Without that information it is virtually impossible for a taxpayer to determine whether the interest charges are correct, and it seems that certainly where interest charges are more than a diminimus amount of say, $50 or $100, it would not be too difficult to simply print the calculations out and supply them to the taxpayer so that they can check the calculations and the facts that were used in generating the calculations.

Turning to the examination procedures, we believe that stronger legislation is needed to ensure that the taxpayer is notified of his rights and allowed to representation. We have far too many instances where the IRS implies to the taxpayers that they must appear personally before the Internal Revenue Service and that a preparer cannot represent them or that they are not aware that a taxpayer can represent them.

So, we think it is important that when there is an examination, taxpayers be notified in writing. It is important that they be aware of the fact that they could be represented for this.

And finally, let me turn to the burden of proof issues. The AICPA cannot support the broad proposal contained in H.R. 390 which shifts the burden of proof to the government in any court proceeding.

With a voluntary tax system there is absolutely no way that the people who are signing under penalties of perjury should not have the burden of proof for supporting the numbers they are signing to. With that provision enacted, the IRS will have a very hard time, and as practitioners we will have a very hard time advising our clients.

The way that I look at it, and perhaps I have not thought long enough about it, but it seems to me that in almost every case you could simply get to court and tie things up forever, which is not going to be a good use of anybody's resources.

Having made that broad statement I do need to point out that there are certain instances, some of which Jerry mentioned—fraud—where the burden of proof should be on the government. And one area that we think is very important is information returns. The burden of proof should be on the government. The IRS needs to search information returns before they impose the burden on the taxpayers, since information returns are prepared by somebody else.

With that, let me close and say as the AICPA we are pleased to be able to help you and work toward the same thing that everyone wants, which is an efficient and effective tax administration system.

Thank you.

[The prepared statement follows:]

TESTIMONY OF DEBORAH WALKER
AMERICAN INSTITUTE OF CERTIFIED PUBLIC ACCOUNTANTS

Thank you, Madame Chairman, for the opportunity to offer recommendations for improving the federal tax administration process. I am Deborah Walker, Chair of the Tax Executive Committee of the American Institute of Certified Public Accountants (AICPA). The AICPA is the national professional organization of CPAs, with over 320,000 members. Many of our members are tax practitioners who are highly concerned with the Internal Revenue Service's standards of accuracy, timeliness, fairness, and consistency and how those standards are applied to taxpayers and practitioners. We also recognize the need for the IRS to administer the system on an efficient and effective basis. It is imperative, therefore, that any changes balance those sometimes competing needs.

ADMINISTRATION IMPROVEMENTS

1. The Taxpayer Ombudsman and Problem Resolution Officers

We believe that the Taxpayer Ombudsman and the Problem Resolution Officers (PRO) have done an outstanding job. The quality of service provided by this group ranks among the highest in the Internal Revenue Service. We see no need to disturb the PRO's reporting structure and risk hindering their ability to function effectively within their District by placing them in a position as "outsiders" to other District personnel. There are definite advantages to having the source of problem identification and correction *within* the IRS.

The Taxpayer Ombudsman and the Problem Resolution Officers are more effective because of their ability to investigate the problems, analyze the reasons for them, report them to the appropriate executives, and monitor solutions. The Taxpayer Ombudsman has brought to the Commissioner's attention identified problems and legislative corrections. We believe that there exists an opportunity to enhance the program by:

- Statutory protection of training funds,
- Adequate funding of the Internal Revenue Service,
- Expansion of statutory authority under section 7811,
- Elevation of the Taxpayer Ombudsman position, and
- Statutory provision for an administrative appeal of Collection Division's actions within the IRS.

Many of the current problems of the IRS stem first from an excessive workload in the Collection Division and insufficient training of personnel in the realities of the business world. Additionally, the lack of emphasis on maintaining a current workload in the Examination Division has resulted in unnecessary hardships for those taxpayers who become involved in disagreements with the IRS.

We have consistently emphasized, in our prior testimony to the Congress, the need for improvement in the personnel recruiting and training programs of the IRS. IRS training programs are sometimes inadequately funded when resources are needed to maintain other programs. It is our belief, based on considerable experience, that many of the problems brought to the PROs are a result of IRS employees who are inadequately trained in IRS procedures and the basics of the tax law.

Further, we believe that the Taxpayer Ombudsman position should be elevated within the IRS organization. In order to accomplish this, we believe the Taxpayer Ombudsman must be a peer of the Deputy Commissioner or Chief Counsel.

We believe that the Problems Resolution Program operation would be strengthened by establishing a plan whereby the Taxpayer Ombudsman reports to the Congress on a periodic basis regarding:

- initiatives that the Taxpayer Ombudsman's office has taken,
- recommendations flowing in from the field,
- the inventory of open items on which no action has been taken,
- the inventory of items on which changes have been made and whether or not those changes resolve the underlying problem,

- recommended changes that have not been implemented with the reasons for not doing so, and the IRS official who made the final decision on each recommended change,
- Taxpayer Assistance Orders which were not honored by the IRS in a timely manner, and
- recommended legislative changes to mitigate problems taxpayers incur in dealing with the IRS.

We recommend that periodic reports be submitted directly to the Congress, without the perceived undue influence regarding prior review or comment from the Commissioner, the Secretary of the Treasury, any other officer or employee of the Department of the Treasury, or the Office of Management and Budget. Additionally, we recommend a formal response to all of the Taxpayer Ombudsman's recommendations be submitted to the Congress by the Commissioner.

Further, we believe that expansion of the Taxpayer Ombudsman's statutory authority under section 7811 is essential to maintaining an efficient tax administration. Section 7811 authorizes the Taxpayer Ombudsman to issue a Taxpayer Assistance Order if the Taxpayer Ombudsman determines the taxpayer is suffering or about to suffer a significant hardship. Taxpayer Assistance Orders require certain actions such as the release of taxpayer property levied upon by the IRS, and may require the IRS to cease any action, or refrain from taking any action as a result of the manner in which the internal revenue laws are being administered. The Code, regulations and other administrative guidance set forth a standard of hardship requiring that the basis for seeking relief is "undue" or "significant" hardship. Therefore, we recommend the elimination of the qualifiers "undue", "significant", etc. thereby providing broader authority for the Taxpayer Ombudsman to take action so taxpayers do not unfairly suffer.

2. Awarding of Costs and Certain Fees

Under current law, as set forth in section 7430, administrative costs may be recovered from the IRS only if incurred on or after the earlier of (1) receipt of the final decision of Appeals or (2) receipt of the statutory notice of deficiency. However, generally no administrative costs are incurred after this period and thus, section 7430 is not effectively carrying out the intent of Congress. Further, the taxpayer is required to demonstrate that the IRS position was not "substantially justified."

We support legislation which would amend section 7430 to provide that any person who substantially prevails in an administrative proceeding can recover reasonable administrative costs if such costs are incurred after the earlier of (1) the date of the first notice of proposed deficiency that allows the person an opportunity for administrative review with Appeals or (2) the date of the notice of deficiency described in section 6212. To protect the government, the amendment to section 7430 could provide that administrative costs will not be recovered if the government can show that its position was substantially justified.

3. Notification of Intention to Offset

We believe the IRS should provide taxpayers with notification of its intention to offset a balance due on one account or module with a refund on another. We recognize the IRS's authority to credit amounts due the taxpayer to any other liability of the taxpayer in accordance with IRC section 6402. However, in such cases, the taxpayer is not notified of such credit application until after the action is taken. In many instances, the balance due is erroneously assessed or subsequently abated. Also, the credit application may have serious ramifications for the taxpayer, particularly an individual or a smaller business that cannot afford to engage a representative to deal with the IRS on such issues.

For example, a taxpayer may elect to apply an overpayment of income tax from one year to the next as an estimated tax payment. This overpayment is sufficient to cover the taxpayer's first quarter estimate for the subsequent year. The taxpayer, a sole proprietor, may have been assessed an employment tax penalty on a given quarter. The penalty is due to the fact that a proper liability breakdown was not included with the Form 941. Once this information is supplied by the taxpayer, the penalty will be abated.

Under the IRS's current system, the taxpayer's overpayment of income tax will be applied to the outstanding employment tax assessment. The amount applied to the first quarter of the subsequent tax year as an estimated tax payment may be insufficient to cover the liability and the taxpayer is subject to an estimated tax penalty on the subsequent year. If the employment tax penalty is subsequently abated, the amount credited against such assessment will be refunded to the taxpayer from the employment tax account. However, the estimated tax penalty will not be abated automatically.

The taxpayer should be notified prior to the application of overpayments to other balances of such taxpayer. There may be other actions in progress to rectify such accounts or significant mitigating factors under consideration by another area within the IRS. The application of such overpayments, without providing the taxpayer an opportunity to address the situation, is a denial of "due process" and may create unnecessary complications and frustrations for both the IRS and taxpayers.

4. Protection from Retroactivity — Prospective Effective Dates for Treasury Regulations

We urge the Subcommittee to consider legislation that would provide protection for taxpayers who make "good faith" efforts to comply with the tax laws during the period between enactment of the law and issuance of clear guidelines and final regulations. The AICPA supports the qualifications for protection from retroactivity as set forth in S. 258, *Taxpayer Bill of Rights 2*, introduced January 23, 1995. Such reforms would recognize taxpayers' needs for early guidance in complex areas of the tax law, while at the same time stimulate the IRS and the Treasury to accelerate issuance of such guidance.

5. Rounding

The AICPA believes requiring the rounding of numbers on most tax returns would decrease the number of errors in tax return preparation and administration. It could greatly enhance efficiency in processing tax returns and does not affect the rights of individual taxpayers. We strongly encourage the Congress to pass legislation requiring the rounding of numbers on most tax returns.

6. Disclosure Changes

IRS statistics indicate approximately 50 percent of all returns are prepared by commercial preparers. We believe, especially because of the complex nature of the law, that taxpayers have a right to expect that the hiring of a preparer will avoid personal inconvenience and unnecessary loss of their own productive time in having their return accepted in the processing phases by the IRS. Our experience and IRS records show the processing of notices during the return perfection and processing phase is a significant workload factor. Many practitioners and taxpayers, unaware of the strict enforcement of the disclosure rules, attempt to resolve these notices by having the preparer "do what the preparer is being paid to do" — prepare the return, solve compliance problems, and appropriately interface with the Service.

We believe changes in the disclosure rules would reduce taxpayer burden, reduce IRS correspondence in dealing with abortive contacts by preparers without a power of attorney, and support the taxpayer's right to be represented. Specifically, we suggest section 6103 be amended to allow for taxpayer representatives to request and receive a taxpayer identification number on the telephone without a power of attorney being filed and to allow IRS personnel to contact a preparer who has signed the return, or accept contacts by such a preparer on behalf of the taxpayer who has received a notice from the IRS with respect to that return. This would reduce the cost of tax administration for the IRS, taxpayers, and preparers. Such communications would be allowed solely for the purpose of perfecting or processing the return for a limited period (e.g., twelve or eighteen months) after the due date of the return or the date the return is filed.

INTEREST

7. Abatement of Interest for Unreasonable IRS Delays

Section 6404(e)(1) provides "...the Secretary *may* (emphasis added) abate" interest on "any deficiency in whole or in part to [due to] any error or delay by an officer or employee of the IRS (acting in his official capacity) in performing a ministerial act."

The ministerial act requirement too narrowly limits the possibility of relief to the taxpayer with the result that the IRS will not abate interest even if it is the IRS's fault. To add a managerial standard only further complicates the statute by providing another unclear standard for interest abatement. Further, IRS rejection of a taxpayer request to abate interest is consistently denied by the courts because section 6404(e)(1) provides no requirement for abatement.

We believe that the statute must be changed to provide that the Secretary must abate or refund interest attributable to unreasonable IRS errors and delays. The ministerial act limitation should be deleted from the statute, and courts should use "unreasonable error or delay" as the appropriate standard of review.

8. Netting of Overpayments and Underpayments for the Calculation of Interest

In 1986, Congress enacted a differential between the interest owed to taxpayers on overpayments and the interest owed to the government on underpayments. Recognizing the inequity created, Congress included specific guidance that "the Secretary should implement the most comprehensive crediting procedures under section 6402 that are consistent with sound administrative practice..." However, the IRS has not responded to Congress's guidance which appeared in the legislative history to the 1986 Tax Reform Act, the 1990 Omnibus Budget Reconciliation Act, and the 1994 General Agreement on Tariffs and Trade. Consequently, we urge Congress to pass legislation requiring "comprehensive crediting procedures under section 6402."

9. Extension of Interest-Free Period for Payment of Tax After Notice and Demand

Taxpayers generally must pay interest on late payments of tax. However, a ten day interest-free period is provided for taxpayers who pay the tax due within ten days of the date of the notice and demand for payment. Oftentimes, the taxpayer does not even receive the notice and demand until after the ten days have expired. Even if the taxpayer received the notice and demand on the date of the notice, ten days often is not adequate time for the taxpayer to gather data for a response, mail a response, and for the IRS to receive it, open it, and route it to the correct area. Therefore, we believe a reasonable extension of the ten day interest-free period to a twenty-one day period should be legislated. We do not support any dollar limitations on this increased interest-free period as is currently proposed in S. 258, *Taxpayer Bill of Rights 2*.

10. Detailed Interest Computations

We believe the IRS should provide interest computations, as a matter of course, to taxpayers when adjustments involving interest are made. Currently the taxpayer only receives a notice showing the amount of tax and the interest due on such amount. IRC section 7522, which is applicable for notices mailed on or after January 1, 1990, requires that such notices describe the "basis for, and identify the amounts (if any) of, the tax due, interest, additional amounts, additions to the tax, and assessable penalties included in such notice." At the present time, the starting date for the interest, the principal amount upon which such interest is based and the rate charged on such amount are not provided to the taxpayer as a part of the notice procedure.

We believe the " basis for" description in the notice should apply to interest computations and should include interest rates and the dates for which the interest applied, the dates and amounts of payments and credits and the interest compounding method. With this information, taxpayers and practitioners

will be able to verify the accuracy of interest computations and expeditiously resolve any discrepancies. We recognize that detailed interest computations could result in a burden to the IRS. Therefore, an exception could be made for de minimis interest amounts such as $50 or $100.

COLLECTION IMPROVEMENTS

11. Application for Extension of Time to Pay (Form 2911) and Installment Agreements

The IRS's Consolidated Penalty Handbook stresses that the purpose of penalties is to "encourage compliant conduct." We support legislative and administrative efforts that the IRS no longer assert the failure to pay penalty when an installment agreement is in effect. We suggest the following expansion of the Taxpayer Ombudsman's recommendation:

> When there has been an application for extension of time to pay or a request for an installment agreement which is made in good faith, in proper form, and evidences a reasonable basis for the application, then the penalty should not be applied, beginning on the date of said application until denial or the termination of the extension or installment agreement, whichever occurs later.

12. Taxpayer Rights Review — Administrative Appeal of Collection Actions

We recommend the creation of an administrative appeal of collection actions (including liens, levies, installment agreements and seizure actions) to resolve issues on matters not related to the determination of tax. This procedure could be an additional function of the Appeals Division and should apply to actions where the deficiency was assessed without the taxpayer's actual knowledge or without an opportunity for an administrative appeal.

13. Expansion of Authority to Release Liens

The IRS currently may only withdraw a filed notice of lien if the notice was erroneously filed or if the lien has been paid, bonded, or became unenforceable. In many instances, taxpayers suffer severe hardships when a lien is filed against them. It is especially difficult for small business owners to carry on business because creditors are unwilling to do business with the taxpayer because of the IRS lien. We recommend expansion of the Secretary's authority to issue a certificate of release of lien and expansion of the IRS's authority to return levied property to a taxpayer when the taxpayer has overpaid their liability if it is determined that:

- filing of the notice was premature or not in accordance with IRS administrative procedures,
- the taxpayer has entered into an installment agreement to satisfy the tax liability,
- withdrawal of the lien will facilitate collection of the liability, or
- withdrawal of the lien would be in the best interests of the taxpayer and the Government.

Further, at the taxpayer's request, the IRS should be required to make reasonable efforts to give notice of the release of lien to the taxpayer's creditors and to credit reporting agencies.

14. Increase Levy Exemption Amount

We support legislation to increase the exemption amounts for property exempt from levy and the indexing of that amount for inflation. In addition, the exemptions permitted to an employee whose salary is levied upon by the IRS should include premiums on health benefits, life, or disability insurance. Thus, a wage earner would be protected from losing his or her health benefits coverage as a result of the IRS's levy. Also, there appears to be an inequity in the statute in that the statutory exemptions do not apply to wages which are direct deposited into a bank account.

15. Damages for Wrongful Liens

We support legislation for a cause of action against the IRS for wrongful liens. Additionally, we would like to have included a similar cause of action on liens in violation of the automatic stay provisions in bankruptcy proceedings.

16. Offers-in-Compromise

We support legislation which would eliminate the requirement of an opinion of Counsel in an instance where taxes are being compromised based upon doubt as to collectibility. Absent this change, we support legislation for a significant increase in the amount requiring a written opinion of Counsel for an offer-in-compromise.

17. Information Return Reporting

Where the taxpayer asserts a nonfrivolous dispute with respect to any item of income reported to the IRS on an information return, then the IRS — not the taxpayer — should bear the burden of proof in any deficiency or refund proceeding absent a showing that the IRS conducted a reasonable investigation of the facts and physically examined the taxpayer's return.

18. Payroll Tax Collection

The procedure for assessment against and collection of unpaid payroll taxes from the owners, officers, directors and/or anyone with the authority and control over payroll funds, "responsible party," helps ensure that "trust" funds are paid when due. However, the "fairness" of collecting all the tax from only one party when many may be involved is questionable. The statute actually permits the IRS to collect the full amount from each party; however, the administration has stated that it does not collect more than the actual liability. Because no party is allowed to know what has been assessed and collected from each of the other responsible parties and how any payment was applied, procedures should be established to show how, and from whom, the IRS has collected the tax and whether civil recovery from others is possible in a post-collection context.

Since collection efforts are directed against the person residing in the area of the IRS office assigned the case rather than against the person most liable for the failure to pay the taxes, or the person who actually benefitted from the failure to pay the taxes, such efforts are often unfair. We urge you to consider changes in this section of the law that would require an equal and fair pursuit of collection from all parties involved. We believe the law should require the IRS to disclose the "uncollected balance" (by tax period) remaining on the assessment to any party from whom it is attempting collection, as well as the identities of other parties against whom the assessment is made or to be made.

Further, we support a requirement that the IRS issue a preliminary notice which will give the taxpayer the right to an administrative appeals hearing for the failure to collect and pay trust fund taxes, or attempt to evade or defeat such taxes provided in section 6672. Also, we support legislative efforts to prevent the IRS from collecting more than 100% of the trust fund taxes owed. We believe legislation should be enacted to prohibit the IRS from attempting to collect the 100% penalty from any alleged responsible persons during the pendency of any administrative proceeding or judicial action brought to contest the merits of a 100% penalty liability.

19. Safeguard for Divorced or Separated Spouses and Married Persons in Community Property States

We believe additional reforms are needed to ensure the equal and fair treatment of spouses who are separated, divorced and/or have community property issues compounding their tax problems. We are especially concerned with the collection procedures applicable in these situations. Often, a

divorced spouse is not aware that a liability has been created in an examination process where the other party was the party examined, as in a situation where one taxpayer has a Schedule C, *Profit or Loss from Business (Sole Proprietor)*. Yet, after the assessment is made, the IRS will attempt to collect the tax from either party. If the taxpayers are divorced or separated and now live in different regions, or even different districts, the IRS tends to only make collection efforts against the spouse living in the area of the IRS office assigned the collection case, even though the distant spouse may have more funds available to pay the bill (and maybe even be the source of the liability).

The root of this problem is in the examination procedures that do not require both spouses to be involved in an audit. We support legislative procedures that require, at the initiation of an examination, the absent spouse to acknowledge by signature whether the other spouse may, or may not, represent the absent spouse. If both parties are aware of, or participate in, the examination, then no one should be caught unaware of the liability and the resulting collection process. Additionally, legislation may be required to ensure that disclosure laws are changed to provide adequate information to the divorced spouse in community property states.

EXAMINATION IMPROVEMENTS

20. Taxpayer Interviews

Section 7521 specifically states that "if the taxpayer clearly states to an officer or employee of the IRS at any time during any interview ...that the taxpayer wishes to consult with an attorney, certified public accountant, enrolled agent, enrolled actuary, ...such officer or employee shall suspend such interview regardless of whether the taxpayer may have answered one or more questions." The AICPA is aware of many instances where the IRS appeared to demand that a taxpayer personally appear alone at the initial examination meeting and the taxpayer was not informed of the right to have a representative appear on his or her behalf. In most instances, an examination can be completely handled by a representative and we believe stronger legislation is needed to ensure the taxpayer is notified of his or her rights and allowed that representation.

21. Place of Examination

We believe that section 7605(a) should be amended to say that the "time and place of examination...shall be such time and place as requested by the taxpayer and as are reasonable under the circumstances." Currently, section 7605(a) provides that the "time and place of examination...shall be such time and place as may be fixed by the Secretary and as are reasonable under the circumstances." Treasury Reg. section 301.7605-1 provides general criteria for the IRS to apply in determining whether a particular time and place for an examination are reasonable under the circumstances. The regulation also instructs that sound judgment should be exercised in applying these criteria and that there should be a balancing of convenience of the taxpayer with the requirements of sound and efficient tax administration. Unfortunately, the IRS placed unnecessary limitations on field personnel by instituting IRM 4235, section 320(1) and (2).

This IRM guidance provides that the place of examination will be established consistent with the regulation and with few exceptions, the examination of the records should be made at the taxpayer's place of business. Also, this guidance indicates that consideration should be given to conducting the examination at the IRS office or the representative's office only if the taxpayer's place of business falls short in some respect relevant to conducting an examination. These guidelines are inadequate and should, therefore, be clarified legislatively.

22. Notice of Examination

The Internal Revenue Service initially contacts taxpayers either by telephone or letter to inform them of an upcoming examination. When the initial contact is made by telephone, it is followed up by letter in order to present the taxpayers' rights in written form. However, the process of allowing initial contacts to be made by telephone creates many problems in assuring taxpayers of their rights. The

revenue agent, however, may request an appointment with the taxpayer in that initial call. Sometimes the taxpayer believes that he or she must personally be at the appointment and the taxpayer does not understand that they have a right to representation.

In order to protect the rights of the taxpayer, the AICPA believes that section 7605 should be amended to require that the initial notification of an examination be made in writing. This requirement should be for all examinations. When the taxpayer receives a notice of examination, the rights accorded a taxpayer under section 7521 (explanation of examination process, right to be represented by an attorney, certified public accountant, etc.) shall attach at that time.

CONCLUSION

In conclusion, the AICPA wants to again thank you for the opportunity to present our comments and recommendations for more efficient administration of the tax system and improvements to the rights of the taxpayer. We will be glad to assist you or your staff with any questions or concerns.

Chairman JOHNSON. Thank you.

Mr. Keating, the executive vice president of the National Taxpayers Union, with Mr. Jack Wade.

STATEMENT OF DAVID KEATING, EXECUTIVE VICE PRESIDENT, NATIONAL TAXPAYERS UNION; ACCOMPANIED BY JACK WADE, CONSULTANT, NATIONAL TAXPAYERS UNION

Mr. KEATING. Thank you, Madam Chairman, for inviting us to testify. I am David Keating, executive vice president of the National Taxpayers Union, and with me is Jack Wade, who is an expert on taxpayer's rights issues. He once headed the revenue officer training program for the IRS and he can tell you that much needs to be done to protect taxpayer's rights.

We especially appreciate your scheduling this hearing today and your interest in these issues. We strongly endorse S. 258. We think it can be improved to better protect taxpayer's rights. At the outset I would like to note that the bill that passed in 1992, proposed establishing the office of the taxpayer advocate. That legislation proposed making that position a political appointment.

That is not in S. 258, and we think it should be. We think a political appointee would come to the job independent of the restrictive mission oriented mentality of just collecting taxes, and not providing service to taxpayers.

We believe it would be a very, very refreshing change from business as usual. There are too many problems that have literally festered for over a decade. Look at the many problems that were identified by the Administrative Conference of the U.S. two decades ago and nothing ever gets done about it.

We think a political appointee in this post will finally give the IRS a true taxpayer advocate who can get some of these problems settled.

The standard for issuing a taxpayer assistance order is much too high. The fact that a taxpayer has to be burdened by a significant hardship is unfair. The taxpayer advocate should be able to act in other situations. My written statement suggests some commonsense situations where the taxpayer advocate should be empowered to act.

One other issue that I would like to address is the provision that allows a taxpayer to sue for damages. We think the standard of proof there is too high. The original bill in 1988 would have allowed taxpayers to recover when the IRS was careless. During the 1980s we had all kinds of increased regulations on tax preparers and on taxpayers, requiring due diligence in the preparing of tax returns.

Why cannot we have a due diligence standard on the IRS? We think that is entirely reasonable. If the taxpayers have to exercise due diligence, then why not the IRS?

Attorney fee awards—it is great to have them, but let's face it, you cannot hire a tax attorney for $75 an hour, virtually anywhere in this country.

We think it is time to raise this cap. The bill proposes a $110 cap. That was in the bill that was passed in 1992. At the very least let us index that $110 for inflation since 1992. A $150 per hour cap would be more reasonable.

I would also like to concur fully with Ms. Walker's statements on interest, computations, and taxpayer representation issues. We agree with that 100 percent.

Another provision in S. 258 would create a 1-year pilot program for appeals of enforcement actions in collections to the appeals division.

We think this is a very, very interesting idea and we hope that this will be made permanent if this bill becomes law. There are many taxpayers who have very modest means. They get caught in these collection actions, they cannot afford to hire representation, they cannot hire an accountant, they cannot hire a tax preparer, they cannot hire an enrolled agent.

If they could at least go to some appeals division in addition to the taxpayer advocate, maybe some of these problems could be corrected.

We also think it is time to selectively modify the Declaratory Relief Act and the Anti-Injunction Act, because there are just too many barriers to taxpayers who are trying to enforce their rights.

Our statement gives some very limited examples of how these laws can be changed to improve taxpayer's rights.

It is also very important to safeguard the right to be self-supporting. The tax laws require a businessperson to keep just $1,100 of business equipment. This is ridiculous. The Foodstamp Program allows more than that. You can qualify for foodstamps with more assets than the IRS will allow you to keep.

It is time to raise these limits. There are many taxpayers who will declare bankruptcy simply to try to keep enough to produce income to pay their taxes. We think this would take some load off the bankruptcy courts, help the IRS, and safeguard the right to be self-supporting, which we think is very important.

The burden of proof can and should be shifted in some cases. Particularly for the 100-percent penalty on trust fund taxes.

We have seen many, many nonresponsible people get hit with this penalty and it is simply unfair for the IRS to come after a bookkeeper and people who are just acting at direction of their bosses.

We also have seen instances where this penalty gets collected more than once, even though it is not supposed to be collected more than once. There is nothing in the law that prevents it from being collected more than once.

There is a big problem on this issue of innocent spouses and I am very glad to hear that Professor Beck testified earlier. We think this reform is very important.

Almost everybody in the agency who works on the front line knows this is a problem and it just does not get fixed. We have heard reports of tax practitioners who cannot even get a power of attorney honored by the IRS in representing a divorced female spouse. They do not even get notified of what is going on.

So clearly something needs to be done in this area and we think Professor Beck's recommendations are very much on target.

I would like to say one last thing. The ultimate improvement to enforcing and helping taxpayer's rights would be to simplify the tax code. We are thrilled to hear that Congressman Archer will hold hearings on the issue of a greatly simplified tax code. The abuses and the problems come from a tax law that is so complicated that no one can understand it.

Thank you, Madam Chairman.

[The prepared statement follows:]

Statement of

David Keating
Executive Vice President
National Taxpayers Union

before the

Subcommittee On Oversight
Committee On Ways & Means
U.S. House of Representatives

on

Taxpayers' Rights Issues

March 24, 1995

Thank you for the opportunity to testify on reforms to improve taxpayer rights. I represent the 300,000 members of the National Taxpayers Union who strongly support providing taxpayers with additional rights and protections during the tax audit and collection process. I am accompanied by Jack Warren Wade, who is an advisor to National Taxpayers Union and author of many books on tax compliance. Mr. Wade once headed the national revenue officer training program for the Internal Revenue Service.

Representative Johnson, we commend you for scheduling this hearing to examine taxpayers' rights. The IRS touches the lives of more American citizens than any other government agency. Because the IRS has more power than any other agency, it is especially important that Congress establish safeguards to protect the rights of taxpayers and to regularly maintain oversight of the tax collection power.

We strongly endorse S. 258, which is similar to the Taxpayer Bill of Rights II provisions in H.R. 11 of the 102nd Congress.

It's Time to Make the Ombudsman More Independent.

The 1992 House bill established a new position, known as the "Taxpayer Advocate" within the IRS. According to the Conference report on H.R. 11, this Taxpayer Advocate "replaces the position of Taxpayer Ombudsman. The Taxpayer Advocate is to be nominated by the President, by and with the advice and consent of the Senate." The final version of H.R. 11 was similar to the House bill, but S. 258 does not include a provision for making the Taxpayer Advocate a political appointee. This would be a serious mistake.

We strongly believe that the Taxpayer Advocate should be a political appointee and not a career IRS employee. As a political appointee the Taxpayer Advocate would be free to be a true taxpayer advocate without concern for his career aspirations within the IRS. He would not have to worry about how other IRS managers view his input into their areas of responsibility. Also, a political appointee would come to the job independent of the restrictive mission-oriented mentality that besets many career agency executives. He would be more receptive to the needs of taxpayers and to changing business-as-usual. A four-year term would enable each new administration to replace the Taxpayer Advocate.

Some have expressed concern about the Taxpayer Advocate being a political appointee. When he was Commissioner, Roscoe Egger once testified that such independent power "would not provide a balance between protecting the government's and taxpayers' interests and would open up dangerous potential for political abuse of the tax system." That's absurd. The Taxpayer Advocate would have no powers for such mischief. After all, the Commissioner is a political appointee. We're convinced that there is room in the IRS for one more political appointee. We believe there are proper checks and balances within the agency to prevent any political abuses or mischief. These include oversight from the IRS Internal Security Division and Treasury's Inspector General as well as an agency culture that resists political pressure.

We also support the proposal to mandate that the Taxpayer Advocate annually report "at least 20 of the most serious problems encountered by taxpayers, including a description of the nature of such problems" and to make "recommendations for such administrative and legislative action as may be appropriate to resolve problems encountered by taxpayers." This is a sound proposal. Much of the agency's emphasis has been on

ensuring taxpayer compliance, which is certainly part of the mission. But taxpayer compliance also can be increased by reducing problems and taxpayer frustration.

`We believe a provision should be added to require the Taxpayer Advocate to form advisory groups from the public and the tax industry to provide feedback about IRS operations and their effects on the taxpaying public.

Taxpayer Assistance Orders and the Problem Resolution Program.

While the Problem Resolution Program has undoubtedly achieved a great deal of success in helping taxpayers, we think there is still room for improvement. Reports have surfaced about problem resolution officers (PROs) who have not been helping taxpayers even though the circumstances appear to warrant intervention. Bob Kamman, a Phoenix, Arizona attorney, who contributes to our Tax Savings Report newsletter, has written that after a Form 911 is filed with a PRO, "that person refers it to the branch of the agency where the difficulty originated. The response quite often is made by the person who caused the problem in the first place. It's not easy to tell co-workers down the hall, who may eat at the same cafeteria table, ride in the same carpool and bowl in the same league, that they screwed up. Sometimes the PRO does it, but often he won't. That's what happened to my client ..."

I have heard complaints that some PROs believe they are not technically qualified to pass judgment on a particular taxpayer's complaint and temporarily overrule the IRS action. If this is indeed a problem, it would account for the dearth of Taxpayer Assistance Orders (TAOs) that have been granted.

The IRS will undoubtedly say that the reason for the dearth of TAOs is that the mere threat of a TAO often will accomplish the task. Mr. Kamman makes the excellent point that "we don't evaluate the effectiveness of police carrying guns by the number of times they shoot them." But the TAO is hardly the equivalent of a bullet.

The Standard of Hardship is Unnecessarily High for a TAO.

One other potential explanation is that the IRS is using an excessively strict standard of hardship. We strongly support the S. 258 provision to reduce the hardship requirement.

If the IRS is violating its internal policies or the tax laws, the Taxpayer Advocate should have the power to issue a TAO. This is altogether reasonable. After all, why should the taxpayer have to bear significant hardships in order to qualify for a TAO?

Mr. Kamman makes several sensible suggestions about how to liberalize the criteria to qualify for a TAO. He suggests that the following questions be considered:

1) Is the taxpayer falsely being accused of filing an incorrect return, or not paying taxes owed?

2) Is the taxpayer incurring expenses paid to tax professionals in an attempt to resolve a problem, not just to calculate a liability?

3) Did an admitted IRS error cause the problem in the first place?

4) Has there been an unreasonable delay in IRS remedial action?

If the answer to any of these questions is yes, hardship should be presumed de facto, and further inquiry into the particular burden of the hardship need not be made.

The Taxpayer Advocate should have the right to intervene in any enforcement proceeding or activity when a taxpayer has made a petition to the Ombudsman that at least one of the following conditions exist:

- There has been an improper or possibly illegal assessment.
- There has been an assessment made without the knowledge of the taxpayer and without benefit of the taxpayer's appeal rights.
- There has been an action in violation either of the statutory procedures of the Tax Code, the policies or regulations of the IRS, or the procedural requirements specified in the Internal Revenue Manual.

Taxpayers Can Still Lose Even When They Win.

Although the Taxpayers' Bill of Rights passed in 1988 offers important new protections for taxpayers, the job of protecting innocent taxpayers from ruin is far from

complete. For example, I have serious doubts that it would have prevented the well-documented Council family tragedy.

The original Taxpayers' Bill of Rights proposal would have allowed taxpayers to sue for damages if "any officer or employee of the Internal Revenue Service carelessly, recklessly or intentionally disregards any provision" of the tax laws. As the bill progressed through the Congress, the word "carelessly" was dropped from what became Section 7433 of the tax code.

Was the IRS treatment of the Council family careless and negligent? Absolutely. The Court's decision was clear on this point. Was it reckless or intentional? It might have been, but that is a very difficult standard to prove.

In the 1986 Tax Reform Act, Congress substantially liberalized the definition of negligent actions by individual taxpayers. During the 1980s, tax preparers have also been subject to increasing penalties for not exercising due diligence. Yet incredibly, Congress refuses to require the IRS to exercise reasonable caution in using its vast array of enforcement powers. We believe Congress should require the IRS to practice due-diligence in its enforcement actions in order to prevail in litigation where a taxpayer sues for damages. Congress should require that the IRS issue regulations defining a due-diligence standard for actions by its employees. We expect that the IRS would include the procedures already outlined in the Internal Revenue Manual as much of the criteria to define this standard.

Taxpayers who have been financially harmed or devastated by IRS carelessness in ignoring a due-diligence standard should have the right to sue and recover damages. We strongly support allowing taxpayers to recover damages for negligent action by the IRS. We also strongly support the proposal in S. 258 to raise the cap for damages to $1,000,000.

If a U.S. corporation makes a product that injures a consumer, consumers don't have to prove that the corporation recklessly or intentionally harmed the consumer in order for the consumer to win an award. Neither should a taxpayer who falls victim to the negligence of the all-powerful Internal Revenue Service.

I would also like to note a flaw in Section 7432 of the tax law. While it appears to allow a lawsuit for damages for failure to release a lien, it only applies for a failure to release a lien under Section 6325, not the imposition of the lien under Section 6321 in the first place. Legislation should correct this flaw.

Attorney Fee Awards Are Woefully Inadequate.

As Kay Council's case showed, taxpayers can suffer enormous financial damages even when they win. Kay was fortunate to receive an award of attorneys' fees for her case. But the fee award didn't come close to paying her total costs. She still owed tens of thousands of dollars.

While her attorneys billed her at $135 per hour and $90 per hour, depending on the respective seniority of the attorney, the judge was restricted by the outdated $75 per hour cap in the current law. He therefore only allowed reimbursement at a rate of $75 per hour and $49 per hour, leaving Kay to pay the difference. Does Congress want to say to future Kay Councils that they'll have to pay through the nose for legal help to fight a careless, incompetent or abusive IRS?

It's very difficult to win attorneys' fees. Also, the courts are extraordinarily reluctant to award attorneys' fees in excess of the $75 per hour cap in the current law. Proving special factors is almost impossible.

Unlike the standard for award of attorneys' fees in the Equal Access to Justice Act, plaintiffs in tax cases must prove that the IRS "was not substantially justified" in pursuing the case. It would be much fairer to require that the government prove it was acting reasonably in order to prevent an award of attorneys' fees.

To protect taxpayers from enormous financial losses incurred while fighting the IRS, we strongly support the proposal in S. 258 to raise the outdated $75 per hour cap to $110 per hour, then index it to inflation. The court would still be limited to awarding only "reasonable fees," preventing excessive awards. The proposed change that would allow taxpayers to collect more costs is also very important. We strongly recommend that the $110 per hour cap be lifted to $150, or at least reflect inflation since 1992. The original Senate bill of the 102nd Congress contained the $150 figure.

Taxpayers' Rights Review.

One provision of S. 258 would create a "1-year pilot program for appeals of enforcement actions (including lien, levy, and seizure actions) to the Appeals Division of the Internal Revenue Service." This is an excellent idea, and we hope that such a program would be made permanent. Had this proposal been in effect years ago, it may have prevented the Council family tragedy. It will certainly help ensure fair treatment during the tax collection process.

Taxpayers who are being treated unfairly by the IRS often don't have the financial means to mount an expensive court fight. This new administrative appeal procedure can help ensure fair treatment for taxpayers of modest means.

The Berlin Wall Stopping Taxpayers' Rights.

In the rare cases when the IRS goes out of control, federal law largely prevents the courts from allowing taxpayers to enforce their rights. The Federal Tort Claims Act allows the government to be sued in certain instances but specifically excludes "any claim arising in respect of the assessment or collection of any tax or custom duty." Of course, the 1988 Taxpayers' Bill of Rights granted two very limited exceptions to that rule.

Another unnecessarily restrictive law is the Anti-Injunction Act, the law that we call the Berlin Wall against taxpayers' rights. Mr. Chairman, it's past time to tear down this wall.

Under Section 7421 of the Internal Revenue Code, no lawsuit can be brought by any person in any court for the purpose of restraining the assessment or collection of any tax, except in limited circumstances.

The case law around the Anti-Injunction Act indicates many problems in obtaining injunctions to restrain the collection of the tax. It is clear that injunctions will be granted where the failure to grant relief would result in irreparable damage to the taxpayer. But an injunction will only be allowed where it is clear that under no circumstances would the government prevail (or the taxpayer would not owe the tax). Otherwise only two remedies are available to the taxpayer: 1) pay the tax, file a claim for refund, and sue for recovery if the claim is rejected; 2) file a petition in Tax Court before assessment and within the short period of time allowed for filing such a petition.

We think that the Anti-Injunction Act should be amended to give taxpayers the ability to enforce their rights if necessary. Taxpayers should be allowed to file suit in a federal district court to enjoin the IRS from enforcement action because: the deficiency assessment was made without knowledge of the taxpayer and without benefit of the appeal procedures provided by law; there has been an improper or illegal assessment; there has been an action in violation of the law or tax laws or regulations providing for procedural safeguards for taxpayers; the IRS has made an unlawful determination that collection of the tax was in jeopardy; the value of seized property is out of proportion to the amount of the liability if other collection remedies are available; or the IRS will not release the seized property upon an offer of payment of the U.S. interest in the property.

Then, there's also the Declaratory Relief Act. This law says that citizens can file suit to get a court to declare their rights "except with respect to federal taxes."

In author David Burnham's excellent book, A Law Unto Itself, he quotes California tax attorney Montie Day and his views on these laws that prevent taxpayers from enforcing their rights. He says that allowing such limited lawsuits would make "the IRS more accountable ... and make the agency more likely to operate in a lawful fashion."

To illustrate this point, he said "assume you are under audit and somehow you learn that the revenue agent has decided the best way to investigate you is to break a window of your office, climb through it and examine your correspondence.

"You come into my office for advice, wanting the court to rule that the IRS agent can't conduct his audit in this way. We consider filing a suit for declaratory relief, but then we remember that the court does not have the authority to issue such a declaration of rights in tax matters because of that exception in the Declaratory Relief Act.

"Then we think about requesting a court order to enjoin the agent from conducting his tax investigation by breaking into your office. This approach, of course, cannot be followed because the court is forbidden to even consider such requests under the Anti-Injunction Act."

As long as taxpayers are largely banned from suing to enforce their rights, taxpayers will continue to be at risk of financial ruin and emotional devastation from the

IRS. It is completely unfair for the IRS to have all the powers and for taxpayers to have few rights that can only be enforced with great legal difficulty. We must ensure fair treatment of innocent taxpayers to continue respect for our Constitutional system of government.

Congress Should Safeguard the Right to be Self-Supporting.

The Taxpayers' Bill of Rights made the very necessary improvement of exempting a larger amount of a taxpayer's weekly salary from levy. But it made little change in the amount of property exempt from seizure.

The law lifted the amounts from a paltry $1,500 for personal property to $1,650 and from $1,000 for equipment and property for a trade, business or profession to $1,100. That's hardly any change, and it is far from sufficient to allow a taxpayer to be self-supporting.

What self-employed plumber could maintain his self-employment with just $1,100 in tools, equipment and a truck? What computer programmer or author could do so? Very few, if any.

Who can provide the basic essentials of clothing and furnishings for a family with only a $1,600 exemption?

The bankruptcy laws provide far more protection than this. The Food Stamp program allows citizens to qualify for benefits with more assets than allowed under the tax laws!

We would like to see the exemption amounts lifted to either $10,000 or to provide the same protection as the bankruptcy laws. Many taxpayers are forced into bankruptcy court by the IRS. Raising the exemption amounts would take some of the load off the bankruptcy courts and safeguard the right to be self-supporting. The current levels are ridiculously low, and the proposed increases in S. 258 are not adequate to safeguard the right to be self-supporting.

Employees Who Abuse the Law Usually Go Unpunished.

There are many fine employees in the IRS who care about helping taxpayers comply with the law and who care about respecting taxpayers' rights. But given the sheer number of employees and the billions of tax returns and documents that are received by the IRS each year, it is inevitable that mistakes will be made and that some employees will act out of line.

The IRS has issued rules requiring tax preparers to exercise "due diligence" in the preparation of tax returns. In certain situations, preparers must cite "substantial authority" for the positions they take on tax returns. Failure to do so may result in monetary fines, being disbarred from practicing before the IRS, and a full scale audit of all the preparers' clients.

Yet IRS employees are often allowed to violate the IRS rules, regulations, policies, procedures, and guidelines at will and without fear of recourse. The law is so overwhelming and sweeping in its power conferred upon the tax collecting authority that there are few checks and balances on the exercise of that authority.

Taxpayers need more protections from arbitrary and capricious actions, and IRS employees should be held accountable for their violations. One theme that comes across again and again in Burnham's book is that the IRS almost always will not punish employees who make big mistakes in handling taxpayer disputes.

It seems clear that the IRS is more interested in controlling, regulating, and punishing taxpayers and practitioners for their violations than they are in controlling, regulating, and punishing their own employees for comparable infractions. If this double standard continues to exist, the compliance system as we know it could be in serious trouble.

Burnham reports a "disturbing footnote" about the occasions "when the IRS has crossed the line in its zealous enforcement of the tax laws: Agency officials involved in questionable activities are seldom punished." He also notes that many lawyers are worried "that the zealous, anything-to-win tactics are more and more becoming the accepted practice of the government." One of the fundamental principles of the U.S. Constitution is that people's rights shall be respected, even if it means that some people will escape being penalized for the laws they break.

Several years ago, Congressman Andy Jacobs introduced an amendment to a tax bill that would have permitted federal judges to make IRS employees personally liable for attorneys' fees paid by taxpayers who proved IRS agents acted arbitrarily and capriciously in pursuing the taxpayers. While this proposal may have gone too far, the concept is a good one - it would serve notice to IRS employees that they should be careful to protect taxpayers' rights.

Section 552(F) of the Federal Freedom of Information Act contains a standard that may be useful in drafting such a provision in the Federal tax law. It says that "Whenever the court orders the production of any agency records improperly withheld from the complainant and assesses against the United States reasonable attorney fees and other litigation costs, and the court additionally issues a written finding that the circumstances surrounding the withholding raise questions whether agency personnel acted arbitrarily or capriciously with respect to the withholding, the Special Counsel shall promptly initiate a proceeding to determine whether disciplinary action is warranted against the officer or employee who was primarily responsible for the withholding."

We expect the tax return preparers will be careful in preparing tax returns. Is it too much to ask that IRS employees and the agency be subject to some limited financial sanctions if they act to intentionally harm the taxpayer? We think not.

Installment Agreements.

Another provision of S. 258 would provide the right to an installment agreement if the taxpayer had not been delinquent in the previous three years and the liability was under $10,000. We think this is a good proposal, especially since it is limited to individual Form 1040 taxes. More taxpayers would be willing to concede to the IRS after an audit if they knew they would have time to pay an unexpected bill. Currently, taxpayers have an incentive to stall if they can't pay. Of course, any interest and penalties that would normally be owed would still continue to accrue.

Marriage, Divorce, and the IRS.

One of the most common complaints I hear comes from taxpayers who have divorced and one spouse has disappeared. Perhaps following a tendency in human nature, the IRS often goes after the spouse it finds first, whose name and address the IRS readily has on its computer, even though that spouse may be innocent.

Of course, in some cases, taxpayers can be relieved of the tax liability on a joint return under the so-called "innocent spouse" rule. However, its provisions are so complicated that it should be known as the "lucky spouse" rule for the few people who can meet all of its tests.

In one case in Arizona, the IRS dunned Carol Bettencourt, even though she had been divorced for five years. Her former spouse ran out on a court-ordered $60-a-month child support payments. Carol never saw a dime from him, but she was expected to pay his tax debts. Carol turned to the IRS Problem Resolution Officer, who told her that since she had once filed joint returns with her ex-husband, the only solution was to pay up.

But the Problem Resolution Officer failed to note that the IRS hadn't sent Carol's notice of tax deficiency to her last known address which the tax law requires. Fortunately, an attorney volunteered to review her case. With his help, Carol got her tax refund, which had been withheld to pay her husband's tax debt.

It is especially important to simplify and ease criteria that taxpayers must meet to qualify for protection as an "innocent spouse."

I don't see any reason why the IRS should not be required to honor divorce decrees that apportion responsibility for tax liabilities, provided that a decree splits such potential liability in proportion to the income earned by each spouse. A court could, for example, rule that in the last three years of marriage the husband earned 55 percent of the income and the wife earned 45 percent and thus require that any federal and state income tax liability that may be assessed against the couple be split accordingly to that ratio.

If the Congress is unwilling to do that, it should consider evenly splitting the liability between spouses. We currently have a situation that creates joint liability where the IRS tries to collect from one person -- an innocent spouse who is complying with the tax laws and is easier to find -- rather than from the responsible spouse, and that is often grossly unfair. The IRS should be required to pursue the spouse responsible for the tax problem. Any tax that arises from a business entity such a reported on a Schedule C should be apportioned to the spouse who owns the business entity. If additional tax arises from unreported income, the additional tax should be collected from the spouse who failed to report the income.

A divorced spouse should also have the right to petition the IRS for a final determination of any outstanding or potential tax liabilities. This would provide protection from a tax surprise on one spouse after a divorce is final.

I have heard reports that the IRS computer system is unable to set up separate collection accounts when the two divorced spouses live in different IRS districts. If this is true, then it is not simply a question of the IRS trying to collect the joint tax liability from the spouse who is located first, but the spouse whose case is being aggressively pursued by one of the two districts. Or, a Revenue Officer may determine that another spouse lives in another district and refer his case to the other district for collection. Case closed, problem transferred.

Much more needs to be done to protect divorced spouses.

Administration of the Federal Tax Deposit System.

If an employer does not report and deposit withheld income and Social Security taxes, then certain responsible officers can be held personally responsible for the taxes plus a one hundred percent penalty. This is an area ripe for reform.

When the IRS seeks to collect these trust fund taxes, it often assesses liabilities on everyone in sight (including bookkeepers, accountants, bank officers, inactive directors, inactive or resigned corporate officers and family members), whether they are truly a responsible officer or not. Inside the agency, this is called the shotgun penalty approach. A lot of innocent people get hurt.

Unfortunately, the burden of proof is on the taxpayer to prove that he or she was not responsible for the lack of payment. You might as well ask the taxpayer "When did you stop beating your spouse?" Proving a negative is a difficult proposition at best.

The burden should be on the IRS to prove the taxpayer was responsible.

Why can't the tax laws define the responsible parties as the chief executive officer, the chief and senior financial officers, those who serve on the board of directors and own a significant stake in a privately held corporation, and other responsible parties designated on a schedule that could be attached to the corporation's last quarterly 941 tax return of each year? The attached schedule would clearly state the serious responsibilities to remit trust fund taxes and require the signature of each named responsible person to indicate their knowledge of and consent to these rules.

If the IRS had the names and addresses of such persons in its computer, then these responsible persons could be immediately notified when a payment has been missed. It would allow these officers and other responsible persons to immediately investigate why these taxes have not been remitted on time, protecting the Treasury and innocent taxpayers.

Tax Complexity Invites Abuse.

Burnham wrote that an IRS instructor once claimed that he could find mistakes in 99.9 percent of tax returns. While he may have been exaggerating, he made a valid point.

The tax laws are so incredibly complicated that many taxpayers can't say with absolute confidence that they know the law or have filed their tax returns with 100 percent accuracy. Year after year, Money magazine reports that virtually all of the tax professionals who take its annual test for professional tax preparers made at least one mistake and they all come back with a different calculation of the tax liability!

This incredible variation opens up the potential for abuse. Vague laws allow enforcement abuses. If someone in the IRS wants to "get" you, the complex laws allow the agency to make a plausible case against virtually anyone.

We hope that this Congress will thoroughly examine proposals by Congressmen Bill Archer and Dick Armey to scrap the current income tax system in favor of a greatly simplified sales or flat rate income tax.

Congress Should Require Equitable Use of the Levy Power.

Burnham's book presents an impressive array of statistics that the levy power is not applied equally across the United States. Burnham reports that in 1988 "for every 1,000 tax delinquent accounts, 892 levies [occurred] in the Western Region; 860 in the Mid-Atlantic; 735 in the Southwest; 714 in the North Atlantic and the Central; 708 in the Mid-West; and 532 for the Southeast."

There's even more variation in the seizure rate. Burnham reports that in 1988 "the seizure rates in the most active districts were 30 to 40 times higher than the rates in the districts with the least. The IRS has no explanation for the variations."

This is nothing new. As far back as 1976, the Administrative Conference of the United States issued a report titled "Collection of Delinquent Taxes" that said the IRS had no clear guidelines specifying when levy action was to be taken. The report said "lacking guidance, revenue officers vary in their criteria for seizure of assets of individual taxpayers ... So long as the Internal Revenue Service fails to delineate clear purposes for the use of summary powers, we believe that these divergent criteria will continue to exist. The variations in practice may lead to the appearance of arbitrariness and caprice in some actions, thus undermining the taxpaying public's confidence in (and compliance with) the taxing system."

These random variations have continued year after year. The guidelines that exist only in Internal Revenue Manuals are not enforceable. Therefore, Congress should require that the IRS issue regulations specifying the circumstances, conditions and situations under which a levy will be made.

Conclusion.

The job of protecting taxpayer rights will never end. Much progress has been made, but more legal protections are necessary. We sincerely appreciate the efforts being made by members of this subcommittee to formulate legislation to better protect taxpayer rights.

Chairman JOHNSON. Thank you, very much.

Mr. Thayer, president and CEO of the National Association of the Self-Employed.

STATEMENT OF BENNIE L. THAYER, PRESIDENT AND CHIEF EXECUTIVE OFFICER, NATIONAL ASSOCIATION OF THE SELF-EMPLOYED

Mr. THAYER. Madam Chairman, and Mr. Hancock, I appreciate the opportunity to testify here today before this subcommittee on oversight. My name is Bennie L. Thayer, and I am president and CEO of the National Association of the Self-Employed.

And may I also, at the outset, thank you, Madam Chairman, for your efforts on behalf of those businesses who operate from their home and coupled with the efforts of Representative Hoagland and Representative Archer. We certainly appreciate those.

Our more than 320,000 members of the NASE, 85 percent of whom have five or fewer employees, have a great deal of concern about the initiatives of this type that tend to protect their rights.

According to a recent NASE survey 82.4 percent of the respondents stated that the IRS imposed the greatest regulatory burden on their business when compared to other agencies. It is for this reason that the NASE welcomes the opportunity to comment today on taxpayer right's proposal.

The House Ways and Means Committee has an excellent track record of supporting efforts to improve taxpayers' rights, and we clearly appreciate and recognize the committee's long standing tradition of fighting for taxpayers' rights.

That includes its involvement in the final passage of the Taxpayer Bill of Rights in 1988, and also in the drafting of the 1992 Taxpayer Bill of Rights II.

We believe today that there are a number of measures found in the 1992 legislation which could serve as a starting point for the drafting of the taxpayer rights legislation which you are considering today.

I would like to just talk about three of those momentarily, if I can. The first one is that we strongly support the provisions contained in the 1992 legislation which called for changes to the structure of the IRS office of the taxpayer ombudsman. The 1992 legislation restructured, as you know, the office of the taxpayer ombudsman and in its place, established the office of the taxpayer advocate. You have just heard a reference to that.

That legislation made the new taxpayer advocate a political appointee, and accountable to Congress. We, too, as you have just heard, believe strongly that this should happen.

The NASE strongly supports the inclusion of this proposal in any 1995 legislative initiative. We reject and we reject vehemently any arguments that an independent taxpayer advocate will result in a politicized office.

Previous presidents and congresses have nominated and confirmed people of outstanding abilities and reputations for the IRS positions of commissioner and chief counsel and we believe that future presidents and congresses will do the same thing.

The 1988 Taxpayer Bill of Rights gave the ombudsman the authority to issue taxpayer assistance orders. And although the tax-

payer assistance orders program is pro-taxpayer when we consider it on its face, only a limited number of taxpayer assistance orders have been issued over the years. Therefore, the NASE strongly recommends that the authority a newly created taxpayer advocate position also be expanded to ensure more effective utilization of taxpayer assistance orders on behalf of legitimate cases of taxpayer hardship.

Second, I would draw to your attention from the 1992 version, the prohibition on the Treasury and the IRS from issuing regulations having a retroactive impact on taxpayers.

To the average small business person retroactive regulations create perception problems for the Federal Government. A taxpayer should not be penalized for his or her good faith reliance on a tax law or regulation which was, indeed, the law of the land one day, although it might have been changed the next day.

The NASE believes that a prohibition on retroactive tax regulations will increase the average taxpayer's faith in the tax administration process and thus, should result in an improvement in tax compliance by the public.

Finally, the third thing I will mention although it was not included in the final House and Senate conference report of 1992, it was in the House version of the bill of rights. That was a measure that made IRS employees personally liable in situations of clear abuse.

The NASE strongly supports this proposal. We reject arguments that such a measure would change the balance of persuasion, if you will, between taxpayers and the IRS employees in the audit situation. Even with enactment of a measure that makes IRS employees personally liable for any egregious acts of misconduct, the NASE strongly contends that the power to intimidate the taxpayer will still remain with the IRS auditor.

If it is not politically feasible to make IRS employees personally liable for egregious acts of misconduct, we then recommend that Congress increase the limits on civil damage awards under the Internal Revenue Code section 7433 and we recommend that they be increased to $1 million from their current $100,000 level.

Section 7433 permits a taxpayer to bring a civil action in district court against the United States if an IRS officer or employee has recklessly or intentionally disregarded the tax law with respect to the collection matter. The NASE believes that a $1 million threshold will send a strong and, I repeat, a very strong message to IRS employees and help deter the egregious acts of misconduct that you have heard represented here today.

We thank you for this opportunity.

[The prepared statement follows:]

TESTIMONY OF BENNIE L. THAYER
NATIONAL ASSOCIATION FOR THE SELF-EMPLOYED

On behalf of the National Association for the Self-Employed, I appreciate the opportunity to testify before the House Ways and Means Subcommittee on Oversight. My name is Bennie L. Thayer, the NASE's President; and I am pleased to testify today on the Taxpayer Bill of Rights and other proposals to improve the rights of taxpayers in their dealings with the Internal Revenue Service.

Taxpayer rights proposals are extremely important to the over 320,000 members of the NASE, individuals who operate businesses throughout the United States. Over 85 percent of the NASE members are business owners with 5 or fewer employees. The membership represents a very wide range of businesses, notably in the consulting and retail fields. If you ask the average NASE member which federal agency creates the greatest number of administrative burdens and headaches for their business, the answer will usually be the IRS.

According to a recent NASE survey, 82.4 percent of the respondents stated that the IRS imposed the greatest regulatory burdens on businesses when compared to other agencies. It is for this reason that the NASE welcomes the opportunity to comment on taxpayer rights proposals. We strongly support efforts to improve the privacy rights of taxpayers and ensure a more even-handed approach to enforcement of the tax laws. The NASE believes such efforts should lead to an increase in the respect taxpayers have for the tax administration process and thus, result in a meaningful increase in taxpayer compliance rates overall.

The History of Efforts to Improve Taxpayer Rights

The House Ways and Means Committee has an excellent track record of supporting efforts to improve taxpayer rights. We clearly appreciate and recognize the committee's long-standing tradition of fighting for taxpayer rights, including its involvement in the final passage of the Taxpayer Bill of Rights in 1988. The NASE also commends the committee for its active involvement in the passage by Congress of the Taxpayer Bill of Rights II ("T2") in 1992; however, it did not become law because the proposal was included in two broader tax bills which President Bush vetoed in 1992 for reasons unrelated to T2.

The 1988 Taxpayer Bill of Rights made a number of improvements to the tax administration process, as well as created a number of new rights for taxpayers overall. As a result of the 1988 law, the IRS is now required to disclose in simple and nontechnical terms, the rights of a taxpayer in his or her dealings with the IRS, including with respect to an audit or tax collection matter. The IRS fulfills this requirement through the issuance of Publication 1, entitled, "Your Rights as a Taxpayer." Also, the 1988 law mandates the IRS abate any penalties or additions to tax attributable to erroneous written advice provided by the agency. The Taxpayer Bill of Rights further requires the Service to issue all temporary regulations as proposed regulations -- with the proviso that any regulation that remains in temporary form for a 3 year period shall expire at the end of such time period.

Other beneficial provisions of the 1988 law include (among others) the right of the IRS Office of Taxpayer Ombudsman to issue taxpayer assistance orders, improvements in the standards regarding when a taxpayer may interview a client, legislative authorization that the IRS may enter into written installment agreements with a taxpayer for the payment of taxes, and the establishment of an IRS Office of Taxpayer Services.

The Beneficial, Pro-Taxpayer Provisions of the Taxpayer Bill of Rights II

The NASE believes there are a number of beneficial pro-taxpayer provisions contained in the 1992 Taxpayer Bill of Rights II and therefore, we recommend that the House Ways and Means Committee include these specific provision in any final taxpayer rights initiative acted upon during 1995 or 1996.

1.) IRS Office of Taxpayer Advocate

We believe T2 was a carefully crafted initiative which balanced the interests of the IRS and the tax administration process with a taxpayer's privacy and due process rights.

First, we strongly support the provision contained in the 1992 legislation which called for changes to the structure of the IRS Office of Taxpayer Ombudsman. IRS Commissioner Jerome Kurtz established the Ombudsman position in 1980, a position which currently has civil service status and currently reports directly to the Commissioner. The office was established because Kurtz wanted to help taxpayers who believed they were not getting their problems addressed through traditional IRS channels.[1] In 1988, with the passage of Taxpayer Bill of Rights I, the Ombudsman's office was given statutory sanction and authority.

The 1992 legislation restructured the Office of Taxpayer Ombudsman and in its place, established the Office of Taxpayer Advocate. T2 made the new Taxpayer Advocate a political appointee and accountable to Congress. That is, T2 made the Taxpayer Advocate independent of the Commissioner's direct line of authority. The NASE strongly supports inclusion of this proposal in any 1995 legislative initiative. While the NASE appreciates the IRS' stated purposes regarding the current Office of Ombudsman, we strongly believe an independent Taxpayer Advocate will greatly contribute to a more taxpayer friendly atmosphere among IRS auditors.

We reject any arguments that an independent Taxpayer Advocate will result in a "politicized" office. The IRS currently has two positions subject to political appointment -- and these are the offices of IRS Commissioner and Chief Counsel. Previous Presidents and Congresses have nominated and confirmed people of outstanding abilities and reputations for these two positions, and we believe future Presidents and Congresses will continue to act in a similarly "good government" fashion. We have immense confidence that the federal government's dire need for revenues will act as a brake on any serious attempts to politicize the Office of Taxpayer Advocate.

The duties and responsibilities of the current Office of Taxpayer Ombudsman are (under the current IRS administrative structure) carried out at the local level by the Problem Resolution Offices located in the IRS district offices and service centers. The Problem Resolution Program is very beneficial to taxpayers in that the program has been set up to help taxpayers who are unable to resolve their problems through normal IRS channels. Unfortunately, the Ombudsman's role can potentially be undercut at the local level since the Problem Resolution Officers are hired and supervised by the local IRS District Director. Therefore, in order to mitigate the potential for any resistance to helping a taxpayer with a significant problem at the IRS local level, we recommend that the Problem Resolution Officers report directly to a newly created Office of Taxpayer Advocate.

As stated previously, the 1988 Taxpayer Bill of Rights gave the Ombudsman the authority to issue Taxpayer Assistance Orders (TAO). A taxpayer can apply to the Ombudsman and ask him to issue a TAO based on the fact the taxpayer is suffering significant hardship due to an IRS collections effort. If warranted, the TAO can require the IRS to stop certain collection efforts, such as removal of a levy on the taxpayer's property. Although the TAO program is pro-taxpayer on its face, only a limited number of TAOs have been issued over the years. Therefore, the NASE strongly recommends that the authority of the current Ombudsman (or in the alternative, a newly created Taxpayer Advocate program) be expanded and broadened to ensure more effective utilization of TAOs on behalf of legitimate cases of taxpayer hardship.

2.) Prohibition on Retroactive Regulations

The NASE strongly supports the measure contained in the 1992 version of T2 which prohibited (except under certain limited circumstances) the Treasury and IRS from issuing regulations which have a "retroactive" impact on taxpayers. According to proponents of the 1992 legislation, this measure was a direct reaction of widespread practices by Treasury during the 1980s, in which the agency offered "temporary regulations which became effective

---

[1]Zeidner, Rita L., "Taxpayer Rights and Collecting Taxes: Striking a Delicate Balance", *Tax Notes*, November 12, 1992, page 832.

immediately upon their publication."[2]

To the average small business person, it does not matter whether a federal agency has meritorious technical and/or substantive reasons for issuing a regulation which has a retroactive impact on a taxpayer's affairs. Retroactive regulations -- rightly or wrongly -- create perception problems for the federal government which are viewed by a small business person as being arbitrary on their face. A taxpayer should not be penalized for his or her good faith reliance on a tax law or regulation which was the "law of the land" one day and changed the next. We wholeheartedly support an effort to prohibit retroactive tax regulations. The NASE believes that a prohibition on retroactive tax regulations will increase the average taxpayer's faith in the tax administration process and thus, should result in an improvement in tax compliance by the public.

3.) Make IRS Employees Personally Liable for Clearly Abusive Acts

Although not included in a final House-Senate conference report in 1992, the House version of T2 included a measure which made IRS employees personally liable in situations of clear abuse. The NASE strongly supports this proposal. We reject arguments that such a measure would change the "balance of persuasion" between taxpayers and IRS employees in an audit situation. The NASE does not agree with arguments that this type of proposal is likely to result in taxpayers intimidating IRS auditors into readily agreeing with the taxpayer's position on audit. In act, when a small business person faces an IRS audit, we firmly contend it is the IRS agent which has the power to intimidate -- not the taxpayer.

Even with enactment of a measure which makes IRS employees personally liable for any egregious acts of misconduct, the NASE strongly contends that the power to intimidate the taxpayer will still remain with the IRS auditor. If nothing else, this kind of proposal would serve to curb to a modest degree the most outrageous acts of misconduct by an IRS employee.

If it is not politically feasible to make IRS employees personally liable for egregious acts of misconduct, we recommend that Congress increase the limits on civil damage awards. Internal Revenue Code Section 7433 permits a taxpayer to bring a civil action in district court against the United States if an IRS officer or employee has "recklessly or intentionally disregarded" the tax law with respect to a collection matter. The current statutory limit for such civil actions is $100,000. We strongly recommend that this threshold for taxpayer civil causes of action against the U.S. be raised to $1 million. The NASE believes that a $1 million threshold will send a strong message to IRS employees and help deter egregious acts of misconduct.

4.) Expanding the Ability of Taxpayers to Recover Reasonable Costs

Section 7430 of the Internal Revenue Code permits a court to award a judgment to a taxpayer for reasonable costs associated with an IRS administrative proceeding or tax litigation case. Such an award can be made to a taxpayer who establishes to the court that the government's position in the tax case was not substantially justified. The Code requires the taxpayer to exhaust all the administrative remedies available to him or her before the court can make an award of reasonable administrative or litigation costs regarding the tax dispute.

Senators David Pryor, Charles E. Grassley and others this year introduced S. 258, a very positive, pro-taxpayer initiative. Among other provisions, S. 258 permits a taxpayer -- once he or she has substantially prevailed in his or her case with the IRS -- to file a petition in court for disclosure of all information and copies of relevant records in the possession of the IRS associated with the case. Also, S. 258 increases the level of attorney fees that a taxpayer may recover from the government under Code Section 7430. In general, this

---

[2]Kirchheimer, Barbara, "ABA Panel Examines Problem Areas in Taxpayer Bill of Rights", *Tax Notes*, September 7, 1992, page 1263.

particular provision increases the level of reasonable attorneys fee from $75 per hour to $110 per hour, and indexes the amount to inflation.

The NASE views Section 7430 as a powerful measure which is designed to dissuade the IRS from bringing unwarranted and egregious collection cases against U.S. taxpayers. Therefore, we are particularly supportive of the above provisions contained in S. 258. These provisions should provide taxpayers with improved privacy protections, as well as help level the playing field for taxpayers when faced with an unwarranted IRS position in a tax dispute.

5.) Other Positive Initiatives Under T2

There are a number of other pro-taxpayer proposals found in the 1992 version of T2 and in bills introduced in 1995 that the NASE strongly supports. First, we endorse an expansion of the rights and circumstances when small taxpayers may use installment agreements to pay a tax deficiency. Last, we urge that any final 1995 legislation protecting taxpayer rights include a requirement that the IRS abate interest when the agency is responsible for an unreasonable error or delay with respect to the agency's tax administration functions.

Chairman JOHNSON. Thank you for your very interesting testimony.

Mr. William Stevenson, president of the National Tax Consultants, on behalf of the National Society of Public Accountants.

STATEMENT OF WILLIAM STEVENSON, PRESIDENT, NATIONAL TAX CONSULTANTS, INC., ON BEHALF OF THE NATIONAL SOCIETY OF PUBLIC ACCOUNTANTS

Mr. STEVENSON. Good afternoon, Madam Chairman, Congressman Hancock, Congressman Portman. My name is Bill Stevenson, and I am here today in my capacity as chairman of the Federal Tax Committee of the National Society of Public Accountants.

NSPA consists of 20,000 independent accountant members serving 5 million small businesses and individuals throughout the country, and our membership consists of CPAs, enrolled agents, licensed public accountants, and other professionals serving smaller businesses. I, myself, am an enrolled agent, and I also hold a special license which allows me to practice before the U.S. Tax Court as a nonattorney.

I am not going to speak about the issues in the bill that everyone has been talking about today. I generally agree with just about everything that has been said. How could you not? But there are two issues I am going to laser-focus on that, if adopted, will greatly improve some of the things that we were discussing earlier.

The regrettable story of Mrs. Howden, while it really bothered us all to our hearts, I want you to know I come from the front lines. I am speaking to you here today after leaving cases like this and finding it very frustrating to deal with issues to help resolve taxpayer problems before the Internal Revenue Service.

The one problem that we are all having is the inconsistency of treatment throughout the country. One good example of inconsistent treatment, for example, is the Internal Revenue Service's program of offers in compromise. It is a program that was rewarmed about 2 years ago because the Internal Revenue Service felt that there was a lot of tax money out there that they could collect, but because of the circumstances of the individuals, it was not possible to get the money under such circumstances. So they—IRS—developed the offer in compromise program.

National Office made a policy. The problem is the policy was interpreted differently in 63 different districts throughout the country. So, Madam Chairman, if one of your constituents filed an offer in compromise, they might have a 40-percent chance of getting it approved. If somebody from Missouri filed an offer in compromise, they might have an 80-percent chance of it getting approved. If somebody from the districts that I worked, the Manhattan and Brooklyn districts, filed an offer in compromise, we would be lucky to get 25 percent or less approved.

It is different in every single district throughout the country. Some districts even say, "X district's offer in compromise policy," rather than Internal Revenue Service's offer in compromise policy.

The IRS employs over 100,000 individuals, probably closer to 110,000 people, and these individuals all have a different set of personal standards and values. While we recognize that the diversity that they have is important because it helps any organization

thrive, the problem that we have is balancing the diversity within the Service with our expectation of equal and fair treatment.

One way we can guarantee, almost, equal and fair treatment is through the Internal Revenue Service manual. I am not sure whether it is apparent to everyone, but when Congress passes Federal tax law, there are two things that happen. It asks the Internal Revenue Service to issue regulations based on that law, and the American public has to follow those regulations. If they don't, they can be penalized, fined, and even be sent to jail. On the other hand, the Internal Revenue Service is required by Federal law to write a manual for its own employees, so you don't have rogue employees running amuck throughout the different districts and making their own policy.

The sad fact is they don't have to follow that manual, and there are many court cases where the IRS was taken into court and said, "Gee, you guys aren't following the manual and you are causing us financial problems because of it." And the courts have ruled in many, many cases—I have 15 of them listed here—that the Internal Revenue Service manual does not have the weight of law, and, therefore, the Internal Revenue Service does not have to follow it. That is one of the reasons why you have this diversity of treatment of taxpayers all over the country.

Congress can enact legislation saying that the Internal Revenue Service manual has the weight of regulation, and it will be given equal status so that if the Service does not follow its own rules and regulations, then you can go to court and get some kind of redress.

Why should the IRS be allowed to write rules and regulations that the public has to follow, and when they write their own rules and regulations, they don't have to follow them? It certainly is a strange paradox.

I realize—my time is up. There was only one more thing I wanted to mention if you could give me a second.

Chairman JOHNSON. Go ahead.

Mr. STEVENSON. The IRS has instituted recently audit-like activities that they call compliance checks. This allows the Service to come into our office and review files. For example, if one of your constituents was in my office and we had an interview that dealt with more than taxes and I put the information in a file and we filed the return electronically, the Service could come into our office, demand to see their file simply because they filed electronically, without the permission of the taxpayer and without due process. There are many examples of this, not only in that area but in others as well.

We think this is really a violation of taxpayers' rights on a very broad scale, and we would like you to redress that problem, too.

I know the Service has dedicated people. We work very closely with them. But we do need to face the problem of inconsistency, and I think you have it within your means to do so.

In closing, I would like to thank you for the invitation to appear before the subcommittee today. These precious 5 minutes that you allowed me make me really proud to be an American, and NSPA stands ready to assist you in your efforts in every way possible.

[The prepared statement follows:]

TESTIMONY OF WILLIAM STEVENSON
NATIONAL SOCIETY OF PUBLIC ACCOUNTANTS

I. Introduction

On behalf of the 20,000 members of the National Society of Public Accountants (NSPA) and the 5 million small businesses and individuals they serve, I would like to thank Madam Chair and the members of this Subcommittee for the opportunity to express the Society's views on the development of "Taxpayer Bill of Rights II" (TBRII) legislation. The Society feels that the current Taxpayer Bill of Rights provides a great deal of assistance and comfort to the public in dealings with the Internal Revenue Service. However, our members have identified several areas in which the first bill could be more effective. First, a new bill of rights should promote consistency within the Internal Revenue Service in its treatment of similarly situated taxpayers. For example, taxpayers in Connecticut should be confident that they are treated similarly to taxpayers in California. Second, TBRII should empower the Internal Revenue Service to act more quickly in serving the taxpayer. Third, an expanded bill of rights should include protection for tax practitioners, who work daily to ensure that the proper amount of taxes are reported and paid. Finally, a new bill of rights should make certain that taxpayers know when they are being examined and exactly what rights they have in that particular examination.

II. Consistency Within the Internal Revenue Service

Currently, the IRS works in this country through seven regions which are further subdivided into sixty-three districts. In addition, there are ten service centers around the country which provide the main contact point for many taxpayers.[1] These centers receive most of the returns, letters and phone calls from the general public. Within this infrastructure, the Service employs over 100,000 individuals, each with a different set of personal standards and values that influence the way they perceive and serve taxpayers. This diversity is a vital asset to the organization, creating more insightful decisions by drawing from varied viewpoints. The problem for the Internal Revenue Service is balancing this diversity with the expectation of taxpayers that the Internal Revenue Code be administered consistently throughout the country.

A. Offers in Compromise

The offer-in-compromise (OIC) program provides an example of the difficulty the Service faces in administering the tax code through its thousands of employees. In 1992, OICs received a new emphasis at the IRS as a means to reduce the troublesome amount of debts labelled "currently not collectable." In that year, the program was expanded to allow those in financial difficulty to pay what they could and settle their federal tax liability. The procedure involves preparation by the taxpayer of an offer which accurately reflects his or her ability to pay off a federal tax debt. This offer is then submitted to the Internal Revenue Service, where it is accepted or rejected depending on the Service's analysis of the taxpayer's ability to pay.

According to a 1994 survey by Tax Analysts[2], taxpayers submitting an offer in compromise in 1993 had anywhere from a 79% likelihood of acceptance in Mississippi to a 19% likelihood of acceptance in California's Laguna Niguel district. On average throughout the country, 53% of offers were accepted. Taxpayers in Utah offered an average of 3 cents on the dollar in order to gain acceptance, while acceptable offers by taxpayers in New Hampshire averaged 31 cents on the dollar. The national average required for acceptance was 15 cents on the dollar.

This program points out the need for an IRS focus on consistency from the inception of a regulation or a program, rather than after a problem has arisen. It should be noted that since the publication of the above-mentioned survey, the Service has taken steps to promote consistency in the offer-in-compromise program. NSPA would like to suggest a provision for TBRII that could enhance consistency before such wide disparities come to light. Give the Internal Revenue Manual the force and effect of law, an action that would require IRS personnel around the country to follow the same guide.

---

[1]Current plans indicate that these numbers will be subject to change in the near future.

[2]Guttman, George, "Compromise Offer Acceptance Rates Vary by Location," Tax Notes, Vol. 62, Number 3, Monday, January 17, 1994.

B. The Internal Revenue Manual

Today, the IRS invests substantial amounts of money every year in updating and revising the Internal Revenue Manual. It provides guidance to Service employees on every facet of the revenue collection process. Generally, it is available for public inspection. Millions of Americans are directly affected by the provisions of the manual and the interpretations thereof. However, in a line of precedent dating back to Sullivan v. U.S., 384 U.S. 170 (1954) and recently restated in Capitol Federal S&L, 96 T.C. 204 (1991), "[G]eneral statements of policy and rules governing internal agency operations or 'housekeeping' matters, which do not have the force and effect of law, are not binding on the agency issuing them and do not create substantive rights in the public." Consequently, if a taxpayer goes to court solely because an Internal Revenue Service employee failed to follow the manual, the taxpayer will lose that claim.

The Capitol Federal S&L case goes on to say that, "Generally, agencies are bound by regulations having the force and effect of law." In order to bind the IRS to the guidelines it sets forth in its manual, NSPA asks this Subcommittee to initiate legislation to give the Internal Revenue Manual the force and effect of law.

The manual's current lack of regulation status leads to inconsistency in the tax system because individual districts develop different methods for handling similar problems. Those methods do not necessarily agree with the national office policy as set forth in the Internal Revenue manual. To use the offer-in-compromise program again as an example, I know from personal experience of at least one district that has its own separate manual for offers in compromise. In that same district, when I reminded a revenue agent that an action he was about to take violated a national office policy, I was told, "That may be national policy, but it's not the policy in [this] district." Such inconsistencies are unfair to the taxpayer. The best solution to the problem is to require the IRS to live by the rules it puts forth for itself in the same manner that taxpayers are required to live by the rules that the IRS puts forth for them.

This is not to say that districts should not be allowed some flexibility. Clearly, in an organization as large as the IRS, not all solutions will work effectively for all parts of the country. If this subcommittee should agree that the manual should have the weight of regulation, we would also request that a process should be created whereby districts can petition the national office and be granted a right to develop their own guidelines on certain projects. These guidelines should then be released to the public. With public access allowed, taxpayers would have an opportunity to be aware of differences between national office policies and district policies before relying on either one. And, once a taxpayer relies on an IRS policy, he or she would have the comfort of knowing that it would stand up in court.

It is not NSPA's intention to handcuff the Internal Revenue Service with either of these proposals. In a system where diverse individuals analyze an Internal Revenue Code that is at times ambiguous and subject to varying interpretations, strict uniformity is obviously unattainable and to some extent even undesirable. However, a federal law should be administered as uniformly as is practical throughout the country. Today, that does not always happen. To remedy the current difficulty, NSPA respectfully recommends that this subcommittee consider giving the Internal Revenue Manual the force and effect of law. This would help to move the Internal Revenue Service toward a more consistent application of the tax law throughout the country.

III. Empowering the IRS to Serve Taxpayers More Quickly

Many taxpayers dread the receipt of an IRS notice not only for the possible monetary penalties that it may entail, but also for the loss of productivity that invariably follows as efforts are made to rectify the problem. This drain on resources is a substantial component of the cost of compliance, whether the money is spent on staff time, representation fees, or both. As a result, taxpayer rights that allow certain issues to be resolved quickly while still being fair to both sides are worthy of support. S. 258 contains a provision that is particularly helpful in this area and NSPA would like to submit another for your consideration.

A. Support for Section 501 of S. 258

Section 501 of S. 258 would allow the Internal Revenue Service to withdraw certain notices of

liens. Under current law, once the IRS places a lien on a taxpayer, it cannot be released until the full debt is settled. Often this hinders the taxpayer's ability to repay the money, as it limits the funds available through borrowing. Section 501 would allow the withdrawal of such a notice by the Service for several reasons, including facilitating the collection of the tax liability. NSPA supports this provision because of its common sense approach to removing liens where they hinder the taxpayer's ability to repay a debt.

B. Request for a Limited Power of Attorney Sign Off on Tax Returns

Another item which is currently in limited use by the Internal Revenue Service but which could be expanded to all returns is a limited power of attorney sign off directly on a form. Today, taxpayers who file electronically sign a Form 8453. In addition to meeting the signature requirement for the taxpayer's individual return, this form also allows the IRS to call the practitioner who transmitted the return in the event that any problems arise which delay the taxpayer's refund. The Form 706 estate tax return also includes a signature line which allows a practitioner to act as the estate's representative before the Internal Revenue Service.

Similar authorizations could save time and otherwise reduce taxpayer burden if they were included on all tax returns. Currently, practitioners who prepare returns for their clients sign the forms, but they are not empowered by that signature to discuss the return with the IRS. When taxpayers receive notices from the Service, their first call is usually to the person who prepared the return. The preparer in turn calls an IRS agent who asks, "Do you have a power of attorney on file?" Most often, this is not the case and the resolution of the problem is delayed while the proper form is completed and filed. If the taxpayer could assign a limited power of attorney on the return at the time of filing, the notice would still be sent to the taxpayer and the taxpayer would still, most likely, call the practitioner. The difference would be that the limited power of attorney would enable the practitioner to discuss the return with the Service immediately and to begin taking whatever steps are necessary to resolve the problem.

Provisions like these, which allow the Service and/or the practitioner community to more quickly resolve taxpayer problems when they arise are valuable elements of a taxpayer bill of rights. By saving taxpayer time, these provisions reduce the drain on taxpayer resources that can be caused by IRS notices. NSPA requests that this subcommittee consider section 501 and a limited power of attorney for inclusion in a taxpayer bill of rights.

IV. Protection for Practitioners

Within the tax system, practitioners provide many services to the taxpayer. Among the most important functions a practitioner performs is that of liaison between the IRS and the taxpayer. As a result, any discussion of taxpayer rights will, of necessity, include issues that impact the practitioner community. NSPA would like to raise two concerns with respect to practitioner rights in relation to the Internal Revenue Service.

A. Recognition of Powers of Attorney Before the Internal Revenue Service

First, many practitioners routinely experience difficulty in having IRS field personnel honor the valid powers of attorney described above. All too often, IRS employees make direct contact with taxpayers, even after receiving a power of attorney authorizing representation by an attorney, CPA or enrolled agent. In such instances, the taxpayer generally is either unaware that such conduct is improper or is afraid to question the propriety of the contact for fear of alienating the IRS employee.

NSPA recognizes that legitimate circumstances may on occasion necessitate a direct taxpayer interview. Nevertheless, where a power of attorney is on file, such an interview should be arranged through the authorized representative and conducted in that representative's presence.

This improper disregard of a power of attorney compromises the rights of both practitioners and taxpayers. NSPA believes that safeguards should be established, such as some appropriate form of sanction, to discourage this practice.

B. Removal of Preparer's Social Security Number from Tax Returns

Second, the practitioner community is becoming increasingly concerned with the requirement that a paid preparer's social security number must appear on returns. Currently, practitioners are required to include their social security number on every return they prepare. In today's world of instant access to volumes of sensitive information about an individual, the social security number is often the key to obtaining this information. Preparers feel that the requirement that they include their social security number on returns violates their privacy, as it provides the client with the opportunity to acquire certain records that would not otherwise be available. NSPA suggests that this committee review this requirement with the Internal Revenue Service and develop a separate system for identifying tax preparers.

V. Knowledge of Examination and Rights Therein

The first taxpayer's bill of rights focused heavily on making sure that taxpayers were aware of their rights in an examination and that those rights were protected. Since passage of the first bill, the IRS has created several new types of examinations. Questions have arisen regarding what a taxpayer's rights are under these new exams and often practitioners hear various answers. Two examples come to mind which illustrate the continuing need for legislation to protect basic taxpayer rights.

A. Current Examination Examples

First, the Internal Revenue Service now conducts electronic filing (ELF) compliance checks. This check often consists of a revenue agent and a member of the Service's criminal investigations division arriving at a practitioner's office, sometimes announced. The Service personnel are there to monitor compliance with the revenue procedures that govern electronic filing. The problem is that there are no clear guidelines on what these Service employees are supposed to be reviewing. Some agents ask only to see basic paperwork, while others demand the entire supporting file on the return. In addition, it can involve a review of taxpayer returns and supporting documents without notice to the taxpayer.

Another example of this problem is an examination known as an employment tax compliance check. In this procedure, the IRS sends a notice to a taxpayer stating that the Service will arrive at the taxpayer's place of business on a specific date to review compliance with employment laws. The notice requests that the taxpayer provide copies of all current employment-related returns, all of which the taxpayer has already filed with the IRS. When NSPA asked the Internal Revenue Service whether or not a taxpayer who received a notice of this examination was required to comply, the answer was no. Taxpayers can refuse to provide the information and basically tell the IRS, "If you want to audit me, do so." Nowhere in the letter for this examination is the taxpayer informed of the right of refusal.

B. Recommendation for Specific Notice

Taxpayers and practitioners undergoing these examinations have a right to know exactly what is required of them under the circumstances. The Service has in some cases been responsive to NSPA concerns about explaining the rights of a taxpayer in every examination situation. However, Service action often comes after the programs are already implemented.

To correct the problem, NSPA suggests that this Subcommittee include in a new taxpayer bill of rights a requirement that any notice of any type of examination or compliance check include a specific explanation of the affected individual's rights under that particular examination. If an examination is unannounced, those conducting the examination should have an affirmative duty to inform the taxpayer or practitioner of their rights before beginning the examination. The explanation of rights should specifically describe what a taxpayer or practitioner is required to show to the Service personnel. It should also tell taxpayers whether they are required to submit to the examination or not. If there is a right to refuse the examination, taxpayers should be informed of the consequences of refusal.

Before concluding, please permit me to point out that the issues raised here today are in no way intended to detract from the efforts of Commissioner of Internal Revenue Richardson and her

dedicated staff. They work tirelessly to administer the tax system in the United States, one of the most difficult and thankless jobs in the realm of public service. The National Society of Public Accountants hopes that the remedies sought here today will improve the current system, making it easier to administer and easing the burden on the Internal Revenue Service as well as the taxpayer.

VI. Conclusion

In closing, Madam Chairman, I would like to again thank you for the invitation to appear before the Subcommittee today. The National Society of Public Accountants applauds your leadership and that of the members of this Subcommittee in addressing the important issue of taxpayer rights. NSPA stands ready to assist you in your efforts in every way possible.

Respectfully submitted,

Dr. William Stevenson
Chairman of Federal Taxation
National Society of Public Accountants

Chairman JOHNSON. Thank you very much. Your testimony has been very helpful, and it is a pleasure to have those of you who are out there on the front line making good, constructive contributions and giving us the opportunity, through a number of different ideas that you have brought up today, to make the Tax Code not only more enforceable for the IRS but more user-friendly for the people affected.

I do want to ask a couple of things. First of all, I just want to put on the record that our current experience with political appointees isn't great, and I guess I personally take the view that Government, the legislative arm, used to be fairly bipartisan once the elections were over. And I think there is going to be a decade ahead when that is not going to be true.

I am not so keen as I used to be on solutions like ombudsmen confirmed by the Senate. I think you can see there have been some grossly unfair problems generated around nominees, and people's lives are being destroyed for no apparent reason. And I think this is going to mean for a time it may be hard for us to get good people who are willing to do this. So I guess at this point I would have to say that at least I am more interested in some other approaches and giving the system far greater guidance and exercising far more oversight.

I do think that perhaps if we were doing more aggressive oversight, we would catch some of these problems earlier.

I want to just ask your opinion, since we have such a good collection here in front of us. This issue of regulations is very difficult. It is very difficult for elected Representatives. You are out there, and people are saying, they gave us guidance, now that the regulations are out, they contradict their guidance, and they are making us liable retroactively, and that is not fair.

It seems to me that there are a lot of good reasons not to have laws go into effect until the regulations are prepared. First of all, I don't think you can really tell necessarily what the law is going to mean until you get regulations in place. For the IRS, that would be particularly difficult, and I understand that.

But I would like you to just comment on that. What has been in your experience the working relationship between guidance and regulations? Has the delay in the adoption of regulations been a problem? Or is the anecdotal evidence that tends to drive so much of an elected official's thinking not a major problem?

Anyone on the panel could volunteer.

Mr. Lane.

Mr. LANE. It is a serious problem. I mean, it literally is what created the tax shelter industry. You know, we had a very complicated series of laws passed, very close in time, generated a need for an incredible number of regulations to be issued. The time-lag between enactment and the regulations coming out caused the window of opportunity for unscrupulous people to go out and promote really baseless interpretations of what the law was going to do, and it created this environment.

I think that is a real problem, and it is going to continue to be a problem until we get this regulation thing squared away. One of the problems, quite frankly, is we have had what, 27 tax law changes in the last 29 years. You know, one of the best things the

Congress could do for this country would be to leave it all alone for a while. Quite frankly, it is a major complication for small business to try and keep on top of this stuff.

Chairman JOHNSON. You are stealing his theme. [Laughter.]

Well, there are a lot of ramifications to not letting a law become effective until the regulations are written, one of which is that you would get very different CBO estimates, and so it would make a big difference in actually how often we do change the tax code, because we would not get first year numbers of the same power. And I just want the others to have a chance to comment on whether it is worth the price that we will pay, and there are some significant prices if you do not let tax laws, particularly, go into effect until the regulations are written.

Any other comment?

Mr. THAYER. I would just like to kind of follow up. As you know, Congresswoman, we have just been debating, very avidly here on the Hill, and you have had input from us on this whole regulatory flexibility amendment act, and as you know, to get some teeth into the act, the 1980 Act, we called for the judicial review component of that.

I kind of go back to what has just been alluded to before. Obviously, from the business community, what our people are telling us, especially the smallest of small business, is that, you know, we are inundated now, and we really need you, just to leave us alone and let us do our business. But if you are going to regulate us, at least assess the impact of that regulation on our ability to do business as you have a law in effect, that says you are supposed to do that, before you put it into effect upon us.

And of course the number one perpetrator of not doing that has been the Internal Revenue Service, and that is why I represented the survey that I did in terms of my testimony.

Mr. JEROLD COHEN. Madam Chairman.

Chairman JOHNSON. Yes.

Mr. JEROLD COHEN. The regulations that are retroactive are interpreted regulations. They are not the substantive regulations. Substantive regulations must be prospective.

Chairman JOHNSON. What is the difference, though, from a taxpayer's point of view?

Mr. JEROLD COHEN. Well, from a taxpayer's point of view, the tax law is the law that you give us, that the Congress gives us, and there are many provisions of the code in which we have not been able to get regulations yet. What many of us are looking for from the regulations are some help in interpreting the provisions that the Congress has given us.

Now, to put in a requirement that the Service cannot make an interpretative regulation retroactive to the time Congress made that the law, leaves you with a real gap as to what the law is between——

Chairman JOHNSON. Mr. Cohen, I guess I wouldn't be recommending this as a policy governing past law made that doesn't have regulations, but only prospectively. That new tax law could not go into effect until——

Mr. JEROLD COHEN. That the law itself would not go into effect until——

Chairman JOHNSON. That is right. The law itself would not go into effect. First of all, it would force the Congress to want to write much simpler law, so that the regulations would be simple, so the whole thing would work.

Mr. JEROLD COHEN. I am totally in favor, and have written on the law being simpler, and also on the regs being simpler, and I think the Service is struggling with that now. I think that is an important measure.

But for the law not to go into effect until the regulation came out would put within the hands of the Treasury when a particular law goes into effect. And I don't think you would want to do that.

Chairman JOHNSON. Don't you think it would also force the Congress to write simpler law, and be clear about what it was they intended? And enable us to have shorter time frames?

Mr. JEROLD COHEN. I am not sure what forces the Congress to do anything. I have not been able to figure that out. Maybe another 30 or 40 years, that will come to me.

Ms. WALKER. But on the other side, it's Congress's responsibility to decide when that law is effective, and I don't think they should delegate that to the Treasury Department. We support the changes concerning the retroactivity of regs. However, in addition, the AICPA believes that by having these provisions the regs will get out sooner, and we think regulations in many cases are very, very important to efficient administration of the tax law.

Chairman JOHNSON. But aren't we delegating that authority anyway, because by the time they get the guidance out there, and then the interpretation of regs, the law is different than you thought it was, and so we have effectively delegated.

Ms. WALKER. Unfortunately, in today's world, which is much more complicated, you have delegated a lot more now than you did 20 years ago, and I don't know anybody that sees a way around that.

But to delegate the effective date, I——

Chairman JOHNSON. Well, let me yield to my colleagues here.

Mr. KEATING. Well, there is one other suggestion I might have on this. I don't know, procedurally, how you do this. If part of the problem is that the regulations don't reflect the law itself, maybe there could be a procedure that would require the regulations to be submitted to Congress, and for Congress to do some procedure to review them before they take affect.

Chairman JOHNSON. Well there is that process of regulations review in many States. Constitutionally, it has some difficulties, and I don't imagine that the Congress would adopt that. Also, I am not sure that any congressional committee would be up to evaluating whether the regulations were correct or not.

So I don't see that as a solution, but I am interested in this idea.

Mr. LANE. Could I add a comment here? One of the concerns we have as practitioners is we are dealing on a daily basis with taxpayers in our offices. We are trying to give them guidance as to how they can comply with the laws, and you know, the taxpayers have a brilliant way of really seeing through to the kernel of things sometimes.

And just by way of illustration, how this regulation thing can really get—and the tax law, the necessity for simplicity in the tax law. I am going to tell you a little story about a client I had.

Remember a couple of years ago, when we were going to enact a limitation on the amount you could deduct at a business meal, and it was going to be $25 per person? I had a client who did a tremendous amount of T&E entertaining.

And I said to him, you know, you really have to understand this. You know, I got him into my office, and I sat down, and I said, you really have to understand these rules because it really does affect you, particularly, because you do so much of this T&E.

And I started to explain this process, that no matter how much the bill is, it would be limited to the $25 or $35 per person. And after I got into about 15 minutes of explanation on this, he said, Wait a minute, I don't need to hear any more of this.

And I said, No, you have to understand this. He said, I don't need to hear any more of this. I said, Why not? And he said, Because I will wait till I get the bill before I figure out how many people were at the dinner. So what he was going to do, if the limitation was $25, and he had eight people at the table, and it was a $250 bill, he would put down he had 10 people at the table.

Now the taxpayers are going to look at this stuff. The point of that story is you can't set up regulations that are so complex, it breeds disrespect for the law.

Because when you do that, and they start to nickel and dime it on that stuff, before you know it they're not declaring major pieces of income they get.

Chairman JOHNSON. I guess part of my thinking is that if we could begin to see what the regulations are going to be, we ourselves might decide that that wasn't such a hot law, and fix it before it went into effect.

Mr. STEVENSON. I guess the bottom line is, maybe Congress does need to take another look at certain kinds of regulations, when it is brought to their attention that the regulations are not in keeping with the theme of the actual law, what their intention was.

Chairman JOHNSON. Let me recognize Mr. Hancock now.

Mr. HANCOCK. Frankly, I think it is a little ridiculous for Internal Revenue and their people to sit around thinking they can come up with something that is going to outsmart the people that are paying the taxes.

I mean, they are going to get outsmarted. They say it won't be dishonest or illegal. They will follow the plan.

One of the things that I would like to know—maybe you can answer this. In your estimation, does Internal Revenue get more money from people that do not take advantage of the deductions that they are entitled to, because they are afraid of Internal Revenue, than they have people that commit fraud, to try to cheat?

I realize it is strictly a speculation.

Mr. LANE. That is a tough one to answer because, you know, we don't know what the other side of it is. But I can tell you, there are very few people claiming the home office deduction——

Mr. HANCOCK. That are really entitled——

Mr. LANE. That are entitled to claim it, and are being told by their tax advisers not to run the red flag up. I can tell you that right now.

Mr. HANCOCK. But is this not true in a lot of other questionable areas, where they say, Well, you know, this would save me $300, but since it is a little bit of a gray area, I won't do it.

I mean, for instance, you mentioned the meals and entertainment deduction. I have had people say, Well, I have just quit deducting, even though I spent a lot of money for entertainment. I just don't deduct them anymore. A legitimate expense, but I don't want to take the chance.

I have even had people tell me, you know, I have got mileage. I just quit deducting my car mileage because I don't want to get involved with Internal Revenue. I fill out the 1040EZ form, if I can, rather than itemize.

I just wonder, you know, years ago, I remember my dad—his name was John Hancock, but not the one that signed the Declaration of Independence—but anyway, he made a comment that years ago that a person's No. 1 fear in many cases was a fear of dying. Now it is fear of the Internal Revenue Service. And I think you mentioned that. And I get this all the time, you know.

Mr. LANE. But you know, there is an old saying that there are two things in life that are always going to happen. That is death and taxes. But the punch line on that is that the death doesn't get worse every time Congress meets. That is the problem. [Laughter.]

Mr. KEATING. And death doesn't end your tax problems either.

Mr. HANCOCK. One of the taxes that I am worried about right now is the estate tax, which takes effect after I die. And, in fact, I think we are going to be addressing that on Monday.

You know, we have been talking all week about the rights of people on welfare. We talk about the rights of the criminal. We talk about minority rights. And I tell you, we have got to start talking about the rights of the people that are paying the bills for all of these things.

And if we don't—and I like Mr. Cohen's statement, I ran on the issue in 1988, that the best thing that could happen to really give this economy and this country the biggest boom that the world has ever seen, would be for the U.S. Congress to pass a moratorium on any change in the tax law for at least 5 years.

If we could get that job done, we would have the budget balanced a long time before the year 2002.

I have been up here 6 years, and I have been talking about it. Quite frankly, the problem is you have got too big a vested interest of people that benefit and make a living from changes in the tax law. I guess. Or maybe it's just a plain old lack of commonsense. I don't know what the answer is on it.

But Mr. Thayer, I am a small businessman. When I first ran for Congress, I knocked on a lot of doors and I remember one place in particular. A small businessman says, What are you doing for small business? And I said, What do you want done? He says, Nothing; leave us alone. [Laughter.]

And I think that is the message that we need to be sending and I hope we can do that over the next several months here on Ways and Means. So I have spoken my piece. Thank you.

Chairman JOHNSON. The gentleman from Ohio, Mr. Portman.

Mr. PORTMAN. Thank you, Mrs. Johnson. It is great having you all here. I wish we could stay here all afternoon and evening and talk about these issues because we have all these great minds, in small business, tax, and accounting, all together.

By the way, Mel, they are actually speaking against their own interest here, because they are talking about simplification and coming up with ways to end up with fewer, not more clients, which I appreciate from this panel.

Mr. HANCOCK. Well, that is right, but they understand what happens if we don't do it also.

Mr. PORTMAN. That is right; that is right.

Let me, just briefly, go back to some of the discussion about regulations, and the Chairman's idea, which I think is a very good one, of trying to tie the law, or the statute we passed here, more directly to regulations, so that we understand what we are doing.

We pass a law here and it is gone, we don't think about it again until enough of our constituents who are taxpayers come back in the case of the IRS, and complain to us about it, and we are shocked to find out what we have wrought.

But there is some precedent for this sort of a look back from Congress. The constitutional issue, as I understand it, is really more the delegation of powers. In other words, Congress is concerned, under the Constitution, rightfully so, about delegating our power to the Federal agencies.

And I think, in effect, we have done that over the years. But to have the agencies come back to us with proposed regulations, and have us, in essence, review them, and then approve them, I don't think would involve the same constitutional issues.

In fact in some sense it would solve existing constitutional problems of delegation of powers.

And just for those of you who don't know it, in this little unfunded mandate bill we just passed, we set in place a new procedure you might want to look at, whereby we have expedited procedures here in Congress to review Agency action down the line, after we pass a new mandate.

It is very complicated legislation. Our own Rules Committee had a lot of heartburn over it, and those of us who were promoting it on a policy basis are appreciative to them for letting us get it through.

But it handles some of the problems you are talking about, and does so in a way that permits the committees, like the Ways and Means Committee and the authorizing committees, to look at the regulations that come down the line after we act, and to decide whether or not those regulations are in keeping with what we have done, and if they are not we can change them, or we can simply rubberstamp them, approve them, and they will go ahead.

If we don't act, incidentally, which is the important incentive here, the regulations don't go forward. So there will be some incentive to actually review meaningful and important regulations, and perhaps to let die and to have the Agency start over again.

Second, I would say to Mr. Thayer that this same Act does provide, for the first time ever, judicial review of Agency action with regard to cost benefit analysis for the private sector regulations,

and of course, which is the focus of the legislation, local and State government regulations that we will be issuing in the future, that are mandates, without providing the funding.

So there is now some precedent to build on, I think, both to have judicial review of Agency action, including IRS action in the future, and to have some sort of a procedure for Congress to look at what we have wrought down the line.

But let me quickly get a couple of you into a dialogue, if I could, over one specific measure that is among the dozens that we have talked about today, and that is this whole notion of the new ombudsman or taxpayer advocate, and whether it should be an independent office, or not.

I talked to Senator Grassley, briefly, about it, whether a political appointee makes more sense, or an internal office, and I think Mr. Lane, you and Mr. Thayer, and perhaps Mr. Keating, have different notions of that.

I would like to hear the two or three of you speak about it. Maybe Mr. Thayer could start off, again, explaining why you think it is so important to have a political appointee in that position.

Mr. THAYER. Well, as we said to you earlier, we really believe that having a person in that position, responsible to Congress as opposed to being responsible to the Commissioner, relieves that person of a burden, obviously to account, and also gives at least the impression to the taxpayers—we would like to think more than that—that at least there will be a fair hearing, or a fair representation in terms of that office.

So we think it just remove that person, if you will, from being compromised in any way by the Office itself.

Mr. PORTMAN. Internal.

Mr. THAYER. That is right.

Mr. PORTMAN. And Mr. Lane, your concerns about that?

Mr. LANE. I guess our concerns are that the system in the field—where these cases happen—the district director is responsible for that district. The problem resolution officer reports to the district director.

So the district director has got a direct vested interest in resolving that case because he owns it.

And if the collection division is trying to levy on a taxpayer's wages, and problem resolution says they ought to not levy on it, the district director gets handed the decision. He owns the problem.

If you take the problem resolution function out from under that district director's jurisdiction, and now he is aligned with this national political appointee, I think you create a situation where the district directors can say, Well, you know, I don't have that problem, that is not my problem anymore, that is the ombudsman's problem, the taxpayer advocate's problem.

You know, if you are envisioning a taxpayer ombudsman, or a taxpayer advocate that is in the National Office, and that is the only one in the organization that is the political appointee, and everybody else still works for the district directors, then that situation might work very similar to the way you have chief counsel and the Commissioner appointed.

But I guess my reaction as a practitioner—and I deal with problem resolution probably three and four times a week—is that PRP is not broken. You don't need to fix it.

The testimony we got today: that ATAOs, went from 65 to 12, that, in Mr. Cardin's evaluation, could be looked upon as you are really having too restrictive a determination as to what qualifies for an ATAO.

But in the reality, what happens in the field, the stuff is getting resolved without having to go that far in the process. You bring it to their attention, and they are resolving it in some 80–85 percent of the cases.

I can tell you, I never had to go insisting that we get the ATAO. I have gone in with those situations, and it has been resolved.

Mr. PORTMAN. And partly being resolved because there is some accountability in the system to resolve it within——

Mr. LANE. Absolutely. It is in the district director's direct interest to get that issue resolved, so it doesn't turn into this case we heard about this morning with this poor woman from Texas.

Mr. PORTMAN. I think I have already run out of time, but Mr. Cohen, you are nodding your head regarding this. Do you have a similar story to tell with regard to your clients?

Mr. JEROLD COHEN. Yes, I do. I think it would be a mistake, and the Tax Section has been on record in this regard, to have a political appointee inserted within the Service. I really do think the system works as it is working now, and that the oversight of this subcommittee is the overall governing force to make certain that the system is working, and I think that it works best as it is presently set out.

Mr. KEATING. I would like to say something further about this. There is nothing in the bill that says the political appointee would change the current bureaucratic structure when problem resolution officers report to the district directors. Absolutely nothing. It is just independence of appointment.

Mr. PORTMAN. Yes, there is nothing that would necessarily say that all the taxpayer advocate local offices would report right up to the national office. But one thing that we found is that when there is a problem in the local office, it gets bumped, someone may go up to the National Office—it just gets bumped down. And in some cases, it just doesn't get resolved.

Mr. KEATING. The other problem is the IRS never comes in here to make substantial taxpayer rights recommendations. You can look at the IRS recommendations over the last 15 years. Every time there has been a bill, the Commissioner comes in, says no, we can't do this and we can't do that.

The fact is the installment agreement changes that have been made by the IRS and much of the positive things the IRS has done lately have come because of legislation introduced in the Congress. If we had a real taxpayer advocate, someone who comes from outside the Agency, who doesn't have to worry about where am I promoted after being a taxpayer advocate, would do a much better job, bring some fresh approaches, and actually come before this committee to say, Look, I know where the bodies are buried out there, I know where the taxpayers are being abused. I don't have to worry about my future with my buddies in the Agency.

Here are the problems that are out there, and these are my recommendations. We may even see some solid legislative recommendations. Now, we almost never get such recommendations from the IRS.

We get some trivial little things about interest abatements and whatnot, but that is shuffling deck chairs.

Jack Wade was in the bureaucracy in the IRS for many years. Maybe Jack could add a couple of comments about why he thinks this is very important. He has been in the bureaucracy, and I think he might have a couple of things to add on this point.

Mr. WADE. In one of my books, "When You Owe The IRS," I talked about the siege mentality inside the IRS, the sort of mission-minded mentality. The problem is that when you have been working for the IRS for 20 or 30 years, and the taxpayer ombudsman is typically somebody who has been around for that long, you tend to view things in a certain way. Often the attitude is, well, this is the way we have always done it, this is right, and anything else outside this, this is wrong.

We think that to be a true taxpayer advocate, you have to bring in somebody that has a fresh mind, somebody who is open to new ideas and new concepts.

People inside the IRS have known for a long time about the problem of the joint and several liability. They know the horror stories with spouses who get hit with tax liabilities caused by problems from their husbands—nobody has ever come up with a viable suggestion or solution from the IRS.

As David said, most of the suggestions that you get from the ombudsmen are very minor, such things as changing the Social Security number on the mailing labels. I think that is a good idea, but it is not a significant creative approach to solving some of the problems that need to be solved in dealing with taxpayers.

We are only looking for a way to bring in a fresh person with some fresh ideas, who can look at things a little bit more objectively.

The idea, for example, that you have user fees on taxpayers who need installment agreements, to me, is just absolutely abhorrent.

Now it is going to cost taxpayers, who can't pay their taxes, more money to pay their taxes in their installments. I think a true taxpayer advocate would have stepped in and said, This is not fair, this is violating the rights of the taxpayer, and this is something that we shouldn't be doing to people who are having difficulty paying their taxes.

There are a lot of instances like this, where we can cite, that these kinds of things should not be going on.

Now, we haven't really studied the idea of bringing the problem resolution officer in a direct line chain of command to the National Office, but when the ombudsman who talked here today—I kind of liked his approach of being involved in the selection process.

What we find in the field is that too many times there are a number of problem resolution officers who really do not have the guts to stand up to a functional division manager, such as a collection division or an audit manager, and say, This should not be happening.

Sometimes we found, and practitioners have reported to us, that the problem resolution officer bucks it back up to the division that started the problem in the first place.

The real problem is that the problem resolution officer, when he or she is done with that job, has to go back somewhere within the IRS to finish his or her career.

It is very unlikely, that somebody is going to stay a problem resolution officer for the whole length of their career. So they have to go back to their function, typically, where they came from—the Collection Division, or the Audit Division, or whatever.

So the problem resolution officer is not going to be butting too many heads, too many times.

So what we are looking at is a way to give the problem resolution officer some strength to be able to step in and issue a taxpayer assistance order, for example, if that is what it takes to get the job done.

We think that there needs to be some accountability here, and we need to find some way to strengthen that problem resolution officer so he, or she is not afraid of butting heads, if that is what it needs.

But in terms of taxpayer advocate, Mr. Thayer said it very eloquently. We don't believe that this is a job that is going to be held by a political hack.

We don't think that any of the Commissioners have been political hacks, nor any of the chief counselors who have held those jobs.

We think that the administrations, at least within the last 20 years, have held the IRS in high esteem. They have gone into the tax and accounting community and selected people with very impressive credentials.

If we ever found that this was going to be a dumping ground for a political hack, you can bet that we would be terribly upset and let you know.

We think that the IRS has been held in high enough esteem that a true political appointed ombudsman would also be someone of equal credentials.

Mr. PORTMAN. Thank you, Mr. Wade, and I think all the panelists, Ms. Walker, or Dr. Stevenson, may have additional comments. Madam Chairman, do we have time?

Chairman JOHNSON. Yes, absolutely.

Ms. WALKER. Let me just be real quick.

The AICPA is on record as stating that we don't believe it should be a political appointee, that it works best, the system that is in place now, as part of the overall Internal Revenue Service.

And in listening to all of this, I guess I would just say why isn't all this part of the Internal Revenue Commissioner's job, as being, you know, a friendly place collecting revenues for the Government as opposed to an adversarial relationship?

I mean, I would put it right at that level.

Mr. PORTMAN. Dr. Stevenson, do you have any comment?

Mr. STEVENSON. Very briefly. As a student of the administrative processes—that is what my doctorate is in—I think, in balance, the system that is in place at the local level has problems in various districts, but on a broad-brush stroke, as Joe said, it's not really broken.

However, there is one problem that we do meet with the Internal Revenue Service officials several times a year—and we bring this community that is sitting here—we bring advocacy issues to the Commissioner and the Commissioner's staff, and various other people.

They listen to us, but we're not really sure that they hear us. Now, when we come and speak to you about certain issues, I get the impression that you are listening and hearing.

So maybe, in balance, with the use of oversight for taxpayer advocacy, plus the work that we are doing at the ground roots level, may help the system along a bit.

Mr. PORTMAN. Thanks very much. I would just make one final comment, and that is, given all the testimony we have heard today, and particularly from this panel, that you all represent many powerful groups' interests out there in the tax community. I would hope that you all work with us toward simplification over time.

Because I think when you get right down to it, a lot of the concerns we have raised here are solved not so much by tweaking the code, or changing the administrative process, and so on, but by just simplifying the code and making it clear, not within the parameters of having to figure out what income has risen, if it is an income tax, but trying to make clear what the actual taxpayer responsibilities are, and clear what the IRS responsibilities are, to avoid a lot of these problems.

So I would hope you will stick with us, and work with us closely. I know that, again, as I said, initially, many of you, frankly, among your constituencies, will have conflicts of interest on that very issue. Because the more we simplify it in some senses, the fewer accountants and lawyers, and other tax advocates that one would need.

Mr. LANE. Mr. Portman, don't be concerned at all. Everybody at this table, I am certain, would be favor of tax simplification, even though it might cost us a couple of clients.

Because no one is more beleaguered by all the changes than the people that are in the business, that are constantly having to explain the changes.

I mean, if you had to sit down with a client that had a business car, he put in business use in 1982, and changed in 1984, 1986, 1988, and 1990, you would have some sense of the frustration we feel. There literally was a law change every other year in that category. A different way of treating the depreciation——

Chairman JOHNSON. Let me recognize Mr. Hancock.

Mr. HANCOCK. Yes. I think we are dealing with seven different depreciation schedules now in our company, and I will frankly admit, I don't think anybody can say absolutely, 100 percent, that we are accurate on it. But I mean, we do the best we can.

You know, maybe the solution would be to come up with a psychological examination for people that are going to go to work for the Internal Revenue Service and find out whether they are Socialist or Capitalist. [Laughter.]

Mr. HANCOCK. And then we can make them split it up anyway. Right now, I am wondering if we haven't got about 75 percent of them over there that believe in redistribution of the wealth. Thank you.

Chairman JOHNSON. Well, I would urge you to reflect on the comments that have been made on this panel.

You have pointed to some of the things that we have done together that, by people bringing recommendations to us, and our changing the law, we have accomplished.

I am not so sure that is not the best ombudsman, and maybe it is that we underutilize that oversight capability, and the ability to change the law, because we have traditionally hooked our ability to make those moves from this committee into the macro tax bills.

We are going to try to change that this session. I have the Chairman's backing in that. I am working with the Senators on that. We are going to try to see if we can't do small things that need to be done, just to fix up and clean up, and make more equitable the process, independently, and not as part of macro bills.

But the achievements you point to are ones that we heard testimony on and legislated on. I frankly have more confidence in that process than the process of a political appointee.

And you say if they became political, you would be the first to want to change it. It is very hard to change it, to get it in place, and what I am saying to you is, you really believe this should be a political appointee. That you need to think through and give me an example of where, in Government, that has really worked.

Because I have been a part of passing a lot of legislation that appointed czars for this, czars for that, overseers for this, and ombudsmen for that, and I don't know one, that after a few years, made any bit of difference, but it sure did increase the complexity.

And I am very concerned about the on-the-line front office, where one person has a different agenda than anybody else, and possibly a hostile agenda.

Their agenda may be to embarrass the people they worked with, because that is the agenda of their appointee, to show how important they are, how valuable they are, how you couldn't do without them, because look at all the awful stuff that is going on.

So don't believe that's not a real danger. It wouldn't be the first appointee. But we're talking about decades; we're not talking about weeks.

So if you want us to go down the path of a political appointee, you will have to prove to at least the chairman of this committee, that it has worked somewhere, at some time, for a decade.

I leave you with that challenge, and thank you for your input. I hope that you will work with us through this process, because it is apparent from this hearing that we could actually be doing a lot of interesting things that would work to make the administration of the code function more equitably, and I think that is our shared interest.

Thank you for being here, thank you for your patience in this day-long effort, and I look forward to working with you.

The hearing is adjourned.

[Whereupon, at 3:32 p.m. the hearing was adjourned, subject to the call of the Chair.]

[Submissions to the record follow:]

STATEMENT OF ERNEST J. DRONENBURG, JR.
VICE CHAIRMAN
CALIFORNIA BOARD OF EQUALIZATION
SUBMITTED TO THE OVERSIGHT SUBCOMMITTEE
OF THE HOUSE WAYS AND MEANS COMMITTEE

April 3, 1995

Many members are familiar with my record on taxpayer rights. I strongly supported the Taxpayer Bill of Rights 1 and have been a consistent advocate for protecting taxpayers from abusive tax enforcement practices. However, the purpose of this statement is to express my strong opposition to legislation, H.R. 390, sponsored by Representative James Traficant, that would shift the burden of proof from the taxpayer to the IRS for tax cases. This legislation would have far-ranging and negative consequences on not only the Internal Revenue Service, but also on State tax systems and honest taxpayers across the country.

I am an elected member of the California Board of Equalization. The Board of Equalization is California's major revenue agency and is responsible for the administration of State and local tax programs. The five member Board was created by California's Constitution in 1879 with four members elected from districts and the State Controller serving as the fifth member.

The Board of Equalization administers State and local sales and use taxes, motor vehicle fuels license taxes, and the cigarette tax. The Board also serves as the body which hears tax appeals. The Board of Equalization is also responsible for appraising all the properties of privately owned public utilities and railroad companies for local property tax purposes. H.R. 390 would severely cripple the ability of the Board of Equalization to meet its constitutional obligation to administer and enforce our State's tax laws and would likely amount to an enormous burden on honest taxpayers by protecting tax cheaters.

IMPACT ON VOLUNTARY COMPLIANCE

Both Federal and State tax systems depend on the voluntary compliance of taxpayers to fulfill their tax obligations and properly report their taxable income. We are very fortunate that the current system operates in a way that results in a high level of tax compliance. A key element to this success is that taxpayers understand it is their obligation to document their taxable income, their credits and deductions, be it a receipt from the Salvation Army for a charitable donation or a mortgage interest statement from their lending institution. The commonly accepted practice over the years has been that the party with the access to the evidence

should bear the burden of providing that evidence. It would be a radical departure to suddenly change the rules and say the tax agency must provide the documentation without full and careful consideration of the consequences.

A purported reason for this legislation is that taxpayers fear the IRS and this bill will lessen that fear. However, I contend the practical effect of this bill would be much different. Rather than allowing the taxpayer to provide the necessary documents to prove their case, it would require that tax auditors get that information from any source available, which could very easily involve interviewing neighbors, employers, other family members -- exposing alleged tax violations to a taxpayer's friends, family, co-workers and community. Imagine going to church one Sunday and having the minister tell you about a visit from an inquiring tax auditor -- how would you feel? Consequently, this proposal could prove incredibly intrusive on one's privacy and rather than being a contained matter between the IRS and the taxpayer, could instead escalate into a very public dispute involving anyone a taxpayer knows who could shed light on their taxable income.

If this burden of proof is moved from taxpayer to tax agency, it would, over time, encourage a disregard for compliance by those taxpayers intent on underreporting their income, because it is obviously easier for the taxpayer to not disclose information than it is for tax auditors to track it down. It is difficult to measure what would be the actual extent of the decline in taxpayer compliance -- but I am confident it would be significant and would increase as time passed.

Naturally, this errant behavior would spill over into noncompliance with State tax systems too. Thus, both Federal and State revenue systems can expect a dramatic drop in tax revenues due to increased noncompliance by Federal and State taxpayers. If Federal and State governments are forced to fill the revenue gap by increasing taxes, then noncompliance would increase even more because there would be even stronger incentives not to comply -- thus creating a vicious cycle of higher taxes to bring in adequate revenues, and falling compliance to avoid an ever-increasing tax liability.

INCREASE DEMAND ON IRS WILL HARM INFORMATION SHARING WITH STATES

State tax systems rely on the Federal tax audit program for assistance in identifying nonfilers and or other taxpayer deficiencies. If H.R. 390 is enacted, the IRS and others justifiably contend that their audit resources will be strained to the limit. Under the current system, the IRS audits approximately 1% of taxpayers annually. If the IRS must assume the burden of proof responsibility, two changes will occur. First, for the current level of audits, the paperwork demands would increase because it would fall to the IRS to collect the necessary documents to prove their claims against noncomplying taxpayers. Second, if the rate of

noncompliance jumps as tax officials expect, more resources will be needed for the higher case load. What does this mean for State tax systems? States often piggyback on deficiency assessments made by the IRS -- so any delays or backlog by the IRS trickles down to the States as well. Thus, States will have inadequate information to conduct their tax audits.

BURDEN OF PROOF COULD BE IMPOSED ON STATE TAX SYSTEMS

If H.R. 390 were enacted, State governments could soon expect similar legislative efforts in their respective legislatures. California is one of the States that conforms to the Federal tax system in many areas. If the burden of proof is shifted for Federal taxpayers, that new standard could potentially be adopted by the California Legislature. In that case, we would have a double hit of contending with the consequences of the burden of proof shift at the Federal level and at the State level.

During these times of extreme fiscal stress on government revenues, State Legislatures would be hard pressed to provide the additional funding to tax agencies to fully comply with the new demands of shouldering the burden of proof responsibilities. While implications for the rights of taxpayers is more troubling, the fiscal realities also make it clear to me that this bill is poison in a pretty wrapper.

UNDERMINE ENTIRE TAX SYSTEM

This proposal runs contrary to efforts by the IRS and by State tax systems to become more service-oriented, more accessible, and more cooperative in dealing with taxpayers and with sharing information among tax systems. Our current tax compliance system has a strong foundation of fairness and efficiency that in turn has created mutual respect for the system and for our taxpayers -- the high rate of compliance is evidence that this system works.

If instead, our resources are devoted to compiling evidence on every dispute like it was a criminal investigation, tax collectors would indeed become the "tax gestapo." I ask that you not let the tremendous progress we have made in improving our tax system backslide due to some misplaced understanding of what are appropriate procedures in handling tax disputes. Please oppose the advancement of H.R. 390. Thank you.

TESTIMONY OF HARLEY DUNCAN
FEDERATION OF TAX ADMINISTRATORS

The Federation of Tax Administrators is an association of the primary tax collection agencies in the 50 states, the District of Columbia and New York City. FTA is concerned that the far-reaching effects of H.R. 390 may not be fully understood. Specifically, we would ask the Subcommittee to consider the bill's deleterious effect on the states' ability to collect taxes.

On the surface, H.R. 390 applies only to the Internal Revenue Service. In simple terms, it would place the "burden of proof" on the IRS rather than on a taxpayer in civil matters. This is generally viewed as a Taxpayer Bill of Rights issue. While taxpayer rights are crucial and should be respected, they must also be balanced against the ability of government to effectively collect the revenues due it. Taxpayer burden of proof is a key element in that process.

Shifting the burden of proof from the taxpayer to the federal government would seriously undermine the federal income tax system. It would make it virtually impossible to assert deficiency assessments for all federal taxes. It will establish a legal system that allows taxpayers to underreport taxes, but not be required to produce information to support their tax reporting. The problem is most easily explained in the following example: an individual deducts $3,000 in charitable contributions, but has no receipts to back up the claim. The government would have to prove this was not true – and it is impossible to prove a negative.

Over time, the bill would destroy voluntary compliance. Taxpayers will quickly learn that they have little reason to report their taxes accurately, and that if they are inaccurate, IRS has little or no legal ability to prove they are wrong. In other countries where the government has the burden of proof, voluntary compliance is an exception, never the rule. In the U.S., some 85 to 90 percent of all dollars are voluntarily paid in full and on time without the federal or state governments having to undertake individualized enforcement actions.

If H.R. 390 is enacted, it would affect each of the states in three ways:

- Many state audit programs – particularly those relating to the individual income tax – rely heavily on the federal programs. When the federal government discovers a nonfiler or finds that an individual has underreported the federal tax due, IRS automatically notifies the state tax authorities. Similarly, states and the federal government are working very closely together to discover unpaid tax on motor fuels. This is modern and efficient government; it also allows states to reap the benefits of far more compliance activities than they could otherwise afford. However, if IRS is no longer able to effectively make deficiency assessments, the states will lose this critical compliance mechanism.

- The provision's harmful effect on voluntary compliance will directly flow through to states. When voluntary compliance drops at the federal level, it most certainly will drop at the state level. This will be especially true if the states have lost their most effective enforcement tool, piggybacking on IRS deficiencies.

- State legislatures often follow the Congressional lead, particularly on Bill of Rights issues. If Congress puts its stamp of approval on this concept, public pressure will be great for the state legislature to follow suit.

I urge you to consider these frightening consequences to the states if H.R. 390 is passed.

TESTIMONY OF RUSSELL A. HOLLRAH
INDEPENDENT CONTRACTOR ASSOCIATION OF AMERICA, INC.

The Independent Contractor Association of America, Inc. (the "ICAA") is a national association — representing over 2700 businesses that engage, or operate as, independent contractors — that is dedicated to the preservation of independent contractor status.

ICAA strongly supports efforts to enhance the rights of taxpayers vis a vis the Internal Revenue Service ("IRS"). In worker classification disputes, the taxpayer is at a serious disadvantage relative to the IRS, and the IRS routinely engages in enforcement strategies that exploit its advantage. Small business taxpayers that engage independent contractors are currently suffering under the weight of an aggressive IRS enforcement program aimed at reclassifying such workers to employee status.[1]

In order to counteract the IRS's enforcement practices that relate to worker classification matters,[2] ICAA strongly supports the Taxpayer Bill of Rights proposals generally, and especially supports the proposals that would make it more feasible for taxpayers to recover the fees and costs incurred in prevailing against the IRS in a federal tax dispute. ICAA also urges that the Subcommittee consider additional taxpayer rights provisions that deal specifically with the IRS's attack on businesses that use independent contractors:

- ICAA urges that a taxpayer be deemed eligible *per se* to recover the fees and costs incurred in defending against an IRS challenge to the taxpayer's classification of a worker as an independent contractor if the taxpayer is ultimately determined eligible for protection under Section 530 of the Revenue Act of 1978 ("Section 530"), based on the taxpayer's reasonable reliance on a safe haven that the taxpayer asserted during the IRS's administrative consideration of the issue;

- ICAA urges that any IRS review of a taxpayer's classification of workers be deemed an "audit" for purposes of Section 530, irrespective of how the IRS characterizes the review; and

- ICAA urges that the IRS be prohibited from targeting small businesses for intensified enforcement efforts seeking the reclassification of independent contractors, as the IRS currently does through its Employment Tax Examination Program ("ETEP").

The Standard that a Taxpayer Must Satisfy In Order to Recover Fees and Costs Incurred in Winning a Tax Dispute Should be Relaxed.

Under current law, a taxpayer is not entitled to recover attorney fees or costs in an IRS dispute unless it can demonstrate, among other things, that the government's position was "not substantially justified."[3] The interpretation of the fee and cost recovery provisions has been overly strict. The statistics offered by the American Bar Association confirms the fact. The ABA testimony pointed out that while the provisions were "scored" as producing a revenue loss each year of $5 million, the actual aggregate awards under the provisions each year have been a mere $220,000. The data leave no doubt that the provisions are not working as the Congress had intended.

ICAA concurs with the witnesses who testified before the Subcommittee that the problem lies with the requirement that a taxpayer prove that the government's position was not substantially justified.[4] In order to remove that impediment, ICAA supports the proposals

---

[1] The IRS's bias against independent contractor status is manifest. The bias has been proven to exist through quantitative analysis in Robinson and Hulen, *IRS Bias In Worker Classification Decisions*, Tax Notes 1741 (September 26, 1994).

[2] While ICAA supports the Taxpayer Bill of Rights provisions generally, ICAA is dedicated exclusively to the preservation of independent contractor status and, therefore, the comments contained herein are limited to the provisions that relate to those specific interests.

[3] Internal Revenue Code section 7430.

to shift the burden of proof to the government, so that instead of requiring the taxpayer to demonstrate that the government's position *was not substantially justified*, the government should be required to demonstrate that its position *was substantially justified*. This does not appear to be an onerous measure, particularly inasmuch as the IRS General Counsel testified at the hearing that government lawyers currently prepare for fee and cost recovery cases by assembling the evidence necessary to demonstrate that the government's position in the case was substantially justified.

ICAA also would support the proposal that would simply eliminate the requirement altogether, so that the issue of whether the government's position was reasonably justified is no longer relevant.

With respect to the cost and fee recovery provisions, the important point is that current law is inadequate. ICAA takes no position as to whether the inadequacies are better addressed by eliminating the need to determine whether the government's position was substantially justified, or by shifting the burden of proof on that issue from the taxpayer to the government. ICAA believes that either would represent a long stride in the correct direction and, therefore, supports both proposals.

Taxpayers Should be Deemed Eligible *Per Se* to Recover Fees and Costs Incurred in Winning a Worker Classification Dispute When the IRS Refuses to Acknowledge the Taxpayer's Section 530 Protection.

The IRS, when challenging the classification of workers by a small business, frequently provides the business with a Hobson's choice of either defending its classification of workers as independent contractors in court — and jeopardizing the financial viability of the business even if it prevails — or acquiescing to the IRS's demand that it reclassify the affected workers to employee status.

While a legal battle can be financially devastating to a small business, a reclassification can have severe financial consequences as well. Many businesses that have acquiesced to an IRS-demanded reclassification of independent contractors have found that their best workers refuse to work as employees and cease performing services for the business.

The Congress during 1978 sought to tame the IRS's aggressive attacks on businesses that engage independent contractors by enacting Section 530 of the Revenue Act of 1978. Section 530 was intended to protect a taxpayer that satisfies the Section 530 criteria against the IRS reclassifying its workers to employee status. The Congress expressly instructed that Section 530 is to be liberally construed *in favor of the taxpayer*.[5] In practice, however, the IRS construes Section 530 narrowly, *against the taxpayer*.

In other cases, particularly in the context of an IRS Form SS-8 request,[6] the IRS commonly refuses to even consider Section 530. In such cases, a firm eligible for Section 530 protection that responds to the Form SS-8 request is forced into a confrontation with the IRS over the application of the common law test to its workers — a controversy that the Congress sought to avoid by the enactment of Section 530.[7]

---

[4] An example of a case were a taxpayer who appeared clearly entitled to recover fees and costs in an independent contractor dispute but who was denied recovery on the grounds that it failed to demonstrate that the government's position was not substantially justified was *In re Rasbury*, 93-1 U.S.T.C. ¶50,351 (N.D. Ala. 1993) *affirmed* 94-2 U.S.T.C. ¶50,319 (11th Cir. 1994).

[5] *General Investment Corp. v. United States*, 823 F.2d 337, 340 (9th Cir. 1987).

[6] The Form SS-8 is used by the IRS for soliciting facts from a firm and a worker for purposes of ascertaining whether the firm's classification of the worker as an independent contractor is proper.

[7] In *Queensgate Dental Family Practice, Inc. v. United States, 91-2 U.S.T.C.* ¶ 50,536 (M.D. Pa. 1991), the district court observed that the Congress made clear that a business that

ICAA suggests that the IRS's enforcement posture with respect to Section 530 would become more moderate if the fee and cost recovery provisions were modified to provide that if a taxpayer advises the IRS of its eligibility for Section 530, the taxpayer will be entitled *per se* to recover fees and costs incurred in winning its case. The recovery could be made contingent on the taxpayer ultimately being determined eligible for Section 530 based on a safe haven provision that the taxpayer relied on when asserting Section 530 protection during an IRS administrative proceeding.

Any IRS Review of a Taxpayer's Classification of Workers Should be Deemed an "Audit" for Purposes of Section 530, Irrespective of how the IRS Characterizes the Review.

Another means used by the IRS to undermine Section 530 is to seek to review a taxpayer's classification of workers without the review being considered an "audit" — in order to avoid the taxpayer qualifying for Section 530 protection based on the prior audit safe haven. The IRS frequently seeks to characterize such reviews as "compliance checks."

A primary objective of Section 530 was to protect taxpayers against recurring IRS audits concerning the classification of workers as independent contractors. To permit the IRS to accomplish a review of a taxpayer's classification of workers as independent contractors through "compliance checks" — without the review establishing a basis for Section 530 protection against subsequent similar reviews — would defeat much of what Section 530 sought to accomplish.

What is more, if the IRS is allowed to continue its current practice of reviewing a taxpayer's classification of workers as independent contractors through compliance checks, without triggering Section 530 protection for the taxpayer, the IRS will have succeeded in accomplishing a *de facto* administrative repeal of the prior audit safe haven of Section 530.

ICAA respectfully urges, therefore, that the Congress clarify that an IRS review of a taxpayer's classification of workers as independent contractors constitutes an audit.

The IRS Should Be Prohibited from Targeting Small Businesses for Intensified Enforcement Actions Involving Independent Contractors, as it Currently Does Through the ETEP.

The IRS has aggressively pursued small businesses that engage independent contractors in an effort to reclassify such workers as employees. The pursuit is attributable largely to the high-profile "Employment Tax Examination Program" that the IRS launched in 1988, known by the acronym "ETEP." The program unabashedly targets businesses with $3 million or less in assets for an intensive worker classification enforcement effort.[8]

The ETEP is patently discriminatory against small businesses. A common characteristic of many small businesses — which makes the program particularly inadvisable — is that such businesses typically do not possess the resources needed to aggressively defend against IRS efforts to reclassify workers as independent contractors.

Anecdotal evidence of IRS representatives pressing taxpayers into reclassifying workers to employee status on a prospective basis (known as the IRS's "prospective compliance" offer) — in cases where the taxpayer may well have prevailed if the matter was defended on its merits — abounds. As a matter of fact, there are legions of small business

---

satisfied the requirements of Section 530 need not also be analyzed under the common law test.

[8] For further discussion of the ETEP, see *The Administration and Enforcement of Employment Taxes — A Status Report on Ideas for Change*, H. Rep. No. 861, 103rd Cong. 2d. Sess (October 19, 1994).

owners who have capitulated to the IRS's prospective compliance gambit — based on the IRS's overstated estimates of the how much it would cost the taxpayer to contest the matter — only to subsequently feel as though they had been tricked by their own government into the reclassification.

While there is no question that the IRS has the right to enforce the tax laws, ICAA contends that the IRS's enforcement efforts must be evenly applied, and that it is not appropriate for the IRS to focus its efforts on a category of taxpayers who are least financially able to defend themselves. What is more, the inappropriateness of such an enforcement strategy is compounded where the IRS unabashedly seeks to exploit the taxpayers' vulnerability, by aggressively urging them to settle the cases — without regard to the merits of the case — on the grounds that the expense involved in defending their position would be cost-prohibitive.

In light of the foregoing, ICAA respectfully urges the Congress to prohibit the IRS from focusing its worker classification enforcement efforts on small businesses and, in so doing, to require the IRS to terminate the ETEP.

Conclusion.

ICAA appreciates the opportunity to present this statement. While TBR 1 represents significant progress in the enhancement of taxpayer rights, much more needs to be done, particularly with respect to the manner in which the IRS currently administers the tax laws that relate to a worker's status. If you have any questions or would like additional information concerning any of the foregoing comments, please let us know.

Respectfully submitted,

Russell A. Hollrah

TESTIMONY OF ROBERT M. TOBIAS
NATIONAL TREASURY EMPLOYEES UNION

Madam Chairwoman and distinguished Members of this Subcommittee. Thank you for the opportunity to submit this statement concerning taxpayer rights. As President of the National Treasury Employees Union (NTEU), which is the exclusive representative of employees from the Internal Revenue Service, we have a particular interest in the taxpayer rights issue. NTEU strongly endorses the concept of defining and protecting taxpayer rights, however, we are wary of creating a system which does not accomplish the goals and paralyzes IRS, rendering them unable to properly carry out their mission to collect taxes.

During the March 24, 1995, Ways and Means Committee, Oversight Subcommittee hearing, Congressman Andy Jacobs (D-IN) testified in support of a proposal to make IRS employees personally liable for "arbitrary, capricious or malicious" acts committed while performing their job duties. NTEU is vehemently opposed to this concept. As you may or may not know, the issue of holding IRS employees personally liable for "arbitrary, capricious or malicious" acts was considered and rejected by the 102nd Congress in the context of a major tax bill, H.R. 11. I am attaching for the record a copy of a letter, signed during H.R. 11, by eight former IRS Commissioners opposing the personal liability provision. In addition, the American Bar Association's Tax Section has publicly opposed this provision.

The reason for such widespread opposition is not difficult to imagine. Not only would the Jacobs proposal make it virtually impossible to recruit and retain IRS employees, it would also undermine the ability of any IRS employees, who were willing to stay in the IRS, to properly collect taxes. While we believe that most Americans are law abiding, compliant taxpayers, we also know that there are people who use the system to avoid paying taxes and others who would not pay taxes if they believed they could get away with it. IRS employees must deal with these noncompliant taxpayers every day. A noncompliant taxpayer would have every incentive to threaten suit against an employee when that employee sought to bring the taxpayer into compliance. The natural result of such a relationship is for the IRS employees to be unwilling to deal effectively with aggressive taxpayers for fear of personal liability. Ultimately, the government would collect far less revenue.

It would become virtually impossible for IRS employees to effectively collect taxes with the black cloud of personal liability hanging over their heads. It is unclear what acts under the Jacobs proposal would be considered "arbitrary, capricious or malicious" and therefore subjecting employees to personal liability. One Judge could find an IRS employee's actions totally reasonable while another Judge could find the *same* actions "arbitrary and capricious". The IRS employee, in an attempt to avoid liability, would constantly be second guessing his/her actions. It will be impossible for an IRS employee to know if his/her actions fall within an "arbitrary and capricious" category. This unworkable standard will result in a chilling effect on the employee's ability to collect taxes.

Not only would personal liability for IRS employees result in less effective tax collection, it would also subject IRS employees to constant harassment. In an effort to avoid IRS action, the noncompliant taxpayer would use every opportunity to raise the personal liability threat against the IRS employee. As the IRS employee found it necessary to increase his or her efforts to bring a taxpayer into compliance, the taxpayer would escalate the threat of personal liability against the employee. Ultimately, it would be the IRS employee who would be harassed by the taxpayer.

We do not approve of inappropriate actions by IRS employees or other federal employees. However, we firmly believe that taxpayers have appropriate recourse in such a circumstance. Aggrieved taxpayers may bring actions against the government for attorney fees and there are currently legislative proposals to increase the possible recovered amount from $100,000 to $1 million. We do not oppose these legislative proposals but we strongly oppose workers

who will risk losing the homes and their kids' college savings every time someone who doesn't want to pay his/her taxes charges them with acting in an undefined "arbitrary" manner.

There is not one group of federal employees who are held personally liable for non-criminal acts if they are acting within the scope of their work duties. Rather, the employer is the liable party. The proposal being set forth by Congressman Jacobs would treat IRS employees differently from all other federal employees, by subjecting them to personal liability. This would make recruiting people to do the unpleasant, but necessary job of collecting taxes set by Congress virtually impossible.

We would also like to remind this Committee that stiff penalties exist, including removal, for inappropriate actions by IRS employees. But, we believe that the dual goals of protecting taxpayers and collecting taxes can be achieved by enforcing existing rules against employees and continuing to allow or expand suits against the government. Requiring the personal liability of IRS employees will make it impossible to find qualified people willing to do the job Congress has directed them to do: collect taxes.

In closing I would like to say that NTEU is very willing to work with Congress and IRS employees to ensure that taxpayers are being fairly treated and at the same time revenue due is being collected in the most effective and productive manner. Thank you for allowing me to submit this statement for the record.

July 15, 1992

The Honorable Dan Rostenkowski
Chair, House Ways and Means Committee
House of Representatives
Rayburn 2111
Washington, DC 20515

The Honorable Lloyd Bentsen
Chair, Senate Finance Committee
United States Senate
Hart 703
Washington, DC 20510

Dear Sirs:

As former Commissioners of Internal Revenue for the past thirty years, we express our concern and strong opposition to certain provisions contained in Title V of H.R. 11 which we believe would seriously and adversely affect tax administration.

Each of us has worked with you or your predecessors in attempting to assure that the Internal Revenue Service ("Service") met its obligation to fully and fairly collect the proper amount of tax owed to the Federal government. In addition, each of us has represented taxpayers in dealing with the Service before and/or after serving as Commissioner. We therefore recognize, as we know you do, the difficulties that the Service faces in collecting the amount of tax properly owed and at the same time doing so in a fair, even-handed and professional manner.

We take seriously the importance of balancing the authorities needed by the Service to discharge its obligations with the rights of individual taxpayers in their dealings with the Service. You well know, and we recognize, that such balancing of the authority needed by the Service to properly perform its duties with the rights of individual taxpayers is often as difficult as it is important. And this is particularly true at the present time in light of the government's need for revenue, the complexity of our Federal tax laws, and the increasing lack of confidence and respect of our citizenry in governmental authority.

In view of these competing considerations, we have considered carefully the provisions of Title V of H.R. 11. Some of the provisions may be helpful, but we have substantial concerns about the impact of other provisions on our Federal tax system. There are three provisions that we feel so strongly about for the reasons indicated below that we urge you to reconsider and delete them from the legislation that you presently are considering.

1. Personal Liability of Service Employees. Section 5704 of H.R. 11 would impose personal liability on Service employees in certain circumstances. Presently, if a taxpayer is the "prevailing party" in tax litigation, then under certain circumstances a court can require the Federal government to reimburse the taxpayer for certain litigation costs. Under the pending proposal, the court could require a Service employee personally to reimburse such costs if the court determined that the proceeding resulted from any arbitrary, capricious or malicious act of the employee, and, in such event, the employee would not be permitted to recover such costs from the Federal government.

This proposal has been criticized publicly by the Taxation Section of the American Bar Association and the Tax Section of the New York State Bar Association. We concur with their criticisms and opposition.

We do not condone the arbitrary, capricious or malicious actions by Service employees in dealing with taxpayers. We believe, however, that present law and procedures provide an aggrieved taxpayer with substantial remedies to redress such conduct, including the Service's Office of the Taxpayer Ombudsman, the Problem Resolution Program, and the Office of the Chief Inspector, as well as the Treasury Department's Inspector General and the provisions of Section 7433 of the Code permitting a taxpayer to bring a civil action against the United States for damages sustained in connection with the collection of Federal tax due to the reckless or intentional disregard of Federal law by a Service employee. Likewise, there are substantial and serious disciplinary measures available to properly punish any employee who might engage in such unauthorized behavior.

Our collective experience in the public and private sectors suggests that although there are instances of inappropriate conduct by Service employees, they tend to be relatively isolated and unusual. It is further our collective experience that although most taxpayers make an honest attempt to cooperate with Service employees in determining their tax obligations, over the last thirty years we also have seen increasingly aggressive behavior by some taxpayers in dealing with Service employees, including a limited but significant number of instances in which certain taxpayers intentionally harassed or attempted to intimidate Service employees. IRS examination, collection and enforcement activities are inherently adversarial in nature; and, in such context, we submit that it may be difficult to delineate adversarial conduct from arbitrary, capricious and malicious behavior.

We believe that the proposal is unwise. We believe that it is likely to cause Service employees to be less willing to deal effectively with uncooperative, aggressive taxpayers because of the employees' concern about potential harassment and possible personal liability in such event. We further believe that such concerns will adversely impact upon the Service's ability to recruit and retain compliance personnel. As you know, similar concerns traditionally have resulted in the grant of general immunity to Federal employees acting in their official capacities.

It is, therefore, our judgment that in balancing the authority needed by Service employees with the rights of individual taxpayers, this proposal is inappropriate and should be rejected, and we urge you to do so.

2. Political Appointment of Ombudsman. Presently, there is a Taxpayer Ombudsman on the staff of the Commissioner of Internal Revenue who is appointed by the Commissioner and who oversees the Service's Problem Resolution Program ("PRP"). Section 5001 of H.R. 11 would replace the Ombudsman with a "Taxpayer Advocate" who would be appointed by the President and confirmed by the Senate and who would supervise all of the PRP personnel.

As you may know, the idea of an Ombudsman was developed by Commissioners Alexander and Kurtz. Most of the undersigned, therefore, have worked directly with the Ombudsman and PRP and all of us enthusiastically support the goals and activities of the Ombudsman and PRP. Each of us believes that the pending proposal is likely to substantially and adversely affect the goals and activities of the Ombudsman and PRP programs, and we therefore oppose the proposal.

Our collective experience indicates that the role and importance of the Ombudsman and PRP programs are increasing. We believe that among the keys to the continued effectiveness of these programs is the need to institutionalize the attitudes and objectives of the Ombudsman and PRP throughout the policies, procedures and personnel of all of the Service functions. Presently, the long-term goal of the Ombudsman and the PRP employees is to so institutionalize their attitudes and objectives across the Service that all of the Service employees will share such attitudes and objectives.

In our opinion, the proposal in H.R. 11 would do just the opposite. By creating a new office headed by an independent Presidential Appointee and given a function independent of the organization, the proposal separates PRP. In any large organization, once a program is separate, it is almost impossible to institutionalize the attitudes and objectives of the program. If the present proposal is enacted to statutorily mandate the Presidential appointment of a Taxpayer Advocate to whom the PRP program will be responsible, we believe that the detriments resulting from such change will more than offset any intended benefits.

We are particularly concerned that such change may politicize the Ombudsman and thereby render the Ombudsman less effective in leading and managing PRP. As you may know, the Ombudsman presently is involved personally on a daily basis in numerous audit, collection and other enforcement activities affecting specific taxpayers. Often, taxpayers or their representatives request the involvement of the Ombudsman. History has taught all of us, and particularly those who are signatories, of the dangers inherent in the involvement of political appointees in such activities on a day-to-day basis at the request of taxpayers. We oppose and urge you to reject this proposal.

3. Retroactivity of Treasury Regulations. Presently, Treasury and IRS officials have discretion about the extent to which regulations can be promulgated retroactively. Under Section 5803 of H.R. 11, proposed and temporary regulations could not be applied retroactively to periods preceding the date of publication unless Congress so provided or unless necessary to "prevent abuse of the statute to which the regulation relates" or "correct a procedural defect in the issuance of any prior regulation".

All of us as former Commissioners, and certainly as practitioners, support the notion that regulations should be issued promptly after legislation is enacted in order to provide affected parties with appropriate guidance and also to avoid the problems which retroactivity creates. However, because of the volume and complexity of tax legislation so frequently passed by Congress over the last thirty years, in our experience it has been increasingly difficult (maybe impossible) for the Treasury Department and the Service to issue regulations as promptly as desirable and needed. Further, it is our collective experience that, under our government of checks and balances, it is often easier for taxpayers and their representatives to block or defer the issuance of regulations than it is for the Service to issue them timely, particularly those regulations that are perceived to affect the interests of taxpayers adversely.

Each of us has had to deal with the delicate and difficult decision as to whether and to what extent a regulation should be retroactive or prospective. Each of us has had to deal with a variety of different situations in which retroactivity, rather than prospectivity, was called for or required. We do not believe that the exceptions in the proposal to permit retroactivity are sufficient to cover the myriad of situations and conditions in which the issue arises. Indeed, in light of these circumstances, we seriously doubt the wisdom of attempting to prescribe in advance when regulations should be promulgated retroactively or prospectively. We believe that flexibility to respond to the exigencies of the particular situation is critically important, and that that is fundamentally what is involved in the present provisions of Section 7805(b) of the Code.

In balancing the needs of the Service with the rights of the taxpayers, we believe that the present flexibility should be continued. Courts have fashioned numerous remedies to permit taxpayers to overturn or circumvent regulations in appropriate circumstances. Over the last thirty years the courts consistently have demonstrated a willingness to uphold taxpayers' actions despite contrary provisions of the regulations when the court determines that the taxpayer has substantially complied with his or her tax obligations or that the Service has abused its discretion in formulating or administering its regulations. See, e.g., Fred J. Sperapani, 42 T.C. 308, 333 (1964); Columbia Iron & Metal Company, 61 T.C. 5, 10 (1973); Jaquelin E. Taylor, 67 T.C. 1071, 1079 (1977); Chester Matheson, 74 T.C. 836, 841 (1980); Young v. Commissioner, 783 F.2d 1201, 1205 (5th Cir. 1986); Woodbury v. Commissioner, 900 F.2d 1457, 1460 (10th Cir. 1990); White Rubber Corporation v. United States, 781 F. Supp. 507, 511 (N.D. Ohio 1991).

For the reasons noted, we oppose the proposal and encourage you to reject it.

If you or your staffs would like to confer with us as a group or individually, we would be pleased to assist you.

The Honorable Nancy L. Johnson
Chairwoman, Subcommittee on Oversight
Committee on Ways and Means
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Madam Chairwoman:

Thank you for your invitation to appear as a witness at the Oversight Subcommittee's hearing on March 24, 1995, on "Taxpayer Bill of Rights 2" (TBR2). While I was unable to attend, I am pleased to provide you with my statement and observations for inclusion in the Subcommittee's printed hearing record. First, I want to commend you for holding a hearing on TBR2 as one of the first hearings conducted under your stewardship. By placing this issue at the top of your list, I believe you have sent a strong signal to the Internal Revenue Service (IRS) and the American taxpayer that the need for TBR2 has not diminished.

When I assumed the Chairmanship of the Subcommittee on Oversight in 1985, the IRS was not required to provide every taxpayer it questioned or examined with a comprehensive statement explaining taxpayer rights nor was the agency prohibited from evaluating its collection agents based upon their collection results. Taxpayers did not have a statutory right to pursue installment agreements with the IRS nor did they have a legal right to seek the abatement of interest in cases where the IRS had erred or caused delay. Taxpayers were powerless to seek redress for reckless IRS collection activities and were denied reimbursement for attorney fees even when they prevailed over the IRS. These and other rights, which were established in 1988 as part of the original Taxpayer Bill of Rights (TBR), make so much sense that today we tend to take them for granted.

When we enacted the original TBR legislation in 1988, we took a significant step forward in protecting the rights of individual taxpayers. We knew then that this was not a cure all for all taxpayer problems and our efforts to protect the legitimate interests of taxpayers were by no means over. Subsequent to the enactment of TBR, additional problems surfaced and the need for additional legislation became apparent. As you know, many of the provisions contained in pending legislation (H.R. 661 and S. 258, introduced by Representative Thornton and Senator Pryor, respectively), were actually developed by the Oversight Subcommittee over the past few years. In fact, much of the current legislation was actually passed by Congress on two separate occasions in 1992, only to be vetoed by the President for reasons unrelated to TBR2.

The IRS touches the lives of more people than any other government agency and, therefore, it is extremely important that Congress remain vigilant in ensuring that the enormous powers of the IRS are used properly and fairly. Some would say that Congress should not attempt to micro manage the IRS or seek legislative remedies to the administrative problems taxpayers encounter in their dealings with the IRS. In my judgment, the original TBR was probably the most important new tax law in recent history and helped restore confidence in our voluntary tax system by providing real and substantive relief for the average taxpayer. Looking back, I sincerely doubt whether IRS on its own would have taken the actions necessary to effectively address the serious problems identified by Congress. In my judgment, it is not only entirely appropriate, but essential for Congress to regularly oversee the operations and practices of the IRS and to establish safeguards, statutorily if necessary, where it is deemed appropriate.

Taxpayers deserve to be treated fairly, professionally, promptly, and courteously by the IRS. I think that IRS employees try to be understanding and helpful most of the time. But occasionally, they can seem awfully heavy-handed and hard-hearted. Although the job of collecting the nation's taxes is difficult, there is absolutely no reason to mistreat or abuse an individual taxpayer. This is especially true in the case of a taxpayer who is trying to comply with our complicated set of tax laws and who, for one reason or another, gets needlessly caught up in a never ending dispute with the IRS. It is to protect these honest, hard working, everyday American taxpayers that every effort should be made to enact TBR2.

As a general proposition, H.R. 661 and S. 258 are both very good bills and I enthusiastically support them. The bills, as well as the legislation I developed in the 103rd Congress, contain well-reasoned and responsible pro-taxpayer provisions which should be included in any Oversight Subcommittee package or legislation you develop this year. These bills will:

- Improve installment agreements by requiring prior notice of their cancellation, allowing for administrative appeals, and suspending certain penalties while they are in effect.

- Expand the authority of the IRS to abate interest payments and give taxpayers additional time after receiving a notice and demand to pay the tax without further interest.

- Provide protection to spouses filing joint returns and require IRS to take all reasonable steps to notify both spouses of any deficiencies on the return.

- Improve the procedures concerning liens, levies and offers-in-compromise.

- Require IRS to verify the accuracy of information returns, the inclusion of the payor's telephone number on such returns, and give the taxpayer a civil cause of action if an information return is fraudulently filed.

- Provide additional notice and protection for taxpayers who are determined to be "responsible officers" in Federal tax deposit situations.

I recognize there is more than one way to build a mouse trap and that some modifications to these provisions may be necessary and desirable. I also believe there are probably a few additional measures that ought to be included TBR2 and would encourage their consideration. As an example, I would encourage you to give serious consideration to including a provision requiring comprehensive crediting procedures for the netting of overpayments and underpayments for the calculation of interest. On three separate occasions, Congress instructed the IRS to implement comprehensive netting rules so that taxpayers would not be unfairly subjected to excessive interest charges during periods when there was a mutuality of indebtedness between the taxpayer and the Government. The IRS' continued failure to issue procedures, coupled with the inconsistent manner in which IRS is currently administering the interest provisions, has resulted in disparate treatment among similarly situated taxpayers. I would caution, however, against listening to the naysayers who argue that a particular provision in TBR2 is unnecessary, unworkable, or unadministrable. In my experience, I seldom found this to be true. It always seemed to be more of a reflection of an agency's desire to conduct business as usual.

Let me provide you with some of the circumstances which gave rise to the provisions under consideration today and why I think we need TBR2. Imagine if you will, a twenty-one old secretary-bookkeeper, working at her first job for a small business. Her duties

include making routine reports to the company president on the company's bank balances. In addition, she is authorized to sign checks, as a convenience to the president, who is frequently out of town on business. She never signs any checks without previous permission, and has no involvement with the company's financial and tax decisions. She is not a CPA, and is not trained or expected to know all the facts about the company's tax obligations. This secretary certainly does not know that this company has not timely deposited its payroll taxes for the past six months. More importantly, she does not know, and has never been told that she can be held personally liable for those taxes. Even if her boss says she was not responsible, she can be held personally liable by the IRS. This is not right, and the provisions contained in TBR2 would correct this problem.

Imagine that a taxpayer receives a letter from the IRS questioning a deduction on his tax return, asking for further substantiation, and telling him that, based on the information he supplied, the IRS will make a final decision. He promptly responds by certified letter, and he hears nothing more from IRS. A couple of years pass, and, out of the blue, the IRS writes the taxpayer, disallowing his deduction, and assessing tax, penalties, and interest. In checking into the matter further, he learns that the two year delay was the result of the IRS "losing" his file, because the person working the case was transferred, and the case was not promptly reassigned. In fact, the IRS even admits its mistake, does not try to defend the situation, and perhaps even apologizes for the delay. No matter, the IRS cannot abate the interest due to its own mistakes. The taxpayer is expected to pay the cost of the IRS delays, which he did not cause, did not want, and could not have prevented. This is not right, and the interest abatement provision in TBR2 corrects this problem.

Imagine a small business owner who recently settled a dispute with the IRS concerning the appropriate tax treatment of contributions she made to her company's employee pension plan. As part of this settlement, she is now paying her tax in full, with interest, in installments over the next six months. Unfortunately, the IRS agent handling the case accidentally files a lien against the company's assets, and has this lien publicly recorded. The company's credit is now destroyed, her commercial loan agreements are now subject to immediate repayment, and her ability to remain in business is in grave jeopardy. The IRS admits it made a mistake, and that the lien never should have been recorded. Too bad, the IRS cannot withdraw the lien until she pays the company's tax liability in full. This is not right, and the lien provisions contained in TBR2 correct this problem.

Imagine a divorced taxpayer who filed separate tax returns for the past several years. However, the IRS has audited the joint returns she filed with her husband when they were married. The IRS never notified her of the examination and has sent a notice of deficiency to her former husband. The IRS has never even attempted to call or write her until she receives a letter telling her that her bank account has been levied and a lien placed on her house. She is further told that her time for administrative appeal has passed, and that she has no choice but to pay the tax, penalty, and interest in full, and then sue the IRS in Federal district court for a refund. This is not right, and the provisions contained in TBR2 correct this problem.

Imagine a taxpayer who receives a letter from the IRS asking why he did not report $30,000 in additional income he supposedly received when he filed his income tax return two years earlier. Unfortunately, he has never heard of the company that supposedly paid him the money, nor does he have any record of ever receiving any money. He has no way of contacting the company, and the "information return" the company filed does not even provide a telephone number of where they can be reached. So the taxpayer calls the IRS to explain the situation and is told that the IRS is entitled to the presumption that this third party return is correct, and that he is responsible for reconciling the discrepancy. Even worse, if he can not straighten the mess out then he must pay the tax, penalty and interest. And even if the taxpayer discovers that the whole dispute was the result of a malicious act

by someone intent on harassing him, he can not sue for damages because there is no Federal cause of action available under existing law. This is not right, and the information return provisions contained in TBR2 correct this problem.

I could go on all day about the problems that taxpayers experience all too frequently in their dealings with the IRS. TBR2 effectively addresses many of them and would provide the American taxpayer with long overdue relief. TPR2 is a responsible package of reform measure and enjoys wide-spread support throughout the tax community.

In closing, I would like to discuss one area that may be the subject of some discussion in the months ahead. Included in TBR2 is a provision which would establish a new position of Taxpayer Advocate within the IRS. The Taxpayer Advocate would have the responsibility to supervise and direct the activities of all problem resolution officers and would have broader authority to act on behalf of individual taxpayers. The Taxpayer Advocate would be required to submit reports to the Congressional tax writing committees identifying significant problems that taxpayers face in dealing with the IRS and the Advocate's recommendations for improvement. Many have commented on whether the Taxpayer Advocate should be nominated by the President and confirmed by the Senate, in essence a political appointee.

While Congress cannot appropriate common sense or pass legislation to fix every injustice that takes place at the hands of the IRS, Congress can certainly see to it that the interests of taxpayers are fully protected by someone who has the stature, independence and authority within IRS to take appropriate action and seek improvements when necessary. I believe the only way to accomplish this is to have an independent Taxpayer Advocate who is required to report regularly to Congress, so that those who are truly held accountable for the actions of the IRS, might know exactly what is going on. The Taxpayer Advocate must be required to make reports directly to the Congress so that his or her voice on behalf of the everyday working American taxpayer will never be swallowed up in the halls of the IRS and Treasury bureaucracies, as is the case today. I believe the provision establishing a truly independent Taxpayer Advocate is the crown jewel of TBR2 and, in my judgment, it would be a terrible mistake to eliminate an independent selection process which ensures accountability to the American taxpayer. Claims that adding an additional political appointee would increase the potential for political abuse are simply unfounded and absurd.

I appreciate the opportunity to offer my thoughts and I wish you the best of luck in the months ahead as you champion the cause of TBR2. Please feel free to call upon me if I can be of any assistance.

With best regards, I am

Sincerely yours,

J. J. Pickle

HAROLD C. TINT
30 East 65th Street
New York, New York 10021

1 April 1995

Mr. Philip D. Moseley
Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Moseley:

I write this letter in support of Congresswoman Nancy L. Johnson, Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, in her efforts to strengthen the protection of taxpayers through the proposed Taxpayer Bill of Rights II.

My recent experiences by members of the Internal Revenue Serices's legal department right up to the Chief Counsel's office in Washington, D.C. clearly demonstrates the need for change regarding the protection of honest taxpayers in legitimate disputes with the Service. The acts of apparent violations of my rights as an American citizen were systematic and most frightening and were carried out by the District Counsel who handled my case, the Regional Counsel of the North Atlantic Region and by an Assistant Chief Counsel in his refusal to accept any of my charges.

What makes my case so unusual is the fact that after all court hearings had been concluded, the District Counsel John M. Elias, Esq. gave a sworn deposition testimony which supported all of the claims I had made regarding the violation of my rights. In that testimony the District Counsel not only admitted stating a known false statement of great significance to the Tax Court but also that he had withheld an essential document in his files and in direct violation of the Tax Court's order to provide my attorney with all documents in his possession in pre-trial discovery.

In his deposition testimony, the District Counsel also detailed certain outrageous acts by his superior Regional Counsel Agatha L. Vorsanger, Esq. of the North Atlantic Region of the Internal Revenue Service. As recently as February 3, 1995, Daniel J. Wiles, Esq., Assistant Chief Counsel of the Internal Revenue Service stated in a letter to United States Senator Daniel P. Moynihan that "my complaints are unfounded."

I wish to suggest most respectfully that a change to require the government to be the plaintiff in actions against a taxpayer is necessary to prevent the type of abuse I encountered. Because I was required to be the petitioner after receiving a notice of a disallowance issued by the government without any known basis, I faced a government attorney who conducted all the required pre-trial conferences without knowing the facts and merits of the transaction that had been disallowed. Such a fundamental violation could not have occurred had the government been forced into the role of the plaintiff as is customary in the American judicial system.

Before outlining the specifics of my case, I wish to call to your attention the professionalism and integrity of staff members of the Internal Revenue Service. The people I wish to cite are a credit to the high ideals one should encounter from government agents: Revenue Officers Stephen A. Sica and Delma Marchand; Appeals Officer John L. Dotoratos; Supervisor Gilbert Moran; and Collection Officer Elizabeth Kishlansky. All of the named are members of the Manhattan District Office. I also wish to note the integrity of Revenue Officer Robert Aramayo who stated to me early on in my case:

> "Mr. Tint, I know you are a businessman and may have something to hide. If you do, you better pay up as they are going after you. They are bullying you like they do to a lot of people. If you have nothing to hide, I wish you would stand up for your rights. You will be doing a service for many people."

Having "nothing to hide", I accepted the challenge.

In 1978 I invested in two computer leasing transactions that were tax deferrals, not shelters, and received a Notice of Deficiency disallowing both transactions in April, 1983. One was accompanied by an agent's report as required; on the other the Service simply disallowed it based on its appearance on the Schedule E portion of my income tax return. The Service knew so little about this transaction that the amount was overstated for 1979 alone by over $ 50,000. It is this second transaction and the manner in which it was handled that is the subject of this letter. To compound this situation is the fact that my partner had been examined on his identical participation in this transaction and had been cleared after examination.

The IRS sent a formal notice with the disallowance "Rights of a Taxpayer" which provides for settlement discussions within the Service. At two meetings under this provision, my attorney and I were advised that the Service had no information and could not hold such a conference as stated in its Publication 5. As a law-abiding citizen, I then instructed my attorney to provide any and all the information I had. The letters of request - which I have - came over a period of almost ten months. However I received a letter from the Service to

the effect that the time for IRS settlement had passed and that the case was being forwarded to the legal department. No conference had occurred as provided in the "Rights Publication."

Many months later, my attorney and I met with the District Counsel John M. Elias, Esq. who had been assigned to my case. This was to be the informal settlement conference as is customary in such matters; but the District Counsel did not know anything about this transaction. I did tell him that my partner had been examined and cleared. The District Counsel explained that what was in another taxpayer's name could not be used by me. What he did not reveal at the time was the essential fact that he had an IRS Engineering Report in my name in his file and that report could have been used to clear me in the same way as my partner had been cleared.

The failure to disclose this information by deliberate withholding presents a clear violation of the law and my rights. It was only the beginning for me. But what makes this case so unusual is the fact that after all the unfavorable court decisions, the District Counsel somehow felt compelled to speak the truth about the systematic abuse of my rights by the IRS including himself and revealed all this in a sworn deposition. As will be shown, this act of integrity appears to have infuriated senior members of the Service's legal department.

After this futile conference I asked the help of my United States Senator Daniel P. Moynihan not to get a favorable decision but to have one conference where I could settle based on the facts and issues and not just receive a "take-it-or-leave-it" offer - i.e. pay up or go to court. The Senator's office then sent a letter based on my request to the IRS office here in New York.

In deposition testimony, the District Counsel testified that Regional Counsel Agatha L. Vorsanger, Esq. treated this letter from a United States Senator "in jest" and pretended "to give me a ribbing because of the accusations that were raised in the letter." There were two other letters written by the Senator's office over his signature with all answered by Regional Counsel Agatha L. Vorsanger, Esq. In the three lettrs of Regional Counsel Vorsanger, Esq., she appears to have directly lied six times to the Senator in stating "the merits of Mr. Tint's case had been discussed." The basis for my accusation also lies in the District Counsel's sworn deposition testimony that he was not prepared to discuss the facts at any meeting.

The most important protection for taxpayers against any arbitrary abuse of power lies in Tax Court Rule 70 (a)(1) which mandates that "both sides must conduct a pre-trial conference with an exchange of necessary facts, documents and other data between the parties as an aid to the more expeditious trial of cases as well as for settlement purposes." In deposition testimony, the District Counsel stated "He was not prepared to proceed further" at our

Rule 70(a)(1) Conference held on February 12, 1986.

About that time I was able to hold a conference with Jerome Kurtz, Esq. - former IRS Commissioner - who told me that I should report to the Tax Court that I had not had a proper Rule 70 (a)(1) Conference. I followed his good advice and told this to the Tax Court at trial. The District Counsel in reply gave the Court an entirely fictitious account of what had actually transpired at that Conference. The Tax Court accepted his false version.

I have been subsequently advised by counsel that a false statement, knowingly made, designed to mislead the Court constitutes perjury. I would never want to bring such an action against the District Counsel in response to his open and honest confession as I believe his integrity - although belated - is of the highest order. But it is seemingly impossible for me to understand how the Chief Counsel's office can dismiss my charges "as unfounded" as Assistant Chief Counsel Daniel J. Wiles, Esq. has noted in the enclosed letter of February 3, 1995 to Senator Daniel P. Moynihan.

On February 26, 1986, the District Counsel finally made and sent an analysis of the transaction. Upon receipt, my attorney called the Regional Counsel and asked for one settlement meeting based on that letter. Regional Counsel Agatha L. Vorsanger, Esq. * denied his request and then directly threatened him because I, his client, had written to Senator Moynihan. This was testified to in Court and was unchallenged by the government attorney and so stands. My attorney was a staff member of a New York accounting firm whose partners were fearful of the wrath of the Regional Counsel. The attorney resigned. This was six weeks before the scheduled court trial. The Tax Court ruled that the substitute attorney chosen in great haste was unprepared and I lost my case "For Failure To Prosecute."

The Regional Counsel in another matter abused me personally. The Chief Counsel's office had become interested in my case with its failure by the Service to afford a bonafide settlement conference. After much encouragement, the representative wrote a letter cancelling any further contact. In sworn deposition testimony the District Counsel testified that Regional Counsel Agatha L. Vorsanger, Esq. sent notice to the Chief Counsel's office that I had threatened the District Counsel at a conference. Such a threat constitutes a felony. I knew nothing about this at the time as there was no threat and if something as serious as that had indeed occurred, I believe the Regional Counsel had an obligation under the law to so advise me and not send such information to the Chief Counsel's office behind my back. This was all disclosed by the District Counsel in his sworn deposition testimony.

---

* Regional Counsel Vorsanger stated "Counsellor, I am considering disciplinary proceedings against you for your client writing to Senator Moynihan."

The withholding of crucial evidence in pre-trial discovery ordered directly by the Court and throughout the entire case is the final and, perhaps, the most serious charge. Rather than try to condense it in this letter, I have supplied two booklets which cover this serious matter in detail and with proof. The District Counsel who had handled my case was no longer with the Service when this matter was discovered. I filed a fraud charge and represented myself before the Second Circuit Court of Appeals. An attorney for the Department of Justice said there was no fraud as the Engineering Report while in my name was in files not in the possession of the District Counsel and that he had no knowledge of this report. This information appears to have come from a staff attorney of Regional Counsel Agatha L. Vorsanger, Esq.

My appeal was dismissed. A year later in deposition testimony, the original District Counsel testified that he had "the other file", did not know about this court action, and that he had not been asked about it by Regional Counsel Agatha L. Vorsanger's staff counsel Michael J. Wilder, Esq.

There is ample proof to support all of the stated charges. Upon request, such proof can be supplied. In addition to the lengthy sworn deposition testimony of District Counsel John M. Elias, Esq., I have documents obtained under the Freedom of Information Act and correspondence with the Service directly.

As a result of Taxpayers Bill of Rights I, the Internal Revenue Service published PUBLICATION 1 - YOUR RIGHTS AS A TAXPAYER which sets forth the issue of the Service protecting "the rights" of taxpayers. But as long as top officials of the IRS legal structure - the Regional Counsel of the North Atlantic Region and an Assistant Chief Counsel - feel no constraints then it appears that Congress can do what it wants for the Rights of Taxpayers' without it affording real protection. However, I feel strongly that a change in legal procedure by making the government the plaintiff would go a long way toward reducing or even eliminating such type of absue. Had such a procedure been in effect, the District Counsel could not have conducted himself as exhibited in my case.

I further believe that if the government after issuing a Notice of Deficiency retains the burden of proof, then the excesses I have reported regarding the conduct of Regional Counsel Vorsanger probably would not have occurred.

Upon request, I am prepared to offer any additional information as requested.

[Attachments retained in Committee Files]

Very truly yours,

Harold C. Tint
(212) 570 1765

DEPARTMENT OF THE TREASURY
INTERNAL REVENUE SERVICE
WASHINGTON, D.C. 20224

OFFICE OF
CHIEF COUNSEL

FEB - 3 1995

Honorable Daniel P. Moynihan
405 Lexington Avenue
41st Floor, Suite 4101
New York, NY 10174-4101

Attention: Deborah A. Famighette

Dear Senator Moynihan:

This is in response to your letter of December 20, 1994, regarding an inquiry from Mr. Harold C. Tint. As you are aware, your inquiry has been forwarded to this office by Eugene D. Alexander, District Director, Internal Revenue Service-Manhattan Office. Mr. Tint raises several concerns about the handling of his case in the United States Tax Court. At issue in that case were Mr. Tint's investments in two tax shelters. Mr. Tint has written to you and the Internal Revenue Service on several other occasions about this same matter.

Mr. Tint's inquiries to the Commissioner of the Internal Revenue and to you were fully considered by this office on these prior occasions, and it was determined that Mr. Tint's case was properly processed by the Service. The United States Tax Court and the Court of Appeals for the Second Circuit, on two occasions, considered Mr. Tint's case and his arguments about the Service's conduct; and on both occasions, the Court of Appeals upheld the Tax Court's dismissal of Mr. Tint's petition. As recently as September 12, 1994, this office again reviewed this matter at Mr. Tint's request and advised him that the Office of Chief Counsel had considered his inquiry and had determined that his claims were without merit.

While it is unfortunate that Mr. Tint believes his case was unfairly handled, the thorough review of his case by the Internal Revenue Service and the federal court system indicates that his complaints are unfounded. There are no further administrative remedies available to Mr. Tint through the Internal Revenue Service. We hope this information is responsive to your concerns.

Sincerely,

DANIEL J. WILES
Assistant Chief Counsel
(Field Service)

HAROLD CHARLES TINT

HOME ADDRESS: 30 E. 65th St., New York, N.Y. 10021 (212-570-1765).
OCCUPATION: President, Charal Investment Company Inc.
OFFICE ADDRESS: P.O. Box 1485, Brick, N.J., 08723 (212-570-1765).
DEGREE: A.B., 1944(45).
MARRIED: Eleanor Klugman, 1951 (divorced, 1964).
CHILDREN: Charles H. Tint, 1954 (Hamilton Coll. '76), *m.* Liz Schlesinger; Alexandra K., 1957 (Goucher Coll.'80).
GRANDCHILDREN: Two.
OFFICES HELD: President, Charal Investment Co., Inc. and Value Oil Company; director, Merit Oil Co.; director, 30 East 65th Street Corp.; director, Toreador Royalty Corp., Dallas, Texas.

In 1960 I opened a retail gasoline service station in Union, New Jersey. By 1982, I was fortunate enough to have built a chain of eighteen retail gasoline stations in northern New Jersey. In early 1983, I sold this operation to the Merit chain of retail gasoline stations and have been retired from active business since that time. Since 1983, I have been somewhat active as a director of three companies, as noted, and have become an investor in common stocks based on the proceeds of that sale.

I also spent some twenty-five years during that time as an active football recruiter for the Harvard Athletic Department. This experience was personally as rewarding as was my business career financially rewarding.

I also served three years—1943-1946—in the Army Air Force as a weather observer and code clerk.

From 1986 to 1990, I battled the Internal Revenue Service on the issue of the Service failing to grant its stated rights to an individual. I argued my case on a *pro se* basis before the prestigious U.S. Court of Appeals for the Second Circuit. I was not successful but did enjoy the vindication of my position as stated by an IRS attorney in a deposition taken in a related legal matter. The power of an entrenched bureaucracy is a most powerful force and, based on my expertise in this case, I have become a strong advocate against the death penalty. At one point, unknown to me at the time, I was falsely accused of having threatened a government attorney at a conference. This was no idle matter as a memorandum to this effect was circulated at the Chief Counsel's office in Washington, D.C.

LIST OF ENCLOSED EXHIBITS:

1. Three letters of Regional Counsel Vorsanger to United States Senator Daniel P. Moynihan stating six times that the "merits" and/or facts had been discussed at conferences when in fact the District Counsel testified he did not know the merits at his personal conferences and "there was no discussion".

2. Evidence that District Counsel withheld crucial IRS Engineering Report despite Court Ordered exchange of documents in pre-trial Tax Court discovery.

3. Evidence regarding the withholding of the crucial IRS Engineering Report; the "spy story" of its discovery; mis-leading information being given to the Dep't of Justice.

TESTIMONY OF THE HONORABLE JAMES A. TRAFICANT JR. OF THE 17TH DISTRICT OF OHIO BEFORE THE OVERSIGHT SUBCOMMITTEE OF THE HOUSE WAYS AND MEANS COMMITTEE

First of all, Madam Chairwoman, I would like to take this opportunity to thank you for permitting me to testify before the Committee. We, as Members of the 104th Congress, have the responsibility of re-establishing the trust the American people have lost in the Federal government. That relationship starts with the Internal Revenue Service. If Americans believe that the Internal Revenue Service and the tax code served them, and not the reverse, confidence in the federal government would most certainly rise.

I want to applaud the subcommittee for tackling the issue of taxpayers rights. It is an issue I have championed since coming to Congress in 1985. I like to talk about the taxpayer rights issue that is central to this whole debate.

Last year I introduced legislation to protect taxpayers from capricious behavior by the Internal Revenue Service. I have once again introduced the bill, H.R. 390 which would shift the burden of proof in all civil tax cases from the taxpayer to the IRS. Too often, the IRS is an agency out of control; too many Americans fear the IRS and that's wrong. So far this year, over 260 members of Congress have co-sponsored this bill.

Madam Chairwoman, my bill has three sections to protect Americans from IRS abuses. First, damages paid to the taxpayer are increased from $100,000 (current law) to $1,000,000. Second, the bill requires the Internal Revenue Service to notify the taxpayer promptly, in writing and upon request as to the specific implementing regulations the IRS claims they have violated. No more ambiguous computer generated letters using code numbers. No more unprepared confrontations with the IRS. These two seemingly innocuous sections of my bill are extremely vital, and will go a long way in rebuilding the American people's faith in our government.

The last part of my bill is the most important: it shifts the burden of proof from the taxpayer to the IRS in civil tax cases. Under current law, if the IRS accuses someone of tax fraud (which could be an honest mistake on the 1040 form), he or she must prove his or her innocence in civil court, the IRS does not have to prove your guilt. An accused mass murderer has more rights than a taxpayer fingered by the IRS. Jeffrey Dahmer was considered innocent until proven guilty. Mom and Pop small business owners, however, are not afforded this protection.

During the last session, I highlighted the need for this legislation on the House floor by reading letters and case histories sent be me by people across the country. You may remember the case of David and Millie Evans from Longmont, Colorado. The IRS refused to accept their cancelled check as evidence of payment even though the check bore the IRS stamp of endorsement. Or how about Alex Council, who took his own life so his wife could collect his life insurance to pay off their IRS bill? Months later, a judge found him innocent of any wrongdoing. I have heard hundreds of stories of IRS abuses like these on radio and television talk shows. Thousands of Americans have written to me personally with their horror stories.

Opponents argue that my bill will weaken IRS's ability to prosecute legitimate tax cheats. This bill will not effect IRS's ability to enforce tax law, it only forces them to prove allegations of fraud. My bill will ensure that IRS agents act in accordance with the Standards of Conduct required of all Department of Treasury employees and the Constitution of the United States of America. Innocent until proven guilty... that's what my bill is about.

Madam Chairwoman, I urge you to approve my bill. It should be your number one legislative goal for the 104th Congress. All I seek is fairness for the American people.

As I have stated earlier, I have championed this legislation for several years. The bill has enjoyed the strong support of both Republicans and Democrats. In fact, last year more than 120 Members signed a discharge petition to force the bill from the Ways and Means Committee to the House floor for a vote. Madam Chairwoman, a basic tenet of the American justice system is "innocent until proven guilty." H.R. 390 simply ensures that this sacred principle is extended to every corner of our justice system. All too many lives have been ruined unjustly and without cause by an IRS that is all too often out of control. Most average Americans don't have the financial resources to engage in a prolonged battle with the IRS. Most Americans, when accused by the IRS, simply pay the fine -- even though they know they did nothing wrong. Many of those who choose to fight either go broke or lose everything. My bill provides some modest safeguards to ensure that the IRS only brings a case when it has clear evidence that a taxpayer has engaged in fraudulent or illegal activity.

Any tax reform measure approved by the 104th Congress should include this provision.

Madam Chairwoman, again, I want to thank you for affording me this opportunity to testify before your august body. I hope to work with you on this and other tax measures in the weeks and months ahead.

JOHNSON ANNOUNCES HEARING TO EXAMINE THE ADMINISTRATION'S PROPOSAL RELATING TO THE TAX TREATMENT OF AMERICANS WHO RENOUNCE CITIZENSHIP

Congresswoman Nancy L. Johnson (R-CT), Chairman of the Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will conduct a hearing to evaluate the provision in the Administration's FY 1996 budget proposals to impose a tax on U.S. citizens who renounce their citizenship and long-term resident aliens who give up their status as residents. **The hearing will be held on Monday, March 27, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 12:00 noon.**

This hearing will feature invited witnesses only. In view of the limited time available to hear witnesses, the Subcommittee will not be able to accommodate requests to testify other than from those who are invited. Those persons and organizations not scheduled for an oral appearance are welcome to submit written statements for the record of the hearing.

BACKGROUND:

U.S. citizens (regardless of their residence) and resident aliens generally are subject to U.S. income taxation on their worldwide income. The U.S. tax may be reduced or offset by a credit allowed for foreign income taxes paid with respect to foreign source income. Nonresident aliens are taxed at a flat rate of 30 percent (or a lower treaty rate) on certain types of passive income derived from U.S. sources, and at regular graduated rates on net profits derived from a U.S. business. Under present law, a U.S. citizen who abandons his or her citizenship with a principal purpose to avoid federal income tax may be subjected to an alternative taxing method on his or her U.S. source income for 10 years after expatriation.

Under the Administration's proposal, a U.S. citizen who relinquishes citizenship generally would be treated as having sold all of his or her assets at fair market value immediately prior to the relinquishment, and net gain from the deemed sale would be subject to U.S. income tax. The tax would also apply to a "long-term resident" (generally, a green card holder who resides in the U.S. for at least 10 of the prior 15 taxable years) who ceases to be subject to tax as a resident of the United States. The tax would apply whether or not the principal purpose of relinquishment of U.S. citizenship was tax motivated. The proposal would apply to U.S. residents who relinquish their citizenship and long-term residents who cease to be taxed as U.S. residents on or after February 6, 1995 (the date the Administration announced the proposal). On March 15, 1995, the Senate Committee on Finance adopted a modified version of the Administration's proposal during its consideration of H.R. 831.

H.R. 831, a bill to permanently extend the deduction for the health insurance costs of the self-employed, and for other purposes, was considered before the Committee on Ways and Means on February 8 and was passed by the House on February 2, 1995.

SCOPE OF THE HEARING:

Under present law, taxes are imposed on former U.S. citizens on U.S. source income for ten years following renunciation of citizenship if one of the principal purposes of the renunciation was to avoid U.S. income tax. A similar rule applies to resident aliens who cease to be residents. According to the Department of the Treasury, the existing rules to prevent tax avoidance through expatriation "have proven largely ineffective because departing taxpayers have found ways to restructure their activities to avoid those rules, and compliance is difficult to monitor." However, as the Administration's proposal is drafted, it would apply to *any* U.S. citizen who abandons his or her citizenship, not simply to those who expatriate for tax-motivated reasons.

The Subcommittee will examine the Administration's proposal and specific problems which the Internal Revenue Service has encountered in recent years in enforcing existing laws aimed at taxing former U.S. citizens who abandon their citizenship for tax-motivated reasons. If the aim of the Administration's expatriation proposal is to tighten the rules for tax-motivated expatriations, the Subcommittee wants to learn why the proposed solution applies broadly to all citizens who give up their U.S. citizenship, and consider whether more narrowly-targeted reforms would achieve the Administration's goals.

DETAILS FOR SUBMISSION OF WRITTEN COMMENTS:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement by the close of business, Monday, April 3, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal size paper and may not exceed a total of 10 pages including attachments.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

*****

Chairman JOHNSON. Good midday, everyone, and thank you for taking part in this hearing with us this afternoon. Today, we will examine the administration's proposal to impose a new tax on people who give up their U.S. citizenship.

Before we begin, I want to observe that while this is a serious proposal dealing with an important matter, much of the rhetoric surrounding this proposal has been less than helpful in focusing on the merits of the issue. People who give up their citizenship are not necessarily economic Benedict Arnolds, as proponents would label them, just as millions of immigrants who created and enriched this Nation over 200 years ago were not traitors to the countries they left.

Opportunity was and is the goal of those who come to the United States and to its citizens. Nor is the proposal necessarily an economic Berlin Wall, as critics have labeled it. The exemption to the proposal is generous enough to impose tax only on those with significant assets. Of course, new tax proposals may often seem benign when enacted and become more onerous with the passage of time and the changing whims of the Congress.

Take, for example, the income tax which started at 1 percent in 1913 and look at the current $600,000 estate tax exemption on which this proposal is modeled and which has been proposed for amendment by current House Minority Leader Gephardt to be reduced to a $200,000 exemption. I am also concerned that this proposal has a broader reach than may be necessary to address the primary concerns raised by the administration.

As I understand the administration's argument, the concern is over U.S. citizens who renounce citizenship for tax avoidance, but who continue to spend significant amounts of time in the United States. This proposal targets all individuals who renounce citizenship, whether or not they have a tax avoidance purpose and whether or not they continue to return to the United States afterward.

I also take very seriously the human rights issues that some of our witnesses today will discuss. While this proposal may not violate any current laws, I think the United States should lead by example. Our national interests may not be best served by drawing what some would see as a narrow distinction between this proposal and similar exit taxes that we have criticized when they were imposed by other countries.

It is possible that this proposal could be rewritten in a way that would more directly address the concerns raised by the administration, but I am concerned that Congress will not have the time to do this in connection with the bill to extend the self-employed health insurance deduction, which we all acknowledge must be enacted very soon.

On Friday, the Subcommittee held a hearing on the taxpayer bill of rights. With the testimony from that hearing fresh in my mind, I want to emphasize how important it is that this proposal not become another source of potential procedural friction between the Internal Revenue Service and law-abiding taxpayers.

For example, I would view it as a significant abuse of taxpayers' rights if the IRS were to attempt to use this proposal, if enacted, to change in any way the treatment of U.S. citizens who have not renounced their citizenship, notwithstanding any suspicion that an

overzealous tax collector may have about a citizen's intentions. That is the gray area and the deep water of this proposal before us.

I would like to express my appreciation to the witnesses who have come here on less than short notice, and I look forward to their testimony. I also appreciate the commitment of my Chairman, Chairman Archer, to not support any tax changes that haven't undergone public hearing in the House, and for that reason, we have convened this hearing, even on rather short notice.

I thank you. I would like to welcome our first witness today, Joseph Guttentag, the International Tax Counsel for the U.S. Department of Treasury—excuse me one moment. Before we proceed, my colleague, Mr. Ramstad, a new and esteemed Member of this Committee and one who has had some important experiences that will be useful to us as we move forward in our work, would like to make an opening comment.

Mr. RAMSTAD. Thank you, Madam Chair. Very briefly, I appreciate your leadership in calling today's hearing on the administration's proposal. I also share your concerns relative to the rhetoric around here and I was interested in the President's radio address over the weekend when he asked that both Republicans and Democrats in the House, in light of last week's debate on the welfare bill, tone down our rhetoric, and I share that concern.

I think we need to work in a bipartisan, pragmatic way on all of these policy issues, but I also think it is important that the administration get the message, too, and tone down its rhetoric, because it is one thing to throw out caveats to keep the dialog from simmering and to be more statesmanlike, but it is another thing when the administration is out there fueling the flames.

So I think it works both ways. I think both ends of Pennsylvania Avenue would be well-served, and certainly the country, more importantly, would be well-served, if we all toned down the rhetoric. This bill, I think, is a good place to start fresh on a beautiful Monday morning here in Washington.

It is particularly timely that we review this proposal. As the Chair mentioned, it was included in the Senate version of the bill we recently passed to restore and make permanent the 25-percent tax deduction for health care costs of self-employed taxpayers.

The inclusion of this particular provision made it possible to raise the deduction to 30 percent beginning with 1995, which is more than appropriate. Some of us would like to see it raised to 100 percent for self-employed individuals, to put them on a level playingfield with their counterparts in the marketplace.

I am particularly interested, Madam Chair, in the testimony of the Treasury Department officials. This provision, while seemingly well-intentioned, appears to create an administrative nightmare for the Internal Revenue Service. I know the IRS already struggles to enforce Code section 877, which allows assessment of U.S. tax with respect to certain types of income for a period of 10 years after relinquishing citizenship.

I am curious how effective the Treasury Department estimates the IRS would be in enforcing the proposal under consideration. I am also curious what Treasury estimates the net Federal revenue gain will be.

In addition, Madam Chair, I share your concerns relative to the issues discussed last week in the taxpayer bill of rights, and I certainly look forward to examining all of these issues with our distinguished witnesses today. Thank you, Madam Chair.

Chairman JOHNSON. Thank you. Mr. Guttentag, will you proceed, please, and welcome.

STATEMENT OF JOSEPH H. GUTTENTAG, INTERNATIONAL TAX COUNSEL, U.S. DEPARTMENT OF TREASURY

Mr. GUTTENTAG. Thank you, Madam Chair and Subcommittee Members. I appreciate the opportunity to testify in support of the administration proposals and section 5, H.R. 831, as approved by the Senate, and designed to prevent a relatively few, very wealthy Americans from avoiding U.S. tax on millions of dollars of gains by renouncing their U.S. citizenship.

I would like to submit my complete statement for the record and summarize the administration's position.

Chairman JOHNSON. That will be done.

Mr. GUTTENTAG. Next month, millions of Americans will settle up with their government and finalize their tax obligations. Recent reports in Forbes and other media have described how a small number of Americans avoid their U.S. tax obligations by giving up their U.S. citizenship.

We believe that when a citizen changes his status to that of an alien, who is exempt from most U.S. tax, it is appropriate and fair to tax him on those gains on which tax has not previously been paid. These expatriates should not obtain an unfair advantage over those U.S. citizens who continue to meet their tax obligations to our government.

Many other countries, such as Canada, Australia and Germany impose similar taxes. Each country crafts its proposal to deal with its own basic tax structure and other fiscal considerations.

Opponents of this proposal imply that this tax is designed to prevent free immigration or deny other important human rights. The proposal submitted by the administration and as approved by the Senate does not in any way restrict Americans from entering or leaving the country. As a matter of fact, as noted by the Chair, many expatriating former Americans choose to spend a significant amount of their time in the United States, often with family members who have not renounced their citizenship.

My views on the human rights issue are strongly buttressed by others much more learned in this field than I and are set forth in a memorandum prepared by the Legal Advisors Office of the Department of State and in a recent letter to Assistant Secretary Samuels from a distinguished international lawyer, Professor Detlev Vagts of Harvard Law School. I would like to submit them both for the record at this time, Madam Chair.

Chairman JOHNSON. We will include them in the record, Mr. Guttentag.

[The following was subsequently received:]

SECTION 201 OF THE TAX COMPLIANCE ACT OF 1995: CONSISTENCY WITH INTERNATIONAL HUMAN RIGHTS LAW

Memorandum of the Department of State
Submitted for the Record by the Department of the Treasury

Hearing Before the Subcommittee on Oversight
Committee on Ways and Means
U.S. House of Representatives

March 27, 1995

The Department of State believes that Section 201 of the proposed Tax Compliance Act of 1995 is consistent with international human rights law, on the basis of information provided by the Department of the Treasury that persons affected would have the means to pay the tax and that such taxes would not be more burdensome than those they would pay if they were to remain U.S. citizens. As described below, closing a loophole that allows extremely wealthy people to evade U.S. taxes through renunciation of their American citizenship does not violate any internationally recognized right to leave one's country. It is inaccurate on legal and policy grounds to suggest that the Administration's proposal is analogous to efforts by totalitarian regimes to erect financial and other barriers to prevent their citizens from leaving. The former Soviet Union, for example, sought to impose such barriers only on people who wanted to leave, and not on those who stayed. In contrast, Section 201 seeks to equalize the tax burden born by all U.S. citizens by ensuring that all pay taxes on gains above $600,000 that accrue during the period of their citizenship. Unlike the Soviet effort to discriminate against people who sought to leave, we understand from Treasury that Section 201 does not treat those who renounce their U.S. citizenship less favorably than those who remain U.S. citizens.

Section 201 would require payment of taxes by U.S. citizens and long-term residents on gains above $600,000 that accrue immediately prior to renunciation of their U.S. citizenship or long-term residency status. We understand that these tax requirements are no more burdensome than those that they would face if they remained U.S. citizens or residents at the time

they realized their gains or at death. While U.S. tax policy generally allows taxpayers to defer gains until they are realized or included in an estate, we further understand that Section 201 treats renunciation as a taxable event because such act effectively removes the underlying assets from U.S. taxing jurisdiction.

International law recognizes the right of all persons to leave any country, including their own, subject to certain limited restrictions. Article 12(2) of the International Covenant on Civil and Political Rights provides that: "Everyone shall be free to leave any country, including his own." Article 12(3) states that the right "shall not be subject to any restrictions except those which are provided by law, are necessary to protect national security, public order (ordre public), public health or morals or the rights and freedoms of others, and are consistent with the other rights recognized in the present Covenant."

Section 201 does not affect a person's right to leave the United States. Any tax obligations incurred under Section 201 would be triggered by the act of renunciation of U.S. citizenship, and not by the act of leaving the United States. In addition, since during peacetime U.S. citizens must be outside the United States to renounce their citizenship (see 8 U.S.C. §§1481(a)(5),1483(a)) the persons affected by Section 201 would have already left the United States. Renunciation does not preclude them from returning to the United States as aliens and subsequently leaving U.S. territory. Accordingly, Section 201 does not affect a person's right or ability to leave the United States.

Inherent in the right to leave a country is the ability to leave permanently, i.e., to emigrate to another country willing to accept the person. The proposed tax is as unconnected to emigration as it is to the right to leave the United States on a temporary basis. It is not the act of emigration that

triggers tax liability under Section 201, but the act of renunciation of citizenship. These two acts are not synonymous and should not be confused with one another. Because the United States allows its citizens to maintain dual nationality, U.S citizens may emigrate to another country and retain their U.S. citizenship. Hence, the act of emigration itself does not generate tax liability under Section 201. Indeed, we understand from the Department of the Treasury that some of the people potentially affected by Section 201 already maintain several residences abroad and hold foreign citizenship. Moreover, in stark contrast to most emigrants, particularly those fleeing totalitarian regimes, it is reported that some continue to spend up to 120 days each year in the United States after they have renounced their citizenship.

While emigration from the United States should not be confused with renunciation of U.S. citizenship, it should nonetheless be noted that it is well established that a State can impose economic controls in connection with departure so long as such controls do not result in a de facto denial of emigration. As Professor Hurst Hannum notes in commenting on the restrictions on the right to leave set forth in Article 12 of the Covenant:

> "Economic controls (currency restrictions, taxes, and deposits to guarantee repatriation) should not result in the de facto denial of an individual's right to leave . . . If such taxes are to be permissible, they must be applied in a non-discriminatory manner and must not serve merely as a pretext for denying the right to leave to all or a segment of the population (for example, by requiring that a very high 'education tax' be paid in hard currency in a country in which possession of hard currency is illegal)."1/

A wealthy individual who is free to travel and live anywhere in the world, irrespective of nationality, is in no way comparable to that of a persecuted individual seeking freedom who is not even allowed to leave his or her country for a day. In U.S. law, the Jackson-Vanik amendment to the Trade Act of 1974 (19 U.S.C. §2432) is aimed at this latter case and applies to physical departure, not change of nationality. Examples of States' practices that have been considered to interfere with the ability of communist country citizens to emigrate include imposing prohibitively high taxes specifically applied to the act of emigration with no relation to an individual's ability to pay, or disguised as "education taxes" to recoup the State's expenses in educating those seeking to depart permanently. Such practices also include punitive actions, intimidation or reprisals against those seeking to emigrate (e.g., firing the person from his or her job merely for applying for an exit visa). It is these offensive practices that the Jackson-Vanik amendment is designed to eliminate and thereby ensure that the citizens of these countries can exercise their right to leave. (See Tab A for further analysis of the Jackson-Vanik amendment.)

The only international human rights issue that is relevant to analysis of Section 201 is whether an internationally recognized right to change citizenship exists and, if so, whether Section 201 is consistent with it. The Universal Declaration of Human Rights, which is in many respects considered reflective of customary international law, provides in Article 15(2) that: "No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality" (emphasis added).2/ Although many provisions of the Universal Declaration have been incorporated into international law, for example in the International Covenant on Civil and Political Rights, Article 15(2) is not. Accordingly, the question arises whether this provision could be considered to be customary international law.

States' views on this question and practices do vary. Many countries have laws governing the renunciation of citizenship, but renunciation is not guaranteed because they have also established preconditions and restrictions, or otherwise subject the request to scrutiny.3/ Professor Ian Brownlie has commented on Article 15(2) in the context of expatriation that: "In the light of existing practice, however, the individual does not have this right, although the provision in the Universal Declaration may influence the interpretation of internal laws and treaty rules."4/ Others agree with this position. (See Restatement of the Foreign Relations Law of the United States, §211, Reporters' Note 4). Nonetheless, the United States believes that individuals do have a right to change their nationality. The U.S. Congress took the view in 1868 that the "right of expatriation is a natural and inherent right of all people" in order to rebut claims from European powers that "such American citizens, with their descendants, are subjects of foreign states, owing allegiance to the governments thereof . . . ." (Rev. Stat. §1999).

It is evident, however, that States do not recognize an unqualified right to change nationality. It is generally accepted, for example, that a State can require that a person seeking to change nationality fulfill obligations owed to the State, such as pay taxes due or perform required military service.5/ This is especially true where the requirement is by its nature proportional to the means to pay, and thus does not present a financial barrier, which we understand from Treasury is the case here.

The consistency between Section 201 and international human rights law is further demonstrated by the practice of countries that are strong supporters of international human rights and that have adopted similar tax policies. According to the Report prepared by the Staff of the Joint Committee on Taxation, Germany imposes an "extended tax liability" on German citizens who emigrate to a tax-haven country or do not assume

residence in any country and who maintain substantial economic ties to Germany. Australia imposes a tax when an Australian resident leaves the country; such person is treated as having sold all of his or her non-Australian assets at fair market value at the time of departure. To provide another example, Canada considers a taxpayer to have disposed of all capital gain property at its fair market value upon the occurrence of certain events, including relinquishment of residency.

Accordingly, to the extent that Section 201 imposes taxes on persons who have the ability to pay and that are no more burdensome than those they would pay if they remained U.S. citizens, it would not raise human rights concerns with respect to change of citizenship for two reasons. First, U.S. citizens would remain free to choose to change their citizenship. This proposal does not in any way preclude such choice, even indirectly. We understand from Treasury that any tax owed, by its nature, applies only to gains and thus should not exceed an individual's ability to pay. Second, international law would not proscribe reasonable consequences of relinquishment, such as liability for U.S. taxes that accrue during the period of citizenship. We understand from the Department of the Treasury that the imposition of taxes under Section 201 would be equitable, reasonable and consistent with overall U.S. tax policy because the provision applies only to gains that accrued during the period of citizenship in excess of $600,000; the tax rate is consistent with other tax rates; and affected persons would have the financial means to pay the tax, either immediately or on a deferred basis. Obviously, there is no international right to avoid paying taxes by changing one's citizenship.

In conclusion, it is the view of the Department of State that, based on the information described above, Section 201 does not violate international human rights law. Accordingly, the debate on the merits of Section 201 should focus solely on domestic tax policies and priorities.

Professor Lillich comments that "the right protected in [Article 15] has received very little subsequent support from states and thus can be regarded as one of the weaker rights . . . ." "Civil Rights," in T. Meron, Human Rights in International Law at 153-54 (1988).

5. A State should not, for example, withhold discharge from nationality if, inter alia, acquisition of the new nationality has been sought by the person concerned in good faith and the discharge would not result in failure to perform specific obligations owed to the State. P. Weis, Nationality and Statelessness in International Law (2nd ed.) 133 (1979). In Coumas, supra note 3, the Supreme Court of California observed that Greece qualified the right of expatriation on fulfillment of military duties and procurement of consent of the Government.

Section 201 of the proposed Tax Compliance Act of 1995 does not conflict with the Jackson-Vanik amendment to the Trade Act of 1974 (19 U.S.C. §2432). That amendment restricts granting most-favored-nation treatment and certain trade related credits and guarantees to a limited number of nonmarket economies that unduly restrict the emigration of their nationals. Specifically, it applies to any nonmarket economy which:

> "(1) denies its citizens the right or opportunity to emigrate;
>
> (2) imposes more than a nominal tax on emigration or on the visas or other documents required for emigration, for any purpose or cause whatsoever; or
>
> (3) imposes more than a nominal tax, levy, fine, fee or other charge on any citizen as a consequence of the desire of such citizen to emigrate to the country of his choice . . . ."

This provision, according to the Senate Finance Committee, was "intended to encourage free emigration of all peoples from all communist countries (and not be restricted to any particular ethnic, racial, or religious group from any one country)." (1974 U.S.C.C.A.N. 7338.) These countries were expected to "provide reasonable assurances that freedom of emigration will be a realizable goal" if they were to enter into bilateral trade agreements with the United States. (Id.)

The amendment does not apply to emigration from the United States or to the renunciation of U.S. citizenship. It has been suggested, however, that Section 201 would somehow conflict with the "spirit" or the "principles" of the Jackson-Vanik amendment. The Department of State does not agree with such proposition.

Generally, in implementing this statute, the President makes determinations concerning a nonmarket economy's compliance with freedom of emigration principles contained in the amendment. Such determinations take into account the country's statutes and regulations, and how they are implemented day to day, as well as their net effect on the ability of that country's citizens to emigrate freely. The President may, by Executive Order, waive the prohibitions of the Jackson-Vanik amendment if he reports to Congress that a waiver will "substantially promote" the amendment's freedom of emigration objectives, and that he has received assurances from the country concerned that its emigration practices "will henceforth lead substantively to the achievement" of those objectives. (19 U.S.C. §2431(c).)

Several types of State practices have been considered by the United States to interfere with the ability of communist country citizens to emigrate, such as:

- prohibitively high taxes specifically applied to the act of emigration with no relation on an individual's ability to pay or disguised as "education taxes" seeking to recoup the state's expenses in educating those who are seeking to permanently depart;

- punitive actions, intimidation or reprisals by the State against those seeking to emigrate (e.g., firing a person from his or her job merely for applying for an exit visa);

- unreasonable impediments, such as requiring adult applicants for emigration visas to obtain permission from their parents or adult relatives;

- unreasonable prohibitions of emigration based on claims that the individual possesses knowledge about state secrets or national security; and

- unreasonable delays in processing applications for emigration permits or visas, interference with travel or communications necessary to complete applications, withholding of necessary documentation, or processing applications in a discriminatory manner such as to target identifiable individuals or groups for persecution (e.g., political dissidents, members of religious or racial groups, etc.).

Examples of these practices in the context of the former Soviet Union are described in an exchange of letters between Secretary of State Kissinger and Senator Jackson of October 18, 1974, discussing freedom of emigration from the Soviet Union and Senator Jackson's proposed amendment to the Trade Act, now known as the Jackson-Vanik amendment. (Reprinted in 1974 U.S.C.C.A.N. 7335-38.)

As explained in the accompanying memorandum, Section 201 does not deny anyone the right or ability to emigrate, and does not impose a tax on any decision to emigrate. Neither does the proposed tax raise questions of disparate standards applicable to the United States as against the nonmarket economies subject to Jackson-Vanik restrictions.

The emigration practices of those countries which have been the target of Jackson-Vanik restrictions have typically involved individuals or groups that have been persecuted by the State (e.g., dissidents), precluded family reunification, applied across the board to all citizens by a totalitarian State in order to preclude massive exodus, or have otherwise

been so restrictive as to effectively prevent the exercise of the international right to leave any country including one's own (as recognized in Article 12(2) of the International Covenant on Civil and Political Rights and further described in the accompanying memorandum). Furthermore, the primary objectives of those seeking to emigrate from those countries have been to avoid further persecution or to be reunified with their relatives, and to leave permanently. It was the act of leaving for any period of time that the State sought to block. None of these conditions are comparable to the exercise of taxing authority by the United States under Section 201 or to the status of the individuals who would be subject to that tax.

As stated in the accompanying memorandum, Section 201 would not interfere with the right of an individual to physically depart from the United States, whether temporarily or permanently.

HARVARD LAW SCHOOL
CAMBRIDGE · MASSACHUSETTS · 02138

March 24, 1995

Hon. Leslie B. Samuels
Assistant Secretary (Tax Policy)
Department of the Treasury Washington. D.C. 20220
Fax: 202-622-0605

Dear Secretary Samuels,

Your office has requested my views as to international law implications of the proposed tax on expatriates that would be imposed by section 5 of H.R. 831. You will understand that this is my personal opinion and in no way purports to represent the views of the institution to which I belong. It is also compact in form due to the constraints of time imposed by your legislative schedule and my own impending travel.

The right of expatriation has always been highly valued by the United States, which has defended it against the claims of other nations that refused to let their citizens go. The right to make this choice is the counterpart of the right not to lose one's citizenship except by one's own voluntary choice, a right underlined by opinions of the Supreme Court. However, in my view, the proposed tax does not amount to such a burden upon the right of expatriation as to constitute a violation of either international law or American constitutional law. It merely equalizes over the long run certain tax burdens as between those who remain subject to U.S. tax when they realize upon certain gains and those who abandon their citizen while the property remains unsold.

Furthermore, the proposed tax does not except, in the most indirect way, burden the right to emigrate. It is the right to emigrate rather than the right to expatriate onesself which is the subject of various conventions and of customary international law. As stated in the preceding paragraph, it basically equalizes certain tax burdens. It is not comparable to the measures imposed by such countries as the former Soviet Union and German Democratic Republic which were obviously and intentionally burdens on the right to emigrate.

In arriving at these conclusions I have reviewed various materials such as your statement before the Subcommittee on Taxation and Internal Revenue Oversight, two opinions of the Office of the Legal Adviser, U.S. State Department, the views of Professors Paul Stephan III and Robert Turner and others.

Very truly yours,

Detlev F. Vagts
Bemis Professor of Law

Mr. GUTTENTAG. Thank you. The argument has also been made that the provision is somehow unconstitutional on the grounds that no taxable gain has been realized by the former American. This argument is also without merit. There are similar taxing regimes already in the Internal Revenue Code whose constitutionality has been upheld against similar challenges.

For example, the foreign personal holding company rules applicable to corporate and individual stockholders and the controlled foreign corporation regime that also applies to corporate and individual shareholders have both been upheld by the courts against challenges that they were unconstitutional, that it was unconstitutional to tax unrealized income.

We must remember that we are not writing on a clean slate. The proposal under discussion is an amplification and improvement of section 877 of the Code which was enacted almost 30 years ago. Unfortunately, section 877 has proven ineffective in addressing the abuses at which it was targeted. The old section 877 taxed expatriate Americans for 10 years but only on certain gains and in a manner that raised administrative and extra territoriality problems. Section 5 of H.R. 831 is designed to avoid the problems of existing law. With this exemption of up to $1.2 million of gain for a married couple, the provision eliminates from its coverage all but the wealthiest. Although the tax is imposed on gains at the time the citizen renounces citizenship, there are provisions permitting deferral of payment of the tax if adequate security is provided. We would be happy to review this issue further, either now or in the future.

U.S. pension plan benefits are excluded from coverage, as well as up to $500,000 of U.S.—foreign pension benefits. U.S. real estate is exempt from this proposal.

Finally, citizenship will generally be deemed lost on the date of renunciation before a U.S. Government official or in the happening of other events, whichever occurs first.

Enactment of this legislation will help assure continued respect for the fairness and equity of our income tax system. With the revenue dedicated to deficit reduction, section 5 of H.R. 831 sends an important signal of our continuing intent to reduce our fiscal deficit.

Madam Chair, this concludes my statement. I will be available to answer any questions that the Subcommittee may have.

[The prepared statement follows:]

STATEMENT OF
JOSEPH H. GUTTENTAG
INTERNATIONAL TAX COUNSEL
DEPARTMENT OF THE TREASURY
BEFORE THE SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

Madame Chair and members of the Subcommittee, I am pleased today to testify in support of Section 5 of H.R. 831, which requires individuals who renounce their U.S. citizenship to face their tax responsibilities. My testimony is limited to section 5 of H.R. 831 as approved by the Senate and is generally similar to part of the Administration's proposal.[1] The proposal is designed as an improvement of similarly targeted provisions of our tax law that have been in affect for almost thirty years.

If a U.S. citizen relinquishes his or her citizenship, property held by that person would be treated as sold at fair market value immediately before such expatriation. Property treated as sold would include all items of property that would be included in the individual's gross estate under the Federal estate tax rules as if such individual were to die on the date of expatriation. In addition, certain trust interests would be subject to the new rules. In this regard, the bill provides that a beneficiary's interest in a trust is determined based on all the facts and circumstances.

The proposal contains important exceptions. First, gains up to $600,000 would be exempt from tax. Second, United States real estate and interests in certain retirement plans would not be treated as sold. Under the Senate bill, with IRS approval and appropriate security, taxpayers could defer the payment of tax on any asset for up to ten years. The tax would be effective with respect to citizens who relinquished their citizenship on or after February 6, 1995. For this purpose a person generally is considered to relinquish his citizenship on the first date on which the individual gives notice to a U.S. government official.

---

[1] The Administration's proposal would also apply the proposed tax regime to a long-term resident, defined as an individual who has been a lawful permanent resident of the United States (i.e. a "green card" holder), other than an individual who was taxed as a resident by another country under treaty tie-breaker rules, in at least ten of the prior fifteen taxable years. A "green card" holder would be taxed when he or she ceases to be subject to U.S. tax as a resident.

Because of the exceptions and conditions described above, Treasury estimates that every year approximately two dozen very wealthy taxpayers with substantial unrealized gains would be subject to the proposed rules. The revenue generated by section 5 of H.R. 831, as passed by the Senate, is dedicated to deficit reduction.

The Administration supports the proposal because we believe that all U.S. persons should pay their fair share of U.S. tax. Our existing laws generally subject individuals to tax when assets are sold or when the individual dies. Certain wealthy people have found that they can completely avoid paying U.S. tax on their gains and generally avoid substantial further U.S. tax, by renouncing their U.S. citizenship. Because of the costs of obtaining another nationality and other transaction costs, renouncing U.S. citizenship to avoid tax is generally only a viable option for the wealthiest Americans.

Although recent publicity has focused on expatriations by super-rich Americans, the problem of tax avoidance by renouncing citizenship is not new. The United States first enacted expatriation tax rules in 1966 as part of the Foreign Investors Tax Act. The 1966 Act was intended to spur foreign investment in the United States by reducing U.S. tax on activities of foreign investors. Section 877 was adopted as part of this overhaul because Congress was concerned that the new rules to encourage foreign investment might also encourage U.S. persons to save taxes by surrendering their citizenship. H.R. Rep. No. 1450, 89th Cong., 2nd Sess. 22 (1966).

Under current section 877, a special taxation regime applies to a U.S. citizen who renounces his or her citizenship unless the loss of citizenship did not have as one of its principal purposes the avoidance of tax. This special regime applies for 10 years after expatriation. It subjects certain assets that produce U.S. source income to tax at graduated U.S. rates as if the person were still a U.S. citizen. Thus, taxing U.S. persons who abandon their U.S. citizenship is an accepted and long-standing part of our law.

The United States is not the only country in the world to enact rules to prevent expatriate tax avoidance. Other developed countries have enacted tax legislation to combat tax avoidance by expatriation. A brief summary follows. In 1971, Canada enacted a provision that treats a Canadian resident taxpayer as having sold all of his capital assets at their fair market value when he relinquishes his residence. In 1992, the Canadians reviewed this provision, and decided to expand it to apply to all assets (not just capital assets) that are owned by the departing resident. Australia also enacted a provision similar to the Canadian rule. In 1971, Germany enacted a rule that requires long-term residents of Germany who terminate their German residence to pay tax on a deemed disposition of 25 percent ownership interests in German corporations. Other countries have enacted different approaches to deal with the same problem. Countries that continue to tax former residents under special rules include Denmark, Sweden, the Netherlands, Norway, and Finland. Thus, it is accepted in the international community that a country may enact special anti-abuse rules to address the problem of departing taxpayers. The tax systems described above are more limited than the current proposal as they apply when one of their citizens decides to live in another country. A tax incurred when renouncing citizenship only

applies when a citizen gives up citizenship and not when a citizen just decides to live overseas. Let me emphasize that such a tax is not imposed when taxpayers leave temporarily or permanently. Travel abroad triggers no tax.

The Treasury Department has recently taken a close look at this area and concluded that section 877 needs to be overhauled. As a result of this review, the President's fiscal year 1996 budget contains a proposal to revise section 877.

The need for changes is based on several considerations. First, under existing rules, U.S. tax is triggered only if the expatriate had a tax avoidance motive. This tax motivation requirement is subject to abuse because it is often difficult to determine whether someone had a principal purpose of tax avoidance. Consequently, in practice it has been difficult to sustain a determination that an individual should be subject to tax under section 877. A similar change was made in 1984, when Congress deleted from the Code a provision that required a tax avoidance intent before tax would be imposed on certain transfers involving foreign corporations.

Second, existing law only applies to certain U.S. source income. This standard is subject to abuse because taxpayers may be able to convert U.S. source income subject to the tax under current section 877 to foreign source income that is not subject to the tax. We understand that practitioners advise their clients on ways to accomplish this conversion in a manner that purports to avoid section 877.

In addition, the U.S. source restriction of current law is inconsistent with the normal rule that U.S. citizens should be subject to tax on their worldwide income, whether from U.S. or foreign sources. However, existing section 877 allows former citizens to earn foreign source income without paying U.S. tax.

Third, existing expatriation rules are very difficult to enforce. The requirement of current law that the imposition of the tax must wait until the property is actually sold requires the IRS to monitor transactions that occur long after an individual relinquishes his citizenship, and is usually living overseas, and therefore imposes an undesirable extraterritorial effect.

Section 5 of H.R 831, as passed by the Senate, addresses the basic issues raised by existing section 877. The proposal taxes appreciation over $600,000 without regard to tax motivation. In addition, the tax applies to all gains, not just U.S. source gains. Finally, the tax would be much simpler to administer and enforce than the current law.

Some have raised concerns about the ability of taxpayers to pay a tax on their illiquid assets if they choose to expatriate. We believe these concerns can be adequately addressed. We support the changes made by the Senate that would allow taxpayers up to ten years to pay the tax. In most cases, a ten-year extension should be adequate time to pay any tax. This provision is based on an existing rule that extends the time that is normally given to pay estate taxes on illiquid assets. Concerns have also been raised about the appropriateness of taxing interests in trusts, particularly remote or contingent interests. The proposal determines trust ownership on

the basis of all the facts and circumstances. Thus, a taxpayer may show that he or she has no interest in a trust even if he or she is a potential beneficiary of the trust. The Senate Finance Committee elaborates on this rule: "It is intended that such regulations disregard de minimis interests in trusts, such as an interest of less than a certain percentage of the trust as determined on an actuarial basis, or a contingent remainder interest that has less than a certain likelihood of occurrence." Of course, payment of any portion of the tax due attributable to the trust interest could be extended as described above. If, however, a taxpayer is unable to pay the tax within that period, pursuant to current authority under the Code, the Internal Revenue Service may permit further deferral of the payment of tax under appropriate agreements. We believe that this combination of procedures should resolve difficulties of the relatively few taxpayers who would ever be subject to the provisions and avoids inserting elaborate complicated rules of limited application into the Code. We are willing however, to review this issue further, now or in the future.

We believe that the Congress has the authority to enact this bill. In 1920, the Supreme Court in *Eisner v. Macomber*, 252 U.S. 189 (1920), held unconstitutional an income tax imposed on stock dividends because the taxpayer had not yet realized a gain. However, the Supreme Court thereafter retreated from creating a constitutional requirement for realization. In 1940 the Court held in *Helvering v. Bruun*, 309 U.S. 461 (1940), that a landlord realized gain when he repossessed leased land on which the tenant had erected a building that added about $50,000 to the value of the property. A few months later, the Court ruled in *Helvering v. Horst*, 311 U.S. 112 (1940), that accrued interest on certain negotiable interest coupons should be taxed to the person that gave the coupons away. In that case, the Court demoted the realization concept from a constitutional principal by describing it as a rule "founded on administrative convenience."

More recently, other provisions of the Internal Revenue Code that tax gains prior to realization have been held to be constitutionally valid. These provisions include the foreign personal holding company provisions, the subpart F provisions, and the mark-to-market rules of section 1256. The Second Circuit considered the foreign personal holding company rules in *Eder v. Commissioner*, 138 F.2d 27 (2nd Cir. 1943), and found that Congress intended to attack "incorporated pocketbooks," and that this purpose was valid and constitutionally permissible. In a later case upholding the Subpart F rules, the Second Circuit said that the constitutional argument "borders on the frivolous." *Garlock v. Commissioner*, 489 F. 2d 197, 202 (2d Cir. 1973), cert. denied, 417 U.S. 911 (1974). More recently, the Ninth Circuit upheld the validity of section 1256 rules stating "section 1256 is neither arbitrary, capricious, nor confiscatory and is a proper exercise of Congress' constitutional power to tax." *Murphy v. U.S.*, 992 F.2d 929, 931 (9th Cir. 1993).[2]

Finally, the constitutionality of existing section 877 has been upheld by the courts. *Di Portanova v. U.S.*, 690 F.2d 169 (Ct.Cl. 1982). In another case involving expatriation, the Tax

---

[2] Although the court upheld the constitutionality of section 1256 on due process grounds, it explicitly declined to address the realization issue.

Court held that "the taxing power of Congress . . . is exhaustive and embraces every conceivable power of taxation." *See Dillin v. Commissioner*, 56 T.C. 228, 241 (1971).

We believe that the power to tax income extends to the power to prevent taxpayers from rearranging their affairs to avoid tax on unrealized appreciation. *See* Bittker, Federal Taxation of Income, Estates and Gifts para. 5.2 at Id. at 5-20 (1989). A reasonable opportunity to impose and collect the tax on appreciated assets is when the U.S. citizen gives up his or her citizenship. Therefore, the tax imposed should be seen as neither arbitrary, capricious, nor confiscatory and as a proper exercise of the constitutional power to tax.

Let me next address the issue of whether the proposal is consistent with international human rights and the Jackson-Vanik amendments to the Trade Act of 1974. A memorandum prepared by the Department of State explains why this tax provision is not inconsistent with human rights obligations of the United States under international agreements and customary international law, and is submitted for the record. In brief, fundamentally the right to emigrate is the right to leave physically the territory of a State. That right is not affected in any way by the proposal. The proposal would not tax the physical departure from the United States, rather it would impose tax at the time of renunciation of United States citizenship.

Finally, regarding our treaty obligations, the proposal is consistent with our tax treaties since the United States reserves the right to tax its citizens and certain former citizens.

We believe that Americans who avoid their tax responsibilities by expatriating should not be rewarded. Instead, they should be asked to pay tax that U.S. citizens will pay sooner or later.

Madame Chair, this concludes my remarks. I would be pleased to answer any questions that the subcommittee may have.

Chairman JOHNSON. I thank you, Mr. Guttentag.

Is it true that regulations have not been issued for current statutory rules regarding U.S. citizens that renounce their U.S. citizenship?

Mr. GUTTENTAG. No regulations have ever been issued over the last 30 years under that section.

Chairman JOHNSON. If expatriation is a major tax avoidance problem, why hasn't the Clinton administration, and why haven't other administrations, issued regulations?

After all, they would only be implementing current law.

Mr. GUTTENTAG. Section 877 has not been—has not worked since its inception, and it was felt that regulations would not provide a means of making an effective provision out of that because of the defects in it. It has proven ineffective in solving the problem for which it was intended.

Chairman JOHNSON. So you would say that the regulations would not overcome the defects in the law?

Mr. GUTTENTAG. That is right.

Chairman JOHNSON. Can you please tell the Subcommittee how many U.S. citizens gave up their citizenship in 1994, 1993, 1992, 1991 and 1990?

Mr. GUTTENTAG. These figures as supplied by the Department of State reflect that in 1990, there were 571 citizens giving up their citizenship; 1991, 619; 1992, 556; 1993, 697; and last year, 1994, 858.

Chairman JOHNSON. How many of those that gave up their citizenship gave up their citizenship for tax motivated reasons in those years?

Mr. GUTTENTAG. We don't have any way of knowing that, Madam Chair. There have been very few cases brought and actions brought under section 877, and of course, we don't have any idea what the intention was of these several hundred people.

Chairman JOHNSON. But, Mr. Guttentag, how do you get revenue estimates for this if you have no idea what part of the 858 last year would be exempted under your bill and how many would be caught in that net? I mean, you must have some information about this or you couldn't have made estimates of the revenue impact.

Mr. GUTTENTAG. Yes. Our revenue estimates for the proposed legislation I believe made the assumption, at least on the Treasury side, that the present 877 was ineffective and did not raise any substantial revenue.

Chairman JOHNSON. So you do not expect this change in the law to raise any substantial revenue?

Mr. GUTTENTAG. I am sorry?

Chairman JOHNSON. So you do not expect the change you are proposing to raise any substantial revenue?

Mr. GUTTENTAG. The change in the law will raise substantial revenue.

Chairman JOHNSON. What I am asking you is, on what do you base that judgment, that revenue estimate, if you know that the current law is ineffective? You know that last year there were 858 renunciations, but you do not know what percentage of those renunciations were for the purposes of avoiding taxes.

Do you know what percentage of those renunciations would have involved assets valued at less than $600,000?

Mr. GUTTENTAG. No, we do not. We do not know, but we are basing our revenue estimate on the proposed legislation which does not require an intent to avoid tax.

Chairman JOHNSON. All right. Do you know then what percentage of the 858 involved estates valued at less than $600,000?

Mr. GUTTENTAG. No, we do not.

Chairman JOHNSON. How can you estimate what your revenue is going to be since they would all be exempted from this law?

Mr. GUTTENTAG. We make these estimates based on our revenue estimators' calculations based on various kinds of evidence which they have as to the number of people who may leave the United States, the number of people who are going to stay, who are in the category of paying high taxes and therefore have high-value assets, and their continued payment of taxes, plus those who would leave the country and pay taxes at the revenue estimate, because it includes people who, aside—if this legislation is not enacted, who would leave the United States and therefore reduce revenues which would otherwise be selected.

Chairman JOHNSON. You may remember that a couple of years ago—I think it was about 1991—this Committee entertained a proposal that imagined that we could collect something like $30 billion by taxing the income of foreign companies the same way we tax income of American companies. We had this extraordinary estimate and we all frankly got very excited about that. That sounded like an easy way to get billions of dollars. When the dust settled, there wasn't any new money there.

Now, I am concerned that we might do this and find no new money there, and I think you are obliged in proposing a change in current law to provide us with some better information about the 858 cases last year, or the 697 the year before, because we need to understand what percentage of these people would have been exempted by your proposal and on what basis you suggest that your proposal is going to bring in $1.4 billion from probably a very small number of cases.

Nothing that you have said in response to my question indicates to me that you have a very concrete grasp of what number of cases are going to pay, how much they are going to pay or why you think they are going to pay that dimension of dollars.

So if you would like to enlarge on any aspect of your preceding comments to make it clearer to me why you think your revenue estimate should be considered as possible, I would be happy to hear those comments.

Mr. GUTTENTAG. Yes, I believe the $1.4 billion estimate was that of the Joint Committee, Madam Chair. I think our—the Treasury estimate was higher than that. The Joint Committee estimate did not include resident aliens who would be subject to tax under the administration proposal. That accounts for part of the difference between our estimates. So while they were different, they are both substantial in amount.

But I would be glad to—these—revenue estimating is a—quite a science, and I do not pretend to be an expert or even knowledgeable in that area. We rely on our revenue estimators, and they

have made these estimates based on collecting facts from various sources. Most of it involves very few people in very high income categories, and if anything, I think they were reasonably conservative.

Chairman JOHNSON. Thank you.

I am going to yield at this time to my colleague, Mr. Ramstad.

Mr. RAMSTAD. Thank you Madam Chair. Mr. Guttentag, let me apologize, I was addressing my questions and opening remarks to Mr. Samuels, not realizing you were in fact pinch hitting. I thought both of you were appearing today. I had a list of witnesses with Mr. Samuels' name on it, but now I can ask you the questions.

I share the Chair's concerns about the revenue projections generated by this tax. You know, the last thing we need around this place is another enforcement nightmare for the IRS that costs the American taxpayers more than revenues would bring in. I think conceptually it is certainly hard to argue that taxing U.S. citizens who give up their citizenship for tax avoidance is not the right thing to do. I think we all agree with that; that it should be the public policy of this country to prevent expatriate tax avoidance.

Let me just ask you a couple of questions for my understanding.

Now, with current law, as your testimony stated, the government must prove intent, that is, intent of tax avoidance.

Mr. GUTTENTAG. That is correct, yes.

Mr. RAMSTAD. So we are trying to make it more of an absolute liability standard?

Mr. GUTTENTAG. Yes. Intent would be irrelevant.

Mr. RAMSTAD. Another reason for the administration's recommended change. As I understand, the current law only applies to certain U.S. source income. You are concerned about the abuses there?

Mr. GUTTENTAG. Yes. The present law applies to U.S. source income and doesn't take into account gains which may be realized from foreign assets; and since U.S. citizens are taxed on a worldwide basis, we believe this proposal should apply on a worldwide basis.

Mr. RAMSTAD. Well, I think before we move this legislation, we should get those revenue estimates about which the Chair probed. I would like to hear a little bit more to ease my concerns as to the cost of enforcement because it seems to me that we could have another enforcement nightmare here that is going to end up costing more than it brings in, and I think that is the last thing we need.

Mr. GUTTENTAG. Well, we would be glad to review those and provide you with additional information.

Let me say that it is my understanding that the way the income was calculated was primarily based on the present keeping—presently—present taxpayers in the United States who might otherwise depart in order to avoid tax. So that we know, based on evidence in the press from public and other media, that certain individuals have left the United States. From that, we can extrapolate as to what would happen under the—this provision, as it would pass, how many of those people would still leave and pay the tax, how many would stay and still be subject to regular U.S. tax as all of us are.

In my discussions with our revenue estimator at Treasury, telling him that I was going to be here this morning, he again confirmed to me that he believes that his estimates are reasonably conservative, and I think the Joint Committee revenue estimates speak for themselves, but they appear to be even more conservative than ours.

Mr. RAMSTAD. Thank you, Mr. Guttentag. You are a very capable pinch-hitter for Mr. Samuels, and I sincerely hope you will take that message back to the White House as the only administration representative here today, or at least the first one that I have seen this week, that we all need to tone down the rhetoric.

Mr. GUTTENTAG. I certainly will.

Mr. RAMSTAD. Thank you, Madam Chair.

Chairman JOHNSON. Thank you.

Mr. Hancock.

Mr. HANCOCK. Thank you very much. You know, this whole thing of people fleeing to avoid paying taxes has been going on throughout history when the citizens start feeling that government is excessive in its taxation. For instance, the Mayan empire, they collapsed as a result of their citizens just disappearing into the jungles because of excessive taxation. In fact, I would recommend a book to you and everybody over at the Treasury, if you haven't already read it, called "For Good Or Evil: The Impact of Taxes on the Course of Civilization," and that may be the area that we are into now.

If, in fact, we had a reasonable capital gains tax and a reasonable estate tax, these people wouldn't have any reason to leave the country; am I correct in that? If, in fact, your judgment is right that they are leaving for the express purpose of avoiding taxes, if in fact we had reasonable taxes on these people, then they wouldn't want to leave—it wouldn't make any difference; am I correct? There would be no reason for them to leave?

Mr. GUTTENTAG. Well, based again on our analysis of those who do leave, it appears that many of them leave not for the purpose of subjecting themselves to some other tax regime, but most of them leave under circumstances under which they or their estates will not be subject to any meaningful taxes in the future.

So it does not appear to us that the level of capital gains tax or the level of taxes here in the United States is a major consideration. Our taxes here are generally comparable to those in most of the developed countries of the world and the expatriating citizens usually subject themselves to the tax regime of the country.

Mr. HANCOCK. You are telling me that our estate taxes and our capital gains taxes are comparable to other developed countries'? Japan, for all practical purposes, doesn't even have a capital gains tax. I am not too sure about the estate tax. Did I hear you right?

Mr. GUTTENTAG. They have—Japan and the United States, for example, I think—and again, this is not my field—are generally at about the same level of taxes as a percentage of gross domestic product, and their tax rates are not that dissimilar.

Mr. HANCOCK. Let me ask you another question.

As an American citizen, let's say I have got a lot on the ball, which a lot of people would question, but let's, for example, say it looks like I am going to make a lot of money. If I gave up my citi-

zenship before I made the money, I could avoid this tax. One person that has citizenship already down in the Bahamas or someplace, investing in the United States, becomes a billionaire, another one living with a citizenship in the United States becomes a billionaire; they will be taxed differently, right?

Mr. GUTTENTAG. That is correct.

Mr. HANCOCK. So what we are saying is that if you are a citizen of the United States, you need to renounce your citizenship before you become wealthy instead of after.

Mr. GUTTENTAG. Right. That is correct.

Mr. HANCOCK. If an individual happens to come from a family that has a lot of money to invest, the best thing to do is become a citizen of another country before he makes his money; isn't that kind of a disadvantage to the American citizen?

Mr. GUTTENTAG. Well, I know you don't intend at all to speak lightly about the act of giving up your citizenship; and we can see from the relatively few people that do that, it is a very treasured thing to most.

Mr. HANCOCK. I understand that you are talking about it being a buried treasure. There is no question about it. But you are also talking about generating an additional $1.5 million a year as a result of this expatriate law that we are considering.

Now, how are you going to—how many people are going to show up to do that? I mean, you are going to run out of billionaires pretty quickly if, in fact, they started doing it, in my judgment. And here again, I need to talk to some experts in this area because this approach of giving up your citizenship is just recently starting to be suggested by tax advisors to extremely wealthy people in their estate planning.

Now, they have been talking for a long time about moving assets out of the United States. In fact, we are even to the point within the United States that people are changing their State of residence because of the differential between, say, the State of California and the State of Florida. This has been going on ever since the Babylonians. So I certainly cannot support any tax law that gives a foreign citizen an advantage over an American citizen, and that is basically what we would be talking about doing here.

Mr. GUTTENTAG. I think that the U.S. citizen has many advantages. First, giving up the citizenship with the hope that you are going to be earning this money in the future, that may, of course, never happen and you have given up your citizenship.

Mr. HANCOCK. Well, I was being a little facetious when I suggested that. But the fact remains, two people, equal, one of them being a citizen of Peru, and one being a citizen of the United States, if they should decide to give up their citizenship in the United States, as far as dollars are concerned, that individual, when his death comes around or he pays his taxes, if he still has his citizenship in the United States, is going to pay a lot more than that individual who made the same amount of money doing the same thing, but does not have a U.S. citizenship, but made his money in the same place, in the United States.

Mr. GUTTENTAG. Well, the administration proposal would tax the long-term resident, immigrant in the United States, the green card

holder, under the administration proposal if that person was here more than——

Mr. HANCOCK. Sir, if you are just investing money in the United States, you don't have to have a green card.

Mr. GUTTENTAG. No.

Mr. HANCOCK. You know, you can make lots of money investing in the United States.

Mr. GUTTENTAG. And we are putting no restrictions on that kind of investment.

Mr. HANCOCK. Well, you are making my point. If I am an American citizen, and I invest in the United States and end up with a lot of money, I am going to be taxed—I am going to pay much bigger capital gains and estate taxes than I would if I was a citizen of England investing here in the United States.

Mr. GUTTENTAG. That is right, and that is the way our tax laws work. They are generally based on two factors, one, the source of your income. We pay tax based on the source. The rest of the tax is based on where you reside. Only in the case of the United States do we also tax based on citizenship and where you reside.

If that person can live in some other country, be a national of that country and be enabled to make money in the United States, he is free to make that money. He does not have the benefits of U.S. citizenship, which we consider important. He is not allowed to live here permanently in the United States. That is true for people all over the world, and there could be a person overseas.

Mr. HANCOCK. And the reason we do that is because we want the investment capital coming into the United States.

Mr. GUTTENTAG. Right.

Mr. HANCOCK. Now, why do we tax people that have accumulated investment capital to the extent that they have got to give up their citizenship so we can retain the investment capital in the United States? I mean, something just doesn't sound quite right to me.

We want the investment capital, but if a citizen of the United States makes it, then we want to tax him, say we don't have the investment capital, then the government ends up with the money to throw away. Thank you. I still think you ought to read this book.

Mr. GUTTENTAG. All right. I certainly will.

Chairman JOHNSON. Mr. Guttentag, your response to my colleague's question that you didn't think it would dampen foreign investment strikes me as very interesting. I can't imagine that that would be so, but it is just a matter of judgment. But the administration's proposal applies to noncitizens. If I were a noncitizen watching this, I would think, what is the next big source of new income? I want it clear in the record that that is simply a matter of judgment and not a matter of fact; and I think we are going to hear testimony later today that it is a matter of fact that Asian immigrants are choosing Canada over the United States, and this kind of action by the United States is certainly going to influence their thinking, at least in my judgment; and I understand that that also is just a matter of judgment. But we are, for whatever reason, seeing some of the most talented immigrants choosing other nations to immigrate to.

I want to get back to my issue of regulations.

Mr. GUTTENTAG. Yes.

Chairman JOHNSON. What is the key change between current law and the law you are proposing that leads you to believe that you will be able to implement regulations that will implement this law and gain the revenue that you suggest is there to be gained?

Mr. GUTTENTAG. The key issue is that this tax that is being proposed would be imposed at the time the U.S. citizen—or the administration proposal, the long-term resident engaged in this expatriating act. And that would be the end of the tax regime for income tax purposes.

Under the proposal—under the legislation as it now exists, the United States imposes tax over a 10-year period when the former U.S. citizen may be living in various countries of the world creating conflicts with our tax treaty network. Assets are outside the United States; there is not even a way to monitor effectively the amount of income earned, as well as being able to convert U.S. source income quite easily to foreign source income and avoiding the tax net under present section 877.

Chairman JOHNSON. I see. Because you impose this at the time of termination of citizenship and collect all the taxes at that time——

Mr. GUTTENTAG. We would——

Chairman JOHNSON [continuing]. This can be more effective?

Mr. GUTTENTAG. Excuse me.

The legislation provides for an ability to defer tax under appropriate—defer payment of the tax under appropriate circumstances, which we think is important.

Chairman JOHNSON. OK. Now, given that, would you discuss how this law applies to trusts and particularly to contingent remainder interests?

Mr. GUTTENTAG. It would apply to trust interests which would be valued in accordance with standard valuation techniques. It would eliminate de minimis interests in trusts based on such valuation so as not to get involved where there is remote and—where there are contingencies, which are reasonably not to come into play, and would also provide—particularly useful in those cases where there was not immediate access to the trust funds—a means of deferring the tax.

Chairman JOHNSON. And so are you suggesting that it would not require somebody with an interest in a trust to convert that interest into income so that they could pay the tax? It would not require, in a sense, escape?

Mr. GUTTENTAG. Well, that would depend on the terms of the trust, whether it could be converted. It would depend on other assets that the citizen had. We would, of course, have to look at all of the assets and all of the gains involved in order to determine how the tax should and would be paid.

Chairman JOHNSON. I wanted to get some examples on the record to be sure that these are also the kinds of cases that would be affected.

Person A fled Cuba in 1959 and became a U.S. citizen. In 1999, Cuba becomes a democracy. A returns to Cuba and renounces his U.S. citizenship. A would be subject to tax under the administra-

tion's expatriation proposal on all assets he had accumulated and all income he had accumulated during his years here, correct?

Mr. GUTTENTAG. That is right, yes.

Chairman JOHNSON. B left Y, his native country, in 1957 because it was ruled by a communist government and he settled in the United States. He never obtained U.S. citizenship, but complied with all immigration laws. After the fall of communism, he returned to Y and decided to make Y his homeland. In 1998, B leaves the United States and returns to Y. B would be subject to tax under the administration's proposal, would he not?

Mr. GUTTENTAG. Yes, he would be.

Chairman JOHNSON. So caught in this net are going to be all those who came here fleeing communism, all those who may have come here because of the unsettled circumstances in the Middle East, all who came here because of the conflict and war in Ireland, and all those who came here for similar reasons from places all over the world and, in good faith, worked hard and developed some resources. And we are, under this proposal, going to then tax them at a level that we tax no other living citizen or noncitizen; is that correct?

Mr. GUTTENTAG. No. We would tax them as we would a U.S. citizen.

You are right, Madam Chair, we opened our doors here to these people. They came here. They took advantage of the U.S. economy, apparently to earn substantial wealth, otherwise they would not be subject to this tax; and if they decide to go home, all we are asking is that they pay U.S. tax on the gains they have realized while they have enjoyed our hospitality here in the United States.

Chairman JOHNSON. But, Mr. Guttentag, we are forcing them to treat things as a sale and so we are forcing them to accumulate cash assets to pay taxes at a time that normally we only do upon death, and in that regard, it can reduce the value of hard-earned assets in a way that we don't force on any other Americans. Wouldn't you say that is fair to say?

Mr. GUTTENTAG. Well, an American, of course, has to prepare also for death and those kinds of taxes and would, of course, in the future be able to prepare for this tax; and as I said, we do plan to have means available to defer the payment of tax to avoid that kind of hardship.

Chairman JOHNSON. I guess my point is that this is not necessarily going to fall on those who are motivated by tax avoidance. Many of the people who came here and worked hard were motivated by all of the motivations that have made America a great and strong country; and without question, this proposal is going to lay on them a burden that no other working American will ever experience. Is that not so?

Mr. GUTTENTAG. The—what we are—the working American who subjects his assets to tax by selling his assets and realizing the gains will, of course, pay tax during his lifetime. But this person who has come to the United States will be allowed to exempt the first $600,000 of gain, which is a substantial amount. That is not assets; that is gain realized during this period of time, 600,000 dollars' worth of gain. He will be able to—he will not have to pay tax on—presumably he would have a home in the United States or

other real estate in the United States. He would not have to pay any tax on that U.S. real estate. He would have, exempt, any money that he would have placed in pension funds for his benefit. So all of those assets would be free and clear of this proposed tax.

Chairman JOHNSON. My staffperson was clarifying for me your exemption for small business assets, which is very important, but if you have saved up and you have your own small business and you invest in stocks, you would be forced to sell them, possibly at a loss, in order to get enough money to pay this exit tax, would you not?

Mr. GUTTENTAG. There are administrative procedures presently in the Internal Revenue Code, Madam Chair, which do permit the deferral of tax collection by the Internal Revenue Service when appropriate security is given and good cause can be shown for—good reason for the deferral.

Chairman JOHNSON. My understanding of the Joint Tax Committee's estimate is that it is based on the assumption that this tax is heavy enough to discourage people from changing their citizenship and that their increase in revenue estimates is based entirely on the fact that people will not choose to make this decision. Is that the assumption behind Treasury's estimate of the revenue increases?

Mr. GUTTENTAG. I think Treasury's methodology and that of the Joint Committee are quite similar.

Chairman JOHNSON. So actually you are not anticipating that people will pay more taxes. You are anticipating that they will not choose to give up their citizenship.

Mr. GUTTENTAG. No. We are estimating that if this law is not passed, that these people will leave the United States and we will not collect that tax. If this law is passed, we will collect more tax than we would if the law is not passed. So we are just assuming that these people will leave the United States if the law is not passed, will give up their citizenship if the law is not passed.

Is that—I am sorry if I am not clear, Madam Chair.

Mr. HANCOCK. Madam Chairman, may I, with your permission?

Chairman JOHNSON. Yes.

Mr. HANCOCK. Are we making the assumption that if you pass the law, then these people will not leave the country, they will not give up their citizenship if the law is passed? Is that what your assumption is?

Mr. GUTTENTAG. Yes. Based on the information we have that the people who have left, the wealthy people who have left really have no interest in leaving the United States. They often spend a considerable amount of time in the United States after they give up their citizenship. They have family here, they have businesses here, that their real reason for leaving is tax avoidance, that if there is a price to pay for tax avoidance, they would stay here.

Mr. HANCOCK. Let me ask you a question then. If your assumption is correct, where is this $1.5 billion going to come from?

Mr. GUTTENTAG. Those people will remain here and would not—if the law is not passed, those people will give up their citizenship and we will not collect the——

Mr. HANCOCK. Wait 1 minute. Let's say we pass the law.

Mr. GUTTENTAG. Right.

Mr. HANCOCK. These people quit leaving the country and giving up their citizenship. Now where does the $1.5 billion increase in revenue come from?

Mr. GUTTENTAG. Well, we have people who are paying millions of dollars a year in tax. Those individuals would continue to pay tax in the United States.

Chairman JOHNSON. So there will be no increased revenue? They are paying it now and they are going to keep paying it?

Mr. GUTTENTAG. Yes. But if the law is not passed, there will be a decrease in revenue and that is considered a revenue gainer.

Mr. HANCOCK. Well, now, are you talking about income tax revenue?

Mr. GUTTENTAG. Yes.

Mr. HANCOCK. Or are you talking about estate tax revenue?

Mr. GUTTENTAG. Income and estate taxes both.

Mr. HANCOCK. Well, I still think, Madam Chairman, we get back to the question that a foreign citizen has a better opportunity to invest in the United States than an American citizen does. I mean, that is what it looks to me like.

Chairman JOHNSON. I am curious as to why the administration didn't focus primarily on those who do return after they have given up their citizenship and continue to do business. It seems to me that wouldn't be too hard to

monitor.

Mr. GUTTENTAG. We have thought about that.

Chairman JOHNSON. That is the real tax avoidance issue.

Mr. GUTTENTAG. That—in some cases, we can't define the situation with respect to all of these people. There are very—relatively few people who are involved in this situation. Many of them who do return, who have obtained U.S. citizenship or obtained a green card permitting them to live permanently in the United States, those people who have been subject to acts of foreign governments which have caused them to come to the United States, when they do have the opportunity to return, very often they keep their citizenship and green cards because of the uncertainty that they don't want to make—they want to make sure if something were to happen again, they would have the United States to return to.

Chairman JOHNSON. Certainly, but if they do that, they are not affected by this tax.

Mr. GUTTENTAG. They are not affected by this tax.

Chairman JOHNSON. If you are really interested in tax avoidance, why don't you go after those who forgo their citizenship but then return and continue to do business? That is the tax avoidance group of all the others. The groups that came from communist-dominated countries and so on and go back for other reasons, that is not really the group you are after. The group you are after are the ones who renounce their citizenship specifically to gain tax benefit.

Now, I would say that my colleague, Mr. Ramstad, pointed out that usually this happens when something has gone awry with the Nation's tax structure. Connecticut loses people every year because our tax structure takes more than people want to pay for seniors, and so people move when they reach 65 to other States. Now, we could fix that in Connecticut and we are trying to fix that.

So I am concerned that we are fixing this in a hostile way when maybe we ought to be fixing it in a positive way. That is one thing that concerns me.

But the other thing that concerns me is that by being overly broad instead of looking at the group that is exploiting our Tax Code, we set up our other people to be gone after by the IRS, and when this gets moving, what will the IRS' stance be in regard to transactions by these people in the months before they declare—just like we get into Medicaid; what happens in the 3 years before you become Medicaid eligible, or in the 5 years before.

So by writing too overbroad a law, you are creating a noose for a lot of innocent folks as well, and that is why we have an obligation to focus this law as narrowly as we can on the problem, and that is why it concerns me that of the numbers of people who renounced their citizenship last year, 858, you don't have any information you can share with me about either what the incomes of these people were, or what was their asset value.

You must know. We have all those records. So I would suggest that you get the Committee some better information. You run your computers overnight, get us back some better information on those folks so that we can see whether or not there is a way we can focus this law more effectively to go after people who are trying to, in a sense, take advantage of international differences in tax burden for their own benefit.

[The information was not available at the time of printing.]

Chairman JOHNSON. But I do worry about the breadth of this bill and particularly the breadth of this proposal for a Nation that has always valued immigration and that believes that opportunity carries with it also certain rights.

So I thank you for your testimony today and we will move on to the next panel.

Mr. GUTTENTAG. Thank you, Madam Chairman.

Chairman JOHNSON. The next panel is Robert Turner, Charles Stockton Professor of International Law, U.S. Naval War College, Newport, Rhode Island, on his own behalf; William Norman of Ord & Norman, Los Angeles; and Lawrence Heller, of Whitman, Breed, Abbott & Morgan, Los Angeles. We will begin with Mr. Turner.

Mr. Turner, if you will proceed.

Let me remind this panel, as well as the next, that your full testimony will be included in the record, and during your time of testimony, would you please summarize your testimony and comment in any way you care to in view of the foregoing discussion. Thank you.

Mr. Turner.

STATEMENT OF ROBERT F. TURNER, CHARLES H. STOCKTON PROFESSOR OF INTERNATIONAL LAW, U.S. NAVAL WAR COLLEGE, NEWPORT, RHODE ISLAND

Mr. TURNER. Thank you, Madam Chairman.

It is a great honor and a pleasure to be here this afternoon to discuss the human rights ramifications of the so-called exit tax in the Tax Compliance Act of 1995. As you suggested, I will submit my prepared statement for the record.

Before going further, I do have three caveats. One you have already mentioned, and it is very important to note that I was asked to appear before the Committee in my individual capacity and not on behalf of the Naval War College or any other group.

Second, also very important to me, I have absolutely no substantive expertise on tax law, and so to the extent you have questions in that area, I am going to have to leave those to your judgment as the real experts.

Finally, a point you also mentioned, we are I think all here on very short notice. I would like to have had more time to think about this, to do more research. That is all the more important, because there are a number of very distinguished international lawyers who take a very different position than the one I will present. All I would say is, consider the arguments I make on the merits and make your own judgments.

The basic human rights issues raised here are not new to me. Ironically, it was my pleasure to serve on the U.S. Senate staff in 1974 when the Jackson-Vanik amendment was passed, and I worked on that amendment as foreign policy advisor to Senator Bob Griffin of Michigan.

Before I get into a brief summation of the law involved, there is one point of apparent disagreement that perhaps it would be useful for me to identify and focus on briefly. The Office of the Legal Advisor of the Department of State, where I have many very close friends, and I have great respect for them; the Library of Congress Congressional Research Service; and others have tried to draw a distinction between the right to travel and the act of renouncing one's citizenship.

Underlying this distinction, apparently, is the view that there is no legal right of expatriation; that is, no right to renounce citizenship, and since this bill doesn't really stop travel, it only stops renouncing citizenship, they argue human rights law doesn't apply. I simply don't agree with this view.

First of all, having worked closely on the Jackson amendment, I can say that—at least for many of us—our concern involved all of the impediments to emigration and expatriation. Certainly we used the word emigration, but we were talking about the human right of citizens of the Soviet Union to make a permanent departure from that country, and to completely sever the citizen-state relationship as they move to Israel or any other country of choice to become citizens.

This was not merely a debate about travel in the sense of taking vacations to the Holy Land, but rather about making a permanent change of allegiance. I think most of us had in mind at that time not only emigration, but also expatriation.

Second, in response to those who have said that international law is not concerned with the right to renounce one's citizenship, I think they are mistaken. I will try to make that point briefly.

Finally, I would note that the Jackson-Vanik amendment passed unanimously in the Senate and overwhelmingly in the House, and one of the things that we were complaining about was something the Soviets called a "citizenship renunciation fee" of 500 rubles. The Soviets said, If you want to go to Israel, among other things,

you have to pay an extra fee for the purpose of renouncing your citizenship.

More importantly, however, the United States has argued for two centuries there is an international right of expatriation. Indeed, the core of the intellectual justification of the American Revolution was that such a right existed. The very first sentence of the Declaration of Independence, in fact, asserts such a right.

Since this proposal comes from the Treasury Department, it might be worth noting President Thomas Jefferson's June 1806 letter to then Treasury Secretary Albert Gallatin, in which Mr. Jefferson wrote: "I hold the right of expatriation to be inherent in every man by the laws of nature." I would note as an aside here that Jefferson viewed the law of nature as the first source of international law.

He goes on to say, "and incapable of being rightfully taken from him, even by the united will of every other person in the Nation."

Continuing, Mr. Jefferson wrote, "Congress cannot take from a citizen his natural right of divesting himself of the character of a citizen by expatriation." This view was shared by Secretaries of State John Marshall, James Madison, James Monroe and many others; and indeed, also implicitly by the first Congresses, because when they passed naturalization laws, they required would-be American citizens to renounce their citizenship to other governments, implying in the process there was a right to do that.

One can argue that the War of 1812 was in no small part fought over this right, because the British were impressing former British subjects who had become naturalized American citizens when they were found on the high seas, and we thought that was an infringement of their international duty to us and the right of our citizens.

The Congress in 1868 enacted an act concerning the American rights of citizenships in foreign states which provided, in part, "the right of expatriation is a natural and inherent right of all people, indispensable to the enjoyment of the rights of life, liberty and the pursuit of happiness."

This act, by the way, was enacted during a dispute we were having—one of many—with Great Britain over their principle, "once an Englishman, always an Englishman." The idea was that once you were an English subject, even if you subsequently took other citizenship, you still were subject to the Crown.

Two years after this 1868 enactment, Great Britain finally abandoned this claim and recognized that people who had accepted other citizenship were aliens, and in so doing, it contributed to the development of the customary international law in this area.

Now, let me turn just very briefly to the relevant international legal documents that give us our legal rules. The International Covenant on Civil and Political Rights, which entered into force in March 1976, and was ratified by the United States with the advice and consent of the Senate in 1992, provides in article 12 that, "Everyone shall be free to leave any country, including his own."

It then said, "The above-mentioned rights shall not be subject to any restrictions, except those which are provided by law and are necessary to protect national security, public order, public health, or morals, or the rights and freedoms of others."

Now, certainly the right embodied in article 12, which I believe should be construed broadly to include the right not only to emigrate, but the right to change nationality in that process, the right to renounce citizenship, is not an absolute right. It is a fundamental right, but not an absolute right.

For example, citizens who are accused or are being tried for criminal activity or have been convicted of crimes—serious crimes—may be kept behind to serve their punishment and complete the trial; and certainly it is also clear that a State may require a citizen to pay any normal tax obligations or other public debts.

It strikes me that a key issue here is whether or not this is in fact a normal tax obligation that would be applicable to all citizens irrespective of their wish to emigrate. If it is instead a special requirement on individuals because of their desire to emigrate—and indeed I was troubled by the Treasury Department testimony just a few moments ago, which seemed to admit that a purpose of this law is to keep people from leaving. He said, Treasury's expectation is that people will not go out and pay this tax, but rather they will remain U.S. citizens—I have to say that troubles me.

If this is a special requirement that would not otherwise fall on these people at that time, then it strikes me that the government has the burden to establish under the covenant that the law is necessary to protect "national security, public order, public health or morals, or the rights and freedoms of others."

I would note in this connection that the Library of Congress Congressional Research Service memorandum on this issue tried to get around this by saying the term "public order" is "roughly analogous to the concept of public policy and likely includes such notions as economic order." However, during the drafting of article 12, an effort was made to broaden this list to include the terms: General welfare and economic and social well-being, and those provisions were rejected as being too far reaching.

Under the principles of treaty interpretation embodied in the Vienna Convention on the Law of Treaties, these "travaux préparatoire," the "preparatory works," could be considered in the case of ambiguities, and I believe it would be very hard to argue that the convention allows that broad an interpretation, given the fact that such language was expressly rejected.

Now, let me talk just very briefly about customary international law. Perhaps the most important written document that contributes to the development of customer international law in this area is the 1948 Universal Declaration of Human Rights. To be sure, when the universal declaration was passed as a U.N. General Assembly resolution in 1948, it was not intended to be legally binding; but there is a very strong consensus today, I would argue, that the declaration is considered reflective of binding customary international law.

The United States would have no prayer of arguing otherwise, given the fact that we have enacted statutes in this area that embody a very clear rule on this. Article 13 of the universal declaration provides that, "Everyone has the right to leave any country, including his own." Given particularly the suggestion that there is no right to renounce citizenship, I would note that article 15 says,

"No one shall be arbitrarily deprived of his nationality, nor"—and this part is important—"nor denied the right to change his nationality."

It strikes me that this is clear language, and it strikes me that, in particular, given the strong history of the U.S. Congress and American Secretaries of State dating back to our very first Secretary of Foreign Affairs, Thomas Jefferson, embracing the view that there is an inherent human right of expatriation, I just don't believe that it is wise to try to pretend we are not violating the law by pretending there is no such right.

Before closing, let me just briefly discuss the Jackson-Vanik amendment of 1974, a very important statute that, as I mentioned, was unanimously passed in the Senate and overwhelmingly passed in the House. It resulted from a series of measures the Soviet Union placed primarily in the way of Soviet Jews who wished to emigrate and change their allegiance to the state of Israel. The statute was broader than that, but its real underlined purpose was probably especially aimed at protecting Soviet Jews.

Among other impediments, Moscow imposed a diploma tax, and the argument was fairly simple. The argument was that these doctors, scientists, or otherwise technically skilled people had received a free education because Moscow assumed that they would be in the country for many years to come, and thus they would pay it back through their service to the State. But if they want to take that special benefit they have received from the State and move to Israel, the U.S.S.R. was going to require them to pay, on a sliding scale, depending on the skill level and how long they had been practicing, of between $5,000 and $25,000. In addition to that, there was also a 500 ruble "citizenship renunciation fee," that they also had to pay before they could leave.

As enacted into law, the Jackson-Vanik amendment would have denied most-favored-nation trade status to any nonmarket economy state, which, among other things "imposes more than a nominal tax on emigration for any purpose or cause whatsoever."

Again, certainly when I used the word "emigration" in those days, I was thinking in terms of the process of a Soviet citizen leaving the Soviet Union, moving to Israel, becoming an Israeli citizen, and severing all legal relationships with the Soviet Union.

Although I would acknowledge there is a technical difference between emigration and expatriation, I think most people who used the word in those days were considering both a part of the process. Second, Jackson-Vanik applied to any State that "imposed more than a nominal tax as a consequence of the desire of such citizen to emigrate to the country of his choice."

Now, that strikes me as being very difficult language to reconcile with the language in this tax bill. What we are saying is, when you declare your desire to emigrate or to expatriate, if you will, we are then imposing a tax—and I gather this tax will average out to something like $40 million a person, so it would be awfully hard to argue that is just a "nominal" tax. I note that the Library of Congress Congressional Research Service characterizes this proposed tax as an "expatriation tax," and I find it just too similar to the Soviet "citizenship renunciation fee" to be real comfortable with the distinction. Both, after all, are premised on the idea that the

citizen has received a benefit in one State, wishes to leave and take that benefit with him, and that he should pay the State before he goes for the fair value of that benefit.

Now, let me emphasize, it is not illegal under international law to require someone who wishes to emigrate or expatriate to pay a normal tax obligation. That is clear. Nor would it be illegal for the United States to tax unrealized capital gains annually—just to have a rule that says, every year we tally up, and whatever property anyone owns that has increased in value, we will estimate the price and make them pay that.

Similarly, it would not be illegal for the Soviets to have charged a fee for providing an education to their citizens. The legal issue arises when this is not done across the board, but rather where people who wish to leave their country and move permanently to another country are treated less favorably than other citizens by virtue of that fact.

Madam Chairman, again, I want to emphasize that honorable people can and do disagree on this issue. I have been working on it specifically for maybe 10 days now. I may change my own mind as the debate goes on. You will hear from other very respected witnesses later today on this issue. It strikes me that it is not an easy call. I think you have a difficult task.

But if I could in closing inject a personal note into the debate, I would urge you to move cautiously if you have any significant doubts about this provision's compatibility with international law. Because candidly, when I balance the importance of upholding international standards of human rights on the one hand against the possibility of coming up with a few billion dollars to help pay off the deficit, my personal values come down on the side of human rights every time.

Madam Chairman, that concludes my prepared testimony. I would be happy to answer questions at the appropriate time.

[The prepared statement follows:]

Prepared Statement of
PROFESSOR ROBERT F. TURNER
Charles H. Stockton Professor of International Law
U.S. Naval War College
before the
Subcommittee on Oversight
of the
House Ways and Means Committee
27 March 1995

MADAM CHAIRMAN, it is a great honor and a pleasure to appear before the subcommittee this afternoon to explore the human rights ramifications of the so-called "exit tax" contained in Title II of H.R. 981, the "Tax Compliance Act of 1995."[1]

Before turning to the merits of the issue, I would like to make three caveats in connection with my appearance here today.

First of all, as your letter of invitation of last Thursday made clear, I was "invited to testify in [my] individual capacity, and not as a representative of the U.S. Naval War College."[2] Although I currently occupy the Charles H. Stockton Chair of International Law at the Naval War College while on leave of absence from the University of Virginia's Center for National Security Law, my appearance is unconnected with either of those relationships. Any similarities between the views I express and those of the War College, the Navy, the University of Virginia, or any other institution or organization, are purely coincidental.

Secondly, I want to stress from the start that I have absolutely no expertise on the substantive issue of tax law. I will therefore have to pass on any questions you might wish to raise predicated upon such a knowledge; and I certainly don't rule out the possibility that a thorough understanding of tax law might produce a different conclusion than the one I have tentatively reached when the relevant rules of International Law are applied to the statutory language now under review.

Finally, since my invitation to testify was not extended until late last week—when I returned to the War College after testifying before the Senate Finance Committee on this same issue—I have been working under time pressures and have found it necessary to use my Senate testimony as a starting point for this afternoon's prepared statement.

The basic human rights issue raised here is not new to me. Ironically, I believe I first looked at the "right of emigration" professionally more than two decades ago when the Jackson-Vanik Amendment[3] came before the Senate while I was the senior foreign policy adviser to Senator Robert P. Griffin of Michigan. I don't believe the pressures of time have prevented me from accurately setting forth the basic legal rules by which this statutory provision should be judged. But both because of my lack of tax expertise and the lack of time to research the issues more thoroughly, I am less certain of my tentative conclusions.

I do not appear before you this morning for the purpose of either supporting or opposing the so-called "exit tax" provision of the tax bill. I do believe that upholding the rule of law is important, and I also believe that this provision raises a sufficiently serious question under International Law that it warrants careful consideration before making a final decision on Section 201. To that end, Madam Chairman, I commend you for scheduling this hearing.

Even if in the end you conclude that the provision does not, in reality, violate the Nation's solemn human rights obligations, if there is even a colorable claim to the contrary that might be raised to undermine future US efforts to enforce human rights laws, it might be wise to avoid even the appearance of violating these laws. In the end it may come down to balancing the importance of the tax code provision against the potential harm that might result if we are perceived as having violated these important rules of international human rights law.

---

[1] *Inter alia*, this provision would amend the Internal Revenue Code by adding this language:

> If any United States citizen relinquishes his citizenship during a taxable year, all property held by such citizen at the time immediately before such relinquishment shall be treated as sold at such time for its fair market value and any gain or loss shall be taken into account for such taxable year.

That the "exit tax" is designed to affect a relatively small portion of the population is clear from the fact that the first $600,000 of gross income is excluded from this provision. According to the State Department, 697 US citizens expatriated in 1993 and 858 the following year. "It is not yet known how many of these former citizens, if any, will be subjected to tax under section 877." JOINT COMMITTEE ON TAXATION, DESCRIPTION OF REVENUE PROVISIONS CONTAINED IN THE PRESIDENT'S FISCAL YEAR 1996 BUDGET PROPOSAL 17 n.6 (Feb. 17, 1995). The fact that the Treasury Department anticipates more than $2 billion in additional revenues from this provision by FY 2000 suggests either that many expatriates will be covered or that the few covered will be hit with rather substantial additional tax bills under this provision. *See infra*, note 68.

[3] 19 U.S.C. §§ 2192 *et seq.*

The Growth of a Legal Right to Emigrate

Today the right of citizens to renounce their citizenship and leave their own country is almost universally recognized as a fundamental human right, but its widespread recognition as creating international obligations among States is of relatively recent origin. The origin of the right of **emigration** (i.e., the right to depart from one's country with the intention of not returning) and **expatriation** (i.e., the renunciation of one's citizenship) as a matter of internal law can arguably be traced back nearly 2500 years, as reflected in this excerpt from the famous *Dialogues of Plato*, in which Socrates says to Crito:

> [H]aving brought you into the world, and nurtured and educated you, and given you and every other citizen a share in every good which we had to give, we further proclaim to any Athenian by the liberty which we allow him, that if he does not like us when he has become of age and has seen the ways of the city, and made our acquaintance, he may go where he pleases and take his goods with him. None of . . . [our] laws will forbid him or interfere with him. Any one who does not like us and the city, and who wants to emigrate to a colony or to any other city, may go where he likes, retaining his property.[4]

The original 1215 version of the *Magna Carta* issued by King John at Runnymede guaranteed the right of "any one to go out from our kingdom, and to return, safely and securely, by land and by water, saving their fidelity to us"; but even this limited "right to travel" was omitted from the forty-six subsequent versions—including the one issued by Henry III in 1225 usually associated with the term "Magna Carta"—on the grounds that such a right seemed "weighty and doubtful."[5] Nor, for that matter, did the right to "travel" included a right of expatriation—a right far more easily sustained in the modern era, now that people have changed from being "subjects" of the King to being "citizens" of the State.

The Alleged Distinction Between "Emigration" and "Expatriation"

MADAM CHAIRMAN, the Office of the Legal Adviser to the Department of State,[6] the Congressional Research Service of the Library of Congress,[7] and some of my colleagues in the international law teaching community are trying to distinguish the right to "travel" from the act of renouncing one's citizenship. Apparently underlying this view is the assumption that there is no legal "right" of expatriation—that is to say, no right to renounce one's allegiance to one's native country.

This argument was perhaps first set forward by my good friend and respected University of Virginia colleague, Professor Paul Stephan, in a letter to Assistant Secretary of the Treasury Leslie B. Samuels, in which he wrote:

> [I]t is critical to recognize the distinction between the right to travel, on the one hand, and the right to change one's citizenship status, on the other. Emigration necessarily involves the former, but not necessarily the latter. The human rights concerns that dominated our encounters with the Soviet Union and other totalitarian regimes during the 1970s and 1980s were based on violations of the right to travel. . . . The so-called education tax that the Soviet Union threatened to impose on emigrants, which inspired the . . . Jackson-Vanik Amendment, was triggered by a request to travel abroad, not by an attempt to renounce Soviet citizenship. Whether the communist regimes also made it difficult to surrender citizenship was a matter of indifference to us. . . .
>
> The Administration's proposal . . . has absolutely no effect on the right of a citizen to travel abroad. It is triggered only by a change of citizenship status, not by the crossing of the country's borders. . . .

[5] By coincidence, I discussed this issue in my prepared testimony before the Senate Judiciary Committee Subcommittee on the Constitution on 5 October 1994 (page 2-3 of original text), which has not yet, to my knowledge, been published.

[6] *See* "Prepared Statement of Jamison S. Borck, Deputy Legal Adviser, U.S. Department of State, Before the Senate Committee on Finance, March 21, 1995."

[7] Congressional Research Service, American Law Division, Memorandum on "Whether Legislation That Would Tax Property Upon Expatriation Constitutes a Violation of International Law," March 28, 1995 (hereinafter cited as "CRS").

> In summary, the international law of human rights is concerned with restrictions on the right to leave one's country, not those on the right to renounce one's citizenship. . . . For these reasons, it is inconceivable to me that the Administration's proposal could be seen as violating international human rights law.[8]

With all due respect to my good and highly respected friend Paul, who joins me on this panel and thus will be able to explain his position in greater detail, I believe he is mistaken on three important points:

- To be sure, the Jackson-Vanik Amendment used the term "emigration"; but I followed that issue closely as a Senate staff member in 1974—at a time when my younger colleague was just entering law school—and I am quite confident that our "concern" involved *all* of the impediments imposed by the Soviet Union to impede the permanent departure of Soviet citizens to other countries and their complete severance of the citizen-State relationship.

- Secondly, I believe Paul is mistaken when he asserts that International Law is not "concerned" with the "right to renounce one's citizenship."

- Finally, and I venture this point with less confidence in deference to Paul's greater expertise in Soviet Law, my understanding is that an important component of the Soviet effort to prevent Soviet Jews from emigrating to (and becoming citizens of) Israel was a 500-ruble "citizenship renunciation fee" that few could afford.

I will address each of these points in greater detail in the statement which follows.

The United States and the "Natural Right" of Expatriation

It is important to keep in mind that the claimed "right of expatriation" was at the very *core* of the intellectual justification for the American Revolution and has long been a fundament of US policy.[9] The very first sentence of the Declaration of Independence asserted that "the laws of nature" (which the Declaration's authors believed was a primary basis of International Law[10]) entitled "one people to dissolve the political bands which have connected them with another"[11] by declaring their independence. I hesitate to contemplate the potential consequences if the view voiced by the State Department last week had been shared by our Founding Fathers. But it clearly was not, and even before the Declaration of Independence was written, the great Virginia jurist St. George Tucker noted that Virginia courts had rejected the feudal doctrine of "indefeasible allegiance"—often expressed as "once an Englishman, always an Englishman"—and had recognized a "right of expatriation."[12]

MADAM CHAIRMAN, while I am not appearing here on behalf of the University of Virginia, it is difficult to be associated with that great institution without being impressed by the transcendental wisdom of its founder, Thomas Jefferson. And, as is true with so many subjects, his legacy of brilliant writings provides insight directly relevant to this issue.

As early as 1774, in his *A Summary View of the Rights of British Americans*, Jefferson reminded King George II that:

---

[8] Letter from Professor Paul B. Stephan III to Leslie B. Samuels, Assistant Secretary of the Treasury for Tax Policy, dated March 20, 1995, submitted for the record during the Senate Finance Committee hearing on this issue.

[9] "Founded as it was on emigration from other countries, the United States has long taken the position that the right to alter one's status by expatriation is an 'inherent and fundamental right.'" Seth F. Kreimer, *"But Whoever Treasures Freedom . . .*", 91 MICH. L. REV. 9-7, 938 n.73, *quoting* JAMES H. KETTNER, THE DEVELOPMENT OF AMERICAN CITIZENSHIP 1608-1870 at 267-70 (1978).

[10] It should be kept in mind that Jefferson believed that a primary basis of International Law (then called "the Law of Nations") was "natural law." To that end, his extensive collection of treatises in this area was catalogued under the heading "Law of Nature and Nations." *See, e.g.*, 2 CATALOGUE OF THE LIBRARY OF THOMAS JEFFERSON 67-88 (1983). *See infra*, note 14 and accompanying text.

[11] "When in the course of human events it becomes necessary for one people to dissolve the political bands which have connected them with another, and to assume among the powers of the earth the separate and equal station to which the laws of nature & of nature's god entitle them, a decent respect for the opinions of mankind requires that they should declare the causes which impel them to the separation." DECLARATION OF INDEPENDENCE. *See, generally*, JAMES MUNVES, THOMAS JEFFERSON AND THE DECLARATION OF INDEPENDENCE: THE WRITING AND EDITING OF THE DOCUMENT THAT MARKED THE BIRTH OF THE UNITED STATES OF AMERICA (1978).

[12] Craig Evan Klafter, *The Influence of Vocational Law Schools on the Origins of American Legal Thought, 1779-1829*, 37 AM. J. LEGAL HIST. 307, 320 (1993).

> [O]ur ancestors, before their emigration to America, were the free inhabitants of the British dominions in Europe, and possessed a right, which nature has given to all men, of departing from the country in which chance, not choice, has placed them, of going in quest of new habitations, and of there establishing new societies, under such laws and regulations as, to them, shall seem most likely to promote public happiness.

Jefferson noted that:

> Their Saxon ancestors had, under this universal law, in like manner, left their native wilds and woods in the North of Europe, had possessed themselves of the Island of Britain, then less charged with inhabitants, and had established there that system of laws which has so long been the glory and protection of that country. Nor was ever any claim of superiority or dependence asserted over them by that mother country from which they had migrated; and were such a claim made, it is believed his Majesty's subjects in Great Britain have too firm a feeling of the rights derived to them from their ancestors, to bow down the sovereignty of their State before such visionary pretensions.

Thus, Jefferson was clearly asserting a "natural right" not only to depart from one's native country (to emigrate) but also to sever the legal relationship which creates legal duties and rights between citizens and their native State. It is perhaps worth noting that Jefferson's thesis drew support in 1791, when the French Declaration of the Rights of Man affirmed the right "to come and to go" from the State as a "natural" right.[13]

The proposal before you comes from the Department of the Treasury; and thus, it may be useful to recall Jefferson's June 1806 letter to Secretary of the Treasury Albert Gallatin—the individual who occupied that post longer than any person in history, and whose statue stands outside its walls—in which our third president wrote:

> I hold the right of expatriation to be inherent in every man by the laws of nature, and incapable of being rightfully taken from him even by the united will of every other person in the nation. If the laws have provided no particular mode by which the right of expatriation may be exercised, the individual may do it by any effectual and unequivocal act or declaration.

Addressing the power of the US Congress to interfere with this right to renounce one's citizenship, Jefferson added:

> Congress may, by the Constitution, "establish an uniform rule of naturalization", that is, by what rule an alien may become a citizen; but they cannot take from a citizen his natural right of divesting himself of the character of a citizen by expatriation.

Jefferson addressed this issue again in his 1821 *Autobiography*, when in discussing his own theory of American independence he argued that "our emigration from England to this country gave her no more rights over us, than the emigrations of the Danes and Saxons gave to the present authorities of the mother country, over England." He reasoned that "expatriation being a natural right, and acted on as such, by all nations, in all ages," the colonists were legally free to dissolve their relationship with Great Britain.

Make no mistake about it—Jefferson was espousing what he viewed to be principles of International Law. In his view, "[t]he law of nations . . . [was] composed of three branches. 1. The moral law of our nature [or 'natural law']. 2. The usages of nations [what we today call 'customary law']. 3. Their special conventions [e.g., 'treaties' or 'positive' law]."[14]

In Jefferson's clearly expressed view, both the law of "nature" and the law of nations denied the United States Government the legal right to deny this fundamental "right of expatriation" to its citizens. It saddens me to witness able attorneys—on behalf of the Department of State, which Thomas Jefferson personally set up as our first Secretary of State—suggest that the right to "travel" is not accompanied by a clear human right to renounce U.S. citizenship. Having served in

[14] 3 WRITINGS OF THOMAS JEFFERSON 228 (Mem. ed. 1904). Today, the International Court of Justice views as "sources" of international law "international conventions," "international custom," the "general principles of law recognized by civilized nations," and "judicial decisions and the teachings of the most highly qualified publicists of the various nations [as subsidiary means]." I.C.J. STATUTE, Art. 38.

the Department of State myself.[15] I understand the loyalty Executive branch employees often feel to defend the President's position. But in this case I doubt seriously that the President was even aware that a human rights issue existed when this tax was proposed and approved.

Nor was Jefferson alone in upholding the right of Americans to renounce their previous citizenship. Secretaries of State John Marshall, James Madison, and James Monroe embraced the same doctrine; and through the early naturalization laws Congress, too, implicitly endorsed the view by requiring new citizens to renounce prior allegiances to former States before becoming Americans.[16] Furthermore, the War of 1812 was fought in no small part for the principle that Great Britain lacked any legal authority over former British citizens who had renounced that relationship while accepting naturalized U.S. citizenship.

In 1859, Attorney General Black wrote:

> The natural right of every free person, who owes no debts and is not guilty of any crime, to leave the country of his birth in good faith and for an honest purpose, the privilege of throwing off his natural allegiance and substituting another allegiance in its place—the general right, in one word, of expatriation, is incontestable. . . . We take it from natural reason and justice, from writers or known wisdom, and from the practice of civilized nations. All these are opposed to the doctrine of perpetual allegiance.[17]

The view that there is a fundamental right of citizens to renounce their allegiance to one State and move to live elsewhere without punishment was embraced by the US Congress in 1868—during another of many controversies with Great Britain concerning the rights of naturalized U.S. citizens—by enactment of "An Act Concerning the Rights of American Citizens in Foreign States," which provided in part:

> Whereas *the right of expatriation is a natural and inherent right of all people, indispensable to the enjoyment of the rights of life, liberty, and the pursuit of happiness*; and whereas, in the recognition of this principle this government has freely received emigrants from all nations, and invested them with the rights of citizenship; and whereas it is claimed that such American citizens, with their descendants, are subjects of foreign states, owing allegiance to the governments thereof; and whereas it is necessary to the maintenance of public peace that this claim of foreign allegiance should be promptly and finally disavowed: Therefore, any declaration, instruction, opinion, order, or decision of any officers of this government which denies, *restricts, impairs*, or questions *the right of expatriation, is declared inconsistent with the fundamental principles of this government.*[18]

Finally, two years later, Great Britain abandoned its claim of "once an Englishman, always an Englishman," and enacted a statute which provided that British citizens who became naturalized in other countries would become aliens under British law.[19]

In 1894, Secretary of State Gresham refused to issue a certificate to assure the Russian Government that the United States had no objections to the granting of Russian citizenship to an American citizen, on the grounds that such a document might undermine the important principle that—and here he quoted the 1868 statute—the "right of expatriation is a natural and inherent right of all people."[20] In the American view, such documents were unnecessary and inappropriate.

More recently, Section 349(a) of the Immigration and Nationality Act recognizes a right of every citizen to relinquish US citizenship.[21] Just a decade ago, the US Court of Appeals for the Ninth Circuit observed that "expatriation has long been recognized as a *right* of United States citizens," and noted that "the Supreme Court [has] placed the right of voluntary expatriation solidly on a constitutional footing."[22]

The proposed "exit tax," of course, does not expressly challenge this well-established right to emigrate/expatriate—it merely provides that a few dozen very wealthy citizens will be forced to pay a major tax on unrecognized appreciation of assets should they wish to exercise this

---

constitutional and international human right. In one sense the proposal does not "tax" the decision to exercise the well-established right—it simply provides as a matter of law that the Government will *pretend* that anyone exercising that right (who, in the subjective judgment of the Internal Revenue Service, is thought to be motivated by a desire to avoid additional tax liability) has sold all of his or her property. In reality, there would be no factual issue as to whether the targets of this tax had actually sold the property in question. This tax would only apply to property that had *not* been sold. But the Treasury Department has figured out that if we can just pretend that they did sell it, while perhaps we can't actually keep them from leaving and renouncing their American citizenship, we can at least make sure that they leave behind another $40 million or so each to help us offset the deficit. All in all, Treasury estimates that the two dozen or so U.S. citizens who are likely candidates for this proposed tax will bring in something in excess of $1 billion toward deficit reduction. And since these individuals will lose their right to vote simultaneously with incurring the tax obligation, I can certainly understand how this might be an attractive proposition to those of you who must come up with solutions to the deficit problem.

International Law and Constraints on the Right to Emigrate/Expatriate

MADAM CHAIRMAN, the issue you have invited me to address, I gather, is whether such a tax would bring the United States into noncompliance with any binding rules of International Law. As I indicated at the start, I am not sufficiently versed on issues of tax law to answer that question with complete confidence; but perhaps I can be of assistance by at least summarizing the existing international law binding upon the United States concerning the human right to emigrate/expatriate.

Let me began by briefly setting forth the status of the right to emigrate under International Law. I will first consider the relevant conventional (treaty) law binding upon the United States, followed by a look at some "non-binding" international documents which may shed light on these issues, and finally I will discuss the very important area of customary international law (which, under the Statute of the International Court of Justice, is considered as equal in authority to conventional law[23]).

Conventional International Law

The effort to codify international human rights law is of quite recent origin, essentially coming in the wake of World War II and the establishment of the United Nations. Article 55 of the UN Charter establishes as a goal the promotion of "universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." In Article 56, "All Members pledge[d] themselves to take joint and separate action in co-operation with the Organization for the achievement of the purposes set forth in Article 55."

An important first step was the unanimous adoption (with eight abstentions, including the Soviet Union and several other Communist States) on 10 November 1948 of the "Universal Declaration of Human Rights," which will be discussed below under Customary International Law.

The International Covenant on Civil and Political Rights

In an effort to follow up the Declaration with a series of binding treaties, in 1966 the United Nations General Assembly unanimously approved the International Covenant on Civil and Political Rights, which entered into force on 23 March 1976. The following year, it was signed by the Carter Administration and on 23 February 1978, it was submitted to the Senate for its advice and consent.

In 1991, President Bush asked the Senate to consider the treaty, and hearings were held late that year in the Foreign Relations Committee, which recommended approval of the treaty by a unanimous (19-0) vote. On 2 April 1992, the Senate consented to the ratification of the treaty with a variety of proposed reservations, understandings, and declarations[24]; and the instrument of ratification was deposited with the United Nations on 8 June of that year with the recommended

---

[23] STATUTE OF THE INTERNATIONAL COURT OF JUSTICE, Art. 38. While customary law may over time replace a rule established by treaty, and the general goal is to ascertain the most recent expression of the consent of the parties (thus a more recent customary practice accepted as law [*opinio juris*] may prevail over a prior treaty), it is probably accurate to observe that, where a relevant treaty exists between the parties to a dispute, the terms of the treaty will provide at least the starting point for resolution of the dispute. However, the principle that "the specific prevails over the general" (*lex specialis derogat generali*) may well lead to a narrow customary practice prevailing over a more general treaty obligation.

[24] REPORT OF THE SENATE COMMITTEE ON FOREIGN RELATIONS ON THE INTERNATIONAL COVENANT ON CIVIL AND POLITICAL RIGHTS, *reprinted in* 31 INT'L LEG. MATS. 645 (1992).

additions—none of which apply directly to the issue at hand.[25] The United States thus joined more than 100 other States in assuming a solemn international legal obligation to abide by the terms of the Covenant.

It is perhaps worth noting that the unanimous report of the Foreign Relations Committee on this treaty categorized the "rights enumerated in the Covenant" as being "the cornerstones of a democratic society."[26] By its own terms, the Covenant was designed to be a legally-binding international treaty setting forth "inalienable rights" which were said to be "derive[d] from the inherent dignity of the human person"[27]—which sounds an awful lot like Jefferson's "natural law" rationale. Article 12 of the Covenant provides:

> ***Article 12***
>
> 1. Everyone lawfully within the territory of a State shall, within that territory, have the right to liberty of movement and freedom to choose his residence.
> 2. Everyone shall be free to leave any country, including his own.
> 3. **The above mentioned rights shall not be subject to any restrictions except those which are provided by law, are necessary to protect national security, public order (*ordre public*), public health or morals or the rights and freedoms of others,** and are consistent with the other rights recognized in the present Covenant.
> 4. No one shall be arbitrarily deprived of the right to enter his own country.[28]

The American Society of International Law commissioned an excellent study of *The Movement of Persons Across Borders*, edited by two of the nation's foremost scholars in this area (Professors Louis B. Sohn and Thomas Buergenthal), which provides important background on the interpretation of the Article 12 of the Covenant. Among other things, the authors note that one of the reasons Article 12 was written was that, "[n]otwithstanding Article 13(2) of the . . . [Declaration], some countries prevent their nationals from leaving, prescribe *unreasonable conditions such as exacting taxes or confiscating property* . . . . [emphasis added]"[29]

While Article 12 embodies a "fundamental right," it is not an "absolute right" in the sense that a State may not legitimately place some reasonable restrictions by law on the right of emigration. In addition to preventing individuals accused of serious crimes from leaving,[30] for example, it is clear that a State may require a citizen to pay any normal tax obligations or other public debts.[31] However, people who wish to emigrate may not lawfully be required to surrender their "personal property," and "Property or the proceeds thereof which cannot be taken out of the country shall remain vested in the departing owner, who shall be free to dispose of such property or proceeds within the country."[32] It seems to me that a key issue with respect to the proposed US "exit tax" is whether or not it represents a normal tax obligation applicable to all citizens irrespective of their wish to emigrate. To the extent that it constitutes a special requirement on individuals because of their desire to emigrate, then the Government would presumably have the burden under the Covenant of establishing that the law is "necessary to protect national security, public order (*ordre public*), public health or morals or the rights and freedoms of others . . . ."[33]

In this regard I noted that the Congressional Research Service legal memorandum on this issue suggests that the term "public order" is "roughly analogous to the concept of public policy and likely includ[es] such notions as 'economic order.'"[34] While I'm not prepared to say that such an interpretation is beyond the pale, it may be relevant that efforts were made during the drafting of Article 12 to broaden this list of permissible exceptions to include such concepts as promoting a State's "general welfare" and "economic and social well-being"—either of which might have arguably justified a special tax provision targeting unrealized appreciation of assets (and perhaps also a tax on the value of a State-funded Soviet education)—but these were *rejected* as

being "too far-reaching."[35] Restrictions on freedom of movement were only to be permitted in "exceptional" circumstances.[36]

I would note in this regard that, to the extent the precise meaning of Article 12 is "ambiguous or obscure," the Vienna Convention on the Law of Treaties[37]—which, although not ratified by the United States, is viewed by our Government as codifying existing customary international law in this respect[38]—permits recourse to "preparatory works" (*travaux préparatoire*).[39] The clear *rejection* of exceptions based upon a State's "general welfare" or "economic . . . well being" would seem to pose a serious obstacle to interpreting the Covenant to permit such an "exit tax" (or, if you prefer the term used by the Congressional Research Service experts, an "expatriation tax"[40]).

Furthermore, Professor Louis Henkin, of Columbia Law School, has noted that:

> The Covenant . . . is not to be read like a technical commercial instrument, but "as an instrument of constitutional dimension which elevates the protection of the individual to a fundamental principle of international public policy." Rights are to be read broadly, and limitations on rights should be read narrowly, to accord with that design.[41]

This view is widely shared by other experts in the field.[42] Discussing Article 12 in a lengthy 1987 article in the *Hofstra Law Review*, a group of four attorneys from the New York law firm of White & Case concluded:

> Although it is accepted that there may be restrictions imposed on the right to emigrate, these restrictions are of an exceptional character and must be strictly and narrowly construed. The right to emigrate is primary; the restrictions on that right are subordinate and may not be so construed as to destroy the right itself.[43]

For the record, the United States is now also a party to the International Convention on the Elimination of All Forms of Racial Discrimination, which prohibits barring freedom of movement (and many other enumerated rights) on the basis of "race, colour, or national or ethnic origin"[44]—however, this treaty does not appear to be relevant to the issue at hand. There are several other international conventions which guarantee the right to emigrate, including regional agreements underlying the European, African, and Inter-American human rights systems. However, the United States is not a Party to these, so in the interest of time I have not addressed their specifics. (While they do serve as evidence of customary legal obligations, in this area the statutory language of the Jackson-Vanik Amendment [discussed *infra*] assures that the United States is bound by the highest standards of customary law in this area.)

Other International Instruments of Relevance

As already noted, the Universal Declaration of Human Rights was intended to be aspirational and not legally binding upon the 48 States that voted to approve it. Because it reflects customary law, it will be discussed under that heading—but it also stands as an important non-treaty human rights document.

Another very important international document clearly not intended to create binding legal rights was the Final Act of the Conference on Security and Cooperation in Europe (Helsinki Accords), which expressly incorporated the Declaration.[45] Time has precluded me from addressing these types of instruments further, but they are probably not critical to a resolution of the issue.

Customary International Law

Perhaps the most important written source of customary international human rights law[46] is the Universal Declaration of Human Rights, approved on 10 November 1948 as a UN General Assembly Resolution. Such resolutions do not have legal effect,[47] and the Declaration was clearly viewed as aspirational at the time—indeed, Mrs. Franklin D. Roosevelt, speaking on behalf of the United States delegation, expressly stated:

> In giving our approval to the declaration today, it is of primary importance that we keep clearly in mind the basic character of the document. It is not a treaty; it is not an international agreement. It is not and does not purport to be a statement of law or of legal obligation. It is a declaration of basic principles of human rights and freedoms, to be stamped with the approval of the General Assembly by formal vote of its members, and to serve as a common standard of achievement for all peoples of all nations.[48]

However, there is a *very* strong consensus today that the *Declaration* is legally binding by virtue of reflecting customary international law.[49] It provides:

> **Article 13**
>
> 1. Everyone has the right to freedom of movement and residence within the borders of each State.
> 2. Everyone has the right to leave any country, including his own, and to return to his country.[50]

In view of the current attempt by supporters of the proposed new tax to distinguish the right of "emigration" from the act of renouncing citizenship, it should be noted that the Declaration also provides:

> **Article 15**
>
> 1. Everyone has the right to a nationality.
> 2. *No one shall be* arbitrarily deprived of his nationality nor *denied the right to change his nationality.*[51]

During the debate on the Jackson-Vanik Amendment in 1974 (discussed *infra*), this document was occasionally portrayed as an international treaty designed to create legal rights.[52] In reality, its only "legal" value is as evidence of binding customary law—but as such it is quite powerful. Its status as evidence of customary law may be important background for the discussion which follows, because the Soviet Union voted against Article 13 during the drafting process and did not vote in favor of the *Declaration* itself in the General Assembly. With a few exceptions, which are not relevant to the issue at hand,[53] rules of International Law are established by the *consent* of States. This can be done explicitly by ratifying a treaty or other international agreement,

---

[46] To constitute binding international customary law, a rule must reflect "a general practice" that has been "accepted as law" (*opinio juris*). *See* STATUTE OF THE INTERNATIONAL COURT OF JUSTICE, Art. 38 (1) (b).

[47] However, a UNGA resolution expressing legal principles approved by an overwhelming vote of Member States may serve as powerful evidence of the existence of a legally-binding international custom.

[52] *See, e.g.,* 120 CONG. REC. 39787 (1973) (referring to the "ratifying nations" of the Declaration).

[53] Some rules of International Law are of such fundamental importance that they are considered "peremptory norms" (*jus cogens*) and bind all States irrespective of consent. A thorough discussion of this issue is precluded by the short time available to prepare this testimony. Some human rights principles have this status—it is doubtful that this is one of them. The issue is of only academic interest given the strong statement of the right to emigrate as constituting binding International Law contained in the Jackson-Vanik Amendment to the 1974 Trade Act (discussed below). Thus, the United States could hardly protest that it is not bound by this rule and claim to have protested against its creation.

or it may be done implicitly by taking part in the development of a consistent and general practice accepted as law. But—again, with some exceptions[54]—a State is not considered bound by customary legal rules against which it clearly protested during formation. Thus, it is at least arguable[55] that the Soviet Union was not bound by the Declaration as customary law in 1974.

The United States, in contrast, played a leading role in the drafting of the Declaration and has frequently treated its provisions as reflective of customary international law. In addition to the Jackson-Vanik Amendment, I would note that on 9 November 1982 the Department of State expressly invoked the Declaration in denouncing Romania's "public education tax."[56]

The 1974 Jackson-Vanik Amendment

MADAM CHAIRMAN, it is important to keep in mind that the United States Congress played a prominent role in the affirmation of customary international law governing the right of citizens to emigrate without having to pay burdensome special taxes. I don't know how many current members of the subcommittee served in the Ninety-Third Congress, so it may be useful for me to review the history of the "Jackson-Vanik" Amendment—also know as the "Freedom of Emigration" Amendment[57]—briefly at this time. I remember it reasonably clearly, for, as I mentioned, I was serving at the time on the staff of Senator Bob Griffin and I followed the Amendment closely.

The genesis of the Amendment was the effort by the Soviet Union to restrict Jewish emigration to Israel. In 1972, Moscow announced that future emigrants who had received higher education at the State's expense would have to pay a "diploma tax" to compensate for the value of the skill they were taking out of the country. In addition, at least as reported in the *New York Times* at the time, Soviet citizens wishing to emigrate to countries that lacked diplomatic relations with the USSR had to pay an additional 500-ruble "citizenship renunciation fee."[58]

As I said earlier, I am most hesitant to get into a quarrel with my good friend Paul Stephan about the details of Soviet law, as he is far more knowledgeable than I am on that general subject. However, I did take the liberty to look up "Emigration" in the two-volume 1973 *Encyclopedia of Soviet Law*, and I found an entry which read in part:

> [T]he current exodus of Jews from the USSR to Israel has led to the adoption of new restrictive administrative practices calculated to curb the flow of departures, intimidate potential applicants for exit permits, or bar the emigration of certain individuals whose qualifications are considered too valuable by the authorities to risk losing their services. These measures have included . . . *adherence to the requirement that the petitioner first formally relinquish his Soviet citizenship and pay a 500-rouble fee for the privilege of so doing*, [and] the imposition of an exorbitant surtax on those seeking an emigration visa justified as indemnification owed to the state for the cost of their education and professional training . . . .[59]

If Paul believes that these reports were in error, he may well be right for all I know and I would urge you to consider his evidence carefully. However, the fact remains that these were the kinds of reports we were getting on the Hill at the time; and even if they were mistaken they certainly influenced our thinking. Thus, when Paul writes that "we"—and here I assume the antecedent is the supporters of the Jackson-Vanik Amendment in the Legislative branch—were "indifferen[t]" to "[w]hether the communist regimes also made it difficult to surrender citizenship," he is simply mistaken.[60]

---

[54] *Jus cogens* rules (discussed *supra*) bind all States, and newly-formed States are bound by all rules of customary law in existence when they are created.

[55] In reality, a strong case can be made that the Soviet Union was bound by this provision of the Declaration in 1974. Among other things, abstention in the General Assembly does not constitute an adequate "protest" to protect against being bound (although it does not constitute "consent" either). The following year the issue was arguably resolved when Moscow signed the Helsinki Accords (which, as discussed *supra*, incorporated the text of the *Declaration*.) While the Helsinki Accords were not designed to be legally binding in themselves, Moscow's acceptance of the principles of the *Declaration* would seem to undercut any Soviet claim that it objected to these principles as *customary* law.

[59] 1 ENCYCLOPEDIA OF SOVIET LAW 245 (F.J.M. Feldbrugge, ed. 1973) (emphasis added).

[60] States may impose a wide range of substantial burdens on their citizens who reside abroad, ranging from various types of taxes to a requirement that they return to their homeland upon demand for military service, to appear in judicial proceedings, and the like. The clear objective of the Jackson-Vanik Amendment was not merely that Moscow allow Soviet Jews (and others) to make occasional tourist excursions to Israel (or elsewhere), but that these

As reported out of the House, Section 402 of the Trade Act of 1974 (H.R. 10710) included the so-called "Vanik Amendment"[61] which prohibited the President from granting "nondiscriminatory tariff treatment" to any "non-market economy country" which "imposes more than a nominal tax, levy, fine, fee or other charge on any citizen as a consequence of the desire of such citizen to emigrate to the country of his choice."[62] In its accompanying report, this Committee referred to the "right to emigrate" as a "basic human right . . . ."[63]

When the trade bill reached the Senate floor in mid-December 1974, this provision was strengthened by the enactment of the famous "Jackson Amendment" (with the final language affirming the right of emigration thus widely referred to as the "Jackson-Vanik Amendment"). Although strongly opposed by the Ford Administration as an impediment to *détente* with the Soviet Union, the Jackson Amendment was introduced in the Senate with 78 co-sponsors[64] and was approved unanimously.[65]

As enacted into law, the provision provided in part:

> **§ 2432. Freedom of emigration in East-West trade**
>
> . . . .
>
> (a) To assure the continued dedication of the United States to fundamental human rights, and notwithstanding any other provision of law, on or after . . . January 3, 1995, products from any nonmarket economy country shall not be eligible to receive nondiscriminatory treatment (most-favored-nation treatment), such country shall not participate in any program of the Government of the United States which extends credits or credit guarantees or investment guarantees, directly, or indirectly, and the President of the United States shall not conclude any commercial agreement with any such country, during the period beginning with the date on which the President determines that such country—
>
> (1) denies its citizens the right or opportunity to emigrate;
>
> (2) *imposes more than a nominal tax on emigration* or on the visas or other documents required for emigration, *for any purpose or cause whatsoever*; or
>
> (3) *imposes more than a nominal tax, levy, fine, fee, or other charge on any citizen as a consequence of the desire of such citizen to emigrate to the country of his choice*,
>
> and ending on the date on which the President determines that such country is no longer in violation of paragraph (1), (2), or (3).[66]

MADAM CHAIRMAN, even if you conclude that the proposed exit tax is not in conflict with the terms of the Covenant on Civil and Political Rights and the Universal Declaration of Human Rights, it strikes me that—given in particular the strong message sent by Congress via the Jackson-Vanik Amendment—it would be wise to consider whether this proposal complies with that standard as well.

Reconciling the Proposed US "Exit Tax" with Jackson-Vanik

Subjectively, of course, all of us can presumably agree that there is a substantial difference in the motivation behind the proposed US "exit tax" and the impediments placed in the path of Soviet Jews (and others) in the early 1970s designed clearly to discourage emigration (especially by dissident Jews to Israel). The United States understandably does not wish to lose the substantial sums in tax revenues which the Treasury Department projects could be lost if especially wealthy US citizens elect to renounce their citizenship and emigrate to foreign points—all the more so if the motivation for the move is perceived to be the avoidance of tax liability. Indeed, I think it is probably fair to assume that an underlying purpose for this proposal is to deter the so-called "super rich" from renouncing their citizenship; as, if they can be persuaded to maintain that relationship, we can probably extract even greater sums in tax revenues over the decades ahead.

While one might normally view this as a "political" problem for Congress to factor in during the drafting of the tax laws—how to extract maximum tax revenues from the wealthy without exceeding the point that the "geese that lay the golden eggs" will fly off to find a more

---

Soviet citizens be permitted to depart permanently from the USSR and to sever all legal connections with that country.

[61] This amendment, introduced by Representative Charles Vanik, was approved on the House floor on 11 December 1974 by a vote of 319-80. *See* 120 CONG. REC. 39782 (1974).

[62] FINANCE COMMITTEE REPORT at 7213.

[64] 120 CONG. REC. 39782 (1974).

[65] *Id.* at 39806. The final vote was 88-0, with 12 Senators absent. All but two or three of the absent Senators were co-sponsors of the amendment.

[66] Trade Act of 1974, 19 U.S.C.A. § 2432 (emphasis added).

hospitable environment in which to do business[67]—there are obvious political attractions to the exit tax approach. Presumably few constituents will be directly affected by this legislation (and "soaking the rich" is not all that unpopular with many Americans of more ordinary means in these troubled times), and in order to be subject to the special "tax" an individual will have to renounce his or her American citizenship—in the process alienating more Americans and surrendering their right to vote in any case. One can see how this proposed new tax might have appeared to be a virtually cost-free (from a political standpoint) way to raise a couple of billion additional dollars over the next five or six years.[68]

From the standpoint of International Law, however, it may be more difficult to make the distinction between the old Soviet practice of charging a special "diploma tax" to compel citizens who wish to emigrate to compensate the State for its investment in their education, and the proposed US "exit tax" designed to compel citizens who wish to emigrate to compensate the State for income taxes they would likely eventually owe if they remained citizens. Both arguments are premised upon the idea that the citizen who wishes to abandon his country has received benefits of calculable value from a relationship with the State, and from which the State would likely benefit over the years if the relationship continued. Thus, if they wish to terminate the citizen-State relationship, it is only fair that they compensate the State for the value they have received through the efforts (or at least the indulgence) of the State.

Indeed, one might argue that the Soviet argument was the stronger one. There, the State *paid* the costs of education—turning ordinary people into doctors, engineers, scientists, and the like—with the expectation that the cost would be recouped over years of service to society. In contrast, presumably the targets of the Administration's proposed new tax gained their wealth by building better "mousetraps," investing wisely, or taking exceptional financial risks with their own resources—and perhaps getting "lucky." The State in this case did not "take them to raise," it simply sought to run a "fair gaming table" at which all citizens could seek their fortune. If a large casino in that circumstance sought to insist that "big winners" leave their profits behind when they left, many of us would think it unfair.

Under existing law, as I understand it, the Treasury Department (IRS) will have a legal right to a large chunk of these people's money *if* they eventually sell their property—but not before. However, the Treasury Department is in desperate need of additional money to help offset the deficit, and if these "super rich" citizens are allowed to walk away from the table and take their money to another "game" we probably won't be able to collect all of that money. So, they are asking you to pass a new law providing that, if certain particularly attractive targets have the audacity to "walk away from the game" by renouncing their US citizenship, we will simply *pretend* that they have at the same time sold all of their property. We can then hit them with multi-million dollar tax bills on the basis of these nonexistent "sales." Hopefully, this will deter most of them from leaving; but, even if some of them do get away, under this bill we can grab much of *their* wealth as they get on the boat to leave.

Obviously, everyone in this room will benefit if we can find another couple of billion dollars to apply toward deficit reduction. I'm not unaware of that, and, like most of you, I would like to see the deficit reduced. But, at the risk of sounding an unpopular note, it does strike me that there are some rather serious ethical and legal issues which need to be addressed.

Let me emphasize that it would *not* be illegal under these rules of International Law for the United States to tax unrealized capital gains annually, or for the Soviets to charge a fee for providing an education—the legal issue arises when people who seek to emigrate are treated less favorably than others because of their decision to exercise their legal right to emigrate. It strikes me that this proposal does that. I'm no tax expert, but it appears to me that, in at least some circumstances, changing markets might dramatically decrease the value of some of the assets in question by the time they were actually sold; and other appreciated assets might actually avoid capital gains taxation entirely through the demise of the owner.[69] But even if I am mistaken, and Treasury can tell us with certainty that every penny they wish to assess through this provision would eventually be due from these individuals over a period of time, I would suggest that *time* is in itself more than a "nominal" penalty.[70] While most of us presumably can't relate to the idea of

---

[67] While I claim no special expertise on matters of finance or tax policy, I was impressed with *Forbes* magazine editor James W. Michaels' observation that "It's not that legislators sympathize with rich tax dodgers. It's that they realize it's time to worry less about soaking the rich and more about changing the tax code to make the country more hospitable to the capital that produces jobs and economic growth." James W. Michaels, "You can't take it (all) with you," FORBES, 13 March 1995, p. 10.

[68] The Treasury Department estimates that this provision will produce $2.2 billion in additional tax revenues between FY 1995 and FY 2000. DEPARTMENT OF THE TREASURY, GENERAL EXPLANATIONS OF THE ADMINISTRATION'S REVENUE PROPOSALS 17 (Feb. 1995).

[69] To be sure, they might then be subject to an inheritance tax.

[70] Does anyone believe the courts would enforce a statutory provision requiring that dissidents who burn the American flag must pay their income taxes earlier than other citizens?

owing tens of millions of dollars in income taxes, my point can be affirmed by simply asking how many Americans voluntarily pay their federal income taxes years before they are due?[71]

Congress Can By Statute Violate International Law

Perhaps I should make one additional point. The United States belongs to the *dualist* school and views municipal and international law as being separate, if often interrelated,[72] legal systems. United States courts will thus first attempt to reconcile the language of apparently inconsistent statutes and treaties, but if that proves unreasonable, they will apply the "later in time" doctrine (*lex posterior derogat priori*) and give legal effect to the instrument of most recent date.[73] The theory underlying this policy is that treaties and statutes have a co-equal standing as "supreme law of the land,"[74] and the lawmaking authority—be it the two chambers of the Legislative Branch acting with the approval (or over the veto) of the Executive,[75] or the Executive acting with the consent of two-thirds of those Senators present and voting[76]—is presumed to know the existing law when it acts and to intend the logical consequences of its actions. Thus, if the Congress enacts the provision in question and it is subsequently challenged as contrary to the nation's solemn treaty commitments, American courts will not strike down the statute because of the treaty. Similarly, while some scholars quarrel with the rationale,[77] the oft-cited 1900 Supreme Court case of *The Paquete Habana* held that "the customs and usages of civilized nations" (customary international law) is part of US law "*where there is* no treaty and *no controlling* executive or *legislative act* or judicial decision . . . ."[78] Furthermore, while the recently ratified Covenant clearly creates a solemn legal obligation upon the United States under International Law, it is not self-executing and thus will not be implemented by US courts in the absence of independent legislative authority.[79]

However, this is not to say that Congress has the legal power to relieve the United States from its solemn treaty obligations under International Law. On the contrary, no such right exists.[80] If the Congress elects to approve a statute that is contrary to the Covenant, it will by so doing make the United States an international lawbreaker.

To be sure, Congress in the past has on occasion enacted legislation which placed the Nation in such a status.[81] Such a decision has consequences, however. Not only might other treaty Parties have available meaningful remedies under International Law,[82] but violations of International Law by the United States contribute to a lack of respect for the rule of law in general and greatly undermine the ability of the United States to persuade other States to comply with such rules. Thus, in particular when the issue involves solemn undertakings in the area of international human rights, one would hope that legislators would be careful to avoid even the appearance of breaching provisions of a treaty.

---

[71] On a somewhat lighter note, I believe it was Oscar Wilde who a century ago remarked: "Time is waste of money." Half-a-century later, George Bernard Shaw observed: "He who robs Peter to pay Paul can always depend on the support of Paul."

[72] As will be discussed, treaties are a part of the "supreme law of the land" and customary international law "is part of our law" too. The *monist* school views international law to be superior to municipal law in a single legal system.

[73] *See, e.g., Whitney v. Robertson*, 124 U.S. 190 (1888).

[74] US CONST. Art. VII

[75] *Id.* Art. I, Sec. 7.

[76] Id. Art. II, Sec. 2.

[77] *See, e.g.*, Louis Henkin, *The Constitution and United States Sovereignty*, 100 HARV. L. REV. 853 (1987).

[78] 175 U.S. 677 (1900) (emphasis added).

[79] For a discussion by Chief Justice Marshall of the distinction between self-executing and non-self-executing treaties, *see Foster and Elam v. Neilson*, 27 U.S. (2 Pet.) 253 (1829).

[80] The only exception would be if a treaty were to provide for termination by act of a national legislature.

[81] This sometimes occurs inadvertently when legislation is considered by members who are simply unaware of a conflicting treaty provision (as may be the case in this Committee's approval of the statute being considered in this hearing), but it also occurs occasionally even after the conflict with a treaty has been identified. An example of this that comes readily to mind was S-961, the "Magnuson Fisheries and Conservation Act," passed around 1976. *See* the minority views of my former employer, Senator Robert P. Griffin, included in the Foreign Relations Committee's report on this bill for a discussion of this problem.

[82] These may range from judicial settlement to reciprocal breach or simply the "horizontal enforcement" of retorsionary behavior to pressure our Country to observe its solemn international legal obligations (*pacta sunt servanda*).

Conclusion

MADAM CHAIRMAN, as I indicated when I began, I did not come here today with the intention of taking a definitive position on this legislation on the merits. I have primarily tried to set forth the basic international legal rules in my testimony, and I suspect that honorable men and women might reach different conclusions when applying those rules to this proposed statute.

One thing that does strike me as being fairly clear is that drawing a distinction between "emigration" and "expatriation" is not the answer. To deny the right of expatriation would conflict with centuries of precedent in U.S. practice of International Law, not to mention Article 15 of the Universal Declaration of Human Rights. It would be contrary to statutory declarations by Congress dating back more than a century, not the least of which is the 1974 Jackson-Vanik Amendment.

If this were merely a statute providing that citizens must "pay their lawful taxes" before they may renounce their citizenship and move to a foreign State they find more attractive, I think it could pass legal muster with little difficulty.[83] But I'm not sure that's the situation. You understand the tax system far better than I do, and I will defer to your expertise in the final analysis.

If the proposed "exit tax" is designed to discourage citizens from exercising their right to renounce US citizenship, I think it is contrary to the law. If it is designed to impose an immediate and substantial financial burden upon citizens—on the specific and expressed grounds that they have elected to renounce their citizenship and emigrate to another country—and it is a burden that would not be imposed upon otherwise identically situated citizens who elected to remain American citizens (and did not elect to sell or dispose of their property or take other action that would recognize capital gains liability), then I think you have a very serious problem. In that event, I would want my money "up front" if I were asked to argue before an international tribunal that the proposed US exit tax complies with the spirit of the Jackson-Vanik Amendment—which no less an authority than the United States Congress argued reflected the minimal requirements of International Law two decades ago. (I think I would base my Jackson-Vanik case upon the technicality that the United States is not covered because it does not have a "non-market economy"—but the underlying rule of customary international law is not so qualified and could not be evaded by that consideration.) Trying to argue that international human rights standards have *declined* since 1974 would clearly not pass the "straight face" test.

The experts are divided about whether the Jackson-Vanik Amendment is a "relic of the Cold War" and ought to be repealed.[84] Secretary of State Christopher and the Congressional Helsinki Commission have both voiced opposition to removing Jackson-Vanik from the statute books on the grounds, *inter alia*, that some "refuseniks" are still being denied the right to emigrate from Russia[85]; and the issue of freedom of emigration has also been central to the debate over MFN status for China.[86] It is simply unrealistic to believe that the underlying principle of freedom of emigration will no longer face serious challenges, and the ability of the United States to use moral suasion to further such important values may well depend in no small part upon the international perception of our own record in upholding these rights. As Jefferson noted in a 19 April 1809 letter to James Madison: "[I]t has a great effect on the opinion of our people and the world to have the moral right on our side."

Unless someone can do a better job that I have heard thus far in distinguishing an exit tax targeted at "super rich Americans" from one aimed at "educated Jews,"[87] you may ultimately find as a practical matter that you will need to make a choice between enacting this provision and attempting in the years ahead to uphold the Jackson-Vanik Amendment and similar fundamental human rights norms. If this provision is enacted into law, I believe the odds are good that future US protests calling upon China, Iraq (which last month imposed an exit tax of its own to curtain the flow of capital), Iran, and other flagrant human rights violators to comply with various

---

[83] The Department of State, for example, has warned that "Persons considering renunciation [of US citizenship] should also be aware that the fact that they have renounced U.S. nationality may have no effect whatsoever on their U.S. tax or military service obligations." 87 AM. J. INT'L L. 602 (1993).

[84] For a useful summary of this debate (reaching the conclusion that "Jackson-Vanik has continuing relevance today," see Kevin M. Cowan, *Cold War Trade Statutes: Is Jackson-Vanik Still Relevant*, 42 U. KAN. L. REV. 737 (1994).

[85] *Id.*

[86] *See, e.g.*, Lucille A. Barale, *U.S. MFN Renewal for China: The Jackson-Vanik Amendment*, 12 E. ASIAN EXEC. REP'T 6 (1990); Randall Green, *Human Rights and Most-Favored-Nation Tariff Rates for Products from the People's Republic of China*, 17 U. PUGET SOUND L. REV. 611 (1994); and Marian Nash (Leich), *Contemporary Practice of the United States Relating to International Law*, 88 AM. J. INT'L L. 719 (1994); Executive Order 12,850 (1993).

[87] I hope I am not the only one who has been alarmed by the tone of some of the rhetoric in this debate. Indeed, if you but changed the nouns, some of the invectives now being directed against "super rich" Americans might easily be mistaken for Soviet diatribes against "Jews" a couple of decades ago.

provisions of the Covenant on Civil and Political Rights will receive in reply a counter-charge concerning American "violations" of Article 12—not to mention the Universal Declaration and our own Jackson-Vanik law.

In summary, last week's State Department testimony not withstanding, it has been the view of the United States government since George Washington was President that citizens of every State have a natural "right" to disavow their political connection with that State and to establish a citizenship relationship with another. That right is now a part of International Law, and it has been codified in American law for more than a century. The question each of you must answer is whether this proposed new "exit tax" places more than a nominal burden on the exercise of that right.

Unlike my friend Paul, I don't regard arguments on either side of this issue to be "inconceivable." On the contrary, I think you have a difficult task. But if I might inject a very personal element into the debate, I would urge you to move cautiously if you have any significant doubts about this provision's compatibility with International Law. Because, candidly, when I balance the importance of upholding international standards of human rights against the possibility of coming up with a billion dollars or so to help pay off the deficit, my personal values come down on the side of human rights every time.

MADAM CHAIRMAN, that concludes my prepared statement. I will be happy to attempt to answer any questions you or your colleagues might have.

Chairman JOHNSON. Thank you, Mr. Turner. I appreciate your very thoughtful testimony.

I think history does matter. I think the effort to be consistent with our own beliefs in different areas is important, and I appreciate your advice to be cautious.

I think it is particularly important in this era in which we just passed a GATT Agreement that is going to require the nations of the world to respect America's definition of the importance of individual property rights, both tangible and intellectual. I think it is very important that we be sure that we act consistently, particularly in regard to uniform values and uniform rights, and I appreciate your testimony.

Mr. Norman.

STATEMENT OF WILLIAM K. NORMAN, ESQ., PARTNER, ORD & NORMAN, LOS ANGELES, CALIFORNIA

Mr. NORMAN. Thank you. Madam Chairman and Members of the Subcommittee, I am here to testify in opposition to the proposal of the administration to impose a new tax on individuals who renounce their citizenship. I am appearing on my personal behalf.

I believe that the administration, the Department of Treasury and various Members of Congress who have been supporting the new proposed expatriation tax have failed to make the necessary public policy case. Only a political case has been made, not so much here today by Mr. Guttentag, but in the press releases and in the Senate hearings.

As a tax lawyer working in the field, I believe the tax policy implications of the proposal and the need for this tax need to be examined more closely. Congress should determine why our citizens are considering to expatriate in the first place.

You have asked today a member of the Treasury why they never issued regulations. I have to admit it is the first time I have ever heard the IRS say they haven't issued regulations because they thought the underlying law couldn't be enforced. We should ask why they haven't issued forms, special forms when people expatriate so we can identify who these 800 people who expatriated are, for instance, this year.

I think more time and more study and hearings are needed to determine if we as a country actually have an expatriation problem and if so, what is the appropriate response.

I think Congress probably had the power to enact the proposed tax or something like this tax, but we need to consider whether we should enact it, not just whether Congress has the power, if we just modify it here and there. Tax motivated expatriation can be discouraged through more positive measures.

Just from my own practice, the lowering of capital gains rates would make a big difference, if not eliminate the motivation for a great many of these people who do expatriate for tax reasons; more effective estate tax deferral provisions when you have deaths with a closely held business would also help.

Congress should also recognize, as has been mentioned here earlier in the Chair's remarks, that dual citizens, U.S. and foreign country citizens, often have legitimate nontax motivated reasons

for renouncing their U.S. citizenship and retaining a foreign country citizenship.

In particular, I suggest that the proposed tax should not be adopted for three reasons. They are in my prepared remarks, but I'd like to summarize them. First, I think it is bad tax policy with likely detrimental economic consequences. Some of our most successful individuals that do not yet have a high net worth or appreciation in their assets will now have a new threshold that is going to get them thinking about whether they should expatriate or not. Because if they build up too high a net worth in the United States, they will be subject to a limitation if they ever leave the country.

There are a large number of people, at least in my practice, who have left—largely in terms of my own total experience—who have renounced not for tax-motivated reasons principally, but for patriotic or personal political allegiance or religious reasons. We are talking about individuals going to Ireland, Israel and some of the Eastern bloc countries. These possibilities with the cold war essentially over and the gulf war resolving questions of political military power in the Middle East have opened up possibilities for many of our dual citizens that were not present before or were unthinkable before.

Second, the proposed tax will discourage foreign resident individuals from becoming long-term residents, if that is the coverage of the proposal, or long-term residents from becoming naturalized citizens. We are going to have a class of wealthy aliens who are residents and who are going to be afraid just for protection of their family and for economic reasons to seek U.S. citizenship, because once they are in the system, they never can leave, they can never make that choice to go back home if their circumstances change.

Wealthy foreign individuals who consider countries to which they emigrate, and there are large numbers of these each year, certainly from the Far East and Asia that we see in California, are going to stay away from a country that seems to need an exit tax or what is perceived to be an exit tax, and not get into what in fact this tax really is, or needs such a tax to keep its citizens home. That tax is just not going to be attractive. It is going to be discussed in international seminars. It is going to be in the South China Morning Post. It is going to be something that is going to be well known to this class of individuals throughout the world.

The United States is going to continue to lose out in competition for the economically successful emigrants. It is already losing out to Canada, a much smaller country that has many more immigrants coming to its shores. Canada, even though it has a so-called exit or departure tax, does have special reliefs for immigrants.

A third—I think the proposal represents a major departure in Federal tax policy. We need to think about what this means in terms of our tax treaty relationships. Time is needed to renegotiate these treaties. We just finished a long negotiation with Canada where we had to accommodate their capital gains tax which is a form of exit or departure tax with our own estate and gift tax sections. It is just difficult and takes time if we are going to go this route.

We don't know what the real policy basis is for these various thresholds and why foreign assets are in the base. They were not

essentially in the base under section 877, the section we are talking about. Why is there no indexing of the exemption amounts? Why do we treat—rather, why don't we treat all expatriates the same instead of only those with appreciated assets? Maybe the threshold should be on net taxable estate. We are talking about the superrich leaving. Why not use something like a net worth of $10 million which is where our highest estate tax rates come in.

In the meantime, I think we ought to encourage the IRS to enforce the current law. They should issue regulations. They should develop compliance procedures.

If we must change 877 because it is not enforceable, I have some suggestions which are not in my remarks, but just bear with me for a moment. We could change the presumption of correctness in the statute, so that the determination of the IRS, as they have in intercompany pricing cases under section 482, would be presumed correct. It would be up to the taxpayer to show he didn't have a tax motivation.

We could have regulations that define tax avoidance. The Treasury just did this in proposed form with respect to the multiparty financing regulations under section 7701. They define what a tax avoidance plan is.

We could have reporting at the time of expatriation, or require a statement supporting why the expatriation is not for tax avoidance purposes. We have similar statements now with respect to nonaliens who claim to have a closer connection with a foreign country. They have to file a statement.

We could provide that these individuals will continue to be treated as residents of the United States if they stay or have a physical presence in the United States beyond 90 days in the next 3 years, so we know they really have gone and they really are serious about their expatriation.

We could even have changes in our immigration law. These people should have to go to the back of the line so that they don't come back and get green cards and even citizenship in some short period of time. Maybe a 5-year period where they couldn't apply for a green card. Why should they expatriate and then have them come back through our system?

I think just to close up, there are very few dual citizens who will make the choice to go to a foreign country. But I think we have to respect the fact that for some individuals who do not have tax motivation, that in their own view, it is the right choice, and we should respect it.

Our country was founded on people who made such a choice, and those who made the wrong choice, if you go back and look at history, went to the Bahamas or Bermuda. These very places that were mentioned in the Forbes article that the Treasury representative referred to. But look how many people are there, a handful, and just a handful are ancestors of these people who made that choice at the time our country was founded.

That concludes my statement.

[The prepared statement follows:]

PREPARED STATEMENT

of

William K. Norman, Esq.
Partner
Ord & Norman
Attorneys at Law
Los Angeles, California

Before
Committee on Ways and Means
Subcommittee on Oversight
U.S. House of Representatives

Room 1100 of the Longworth House Office Building

Monday, March 27, 1995

Madam Chairman and Members of the Subcommittee, I am here to testify in opposition to the proposal of Administration to impose a new tax on individuals who renounce their United States citizenship. I have in the past represented individuals who have renounced their United States citizenship or surrendered their green cards. I and my firm currently represent clients who have an interest in the proposal relating to expatriation before the Subcommittee today and the other proposals relating to foreign trusts contained in the original proposal of the Administration released on February 6, 1995. I am testifying here today on my own behalf and I am personally bearing the expenses of preparing my statement and appearing here today.

I believe that the Administration, Department of the Treasury and various members of Congress supporting the new proposed expatriation tax have failed to make the necessary public policy case for their proposal. Only a political case has been made. The new tax is technically not a tax on change of residency or on travel itself. It is in essence a tax targeted against the dual citizen who chooses to become a citizen of only one country, a foreign country, rather than the United States. As a tax lawyer working in the field, I believe the tax policy implications of the proposal need to be examined more closely. Congress should determine why our citizens are considering expatriating in the first place. The Internal Revenue Service should be asked why it has never embarked on serious enforcement efforts in this area. Specifically, the IRS should be asked why it has never issued regulations under the existing Internal Revenue Code provisions dealing with expatriation or why it has never required special forms to be filed at the time of expatriation.

More time, including hearings, are needed to determine if we, as a country, actually have an expatriation problem and, if so, what is the appropriate legislative response, if any. If Americans for tax reasons are in fact leaving this country and abandoning their citizenship in crisis numbers, it cannot be for the healthcare facilities in Belize or Nevis or the low taxes in Australia, Canada or the United Kingdom. Congress should not devise and enact legislative solutions to nonexistent crises or to a crisis not understood. Did not the voters in 1992 and in 1994 send a clear message that Congress and the President should find real solutions to real problems? Even if a new tax seems warranted, we need to consider the international implications, *i.e.*, how will the proposed new tax mesh with the tax systems of other countries, especially the tax systems of our treaty partners. Congress probably has the power to enact the proposed tax but it needs to consider carefully whether it should do so. Tax motivated expatriation can be discouraged through more positive measures such as lowering the capital gains tax rates. Congress should recognize that dual citizens often have legitimate non-tax motivated reasons for renouncing United States citizenship and retaining a foreign country citizenship.

The new tax as proposed should not be adopted for the following three reasons:

First, the imposition of an exit tax on certain U.S. citizens who renounce their citizenship is bad tax policy with likely detrimental economic consequences. Some of our most successful individuals will be encouraged to expatriate before they build up the threshold levels of appreciation in their assets. Further, the new provision is unfair to dual citizen individuals who seek to renounce their United States citizenship and return to their homeland either for patriotic or religious reasons. If somebody is going to move abroad and become, for example, politically active in Ireland or Israel, why should they retain their United States citizenship? The individual is not an economic traitor to this country. The individual is merely being true to his

or her own beliefs and heritage. Only a handful of individuals, perhaps a dozen, will be annually subject to significant levels of tax under the proposal. Surely, a less radical approach can be found.

Second, the proposed tax will discourage foreign resident individuals from becoming long term residents of the United States and long term resident aliens from becoming naturalized U.S. citizens. Specifically, resident aliens will be encouraged to remain United States residents for economic reasons and not seek United States citizenship. Once an alien becomes a U.S. citizen, he will not be able to remove himself from the U.S. tax system without being subject to tax on the appreciation in his assets provided the thresholds are reached. The United States will be sending the wrong message to the potential immigrants. Wealthy foreign individuals considering countries to which to immigrate will be shy of a country that needs an exit tax to keep its citizens home. In general, the United States will continue to lose out in the competition for economically successful immigrants to Canada, Australia and others. For example, even though Canada imposes a tax somewhat like the proposed exit tax, it provides a fresh start in the form of a new basis for the assets of its immigrants. Further, Canada permits establishment of pre-immigration foreign trusts to avoid Canadian taxation on income derived from assets acquired by an immigrant before he or she establishes Canadian residency.

Third, since the proposal represents a major departure in federal tax policy, a detailed study is warranted. In this connection, a number of matters should be studied. Consideration should be given to providing a grace period in order that the United States will be able to renegotiate its income tax treaties to accommodate this new system. The United States just went through a rather long period of negotiation with Canada to accommodate the Canadian capital gains tax with our own estate and gift tax system. Additionally, a stronger policy rationale for the coverage and exemptions in the proposal needs to be developed. Should only U.S. citizens be covered? Should short term and long term residents be covered? What is the policy basis for the various thresholds or exemption amounts? Why are foreign assets even in the tax base? Why is there no indexing of the exemption amounts? Why are not all expatriates treated the same, instead of only those owning assets with the threshold amounts of appreciation? Perhaps the threshold should be based on net taxable estate and not on a specified amount of built-in appreciation. Further, consideration should be given to providing a February 6, 1995 fresh start tax basis for all taxpayers who become subject to the tax. Finally, if the proposed tax is intended only to be imposed on the very rich, why not increase the threshold amount to persons with net asset values of $10 million dollars or more -- the levels where the very top United States estate tax rates are imposed.

In the meantime, Congress should encourage the IRS to enforce the current law concerning tax motivated expatriation. Congress should ask the IRS to issue regulations, just as Congress has done a number of times with respect to inter-company pricing. Congress should ask the IRS to develop compliance procedures that will help it identify cases of expatriation that are tax motivated and subject to the current regime in the Code. The IRS could develop a procedure for "quarantining" United States assets at the time of expatriation so that the tax imposed under existing Section 877 will be collected at the time there is a realization event. Finally, Congress should ask the IRS to add these projects to its current 1995 business plan.

In 1966, Congress apparently enacted the existing Code Section 877 dealing with tax motivated expatriation because it believed it was at the same time making the United States tax laws too attractive for nonresident aliens. Now in 1995, a handful of U.S. citizens apparently believe that our tax laws have made it too burdensome for them to remain American citizens. If this is so, how can enacting a new tax, a tax on the freedom to abandon dual citizenship be ameliorative? Congress should find out why some U.S. citizens are considering expatriating while at the same time immigration to this country is at a record high. If the policies of our country are driving our rich citizens to expatriate and encouraging the alien poor to immigrate, we certainly have a problem. If such a problem exists, careful congressional study is called for. Any legislative solution needs to be carefully crafted.

The use of the proposed new tax on expatriates as a favorite revenue offset is not responsible given the serious harm that may result from the enactment of the proposal as currently formulated. We need a "Stay American" and "Invest American" Tax Incentive Act and not an Act that will make Americans the pariah of the world's rich, successful and entrepreneurially able. We should not wage economic warfare on some of our most successful citizens and residents and call them "Economic Benedict Arnolds." Even those who give up United States citizenship or long term residency should not be discouraged from investing in the United States. Finally, those wealthy aliens currently living abroad seeking a country to which to immigrate should not be discouraged by a U.S. tax system hostile to change in residency or even citizenship. We live in a world of change.

Mr. HANCOCK. I want to take this opportunity to underline, Madam Chairman, if you would yield, this one sentence that you have in your testimony, Mr. Norman. It says, If the policies of our country are driving our citizens to expatriate and encouraging the alien poor to immigrate, I mean we really have a problem. And I don't think you meant—you should have emphasized that a lot more.

Mr. NORMAN. I was trying to tone down the rhetoric in response to the other Member.

Chairman JOHNSON. Mr. Heller.

STATEMENT OF LAWRENCE H. HELLER, ESQ., PARTNER, WHITMAN BREED ABBOTT & MORGAN, LOS ANGELES, CALIFORNIA

Mr. HELLER. Thank you.

Madam Chairman and Members of the Subcommittee, I am here today to testify in opposition to to the President's budget proposals to impose a tax on U.S. citizens who renounce their citizenship and long-term resident aliens who give up their resident status. I am testifying in my personal capacity.

I would like to submit my statement for the record, and will take this opportunity now to summarize some of the key elements of my statement.

I feel that the administration's proposal is deficient and unnecessary for several reasons, many of which we have heard today. I feel the most compelling are, number one, the Treasury has failed to issue regulations or take any serious measures to improve enforcement of section 877. We have talked about that many times today. We have an existing statute. The statute has been around for almost 30 years, and yet testimony by Treasury and other witnesses has confirmed that nothing has been done about it. Let's use that statute, let's take a look at it and see how it can be used to put a—or to work with some of the perceived problems.

Number two, the proposal fails to recognize the need for the international coordination of taxes. This is a complex area, and it needs further study and analysis. The proposal fails to—excuse me. The revenue estimates are based on flawed assumptions and are thus incorrect.

And finally, the proposal fails to recognize and adequately address the various administrative problems that will result from the new tax regime.

With regard to section 877, as I have indicated before, and this is the current statute, I find no evidence to support the proposition that the existing rules have been tested and are ineffectual. These expatriation tax rules were originally enacted over 30 years ago, as I have indicated. What were they designed to accomplish?

These rules were designed in section 877, which is attached as an exhibit to my statement, to impose a tax on U.S. citizens who expatriate. That is what we are talking about today. Basically, it was designed to impose a tax over a 10-year period in areas that are not otherwise covered by the normal tax regime. Non-U.S. taxpayers are only taxed on their U.S.-source income.

The 877 went one step further and attempted to impose a tax on U.S. citizens who expatriate by adding a restriction and imposing

a tax on their assets that are sold during that 10-year period, assets that may otherwise not be subject to taxation. This was the purpose of the statute in 1966. It is covered by the Committee reports.

Why does the Treasury feel that this section needs to be overhauled? As one of their reasons they have cited that the burden on the Treasury is too onerous to establish the tax avoidance motive. Well, let's look at that. There are several situations where in the past the burden has been shifted. Maybe we ought to take a look at shifting the burden to the taxpayer or, as Mr. Norman indicated, providing guidance so that we know under what situation the burden will be imposed.

The imposition of tax must wait until the property is actually sold, requiring the IRS to monitor these transactions. That is another perceived problem with the current section 877. Well, in the Treasury's own testimony, they have indicated that this would be a problem with the new proposed section 877.

There are many ways to monitor the transaction short of issuing an exit tax. An interim measure is a little bit of an overkill when the current statute hasn't even been utilized.

I won't go into the details now, but if you look at my statement, I have indicated ways that the IRS and the Department of State can coordinate their efforts to monitor the expatriating citizens and to find out who is paying their taxes and who isn't, who is filing returns and who isn't.

Mr. Norman indicated, and I support the idea of filing a statement when you expatriate and providing the IRS with information. After all, this is a voluntary tax system. We do base our entire system on voluntary compliance.

As I have indicated, the proposal fails to recognize the need for international coordination of taxes. Much has been said about this. I will only state that I feel this requires considerable study. Analysis needs to be made of the various tax treaties.

I think there is a serious problem involved with double taxation. If you tax the U.S. citizen now and then when he sells his assets, when he is a resident of another country, he is going to be subject to a second tax, without the ability to use any of the credits that are now available. This is going to create a real treaty problem, and I think maybe it can be worked out and maybe not. But it is part of the administrative nightmare that we are looking at.

What about the fact that we are trying to tax our citizens on a nonrealization event? Take the hypothetical situation of Mr. A who has an interest in the closely held corporation. If he expatriates, then he may be forced to pay the tax without having the cash to—or the cash flow to pay the tax. Where is he going to get the tax? Where is he going to get the funds? Is he going to have to liquidate his business? Is he going to have to borrow from the bank? Is this going to further skew our national economy? Yes.

The Treasury has suggested that maybe under certain circumstances, specifically section 6166 of the Internal Revenue Code, this individual would be able to defer his tax, maybe 5 or 10 years. But he is deferring his tax, he is still paying interest on that deferral, and if you look at section 6166, it is not a full deferral, but it

is basically an installment payment of the taxes. So it doesn't solve the problem at all.

Somebody mentioned earlier today that death is a nonrealization event. Well, that is true. However, as an estate planner practicing in this area for over 25 years, we learn to plan to pay for the taxes in the event of death. Life insurance is available, and there are other planning techniques that help eliminate this nonrealization event and provide for the liquidity that is necessary in the situation. There is no liquidity provided with this exit tax that is being proposed by the Treasury.

We are very aware of the flawed revenue estimates and the assumptions here. I haven't heard anything today that changes my concerns in this area. I feel that there is nothing that really has convinced me that the $970 million that have been projected by the Treasury to raise in 5 years from the 24 taxpayers will ever be realized. So I think this is a real concern and something that has to be fully analyzed.

Finally, I think that we have to look at ways to encourage our citizens to stay here, fix the problems at home, reduce the capital gains rates as an example, work on our other problems. Let's see why these citizens are leaving; let's conduct studies in this area.

I think that with the proper analysis and the proper study, we can work together to solve the problem that can be readily solved without taking these extreme measures.

This concludes my remarks and I will be glad to answer any questions.

PREPARED STATEMENT

OF

LAWRENCE H. HELLER, ESQ.
PARTNER
WHITMAN BREED ABBOTT & MORGAN
LOS ANGELES, CALIFORNIA

CHAIR, INTERNATIONAL, PROPERTY, ESTATE AND TRUST LAW
COMMITTEE
SECTION OF INTERNATIONAL LAW AND PRACTICE
AMERICAN BAR ASSOCIATION

(TESTIFYING IN PERSONAL CAPACITY)

BEFORE

COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT
UNITED STATES HOUSE OF REPRESENTATIVES

ROOM 1100 OF THE LONGWORTH HOUSE OFFICE BUILDING

MONDAY, MARCH 27, 1995

Madame Chairman and members of the Subcommittee, I am here today to testify in opposition to the President's FY 1996 budget proposals to impose a tax on United States citizens who renounce their citizenship and long-term resident aliens who give up their resident status. I am testifying in my personal capacity as a partner in the law firm of Whitman Breed Abbott & Morgan.

Under the Administrations's proposal, if, after February 6, 1995, a U.S. citizen relinquishes his or her citizenship, property held by that person would be treated as sold at fair market value immediately before such expatriation. This "deemed realization" provision would also apply to a "long-term resident" defined, under the proposal, as an individual who had been a lawful permanent resident of the United States (i.e., a green card holder), other than an individual who was taxed as a resident by another country under a treaty tie-breaker rule, in at least ten of the prior fifteen taxable years. For this purpose, property that would be treated as sold would include all items of property (with the exception of certain U.S. real property interests and interests in domestic retirement plans) that would be included in the individual's gross estate under the Federal estate tax if such individual were to die on the day of deemed sale. In addition, certain trust interests would be subject to the new rules.

On March 15, 1995, the Senate Committee on Finance adopted a modified version of the Administrations proposal as an amendment to H.R. 831, a bill extending the health insurance deduction for the self-employed. Under Section 5 of H.R. 831 the proposal's application to resident aliens was eliminated and the effective date for the renunciation of citizenship was clarified to be the date the individual initiated the process with the State Department. H.R. 831 also attempted to clarify the treatment of beneficial interests held in trusts by expatriating citizens.

The Administration's proposal is deficient and unnecessary for several reasons, the most compelling of which are that: (i) the Treasury has failed to issue regulations or take any serious measures to improve enforcement of section 877, (ii) the proposal fails to recognize the need for the international coordination of taxes, (iii) the revenue estimates are based on flawed assumptions and are, thus, incorrect and (iv) the proposal fails to recognize and adequately address the various administrative problems that will result from the new tax regime.

I. **Failure to Recognize That the New Law is Not Necessary Given the Lack of IRS Efforts With Respect to Existing Provisions.**

I find no evidence to support the proposition that the existing rules under current section 877 (see Exhibit "1") have been tested and are ineffectual. These expatriation tax rules were originally enacted in 1966 and in the almost 30 year period since, the Treasury has failed to enact any regulations interpreting Section 877 or provide any guidance for their application. Furthermore, the tax reasons for expatriating are overstated and the disincentives to move to low tax jurisdictions are understated.

Despite this lack of prior attention to the current section 877, the Treasury has concluded that section 877 does not work[1] and needs to be overhauled, citing as its reasons: (i) that the burden on the Treasury to establish that the taxpayer has a tax avoidance motive is too onerous, (ii) since current section 877 only applies to U.S. source income, it is subject to abuse because taxpayers are able to convert U.S. source income into foreign source income and avoid tax altogether, (iii) the rules are extraterritorial in nature and, thus, may unfairly tax the expatriate for post relinquishment U.S. source income earned during the ten year period, and (iv) the imposition of the tax must wait until the property is actually sold requiring the IRS to monitor transactions that occur long after an individual relinquishes his citizenship.

Burden of proof with respect to the tax avoidance motive. I find no merit in the Treasury's position that the burden of establishing that the taxpayer has a tax avoidance motive is too onerous.[2] At the outset, the scope of the Treasury's burden of proof should be examined, in light of what is *not* required. The Commissioner's burden under current Section 877 is *not* to establish that the loss of citizenship did not have as one of its principal purposes the avoidance of U.S. income, estate or gift taxes, but rather the Treasury Department must establish that it is *reasonable* to believe that the expatriate's loss of U.S. citizenship would, but for the application of section 877, result in a substantial reduction in the U.S. tax based on the expatriate's probable income for the taxable year (sec. 877(e)). Establishing this reasonable belief shifts the burden of proving that the loss of citizenship did not have as one of its principal purposes the avoidance of U.S. income, estate or gift taxes to the taxpayer.

Furthermore, even if there was a legitimate basis for the Treasury's position, current section 877 could be amended to shift the burden of proof to the expatriating citizen from the outset.

Ability to convert U.S. source income to foreign source income. The Treasury is concerned because taxpayers may be able to convert U.S. source income subject to the tax under current section 877 to foreign source income that is not subject to the tax and that some practitioners advise their clients on ways to accomplish this conversion in a manner that purports to avoid section 877. Even if this was a legitimate problem, less draconian measures are available such as amending current law, i.e., section 367 or issuing regulations under existing section 877.

Post emigration gains should not be subject to U.S. taxation. The Treasury believes that[3], since existing ten-year expatriation rules are extraterritorial in nature, and therefore, tax gains accruing between expatriation and the sale of the asset, it is unfair to tax an expatriate who purchased U.S. stock the year after he relinquished his citizenship and sold

the stock eight years later. I hardly find this to be a compelling reason to change the existing provisions and arguably, it is just as unfair to impose an exit tax on the same person before there has been a realization event.

Monitoring post relinquishment sales. The Treasury is concerned that the requirement of current law that the imposition of the tax must wait until the property is actually sold requires it to monitor transactions that occur long after an individual relinquishes his citizenship.[4] The above notwithstanding, coordinated efforts among the IRS, the State Department, Custom Service and Immigration and Naturalization can improve enforcement of the current section 877. Currently, the IRS does not request the Department of State to regularly provide lists of Americans who renounce their citizenship. Such a list could be cross-matched against the IRS's listing of "stop filers," that is, those taxpayers who do not file an income tax return in a year subsequent to having filed an income tax return. While thousands of stop filers result from death of the taxpayer or retirement from the labor force, matching citizenship relinquishment against stop filers who had reported income above a certain level in the prior year, or prior several years, may indicate taxpayers who relinquished citizenship with a tax motivation.

With coordinated notification efforts, the IRS can determine whether an expatriate possesses any assets within the United States that could be seized to satisfy the tax liability in situations where a concern that the revenue may not be collected exists. Seizure of assets for failure to pay taxes is permitted under present law. Also, the IRS could coordinate with the Customs Service and Immigration and Naturalization Service to detain noncompliant expatriates who attempt to re-enter the United States. Present law would permit such coordination for purposes of collecting taxes assessed under section 877, if the IRS would seek to assess and collect such taxes.

II. **The Proposal Fails to Recognize the Need for International Coordination of Taxes.**

I do not intend to dwell on the public policy arguments that have been raised by those who consider the proposal to be draconian and nothing more than an "exit tax" on emigrating U.S. citizens and long-term residents aliens.[5] Rather, my concern is that, without responsible fiscal analysis and review of the broad policy and international implications of these proposals, the impact of creating a negative image in the international community may outweigh any hypothetically perceived revenue returns. Imposing an exit tax on U.S. citizens sends the wrong signals to the international community. The proposal is already having serious repercussions outside the United States with some wealthy foreigners even considering divesting their U.S. investments.[6]

The broad policy implications do not stop there. There will be a need to mitigate the double tax effects in the new jurisdiction upon the actual subsequent sale of assets by the departing taxpayer and there will be a need to thoroughly analyze and renegotiate treaties to accommodate timing differences. The proposal also fails to provide transitional relief for bonafide dual citizens.

III. **Failure to Recognize the Administrative Problems.**

The administrative problems raised by the proposal are considerable. Without a "realization event," extra resources must be devoted to determining the value of the assets of the taxpayer who is relinquishing his or her citizenship. Additional costs will be involved since, in many circumstances, professional appraisals will be necessary, thereby adding additional expense to a taxpayer who may already be burdened with "cash flow" problems.

Imposition of an Income Tax where there is a Nonrealization Event.

A taxpayer should not be required to pay income tax until there has been a sale or other disposition of property. Under the proposal, a U.S. citizen who relinquishes citizenship generally is treated as having sold all of his property at fair market value immediately prior to the day of expatriation. Gain or loss from the deemed sale is recognized at that time, generally without regard to other provisions of the Code. Such a provision puts an undue cash flow and liquidity burden on the taxpayer. Taxing unrealized gains also mismatches the timing of U.S. and foreign income tax so that foreign tax credits will not be effective to prevent double tax.

Further study is required for many reasons. Additional time is needed for coordination with both domestic and foreign estate and gift tax rules. The proposal fails to impose any obligations on the IRS to issue regulations. An analysis should be made and a study undertaken to determine the hidden costs of enforcement of the new provisions. Like present law, absent enforcement initiatives by the IRS, the proposal relies on the voluntary compliance of expatriating citizens. The major change in terms of voluntary compliance is to deem all expatriates with certain accrued capital gains in excess of $600,000 liable for tax. Where present law requires the expatriate to make a judgement about whether his relinquishing of citizenship was tax motivated and then file returns for the subsequent 10 years, the proposal requires the expatriate whose accrued gains exceed the threshold to file a tax return within 90 days of expatriation. The IRS can expect disputes over valuation of assets that are deemed to have been sold when no transaction, in fact, took place. This will result in additional costs in terms of auditors and other IRS personnel.

Jeopardy Assessment. The proposal raises several other administrative questions. First, is the proposal necessary in light of the jeopardy and termination assessment procedures already available under Sections 6851 et seq. of the IRC? Under the jeopardy and termination assessment procedures, the IRS may assess the taxpayer's tax and immediately commence collection if: (i) it appears that the taxpayer is or appears to be designing to depart quickly from the United States or to conceal himself; (ii) if the taxpayer is or appears to be planning to quickly place his assets beyond the reach of the IRS; or (iii) if the taxpayer's financial solvency is or appears to be imperiled. If the IRS makes a jeopardy or termination assessment based on reasonable grounds that suggest one of the above-referenced situations is taking place, it must provide the taxpayer with a written statement setting forth the information which the IRS used in making the assessment. The taxpayer then has the earlier of (a) thirty (30) days from the receipt of the written statement or (b) thirty-five (35) days from the date of the assessment to file an administrative appeal. Failure to file such an appeal will permit the IRS to proceed with enforcement procedures to collect the unpaid taxes.[7]

Consequently, if the IRS is notified by the U.S. State Department of U.S. citizens seeking to relinquish their citizenship or by the Custom Services or the Immigration and Naturalization Services of U.S. of aliens seeking to leave the United States, the IRS could then utilize the jeopardy and termination assessment procedures to collect necessary taxes. However, the IRS has not requested the State Department to regularly provide lists of Americans who renounce their citizenship. Such a list could be cross-matched against the IRS's listing of "stop filers" to determine which taxpayers may have relinquished citizenship with a tax motivation.

Conflict between Sections 6851 et seq.and the proposal.

Under the proposal, an individual who is subject to the tax on expatriation is required to pay within ninety (90) days a tentative tax equal to the amount of tax that would have been due based on a hypothetical short tax year that ended on the date the individual relinquished his citizenship. On the other hand, under the jeopardy and termination assessment procedures, the IRS could enforce collection actions within thirty (30) days after giving notice to the taxpayer. Presently, there is no provision in the

jeopardy and termination assessment procedures, the existing law (under the current section 877) or the proposal that addresses this conflict.

In this regard, the U.S. Senate's Joint Committee on Taxation released a report (JCX-14-95) on taxation of U.S. citizens who relinquish citizenship which suggests that Section 877 would govern over the jeopardy and termination assessment procedures. At the end of Part II of the report, the Committee acknowledges that the Senate-modified section 877 "would replace the current 'sailing permit' requirement under Section 6851(d) of the jeopardy and termination assessment procedures with a new requirement to file a short-year tax return" (i.e. the ninety (90) day filing requirement of Section 877). Section 6851(d) and the regulations thereunder currently require any alien who leaves the United States, regardless of the duration of the trip, to obtain a certificate from the IRS District Director showing that the alien has complied with all U.S. income tax obligations before the alien can leave the country. Obviously, compliance with this requirement is infrequent. Under H.R. 831, however, any alien who leaves the United States would be required to file a tax return and pay the relevant tax within ninety (90) days of the date that the alien ceases to be a U.S. resident. Nothing would be required of a resident alien who returns to the United States as a resident within ninety (90) days of departure or otherwise maintains U.S. residence.

The Joint Committee's interpretation that H.R. 831 would govern over Section 6851(d) would appear to be equally applicable in instances involving U.S. citizens who relinquish their citizenship. Thus, pursuant to the Joint Committee's analysis above, the tax liabilities of a U.S. citizen who relinquished his citizenship would be governed by H.R. 831 instead of the jeopardy and termination assessment procedures.

IV. **Failure to Recognize the Flawed Assumptions Under which the Revenue Estimates were Made.**

If the Administration's proposal becomes law only the marginal taxpayer will continue to expatriate, thereby eliminating any immediate significant sources of revenue. Even if wealthy U.S. citizens continue to emigrate, the revenue impact can hardly be significant. In fact, according to the Treasury's own estimates[8], wealthy taxpayers are emigrating at the rate of only two dozen per year. Taxing our citizens a dozen at a time can hardly justify the use of the legislative and administrative resources that will be called to bear. The negative image and mixed signals that this will give to the rest of the world and the international community by imposing such an exit tax hardly compare with the hypothetical revenue increases. Consideration should thus be given to the revenues lost by discouraging high net worth foreign individuals from immigrating to the United States.

Other concerns include the fact that the high cost of administration has not been reflected, losses from discouraging domestic investment by wealthy foreign individuals needs to be considered, and losses from United States citizens encouraged to plan for low appreciation in their assets and future high income potential may be a factor to consider, as well as does the loss from entrepreneurs and high income potential (for current low net worth) citizens who expatriate before developing a high net worth.

V. **Other Solutions Exist**

A. "Quarantine" U.S. assets at time of expatriation and impose tax at time realization event occurs. U.S. assets may be "quarantined," *e.g.*, QDT and tax imposed only upon a subsequent realization event.

B. Reduce capital gains rate to eliminate motivation.

C. There is no public policy rational for the proposed exemption: foreign vs. domestic pensions, foreign assets in tax base, no indexing of exemption amounts, all expatriates should be treated the same.

D. Authorize IRS to conduct study and issue anti-abuse regulations under current law.

E. Apply tax only to appreciation occurring after February 6, 1995.

F. Provide the tax is not applicable to existing dual citizens for five years.

G. Provide the tax is not applicable to individual who become citizens of a treaty country for five years.

H. Additional suggested changes to current proposal.

i) Foreign personal residences and foreign pension plans should be exempt. More than 5 years should be allowed to pay tax attributable to business interests.

ii) Basis adjustments for U.S. tax purposes should be provided for in the statute without the need for implementing regulations, which may not be forthcoming for many years.

iii) Heretofore, jurisdiction to tax was based on citizenship or residency at the time a realization event occurs. If this principle is to be abandoned and gains that accrue during the period of U.S. citizenship are to be taxed in the U.S. without regard to citizenship or residency at the time of sale, gains that accrued to persons prior to becoming U.S. citizens similarly should be exempt from any U.S. income tax.

FOOTNOTES

1. Statement of Assistant Secretary of the Treasury (Tax Policy), Leslie B. Samuels, delivered during the Oversight Committee of Finance of the United States Senate hearings on March 21, 1995.

2. There are numerous civil provisions in the Code that explicitly place the burden of proof on the Commissioner in specifically designated circumstances: (a) Fraud. Any proceeding involving the issue of whether the taxpayer has been guilty of fraud with intent to evade tax (secs. 7454(a); 7422(e)). (b) Foundation Managers. Any proceeding involving the issue of whether a foundation manager has knowingly participated in prohibited transactions (sec. 7454(b)). (c) Transferee Liability. Any proceeding in the Tax Court to show that a petitioner is liable as a transferee of property of a taxpayer (sec. 6902(a)). (d) Review Of Jeopardy Levy Or Assessment Procedures. Any proceeding to review the reasonableness of a jeopardy levy or jeopardy assessment (sec. 7429(g)(1)). (e) Property Transferred In Connection With Performance Of Services. In the case of property subject to a restriction that by its terms will never lapse and that allows the transferee to sell only at a price determined under a formula, the price is deemed to be fair market value unless established to the contrary by the Secretary (sec. 83(d)(1)). (f) Illegal Bribes, Kickbacks, And Other Payments. As to whether a payment constitutes an illegal bribe, illegal kickback, or other illegal payment (sec. 162(c)(1) and (2)). (g) Golden Parachute Payments. As to whether a payment is a parachute payment on account of a violation of any generally enforced securities laws or regulations (sec. 280G(b)(2)(B)). (h) Unreasonable Accumulation Of Earnings And Profits. In any Tax Court proceeding as to whether earnings and profits have been permitted to accumulate beyond the reasonable needs of the business, provided that the Commissioner has

not fulfilled specified procedural requirements (sec. 534). (i) Expatriation. As to whether it is reasonable to believe that an individual's loss of citizenship would result in a substantial reduction in the individual's income taxes or transfer taxes (secs. 877(e); 2107(e); 2501(a)(4)). (i) Public Inspection Of Written Determinations. In any proceeding seeking additional disclosure of information (sec. 61 10(f)(4)(A)). (k) Penalties For Promoting Abusive Tax Shelters, Aiding And Abetting The Understatement Of Tax Liability, And Filing A Frivolous Income Return. As to whether the person is liable for the penalty (sec. 6703(a)). (l) Income Tax Return Preparers' Penalty. As to whether a preparer has willfully attempted to understate tax liability (sec. 7427). (m) Bankruptcy Claims. As to whether the IRS has a valid claim against the debtor's assets in any bankruptcy proceeding (11 U.S.C. 3001(f)). (n) Status As Employees. As to whether individuals are employees for purposes of employment taxes (sec. 530 of the Revenue Act of 1978).

3. See Samuels, Endnote 1.

4. See Samuels, Endnote 1.

5. See Robert F. Turner's statement during the March 21, 1995 Senate Finance Committee hearings and his discussions of the Jackson-Vanik right of emigration Amendment.

6. Statement of Marshall J. Langer delivered during the Oversight Committee of Finance of the United States Senate hearings on March 21, 1995.

7. Obviously there are numerous other procedural steps involved in jeopardy and termination assessments (e.g. time for appeals, judicial review). Notwithstanding, the principal of jeopardy and termination assessments provides an alternative method to collect taxes currently lost to expatriation.

8. See Samuels, Endnote 1.

EXHIBIT "1"

[¶ 28,120] EXPATRIATION TO AVOID TAX

Sec. 877 [1986 Code]. (a) IN GENERAL.—Every nonresident alien individual who at any time after March 8, 1965, and within the 10-year period immediately preceding the close of the taxable year lost United States citizenship, unless such loss did not have for one of its principal purposes the avoidance of taxes under this subtitle or subtitle B, shall be taxable for such taxable year in the manner provided in subsection (b) if the tax imposed pursuant to such subsection exceeds the tax which, without regard to this section, is imposed pursuant to section 871.

(b) ALTERNATIVE TAX.—A nonresident alien individual described in subsection (a) shall be taxable for the taxable year as provided in section 1, 55, or 402(d)(1), except that—

(1) the gross income shall include only the gross income described in section 872(a) (as modified by subsection (c) of this section), and

(2) the deductions shall be allowed if and to the extent that they are connected with the gross income included under this section, except that the capital loss carryover provided by section 1212(b) shall not be allowed; and the proper allocation and apportionment of the deductions for this purpose shall be determined as provided under regulations prescribed by the Secretary.

For purposes of paragraph (2), the deductions allowed by section 873(b) shall be allowed; and the deduction (for losses not connected with the trade or business if incurred in transactions entered into for profit) allowed by section 165(c)(2) shall be allowed, but only if the profit, if such transaction had resulted in a profit, would be included in gross income under this section.

'86 Code

(c) SPECIAL RULES OF SOURCE.—For purposes of subsection (b), the following items of gross income shall be treated as income from sources within the United States:

(1) SALE OF PROPERTY.—Gains on the sale or exchange of property (other than stock or debt obligations) located in the United States.

(2) STOCK OR DEBT OBLIGATIONS.—Gains on the sale or exchange of stock issued by a domestic corporation or debt obligations of United States persons or of the United States, a State or political subdivision thereof, or the District of Columbia.

For purposes of this section, gain on the sale or exchange of property which has a basis determined in whole or in part by reference to property described in paragraph (1) or (2) shall be treated as gain described in paragraph (1) or (2).

(d) EXCEPTION FOR LOSS OF CITIZENSHIP FOR CERTAIN CAUSES.—Subsection (a) shall not apply to a nonresident alien individual whose loss of United States citizenship resulted from the application of section 301(b), 350, or 355 of the Immigration and Nationality Act, as amended (8 U.S.C. 1401(b), 1482, or 1487).

(e) BURDEN OF PROOF.—If the Secretary establishes that it is reasonable to believe that an individual's loss of United States citizenship would, but for this section, result in a substantial reduction for the taxable year in the taxes on his probable income for such year, the burden of proving for such taxable year that such loss of citizenship did not have for one of its principal purposes the avoidance of taxes under this subtitle or subtitle B shall be on such individual.

Chairman JOHNSON. I thank the panel for your thoughtful testimony.

I have a number of questions, and I will start with Mr. Turner, at least I think I will start with Mr. Turner. I think I will have to come back to Mr. Turner. I am sorry, I can't find the notes I made on that.

Let me start with the other two panelists first, then. Both of you raised the issue of enforcement of current law. Why is it the administration can't tell me anything more about the numbers of people who have given up their citizenship in the last few years?

Can you tell me anything more about them in terms of their assets, or any information that might be relevant to whether this law is important and whether it will work and whether it will produce revenue? Why can't they tell me that?

Mr. NORMAN. I don't know for sure, but my educated guess would be that at the time that the people expatriate, they basically do it by going before a U.S. consulate outside the country. They do it before a consular officer and not before an IRS officer. There is really no coordination between the renunciation of citizenship, which is usually done by signing an oath outside the country and any IRS filing.

Chairman JOHNSON. What about these forms that you refer to that they would have the power to develop under the current law?

Mr. NORMAN. I would say that they have the power to require such forms.

Chairman JOHNSON. But they don't have forms currently. If they had had these forms, couldn't they give me a lot more information about who is renouncing and what their assets were?

Mr. NORMAN. Yes. What I am suggesting is that they require a statement. The statement would say I am renouncing and it would set forth the reasons why it is not for tax motivation, similar to what you do now, if you want to establish as an alien that you are not a resident alien. They also could have a balance sheet you must file if you say, I can't pay my taxes when due.

People file returns. They say, I just don't have the money. There is a special form where you set forth your balance sheet. The IRS could use that same concept and have a second page to this form so we would know who is expatriated. At the time they expatriate, we would know why or at least their statement as to why, and we would know what assets they have to determine if it is worthwhile auditing that particular case.

I think now they just don't know and they read it in Forbes or wherever, the Wall Street Journal. There is not an effective tie between the act of renouncing——

Chairman JOHNSON. In other words, they could have the information that we need to make rational policy and we don't have it because there has been no effort to implement the law and that is the conclusion I am drawing from your testimony, that they could have adopted regulations, they could have had forms, and if they had done those things, we would have a different——

Mr. NORMAN. I think they have the authority and the general regulatory power to issue regulations that would require these taxpayers to file a special form. We have a special permit when aliens

leave the country where they have to file a tax return in certain circumstances to leave the country.

I don't know why we couldn't have a similar procedure for citizens who expatriate. But again, I haven't worked for the IRS or Treasury, so I don't know the specifics of why they don't.

Chairman JOHNSON. Mr. Heller, do you have any comment?

Mr. HELLER. Well, I think it is significant to note that the IRS has a complete filing of stop-filers. These are people that are no longer filing tax returns.

Now, a lot of these are the result of the death of the taxpayer, but it would be appropriate, and I think I would suggest that one approach would be for the IRS to do a cross-check with the State Department of those stop-filers with those U.S. citizens who expatriate.

Chairman JOHNSON. Thank you.

Mr. Heller, in your statement you mention that disincentives to move to low-tax jurisdictions are understated by the Treasury. Could you enlarge on some of the disincentives to move to low-tax jurisdictions?

Mr. HELLER. Well, one of the major disincentives are the lack of adequate medical facilities. Many of the individuals that may expatriate and go back to their homeland behind the former Iron Curtain or go back to Cuba, these are older citizens. They don't want to be living in BVI or Turks and Caicos or the Bahamas. I don't know, you know, how often you have been down there, but I wouldn't want to get sick on one of those islands. In fact, we have documented cases where some of the wealthier people that did move down there have returned to other jurisdictions because of this real problem.

Chairman JOHNSON. All right. And also, both of you spoke about the need to look more carefully at how this change would affect other international agreements that we have. Could you give us more specific examples of problems that would be created by passage of this legislation for already negotiated tax treaties, how many would we have to renegotiate, how substantial would the issues be? How complex have those negotiations been in the past?

You know a lot more about this than I do. Give us some insight as to what passage of this kind of a provision would do to agreements already in place.

Mr. NORMAN. I think our best example is the negotiations we just concluded with Canada with respect to their protocol. They have a capital gains tax which is imposed when you give up residency in Canada or when you die. That is really a replacement for an estate tax. We have Canadians who are in the United States who would be subject to their capital gains tax and our estate tax. There would be no corresponding credit because one tax is an income tax and one tax is an estate tax and we don't allow crediting across those kinds of taxes.

Chairman JOHNSON. So those negotiations protect people from double taxation.

Mr. NORMAN. That is right. And the countries to be most important for these or those others that I can think of would be the United Kingdom, New Zealand, Canada, Australia, France, perhaps, Switzerland, and Germany. So there are a number of these coun-

tries, at least from my practice and from practitioners that I know in the area, where these issues would arise. So at least 10 or 15 treaties would be important. I think we have over 40 treaties, but not all of the countries would necessarily have a lot of these types of expatriates.

Chairman JOHNSON. I have some other questions, but I am going to yield at this time to my colleague, Mr. Hancock. I am pleased to welcome our colleague, Mr. Herger. I appreciate the attendance of my colleagues at this hearing.

Mr. HANCOCK. We have two witnesses that are actively practicing, in fact maybe all three of you are actively practicing tax law.

Mr. Turner, you are not a tax attorney; is that correct?

Mr. TURNER. That understates the case, sir. I know nothing about tax law.

Mr. HANCOCK. OK. Well, but the other two gentlemen are actively practicing.

Let me ask you this. But you are an expert on international law, Mr. Turner. Do you know of other governments that actually prohibit not the taxation, but prohibit the transfer of assets; in other words, that say OK, you can leave the country, but you can't take anything with you.

Mr. TURNER. I don't know. My primary area is public international law, and what you are talking about is comparative law or internal foreign law, and I really haven't looked at that at all.

Mr. HANCOCK. Let me ask Mr. Heller and Mr. Norman. Is this true some countries, especially the Third World countries, prohibit removal or the moving of assets in and out of the country, is that not correct? In fact, hasn't that been one of the problems down in Mexico?

Mr. NORMAN. That was one of the problems in Mexico. South Africa had exchange controls. Exchange controls are now coming off in many, many countries. In most of the countries that we have trade relationships, we don't have really significant exchange control, but in many of the less developed countries they do exist.

Mr. HANCOCK. But historically in your judgment, is the restrictions upon the free flow of funds one of the things that has kept those countries in the economic condition they are in because nobody wants to go in and invest in a country when they can't get their money out of the country?

Mr. NORMAN. Well, clearly, that is one of the first things we talked about when a U.S. company or a U.S. individual considers investing in a foreign country, that is the very first question we talk about. First the tax treatment and then, can we repatriate our profits if we make money or even get our money out of the country if we sell it out.

Mr. HANCOCK. OK. Would this bill that has been introduced by the administration create a little bit of that question in an individual's mind when there is talk about investing or coming in or making his money here in the United States if he knew he could be subjected to this tax ahead of time? Would you agree with that statement?

Mr. NORMAN. It is going to be perceived as an exit tax, and I think it is mostly high net worth individuals who are going to look at this tax and say I don't want to get in this system because I

can't get out without having these deemed sales which is going to cause some of the cash flow problems that Mr. Heller talked about as well as the tax.

So it is going to be a barrier. It is going to be talked about, as I said, in newspapers and business magazines; it is going to be in tax seminars. This is going to become a major topic of discussion when somebody thinks about investing in the United States. It is going to be a negative.

Mr. HELLER. And I might add if I may that when you are sitting down with a client from a foreign country, inevitably that is one of the questions that comes up, will there be any restrictions on the free flow of funds. And many of these individuals have had very negative experiences with other countries.

Mr. HANCOCK. This is just now beginning to get a little publicity, I heard about it a few years ago, you know, that there were certain people that were not only considering expatriating, moving their citizenship, but also moving their assets to offshore tax shelters. It has been going on for a long time. We have all heard the stories about the secret bank accounts in Switzerland and what have you.

In the past few years, in your practice, and I know there are a lot of wealthy individuals out along that golden shoreline over there where you are from, the Los Angeles area.

Is the publicity on this issue starting to cause people to call you and say, hey—you have a lot of people that live out there that are worth $25 million, $50 million, which is a lot of money, but not all that much—30 years ago it was a lot of money.

Are you getting more inquiry in this area?

Mr. NORMAN. I think what I am saying is, we have more of what I call multinational families. We have families where all of the members are not citizens or residents of a single country. We have Taiwanese, Hong Kong, Indonesian, Philippine people coming into the United States. Their parents may stay back in the home country, the children may not all come to the United States, some may go to Canada, some may go to the United Kingdom, and those people are concerned about these kinds of measures and also the measures that were in the broader administration proposal dealing with foreign trust.

In terms of the people worried about moving assets offshore, some people are worried about tort liability and using foreign trusts as asset protection devices. There is no tax advantage to that; it is more protection from future creditors. You do see that.

In terms of persons worried about capital gains taxes, every year in my practice, and there is probably a half a dozen or so of us on the West Coast that have some reputation in advising in this area, every year or so I get a half a dozen or so people who are either worried about capital gains or worried about estate tax. Very few of them, once you get the whole picture out in front of them, are interested in expatriation, because it requires a major change in lifestyle, problems with—I even had a 92-year-old woman whose children thought it was crazy that she was thinking about it. She never did it. It is just not practical.

It is an estate tax avoidance device for most people. Capital gains taxes, people were concerned when tax rates started creeping up after the 1986 act, and there is interest in that area, and there are

a few, to take the Treasury's word, there are 24 people, there are a few, some on the West Coast who are concerned about the capital gains tax. But if that rate was reduced, I don't think the interest would be there.

Mr. HANCOCK. I would just like to make one comment. Almost ever since I have been an observer of what is going on in this country, after getting out of school, also especially since I have been here in the U.S. Congress and the rhetoric that I have been hearing up here, especially right now, is you have to be in favor of taxing the rich if you are going to be politically correct.

That theory of taxing the rich started about 100 or so years ago with a socialistic concept, and the redistribution of the wealth, and it would appear to me, and I am just going to make a statement, and I won't ask for you to make a comment, it would appear to me that this is another move on the part of certain people to get back to that theory, well, they are not entitled to accumulate all of this big money, they had to be dishonest or something, they didn't provide a service or anything else. But anyway, with that, thank you, Madam Chairman.

Chairman JOHNSON. Mr. Herger.

Mr. HERGER. Thank you very much, Madam Chair. Just a follow-up on that line of questioning.

We would like to think that here in America, that the ideal is that people could work hard, be entrepreneurs, work hard in their business and profession and do well and hopefully not be taxed out of everything they have if they happen to reach that point. But I would like to think back to several years ago, when the members of that other party were controlling both the House and the Senate, we had, in this same vein, the luxury tax.

We were really going to sock it to those people who acquired anything that was a "luxury," and you can see what we did to the yacht business. We basically destroyed the yacht business. People did not continue buying yachts with the high taxes. We saw industry basically go out of business over a couple years before we finally repealed that. People just didn't buy them. We had people on welfare then who were paying taxes prior to that.

But I guess in this line, I am just interested, Mr. Heller, what your advice would be to your clients who are either renouncing their citizenship, and I might ask that first question, what would be your advice to a—someone who is currently a citizen who would be considering renouncing their citizenship to go to maybe the land they emigrated from, for example, if this tax bill were to go through.

Mr. HELLER. Well, if this tax bill went through and I was advising an individual who was considering expatriating and moving back to their foreign homeland, say Czechoslovakia or Hungary, I would have to advise them what the tax consequences would be, and we would have to sit down and actually evaluate their assets, do something that we wouldn't have to do now because the problem is they may want to leave the country or give up their citizenship, but they want to—they may want to continue owning the business, and if they continue owning the closely held business, then we will, as U.S.—the government will continue to collect taxes from this business.

If, on the other hand, they are required to liquidate the business in order to pay the taxes, then everybody is a loser. They are a loser and we are the loser, and the question really is, you know, does this discourage or encourage somebody to do this by imposing this exit tax. I suggest that it isn't the proper approach.

The proper approach is to work within the current system, within the current statute, and allow these people to pay their taxes when there is a realization event, when they sell those properties, and we can put in the necessary checks and balances and do some of the administrative things, working with the existing statute.

Mr. HERGER. Now, if these individuals are paying the same amount of tax—well, they are currently citizens so, therefore, they are paying the same tax as everyone else. Let's maybe look on the other side of the coin somewhat. Let's say there is an immigrant that is considering coming to this country, considering—here is someone with business skills, someone who is a professional person, someone who theoretically is going to be adding to our society here, like so many of the immigrants.

My grandparents, two of my four grandparents were immigrants to this country. My father didn't know any English when he started school. That was common in those days. It is not an uncommon thing today, nor was it then, nor was it since our country was founded, but let's say those immigrants who are considering coming here, what would be your—would you have recommendations to them that would be any different were this legislation to go through than what it would be now?

And Mr. Norman, if either one of you have a comment.

Mr. NORMAN. Clearly what you would have to say if these are high net worth individuals you have got to think twice about getting into our system, depending on the scope of the proposal. If it covers only citizens, then you are only worried about those individuals who convert or become U.S. citizens, because only those taxpayers would be subject to tax if they later returned to their home country. But if you are talking about—if the scope of the provisions would cover long-term residents, we are going to advise against long-term residents, if taxes mean anything to them.

And at this point, when somebody is just considering immigrating to the United States, they are in a decisionmaking mode. They have a choice of coming to the United States and being stuck in a tax system that doesn't allow them make a second choice, so to speak, to reevaluate whether they really want to be long-term residents or not, for other reasons, which may or may not be tax motivated. They have Canada which is very friendly toward new immigrants, gives them a new tax basis at the date they become a resident, allows them to set up trusts, preimmigration trusts that will not end up subjecting them to the tax for 5 years if they change their mind, as many Hong Kong people have.

They come to Canada, they stay there 3 years, get their citizenship, which is what they want because they are uncertain about the status of Hong Kong, and now they have a Canadian citizenship and they can give up their residency and Canada has not imposed a tax. And those are the places they are going to go, and they are going to Australia.

Even if they have exit taxes, which the Treasury has pointed out or the Joint Committee in some of their testimony, they are very friendly toward immigrants. This provision is, at least in the original version of it, is not for only the long-term immigrants, the long-term residents that remain aliens, and it clearly is not for those who become citizens.

Often these people retain dual citizenship and at some later date, at retirement, upon a change of circumstance at home, a change in opportunities at home, political changes at home, they don't have to be as radical as from communism to noncommunism, just political changes, they will go back home. It is certainly convenient for them to just be a citizen of one country, and they often do that, and it is not because they are traitors to our country. They really have a dual loyalty from the beginning and they are just making a choice.

And I think you are going to have a lot of these people not wanting to come here and clearly not staying here a long time and certainly not converting or becoming a citizen.

That is going to be on every immigration lawyer's checklist, the tax consequences of becoming a citizen. That you are in the system and you can never make a second choice, you can't go back to Switzerland, you can't go back to Israel or Hong Kong or wherever it is. You are in it, and that could be a big thing, because these people are not only concerned about their own wealth, but passing wealth on to their children, giving their children a good start in life, and if they have a big family, $600,000 of appreciation doesn't go a long way especially if you have a really big family like some of these immigrants do.

Mr. HERGER. Well, thank you very much. And again, as I reflect back on my heritage, I think of the greatness of this country as really the freedom of choice. And what I am concerned about with this type of legislation is that we are taking away many of the freedoms because of what penalties are being inflicted on those who could contribute to our society, and I think we should all not take this action lightly. We should consider it, should consider the dynamics.

I thank you for your testimony here today. Thank you.

Chairman JOHNSON. I have just two more questions that I want to ask. Is it possible for two people who have similar histories of earning and assets to be taxed differently under this law?

Mr. NORMAN. This law taxes two things. It taxes people who make a choice—practically, we are talking about dual citizens because nobody is going to give up their U.S. citizenship if they have no other citizenship. So it taxes that and it also taxes—in fact only imposes taxes if you have appreciation that rises to some threshold level.

So you could have persons who have high income potential, are making a lot of money but have been spending it or not investing in ways that have created appreciation and those people slip right through the proposed new system if you will.

Chairman JOHNSON. So this doesn't treat all people the same according to income. This isn't a tax on their net worth, this is only a tax on their gain.

Mr. NORMAN. A tax on their built-in gain.

Chairman JOHNSON. So two people could have exactly the same asset profile and not be subject to the same tax.

Mr. NORMAN. If you inherited, say, $5 million, you would get a new stepped-up basis. If that person wanted to expatriate under this provision, they wouldn't be taxed. If the same person had $5 million in assets and it represented the buildup in the value of a business over time, then that appreciation would be taxed.

Chairman JOHNSON. I think that is very important to recognize. This isn't about just rich-poor. This is really actually not even about equity. This is about looking at a very specific type of gain and going after that specific type of gain, and this will not prevent people who have high value assets in this country or high income from not escaping if they care to, as long as they don't have a net gain.

Mr. NORMAN. I have had situations where people, because of the recession in the real estate market or because of stock market changes where they might have had a very huge total net worth, I mean, relatively huge in my view, say $10 or $15 million, they now have no net appreciation or very little net appreciation.

Chairman JOHNSON. So what you might advise a client is, where you have a big loss impending in some part of your portfolio and when it offsets it, you can change your citizenship or renounce your citizenship without any tax consequences, but if your portfolio does well, don't renounce.

Mr. NORMAN. What is going to happen is you are going to have new planning techniques. If you are going to make a lot of money in the future, get out now, or if you have, as you suggested, you have losses that offset gains, now is the time to expatriate. I don't think we want those kinds of incentives in the law.

Chairman JOHNSON. One last question to Mr. Turner.

You know, Mr. Turner, you really pointed out some very powerful phrases in legislation and in international agreements to which we are a party that make it very, very clear that we have taken the position that people have a right to citizenship and have a right to change their citizenship, and I thought the portion that you pointed out from section 2432 of freedom of immigration, East-West trade that says that no country shall have the right to impose more than a nominal tax on immigration or on the visas or other documents required for immigration for any purpose or cause whatsoever or, and it goes on to say, impose more than a nominal tax, levy, fine, fee on any charge on any citizen as a consequence of the desire of such citizen to immigrate to the country of his choice, was very powerful.

And when you put that up against the assumptions behind both Joint Tax's estimates and the Treasury's estimates, because we just had testimony from Treasury that they thought their assumptions were the same as Joint Tax's assumptions. Joint Tax's assumptions are that this levy will be significant enough that people will decide not to change their citizenship, not to relinquish their citizenship and we get the money because they continue to pay what they are currently paying.

Now, a fee that is so powerful that it would lead you to not relinquish, when you had desired to relinquish, seems to me in very direct contradiction of the laws and agreements that you have called

to our attention. Do you think the assumptions behind their estimates do call into question our commitment under these treaties?

Mr. TURNER. Madam Chairman, I think it raises a very serious problem. I think the United States has led the world in some respects in this area, in the right of citizens not just to travel, not just to spend a weekend in the Holy Land, but to actually pick up and renounce their citizenship in one State, move to another State, settle there permanently and pledge allegiance to that State, I think one can argue technically that perhaps you can get around the language of the covenant.

I think the covenant is arguable one way or the other; but having spent an awful lot of time working on the Jackson-Vanik amendment, I really have a lot of trouble trying to get around that. It is very strong language—"for any purpose or cause whatsoever,"—and again, I can say from my own recollection, having worked on it 21 years ago, it is my strong sense that Scoop Jackson and the other people involved in this were talking about affirming the right, especially of Soviet Jews, but of anyone in the Soviet Union, to renounce that citizenship relationship, to move free of molestation to another State, and to set up a new life there and be totally free of any further control by the Soviet Union.

If we had said, well, yes, they have the right to travel, but they don't have a right to give up their citizenship, then in theory the Soviets could have required them to return for military service, or for taxes, or for a variety of other purposes in the years that followed. One of the problems we had in this country that so upset Jefferson, and led Congress to pass the statute I quoted back in 1868, was if someone came to the United States and established American citizenship and then traveled back to Ireland—which then denied this right to renounce citizenship, this right of expatriation—then the Irish Government could harass that person and say, you owe us taxes, or you owe us military service, or you owe us some other obligation that the U.S. Government has historically said was not within their rights under international law to claim.

You are going to hear from Paul Stephan, who is a very able scholar, a very bright man, and he is going to disagree strongly with me—and he may well be right. Professor Detlev Vagts, I gather, has submitted a letter. I talked to Professor Lou Henken, a very distinguished scholar at Columbia University, who told me he didn't see a problem here.

It may be because I have only had a few days to look at this that I have been misled, but it strikes me the values at stake are so important and, relatively speaking, the money we are talking about here is almost trivial. I know $1 billion is a lot of money, but in terms of human rights values that this country has stood for since the days of Thomas Jefferson, $1 or $2 billion toward the deficit is not worth sacrificing one iota of human rights in my view.

Chairman JOHNSON. I very much appreciate your being able to testify and, as you pointed out, on very short notice, but these are big enough issues, and underlying this proposal are some very big issues, both in terms of our historic commitment to human rights of our international obligations, of the concept of equitable treatment, of taxpayers in similar circumstances, and what kinds of incentives are we going to create for investors in our economy that

even on short notice, this is worth the kind of attention that we are giving it today and that I hope we will give it in the months ahead.

I would conclude this panel that one of the things that you have brought out that has been very useful to us is that this would create new and perverse incentives for people to relinquish their citizenship before they hit the threshold if they were likely to hit it, and want to move. So it would precipitate that decision early which means that we wouldn't get the money nor the penalty, neither one, and in not many years, that would all come to pass.

Unless the Members have more questions of this panel, we will move to the next one. Thank you very much for your testimony.

The next panel consists of Stephen Shay of Boston, Massachusetts; Paul Stephan, professor at the University of Virginia Law School; Carlyn McCaffrey, New York; and Rabbi Jack Moline, vice president of the Washington Board of Rabbis.

We will start with Stephen Shay.

Mr. Shay.

STATEMENT OF STEPHEN E. SHAY, ESQ., PARTNER, ROPES & GRAY, BOSTON, MASSACHUSETTS; AND FORMER INTERNATIONAL TAX COUNSEL, U.S. DEPARTMENT OF THE TREASURY

Mr. SHAY. Thank you, Madam Chair. Thank you and other Members of the Subcommittee for inviting me to testify today regarding the administration's proposal. I would like to submit my statement for the record.

I am a partner in the law firm of Ropes & Gray in Boston where I practice international tax law on behalf of U.S. and non-U.S. corporate and individual clients. Prior to joining Ropes & Gray in 1987, I served as International Tax Counsel to the U.S. Treasury during the Reagan administration.

I am testifying today in an individual capacity. My comments are not made as a representative of my law firm, its clients, or of any bar or professional associations of which I am a member.

I have submitted detailed comments that I don't propose to summarize here. Subject to some technical modifications in those comments, I strongly support the administration proposal. I think it is helpful to keep this simple. The United States taxes citizens and residents on their worldwide income. We tax nonresidents only on U.S. source income.

I think it is appropriate for the United States to tax appreciated assets at the time that a citizen or resident moves from full taxing jurisdiction to partial taxing jurisdiction for reasons I will describe very briefly. This is a vast improvement over current law because it accurately measures, and imposes U.S. tax on the appreciation that has accrued during the time a taxpayer is subject to full U.S. taxation jurisdiction. I express this view without any regard to the issue of tax motivation.

You can think of it most simply in terms of you and your neighbor. Assume that both of us work very hard and at the point in time where we are each fortunate enough to have assets that have appreciated over $600,000, one of us leaves the country and renounces citizenship, or if that person is a long-term resident, for

whatever reason he took up residence in the United States, after having been here in excess of 10 years under the administration's proposal, leaves in a situation where, after leaving, he sells that asset and recognizes the gain without U.S. tax.

In my view, the gain that has accrued up to the point of departure is an appropriate gain to be subject to U.S. taxing jurisdiction. Moreover, I, as a person who is here, or perhaps it is you or your colleague, cannot sell that asset without being subject to full capital gains tax at whatever rate it happens to be. I have made all of my remarks and testimony on the basis of current law, without expressing perhaps a hoped-for view that the law might change in one direction or another.

I think, Madam Chair, this is an issue of equity. The fact is that section 877 today is laughably avoidable. A well-advised expatriate should not pay U.S. tax whether he is renouncing his citizenship or if a long-term resident, ceasing to be a resident, on assets not disposed of before he leaves.

There are a series of technical problems with section 877 under today's law, one of which I will mention. Because that section applies in those rare cases where a principal purpose to avoid tax is found, and I say that is rare because of the case law under that section which I have cited in my testimony, it will tax appreciation after the person has left. In my view, the section taxes too much in that case. That is why I favor the administration proposal as taxing the right amount when tax is indeed due.

I think I would like to make one last personal comment which is not in my testimony. I am no expert on human rights but I have evaluated my views on this provision by a very simple test. My wife, 8-year-old son and 4-year-old daughter are Jewish. I have asked myself, should they decide to expatriate to go to Israel later in our lives, would I feel it appropriate to pay tax on the gains that I have been fortunate enough to realize as a citizen of the United States up until the time we leave, and my unquestioning answer, Madam Chair, is yes.

Thank you.

[The prepared statement follows:]

PREPARED STATEMENT OF
STEPHEN E. SHAY
BEFORE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

MARCH 27, 1995

Madame Chairman, Members of the Subcommittee:

Thank you for inviting me to testify today regarding the Administration's proposals to impose a tax on U.S. citizens who renounce their citizenship and long-term resident aliens who cease to be subject to tax as residents.[1]

I am a partner in the law firm Ropes & Gray in Boston, where I practice international tax law on behalf of U.S. and non-U.S. corporate and individual clients. Prior to joining Ropes & Gray, I served as International Tax Counsel to the U.S. Treasury Department.

I am testifying today in an individual capacity. My comments are not made as a representative of Ropes & Gray or any of its clients, or of any of the other bar or professional associations of which I am a member.

Subject to certain technical comments discussed below, I strongly support the Administration's proposal. It is appropriate for the United States to tax appreciated assets at the time a U.S. citizen or resident moves from full U.S. personal taxation jurisdiction to being subject solely to U.S. source taxation. The proposal is an improvement over current law because it more accurately measures and imposes U.S. taxes on appreciation that accrues while a taxpayer is subject to full U.S. personal taxation jurisdiction.

Description of Current Law

The United States exercises personal jurisdiction to tax individuals by taxing the worldwide income of U.S. citizens (whether or not resident or domiciled in the United States) and residents.[2] A U.S. taxpayer may elect to credit foreign income taxes against his U.S. tax, subject to a limitation that applies with respect to categories of foreign source income to restrict the credit to the amount of U.S. tax paid with respect to income in that category.

The United States asserts a source-based tax on nonresident aliens.[3] Nonresident aliens are taxed on the gross amount of U.S.-source interest, dividends, rents, and other fixed or determinable income at a flat rate of 30 percent (or a lower treaty rate). This tax generally is collected by withholding. A nonresident alien is taxed at regular graduated rates on income that is effectively connected with a U.S. trade or business, less deductions that are properly allocable

---

[1] I wish to thank my colleague, Debra Brown Allen, Esq., for her assistance in preparing this testimony.

[2] Taxation on the basis of citizenship is different from the practice of most countries, which is to tax individuals on the basis of residence. The Supreme Court, however, has upheld the constitutionality of taxing a nonresident citizen. *Cook v. Tait*, 265 U.S. 47 (1924).

[3] A nonresident alien individual is an individual who is neither a U.S. citizen nor a resident alien. Generally, an alien individual is a resident alien for U.S. tax purposes under Section 7701(b) if he or she (1) is a lawful permanent resident of the United States (i.e., holds a green card), or (2) satisfies the "substantial presence" test as a result of being physically present in the United States for a prescribed amount of time.

to the effectively connected income. A nonresident alien individual is allowed a foreign tax credit under Section 906[4] only for foreign taxes paid with respect to income effectively connected with a U.S. trade or business.

Under current law, the only income tax provision governing a change from citizenship to non-citizenship status is Section 877, first enacted in 1966. Under Section 877, a special taxation regime applies to a U.S. citizen who relinquishes his U.S. citizenship with a principal purpose of avoiding Federal income tax. Such an individual may be taxed either as a nonresident alien or under an alternative taxing method, whichever yields the greater tax, for 10 years after expatriation. For purposes of determining the tax under the alternative method, gains on the sale of property located in the United States and stocks and securities issued by U.S. persons are treated as U.S.-source income, taxable at rates applicable to U.S. citizens.

Whether tax avoidance is a principal purpose for the expatriation is determined by all of the relevant facts and circumstances. If the I.R.S. establishes that it is reasonable to believe that the loss of U.S. citizenship would result in a substantial reduction in the taxpayer's income taxes for the year (taking account of U.S. and foreign taxes),[5] then the burden of proving that the loss of citizenship did not have tax avoidance as one of its principal purposes shifts to the taxpayer.[6]

The taxing rules of Section 877(b) (which does not include the principal purpose test) are applied under Section 7701(b)(10) in the case of a resident alien individual who is resident in the United States for three consecutive years, then ceases to be a resident, and subsequently becomes a resident before the end of the third calendar year beginning after the close of the initial residency period. This anti-abuse rule protects the U.S. tax base from erosion by a resident alien who transfers residence from the United States for a limited period of time in order to sell an appreciated asset and then resumes his or her U.S. residence.

Deficiencies of Current Law

Section 877 was enacted in 1966 as part of the Foreign Investors Tax Act, which was intended to spur foreign investment in the United States by eliminating graduated rates with respect to non-effectively connected income of a nonresident alien. Section 877 was adopted because Congress was concerned that this rule could encourage some individuals to surrender their U.S. citizenship and move abroad.[7] The 89th Congress did not have any experience as to whether the other changes in taxation of nonresident aliens made by the Foreign Investors Tax Act would induce expatriations and chose to employ a tax avoidance purpose condition to the application of Section 877.

Section 877 has several weaknesses, both on its own and as a function of its interplay with other aspects of the U.S. tax scheme. The weaknesses include: (1) Section 877 is triggered only if the expatriate had tax avoidance as a principal purpose; (2) tax treaties with other countries may prevent the United States from taxing nonresidents, even with the existence of Section 877; (3) Section 877, by deferring tax until the expatriate sells his assets, generally does not properly tax the gain (or loss) that accrued while the taxpayer was a U.S. citizen; (4) the interplay of Section 877, Section 906 and tax treaties with other countries may result in

[4] Unless otherwise indicated, all section references are to the Internal Revenue Code of 1986, as amended and as proposed to be amended by the Committee Bill.

[5] *See Enrico di Portanova v. United States*, 690 F.2d 169, 176 (Ct. Cl. 1982) (citing H.R. Rep. No. 1480, 89th Cong., 2d Sess. 82, reprinted in 1966-2 C.B. 965, 1025).

[6] The presumption of tax avoidance is rebuttable. *See, e.g., Furstenberg v. Commissioner*, 83 T.C. 755 (1984).

[7] H.R. Rep. No. 1450, 89th Cong., 2nd Sess. 22 (1966).

inappropriate double taxation; and (5) Section 877 easily may be avoided by holding assets for more than ten years or converting U.S. income and assets into foreign income and assets. Although Section 7701(b)(10) does not require proof of a principal purpose of tax avoidance, it is otherwise subject to the same infirmities as Section 877.

The facts of the *Furstenberg* case, in which the Tax Court found that the taxpayer's expatriation did not have tax avoidance as a principal purpose, illustrate why a tax avoidance purpose standard is ill-advised. To satisfy a commitment made before her marriage to her new husband, Mrs. Furstenberg renounced her U.S. citizenship immediately after her honeymoon on December 23, 1975. As a result of the Tax Court's decision that Section 877 did not apply, it appears that Mrs. Furstenberg paid no U.S. tax on as much as $9.8 million of capital gains from selling securities owned at the time of her expatriation in the two years following her expatriation.

There is ample precedent for asserting a tax on appreciated assets at a time when the asset will no longer be subject to U.S. personal taxing jurisdiction. Under Sections 367 and 1491, the United States overrides otherwise applicable nonrecognition rules in order to tax transfers of appreciated assets to foreign entities. It is accepted that this principle should apply in circumstances where there is no actual transfer of an asset, for example, when a foreign trust ceases to be a grantor trust with a U.S. grantor.[8] Amendments in 1984 to Sections 367 and 1492 deleted exceptions to taxation of such outbound transfers where the taxpayer could establish that the transfer did not have as one of its principal purposes the avoidance of Federal income taxes. Because a principal purpose test is difficult to administer and subject to abuse, it similarly should be deleted from Section 877.[9]

Another difficulty with both current Section 877 and Section 7701(b)(10) is that the United States may be unable to collect taxes due under the terms of these sections because of treaty provisions. Although the so-called savings clause found in most modern income tax treaties generally provides that the United States may tax its citizens and residents as though the treaty had not come into effect[10] and the I.R.S. has published a revenue ruling taking the position that the savings clause preserved U.S. taxation of former citizens taxable under Section 877,[11] the Tax Court held in *Crow v. Commissioner*, 85 T.C. 376 (1985), that the savings clause of the 1942 United States - Canada Income Tax Convention did not apply to a former citizen who, it was assumed for purposes of deciding petitioner's motion for summary judgment, expatriated to Canada for a principal purpose of avoiding U.S. tax. The Court found that, properly interpreted, the Convention prohibited the United States from taxing the taxpayer's capital gain from the sale of stock under Section 877. Based on the *Crow* decision, it is doubtful whether the United

[9] There are a series of exceptions to taxation at the time of transfer under Sections 367 and 1491 that are based in substantial part on the fact that the transferring shareholder remains subject to residence-based taxation on property that receives a carryover basis in the exchange for the transferred property. That circumstance is not present in the context of Section 877.

[10] See U.S. Department of the Treasury, Proposed Model Convention Between the United States and _____ for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion, Art. 1(3) (1981), reprinted in 1 Tax Treaties (CCH) ¶ 208 (1994) (hereinafter "U.S. Model Treaty"). The savings clause implements the U.S. policy that tax treaties generally are not intended to affect U.S. taxation of U.S. citizens or residents. American Law Institute, *Federal Income Tax Project: International Aspects of United States Income Taxation (Proposals of the American Law Institute on United States Income Tax Treaties)*, 229 N. 606 (1992).

[11] Rev. Rul. 79-152, 1979-1 C.B. 237 (holding that a liquidating distribution would be taxable to a Section 877 expatriate that acquired residence in a treaty country even though the treaty did not preserve U.S. right to tax under Section 877).

States may tax a treaty resident under Section 877 on income that a treaty reserves for taxation by the country of residence unless the treaty specifically preserves the U.S. right to tax a Section 877 expatriate.

Current U.S. treaty policy is to cover Section 877 expatriates under the savings clause to permit the United States to tax income or gains of a Section 877 expatriate who is resident in the treaty partner country notwithstanding other articles of the treaty.[12] However, even where the savings clause covers taxation of an expatriate under Section 877, the coverage may be less than complete.[13]

If a nonresident alien otherwise subject to Section 7701(b)(10) were resident in a treaty country for purposes of an income tax treaty between the United States and that country, the treaty would apply to the nonresident without regard to the savings clause. Most (but not all) U.S. income tax treaties would prohibit U.S. taxation of such a treaty resident's gains from the sale of property other than real estate or assets connected with a U.S. trade or business.

Perhaps the most significant objection to current law Sections 877 and 7701(b)(10) is that they rarely, if ever, will measure correctly, and thus tax, gains that accrued while the taxpayer subject to a Section 877 tax was a U.S. citizen or resident. This is because Sections 877 and 7701(b)(10) defer U.S. taxation, imposing such tax on gains realized within a ten or three-year expatriation period. Sections 877 and 7701(b)(10) therefore may result in either over-taxation or under-taxation, depending upon whether the asset appreciates or depreciates in value between the time of expatriation and the time of sale or disposition. For example, if a U.S. citizen expatriates with a tax avoidance motive and, seven years later, sells an asset, Section 877 would subject the entire gain from the sale to U.S. taxation, including any gain that accrued post-expatriation. Similarly, under Section 7701(b)(10), if a resident alien ceases to be treated as a resident, sells an asset two years later and subsequently returns to the United States, he will be taxed on the full gain from the sale, including any gains that accrued during the two years in which he was not a U.S. resident. These post-expatriation gains (or gains accruing during a period of non-residency), should not be subject to U.S. tax. Conversely, under both Section 877 and Section 7701(b)(10), if the taxpayer's assets declined in value during either post-expatriation or the taxpayer's period of non-residency, the United States would not capture all of the gains that had accrued during citizenship or residency, which, arguably, should be subject to U.S. tax. A tax imposed at the time of expatriation, however, would accurately delineate gains properly subject to U.S. taxing jurisdiction.

The current taxation scheme under Section 877 may result in double taxation. A foreign tax credit is not allowed for foreign taxes on income that is deemed to be U.S.-source income under the alternative method. Section 877(c) transforms foreign income that would not be effectively connected income into U.S.-source gross income, but does not cause the income to be effectively connected income. The Section 906 foreign tax credit therefore does not allow a credit for any foreign tax that may be imposed on the re-sourced income (assuming that the taxpayer had sufficient foreign tax credit limitation to credit the tax).

It does not appear that treaties remedy the failure of the domestic law foreign tax credit mechanism to avoid double taxation for expatriating citizens under Section 877, even where the gain accrues after the taxpayer's expatriation. For example, the 1980 Convention between the United States and Canada allows the United States to impose tax on gains from the sale of stock

[12] See U.S. Model Treaty, Art. 1(3).

[13] The 1993 U.S. treaty with the Netherlands, for example, does not cover Section 877 expatriates who are Dutch nationals. Convention Between the United States of America and The Kingdom of the Netherlands for the Avoidance of Double Taxation and the Prevention of Fiscal Evasion With Respect to Taxes on Income, Art. 24(1).

in a U.S. company realized by a Section 877 expatriate who is resident in Canada.[14] Canada also would be allowed to tax the gains.[15] For purposes of applying the foreign tax credit provisions of the Convention, the gains from the sale of stock would be treated as Canadian-source income,[16] however, the United States does not commit to allow a credit for the Canadian tax.[17]

Yet another problem with current Sections 877 and 7701(b)(10) is that they are easily avoided. Residents who cease to be treated as residents and sell appreciated assets during the period of non-residency can avoid Section 7701(b)(10) merely be extending their period of non-residency beyond the three-year period. Section 877 may be avoided as easily. I quote from a 1993 article published in Tax Notes International:

> "Even for those nonresident former U.S. citizens with substantial U.S. assets and income, there are techniques that can greatly reduce the impact of the anti-abuse rules by converting U.S. income and assets into foreign income and assets or by deferring income and taxable transfers until after the 10-year period under the anti-abuse rules has expired.
>
> For example, consider the plight of a tax-motivated former U.S. citizen living abroad and owning a portfolio of U.S. stocks and bonds. Without taking any measures, such a person would be subject to U.S. income tax on interest, dividends and capital gain from the portfolio and would be subject to a U.S. estate and gift tax on taxable transfers of assets in the portfolio. Such an individual could, however, transfer the portfolio to a foreign corporation that is not engaged in a U.S. trade or business with drastically more favorable results.
>
> For income tax purposes, the foreign corporation would itself be taxed in the same manner as an NRA who had never been a U.S. citizen (i.e., gross U.S.-source dividends would be subject to a flat 30- percent-or-lower withholding tax, certain types of U.S.-source interest would be subject to a similar flat withholding tax while other types of U.S.-source interest would be exempt under the portfolio interest or other exemptions and capital gains would be exempt from tax unless real estate related). While a sale of stock in the foreign corporation by the former U.S. citizen would be treated as taxable U.S.-source income under the anti-abuse rule, a sale of the U.S. stocks and securities in the portfolio by the foreign corporation would not. Moreover, dividends by the foreign corporation to its shareholders would be foreign-source, and therefore free from U.S. tax, even if the foreign corporation's earnings out of which it pays the dividends are U.S.-source interest, dividends, and capital gains." (Footnotes omitted.)[18]

In light of the increasing sophistication of taxpayers, it is not surprising that the easy pickings of tax-motivated expatriation are too tempting for some to resist. Based on informal discussions with the State Department, the Staff of the Joint Committee on Taxation has reported that 697 citizens expatriated in 1993 and 858 in 1994.[19] There is evidence that some of these

expatriations will result in substantial revenue loss as a result of the infirmities of current Section 877. It is time to amend the law to address current realities.

Description of the Administration's Proposal and Modifications Made by H.R. 831 as Reported by the Senate Finance Committee

Under the Administration's Proposal, a U.S. citizen who relinquishes U.S. citizenship or a long-term resident who ceases to be subject to tax as a resident generally would be treated as having sold all of his or her property at fair market value immediately prior to relinquishing citizenship or ceasing to be subject to tax as a resident (the "expatriation date") and gain or loss from the deemed sale would be subject to U.S. income tax. In addition, the deferral of tax or income recognition (e.g., due to the installment method) would terminate on the date of the deemed sale and the deferred tax would be due and payable on that date. The first $600,000 of net gain recognized on the deemed sale would be exempt from tax. Under the Administration's Proposal, a long-term resident is any individual who is not a U.S. citizen and who is subject to tax as a resident, as a result of being a lawful permanent resident of the United States, for 10 of the last 15 years. A citizen would be treated as relinquishing citizenship on the date the Department of State issues to the individual a certificate of loss of nationality or the date a U.S. court cancels a naturalized citizen's certificate of naturalization.

Generally, property interests that would be included in the individual's gross estate under the Federal estate tax if such individual were to die on the day of the deemed sale, plus trust interests that are attributed to the taxpayer under expanded attribution rules, would be taxed on the expatriation date. A long-term resident would be allowed to elect to take a fair market value basis in property owned on the date the individual first became a resident for purposes of the period of long-term residency and treated as sold on the expatriation date.

U.S. real property interests, which remain subject to U.S. taxing jurisdiction in the hands of nonresident aliens, generally would be excepted from the proposal.[20] Certain interests in qualified retirement plans and, subject to a limit of $ 500,000, interests in foreign pension plans (as provided in regulations) also would be excepted from the deemed sale rule. The I.R.S. would be authorized to reach an agreement with a taxpayer to defer payment of the tax on an interest in a closely-held business (as defined in Section 6166(b)) for up to five years.

The Administration Proposal would be effective for U.S. citizens who relinquish their U.S. citizenship on or after February 6, 1995 and long-term residents who cease to be subject to tax as residents of the United States on or after that date.

The version of H.R. 831 reported by the Senate Finance Committee (the "Senate Finance Bill") only would have applied to expatriating citizens, but included several significant modifications to the Administration Proposal. Under the Senate Finance Bill, a U.S. citizen would be treated as having relinquished his citizenship on the earlier of (i) the date he renounces citizenship before a diplomatic or consular officer, (ii) the date he provides to the State Department a signed statement of voluntary relinquishment of citizenship confirming an act of expatriation under the Immigration and Nationality Act, (iii) the date that the U.S. Department of State issues a certificate of loss of nationality, or (iv) the date a court cancels a naturalized citizen's certificate of naturalization. The tax would be due on the 90th day after the expatriation date and no tax would be due before 90 days after enactment. The I.R.S. would be authorized to allow a taxpayer to defer payment of the tax for up to 10 years under Section 6161 as though the

---

1995).

[20] The exception would apply to all U.S. real property interests, as defined in section 897(c)(1), except stock of a U.S. real property holding corporation that does not satisfy the requirements of Section 897(c)(2) on the date of the deemed sale.

tax were an estate tax imposed by chapter 11. If a taxpayer were determined to hold an interest in a trust for purposes of Section 877A, the trust would be treated as though it sold the taxpayer's share of assets of the trust and the proceeds were distributed to the taxpayer and recontributed to the trust.

Analysis of Proposed Section 877A Under the Administration Proposal and as Modified in the Senate Finance Bill

The Administration Proposal meets the objections to current law Section 877 and Section 7701(b)(10) described above. It deletes the tax avoidance purpose test of Section 877 and does not implicate treaties. Most importantly, it imposes tax on gain determined as of the date a taxpayer ceases to be subject to full U.S. personal taxation jurisdiction and thereby properly measures the gain subject to U.S. personal taxing jurisdiction. As a consequence of these changes, it will be more administrable and not subject to easy avoidance and abuse.

The Senate Finance Bill makes several significant improvements over the text released in the original version of H.R. 981. The definition of when a taxpayer relinquishes citizenship has been modified to relate to the earliest of several substantive acts that manifest an intent to voluntarily relinquish citizenship. This should adequately protect taxpayers who have relied on current law. The I.R.S. authority to extend the time to make payment of the tax is expanded to permit deferral of up to 10 years under rules that are commonly used in the estate tax context. These changes are welcome.

The Administration's Proposal to apply Section 877A to expatriating long-term residents, in addition to U.S. citizens, is reasonable since such individuals are subject to full U.S. personal taxing jurisdiction like citizens. Gains that accrued to their property during residency should not escape U.S. taxation upon their departure.

The Administration Proposal would allow a long-term resident who is not a citizen to take a "fresh start" fair market value basis in his or her assets for purposes of Section 877A as of the date the individual became a resident. I recommend that this provision be broadened and modified. First, it also should apply to an alien who becomes a naturalized citizen. For such aliens, the measuring date should be the earliest of (i) the date the alien becomes a resident alien, (ii) the date the alien becomes a naturalized citizen, and (iii) the date the asset first becomes "effectively connected" with a U.S. trade or business of the alien. Second, the "fresh start" fair market value basis should be for all purposes, not solely for purposes of Section 877A.[21] By limiting the "fresh start" basis to determining gains for purposes of Section 877A, property that is sold while the person is a U.S. resident will be subject to tax on gains that accrued prior to the person becoming a U.S. resident. Such gains arguably should not be caught within the U.S. taxing net. In addition, by subjecting such gains to U.S. taxation if the property is sold while the owner is a U.S. resident, but not if the owner expatriates when he still owns the property, the proposal will have a "lock-in" effect similar to that of the Section 1014 step-up in basis at death. There could be a strong incentive not to sell an asset until after ceasing to be a U.S. citizen or resident. Finally, the fair market basis provision should not be an election; it should be applied across-the-board so that taxation under Section 877A does what it intends to do: accurately measure and tax those gains that accrue while the taxpayer is subject to U.S. personal taxing jurisdiction.

---

[21] According to the Joint Committee on Taxation, both Canada and Australia, which both impose a departure tax on residents, treating them as having sold their assets at the time of departure, allow individuals who become residents to take a basis in their foreign assets equal to the assets' fair market value at that time for all purposes. Staff of the Joint Committee on Taxation, *"Background and Issues Relating to Taxation of U.S. Citizens Who Relinquish Citizenship,"* (JCX-14-95, March 20, 1995).

I recommend adding an exception from Section 877A for property that is effectively connected with a U.S. trade or business of the taxpayer. As a corollary to this recommendation, Section 864(c)(7) should be amended to tax a nonresident alien individual subject to Section 877A on gain at the time such an asset ceases to be held for use in the U.S. trade or business.[22]

It should be possible to mitigate double taxation that could occur under the Administration's Proposal by negotiating with treaty partners to increase a taxpayer's basis in property taxed by the United States on expatriation for purposes of taxation by the treaty partner. If taxation at the time of expatriation is adopted, I would urge the Treasury to take such a position in treaty negotiations and, if requested by a taxpayer, under a mutual agreement article's competent authority procedure. To the extent that such a basis step-up would not be allowed under the domestic law of the expatriate's new country of residence (assuming that it imposed an income tax), a well-advised taxpayer could take self-help measures to avoid the second tax.

I reserve comment on other technical aspects of the proposal. In particular, I do not comment, without further study, on the approach taken by the Senate Finance Bill to interests in trusts or to the interaction of Section 877A with estate and gift tax rules. I would be pleased to work with the Committee staff on the details of final legislation.

I respectfully disagree with an asserted "constitutional" objection to this proposal that rests on dictum in the 1920 Supreme Court decision in *Eisner v. Macomber*.[23] In *Eisner*, the Supreme Court defined income not as a gain "accruing to capital", but as something "severed from" capital. It has been suggested that *Eisner v. Macomber* accords constitutional significance to the "realization" principle. However, since 1920, *Eisner v. Macomber* has been distinguished and limited,[24] and, according to at least one court, "insofar as it [*Eisner v. Macomber*] purported to offer a definition of the term income, as used in the Sixteenth Amendment, it has been discarded."[25] Similarly, the weight of scholarship rejects the view that realization is or should be constitutionally required to tax gains.[26] Proposed Section 877A would not be the first provision to tax gains prior to realization. Congress has approved, repeatedly, income tax measures that apply to income that has not been realized by the taxpayer.[27] Section 1256, which was added to

---

[22] Consistent with this recommendation and the recommendations in the preceding paragraph, a long-term resident alien's basis in property contributed to his U.S. trade or business should take a fair market value basis as of the date of contribution.

[23] 252 U.S. 189 (1920) (holding that a stock dividend should not be included in taxable income).

[24] *See e.g., Helvering v. Bruun*, 309 U.S. 461 (1940); *Helvering v. Horst*, 311 U.S. 112 (1940).

[25] *United States v. James*, 333 F.2d 748, 752 (9th Cir. 1964).

[26] *See e.g.*, Surrey and Warren, *"The Income Tax Project of the American Law Institute: Gross Income, Deductions, Accounting, Gains and Losses, Cancellation of Indebtedness,"* 66 Harv. L. Rev. 761, 770-71 (1953) ("Essentially the concept of income is a flexible one, with the result in a particular case being determined by the interplay of common usage, accounting concepts, administrative goals, and finally judicial reaction to these forces.").

[27] In 1937, with the foreign personal holding company rules, in 1962 with the controlled foreign corporation rules, and in 1986 with the passive foreign investment company rules, Congress enacted provisions that taxed certain domestic shareholders on undistributed earnings of certain foreign corporations. The constitutionality of the foreign personal holding company rules and the controlled foreign corporation rules have been upheld. *See Eder v. Commissioner*, 138 F.2d 27 (2d Cir. 1943) (upholding U.S. tax on taxpayers owning stock in Columbian company under foreign personal holding company rules, even though distribution of pesos

the Code in 1981, provides that certain regulated futures and foreign currency contracts are marked-to-market on the last day of a taxpayer's taxable year and gain or loss is recognized.[28] Section 475, enacted in 1993, requires securities dealers to mark-to-market securities held in inventory on the last day of the taxable year and recognize gain or loss. Moreover, fairness to taxpayers as well as the Government's revenue interests may require that such mark-to-market treatment be expanded to a broader range of circumstances. It would be extremely unwise for this Committee to adopt the holding of *Eisner v. Macomber* in a way that could be viewed as imposing a constitutionally-based realization requirement.

Conclusion

Proposed Section 877A would constitute an improvement over current law and, modified as suggested above, deserves the strong support of your Committee.

Madame Chairman, this concludes my remarks. I would be pleased to answer any questions that the Subcommittee may have.

SES/DBA/amp:4021174.04

---

blocked pursuant to Columbian law); *Garlock v. Commissioner*, 489 F.2d 197 (2d Cir. 1973) (upholding constitutionality of requiring shareholders in controlled foreign corporation to include in gross income their pro rata share in the controlled foreign corporation even if there had been no distribution to the shareholders. The court, in fact, stated that the argument that the controlled foreign corporation rules are unconstitutional "borders on the frivolous . . . .").

[28] The Ninth Circuit has passed favorably on the constitutionality of Section 1256, but did not address the realization issue directly. *Murphy v. United States*, 992 F. 2d 929 (9th Cir. 1993).

Chairman JOHNSON. Thank you, Mr. Shay.
Mr. Stephan.

STATEMENT OF PAUL B. STEPHAN III, PROFESSOR, UNIVERSITY OF VIRGINIA SCHOOL OF LAW, CHARLOTTESVILLE, VIRGINIA

Mr. STEPHAN. I have prepared my remarks for the record and I will submit them as they stand. I want very briefly to make a couple of key points with regard to the international law issues that may be raised by this legislation.

I would like to emphasize two distinctions, one of which I think is significant, the other which might seem like hair splitting. I think it is very significant to distinguish emigration from expatriation. Emigration might include expatriation, but it doesn't have to. Expatriation means the renunciation of one's citizenship.

If one focuses on the human rights conflicts of the sixties, seventies and eighties, I think it is absolutely clear that we were concerned with emigration and that questions of renunciation of one's citizenship were tertiary at best.

There has been some discussion of the Jackson-Vanik amendment. One of the witnesses in his prepared testimony suggested that my recollection of those events might be faulty because I was only entering law school. I am always happy to have my youth used against me, but I would point out that 1974 was the year that I left the Central Intelligence Agency to start law school, that my responsibilities at the CIA included political analysis with respect to the Soviet Union and particularly with respect to human rights and immigration issues. That was essentially my account.

So I do feel I know something about the events that inspired the Jackson-Vanik legislation, and I am fairly firm in my recollection that one of the articulated concerns of Congress at the time was that the Soviet Union arbitrarily insisted that those who wished to emigrate also expatriate, were not given a choice as to expatriation. The concern that they also were charged for the expatriation was part of that, but it was clear Congress understood at the time that emigration was distinct from expatriation.

Now, this is not, I think, an immaterial technical lawyer's point. Emigration means your physical security. Expatriation means an ongoing bond with a country which only can be enforced if you come once again within their territory. I don't mean to suggest that expatriation is insignificant. It is not. We have had cases where people have expatriated themselves from the Soviet Union, come back as tourists because they expatriated themselves in the context of World War II. The Soviet Union did not recognize their expatriation and proceeded to prosecute them for what were alleged to be war crimes. I think that was improper.

But that is not at all what this legislation here involves. This is an expatriation-triggered tax. It has nothing to do with emigration in the sense of changing one's residence. If it were otherwise, I would have deep concerns about it.

As a tax on expatriation, this gets into another distinction that may seem more like hair splitting, the distinction between international law and consistent U.S. policy. As a lawyer, I look at international law as an obligation that is enforceable by at least

some means, if even only by the consensus of the international community. I look at instruments, I look at customary international law.

I do not find in any of the instruments that deal expressly with the right to travel, the right to leave one's country, an obligation having to do with expatriation. Neither in customary international law do I find a clearly established right. Indeed we see many constraints on this.

On the other hand, it has been consistent U.S. policy that the right to expatriate exists. Whether or not it is recognized by other nations, it has been our policy, and I think it ought to be respected, I think the United States should not do things that are inconsistent with that policy. But I do not think it is inconsistent with that policy to impose reasonable restrictions that are not discriminatory.

Now, this of course depends on how you characterize this tax, and here I would affiliate myself with Mr. Shay's remarks. If in the abstract, you say, well, the only people who pay taxes on realized gains are people who are changing their citizenship, that is discrimination. But I can flip that and say that the only people who are U.S. citizens who accumulate unappreciated wealth who do not have to face either an income tax or an estate tax, one or the other, not necessarily both, are those people who change their citizenship. In that sense, I think this law, with its imperfections, which I would like to touch on, does simply prevent the expatriating from being treated more favorably than people who remain behind.

Indeed, it is still reasonably favorable, compared to the estate tax, because 39.6 percent on the net is a lot better than 55 percent on the gross under the estate tax. There are, I think, some technical problems here. I touch upon what effective date to use in my remarks. I would be happy to answer questions about those.

Thank you.

[The prepared statement follows:]

Prepared Statement of Professor Paul B. Stephan III on Section 5 of H.R. 831

Madam Chairwoman and members of the Committee, it is an honor to appear before you to discuss the merits of the Administration's proposal to collect an income tax on certain unrealized gains upon the relinquishment of U.S. citizenship. I appear before you in my capacity as an academic specialist on matters of international law, U.S. tax law, and Soviet-American relations. I am sure you are more interested in the strength of my arguments than in my credentials, but for the record I hold the Percy Brown, Jr. Chair and the Hunton & Williams Chair at the University of Virginia School of Law. At Virginia I have taught tax law for sixteen years, as well as a range of international courses. On occasion I have advised various U.S. government agencies on matters of international law, in both Republican and Democratic Administrations. One of the books I have edited, a text on public international law, is used as a course book in both Russia and the United States; my former student Bob Turner, who appears here with me, co-authored one of the chapters. Not that political affiliation matters on questions of this nature, but in 1992 I served as national vice-chair of Law Professors for Bush-Quayle and today am a paid-up member of the Virginia Republican Party.

I understand that you are primarily interested in the question of whether the Administration's proposal would conflict with any obligation under international law to which the United States is subject. In particular, you want to know whether treating renunciation of citizenship as a realization event raises even a suspicion of conflict with the international law of human rights. In addition, there are issues as to the constitutionality of the proposal and its merits as a matter of tax policy. I will dwell principally on the first issue but will touch on the latter two.

In terms of positive international law, there are two multilateral instruments to which the United States is a party that deal specifically with freedom to leave one's country. The first is the International Covenant on Civil and Political Rights, to which the Senate extended its consent to ratification in 1992. The other is the Final Act of the Conference on Security and Cooperation in Europe (Helsinki Accords), signed by the Ford Administration in 1975 but not regarded as a treaty and therefore never submitted to Congress for consent to ratification. Both of these protect freedom of movement. Article 12(2) of the Covenant states that "Everyone shall be free to leave any country, including his own." This language tracks closely that of Article 13(2) of the Universal Declaration of Human Rights, a UN General Assembly Resolution. The Helsinki Accord on Cooperation in Humanitarian and Other Fields, I(d), provides:

> The participating States intend to facilitate wider travel by their citizens for personal or professional reasons and to this end they intend in particular:
>
> —gradually to simplify and to administer flexibly the procedures for exit and entry;
>
> —to ease regulations concerning movement of citizens from the other participating States in their territory, with due regard to security requirements.
>
> They will endeavour gradually to lower, where necessary, the fees for visas and official travel documents.

As a technical matter, the Covenant constitutes an explicit obligation of the United States under international law, although subject to certain reservations expressed by the Senate; the Accords are considered political rather than a legal, although they provide a gloss on the meaning of more general treaties such as the Charter of the United Nations.

These are weighty commitments, and the United States should not violate them. But it is critical to recognize the distinction between the right to travel, on the one hand, and the right to change one's citizenship status, on the other. What becomes immediately clear upon reviewing these instruments is that they deal with the freedom of individuals to cross borders. They are concerned with travel and residence, with physical movement. Citizenship is different: It is an abstract legal relationship that exists regardless of the physical location of the citizen. States should not hold their citizens captive; people should be free to cross borders subject only to reasonable restrictions of a general and nondiscriminatory nature. This important principle has nothing to do with citizenship, but rather with physical presence.

The reason why international human rights law focuses on travel and not citizenship is fairly simple. As long as people are held within a country, they are subject to the full weight of sovereign state power. Once they leave a country's territory, they are freed of an immediate threat of physical coercion and incarceration. Whether persons outside a country's boundaries retain the formal status of citizen or not is an entirely different matter. Citizenship is not meaningless, but a state cannot throw you in jail or torture you simply because it still claims you as a citizen. And it is exactly abuses of state power over people that prompted these human rights instruments.

When one turns to customary international law, one finds the same distinction between freedom to travel and the power to change one's citizenship. Perhaps the clearest statement of the U.S. position on the obligation to permit freedom to travel can be found in the Jackson-Vanik Amendment to the Trade Act of 1974. The Amendment, in part, condemns any state that imposes more than "a nominal tax" on emigration, 19 U.S.C. § 2432(a)(2), and goes on to specify that other duties and charges levied on persons seeking to exercise their right to emigrate similarly are abhorrent. But by emigration, the drafters of this legislation meant leaving the country, not renunciation of citizenship. Indeed, one of the abuses cited at the time was the Soviet practice of requiring emigrants to surrender their Soviet citizenship as a condition of departure. Congress believed that emigration did not involve a change of citizenship, and denounced countries such as the Soviet Union that sought to link the two.

More generally, the human rights concerns that dominated our encounters with the Soviet Union and other totalitarian regimes during the 1970s and 1980s were based on unambiguous violations of the right to travel. Those governments treated their borders as the perimeter of a prison, and their citizens as prisoners. The so-called education tax that the Soviet Union threatened to impose on emigrants, which inspired the above cited language in the Jackson-Vanik Amendment, was triggered by a request to travel abroad, not by an attempt to renounce Soviet citizenship.

I do not mean to suggest that the refusal of a state to permit a nonresident person to renounce his citizenship is never a matter of concern under the international law of human rights. Early in our nation's history, we protested vigorously, even to the point of war, when nations such as England would claim as their own citizens and seize American sailors found on the high seas. But this problem is different in kind from that presented by the freedom to travel. And today the conduct that triggered the American protests—arbitrary seizure of persons on the high seas—would likely be seen as a human rights violation regardless of any claims of citizenship.

The Administration's proposal, as I understand it, has absolutely no effect on the right of a citizen to travel abroad. It is triggered only by a change of citizenship status, not by the crossing of our country's borders. The reason for this distinction is clear when one considers how U.S. tax rules operate. Whether a citizen resides within or without the United States, the obligation to pay tax on appreciation of assets remains the same. Any gain realized and recognized during life will result in an income tax. Any unrecognized appreciation that remains at death will not be subject to an income tax, but instead will subject the decedent to the estate tax. To be sure, the federal estate tax is not an exact substitute for an income tax at death on unrealized appreciation, both because only wealthy persons (those with assets in excess of $ 600,000, assuming no taxable gifts during life) are subject to the estate tax, and because the taxable estate includes both realized and unrealized appreciation. But I am not alone in having pointed out that the estate and gift tax, in practice, serve as a reasonable approximation for the income tax that could be levied on unrealized appreciation at death.

All of the above turns on citizenship, not on residence. A U.S. citizen who resides abroad will have to include in his tax base any gain realized from the disposition of an asset, *see Cook v. Tait*, 265 U.S. 47 (1924), will pay a federal gift tax on any taxable gift during his life, no matter where the asset is located, and will include all of his worldwide assets in his taxable estate at death. By contrast, a person who severs the bond of U.S. citizenship and does not continue to reside in the United States will pay neither income, gift, nor estate tax (except as to U.S.-sourced income and, for the estate and gift tax, transfers of certain property sourced to the United States). The change of citizenship status, not of residence, is what matters for U.S. tax law. Current law recognizes the significance of changes in citizenship by subjecting nonresident aliens who lose U.S. citizenship for tax avoidance reasons to a special alternative income tax, *see* Internal Revenue Code Section 877. Section 2107 imposes a similar result with respect to the estate tax, and 2501(a)(3) with respect to the gift tax. What the Administration proposal would do, as I understand it, is replace the unworkable tax avoidance standard of Sections 877, 2107 and 2501(a)(3) with a *per se* rule that applies to any person with sufficient assets to make future estate taxation a probability. An analogous provision is Section 367 of the Code, which denies nonrecognition treatment in certain corporate reorganizations if the recipient of appreciated property is a foreign corporation. I never have heard the argument that the latter provision imposes an impermissible burden on the right of a domestic corporation to export its capital.

In summary, the international law of human rights is concerned almost entirely with restrictions on the right to leave one's country, not those on the right to renounce one's citizenship. To the extent human rights law deals with citizenship status, it addresses involuntary denials of citizenship, not burdens triggered by the renunciation of citizenship. Furthermore, the proposed measure is not a tax on the export of capital as such, but rather a logical part of a comprehensive scheme to ensure that all appreciation of capital owned by a U.S. citizen eventually will be subject to a U.S. tax, whether income, gift, or estate. For these reasons, it is inconceivable to me that the Administration's proposal could be seen as violating international human rights law.

Next, is the Administration's proposal unconstitutional? Here the issue is the enduring validity of *Eisner v. Macomber*, 252 U.S. 189 (1920). You will find in the analysis of the Joint Committee all of the relevant precedent, and its judgment that the realization requirement no longer

has a constitutional basis is one that I have expressed in print on several occasions. To appreciate why this conclusion is persuasive, if not ineluctable, one should recall that *Eisner* itself rested on *Pollock v. Farmers' Loan & Trust Co.*, 158 U.S. 601 (1895). That notorious case struck down the 1894 federal income tax on two grounds: a tax on income functioned as a direct tax in violation of Article I, Section 9, Clause 4, and a tax on interest paid by States on their debts amounted to a violation of intergovernmental immunity. The second prong of *Pollock*, namely its holding on State immunity from federal taxation, was explicitly overruled by the Supreme Court in *South Carolina v. Baker*, 485 U.S. 505 (1988). The first prong was a wholly illegitimate exercise of judicial lawmaking, contrary to the intent of the framers and the Court's own precedent. The direct taxes prohibition of Article I was motivated by a concern that the federal government, dominated by a coalition of poorer States, would impose a real estate property tax that would disproportionately burden the rich landowners of New York, Virginia, and a few other prosperous States. Income taxation as such did not exist then, and the framers did not have it in mind when they crafted the language of Article I. The *Pollock* Court was not at all interested in wealth redistribution among the States, clearly the framers' only concern, but rather with the social and economic implications of progressive taxation, a problem addressed, if at all, only in the Takings Clause of the Fifth Amendment. It is not surprising, therefore, that the first prong of *Pollock*, on which *Eisner* rests, has become so irrelevant that the modern Court has never felt the need explicitly to overrule it.

Finally, I would like to touch on the wisdom of this measure as a matter of tax policy. Whether you should like this proposal or not, I believe, turns on what you think of the federal estate tax. If you think the estate tax is an appropriate mechanism for addressing a significant deficiency in a realization-based income tax that steps up basis at death, then you should support the proposal. It deals only with holdings that are outside the estate tax's zero bracket, it excludes property that will be subject to the estate tax regardless of the decedent's citizenship and residence, and it provides a much cleaner and easier-to-administer rule than current law's tax avoidance standard. If, on the other hand, you want to abolish the estate tax, then you also should reject the proposal.

I can appreciate the merits of a system that only taxes consumption and leaves returns to capital out of the base. For now, however, that is not our system. What I cannot understand is a system that generally levies a tax on capital appreciation, but excludes appreciation belonging to persons willing to renounce their ties to the United States. That simply makes no sense to me.

There is one technical point, however, on which the bill should be improved. Proposed Section 877A(e)(2) would fix the time of the tax as of date an individual notifies the Department of State of the performance of an act of expatriation as specified by paragraphs (1) through (4) of Section 349(a) of the Immigration and Nationality Act (if this is earlier than any of the other expatriating events specified in Section 877A(e)). But as I understand the Immigration and Nationality Act, a person loses his citizenship when he performs the specified act, not later if and when he notifies the Secretary of State. *Cf. Vance v. Terrazas*, 444 U.S. 252 (1980). There is no reason why the tax rule should be any different from the citizenship rule. The timing of the tax should not turn on the formality of notice, which an individual might manipulate to reduce his burden. Indeed, I could imagine a case where a person loses his citizenship through an act of expatriation but never notifies the Department of State that he has done this. At death such a person could claim immunity from the estate tax because of his status as a nonresident alien, but because of the lack of notice to the State Department would not have been subject to tax under proposed Section 877A. I therefore recommend that the language of Section 877A(e)(2) be amended to make clear that the date of the tax should be when the specified act of expatriation occurs, not when notice is given. This would also affect when the enacted tax would first take effect, because persons who have performed acts of expatriation without a tax avoidance purpose before February 6, 1995, would not be covered by Section 877A. Since there is no good reason to make this tax retroactive, I would assume this change would be uncontroversial.

Chairman JOHNSON. Thank you, Mr. Stephan.
Rabbi Moline.

STATEMENT OF RABBI JACK MOLINE, VICE PRESIDENT, WASHINGTON BOARD OF RABBIS, WASHINGTON, DC

Rabbi MOLINE. Madam Chairperson and Members of the Subcommittee, thank you for inviting me to testify today regarding the proposed expatriation tax. I serve as the rabbi of Agudas Achim Congregation in Alexandria, Virginia. I have held leadership positions in the Washington Board of Rabbis and the Rabbinical Assembly of Conservative Judaism. I mention those credentials not because I represent those organizations in my testimony, I do not. It is simply to indicate that my perspective and concerns are not unusual among the leadership of Jewish community in the United States and abroad and I respectfully ask you to reject this tax.

I have spent many years struggling with foreign governments on behalf of Jews wishing to leave oppressive societies for the freedom afforded by our country and others. I traveled to the Soviet Union in 1978 for the purpose of meeting Jews who wanted to emigrate but were denied that opportunity on the basis of legal technicalities and most onerously, excessive taxes placed on their request to emigrate. They were described beautifully by Professor Turner.

Their stories were heartbreaking and indeed many Members of Congress remember well their own advocacy on behalf of these refuseniks.

I also had the privilege of serving a congregation whose membership includes Jews from many countries. Among the families is a large extended family from Iran. The restrictions placed on their emigration were so severe that young and old alike, they had to endure torturous overland trips and be smuggled out of Iran leaving behind all their possessions.

I might add that this family was well-to-do in Iran, but they were unable to afford the taxes that were placed upon emigrants. In order to reach freedom, they had to abandon all their property. The few members of their family remaining in Iran live in fear of the seizure of their property and possessions as payment for the emigration of others.

Our government responded to such tactics by taking the moral high ground. The Jackson-Vanik amendment successfully enacted 20 years ago used the human rights issue as the wedge to the most accessible crack in Soviet culture. By making clear our willingness to sacrifice gains in trade and influence for the cause of human rights, the United States established itself as a champion of its own principles: Life, liberty, and the pursuit of happiness, and now that moral high ground is threatened.

A small group of wealthy Americans, seeking to avoid the responsibilities of citizenship, seems to be a lucrative and popular target for much needed revenue in a time of fiscal crisis. And nobody, including me, has much sympathy for the greed which motivates their actions. But the abuse of our freedom by a few does not call for legal remedies which lay the groundwork for threatening the freedom of the many. For while we Americans may understand the fine lines we draw regarding income, assets, capital gains and tax

liabilities, foreign dictators will find them irrelevant. The arguments are the same. We simply draw the line in a different place.

Any number of times I have sat face to face with representatives of the Soviet Government and heard them defend exit taxes on the basis of repaying a debt to society. The claim was that there had been an investment in the Jews who wished to emigrate. They were educated in the USSR, that they had enjoyed health care, guaranteed employment, housing and security, that they had served in the military and they knew secrets. If they wished to take the fruits of their life away from the tree which bore them, then it was reasonable to reimburse the workers who must remain behind to pick up the slack. Such ingrates were to be punished for rejecting the blessings of Soviet society. They would repay their benefactors for the decision not to endorse the particular social contract and political agenda of that country.

I heard the same arguments articulated by a staff member of a congressional Committee just last week and I was horrified. This tactic has been used not only by the Soviets and the Iranians but by the Iraqis, the previous government of South Africa, pre-Zimbabwe, Rhodesia, and, to add to this rogues' gallery, Adolf Hitler's Germany.

The victims have been the disenfranchised of every ilk, not just Jews, but Bahais and Christians and Muslims, black majorities and white minorities. This provision would begin the construction of a wall around this country. The wall would not defend us against hostile invaders but imprison those who wish to leave. Mr. Guttentag himself offered that opinion in his testimony.

The limited application and target population of this provision may look safe in the short term, but the precedent it sets is frightening in its potential to undermine our basic commitment to human rights and it eviscerates Jackson-Vanik.

I make no representation as to whether this provision passes muster under the Constitution or international law. I also make no representation about whether this is good tax policy. Discussions on those matters will focus on technicalities and twists of language, on graphs and on growth theories.

I raise only the overarching moral questions, do we wish to trade a short-term economic gain for the standing we have as the exemplars of human rights, even for those who exercise them in unpopular ways? I assure you, I wish no peace to those who abandon this great country for material gain, but I can live with my resentment of the success of their greed and manipulation. I would be humiliated, however, if I spoke up on behalf of an oppressed minority anywhere, and I will, and had to respond to some smug tyrant who waved a copy of this provision in my face.

I appreciate your willingness to hear my testimony. These conclude my remarks and I am available for any questions.

Chairman JOHNSON. Thank you. Thank you very much, Rabbi Moline.

Ms. McCaffrey.

STATEMENT OF CARLYN S. McCAFFREY, ESQ., PARTNER, WEIL, GOTSHAL & MANGES, NEW YORK, NEW YORK

Ms. MCCAFFREY. Madam Chair, Members of the Subcommittee, I welcome the opportunity to share with you the concerns I have with Treasury's proposal to impose a tax on citizens who give up their citizenship.

I am a tax partner at the law firm of Weil, Gotshal & Manges, a member of the adjunct faculty of law at the New York University School of Law and have practiced and taught tax and trusts and estates law for more than 25 years. I appear today in my individual capacity and I am going to talk about tax and trust law.

The proposed legislation would replace the provisions of current law that subject former citizens to tax on U.S. source income for 10 years if a principal purpose of expatriation was to avoid U.S. tax. The problems with the current expatriation rules are well known. The requirement of a tax avoidance motive provides a reason for not reporting and creates an obstacle to enforcement. The 10 years may be insufficient to capture all gain that should be caught, and as Mr. Shay told us earlier this afternoon, tax practitioners have created various techniques over the years that make it quite easy to avoid its reach.

These factors have all combined to enable individuals to avoid tax on income and unrealized gain that accrue during periods of U.S. citizenship.

I agree that the Code should be strengthened to ensure that income and gain that accrued while an individual was enjoying the advantages of U.S. citizenship do not escape U.S. taxation. Treasury's proposal, however, extends far beyond that legitimate objective. My concerns with the bill relate both to its substance and to a number of technical flaws.

As to substance, I am concerned that expatriation is not an appropriate tax event and with the proposed scope of the tax as well. The bill treats relinquishment of U.S. citizenship as a tax recognition event. The event of expatriation, it seems to me, is not an appropriate recognition event since it produces neither the cash to pay the tax, nor a way of accurately measuring an individual's gain or loss and their assets.

As Mr. Guttentag testified, the bill attempts to deal with the liquidity problem by extending the estate tax deferral provisions to the expatriation tax. These provisions permit the Internal Revenue Service, for reasonable cause, to extend the time for the payment of the estate tax for 10 years. At current rates, deferral requires the payment of interest at 9 percent compounded daily. A taxpayer who defers using this provision will risk incurring an interest obligation to the United States that ultimately exceeds her profits from her retained assets. In most cases, this will not be a viable or a sensible option.

Although expatriation should not be a recognition event, this doesn't mean that an expatriate should escape U.S. income tax. There are reasonable alternatives that should be explored that are consistent with our general policy of deferring tax on income until collection and on gains until recognition.

One alternative is to require an expatriate to identify the assets she holds at the time of expatriation and to require her to pay U.S.

income tax on those assets when they are actually sold or transferred by gift for a debt to the extent that they are not subject to the U.S. gift or estate tax.

In terms of timing and measurement, the expatriate would then remain in the same position as a U.S. citizen. I think this should be the objective. Collection of the tax could be assured by requiring a bond or a deposit of assets in the U.S. trust. A similar technique is now required by the U.S. estate tax law in connection with the allowance of a marital deduction for bequests to noncitizen spouses.

An easier and perhaps better alternative, as several witnesses have suggested earlier this afternoon, is simply to strengthen the provisions in existing law that impose an income tax on an expatriate's U.S. source income for 10 years. The exception for non-tax-motivated expatriations could be eliminated, and most importantly, the sections that impose a tax on the transfer of appreciated property to foreign corporations, partnerships and trusts could be amended to apply to transfers by expatriates during the 10-year period.

In fact, most of the abuse that centers around section 877 probably stems from an inadvertent change to section 367 as part of the 1976 reform act. Before that date, section 367 would have caught any expatriate who transferred assets to a foreign corporation, but that was changed and since then it has been fairly simple to avoid 877 by making transfers of that sort.

If these steps were taken, it is likely that the United States would tax most of the income and gain that should be taxed and would do so without creating a new layer of complex Code provisions that would require a long process of technical corrections and regulations to be workable.

As to the scope of the tax, the bill treats the expatriating citizen as owning those assets that would have been included in her gross estate if she had died on the date of expatriation, certain interests and trusts, including discretionary trusts, and any other interest in property specified by the secretary.

These categories are too broad because they reach assets which the individual doesn't own and to which he has no access. Additionally, it reaches property that probably would never have been subject to any U.S. tax at all if the individual had retained her citizenship.

The bill's application of the tax to a beneficiary's interest in a discretionary trust created by another reflects a disregard for the reality of those rules of trust law that stand between a beneficiary and the assets of a trust. When a beneficiary is subject to tax on account of her interests in a trust, she won't be able to compel the trustee to distribute assets, nor will she be able to sell her interest in the trust. Unless she has sufficient other assets to pay the tax, this new expatriation tax will make it economically impossible for her to relinquish her citizenship.

In addition to my concerns with the substance of the bill, I have a number of technical concerns that are explained in my written statement. But I would like to summarize just a few of them now.

The first four problems that are described can combine to result in a U.S. income tax, a foreign income tax and a U.S. estate or gift

tax on the same amount of gain all without any adjustment to avoid what could amount to a tax in excess of 100 percent.

As described in my written statement, the bill appears to reach all rights to receive future income, including the alimony rights an expatriating husband or wife takes when he or she returns to his or her native land and expatriates after a divorce.

The consequence of this provision is not only to tax the expatriate on the present value of rights to future alimony, but also to deny an alimony deduction to the paying spouse who remains behind.

Finally, no attempt has been made in the bill to deal with the very difficult problem of creating a rational system for the future taxation of a trust and its beneficiaries after one of its beneficiaries has expatriated, causing a portion of the trust assets to be subject to tax.

Last week, Mr. Samuels concluded his testimony on this bill before the Senate Finance Committee by stating that, Americans who avoid their tax responsibilities by expatriating should not be rewarded. Instead, they should be asked to pay tax that U.S. citizens will pay sooner or later.

I agree. They should be asked to pay, but a tax paid sooner is obviously more burdensome than one paid later, and a tax paid on assets that may never be received creates what appears to be an unconscionable burden. To ask an expatriate to assume a greater burden than a similarly situated citizen creates an unseemly exit tax. It punishes a politically unpopular group of U.S. citizens for choosing to exercise their right to give up their citizenship.

This concludes my prepared remarks, and I would be happy to answer any questions.

[The prepared statement follows:]

HEARINGS ON H.R. 831 BEFORE THE SUBCOMMITTEE ON OVERSIGHT OF THE COMMITTEE ON WAYS AND MEANS UNITED STATES HOUSE OF REPRESENTATIVES

MARCH 27, 1995

STATEMENT BY CARLYN S. McCAFFREY

Madame Chair and members of the Subcommittee, my name is Carlyn McCaffrey. I welcome the opportunity to share with you the serious concerns I have with Treasury's proposal to impose a tax on U.S. citizens who renounce their citizenship.

I am a tax partner at the law firm of Weil, Gotshal & Manges, a member of the adjunct faculty at the New York University School of Law and have practiced and taught tax and trusts and estates law for more than twenty-five years.

The proposed legislation would replace provisions under current law that now subject expatriating citizens to U.S. tax on U.S. source income for 10 years after expatriation if a principal purpose of the expatriation was to avoid U.S. tax. It is part of a larger legislative proposal to expand the exposure of foreign trusts and their U.S. beneficiaries to U.S. reporting requirements and tax.

The problems with the current expatriation rules, set forth in Code Sections 877, 2107, and 2501(a)(3), are well known. The requirement of a tax avoidance motive provides taxpayers a basis for not reporting taxable events, and presents an obstacle to enforcement. The 10 year limitation may be insufficient to capture all gain that should be captured. Over the almost thirty years since these provisions were enacted, tax practitioners have created various techniques that make it easy to avoid its reach. These factors have all combined to enable individuals to avoid tax on income and unrealized gain that accrue during periods of U.S. citizenship.

The Code should be strengthened to ensure that income and gain that accrued while an expatriate was enjoying the advantages of U.S. citizenship do not escape U.S. taxation. Expatriates should be taxed on such gain and income in the manner they would have been taxed if they had not expatriated. Treasury's proposal, however, extends far beyond that legitimate objective. It does so by taxing an event that does not appropriately measure an expatriate's income or gain from any asset and that does not give her the funds to use to pay the tax.

Treasury's expatriation proposal, since its announcement on February 6, 1995, has had two versions, one in section 201 of H.R. 981, which was introduced on February 16, 1995, and one in an amendment to H.R. 831, which was approved by the Senate on March 24, 1995. The principal difference between the two versions is the deletion from the later version of a

similar tax on resident aliens who give up their residency. My comments today relate to the latter version.

My concerns with the Bill relate both to its substance and to its technical structure.

THE SUBSTANCE OF THE PROPOSAL

1. ***The Taxable Event.*** H.R. 831's treatment of the relinquishment of U.S. citizenship as a tax recognition event imposes a cost on expatriation. This cost is not necessary to prevent the avoidance of U.S. tax on income and gain accrued prior to expatriation. As suggested above, the event of expatriation is not an appropriate tax recognition event since it produces neither the cash to pay the tax nor a way of accurately measuring an individual's gain or loss in any particular asset.

The Bill attempts to deal with the liquidity problem by extending the provisions of Code Section 6161 to the expatriation tax. Code Section 6161 permits the Internal Revenue Service, for "reasonable cause" to extend the time for the payment of the estate tax for a period not in excess of 10 years. The examples of "reasonable cause" provided in Treas. Reg. § 20.6161-1 all require a lack of sufficient liquid assets to pay the tax. No option is given to a taxpayer to elect to defer because she wants to retain an asset for investment reasons. Moreover, deferral will require the payment of interest on the deferred tax. A taxpayer who is given the opportunity to defer will risk incurring an interest obligation to the U.S. that ultimately exceeds her profits from her retained assets. In most cases, this will not be a viable or sensible option.

Expatriation should not be a recognition event. But, this does not mean that an expatriate should escape U.S. income tax on income and gains accrued at the time of expatriation. Alternatives that are consistent with our general policy of deferring tax on income until collection and on gains until recognition should be considered.

One alternative is to require an expatriate to identify the assets she holds at the time of expatriation and to require her to pay U.S. income tax on those assets when they are actually sold or transferred by gift or at death, to the extent not subject to the U.S. gift or estate tax. This approach would preclude an expatriate from avoiding U.S. tax on income and gain appropriately taxed in the U.S. by relinquishing citizenship without artificially accelerating the imposition of tax. In terms of the timing and measurement of tax, the expatriate would remain in the same position as U.S. citizens. This should be the objective. Collection of the tax could be assured by requiring a bond or the deposit of the assets in a U.S. trust. A similar technique is required by the U.S. estate tax law in connection with the allowance of the marital deduction for bequests to non-citizen spouses. See Code Section 2056A.

Another alternative is to strengthen the provisions in existing law that impose an income tax on an expatriate's U.S. source income for 10 years after expatriation. The exception for non-tax motivated expatriations could be eliminated and Code Sections 367 and 1491, the

sections that impose a tax on the transfer of appreciated property to foreign corporations, partnerships, and trusts, could be amended to apply to transfers by expatriates during such 10 year period.[1] If this were done, it is likely that the U.S. would tax most of the income and gain that accrued prior to expatriation.

2. ***The Scope of the Tax.*** H.R. 831 treats the expatriating citizen as owning: (1) those assets that would have been included in her gross estate if she had died on the date of expatriation, (2) certain interests in trusts, and (3) "any other interest in property specified by the Secretary as necessary or appropriate to carry out the purposes of this section."

These categories are too broad because they reach assets to which the individual has no access. As a result, she will have no funds to use to pay the tax either at the time of expatriation or, if deferral is permitted, at any later date.

In some cases, the lack of access is attributable to action taken by the expatriate before the announcement of H.R. 831; in others, it is attributable to action taken by a third party over which she has no control. Examples of assets in the first category include certain assets that have been given away irrevocably within three years of expatriation, and interests held in trusts created by the individual with respect to which she has retained a limited right such as the right to receive income or a power to select among alternate beneficiaries. Examples of assets in the second category include an individual's interests in trusts created by others of which she is a discretionary beneficiary.

The Bill's application of the expatriation tax to a beneficiary's interest in a discretionary trust created by another reflects either a disregard for or a disbelief in the reality of those rules of trust law that stand between a discretionary beneficiary and the assets of a trust. When an expatriating beneficiary is subject to tax on account of her interest in a trust, she often will not be able to compel the trustee to distribute trust assets to her nor will she be able to sell her interest in the trust. Unless she has sufficient other assets to pay the tax, the expatriation tax will make it economically impossible for her to relinquish her citizenship.[2]

---

1. Curiously, until 1976, Code Section 367 did apply to transfers to foreign corporations by expatriates. The exclusion of expatriates by the amendments made to Code Section 367 by the Tax Reform Act of 1976 (P.L. 94-455, § 1042(a)) was probably inadvertent. Such inadvertent changes are symptomatic of a legislative process that often proceeds too quickly with changes to the Internal Revenue Code. The current complexity of the Internal Revenue Code and the intricate pattern of relationships among its various sections create a high degree of risk that a change to one provision will have an unexpected and undesirable impact on another.

2. The reality of these rules has been made clear in a series of state court decisions that refuse to compel the trustees of discretionary trusts to make distributions to beneficiaries who are welfare recipients. *E.g.*, *Lang v. Commonwealth*, 515 Pa. 428,

(continued...)

The final category raises additional concerns as to the scope of Treasury discretion. To grant Treasury unlimited discretion to characterize any item of property as held by an individual for purposes of the tax creates an unacceptable degree of uncertainty as to the scope of the provision.

The Bill exempts the first $600,000 of gross income attributable to the deemed sale. The use of this figure, which is equivalent to the maximum amount that most U.S. taxpayers may give or bequeath free of U.S. estate or gift tax, suggests a connection between the expatriation tax and the U.S. transfer tax system. It is unclear whether the use of this number is coincidental or if its use signals an eventual attempt to extend the principles of this tax to the transfer tax system.

TECHNICAL CONCERNS

1. ***Foreign Gains Are Subject to U.S. Tax.*** The same logic that justifies subjecting the expatriate to U.S. tax on income and gain that accrued while she enjoyed the benefits of U.S. citizenship or residency compels the conclusion that any income or gain that accrued in any U.S. person's assets before the time she became a resident of the U.S. or prior to her receipt of such assets from a foreign donor or decedent should be protected from the expatriation tax and from all other U.S. income taxes by appropriate basis adjustments.[3] The Bill contains no basis adjustment for either purpose.

2. ***Two U.S. Income Taxes May Be Imposed on the Same Income.*** If an individual is deemed to have sold her assets upon expatriation for an amount equal to fair market value, her basis in such assets should thereafter be adjusted to fair market value. The basis adjustment is significant because the expatriate, for a variety of different reasons, may continue to be subject to U.S. income tax. Instead of providing for such a basis adjustment, the Bill directs Treasury to draft regulations to permit an adjustment. The basis adjustment provisions should be a part of the Bill. The expatriate should not be required to await the issuance of regulations in order to determine her basis in assets which are deemed to have been sold and on which tax has been imposed.

Additional technical problems arise for the expatriate who pays an expatriation tax on an asset that will continue to grow in value and that will be disbursed to her over a period of time. The type of technical problems that will arise can be illustrated by the following example:

---

2. (...continued)
528 A.2d 1335 (1987); *First Nat'l Bank of Maryland v. Department of Health & Mental Hygiene*, 284 Md. 720, 399 A.2d 891 (1979); *Portsmouth v. Shackford*, 46 N.H. 423 (1866).

3. The basis adjustment suggested for individuals immigrating to the U.S. is often referred to as "landed basis."

Example 1: Kate is an employee of the X Corporation. Under the terms of her unqualified deferred compensation arrangement with X, she will be entitled to receive annuity payments from X when she retires in 10 years. The annuity payments will be equal to 50% of her highest annual compensation. X transfers her to a foreign country and she expatriates. At the time of her departure from the U.S. and her expatriation, the value of her deferred compensation arrangement is $400,000. When she begins receiving annual payments of $100,000, how will she be taxed? Will the first payments received be excluded from U.S. income tax until she has collected the $400,000 on which she already has paid the income tax? Or, will she be required to allocate the $400,000 over the number of years of expected payments? When will X be able to deduct the $400,000 - on expatriation or on actual payment?

3. ***A Foreign Tax and a U.S. Tax May Be Imposed on the Same Income.*** When the expatriate later sells an asset on which the expatriation tax has been paid, she is likely to be subjected to tax on the same gain by her country of residence. If she had not surrendered her U.S. citizenship before the sale, she would have been protected from double tax by the U.S. foreign tax credit. The imposition of two taxes on an expatriate is a penalty that would not have been imposed on her if she had become a nonresident without surrendering her U.S. citizenship. To avoid the double tax penalty, the U.S. foreign tax credit provisions should be amended to permit a refund of the expatriation tax to the extent of the foreign tax credit that the U.S. would have permitted an expatriate if she had not surrendered her citizenship before the sale.

4. ***A U.S. Income Tax and a U.S. Gift or Estate Tax May Be Imposed on the Same Income.*** If an expatriate is subjected to the expatriation tax on gain accrued in a particular asset and if she later gives that asset away or dies holding it, the gain on which the expatriation tax was paid may be subject to a U.S. gift or estate tax. The combination of the two taxes can exceed 99%. An adjustment should be provided to prevent this result.

5. ***The Exemptions Are Too Narrow.*** The Bill exempts interests in U.S. real estate, interests in qualified pension plans, and interests in foreign pension plans (under regulations prescribed by Treasury up to $500,000). It is understood that U.S. real estate interests are excluded because these will continue to be subject to U.S. income tax under Code Section 897. But U.S. real estate interests are not the only assets that will continue to be subjected to U.S. income tax. A nonresident alien is also taxed on income effectively connected with a trade or business conducted within the United States under Code Section 871(b). Assets used in connection with such a trade or business should similarly be exempted.

6. ***Deduction for Personal Losses May Be Allowed.*** The calculation of the expatriation tax provides that, "notwithstanding any other provision" of the Code, all gains or losses are to be taken into account. A literal application of this provision would permit the expatriate to reduce investment gains by losses on personal assets. Such losses are not ordinarily deductible. It is not clear that this was intended.

7. ***Alimony and Other Rights to Future Income May Be Taxed.*** The Bill does not exempt rights to future payments of income. As a result, it appears to reach rights that it may not be intended to reach. If it is intended to reach these rights, technical changes must be made to other provisions of the Code to preserve the structural balance between income and deductions.

For example, subjecting an expatriating divorced spouse's right to receive future alimony payments seems inappropriate. The right to receive alimony relates not so much to gain that accrued under the protection of the U.S. but to the future support needs of the alimony recipient. But, if the Bill is intended to reach alimony payments, Code Section 215, which allows an alimony deduction only when a payment is actually made and then only if included in the gross income of the receiving spouse under Code Section 71, should be amended to avoid the loss of the deduction to the paying spouse. In addition, Code Section 71(f) should be amended to remove the possibility of the so-called "front-loading" tax if the expatriation of an alimony recipient is treated as an accelerated payment of alimony.

8. ***The Trust Provisions Are Flawed.*** As indicated above, the Bill treats an expatriate as owning certain interests in trusts. The method by which such interests are to be determined is unclear. Moreover, the manner in which the Bill subjects such interests to the expatriation tax is technically flawed and fundamentally inconsistent with existing statutory methods for taxing trusts and their beneficiaries.

a. ***Determining the Beneficiary's Interest.*** A beneficiary's interest in a trust is to be determined based upon "all relevant facts and circumstances" including, not only the terms of the trust instrument, but also a group of factors that, at best, reflect the expatriate's expectations as to her trust interest rather than any definable property interest. These include "any letter of wishes or similar document, historical patterns of trust distributions, and the existence of and functions performed by a trust protector or any similar advisor."

Except where an individual's trust interest can be actuarially valued, as in the case of an interest such as the right to receive trust income for a term, it is impossible to predict how these factors can possibly be utilized to measure an individual's interest in a trust.

An alternate method is provided for those cases where a beneficiary's interest cannot be determined based on facts and circumstances. The alternate method treats the beneficiary or beneficiaries who have the closest degree of kinship to the grantor as holding the trust interests regardless of whether she has any actual access to or expectation of receiving trust distributions. The application of this approach can be illustrated by the following example:

Example 2: Mary established a discretionary trust for her all of her issue 10 years ago. The terms of the trust instrument give complete discretion to a corporate trustee as to the timing and amount of distributions. The trust is to

last until the last to die of Mary's issue living at the time of the trust's creation. At that time, all trust property will be paid to charity. When Mary created the trust, she had three living children and ten living grandchildren. Ten years after the trust's creation, Maureen, one of Mary's daughter's expatriates. Maureen's two sisters are alive at the time of expatriation. There are no letters of wishes and no trust protector or advisor. No distributions have ever been made because the trustee has determined that none of Mary's issue is in need of funds. Maureen has no reason to believe she will ever receive any distributions from the trust. Since it is impossible to determine trust interests on the basis of facts and circumstances, Maureen will be deemed to hold one-third of the trust.

In the case of a grantor trust whose grantor and beneficiary expatriate, the Bill appears to impose the expatriation tax on both of them with respect to the same trust assets. The report entitled "Background and Issues Relating to Taxation of U.S. Citizens Who Relinquish Citizenship" prepared by the Staff of the Joint Committee on Taxation dated March 20, 1995 states that this result is not intended. Language should be added to the Bill to make this clear and to explain how to treat trusts that are only partially grantor trusts.

b. ***Calculating the Tax.*** The expatriate who is deemed to hold an interest in a trust must calculate her expatriation tax allocable to the trust interest in the following manner:

(1) The Bill appears to assume that the expatriate's interest will be quantifiable as a percentage share of the trust as a whole. This share is then to be treated as a separate trust.

(2) The deemed separate trust is then deemed to have sold all of its assets for their fair market value immediately before the beneficiary expatriates and to have distributed all such assets to the expatriate.

(3) The expatriate is then deemed to have recontributed the distributed assets back to the trust.

It is understood that the object is to require the expatriate to include in her gross income any gain deemed to have been recognized on the deemed sale as well as any previously undistributed income allocable to the beneficiary's share. This result, however, interacts uneasily with the various existing methods for taxing trusts and their beneficiaries and creates a number of anomalies and unanswered questions. For example:

(1) Will capital gain realized on the deemed sale of assets be included in distributable net income so that the deemed distribution to the beneficiary will make the beneficiary (rather than the trust) taxable on capital gain? Normally capital gain is not included in distributable net income of a domestic trust.

(2) Will these rules apply if the trust actually sells assets and distributes amounts to the expatriating beneficiary?

(3) After the expatriate is treated as having recontributed the assets to her separate trust, will the trust continue to be treated as a separate trust so that she will receive the benefit of the basis adjustment to the contributed assets if they are distributed to her in the future? If so, how will the trust treat future distributions? In the example set forth above, will future income distributions from the trust to any beneficiary other than Maureen be treated as coming from the two-thirds share of the trust that is not her share? If so, an actual distribution of all trust income to Maureen's sister will give rise to a deduction of only two-thirds of such income. The sister will pay tax on only two-thirds of the income while tax on the remaining income will be imposed on the trust.

(4) How will the deductions of the trust, such as the deductions for expenses and charitable contributions, be allocated and reflected in the expatriate's tax calculation?

(5) For what tax purposes will the expatriate be treated as having received a distribution? If she is a grandchild of the trust's grantor (or otherwise assigned to the grantor's grandchildren's generation), will she be subject to the generation-skipping transfer tax on account of her receipt of a taxable distribution? If so, will the generation-skipping transfer tax be deductible in computing the expatriation tax. Arguably, expatriation should not accelerate the generation-skipping transfer tax. If it does not, the generation-skipping transfer tax should be amended to permit the expatriate to reduce the amount of any future actual taxable distributions by the expatriation tax.

(6) For what tax purposes will the expatriate be treated as having recontributed the assets? Will she be subject to the normal gift and estate tax consequences that flow from contributions to trusts? If she is a child of the trust's grantor (or is otherwise assigned to the grantor's children's generation), will she be treated as the transferor of the trust for generation-skipping transfer tax purposes, thereby avoiding the generation-skipping transfer tax on subsequent distributions to the grantor's grandchildren.

(7) In the case of an expatriate whose trust interest consists of an income interest, should such recontribution be treated as a purchase of an income interest so that she would be able to take an amortization deduction against future income distributions? If so, Code Section 167(e), which generally precludes the amortization of term interests when related persons hold the remainder interests, should be amended.

(8) Will the expatriate's share of the trust be treated as a so-called "grantor trust" as to the recontributed share with the result that all items of income, deduction, and credit allocable to her share will be attributable to her?

(9) In the case of an interest in a charitable remainder trust, how is the distribution to be allocated among the various categories of accumulated income? Will the expatriate receive a charitable deduction for the deemed recontribution of assets back to the trust? Will a charitable remainder annuity trust lose its status as a charitable remainder trust because of the deemed contribution by its expatriating beneficiary? Charitable remainder annuity trusts are not permitted to accept additions.

(10) In the case of an interest in a pooled income fund within the meaning of Code Section 642(c) and in the case of a charitable lead trust, will the expatriate receive a charitable deduction for the deemed recontribution of assets back to the trust?

As suggested by the examples above, the Bill's provisions regarding the taxation of interests in trusts raise serious technical problems. The appropriate solution requires further study. In the case of an expatriating individual's interest in U.S. trusts, however, the best solution may simply be to impose a withholding tax on distributions to the expatriate to the extent such distributions are attributable to pre-expatriation income or gain of the trust.

* * * * *

Last week Mr. Samuels concluded his testimony on H.R. 831 before the Senate Finance Committee by stating that: "Americans who avoid their tax responsibilities by expatriating should not be rewarded. Instead, they should be asked to pay tax that U.S. citizens will pay sooner or later."

I agree. They should be asked to pay. But a tax paid sooner is significantly more burdensome than one paid later. And, a tax paid on assets the expatriate may never receive creates an unconscionable burden. To ask an expatriate to assume a greater burden than a similarly situated citizen creates an unseemly "exit tax" that punishes U.S. citizens who make the politically unpopular choice of exercising their right to expatriate.

This concludes my prepared remarks. I would be happy to answer any questions.

Chairman JOHNSON. I thank you very much.

Mr. Stephan and Mr. Shay, you testified that this is fair. We have had a lot of testimony. This isn't going to fall fairly on people. I will put two questions to you. One is, why don't we write regulations about the current law? Why didn't we write forms? Why don't we know of all the people who decided to relinquish their citizenship last year, what the values of their assets are and who in fact might be affected by this?

And do you think it is good public policy to change a law in a way that will have both domestic and international ramifications with literally no information that is reportable about the 858 people in this category as reported by the Treasury.

Mr. SHAY. I will start with a response on the regulations. As I am sure you are aware, the resources of the Treasury Department and the IRS are limited. From my perspective, devoting resources to write regulations to a statute that is currently not effectively enforceable, no matter what regulation you write, is a waste of time. A regulation——

Chairman JOHNSON. Mr. Shay, let me talk about that just a minute. This law has been on the books 30 years. Don't you think it is not hard to write at least a regulation about forms to get the information so that anyone who makes this declaration will at least know? We have done that in other laws. This is not unique. This is not difficult.

We have asked for this kind of declaration in other circumstances and, to defend the Treasury on the basis that they can't write the regulations because the law is not enforceable, they do that all the time. They could have at least written regulations that ask for a declaration that says what the assets of these people are and so on and so forth so we would have the information.

Mr. SHAY. Madam Chair, I think earlier in the day there was a lot of comment regarding cost-benefit analysis. The only point I was making was applying a cost-benefit analysis to seek to write regulations that, even if fully enforced, would not yield a tax because of a deficiency in law or perhaps to impose a recordkeeping requirement that, again, would not have any effect under current law in terms of increased revenue. I could understand that from the Treasury perspective that would be a waste of time.

Chairman JOHNSON. Would you suggest, then, that Treasury might come to the same conclusion about the new law, because once the new law is written and the regulations are written, anyone in their right mind who is going to expatriate would expatriate before they hit the threshold and so it is not going to affect anything anyway?

Mr. SHAY. I agree that the new law would not apply unless there is gain in excess of $600,000 and, therefore, certainly some planning would revolve around whatever point you place that threshold.

I also agree that the new law would have some significant effect even without regulations. I think it does have some technical infirmities described in my testimony, but it certainly would have an immediate prophylactic effect starting from the proposed effective date of February 6.

If I may turn to another question you asked, which was the relationship of the proposal to treaties. Speaking only of income tax treaties, the administration proposal is less intrusive on the taxing rights of foreign governments than is current law. Under current law, the tax would be deferred until there is a disposition event. Typically—I mean, as the law is structured, that disposition event will always be at a time when the person selling is resident in another country.

Now, two things can occur. First, some of our older treaties would prevent the United States from collecting any tax on that sale in the case of long-term residents who move to another country. Second, some of our older treaties do not preserve the U.S. right to tax under existing section 877 because they have not been amended recently enough to pick up that rule.

Notwithstanding that the IRS has tried to impose that tax when somebody has gone to such a treaty country, the Tax Court has ruled against them; I think that the Tax Court decision is correct and would be upheld by other courts. So under current law, section 877 could not be applied effectively with respect to people who change their residency to certain other treaty countries.

There has also been, I think, a very correct reference to the possibility of there being a double tax, and I address that in my testimony. First, if, after the time a person has expatriated there is a tax under the administration proposal and a foreign country taxes that gain again, every income tax treaty that the United States has, except one, has an effective mutual agreement procedure that allows the two countries to settle issues of double taxation.

In my statement, I have strongly urged the Committee to urge the Treasury that, if this proposal passes in something like this present form, they reach mutual agreements with treaty partners to be sure that that expatriate gets full basis for the taxes paid on the gain that was accrued while in the United States so that other countries would not double tax that income.

There is no guarantee that this would occur. But I would also urge that you combine that with a recommendation to the Treasury that in negotiating all future treaties, that they try to include such a provision in the treaty itself so that there is not an issue of a possible disagreement under the mutual agreement procedure.

Chairman JOHNSON. May I clarify that point, Mr. Shay, because you didn't go through your testimony in detail. Are you saying that with all but one country, our tax treaties are such that they would allow a clarification of this point, though with some further negotiation?

Mr. SHAY. What these tax treaties have is an arrangement where the two tax authorities, when the same income has been taxed by both countries, sit down and they can discuss what the appropriate tax is in order to avoid double taxation. That is the purpose of the treaty.

If a taxpayer paid the tax upon exit, moved to a country with whom the United States does have an income tax treaty and were taxed again on the same gain, it would be entirely appropriate, and indeed I think we should encourage that taxpayer to go to the tax authority and initiate a procedure under that treaty.

The one problem with this is those two tax systems or administrators don't have to agree. This is not binding, although actually two of our newer treaties have binding arbitration clauses that would make it binding, but they are not implemented yet. But the objective of the tax authorities is to avoid double taxation and they should be able to resolve which country is appropriately taxing the gain.

Chairman JOHNSON. So in other words, all but one of our current treaties addresses this issue, though not in a binding way, and you would recommend that we renegotiate all of those treaties so that it is binding but that we make it binding in any future treaties?

Mr. SHAY. I agree. But if I may clarify just one point. I would recommend that we take as a negotiating position that this be binding in future treaties. But treaties include a lot of benefits and tradeoffs and I am not sure I would recommend that the United States have to have that, because you always have this procedure. The mutual agreement procedure has been criticized in the past for being slow, but the IRS has worked very hard on improving that procedure and I think that is a relief valve. It is not perfect, but it is an appropriate relief valve for the potential double taxation that could arise.

Chairman JOHNSON. But it is at the discretion of the other country.

Mr. SHAY. It is at the discretion of both countries, yes.

Chairman JOHNSON. Thank you.

Ms. McCaffrey, do you have any comment on that point?

Ms. MCCAFFREY. Well, I am not familiar with how that—those provisions have actually been used and I wonder if they have ever been used in a similar situation where the United States taxes income in 1 year and the other country isn't going to tax it until 10 years into the future.

I had thought the preferable way of dealing with this problem, and my remarks talk about this, is that our foreign credit, tax credit provision should be amended so as to allow the expatriate a refund in a year of later sale to the extent that she would have been permitted a foreign tax credit if she hadn't given up her citizenship.

Because what this provision is now doing is subjecting somebody to a greater tax who is in exactly the same position with one exception. If A and B both leave the United States with the same amount of appreciated assets and move to country X, and A gives up her citizenship and B doesn't, A is going to wind up paying a tax when she leaves, B won't.

Now, when they later sell the asset in the new country, A will pay a tax all over again and B will only pay one tax because the foreign tax credit provisions now in force will allow her a credit for her U.S. tax against the tax paid to the foreign jurisdiction.

Mr. SHAY. Just one point. I think, though, the credit would allow credit for the foreign tax against the U.S. tax.

Ms. MCCAFFREY. That is the point I am making. But in its current form, that won't work. So before we implement the expatriation tax, one of the kind of corresponding technical changes that ought to be made is a change to our foreign tax credit provisions

to allow a refund later on equal to the credit that would have been allowed if citizenship hadn't been relinquished.

Mr. SHAY. I respectfully disagree and I think this is a useful discussion. Precisely because under the foreign tax credit mechanism of U.S. law, the United States gives a credit for foreign tax imposed on the same gain that is taxed by the United States when it is considered foreign source income. So in other words, we are ceding our taxing right to the more senior taxing right, so to speak, of the other country. Frankly, when the tax is imposed at the time that that person is resident in the other country, that is not an unreasonable position. But I do think it ends up with the wrong result in cases where that other country taxes gain that has accrued up to the point of departure.

I think the United States should have the primary right to tax that gain. Indeed, under the mutual agreement procedure we just discussed, I think the right answer for the U.S. negotiators in that procedure is to say to the other country, we respect your right to tax this, but we think you should give a credit for the U.S. tax. That way the U.S. tax base is not eroded and I think you get the correct answer internationally.

Chairman JOHNSON. Is there any precedent for that?

Mr. SHAY. Yes. I don't know all of the competent authority cases because they are confidential, but I do know one competent authority case that deals with a very analogous point, and that has been made public. It is part of the record of the ratification of the U.S. treaty with Canada, and in that arrangement, the United States obtained a Canadian agreement to allow greater depreciation deductions to U.S. drillers, offshore drillers, who brought their rigs into the Canadian waters and then were taxed upon departure, in essence by recapturing of the depreciation in Canada, denying them when they were in Canada a full depreciation deduction.

The mechanics are very different than what we are talking about today, but the principles are precisely the same. It was used under the U.S.-Canadian treaty vis-a-vis their departure tax imposed on businesses, not individuals, to achieve a fair resolution of the taxing rights of the two countries.

Chairman JOHNSON. Ms. McCaffrey, has this approach been used generally in the taxation of foreign source income?

Ms. MCCAFFREY. Well, I am not aware of many instances where this kind of complex procedure is used for individuals who move from one country to the other, but I think this dialog is useful in that it points out that I think both of us agree, and most tax lawyers agree, that this legislation is creating a problem, a problem of double tax that ought to be cured, perhaps the way Mr. Shay suggests through treaties, perhaps the way I suggest with the modification of our foreign tax credit provision, but until it is clear that the system is going to avoid the double tax provision, I think the expatriation tax ought not to be passed.

This is a problem that needs to be worked out in advance. I don't think we should leave it up to the individuals in the future to negotiate their own tax breaks with the foreign governments in the foreign countries to which they move.

Chairman JOHNSON. Isn't one of your points that this not only creates a double tax problem, but it creates it over time? In other words, it might create it over a 10- or 15- or 20-year span of time.

Ms. MCCAFFREY. Part of the problem, of course, is the timing. In the normal course of events, the person that moves to country *x* and doesn't give up her citizenship doesn't have to pay this tax until an actual sale. But the person that moves to country *x* at exactly the same time has to pay the tax——

Chairman JOHNSON. So we have a choice. We create a better law that is more enforceable so that we can tax at the time of realization, whether you are here or there, or we have got this kind of situation where we have to solve the double taxation problem over time, and I would suggest that I am drawing the conclusion from this dialog between you that solving this double taxation problem will be administratively very complex.

Mr. SHAY. I think two points should be observed, though. One is, as I point out in my testimony, the current law provides no foreign tax credit whatsoever. It is completely deficient in that regard. So this is an issue that should be addressed.

Second, addressing it by waiting until realization weakens the claim of the United States to tax what I strongly urge the Committee to view as its fair share of the income as opposed to allowing France or Germany or the other country to tax it. Now, frankly, when the other country is the Bahamas, as it is in the case of at least one expatriate, I don't think we should worry too much.

Chairman JOHNSON. Would you consider quarantining of U.S. assets an appropriate response? Quarantining at the time of expatriation, and then you impose the tax at the time of realization, so you hold the asset.

Mr. SHAY. The advantage of quarantine, as I understand it, is that you are in essence creating a collection mechanism, but it doesn't surmount the problem that I have identified with respect to waiting for realization, because by that time the person has already entered the tax jurisdiction of another country. That creates the issue of double taxation.

Take this test, if I may suggest——

Chairman JOHNSON. But wouldn't it be easier to solve the problem of double taxation if you are dealing with it at the time of realization than if you are dealing with it at two different points, one at proclaimed realization and one of actual realization.

Mr. SHAY. Well, not necessarily, and for this reason: What the IRS has urged taxpayers to do in the transfer pricing world has been, at the time that a foreign country is claiming that the taxpayer has paid too little income to that country because, let's say, it has charged too large a royalty so there is a deduction in that country and the United States is getting all the income, the United States lags significantly in doing audits compared to some other countries, the IRS has said, when that country asserts a transfer pricing allocation, you tell us as soon as possible.

By the same token, under this regime, a taxpayer could notify the foreign government at the time of moving there in the first instance, the treaty authority, and try and set that procedure in place before selling the asset, so that that issue is something that is dealt with with certainty.

Second, I think we are overlooking here the fact that we are dealing with well-advised taxpayers, taxpayers who have gained in excess of $600,000, and I would be delighted to advise any of you or others as to how to take some self-help measures to avoid the double tax problem. To put it crudely, and I wouldn't advise a client to do this, but just for example, for illustration, if you were that concerned about the double taxation and you really did like the Bahamas as a place to sojourn for 1 or 2 years or whatever time it takes, you might move there for a period of time, sell your asset without tax, get current basis, and then move to the country where you want to live. This is not recommended.

What is recommended is to let people—hopefully people don't guide their lives by taxes such as we are describing here. But there is a potential for self-help that creative taxpayers can come up with.

Chairman JOHNSON. Wait 1 minute, Mr. Shay. Do I understand you to say, even if we changed the law, there would be ways to advise clients so that they could circumvent?

Mr. SHAY. Not so they could circumvent the U.S. tax, but so they could circumvent or avoid the double tax that could occur if they moved to another country. Two country's tax laws often don't work properly together.

Chairman JOHNSON. Is there any way we could focus on those whose purpose was tax avoidance and particularly those whose purpose was tax avoidance and who actually came back then and participated in our economic life quite extensively? Wouldn't it be possible to deal with that issue specifically rather than, in a sense, spreading such a broad net?

Mr. SHAY. It is possible, but I think the question has to be asked as follows: This tax only applies when an individual takes a strong affirmative step either to relinquish citizenship, which requires you to march in and file something with the State Department, or to give up your green card, give up your right to legal permanent resident status in the United States.

The simplest tax planning of all here to avoid these problems is to hold on to your citizenship and to hold on to your green card if you are going to come back. In that way, you are not going to have double taxation that isn't already relieved by our domestic law foreign tax credit mechanism, that isn't already relieved by treaties.

The point I am trying to make, Madam Chairman, is quite simple and that is we are dealing in a world where the tax is potentially so significant that I think individuals will take account of it.

I think the equities are in favor of adopting the administration proposal, recognizing that there are some technical changes that have to be made. I think the problems are in many respects more theoretical than real to a well-advised taxpayer. I do add that caveat, but that caveat I think is appropriate when you are restricting the gain to in excess of $600,000.

Chairman JOHNSON. Well, I am going to yield to my colleague, Mr. Hancock.

Mr. HANCOCK. I think, Mr. Shay, one of the comments that you made when you mentioned the word "fair share," and quite frankly, I think that is part of the problem that we have with our old tax law now, is that there is an awful lot of people that feel like, espe-

cially the investors, the ones that are making the personal sacrifices to investment of accumulated assets, now all of a sudden they feel like they are paying more than their fair share because of the way our tax law operates.

Ms. McCaffrey, you mentioned in your testimony, it indicates that you have been practicing tax law for approximately 25 years. Twenty-five years ago, or let's say 20 years ago, how often did you have anybody even talk to you about giving up their citizenship as a method to avoid or to postpone or to change their tax liability?

Ms. MCCAFFREY. Twenty years ago I wasn't having many people come to me to discuss that.

Mr. HANCOCK. What about 10 years ago?

Ms. MCCAFFREY. I would say it has been within the last 5 to 10 years.

Mr. HANCOCK. All right. Quite frankly since 1986, would you say?

Ms. MCCAFFREY. Over that period of time.

Mr. HANCOCK. When we got rid of the capital gains tax, and when we also went to a 28-percent tax and started getting rid of deductions, now we say, Well, our tax rate is actually less now, even though it is at 38 percent, it is less than it was at one time when it was up to 40 percent, but yet at that time you had deductions and now you don't have any deductions, except the interest on a residence. You know, that is about it.

Ms. MCCAFFREY. Those few clients of mine who have expressed an interest in perhaps expatriating for tax reasons, and I do emphasize that there have been very few, have been at least, equally, if not more concerned, with the estate tax burden than the income tax, although income tax is a concern.

But many of them, when they think about moving, think about moving to jurisdictions that pay—that have an income tax that in some cases are even higher than ours. It is the estate tax that is the problem.

Mr. HANCOCK. But Mr. Shay has indicated, and we respectfully disagree, that anybody that has assets over $600,000 is wealthy. I guess for a husband and wife that is 1.2 million. You know, 1.2 million wouldn't last very long in this day and age now, especially if you live 25 years, you may have trouble getting by. If you should have a widow who inherited $1,200,000, and if she happens to live to age 90, she is liable to become dependent on the government. If they are 65 now, 30 years from now I don't know what it is going to cost, and nobody else does, except I think you can just move your decimal point one place to the right and that will give you your cost of living 30 years from now. I am talking about what an average family or average person would have to have to stay in a retirement home, take the current process and just move the decimal point.

But it would appear to me that this statement that was made by the earlier panel, Mr. Norman, and I would like to get the response from this, or from each one of you: "If the policies of our country are driving our rich citizens to expatriate and encouraging the alien poor to emigrate, we have a problem." Now that was the statement made.

Well, let me ask the question. Does that exist? Is that what we are doing? Are we encouraging people with our tax laws to give up their citizenship and encouraging the alien poor to emigrate?

Mr. SHAY. If you are asking me whether current law, which creates the opportunity to renounce citizenship for the citizen and to expatriate for the long-term resident alien, if that creates the incentive, as professionals, we have to advise clients of that opportunity. Not everyone takes it, because many view the value of being a resident or a citizen of the United States to exceed the issue of taxes. But some do, and more will, I think, unless the issue is addressed, and the question is, do you want to let that continue or do you want to address the problem?

Mr. HANCOCK. But, in other words, I think everybody then pretty well agrees with what Mr. Shay said. However, should we address the problem by penalizing those people that have been successful rather than to make it beneficial for them to give up their citizenship, change the tax law to where it is beneficial to retain their citizenship, because they are the type of people that we need in this country.

Mr. STEPHAN. Congressman, I in my statement make the argument that a radical revision of our tax system would be attractive. I myself would favor replacing the income and the estate tax with a cash flow consumption tax. That is part of my good Republican credentials to make this assertion.

I do think that pressure for significant tax reform is thwarted by the continuation of loopholes in the law. I think given existing law, section 877 amounts to a loophole that 877(a) would block.

In other words, I am making the argument that it might be easier to move toward significant tax reform by taking away the opportunities to skirt a system that may be fundamentally flawed.

Mr. SHAY. I also would point out that while the tax lawyers at the two ends of the panel may be prescribing potentially differing approaches, I think I am hearing agreement that the current situation is unfortunate.

Ms. MCCAFFREY. I think that is right. I share your concern with the many problems in the tax system as a whole, but I am not sure that we should wait to cure this particular problem until we have a more rational overall tax system. This problem ought to be solved one way or the other. Mr. Shay and I simply disagree on the method to be used to solve it.

Mr. HANCOCK. But is this an opportunity to take a look at a more rational overall tax system.

Ms. MCCAFFREY. I agree.

Mr. HANCOCK. For instance, Stanford Hoover Institute's flat tax that they are suggesting, is it time we address that? You all are tax practitioners. Can we continue to what I call compound the felony by writing more regulations or tax law?

Ms. MCCAFFREY. No. I think it is time to take a hard look at the system. Its complexity has grown to the extreme that we have problems of this sort and when we try to cure a particular problem with a Band-Aid in one area, we find that we are creating two or three other problems in another area.

Mr. HANCOCK. Well, as a personal note I met with my CPA yesterday afternoon at 1 o'clock. He had his computer, I had my com-

puter, and along about 4 or 5 o'clock we finally figured out that maybe we were close to getting my income tax ready to file for 1994.

You know, I mean something is wrong, something is wrong when it takes that amount of time, and two computers, you know, when you have to carry your portable over to your CPA to look up information and still not even know for sure whether you are right or wrong.

Thank you, Madam Chairman.

Chairman JOHNSON. Ms. McCaffrey, am I correct in concluding from your testimony that you believe we can strengthen the current law and correct the problems in the current law to deal with this problem more effectively than adapting the administration's proposal?

Ms. MCCAFFREY. That is my testimony; that is what I believe. I believe section 877 can be strengthened to solve most of the problems. You are not going to wind up with a perfect system, but I don't think what the administration is proposing is going to be a perfect system either. I think over a 10-year period, if we are taxing U.S. source income, that the United States will wind up taxing most of what is appropriate for it to tax.

Chairman JOHNSON. Mr. Shay, would you agree that one of the problems in the current proposal is that while you can defer payment, you must make it and you accrue interest at a rate that could result in your paying more than the value of the asset in taxes?

Mr. SHAY. I guess I don't view that as much of a problem as others do because I think in part it is the price for taxing the correct amount and for assuring that the United States rather than another country gets to tax its fair share.

Chairman JOHNSON. Of course, there is a very significant difference here. We are forcing taxation on assets that must either be sold at a time when it is unfavorable and therefore, you are going to get an undervaluing of it, or in the trust area, aren't we forcing a cash obligation that there may not be any way to gain the cash to make good on? I mean, isn't that true? Isn't that one of the possibilities under this law?

Then you would have no choice but to ask for deferral, have no choice but to pay interest and have no choice in the end but to be liable for something greater than the assets. Correct me if I'm wrong, Ms. McCaffrey.

Ms. MCCAFFREY. I am glad you are turning your attention to the trust aspects of this proposal, because I think that those aspects are the most seriously flawed of all of the proposals, because what the proposal does is impose a tax on assets that a beneficiary has no right to have, and in the normal course of events may never receive.

There is an example in my prepared remarks that illustrates it, yet in order to give up an individual's citizenship, she is going to have to pay a tax on her deemed share of assets inside a trust. That seems to me to be very bad tax policy.

Mr. SHAY. I don't want to comment on the trust aspects of this. I specifically reserve technical comment on that in my testimony.

Chairman JOHNSON. Do you think there are problems in the trust aspects?

Mr. SHAY. I have not formed a strong enough view to express a view one way or the other which is what I said in my prepared testimony. I think it is a complex area, and actually, I defer to my colleague on my right as being far more expert in that area than I am.

But in response to your question, I want to again remind ourselves that the act that we are talking about of renouncing citizenship or of passing in your green card is one that the individual himself or herself will affirmatively take. So taxes will come into play for that act, if you think that you are better off by waiting, then you may pay another year's U.S. income tax to wait for the proposal.

Chairman JOHNSON. Of course then you do get back to Rabbi Moline's problem.

Mr. SHAY. But that doesn't affect your ability to leave.

Chairman JOHNSON. Even if you are paying taxes, Mr. Shay, it surely does affect your ability to leave. I mean, at least be honest about what we are talking about. I don't disagree you made some excellent points, but we are going to impose a tax. That for many will mean that you cannot exit, period. I mean, we ought to be honest about that.

Mr. SHAY. I am having trouble.

Chairman JOHNSON. You could give examples from your experience of the trust area of taxes that can be imposed that there will be no way that anyone can sell anything or do anything to realize that tax to pay. So you cannot by definition leave.

I mean, that is what we are doing here. That is not all of what we are doing here. And there is the problem that we all agree is there, that we do not want people to be able to renounce their citizenship for the purposes of evading taxes. That we are in agreement about.

But not to recognize that there is a downside here that is so significant that we are going to actually deny our own citizens the right to do something that in many other instances we have declared a sort of fundamental human right, the implications of that are very significant.

Mr. STEPHAN. Congresswoman, if I could jump in there, we are not addressing leaving in this bill.

Chairman JOHNSON. Well, we are making leaving impossible or possible.

Mr. STEPHAN. No, ma'am. Someone can become a permanent resident overseas and not be affected by this law. This law only applies to expatriation.

Mr. SHAY. Madam Chairman, I would agree that it is incumbent on us, if this proposal is going to move forward, to address the trust issues in a manner that would not have the outcome that you are describing. And I am frankly skeptical that it is beyond the realm of our imagination either in the bar or elsewhere, to come up with an approach that would avoid that result.

Chairman JOHNSON. Well, we will certainly relay that information to the conference committee, that there are problems in this bill that really have to be addressed before they bring it out of con-

ference committee, or it will have some very negative impact. My understanding is that it will be out of the conference committee in a very few days.

I would ask you, do you think the problems in this bill can be corrected in the next 3 or 4 days? I open that to all the panel.

Ms. MCCAFFREY. I think it is going to take much more than 2 or 3 days. I think that the people who are drafting the legislation and the corrective legislation need to draw on the resources of lawyers in the various bar groups across the country in order to help deal with this problem.

I am a member of the committee of the N.Y. State Bar Association tax section that has begun to study this a week or so ago, and we expect that we are going to have a report that will make some suggestions as to how the bill can be improved within the next several weeks. Other bar associations are conducting similar studies, and I think the information and the reports that come out as a result of that can be helpful to you to come up with a good proposal, one that could be passed maybe later this year, but not within the next several days.

Chairman JOHNSON. Thank you. We will be interested in those reports.

I do thank you all for your comments on, as I say, very short notice. Our notice was short as well as yours was short, and I think perhaps with your help, we perhaps can make rational sense of all of this.

Thank you very much.

Mr. SHAY. Thank you for your attention.

Chairman JOHNSON. Thank you.

[Whereupon, at 3:15 p.m., the hearing was adjourned.]

[A submission for the record follows:]

STATEMENT OF
JOHN E. CHAPOTON
SUBMITTED TO THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

March 27, 1995

I am pleased to present our views on the proposal to tax U.S. citizens upon expatriation. I am the Managing Partner of the Washington Office of Vinson and Elkins L.L.P., a law firm with a large international tax practice.

The principal purpose of my testimony is to make certain the Committee is aware of serious technical difficulties in the application of the expatriation tax to beneficiaries of trusts. We represent a U.S. trust the beneficiaries of which would be adversely affected by the proposed legislation in what we think are unintended ways. We have discussed these problems with the Committee staffs, the Joint Committee staff, and the Treasury Department's Office of International Tax Counsel, and I believe they are considering what, if any, changes in the proposal might be appropriate in response. The facts with respect to the trust are set out, in simplified form, below.

I would make three preliminary comments about the proposal you are considering before going into our specific problems. First, I would point out that the Code already contains provisions designed specifically to prevent expatriation by a U.S. citizen for the purpose of avoiding U.S. tax. It is obvious that the Treasury Department believes these provisions to be inadequate, and the Administration thus has proposed an "exit tax" as a substitute for existing law. The exit tax is a wholly new type of tax, without precedent in the Internal Revenue Code. That is a bold and unproven course to follow. The difficulty of designing an entirely new scheme of taxation in this area is illustrated by the many problems that have been identified in just a brief time in attempting to apply this new scheme to trust beneficiaries. It is likely there are other, undiscovered difficulties in the application of such a provision in other fact situations will emerge. It might be prudent to consider amending the provisions of existing law to make them work more effectively, rather than to adopt immediately such a radical new approach. We make some suggestions toward that end at the conclusion of this statement.

Secondly, the proposed exit tax, if enacted, would often be a major factor in an individual's decision to relinquish U.S. citizenship (from the U.S. to the country of the individual's birth or where he or she was raised and may now live, for example). The potential of a tax burden on expatriation or change in residency also could be a significant factor to a citizen of another country who is contemplating emigrating to the U.S. Only two or three other countries now attempt to impose such a tax, and even in those few cases the countries concerned modify the tax to make its application less stringent than the provision adopted by the Finance Committee. If the United States adopts an exit tax, it is quite possible (even likely) that such taxes will become the international norm. The Committee should consider carefully whether it wants all countries to impose these types of taxes on individuals who change citizenship, and if so whether the United States should adopt some sort of stepped-up basis rule for immigrants who enter this country, to prevent U.S. taxation of the gain in assets they bring with them that was accrued before they became U.S. citizens.

My third and final preliminary comment is to point out that the exit tax would, of course, be imposed without the realization of any income by the taxpayer. That is virtually unheard of in our income tax system; the only arguable precedents I can think of relate to so-called "section 1256 contracts" (where a mark-to-market rule was adopted to deal with specific tax avoidance problems through the use of straddles) and to mark-to-market tax rules for professional securities dealers, who already keep their books under a mark-to-mark system and

whose assets are readily convertible into cash. The exit tax would thus not only impose a tax at a much earlier point in time than would normally be the case (which is in itself a penalty), but would necessitate collection by the IRS when there may be no liquid assets with which to pay the tax, and in some cases (such as the case of the trust beneficiary described below) when the taxpayer has no access to the assets the gain on which is being taxed. These problems can be ameliorated, but not solved entirely, by deferral in collection of the tax. The important point to realize is that taxing appreciation in the assets of individuals before it is realized is a big step, and a step that unavoidably causes problems in application of the tax.

Problems in Application of the Exit Tax to Trusts

The beneficiary of a trust who might contemplate relinquishing his or her U.S. citizenship would face special problems under the provision proposed by the Treasury and under the version of the proposal adopted by the Finance Committee. The difficulties are principally a result of the fact that a trust beneficiary ordinarily has no access to the assets of the trust even though he or she has a beneficial interest in those assets. It does not at all follow that because a person is named a contingent beneficiary in a trust, even a large trust, he or she has any assets apart from that interest. Family estate planning that concentrates family assets in a trust often leads to the result that, though the trust may grow large over the years, subsequent generations of family members have no significant personal assets. The problem is compounded in the case of remainder beneficiaries because it may be many years before they receive any income or assets from the trust; and the problem is further compounded if, as is often the case, the remainderman's interest is contingent, and thus will only be realized if he or she outlives the life beneficiary.

Even in the seemingly simple case of a life beneficiary who is receiving distributions of income from the trust, the exit tax would have surprising consequences. If that individual expatriates, the gain on the trust's assets would be taxed to him or her even though all the capital of the trust, including all appreciation, will go not to that individual but to the remaindermen who ultimately receive the trust's assets. Further, the income beneficiary would not apparently obtain any step-up in basis.

Facts

The trust we represent was created many years ago. The trust instrument requires that all trust income be paid to a single beneficiary for his life, and upon his death and the death of his siblings, the trust terminates. The assets of the trust are then to be distributed to the children of the income beneficiary who are alive at that time. If any child of the income beneficiary is deceased, the assets of the trust are to be distributed to his or her children.

The trustees have no discretion to pay any principal to the income beneficiary or the contingent remaindermen (the children and grandchildren of the income beneficiary). Furthermore, the trust contains a strict spendthrift provision, which prevents any beneficiary from selling, assigning, or otherwise anticipating his or her beneficial interest in any way; for example, a beneficiary could not use a beneficial interest in the trust as collateral for a loan.

The income beneficiary and several of the remaindermen live abroad. In fact, some were born abroad and have never lived in the United States. The income beneficiary has lived in a high tax Western European country for more than 20 years, never even visiting the United States. He obviously will not realize a U.S. income tax benefit if he expatriates, but he is considering doing so for personal reasons. If the exit tax were adopted in its present form, the U.S. tax penalty, as described below, would be severe and, indeed, prohibitive in the case of the contingent remaindermen because it would significantly exceed the value of their other assets.

The Income Beneficiary

If the income beneficiary should expatriate, he would have tax liability determined by using the trust's basis in the assets "attributable" to his income interest. Presumably, the interest attributed to him would be based on the value of his life expectancy relative to the total value

of trust assets. Under the exit tax provision adopted by the Finance Committee, the following problems would be presented.

- The income beneficiary will pay tax on a portion of the unrealized capital gains in the trust's assets even though *he can never receive any portion of those capital gains.*

- The income beneficiary *will not have access to either trust assets or income in order to pay the tax* because the income beneficiary cannot anticipate his future income from the trust (which would stop tomorrow if he were to die).

- Certain U.S. source fixed or determinable income of the trust paid to the income beneficiary would be subject to U.S. withholding taxes, apparently with *no basis adjustment to reflect the fact he had paid a full tax* on part of the value of his income interest. It is unclear who, if anyone, would ever receive the benefit of the basis created by the deemed sale of trust assets.

The Contingent Remainder Beneficiaries

If a child of the income beneficiary expatriates, he or she will have a tax liability based on the unrealized capital gains on the proportionate share of trust assets attributed to his or her contingent remainder interest, as if the trustee has sold those assets and distributed the proceeds to the beneficiary.

- On an actuarial basis, it will be more than 22 years before any remainderman can expect to receive the assets on which he or she will pay a tax, and then only if surviving. Furthermore, the grandchildren of the income beneficiary have an even more remote interest they are not likely ever to receive (their grandparent would have to survive their parent). *Such interests can be extremely remote* but nevertheless can be subject to the tax as proposed.

- *A remainderman cannot reach trust assets to pay the tax*, so as in the case of the income beneficiary, a remainderman would have to pay tax out of other assets, if any. If a remainderman did not have assets adequate to pay the tax (and in the case posited, none of them do), *the provision would prevent him or her from expatriating.*

- A remainderman's interest is contingent, either on surviving the income beneficiary (in the case of a child of the income beneficiary), or on his or her parent not surviving the grandparent (in the case of a grandchild of the income beneficiary). *A remainderman would be required to pay the exit tax on gain in assets he or she may never receive.*

- A remainderman may obtain no basis in trust assets for foreign tax purposes, thus *potentially subjecting gains to international double taxation.*

Proposed Solutions

We think these problems can be ameliorated, if not solved altogether, by the following amendments to the provision adopted by the Finance Committee.

Income Beneficiary

At the election of the income beneficiary, no sale of assets should be deemed to have occurred. Instead, for some period (10 years, for example) the trust income would continue to be taxable to the income beneficiary as received, in the same manner as if he or she had not expatriated.

Remainder Beneficiaries

With respect to remainder beneficiaries of trusts, the following rules should be adopted:

a. De minimis rule. The interest should not be taxed if it is so remote as to represent an insubstantial proportion of the total interest in the trust determined on an actuarial basis (for example, 10 percent).

b. 1. Trust-level tax. Any tax with respect to a remainderman should be imposed on the trust, which has the assets with which to pay the tax, rather than on the income and remainder beneficiaries. The trustees can adjust trust interests and basis to take such payments into account to properly allocate the burden and benefit of the tax under many applicable local probate laws. *See, e.g., Estate of Warms,* 140 N.Y. Supp.2d 169, 171 (1995); *Estate of Bixby,* 140 Cal. App.2d 326, 388 P.2d 68 (1956).

2. Deferral of tax. Alternatively, a remainder beneficiary could be allowed to defer the payment of the tax until the interest vests and is distributed. The tax should continue to be calculated based on the gain with respect to the beneficiary's share of trust assets at the time of expatriation because any subsequent appreciation in value is accumulated at a time when the beneficiary no longer enjoys the protection of U.S. citizenship and U.S. law.

Furthermore, no interest should be assessed on the deferral because the exit tax is imposed upon unrealized gains, in advance of the time when those gains would normally be taxed. Deferral of tax until realization does not ordinarily carry with it an interest charge, and it should not in this case.

c. Refund procedure. Any tax paid with respect to a contingent remainderman should be refundable to the trust in the event the trust terminates without any interest vesting in that remainderman. Alternatively, the exit tax should not be due with respect to a contingent remainderman unless and until the remainderman becomes entitled to trust assets.

Even if these solutions were adopted, there would be the potential for double taxation of gain on trust assets if the exit tax is applies to beneficial interests in trusts. There does not appear to be any way other than renegotiation of international tax treaties to address this problem.

Alternative Approach

The unforeseeable technical and policy problems that might flow from the adoption of an exit tax in such a short time frame might suggest that a more viable alternative would be to make section 877 more effective. For example, consideration might be given to one or more of the following with respect to a U.S taxpayer who wishes to expatriate:

a. The taxpayer could be required to file with the IRS a complete financial statement, which would include a description of all assets.

b. The taxpayer could be required to agree to file annual information returns for a 10-year period following expatriation.

c. The taxpayer could be required to grant a lien on U.S. property or provide other acceptable security to assure payment of any future U.S. tax liability.

d. The taxpayer could be required to appoint a U.S. agent for the purpose of service of process.

Conclusion

We appreciate the Committee's consideration of the problems the tax on expatriation would cause for beneficiaries of trusts. We hope you agree that these consequences are undesirable and unintended.

JOHNSON ANNOUNCES HEARING ON THE TARGETED JOBS TAX CREDIT, THE EXCLUSION FOR EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE, THE ORPHAN DRUG CREDIT AND OTHER TEMPORARY TAX PROVISIONS

Congresswoman Nancy L. Johnson (R-CT), Chairman, Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will hold a hearing to examine issues relating to several recently expired provisions of the tax laws, including the targeted jobs tax credit (TJTC), the exclusion for employer-provided educational assistance, the tax credit for orphan drug clinical testing expenses, and the special rule for certain contributions of qualified appreciated stock to private foundations, as well as other tax provisions scheduled to expire. **The hearing will take place on Tuesday, May 9, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 10:00 a.m.**

BACKGROUND:

Targeted Jobs Tax Credit. Prior to January 1, 1995, certain employers could claim a credit based on qualifying wages paid to individuals from several targeted groups (Code section 51). The targeted groups consisted of individuals who generally were recipients of payments under means-tested transfer programs, economically disadvantaged, or disabled. The credit was equal to 40 percent of up to $6,000 of first-year wages paid to a certified member of a targeted group. Thus, the maximum credit generally was $2,400 per individual. With respect to economically disadvantaged summer youth employees, the credit was equal to 40 percent of up to $3,000 of wages, for a maximum credit of $1,200. The credit expired for individuals who began work for an employer after December 31, 1994.

Exclusion for Employer-Provided Educational Assistance. Prior to January 1, 1995, an employee's gross income and wages for income and employment tax purposes did not include amounts paid or incurred by the employer for educational assistance provided to the employee if such amounts were paid or incurred pursuant to an educational assistance program that met certain requirements (Code section 127). This exclusion, which expired with respect to amounts paid after December 31, 1994, was limited to $5,250 of educational assistance with respect to an individual during a calendar year. In the absence of the exclusion, for purposes of income and employment taxes, an employee generally is required to include in income and wages the value of educational assistance provided by the employer unless the cost of such assistance qualifies as a deductible job-related expense of the employee.

Tax Credit for Orphan Drug Clinical Testing Expenses. The orphan drug credit (Code section 28) provided a 50-percent nonrefundable tax credit for a taxpayer's qualified clinical testing expenses paid or incurred in the testing of certain drugs for rare diseases, generally referred to as "orphan drugs." Qualified testing expenses are costs incurred to test an orphan drug after the drug has been approved for human testing by the Food and Drug Administration (FDA) but before the drug has been approved for sale by the FDA. The orphan drug credit expired after December 31, 1994.

Gifts of Publicly-Traded Stock to Private Foundations. Prior to January 1, 1995, the deduction allowable for charitable contributions to private nonoperating foundations of certain readily marketable stock was the full fair market value of the stock on the date of contribution (Code section 170 (e)(5)). Thus, for donations made during the period prior law was applicable (July 19, 1984, through December 31, 1994), the rule generally applicable to donations of capital-gain property to nonoperating foundations (sec. 170(e)(1)(B)(ii)) -- which generally limits the deductible amount to the asset's cost -- did not apply to contributions of such stock.

Federal Unemployment Tax Act (FUTA) Exemption for H-2A Agricultural Workers. Under a program administered by the Immigration and Naturalization Service, aliens are admitted to the U.S. on a temporary basis to perform agricultural labor. Prior to January 1, 1995, this agricultural labor was exempt for purposes of FUTA employment taxes (Code section 3306(c)(l)).

-MORE-

Production Tax Credit for Nonconventional Fuels. Under current law, certain nonconventional fuels are eligible for a production credit equal to $3 per barrel or Btu oil barrel equivalent (Code section 29). The Energy Policy Act of 1992 extended the credit, for gas produced from biomass or synthetic coal fuels. These fuels must be produced domestically from a facility placed in service before January 1, 1997, pursuant to a written binding contract in effect before January 1, 1996. Fuels produced from facilities which satisfy the binding contract rule may qualify for the credit if sold before January 1, 2008.

Transportation Fuels Tax Exemption for Aviation Jet Fuel. The Omnibus Budget Reconciliation Act of 1993 generally imposed a 4.3 cents per gallon excise tax on transportation fuels effective October 1, 1993. However, a two-year delay from the transportation tax was provided for gasoline and jet fuels used in commercial aviation. Thus, on October 1, 1995, the current commercial aviation fuels tax exemption will expire. Revenues generated by the transportation excise tax are retained in the General Fund of the Treasury.

DETAILS FOR SUBMISSIONS OF REQUESTS TO BE HEARD:

Requests to be heard at the hearing must be made by telephone to Traci Altman or Bradley Schreiber at (202) 225-1721 no later than the close of business, Wednesday, April 26, 1995. The telephone request should be followed by a formal written request to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. The staff of the Subcommittee on Oversight will notify by telephone those scheduled to appear as soon as possible after the filing deadline. Any questions concerning a scheduled appearance should be directed to the Subcommittee staff at (202) 225-7601.

In view of the limited time available to hear witnesses, the Subcommittee may not be able to accommodate all requests to be heard. Those persons and organizations not scheduled for an oral appearance are encouraged to submit written statements for the record of the hearing. All persons requesting to be heard, whether they are scheduled for oral testimony or not, will be notified as soon as possible after the filing deadline. Witnesses scheduled to present oral testimony are required to summarize briefly their written statements in no more than five minutes. **THE FIVE MINUTE RULE WILL BE STRICTLY ENFORCED. The full written statement of each witness will be included in the printed record.**

In order to assure the most productive use of the limited amount of time available to question witnesses, all witnesses scheduled to appear before the Subcommittee are required to submit 200 copies of their prepared statements for review by Members prior to the hearing. **Testimony should arrive at the Subcommittee on Oversight office, room 1136 Longworth House Office Building, no later than 5:00 p.m. on Friday, May 5, 1995.** Failure to do so may result in the witness being denied the opportunity to testify in person.

WRITTEN STATEMENTS IN LIEU OF PERSONAL APPEARANCE:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business, Tuesday, May 23, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages including attachments.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at 'GOPHER.HOUSE.GOV' under 'HOUSE COMMITTEE INFORMATION'.

Chairman JOHNSON. Good morning.

We have a long day ahead of us, so I am going to be brief, and I will encourage my colleagues and the witnesses to be sensitive to the difficulty of examining seven provisions of tax policy in a single day and to observe the limitations of our time.

Perhaps someone should call the National Enquirer, because when I first looked over the list of expiring provisions we are considering today, I could have sworn I saw Elvis. [Laughter.]

Just to give you some idea of how long we have been temporarily extending some of these provisions, in 1978 the Shah was in power in Iran, Brezhnev was in power in the Soviet Union, a letter could be mailed for 15 cents, "Annie Hall" won an Oscar, and the best-selling album of the year was "Saturday Night Fever." Disco may be gone, but the expiring provisions, like Elvis, live on.

All of these provisions have some merit. In fact, I have sponsored or cosponsored legislation to extend many of them. However, it is not clear that we can afford to extend them all. It is indeed timely and appropriate to examine these provisions to see how well they are working, to determine which of them may need fine-tuning, and to decide whether some of them have outlived their usefulness.

It is my hope that the 104th Congress will determine which of these provisions have sufficient merit to justify enacting them permanently and which we can do without. We do not have a limitless list of loophole closers. Every time we extend expiring provisions, we have to make up the revenue somewhere else.

If we were to make permanent each of the seven provisions we are examining today, along with the two provisions we will be considering tomorrow, the R&E credit and the research expense allocation rule, the 5-year cost to the Treasury would be nearly $20 billion. Of course, budget policy may dictate resorting to temporary extensions, something which provides less certainty and a greater administrative burden for taxpayers and the service alike. In any event, with the budget deficit as a backdrop, we do not have the luxury of ignoring the costs associated with extending these provisions.

I welcome today our witnesses and I thank them for joining us.

With that, I will yield to my Ranking Member, Mr. Matsui.

Mr. MATSUI. I would like to thank Chairwoman Johnson for putting on these hearings. I think they are extremely important, particularly in light of the fact that this year we would like to make certain provisions permanent, and I would like to associate myself with her remarks in terms of the issue of permanency.

Let me just make a couple of very brief observations about the extension of these provisions. I would hope, as Chairwoman Johnson has indicated, that we do make these provisions permanent, for two reasons: One, obviously, we do not get a chance to really prioritize. As these provisions come up, we reach a deadline, we have very little opportunity to either make changes or prioritize and look at others and drop some, because they all tend to go together. Of course, that is not really a good way to legislate.

The second reason is that we need to create certainty. We need to create certainty for those that use this credit. The R&E credit is a great example. Many of the business leaders, high-tech companies and others that use this credit have always assumed that they

were going to be extended, but when we reach a deadline, uncertainty occurs. They might be preparing their fiscal budget for the next 2 or 3 years, and it does create a great deal of difficulty and problems.

Certainly, the issue of financing, as the Chairwoman indicated, is always there that we have to deal with. Nevertheless, it is my hope that we will be able to make these provisions or at least some of these provisions permanent in this Congress, so that we will not have to deal with this as we have in the past.

I would like to also indicate that there are four provisions that I would like to see extended permanently. I will not mention them, but I am going to be working on these with the Chair, with the notion that we do make, for example, the research experimentation credit, the allocation of research experimentation credit, and the allocation of research experimentation expenses and a number of others permanent.

With that, if time permits, I would like to yield to Mr. Levin from Michigan.

Chairman JOHNSON. Do any other Members have an opening statement?

Mr. Levin.

Mr. LEVIN. Madam Chairwoman, I would ask that my opening statement be put in the record.

Chairman JOHNSON. Without objection.

Mr. LEVIN. Let me just briefly say a few things. I would like to move along, because our colleagues have been patient, and there are many more witnesses to come.

First of all, I would like to commend you for this hearing. It will be lengthy, but I very much agree with your insistence that we do this thoroughly.

Let me just say a word about employer provided education assistance and its importance, section 127. I think sometimes we underestimate the impact of the Code on the overall competitiveness of this country. I feel very deeply about its extension, and that is why the first day of the session, Mr. Shaw and I introduced legislation to reinstate and permanently extend it.

This provision has been a win-win provision for this country, for employers and employees alike. It has helped thousands of people to be retrained, move up the ladder of success to their benefit and the benefit of their companies.

In my statement, I refer to a gentleman by the name of Earl Hartman who worked at the GM Tech Center in Warren, Michigan, for 29 years. He had to quit school at the beginning of his employment to help raise his family. Now, he has been able to return to college and become a computer programmer.

The vast majority of people who benefit from this program, about 70 percent, earn less than $30,000 a year. Without this credit, without this exemption, they would not be able to continue. This deduction, to state the provisions technically correct, is vital for employees and employers alike. Together it provides really the tools so that they can be on the cutting edge of tomorrow's developments economically.

My colleagues, I hope very much that when we end this hearing, we will conclude that this is a vital provision and that we should permanently extend it. I would like to put in the record a statement I received today from the University of Michigan. I will leave the rest of my statement for the record.

Thank you very much.

[The opening statement follows:]

SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS

REMARKS ON EXPIRING PROVISIONS

BY

THE HONORABLE SANDER LEVIN

MAY 9, 1995

Madam Chairwoman, I would like to thank you for calling these hearings. The issue of renewing many of these provisions has continued to be a thorn in the side of everyone involved. I believe that they will put us on the road to removing this thorn, so that we can stop coming back again and again to revisit the same old issues as this process has been particularly burdensome for all of those involved.

I would like to call attention to the provision which allows an important exemption for employer-provided education assistance. On the first day of this Congress, Representative Clay Shaw and I introduced a bill that would reinstate and permanently extend this provision in order to help the millions of workers who are not being taxed on their tuition.

This provision is a win-win proposal for employers and employees alike. Companies use it to retrain workers whose jobs or skills have become obsolete. Workers use it as a way to improve their education, to move up the ladder of success, and to stay ahead of new technologies. Failing to extend it will send the wrong message to employers and employees about the importance of education.

The importance of this exemption can be best illustrated by Earl Hartman, who worked at the GM Tech Center in Warren, Michigan, for 29 years. After having to quit school to raise a family, Mr. Hartman has been able to return to college and become a computer programmer. He is even now working toward getting his Master's degree in science and technology.

Since the creation of employee educational assistance programs, millions of workers, much like Earl Hartman, have benefited by using them as a means to upgrade skills and keep up to speed with new competitive, technological, industrial developments.

Seventy percent of those who us this training earn less than $30,000 a year. Many of who have contacted me about this exemption say they will not be able to continue their education without this deduction because they simply cannot afford to pay the taxes that have been tacked onto their tuition.

The people who use this provision will be tomorrow's engineers, accountants, computer specialists, in short, tomorrow's cutting edge. This exemption is important to people who live in suburban areas, much like the one I represent. They know first-hand that staying on the cutting edge of new skills is the only way to protect themselves in our rapidly changing economy.

Since "employee educational assistance" began, millions of workers have used them to upgrade their skills and keep up to speed with new technological and industrial developments.

I hope that by the end of today's hearing the members of this Subcommittee will realize the importance of this exemption to employers, to employee's, and to the nation as a whole.

Chairman JOHNSON. Thank you, Mr. Levin.
Mr. Houghton.

STATEMENT OF HON. AMO HOUGHTON, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. HOUGHTON. Thank you, Madam Chairman.

Could I just make a comment. It is not easy to hear your voices. I do not know what happens to the back of the room, but maybe if they could put up the volume a little bit, it would be great.

Chairman JOHNSON. We will tell you, as we so often do, to get close to the microphone.

Mr. HOUGHTON. Maybe I will be too loud and compensate for that.

Mr. LEVIN. You are never too loud.

Mr. HOUGHTON. I would like to thank you for letting me be here. I am here on the concept of a targeted jobs tax credit. It is good to be back at my old Committee. I will try to be brief, because you have lots of witnesses and many panels.

The reason I am here, Madam Chairman, along with Mr. Rangel, is to tell you of my plans to introduce legislation within the next several weeks to reinstate, in effect, a reform of the new and different targeted jobs tax credit. This credit is the same old plan. The concept is the same old plan as the one which was started in 1978 and which ended in December of last year. The rules are entirely different.

Why are we doing this? For one simple reason, in the House, our hopes are to change the welfare program dramatically, and that means to make it essential that people, where they are able, move into the job market. The concept is good and our intentions are admirable, but there is one missing piece. Where are the jobs?

It is easy to sort of replan welfare, but to make it work, there must be receivers out there to offer work. These things just do not happen out of thin air. Somebody has to have an overwhelming need, a big heart or an incentive to take on people who usually have a very low skill base. The job market, as you know, is moving away from that type of job category.

So enter TJTC, the targeted jobs tax credit. Two million people leave welfare every year, one million because they have found jobs, but those jobs are usually temporary, and so the charade goes on. They move into a job and out of a job, into a job and out of a job.

Under the House welfare reform bill, after 5 years, we could have over 500,000 people a year going off welfare forever, and even sooner, if the States make special procedures on this. Where will these people go, into the private sector? Sure, to some degree. But let us remember that the McDonald's and the service stations and the Pizza Huts and people like that have enormous profit squeeze on them. The margin is very thin, and so many cannot take a chance.

Also, as you know, the larger corporations need sure-fire skilled and dependable people for a variety of different reasons. The private sector can and will absorb some of its own, but that will not take care of the more risky cases. Here is where the tax incentives come in. In effect, for up to a year, with varying tax incentives, you can economically justify taking a chance on someone. If you win, you have saved a life and trained a good employee and put that

person back into a self-respecting job in the work force. If you lose, you have not lost an arm and a leg in the process.

There are arguments against this, particularly the programs which expired on December 31 of last year. We have tried it and it did not work. The cost to the government was a lot of money, and over 90 percent of the people would have been employed anyway, and that is true. The concept was good and the mechanics were bad.

What have we done to fix those? We have tried to take a look at various aspects of those mechanics. For example, rather than hiring people and then shoving them into this particular category in order to get the tax incentives, there is a very careful precertification and clearing process that goes on.

Another criticism is employees do not stay on the job. You get your incentive, the employer gets the benefit and then the job is over with. We have sort of backloaded credits to give incentive to the employer to keep the employee on the job longer.

Madam Chairman, I have been around business for a good share of my life and I think this has a good chance of working. The first approach was an invitation for problems. To sum up, for welfare reform to work, there must be jobs for job seekers, and this is a good way to help the process along. It is a good investment, and in the long run it is going to save the government money.

Thank you very much.

[The prepared statement follows:]

STATEMENT OF THE HONORABLE AMO HOUGHTON

BEFORE THE SUBCOMMITTEE ON OVERSIGHT

COMMITTEE ON WAYS AND MEANS

MAY 9, 1995

Madame Chairman, members of the Subcommittee, I am pleased to have the opportunity to appear before you to discuss a new Targeted Jobs Tax Credit program. The Targeted Jobs Tax Credit (TJTC) was enacted in 1978 to improve the private sector employment prospects of disadvantaged individuals. The credit expired on December 31, 1994 after being extended by Congress on nine occasions, most recently in the Omnibus Budget Reconciliation Act of 1993. Prior to January 1, 1995, certain employers could claim a credit based on qualifying wages paid to individuals from nine targeted employee groups. The targeted groups consisted of individuals who generally were recipients of payments under means-tested transfer programs, were economically disadvantaged, or were disabled. The credit was equal to 40 percent of up to $6,000 of first-year wages paid to a certified member of a targeted group. Thus, the maximum credit was $2,400 per individual. With respect to economically disadvantaged summer youth (aged 16 and 17, working between May 1 and September 15), the credit was equal to 40 percent of up to $3,000 of wages, for a maximum credit of $1,200.

I have developed a new program after consulting with those in the private sector who have been involved in placing and hiring individuals eligible for the program. In addition, I have reviewed the comments of those who have criticized the existing program and believe my new proposal, which is before you, addresses their concerns.

The new JOBS program targets two groups: a.) those who are receiving public assistance or b.) Youths at high risk in danger of becoming dependent on it. At the same time, the new TJTC program calls for streamlining its administration through use of objective eligibility criteria wherever possible. Precertification should eliminate any identified abuses while at the same time keeping the program user friendly.

I support the new Targeted Jobs Tax Credit program because I believe it will help to achieve a critical goal of this Congress -- providing private sector employers with the appropriate incentives to hire and train those individuals in our society who are economically disadvantaged and who are receiving or at risk of longtime dependence on public assistance programs. If we continue to have as our goal moving people away from dependence, then it is incumbent upon us to provide the private sector with the incentives they will need to hire the economically disadvantaged.

Ultimately, if we are to be a productive society, we must look to the private sector, not the public sector to provide permanent employment for our citizenry. That is why I believe that there is no better time than right now to forge a new public / private sector partnership to move people from dependency to self-sufficiency.

What convinced me to develop an improved Targeted Jobs Tax Credit program were the statistics from my own State and district. Since 1978 over 374,000 people have been hired under TJTC at a savings to New York employers of $523 million. In 1994 alone, the savings to New York employers totaled $60 million. Over the nearly 16 years of the program the State Department of Labor estimates an economic multiplier effect on the economy of New York of $10 billion.

During 1994, hiring from the categories of Medicaid, public assistance, and SSI recipients represented a federal net savings of $7.9 million. This translated into reduced spending on these programs for my State's taxpayers of $34 million.

During 1994, in my home district, there were 317 TJTC hires within the categories of welfare recipients, disabled, and ex-offenders. Taxpayers in these counties saved $1.65 million in public assistance and home relief. This amounted to a cost to the Treasury of $443,000. When reduced federal welfare, Medicaid, and SSI payments for 1994 were considered, the cost to the federal taxpayer of the TJTC program was reduced from $443,000 to $37,000.

Based upon the analysis supplied to us by New York State, in addition to what I have heard from employers across the nation, I am convinced that a TJTC program makes economic sense. We need to reinstate it as quickly as possible.

There have been valid criticisms of the program. The previous TJTC was successful, but the criticisms raised by the Department of Labor must be addressed. As a result, I have examined the concerns that have been raised. The private sector, the companies actually hiring the economically disadvantaged, incur extra costs when they choose to hire and train the structurally unemployed. That is exactly what the tax credit is designed to offset. A workable credit needs to provide a benefit to the public sector also.

As you have heard, the New York experience indicates that credit's costs are significantly offset by dramatic reductions in public assistance payments. Yet at the Federal level, because of the way we score tax incentives, we fail to take such spending savings into account. We also fail to account for the long term benefits to our society of moving people into the work force and away from dependency.

Madame Chairman, I have taken the liberty of distributing to the members of the Subcommittee a discussion draft of the new TJTC program which I intend to introduce shortly. At this point, I await a revenue estimate by the Joint Committee on Taxation and have as my goal to introduce a bill with approximately the same revenue impact as the previous TJTC program.

The first, and I believe the most significant change would be to require employers to pre-screen potential hires for TJTC eligibility prior to offering them a job. This would eliminate the so-called employer windfall issue. Probable TJTC eligibility would be known to the employer before a job was offered.

The next most significant change would encourage the transition from dependence to independence. Thus, the new TJTC program would extend the current welfare, SSI, and general assistance eligibility to include those receiving food stamps, WIC (Women, Infant, and Child), Medicaid and public housing benefits.

Higher wage and retention incentives have been incorporated. The credit would be in two tiers. Instead of the current 40% of the first $6,000 in wages earned, the new credit would be 35% of the first $5,000 earned in the first six months of employment. During the second six months of employment, the credit would be 45% of up to $5,000 in wages earned. The credit is backloaded to reward employers who are successful in keeping their TJTC workers on the job for a full year.

The high-risk youth category has been expanded to recapture 23 and 24 year olds who were dropped from the original program. Statistics indicate that those with little job history and few job skills by the time they reach ages 23 or 24 are at the greatest risk of joining the permanently unemployed and entering a life of economic dependence, or even worse, crime and drug addiction.

The veterans category has been changed to cover all veterans, not just those from the Vietnam era, who have been on public assistance during the previous 18 months. Ex-offenders, and summer youth would also be eligible for a credit. The remaining categories of eligibility from the old program have been dropped.

Most of the previous administrative difficulties and delays will be eliminated through the use of objective eligibility criteria, and the use of uniform, nationwide application forms.

I hope the Subcommittee will agree that we need to provide the private sector with the incentives it needs to seek out and hire the traditionally "hard to employ". I believe the improved TJTC program can go a long way toward fulfilling that policy goal. I look forward to receiving the Subcommittee's input and working with you on this important issue.

Chairman JOHNSON. Thank you, Mr. Houghton.
Mr. Collins.

STATEMENT OF HON. MAC COLLINS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF GEORGIA

Mr. COLLINS. Thank you, Madam Chairman.

I thought it was just me down here getting old and could not hear well, but I am glad to see that Amo says also he has a problem with the acoustics in this room from this perspective.

We appreciate the opportunity to discuss with you and other Members of the Committee today H.R. 752, which is to repeal a tax that has actually not been levied yet, but will come up later this year dealing with aviation fuel.

As a bit of information, Madam Chairman, we have at this point over 60 cosponsors of this piece of legislation, that is Ms. Dunn and I who actually introduced the bill, 19 Members of the Ways and Means Committee I am pleased to announce are cosponsors. For those of you who are not, we hope by the end of the day that your names can be added to the list.

Madam Chairman, it is a well known fact that the airline industry has suffered tremendously in the last few years and their financial situation is not good overall. A strong airline industry is very important to this Nation. It provides not only a number of jobs in the service area that they render, but also in many other areas that are affiliated with the airline industry as far as manufacturing or even offsite jobs around the many hubs that we have in this country.

The airline industry itself—and I have talked to a number of the chief executive officer's—actually supported the idea of deregulation several years ago, and I commend them for the way they have actually adjusted to deregulation. It has caused some tremendous difficulties for them, but they have adjusted well. Shortly after the deregulation, they had a serious downturn in the economy. We as the Federal Government, unfortunately, have compounded the problems of our Nation's airline industry with heavy-handed fees and taxes, placing the industry again in extreme financial jeopardy. This is what we hope to address and help them with in this particular provision.

I want to make a few major points and I would like to respond to any questions from the Subcommittee. First of all, beginning in October of this year, the airline industry will be required to pay a new 4.3-cents-per-gallon tax on jet fuel under the terms of the Omnibus Budget Reconciliation Act of 1993.

The tax is projected to cost the airlines more than $527 million annually, and that is already on top of $6.5 billion in annual fees and taxes industry has already collected, which again is on top of any local, State, and Federal taxes which businesses already pay.

The point I hope everyone will keep in mind is that the industry is not trying to escape paying its fair share of the country's tax burden, because the industry is already paying more than their fair share. As the government continues to add more and more taxes, the airline industry is struggling through its worst financial crisis in history.

Just consider this situation since 1990; the industry has lost a staggering $13 billion, and that is without a fuel tax. The airline industry has laid off almost 120,000 people. The increase in tax equates to the annual cost of compensation for an average of 10,000 employees. The U.S. airlines have either canceled or deferred orders and options on more than 1,000 aircraft, and 125,000 high-paying aircraft manufacturing jobs have been eliminated.

With the exception of Southwest Airlines, every airline has a "junk" credit rating with the capital markets. Even airlines, traditionally considered strong, pay a fortune now to borrow money. In the third quarter of last year, the Standard & Poor's stock index listed the airlines last in the industry groups. The 500 companies in the S&P 500 stock index fall into 88 industry groups. Airlines are listed number 88, dead last.

Notwithstanding this condition, in the past 4 years, virtually every Federal tax or fee imposed on the industry has been increased. In addition, two new fees were added, passenger facility charges and the agriculture inspection fee.

I think many Members of Congress hold the view that these fees do not affect the industry, because they can pass it on to the passenger. The reality is that the pressures of competition is so strong that the airlines have to absorb these fees. Thus, a percentage increase in the mandated fee becomes the same percentage removed from the profitability of the airline. That, I believe is the underlying reason for the $13 billion loss over the past 4 years.

The fuel tax was enacted to help lower the Federal budget deficit. However, some fees paid by the airline industry already go toward supporting government functions and deficit reduction.

For example, the Aviation Trust Fund covers 75 percent of the costs of operations of the Federal Aviation Administration. The customs user fee was increased from $5 to $6.50 to pay for NAFTA, the North American Free Trade Agreement, although aviation rights are not part of the NAFTA Treaty. The passenger ticket tax was increased from 8 to 10 percent in 1990, with 2 percent diverted from the Aviation Trust Fund to the general fund for 2 years to help pay down the deficit.

I also want to mention, Madam Chairman, that this legislation has extremely broad support from businesses throughout the country. I was privileged to a letter not too long back that listed a number of those supporters.

In closing, I want to emphasize that it is time to put a stop to this irresponsible action. The airlines are not cash cows. They are taking aggressive actions to restructure and return to sustained profitability. This is requiring tough choices and difficult sacrifices. Employees have made significant wage and benefit concessions to help provide financial stability for their airlines and their families, and it is beyond all reason to continue to have them pay so much more than their share.

Again, thank you for this opportunity. Ms. Dunn will follow me, and we will both be open to questions from the Committee. Thanks again.

Chairman JOHNSON. Thank you very much for your testimony.

Ms. Dunn.

STATEMENT OF HON. JENNIFER DUNN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WASHINGTON

Ms. DUNN. Madam Chairman, Mr. Matsui and Members of the Committee, it is an honor and a pleasure for me to appear before this Subcommittee to testify on behalf of H.R. 752, a measure that will repeal the commercial jet fuel tax.

Madam Chairman, Mac Collins and I both appreciate the support expressed by this Subcommittee and the Full Committee in supporting our bill. As Mr. Collins said, 19 Full Committee Members support our bill, and 6 Members of this Subcommittee also are sponsors.

I am an original cosponsor of the legislation and a strong supporter of the airline industry. Yet, I cannot begin to express the level of support I feel for this bill. Given the prominence of the Boeing Co. in Washington State, certainly this is a parochial problem for me and for my good friend and colleagues on the Ways and Means Committee, Congressman McDermott. Both of us have many aviation employees who live in our respective districts.

Yet, this is a much larger problem with national implications. It affects millions of citizens through regional job losses and reduced commercial and passenger service.

Mr. Collins and I have compared our testimony, so as not to be too long or redundant. The facts that he presented are accurate and, as accurate as they are, astounding. I would like to offer a few facts of my own.

As Mr. Collins noted, since 1990, 125,000 aircraft manufacturing jobs have been lost. In that period, Madam Chairman, 50,000 of these jobs have come from the Boeing Co., from my part of the country and the largest aviation manufacturer. In February, Boeing announced another 7,000 layoffs, and the Nation's other leading aircraft manufacturer, McDonnell Douglas, announced that it might halt production of its largest airliner, the MD–11. Both McDonnell Douglas and Boeing have had to take such actions because of one simple reason. The domestic airlines cannot afford to purchase many new airplanes.

Madam Chairman, the airlines have lost almost $13 billion—service is being cut, carriers are going under, and others are threatened. Our industrial aviation manufacturing base is under severe stress, and yet the U.S. Government will soon impose an additional tax of over $520 million per year on the industry.

Mr. Collins mentioned that the aviation industry already pays a number of taxes. I would like to list some of those for you, and these are 1994 numbers. The airline industry pays a passenger ticket tax of $4.742 billion a year, a cargo waybill tax of $261 million a year, an international departure tax of $235 million a year, an INS, Immigration and Naturalization Service, user fee of $264 million a year, a customs user fee of $283 million a year, an agriculture inspection user fee of $81 million a year, and in 1994 a passenger facility charge of $782 million a year. They are not trying to escape taxes, Mr. Chairman.

In February, I met with Herb Kelleher, who is the chief executive officer of Southwest Airlines, a company that has been doing reasonably well. His point was both succinct and clear: This new tax which will be imposed beginning October 1 will severely hurt his

currently profitable airline, reduce the ability of Southwest and other carriers to purchase planes from Boeing and McDonnell Douglas, and will severely threaten the viability of other carriers.

Madam Chairman, I hope this Committee will heed the advice of Mr. Kelleher. I pledge to work with you to repeal this dangerous and ill-advised tax.

In fact, Mr. Collins and I have also introduced a bill that will serve as a partial offset for this burdensome airline jet fuel tax, H.R. 1024, the privatization of the Government Printing Office, and that has been given a preliminary scoring by CBO of right around $1.5 billion. Mr. Collins and I have testified in front of the Budget Committee and the Transportation and Infrastructure Committee regarding our plan to remove the jet fuel tax in a fiscally responsible manner.

Madam Chairman, I thank you for this opportunity to appear before the Committee.

[The prepared statement follows:]

Testimony

Congresswoman Jennifer Dunn

Madam Chairman, Mr. Matsui, and Members of the Committee, it is an honor and a pleasure for me to appear before this subcommittee to testify on behalf of H.R. 752, a measure that will repeal the commercial jet fuel tax.

Madam Chairman, Mac Collins and I both appreciate the support expressed by this subcommittee and the full committee in supporting our bill. For the record, 19 Members of the Ways and Means Committee and 6 Members of this subcommittee are cosponsors.

I am an original cosponsor of this legislation and a strong supporter of the airline industry, yet, I cannot begin to express my level of support for this bill. Given the prominence of Boeing in Washington state, this is a parochial problem for myself and my good friend Congressman McDermott. We both have many aviation employees who live in our respective districts.

Yet, this is a much larger problem with national implications. It affects millions of citizens through regional job losses, and reduced commercial and passenger service.

Last night, Mr. Collins and I compared our testimony so as to not be too long or redundant. The facts that he presented are as accurate as they are astounding. But, let me add a few facts of my own.

As Mr. Collins noted, since 1990, 125,000 aircraft manufacturing jobs have been lost. But, Madam Chairman, in that period, 50,000 of those jobs have come from The Boeing Company -- from my part of the country and the largest aviation manufacturer. And in February, Boeing announced another 7,000 layoffs and the nation's other leading aircraft manufacturer, McDonnell Douglas, announced it might halt production of its largest airliner - the MD-11.

Both, McDonnell-Douglas and Boeing have had to take such actions because of one simple reason: the domestic airlines cannot afford to purchase many new planes.

Mr. Madam...the airlines have lost almost $13 billion...service is being cut...carriers are going under and others are threatened...our industrial aviation manufacturing base is under severe stress, and yet, the United States Government will soon impose an **additional** tax of over $520 million dollars per year on the industry.

Let me list the taxes **already being** paid by the airlines:

1994 NUMBERS (Estimated)

TAX OR FEE	AMOUNT	TOTAL REVENUE LOSS
Passenger ticket tax	10%	$4,742,000,000
Cargo waybill tax	6.25%	261,000,000
International departure tax	$6.00	235,000,000
INS user fee	$6.00	264,000,000
Customs user fee	$6.50	283,000,000
Agriculture inspection user fee	$1.45	81,000,000
Passenger facility charges	$3.00	782,000,000
TOTAL		**$6,648,000,000**

1993 NUMBERS

TAX OR FEE	AMOUNT	TOTAL REVENUE LOSS
Passenger ticket tax	10%	$4,472,000,000
Cargo waybill tax	6.25%	255,000,000
International departure tax	$6.00	223,000,000
INS user fee	$5.00	220,000,000
Customs user fee	$5.00	138,000,000
Agriculture inspection user fee	$1.45	74,000,000
Passenger facility charges	$3.00	486,000,000
TOTAL		**$5,868,000,000**

In Februry, I met with Herb Kelleher, CEO of Southwest, an airline that has been doing reasonably well.

His point was both succinct and clear. This new tax, which will be imposed beginning October 1st, will severely hurt his **currently** profitable airline, reduce the ability of Southwest and other carriers to purchase planes from Boeing and McDonnell Douglas, and severely threaten the viability of other carriers.

Madam Chairman, I hope this committee will heed the advice of Mr. Kelleher. I pledge to work with you to repeal this dangerous and ill-advised tax.

Chairman JOHNSON. Thank you very much.
I would like to recognize Hon. Mr. Roth.

STATEMENT OF HON. TOBY ROTH, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF WISCONSIN

Mr. ROTH. Thank you, Madam Chairman. I am delighted to join my colleague Mr. Collins, Mr. Houghton, and Ms. Dunn before the Committee this morning.

I am here to testify in support of the permanent exemption for our airlines, the 4.3-cents-per-gallon transportation fuel tax which would be going into effect October 1.

A question was asked here this morning by Mr. Houghton. He asked where are the jobs going to come from. I will tell you where the jobs are going to come from. The jobs are going to come from the area of travel and tourism. With the huge trade deficit we have this year, one area where we have a trade surplus is in the area of foreign tourists coming to the United States. We are getting in about $1.5 billion because of foreign tourists coming here and shopping and giving us that kind of a trade surplus. This is why tourism is so important.

As the Chairman of the Travel and Tourist Caucus, I can tell you that the restaurants, the small stores, small businesses, hotels and service industries in our State of Wisconsin, if we have a good tourism year, we have an additional 147,000 jobs, and that is even more true for Maryland, Michigan, California, Connecticut, Missouri, or Texas. This is true throughout our country, and that is why this has such a tremendous impact on us.

The unreasonable tax that would be imposed on one segment of the travel and tourist industry, the airlines, will cost good paying jobs, essential travel services, and quite possibly will deliver a crushing blow to many of the U.S. carriers struggling to get back on their feet.

As Chairman of the Travel and Tourist Caucus, Madam Chairman and Members of the Committee, I know firsthand how vital our Nation's airlines are to the health of the U.S. economy. Travel and tourism added $127 billion to the national coffers last year. People like you have a tremendous responsibility. I again want to emphasize, $127 billion came into our national coffers because of travel and tourism, and this is many times lost. Travel and tourism adds $127 billion to the national tax coffers, with several billion dollars coming directly from the airlines industry.

In addition to these Federal taxes and other State taxes, the airlines pay over $6 billion in passenger and excise taxes, the equivalent of a 46-cents-per-gallon fuel tax. The airline industry already pays their fair share, as has been so adequately pointed out in the testimony this morning, of the American tax burden. Even under today's Tax Code, the airlines have lost a staggering $12.8 billion in the last 4 years, and that is something I think we have to always keep in mind.

While in recent months the industry has shown small signs of recovering from the $12.8 billion loss, recovery has come only at the sacrifice of 120,000 U.S. airline employee jobs and 125,000 U.S. aircraft manufacturing jobs. Midwest Express, one of the companies that is in my congressional district, has estimated that if the fuel

tax had been in place in 1994, it would have cost the airlines $2 million. That amounts to 22 percent of their total operating revenue for last year alone.

Madam Chairman and Members of the Committee, I think that we have to make sure that the companies pay their fair share, but let us not drive these people out of business. If they do not have any business, we do not have jobs, we do not have jobs in our restaurants and our motels and all across the board. We do not have profits, no jobs, and also no taxes.

This bill acknowledges the sacrifices of airline industry employees who took pay cuts to keep their companies in business. It promotes economic growth and employment in one of our Nation's most dynamic and untapped industries of the travel and tourism industry. For that reason, Madam Chairman and Members of the Committee, I hope that you will agree with the panel here this morning and also with our testimony.

Thank you.

CONSUMER CREDIT SUBCOMMITTEE

United States
House of Representatives

Testimony
Representative Toby Roth
House Committee on Ways and Means
Subcommittee on Oversight

May 9, 1995

Mr. Chairman:

I testify today in support of a permanent exemption for the airlines from the 4.3 cents per gallon transportation fuel tax set to take effect on October 1, 1995.

This permanent exemption is one provision of H.R. 1083, "The Travel and Tourism Relief Act of 1995," which I introduced in the House of Representatives February 28, 1995.

The five provisions of the Travel and Tourism Relief Act are 1.) to permit travel agents independent contractor status, 2.) to restore the meal and entertainment tax deduction from 50 back to 80 percent, 3.) to make permanent the 4.3 percent airline fuel tax exception, 4.) to provide a tax credit for companies promoting the U.S. abroad, and 5.) to allow tax deduction for business meeting held on cruise ships.

All of these provisions are important, but today I want to speak on behalf of provision three, the necessity of of a permanent airline fuel tax exemption.

We all want to make sure that all businesses pay their fair share of taxes, whether it is a large corporation or the Mom and Pop corner store. But all too often, the travel and tourism industry is singled out as the tax collector's cash cow.

And this time, the unreasonable tax that has been imposed on one segment of the tourism industry -- the airlines -- will cost good-paying jobs, essential travel services, and quite possibly will deliver the crushing blow to many of the U.S. carriers struggling to get back on their feet.

With this additional tax, the airline industry will suffer unduly at the hands of the big spenders -- big spenders who intend to spend more than America has and do so at the cost of American workers and American businesses.

As Chairman of the Congressional Travel and Tourism Caucus, I know firsthand how vital our nation's airlines are to the health of the U.S. economy. Travel and tourism adds $127 billion to the national tax coffers, with several billion coming directly from the airline industry.

In addition to these Federal taxes and other state taxes, the airlines pay over $6 billion in passenger and excise taxes -- the equivalent of a 46 cents per gallon fuel tax.

The airlines already pay their fair share of the American tax burden. Even under today's tax codes, the airlines have lost a staggering $12.8 billion during the last four years. This industry is already on less than stable ground.

Even as the airlines struggled just to survive, the Clinton Administration's tax plan of 1993 imposed the 4.3 cents per gallon fuel tax, now scheduled to take effect October 1, 1995.

Mr. Chairman, this tax will cost airlines an additional $527 million a year -- a devastating blow. The cost to the U.S. economy will be even greater.

A healthy U.S. airline industry is critical to the vitality of our nation's economy. The Congressionally-mandated National Airline Commission stated in its 1993 report that to return the industry to profitability, Congress must act to "relieve the airline industry of its unfair tax and user fee burden."

While in recent months, the industry has shown small signs of recovering from its $12.8 billion loss, recovery has come only at the sacrifice of 120,000 U.S. airline employee jobs and 125,000 U.S. aircraft manufacturing jobs.

Employees whose jobs were not eliminated accepted substantial wage and benefit decreases, with total airline industry concessions in excess of one billion dollars annually.

Mr. Chairman, it would be more than an exercise in poor judgement to inflict an additional $527 million tax on an industry and its employees who have struggling so hard to regain financial footing.

This tax is bad public policy.

It will affect us all by upsetting essential aviation services, raising unemployment, increasing ticket prices, and quite possibly by forcing some of our nation's airlines into bankruptcy.

Midwest Express, one of the airlines that services my own district in Northeast Wisconsin, estimated that if this tax had been in place in 1994 it would have cost their airlines $2 million.

That amounts to 22 percent of their total operating revenues for last year alone!

Mr. Chairman, my bill H.R. 1083 makes permanent the exemption of commercial airlines from this job-killing transportation tax.

The National Airline Commission officially stated that the airline industry can not financially absorb another tax hit of this magnitude.

Ladies and Gentlemen, we must make sure companies pay their way, but let's not drive them into the ground.

The Travel and Tourism Relief Act enables the airlines -- a critical segment of the tourism industry -- the opportunity to sustain their economic recovery.

This bill acknowledges the sacrifices of the airline industry employees who took pay cuts to keep their companies in business.

And it promotes economic growth and employment in one of our nation's most dynamic and untapped industries -- travel and tourism.

I urge my colleagues to support the Travel and Tourism Relief Act and to support the jobs of thousands of travel agents, restaurant owners, small businessmen and women and particularly airline employees who are directly at risk with this airline fuel tax.

Chairman JOHNSON. I thank the panel for your excellent comments.

There are a couple of other Members who, for various reasons such as plane schedules, will not be here until later and they will be allowed to testify at that time.

First of all, I do think a healthy airline industry is important to a strong economy. I appreciate the wealth of data that you have presented to us and the fact that you did not allow your testimony to overlap too much.

We will be looking in the course of this hearing at the tax burden on airlines versus other modes of transportation, as well as looking at the broader picture of the role of the airline industry in our economy.

It is also true, however, that when we pass a tax and exempt one industry because of its health, we do that in the context of not looking at the health of carriers in other industries, as well. We do want to look at the equity issues for other modes of transportation in the course of this hearing. You have provided us with excellent information and a fine place to start, and I thank you for that.

Amo, I look forward to the details of your reform proposal. I hope that when the Department of Labor testifies today, that they will have a reform proposal, because they have long said that the current program is not workable and does not accomplish our goals effectively. I share with you the belief that the concept is an important one and am disappointed that to this point the Department of Labor has not come forward with their idea of what reform would represent.

I am pleased that you and Charlie are taking on that task. I would urge you, however, to move forward rapidly, because, as you and I know, decisions about how much we are going to have to raise and what we are going to have to do are going to fall rapidly upon us.

Do other Members of the Committee have questions? Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

I want to thank all four of the Members of the panel, and I also look forward to working with the three of you who talked about the aviation fuel tax.

I would like to touch on Mr. Houghton's targeted jobs tax credit issue. First of all, I want to commend you and Mr. Rangel for trying to reform this particular tax credit. Certainly, I think we learned last year that it is in need of major reform. Unless we do, I cannot see us actually extending it and making it permanent. I think your efforts will go a long way in making sure it does work.

Without getting to specifics, because you have not introduced the bill yet, you are going to raise the threshold from $6,000 to $10,000. Would you perhaps explain why that is? Perhaps it is a little premature yet. If it is, just tell me. If you have the answer to that, could you explain it? Perhaps you could also talk about the possible revenue implications, if in fact, it will be more or less. Again, I know it is early.

Mr. HOUGHTON. Mr. Matsui, there are a couple of reasons for the increase. First of all, inflation has taken its toll. Also, if you multiply 425 times 2,000-plus, you get—I mean it is way out of whack.

It is not a realistic number for the year 1995, so that is primarily why we had to include an increase.

As far as the revenue implications are concerned, I have no idea. I have tried to get some revenue answers. I have not been able to get them. The old program costs about $2 billion over 5 years, actually $1.9 billion, so let us say that averages how many dollars a year. That is one way of looking at it.

The other way of looking at it that has been very tempting to me to explore, is if you take somebody on welfare and you add up all the costs, you get the equivalent of about $12,000 a year. If you compare that to $4,000 a year as benefit for the corporation or net that out with a 35-percent tax rate to about $2,600, The proportions are way off. It does cost money for the government, but in terms of shifting that from the welfare program I think net to net it is a great savings.

Mr. MATSUI. I understand also you are going to shrink the number or the kinds of employees that will actually be able to use the credit, which probably will help reduce the revenues a little bit.

Mr. HOUGHTON. Right.

Mr. MATSUI. Obviously, the main issue is to make sure that when these people are hired under this program, that they become permanent employees, rather than 6 months hired and then later laid off and having the employer take advantage of basically a tax credit. I think that is an issue you are working on now.

Mr. HOUGHTON. Exactly. Imagine yourself running a small operation, and all of a sudden an ex-felon or somebody who has not had a very good record, has been on welfare for a long time, comes up and says I want to get a job. He has no skills. You have got to have a very big heart to be able to take that person on. Frankly a lot of people doing it have worked out. Just this extra nudge, with all the preconditions which we put into this new bill, I think it is really worth a chance.

Mr. MATSUI. Thank you.

Mr. HOUGHTON. Thank you.

Chairman JOHNSON. Do other Members have questions or comments?

Mr. Hancock.

Mr. HANCOCK. My good friend from New York, I would like to ask a question. One of the things I hear in the small business community is, they are very concerned, most businessmen would like to help get people off welfare. It is understood that it is good if they can do this as citizen involvement.

In many cases, though, I have had small businessmen say, look, I just cannot take the risk. I tried it once, and the next thing I knew the guy did not work out. I had the wage and hour people on me. Attorneys were in on it, and it cost me $25,000 in legal fees to get the government off my back, because I was willing to take a risk by hiring this disadvantaged individual.

I am sure that did not work out all the time, but is there some way or could you consider some way to try to control the risk and the liability on the small business community, if in fact they are willing to take on that risk?

Mr. HOUGHTON. I think the agency is going to have to do that. I think if the agency dishes up somebody who has broken into

stores and held up various people and has absolutely no remorse about this thing and is really a high-risk employee, then that is wrong. That will probably happen, but it should not. This is why the tightening up of these preconditions are concerned.

As you know, Mr. Hancock, business is money and you are willing to take a risk if the incentives are there. This is why the incentives are here in this program.

Mr. HANCOCK. A risk that you do not have to take, very few businessmen are going to take it.

Mr. HOUGHTON. If there is no financial incentive to offset the imagined risk in your mind, you are not going to take it, period.

Mr. HANCOCK. I am still saying, though, that if you would consider—I am just asking the question—if you would consider some way to include in your bill some type of relief, some type of protection for the businessman that is willing to take the risk, not because—I am sure there is an incentive to make this successful, but he may be doing it just out of the goodness of his heart. There are people who do things like that.

Thank you very much.

Mr. HOUGHTON. Could I just answer that? If you have got ideas that are not overly burdensome and do not put a tremendous liability on the part of the agency or the government that is doing this, I would love to see it, because I think there are some things that can be changed here. Frankly, maybe a cap should be considered, maybe a sunset provision, maybe things like that. Let me know and I will be willing, and I am sure Mr. Rangel also, to work this into our bill.

Mr. HANCOCK. Thank you very much.

Madam Chairman, I would like to take this opportunity to ask unanimous consent to submit a statement for the record by Sam Fox of Clayton, Missouri, supporting the permanent extension of section 170(e)(5), which prior to expiration permitted a tax deduction for donations of appreciated marketable securities to private foundations. I ask that this statement be included at the appropriate place in the hearing record.

Chairman JOHNSON. Without objection.

Mr. HANCOCK. Thank you, Madam Chairman.

[The prepared statement follows:]

STATEMENT BY SAM FOX OF CLAYTON, MISSOURI WITH RESPECT TO EXTENSION OF IRC SECTION 170(e)(5) REGARDING CONTRIBUTIONS TO PRIVATE FOUNDATIONS

This statement is submitted by and on behalf of Sam Fox of Clayton, Missouri in support of the permanent extension of Section 170(e)(5) of the Internal Revenue Code which, until December 31, 1994, permitted tax deduction (within certain prescribed limits) of donations of appreciated marketable securities to private foundations.

My name is Sam Fox. I reside in Clayton, Missouri. I am the Chairman and Chief Executive Officer of Harbour Group, which, together with its affiliated organizations, manages and owns substantial interests in a number of industrial groups having manufacturing facilities throughout the United States and Europe.

I, together with my wife, are founders of the Fox Family Foundation, a private charitable foundation, qualified as such under Section 501(c)(3) of the Internal Revenue Code.

The Fox Family Foundation is not merely a passive conduit of funds to large public charities. A significant part of its activities involves the active selection of grant recipients, usually small agencies engaged in important social welfare projects, but who do not have the wherewithal to support broad fund solicitations. Each year the Foundation provides grants to more than 150 organizations. Grant recipients include such organizations as the Crusade Against Crime/Child Assistance Program to provide funding to employ a part-time social worker, the St. Louis Community Aging Corporation to provide support services for senior project tenants, the Food Outreach program to help provide food to indigent persons suffering from AIDS, Hamilton Heights Housing for its job training program and the St. Louis Child Abuse Network to employ a family therapist. The Foundation also provides seed money for start up charities such as the Alliance for Mentally Ill/Self-Help Center to cover salaries for a fund raiser and program director.

My wife and I and our five children serve as Trustees of the Foundation. The Foundation has two full-time employees. Its finances are audited by Price Waterhouse and its legal requirements are provided by the law firm of Dickstein, Shapiro & Morin L.L.P. of Washington, D.C.

In the past, funding for Foundation activities has been generally provided by large annual cash contributions by me and my wife. However, in addition to annual cash contributions in support of current activities, we are now seeking to establish a substantial endowment so that the Foundation can maintain continuity in its charitable activities for decades to come. In 1994 my wife and I contributed over $6 million of appreciated, marketable securities to the Foundation. Such securities consisted of common stock of four public companies that had been established by Harbour Group in which my wife and I have very substantial positions.

The expiration of Section 170(e)(5) of the Internal Revenue Code has produced the anomaly that contributions of appreciated stock to public charities are deductible at their fair market value while such contributions to private charitable foundations are not. This works to the disadvantage of small, grass-roots charitable organizations, such as those supported by the Fox Family Foundation, which do not have the staff or infrastructure to manage endowments or even to deal with contributions of securities. I believe there is no valid reason for this discriminatory differentiation between public charities and private foundations. Certainly, the panoply of law, regulations and enforcement mechanisms governing private foundations should preclude any concern over abuse or misuse. Moreover, for the reasons stated, private foundations can operate with an intimate knowledge of community needs that would normally be outside the ken of large public charities.

If Section 170(e)(5) is extended for 1995 and years subsequent, it would be our intention to continue to make similar substantial stock contributions to the Foundation. On the other

hand, if Section 170(e)(5) were not to be extended, our cost basis in such shares is so low that it would make little sense for us to contribute such shares to the Foundation except perhaps by testamentary disposition after the last of us has died. At the very least, this would most probably produce a very long deferral of such contributions and a substantial diminishment of the Foundation's capacity to perform charitable activities which would otherwise be funded at a rate of not less than five percent of the value of the Foundation's retained assets.

I am aware that the Joint Committee on Taxation has earlier estimated that the extension of Section 170(e)(5) would produce a five year revenue loss of some $280 million. Even if that were the case, I believe that the benefits to be derived from the additional charitable activities that extension of Section 170(e)(5) would generate would more than reciprocate for such loss. But if the behavior of other taxpayers in my situation is similar to my own, I question the assumptions on which that presumed revenue loss has been based. For revenue losses would only be incurred if taxpayers owning securities with substantial unrealized appreciated gains would choose to sell those securities and pay capital gains thereon in order to contribute the net cash proceeds to private foundation. I believe this to be highly unlikely particularly in situations that may constitute the bulk of such potential contributions where the prospective donor's holdings in a public company represent a substantial, perhaps controlling, interest in the public company.

Both federal and state budgetary considerations will necessarily diminish, if not preclude, government funding for activities such as those supported by the Fox Family Foundation. Moreover, it is my strongly held belief that funding of such activities is more effectively and less expensively performed by the private sector. Accordingly, I believe that an essential element of government downsizing would be to encourage private charitable giving in every possible way. Certainly, extension of Section

Chairman JOHNSON. Mr. Johnson.

Mr. JOHNSON of Texas. Thank you, Madam Chairman.

Mr. Houghton, I understand that you have got a separate category in your program for high-risk youths. I think there is a lot that would not fall under the means-tested program that needs our attention, and I wonder if you could discuss with me the separate category of high-risk youths as it appears in your plan.

Mr. HOUGHTON. The different categories of people who are eligible?

Mr. JOHNSON of Texas. Yes, high risk.

Mr. HOUGHTON. There are basically two. There is the group between 18 and 12, it used to be lower than that, who were either on public assistance or have a very good chance of getting on public assistance. There is this high-risk youth category from 16 to 21 years of age. About 75 percent come from the high-risk youth category. Those are the two basic categories.

Mr. JOHNSON of Texas. Those high-risk guys are those who have been without working role models, perhaps they are unskilled and oftentimes youth that turn to drugs and violence. I guess the program that you propose is supposed to provide them with some training and role models in the workplace which theoretically would—you know, they would otherwise be at risk of no economic recovery.

Mr. HOUGHTON. That is right. As you know, when we discussed the welfare bill, there is really no training until you have a job. If the incentive is there, the job is there, the AFDC Program comes in and really helps these people. There are so many of these training programs, they are going to try to boil them down from about 133 down to 1, so it is going to be expensive, but that is where that kicks in.

The end result you hope is to make a worthwhile solid individual out of somebody who is just on the brink all the time.

Mr. JOHNSON of Texas. Thank you, Mr. Houghton.

Mr. HOUGHTON. Thank you.

Mr. JOHNSON of Texas. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you very much for your input today.

I would just add to my opening statement while Members are here this proviso. While I did recognize that we may be forced to consider temporary extensions, I think the whole concept of a balanced budget proposal, of the Congress taking on the responsibility of reaching some kind of balance between revenues and expenditures in 7, 8, or even 10 years means that we have an obligation right now to say this is the tax policy that we think will support services and a vital economy in that period and to pay for those things.

Temporary extensions do not do that. I personally feel a certain obligation to prefer permanence over temporary, because I think it is a more honest reflection of our commitment to setting out a spending path that reaches balance by the year 2002, but also encompasses both a spending policy and a tax policy that we believe will support a strong economy.

We will be putting a heavy emphasis on permanency and we will be looking at the alternatives to accomplishing the goals of the tax

provisions that people support. I invite your continued work with us as we go through this process.

Thank you for your excellent testimony this morning.

Mr. COLLINS. Thank you, Madam Chairman. I would like to emphasize, too, that we feel very strongly about the fact that we must work toward a balanced budget by the year that we have promised the public we would do so, and that is the year 2002. That is the reason it is done. I have identified some 40 billion dollars' worth of possible rescissions or changes in Tax Code offsets and spending that would help us pay for the assistance that we are trying to grant to the airline industry. We feel like a repeal of this upcoming tax will probably be much more beneficial in the long run. With the repeal and implementation of it from the standpoint of the operation of the airlines, their profits and the employees and the wages they earn and the taxes that are deducted from their wages, and also those who are affiliated with the airline industry through the airports and manufacturing or catering or whatever the other offset business or outside business may be.

We welcome the opportunity to offer offsets, and we welcome the opportunity to work toward a balanced budget. It will be very prosperous to this Nation the day that we reach zero deficit.

Thank you.

Chairman JOHNSON. Thank you.

I thank the panel and call the next panel. The next panel is the Deputy Assistant Secretary for Tax Policy of the Department of the Treasury, Cynthia Beerbower; also Hon. Doug Ross, Assistant Secretary for Employment and Training of the Labor Department; and Patrick Murphy, Acting Assistant Secretary for Aviation and International Affairs of the U.S. Department of Transportation.

Normally, as Committee Members know, I think it is only fair to indulge the administration witnesses, because I think your long experience is terribly important to us. However, because we have so many panels, I will have to also ask you to be as targeted in your remarks as you can be. I assure you that we will be willing to work with you throughout this process, but I would appreciate it if you focus your remarks as much as you can, and if the Committee Members will also try to focus their questions.

We will first hear from Ms. Beerbower, of the Treasury Department.

STATEMENT OF CYNTHIA G. BEERBOWER, DEPUTY ASSISTANT SECRETARY FOR TAX POLICY, U.S. DEPARTMENT OF THE TREASURY; ACCOMPANIED BY ELIZABETH WAGNER, STAFF ASSISTANT

Ms. BEERBOWER. Thank you, Madam Chair and distinguished Members of the Subcommittee.

I am pleased to present the views of the administration on the extension of the expiring tax provisions that are the subject of your hearings today, as well as tomorrow, and we thank the Subcommittee for allowing us to consolidate our comments for both days into one testimony.

The administration has supported and continues to support the revenue neutral extension of many of these provisions, and we look forward to working with this Congress in order to meet that goal.

I was pleased to hear your comments, Mrs. Johnson, just a few moments ago about the importance of permanent extension. As a matter of tax policy and consistent with our position in 1993, the administration believes that any extension of the provisions generally should be made permanent, particularly the research tax credit and the orphan drug tax credit, where temporary extensions create great uncertainty and make it very difficult for taxpayers to engage in long-term research decisions.

Temporary extensions create a host of complexities and administrative burdens for taxpayers, particularly when they are allowed to expire, as is the case with some of these provisions today, and then they are reinstated retroactively. Nevertheless, the administration is mindful of budgetary constraint. In considering the permanent extension of all of these incentives, we are happy to work with Congress on a bipartisan basis to develop financing options to pay for them.

The first provision I would like to address is the exclusion for employer-provided educational assistance. The administration supports the extension of the exclusion for employer-provided educational assistance. The exclusion, we believe, encourages employers to provide educational assistance, and it thereby increases our Nation's work force productivity.

In addition, the absence of the exclusion would impose significant administrative burdens on employers, workers and the IRS, Internal Revenue Service, who would need to distinguish between job related expenses, which are excludable from gross income under current law when paid by the employer and other employer-provided educational expenses which are not excludable and, therefore, among other reporting requirements, are subject to wage withholding.

Education and training of our work force is a high priority for this administration. In addition to the employer incentives set forth in this provision, the administration in the Middle-Class Bill of Rights has proposed a deduction for middle-income families for postsecondary education and training expenses.

Second, is the research tax credit. The administration consistently has supported the research tax credit and has recommended its permanent extension in 1993 for the 1994 budget. Unfortunately, that did not occur in Congress and it was only temporarily extended.

Again, in the administration's 1996 budget, we continue to support the permanent extension of the research tax credit. We recognize the importance of technology to our national ability to compete in what is now a very global marketplace. The research tax credit is a vital tool in developing, supporting and fostering American technology.

Third, the administration supports the permanent extension of the orphan drug tax credit. This credit has been helpful in making new drugs available for those suffering from rare diseases. The development of these drugs might not occur without the credit, since the low rate of return on sales of specialized drugs generally cannot justify the extensive research by biotechnology and pharmaceutical companies to develop them.

Fourth, the administration supports reinstating the full fair-market value deduction for gifts of qualified appreciated stock to private foundations. Private foundations perform an important role in funding the charitable sector. As the government reinvents, restructures and reduces in size, the charitable sector will be expected to take on the financial burden of an increasing number of public projects.

Thus, charitable giving needs to be encouraged. We believe that allowing the full fair-market value deduction for gifts of qualified appreciated stock will encourage the formation and funding of private foundations and will enable the charitable sector to better fund its increasing responsibilities.

Fifth, as stated in the President's 1996 budget, the administration supports the revenue neutral extension of section 864(f). In 1992, the Treasury undertook to study the allocation methodology for allocating research and experimentation costs between foreign source and domestic source income.

I am happy to say this morning that this study is nearly completed. In fact, we were hoping to be able to release the regulations this morning. We will shortly announce these regulations. One thing I can say about them is they are likely to be more favorable to taxpayers than the 1977 regulations.

Sixth, the administration opposes any general extension of the tax credit for producing fuel from nonconventional sources. When Congress enacted this credit, an objective was to support the development of new alternative technologies to recover oil and gas. The credit was intended to apply for a limited period of time only, after which Congress expected that no special incentive would be needed for the affected industries, since they would have matured and become competitive without government assistance over the life of the credit.

The 1992 extension for biomass and coal facilities was intended to be a transition rule for taxpayers with facilities that were soon to be placed in service. This transition period is now almost over, and we believe that a further extension is not warranted.

The administration also opposes any delay in the effective date of the 4.3-cents-per-gallon excise tax on fuel used in commercial aviation. When Congress increased the excise tax on fuels used in transportation, the intention was that all modes of transportation would be equally subject to this excise tax. The effective date of the tax on commercial aviation was delayed for 2 years because of the concerns that the commercial airlines industry generally was experiencing industry-wide losses.

Today's economic picture is different. As the economy has recovered from the recession, air traffic has increased and most airlines have experienced improvements in their financial condition. Thus, the industry is now in a better position to accommodate an excise tax of 4.3-cents-per-gallon on commercial aviation fuel. This tax is well within the range of the jet fuel prices over the last couple of years, and that type of fluctuation should be easily accommodated by the industry and has in fact been accommodated through the price fluctuations.

The employment of economically disadvantaged and disabled workers is undoubtedly one of the administration's most pressing

concerns. As Treasury testified last fall, however, there are problems with the targeted jobs tax credit that undermine its effectiveness. Because we are very concerned about the efficient use of government revenues, we believe that the problems undermining the credit's effectiveness must be addressed before pursuing an extension of this credit.

The Labor Department will discuss this further, but in August 1994 the findings by the Labor Department's Office of Inspector General were critical of the credit's effectiveness. My written testimony highlights a couple of the credit's problems and it offers general options for addressing these concerns. The Treasury Department looks forward to working with Congress on a bipartisan basis to address these problems that currently undermine the credit's effectiveness.

This concludes my prepared remarks, but I will remain until the other panelists have finished for questions.

Thank you.

[The prepared statement and attachment follow:]

STATEMENT OF
CYNTHIA G. BEERBOWER
DEPUTY ASSISTANT SECRETARY (TAX POLICY)
DEPARTMENT OF THE TREASURY
BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
UNITED STATES HOUSE OF REPRESENTATIVES

Madam Chair and distinguished Members of the Subcommittee:

I am pleased to present the views of the Treasury Department today on the extension of various expired or expiring tax provisions set forth in the Subcommittee's Notice of Hearing dated April 19, 1995.

As discussed in more detail below, the Administration has previously supported and continues to support the revenue-neutral extension of many of these expired or expiring tax provisions, and looks forward to working with this Subcommittee to achieve that goal. These provisions include the exclusion for employer-provided educational assistance, the research tax credit, the tax credit for orphan drug clinical testing expenses, the tax deduction for contributions of qualified appreciated stock to private foundations, and the rules regarding allocation of research expenditures. The Administration would also support the extension of the targeted jobs tax credit if the problems underlying the credit's effectiveness were addressed.

As a matter of tax policy, the Administration believes that any extensions of tax incentives generally should be made on a permanent basis. Temporary extensions undercut the desired incentive by creating uncertainty and making it difficult for taxpayers to make long-term business plans. Temporary extensions also contribute to complexity for taxpayers and may create administrative problems when the provisions are allowed to expire and are then reinstated retroactively. Nevertheless, the Administration is mindful of budgetary constraints in considering permanent extensions of these incentives. The Administration is happy to work with the Congress on a bipartisan basis in developing acceptable options for financing these extensions. (Attachment A shows the receipts effect of permanent extension of the expiring provisions.)

The Administration opposes extending the delayed effective date of the 4.3 cents per gallon tax on commercial aviation fuel enacted as part of the Omnibus Budget Reconciliation Act of 1993

(OBRA 1993). The Administration also opposes extension of the production credit for nonconventional fuels.

In addition to the various expiring provisions that are the subject of this hearing today, several other provisions of the tax code either have already expired or are scheduled to expire soon. As indicated in the Administration's Fiscal Year 1996 budget, the Administration supports extension of these provisions, which are described below:

-- Oil spill liability tax. Under prior law, a 5 cents per-barrel tax was levied on each barrel of domestic and imported crude oil entering a U.S. port. This tax, which was deposited in the Oil Spill Liability Trust Fund, was to expire on the earlier of December 31, 1994, or the date on which the unobligated balance in the fund reached $1 billion. This tax expired on December 31, 1994.

-- Generalized system of preferences (GSP). Under GSP, duty-free access is provided to over 4,000 items from about 142 eligible developing countries that meet certain worker rights and other criteria. This program, which was extended for 10 months under the Uruguay Round Agreements Act of 1994, is scheduled to expire after July 31, 1995.

-- Environmental tax on corporate taxable income. A tax equal to 0.12 percent of alternative taxable income in excess of $2 million is levied on all corporations and deposited in the Hazardous Substance Superfund Trust Fund. This tax expires on December 31, 1995. In addition, the Administration also supports extension of the excise taxes deposited in the Superfund, which are scheduled to expire December 31, 1995. These environmental excise taxes are the crude oil tax (9.7 cents per barrel for domestic crude oil and imported petroleum products), the tax on feedstock chemicals, and the tax on certain imported substances.

The Administration's detailed views regarding the expiring provisions that are the subject of today's hearings follow.

1. Exclusion for Employer-Provided Educational Assistance

Background

The exclusion for employer-provided educational assistance was first enacted on a temporary basis as part of the Revenue Act of 1978. It has been extended seven times. In its Fiscal Year 1994 budget, the Administration proposed permanently extending the exclusion for employer-provided educational assistance. OBRA 1993, however, provided only a temporary extension. The exclusion expired for taxable years beginning after December 31, 1994.

Current Law

Prior to expiration, section 127 provided that amounts paid by an employer with respect to an employee under an educational assistance program were excluded from the employee's gross income and wages for employment tax purposes to the extent that the value of the assistance did not exceed $5,250 per year, regardless of whether the expense would otherwise be deductible. Such programs were subject to nondiscrimination rules to ensure that the assistance was not provided primarily to higher-paid employees.

Education expenses incurred directly are deductible only if the education is related to the person's employment, and then only as a miscellaneous itemized deduction subject to the two percent of adjusted gross income floor. A deduction for education expenses is allowed only if the education maintains or improves a skill required in the individual's employment or other trade or business, or is required by the individual's employer, or by law or regulation for the individual to retain his or her current job.

Employer reimbursement of such expenses, however, may be excluded from income as a working-condition fringe benefit under section 132(d), and, unlike education expenses paid for by the employee, is not subject to the two-percent floor, nor is the deduction subject to a ceiling. The educational expense, however, must be job-related.

In the absence of section 127, the value of employer-provided educational assistance is included in an employee's income and employment-tax wages unless the cost of the assistance would qualify as a deductible, job-related expense of the employee if the employee had incurred the expense directly.

Administration's Recommendation

As stated in the Administration's Fiscal Year 1996 budget, the Administration supports extension of the exclusion for employer-provided educational assistance on a revenue-neutral basis.

The exclusion encourages employers to provide educational assistance and thereby increase the nation's productivity. In addition, the absence of the exclusion would impose significant administrative burdens on employers, workers, and the IRS in distinguishing between job-related expenses (which are excludable from gross income under current law when paid by the employer) and other employer-provided educational expenses.

As noted above, absent the exclusion, the value of employer-provided educational assistance is excludable from gross income

only for employment-related educational expenses. Because of the breadth of prior training and current job responsibilities, employer-provided education benefits provided for higher-income, higher-skilled employees are more likely to qualify as employment-related and thus be deductible regardless of the extension of section 127. In contrast, the educational objectives of lower-income, lower-skilled employees are more likely to include associate or undergraduate degrees and training for new employment, which do not qualify for exclusion in the absence of section 127.

2. Research Tax Credit

Background

The research tax credit initially was enacted as part of the Economic Recovery Tax Act of 1981 and was scheduled to expire on December 31, 1985. The Tax Reform Act of 1986 modified the credit and extended it through December 31, 1988. The credit was further modified and extended by the Technical and Miscellaneous Revenue Act of 1988 (extension through December 31, 1989), and the Omnibus Budget Reconciliation Act of 1989 (extension through December 31, 1990), which also modified the method for calculating a taxpayer's base amount. The credit was subsequently extended by the Omnibus Budget Reconciliation Act of 1990 (extension through December 31, 1991), the Tax Extension Act of 1991 (extension through June 30, 1992), and the Omnibus Budget Reconciliation Act of 1993 (OBRA 1993) (retroactive extension from July 1, 1992 through June 30, 1995). The credit is currently scheduled to expire on June 30, 1995.

Current Law

The research tax credit applies on an incremental basis to a taxpayer's "qualified research expenditures" for a taxable year. The credit is equal to 20 percent of the amount by which the taxpayer's qualified research expenditures for the taxable year exceed a base amount. The base amount is the product of the taxpayer's "fixed base percentage" and the average of the taxpayer's gross receipts for the four preceding years (subject to a maximum rate of .16). The base amount cannot be less than 50 percent of the taxpayer's qualified research expenditures for the taxable year.

For most taxpayers, the fixed based percentage is the ratio of the taxpayer's qualified research expenditures to its gross receipts during the period from 1984 until 1988. For certain

"start-up companies," the fixed base percentage is determined under special rules added by OBRA 1993.[1]

Qualified research expenditures consist of (1) "in house" expenses of the taxpayer for research wages and supplies used in research, (2) certain time-sharing costs for computer use in research, and (3) 65 percent of amounts paid by the taxpayer for contract research conducted on the taxpayer's behalf. To be eligible for the credit, research must be undertaken for the purpose of discovering information which is technological in nature, the application of which is intended to be useful in the development of a new or improved business component of the taxpayer, and must relate to functional aspects, performance, reliability or quality of a business component. Research does not qualify for the credit if it is conducted after the beginning of commercial production of the business component, if it is related to the adaptation of an existing business component to a particular customers requirements or need, or if it is related to the duplication of an existing business component from a physical examination of the component itself (or from similar information such as blueprints). Similarly, qualified research does not include efficiency surveys, market research or development, routine quality control, or research in the social sciences, arts, or humanities.

The credit does not apply to research conducted outside the United States, or to research funded by another person or governmental entity.

Administration's Recommendation

The Administration has consistently supported the research tax credit and included a proposal for its permanent extension in the 1994 budget. As indicated in the Administration's budget for Fiscal Year 1996, we continue to support the revenue-neutral extension of the research tax credit.

---

[1]Under these rules, a taxpayer's fixed base percentage is set at .03 for the first five taxable years after 1993 in which the taxpayer incurs qualified research expenditures. For the next five years (assuming extension of the credit), the fixed base percentage is phased-in based on the taxpayer's actual ratio of qualified research expenditures to gross receipts. Thereafter, the percentage is based entirely upon the taxpayer's actual ratio for any five years selected by the taxpayer from its fifth through tenth taxable years after 1993.

Prior to amendment by OBRA 1993, a start-up company's fixed base percentage was set at .03 for all years.

The Administration recognizes the importance of technology to our national ability to compete in the global marketplace. Fostering the development of new technology is a cornerstone of our economic and national security strategy. We are committed to working with the private sector to enhance the role that technology plays in promoting competitiveness, creating high-wage jobs, maintaining America's defense capabilities, improving our quality of life, and fostering sustainable development.

The research tax credit is one tool that could be useful in supporting and fostering American technology. The credit provides incentives for private-sector investment in research and innovation that can help increase America's economic competitiveness and enhance U.S. productivity. These incentives are particularly important, as the U.S. economy becomes increasingly reliant on technological know-how, because private-sector investment in research often creates benefits for the economy that are not captured by an individual company.

The Administration continues to believe that for the research tax credit to be most effective, it should be made permanent, to provide taxpayers with greater certainty in making long-range business plans. It is also important that the cost of any extension of the research tax credit be fully offset. Increasing the Federal deficit could have an adverse impact on research expenditures (by drawing capital away from private-sector investments) and could thus offset the benefits resulting from the extension of the research tax credit.

3. Orphan Drug Tax Credit

Background

An orphan drug tax credit was first enacted as a part of the Orphan Drug Act of 1983. The Act's purpose was to provide incentives and direct Federal grant support for developing drugs for rare diseases and conditions. In addition to the incentive of a 50 percent credit for the expenses of clinically testing drugs for rare diseases, the Act also provided a seven-year exclusive marketing period for rare disease drugs approved for use by the Food and Drug Administration (FDA).

Under the 1983 Act, a "rare disease or condition" was defined as any disease or condition which occurs so infrequently in the United States that there is no reasonable expectation that the cost of developing and making available in the United States a drug for such disease or condition will be recovered from sales in the United States. This facts-and-circumstances test proved difficult to administer and, as a part of the Tax Reform Act of 1986, the definition was expanded to include any disease or condition which affects less than 200,000 persons in the United States.

This credit was originally scheduled to expire at the end of 1987, but was subsequently extended to the end of 1990 by the 1986 Act; to the end of 1991 by the Omnibus Budget Reconciliation Act of 1990; to June 30, 1992 by the Tax Extension Act of 1991; and to December 31, 1994 by the Omnibus Budget Reconciliation Act of 1993.

Since the inception of the orphan drug program, FDA has made (through March 31, 1995) 598 designations of orphan drugs related to particular diseases or conditions (some drugs have been designated with respect to more than one disease or condition). Of these orphan drugs, 104 have been approved for marketing. Included among the diseases and conditions for which marketing approval has been given are metastatic renal cell carcinoma; advanced adenocarcinoma of the ovary; tuberculosis infections; intractable spasticity caused by spinal cord injury or diseases; and hairy cell leukemia. About 20 percent of the approved drugs are to treat children.

Current Law

Prior to its expiration at the end of 1994, the orphan drug tax credit equaled 50 percent of qualified clinical testing expenses for drugs being tested under an exemption for a rare disease or condition under section 505(i) of the Federal Food, Drug, and Cosmetic Act. The testing must occur after the drug is designated under section 526 of the Act and before the drug is approved for use. Expenses funded by a government grant or by any person other than the taxpayer do not qualify. Qualified clinical testing expenses are taken into account in determining base period research expenses, but not qualified research expenses for purposes of the credit for increasing research activities (the R&E credit). The orphan drug tax credit can offset regular income tax liabilities entirely, but cannot be used to reduce alternative minimum tax liabilities. Amounts normally deductible as a business expense are reduced by the amount of any credit claimed. The credit cannot be claimed by any corporation that has elected the section 936 possessions tax credit.

Administration's Recommendation

As indicated in the Administration's Fiscal Year 1996 budget, the Administration supports making the orphan drug tax credit permanent, subject to identifying acceptable revenue offsets for any package of extensions, and will work with the Congress to achieve that goal. As a complement to other provisions of the Orphan Drug Credit Act, this credit, as noted above, has been helpful in making new drugs for rare diseases and conditions available to the least fortunate among us, those suffering from rare diseases but whose numbers are insufficient to provide adequate market incentives for developing remedial

drugs. If this provision is extended, one option to consider is making the credit permanent, so that developers of potential new drugs, when they make initial commitments of venture capital, can plan on the credit being in place if their research is successful to the point of securing FDA approval for clinical trials. The Administration would be willing to consider allowing excess orphan drug credits to be carried forward or backward, as a means to allow smaller drug firms to take advantage of this provision.

4. Full Fair-Market Value Deduction for Gifts of Qualified Appreciated Stock

Background

In the Deficit Reduction Act of 1984, Congress enacted section 170(e)(5), which provided a full fair-market value deduction for gifts of qualified appreciated stock to private foundations. At the time section 170(e)(5) was enacted, taxpayers who donated appreciated property to private foundations were permitted a deduction for their adjusted basis in the property plus sixty percent of the appreciation. This benefit for property other than qualified appreciated stock was eliminated as part of the Tax Reform Act of 1986. The House report accompanying the qualified appreciated stock legislation explained that improved treatment for gifts of all kinds to private foundations was warranted to acknowledge "the substantial role of nonoperating foundations in private philanthropy." It added that the publicly traded stock proposal was appropriate because it offered little potential for abuse.

The full fair-market value deduction for gifts of publicly traded stock expired on December 31, 1994.

Current Law

Prior to its expiration, section 170(e)(5) allowed a taxpayer who contributed qualified appreciated stock to a private foundation to deduct the full fair market value of the contributed stock, rather than the adjusted basis of the contributed stock. Qualified appreciated stock is defined as stock for which a market quotation is readily available and which has been held for more than one year (i.e., long-term capital gain property). This special treatment applies only to the extent that the qualified appreciated stock does not exceed 10 percent of the total outstanding stock of the corporation.

Section 170(e)(5) is an exception to the general rules on gifts of appreciated property to private foundations, which currently allow a deduction only for the donor's adjusted basis in the contributed property. By contrast, the rules on gifts of appreciated property to public charities generally allow a deduction for the full fair-market value of contributed long-term

capital gain property. (If a donor gives appreciated tangible personal property to a public charity which does not use it to further its exempt purposes, a deduction is allowed only for the donor's adjusted basis in the property.)

Administration's Recommendation

As set forth in the Administration's budget for Fiscal Year 1996, the Administration recommends reinstating the full fair market value deduction for gifts of qualified appreciated stock to private foundations, provided that it can be done on an acceptable revenue-neutral basis.

Private foundations perform an important role in the charitable sector. They provide grants and funding for charitable projects that they believe are promising. Thus, encouraging the formation and funding of private foundations through the full fair-market value deduction for gifts of qualified appreciated stock works to the benefit of the charitable sector as a whole.

Allowing a full fair-market value deduction for gifts of publicly traded stock to private foundations encourages taxpayers to devote the stock exclusively to charitable purposes. As government is restructured and reduced in size, the charitable sector will be expected to take on an increasing number of publicly beneficial projects. This incentive for charitable giving will help prepare for that future.

5. Targeted Jobs Tax Credit

Background

The TJTC was enacted by the Revenue Act of 1978 as a substitute for what had been a broad-based new jobs tax credit. Congress concluded that the unemployment rate had declined sufficiently so that it was appropriate to focus employment incentives on individuals with high unemployment rates and other groups with special employment needs.

The credit initially was scheduled to expire on December 31, 1981 and applied to wages earned in the first and second years of employment. The first-year credit was equal to 50 percent of the first $6,000 earned by a TJTC-hire and the second-year credit was 25 percent of the first $6,000 earned.

The TJTC has been extended on a short-term basis numerous times over the years. Revisions also have been made by a number of tax laws to adjust the amount of the credit, close loopholes, and alter the targeted groups of individuals covered by the credit.

The TJTC was amended and extended for one year through December 31, 1982, by the Economic Recovery Tax Act of 1981. This Act eliminated retroactive certification of employees already on the payroll and also required that one targeted group -- cooperative education students -- be economically disadvantaged in order to be covered by the credit. Without this constraint, employers were able to receive subsidies for hiring individuals they likely would have hired in the absence of the credit. Other changes made by the 1981 Act included increasing the number of targeted groups and modifying certain restrictions on eligibility within existing categories.

The TJTC was extended for two more years through December 31, 1984, by the Tax Equity and Fiscal Responsibility Act of 1982. This Act extended the credit to employers hiring economically disadvantaged 16- and 17-year-olds for summer employment. The 1982 Act also deleted one of the targeted groups -- former public service employment participants under the Comprehensive Employment and Training Act.

The Deficit Reduction Act of 1984 extended the TJTC for another year through December 31, 1985, after which it expired. It was extended retroactively for three more years through December 31, 1988, by the Tax Reform Act of 1986. The 1986 Act reduced the amount of the credit to 40 percent of the first $6,000 earned and eliminated the second-year credit. Employees also were required to work for a minimum of 90 days or 120 hours to be covered by the credit (14 days or 20 hours for summer youths). A minimum employment period was imposed to limit the "churning" of employees by some employers. "Churning" involves maximizing the amount of credit by rapidly turning over workforce to hire additional targeted members.

The Omnibus Budget Reconciliation Act of 1987 eliminated the credit for wages paid to individuals who perform duties similar to those of workers who are participating in or are affected by a strike or lockout. The Technical Corrections and Miscellaneous Revenue Act of 1988 extended the credit for an additional year through December 31, 1989; reduced the summer youth credit from 85 percent to 40 percent of the first $3,000 earned; and eliminated 23- and 24-year-olds from the targeted group of economically disadvantaged youths.

The TJTC was extended for nine more months through September 30, 1990, by the Omnibus Budget Reconciliation Act of 1989. This Act also reduced the burden placed on local Employment Service offices of verifying worker eligibility. The 1989 Act required employers requesting certification of a job applicant for which there had not been a written preliminary determination of eligibility (a voucher) to specify at least one, but not more than two, targeted groups to which the individual might belong. The employer also had to certify that it had made a good faith

effort to determine the individual's eligibility. The prior practice of asking local Employment Service offices to verify TJTC-eligibility of all new hires burdened these offices without creating new jobs. The employer firms already had decided to hire the individuals, although the individuals had not yet been put on the payroll.

The Omnibus Budget Reconciliation Act of 1990 retroactively extended the TJTC for 15 months through December 31, 1991. The conference agreement also clarified the definition of one of the targeted groups. This group -- "ex-convicts" -- was defined to include persons who are placed on probation by State courts without a finding of guilty. The TJTC was further extended for six months through June 30, 1992, by the Tax Extension Act of 1991.

Most recently, the credit was extended retroactively for 30 months by the Omnibus Budget Reconciliation Act of 1993. The 1993 Act extended the TJTC to cover individuals who begin work for an employer after June 30, 1992 and before January 1, 1995.

Current Law

Before its expiration, a TJTC was available to employers for up to 40 percent of the first $6,000 of wages paid to a certified worker in the first year of employment. This translates into a potential credit of $2,400 per targeted worker. The worker must be employed for at least 90 days or work at least 120 hours. (The credit for summer youth is 40 percent of the first $3,000 of wages, or $1,200, and these individuals must work for 14 days or 20 hours.) The employer's deduction for wages is reduced by the amount of the TJTC.

Certified workers must be economically disadvantaged or disabled individuals in one of nine targeted groups. These groups are (1) youth 18-22 years old; (2) summer youth age 16-17; (3) cooperative-education students age 16-19; (4) ex-offenders; (5) Vietnam-era veterans; (6) vocational rehabilitation referrals; and individuals receiving (7) general assistance, (8) Supplemental Security Income, or (9) Aid to Families with Dependent Children.

For purposes of the TJTC, a worker is economically disadvantaged if the worker's family income is 70 percent or less of the "lower living standard income level." This level is revised periodically to account for changes in the Consumer Price Index and varies by geographic and urban area.

To claim the credit for an employee, an employer must receive a written certification that the employee is a targeted group member. Certifications for employees are generally provided by State Employment Security Agencies. The employer

must have received or filed a written request for a certification on or before the date a targeted member begins work. If the employer has received a written preliminary determination that the employee is a member of a targeted group, the employer may file a written certification request within five calendar days after the targeted group member begins work.

The TJTC is jointly administered by the Treasury Department through the Internal Revenue Service (IRS) and the Department of Labor through its Employment Service. The IRS is responsible for tax-related aspects of the program and the Employment Service, through the network of State Employment Security Agencies, is responsible for defining and documenting worker eligibility.

Administration's Recommendation

The employment of economically disadvantaged and disabled workers is one of the Administration's most pressing concerns. Because we are very concerned about the efficient use of government revenues and the need to find revenue offsets, however, we believe that the problems undermining the credit's effectiveness must be addressed before pursuing an extension of the credit.

The most recent example of criticism of the program is an August 1994 report by the Labor Department's Office of Inspector General. The Inspector General's report raises significant concerns regarding the effectiveness of the credit. Although the report notes that the TJTC provides some benefits, the report concludes that the TJTC is not cost-effective and recommends that the Secretary of Labor discourage further extensions of the credit.

I would like to highlight three of the credit's main problems and offer very general options and principles for addressing those concerns. These problems are that the credit (1) provides a windfall to employers, (2) subsidizes short-term employment, and (3) promotes only limited training of employees for advanced career positions.

A. Employer windfall

Perhaps the most significant problem with the TJTC is that it often provides a "windfall" to employers. The credit provides a windfall to the extent it confers a benefit on employers for doing what they would have done without that benefit.

The most direct way to reduce any windfall is to require certification of eligibility before the hiring decision is made. In this way, the TJTC can serve as an incentive in the hiring decision. We are mindful that pre-hiring certification may be perceived as conferring a stigma on job applicants. However, the

TJTC was designed to overcome any negative employer perception about the likely productivity of targeted workers by rewarding employers for hiring them. In order for the program to work effectively, employers need to be aware that they are hiring targeted workers at the time the hiring decision is made. A pre-certification system would ensure that the credit was limited to employers that knowingly hired targeted workers.

One drawback of a pre-certification system is that it would place a larger burden on the Employment Service Agencies that perform the certifications. Treasury would be very wary, however, of endorsing any "self-certification" system under which individuals or their employers would certify targeted status with reduced oversight by government agencies. We would be concerned that such an "honor system" is too susceptible to abuse to be workable. Under the current regime, the principal checks against abuse are that Employment Agencies make the certifications and their actions are subject to audit by the Department of Labor. We believe these checks are important to curbing potential abuse and should not be replaced by more lax measures.

B. Employee turnover

Another serious criticism of the TJTC is that it subsidizes short-term positions that are less likely to promote job skills that are beneficial to more advanced job positions.

The Treasury and Labor Departments have explored two broad approaches to the churning problem. Under one approach, churning would be curbed by increasing the number of hours an employee must work with an employer before his or her wages could be taken into account in computing the credit. The current minimum employment period, which is the lesser of 90 days or 120 hours, translates into as little as three weeks of full-time work.

The other approach would "backload" the credit. Under current law, the credit is 40 percent of the first $6,000 in wages paid to a targeted individual. Under the backloading approach, the credit rate applying to wages above some threshold would be higher than the credit rate applying to the initial wages. This shifts the incentive of employers in the direction of paying higher wages and keeping their employees on the job longer.

There are possible downsides to these reform proposals, such as a reduction in the initial hiring incentive and increased administrative burdens that would need to be considered.

C. Training of employees

To the extent the TJTC influences hiring and retention decisions, it helps hard-to-employ individuals develop basic job

skills. These include such fundamental skills as showing up for work on time, taking directions from managers, asking questions when instructions are not clear, and successfully completing assigned tasks. Nevertheless, the low-wage jobs traditionally subsidized by the credit typically do not offer more extensive training that could directly serve as a springboard to more advanced job positions.

To bolster the TJTC's impact on training, the Department of Labor has suggested that the credit might be expanded to apply to individuals participating in approved "school-to-work" programs. Although it is appropriate that a broad range of options be considered, attempts to redesign the TJTC to encourage training present special challenges. Any broad training initiative in the TJTC should attempt to ensure that the credit's special emphasis on hiring economically disadvantaged individuals is retained. A broad-based training option also could lose significant revenue because of the size of the potentially eligible population.

Before extending the TJTC to school-to-work participants, it also would be necessary to understand the relationships of this possible category to existing categories and the precise criteria used in establishing eligibility. We would also need to evaluate whether redesigning the TJTC to include a new training component is allocating government resources to programs that work the best.

6. Tax Credit for Producing Fuel From Nonconventional Sources

Background

As originally enacted in 1980, the nonconventional fuels production credit was available for qualified fuels produced domestically from a well drilled or a facility placed in service before January 1, 1990, and sold to an unrelated person before January 1, 2001. In 1988, the placed-in-service date for both wells and facilities was extended to January 1, 1991. In 1990, the placed-in-service date for both wells and facilities was extended to January 1, 1993, and the production-credit sunset date was extended, so that sales of qualifying fuels occurring before January 1, 2003, would be eligible for the credit.

The Energy Policy Act of 1992 included a provision which treated biomass facilities and facilities that produce synthetic fuels from coal as being placed in service before January 1, 1993, if such facility was placed in service before January 1, 1997, pursuant to a binding written contract in effect before January 1, 1996. The 1992 act also extended the production-credit sunset date to 2008.

Current Law

Under section 29 of the tax code, certain fuels produced from nonconventional sources are eligible for a production credit equal to $3 (generally adjusted for inflation) per barrel or Btu oil barrel equivalent[2]. (For calendar year 1993, the credit is $5.76 per barrel-of-oil equivalent of qualified fuels.) Qualified fuels must be produced domestically from a well drilled before January 1, 1993; or from a facility that produces gas from biomass or that produces liquid, gaseous or solid synthetic fuels from coal (including lignite) and that is placed in service before January 1, 1997, pursuant to a written binding contract in effect before January 1, 1996.[3] The production credit is available for qualified fuels from a well sold to unrelated persons before January 1, 2003 and from a facility sold to unrelated persons before January 1, 2008.

Qualified fuels include (1) oil produced from shale and tar sands, (2) gas produced from geopressured brine, Devonian shale, coal seams, a tight formation, or biomass (i.e., any organic material other than oil, natural gas or coal (or any product thereof)), and (3) liquid, gaseous or solid synthetic fuels produced from coal (including lignite), including such fuels when used as feedstocks.

Administration's Recommendation

The Administration opposes any general extension of the placed-in-service date or the production-credit sunset date for facilities that produce gas from biomass or that produce liquid, gaseous or solid synthetic fuels from coal.

When Congress enacted the nonconventional fuels production credit in 1980, an objective was to support the development of new alternative technologies to recover oil and gas.[4] By increasing the profitability of these projects, the credit encourages investment in projects that might not have been undertaken without the tax incentive. Another objective of the credit was to encourage industries to develop alternative energy

---

[2]A barrel-of-oil equivalent generally means that amount of the qualifying fuel which has a 5.8 million Btu content.

[3]In the case of a facility that produces coke or coke gas, however, this provision applies only if the original use of the facility commences with the taxpayer.

[4]Senate Report No. 96-394, 96th Congress, 1st Session, p. 87.

sources that would be competitive with conventional fuels.[5] The credit was intended to apply only for a limited period of time, however, after which Congress expected "no special incentive will be needed" because the affected industries would have matured and become competitive without government assistance over the life of the credit.[6] The 1992 extension for biomass and coal facilities was intended to be a transition rule for taxpayers with facilities that were soon to be placed in service. This transition period is now almost over and no extension is warranted.

7. Transportation Fuels Excise Tax Exemption for Fuels Used in Commercial Aviation

Background

The Omnibus Budget Reconciliation Act of 1993 (OBRA 1993) generally provided for a 4.3 cents per gallon fuels excise tax on all transportation fuels, with the exception of fuel for commercial aviation, effective October 1, 1993. Gasoline and jet fuel used in commercial aviation is subject to the tax beginning on October 1, 1995.

Current Law

OBRA 1993 imposed a permanent excise tax of 4.3 cents per gallon on: (1) all transportation fuels currently subject to the Leaking Underground Storage Tank Trust Fund ("LUST") excise tax, except for jet fuels used in commercial aviation, (2) liquefied petroleum gases currently taxable as special fuels, (3) diesel fuel used in noncommercial motorboats, and (4) compressed natural gas (CNG) used in highway motor vehicles or motorboats (at 48.54 cents per mcf). Taxable fuels include motor fuels (gasoline, diesel fuel and special motor fuels) used for highway transportation or in motorboats; gasoline used in aviation; gasoline used in off-highway non-business uses (e.g., small engines and recreational trail uses); diesel fuel used in trains; and fuels used in inland waterways transportation. Most fuel uses that are exempt from the LUST tax are exempt from this tax. OBRA 1993 provided a temporary exemption from the 4.3 cents per gallon fuels tax for gasoline and jet fuels used in commercial aviation prior to October 1, 1995.

The provision was effective on October 1, 1993 (with appropriate floor stocks taxes being imposed on that date). In addition, gasoline and jet fuel used in commercial aviation was

---

[5]Ibid.

[6]Ibid.

subject to the tax beginning on October 1, 1995 (with appropriate floor stocks taxes being imposed on that date).

Revenues from this transportation fuels tax are deposited in the General Fund of the Treasury. This tax is separate from, and in addition to, any user-based excise taxes imposed on the same fuels to fund the Highway Trust Fund, the Airport and Airway Trust Fund, the Leaking Underground Storage Tank Trust Fund, the Inland Waterways Trust Fund, the Aquatic Resources Trust Fund, or the National Recreational Trails Trust Fund.

Administration's Recommendation

The Administration opposes any delay of the effective date of the 4.3 cents per gallon excise tax on fuel used in commercial aviation. No legislative action is required for this tax to go into effect.

When Congress enacted the 4.3 cents per gallon excise tax on fuels used in transportation, the effective date of the tax with respect to commercial aviation fuel was delayed from October 1, 1993, to October 1, 1995, because of concerns that the commercial airline industry generally was experiencing losses. The date certain for making the provision applicable to commercial aviation indicates that there was no intention that commercial aviation should be permanently exempted from the generally applicable excise tax on transportation fuels dedicated to the General Fund and used for deficit reduction.

An excise tax of 4.3 cents a gallon on commercial aviation fuel will not significantly affect the economic condition of the airline industry. This tax rate is well within the range over which jet fuel prices have fluctuated in recent years. During 1993 and 1994 average monthly jet fuel prices ranged from 50.7 to 61.3 cents per gallon. Moreover, we expect that airlines will pass a portion of these taxes on to passengers and shippers in the form of higher fares and rates.

The revenues and profits of the airline industry have recovered in 1993 and 1994 from recession lows. The Federal Aviation Administration reports that in fiscal year 1994, U.S. commercial airlines had operating profits of $2.6 billion and net profits of $1.2 billion. Passenger enplanements were up 8.2 percent over the prior year and revenue passenger miles up 5.5 percent. The FAA forecasts domestic enplanements to grow at an average rate of 5.8 percent per year over the 1995-97 period and at a rate of 4 percent per year over the next 12 years. International enplanements for U.S. carriers are expected to grow at a 5.8 percent annual rate over the next 12 years.

A tax on jet fuel will not affect the competitiveness of the U.S. carriers, because the tax will apply to foreign carriers

operating in the U.S. and will not apply to U.S. carriers (or foreign carriers) in their international operations.

8. Allocation of Research Expenditures

Background

U.S. persons are taxed on their worldwide income, i.e., their taxable income from both U.S. and foreign sources. To prevent double taxation of foreign-source income that may also be subject to foreign income taxes, U.S. persons may credit foreign income taxes paid against their U.S. tax liability.

The foreign tax credit is limited to the taxpayer's U.S. tax liability on its foreign-source income. Without this limitation, the U.S. effectively would subsidize higher tax rates of foreign jurisdictions by reducing a taxpayer's tax liability with respect to U.S.-source income to compensate for higher taxes imposed by foreign jurisdictions on foreign-source income. A taxpayer's foreign tax credit limitation (i.e., the ability to use its foreign tax credits) increases with the level of its foreign source income.

Consequently, a taxpayer with excess foreign tax credits (creditable foreign taxes in excess of its foreign tax credit limitation) has an obvious incentive to characterize as much income as possible as foreign source and to characterize as many deductions as possible as domestic source. In order to preserve the integrity of the foreign tax credit limitation so that foreign-source income is not taxed twice and foreign taxes do not offset the U.S. tax on U.S.-source income, it is important to accurately measure taxpayers' foreign-source income. This requires both an accurate measurement of a taxpayer's foreign source gross income, and of the deductions that are properly associated with that income.

Sections 861 and 862 provide rules for determining whether income and deductions are from U.S. or foreign sources. Prior to 1977, there were either no final regulations interpreting the expense allocation rules of sections 861 and 862, or regulations that simply restated the statutory rule with little elaboration. In 1977, Treasury issued final regulations governing the sourcing of expenses and other deductions as Treas. Reg. §1.861-8.

The 1977 regulations require research and development (R&D) expenses to be allocated among two-digit Standard Industrial Classification (SIC) code categories. R&D expenses associated with each such category are separately apportioned. R&D expenses that are incurred solely to meet the legal requirements of a particular jurisdiction and that cannot reasonably be expected to generate income (beyond *de minimis* amounts) outside that jurisdiction are allocated directly to gross income from the

geographic source that includes that jurisdiction. The remaining R&D expense is apportioned under *either* the sales method or the gross income method.

Under the sales method, thirty percent of the R&D deduction is exclusively apportioned to income arising from the geographic location where more than 50 percent of the taxpayer's R&D activities are performed. The remaining 70 percent is apportioned between U.S. and foreign source income on the basis of relative amounts of domestic and foreign- source gross sales receipts. A "look through rule" treats sales of certain controlled parties, such as foreign subsidiaries, and uncontrolled licensees as sales of the taxpayer for purposes of determining domestic and foreign gross sales receipts.

As an alternative to the sales method, a taxpayer may apportion R&D expenses based on the relative amounts of gross income from U.S. and foreign sources. Under this method, however, an exclusive allocation based on the place of performance is not permitted. As a further limitation, the portion of the R&D expenses apportioned to U.S.- and foreign-source income cannot be less than 50 percent of the amount that would be apportioned to U.S.- and foreign-source income under the sales method.

The 1977 regulations have been the subject of ten temporary modifications since 1981. A chronology of these modifications follows:

The Economic Recovery Tax Act of 1981 (ERTA) directed the Treasury to study the impact of the 1977 regulations on U.S.-based R&D and on the availability of the foreign tax credit. ERTA also suspended application of the 1977 regulations to U.S.-based R&D expenses for taxpayers' first two years beginning after August 13, 1981. During this period, 100 percent of U.S.-based R&D expenses were apportioned to U.S. source income. Expenses for foreign-based R&D were apportioned between U.S. and foreign source income under the rules of the 1977 regulations.

In 1983, Treasury published a report entitled "The Impact of the Section 1.861-8 Regulation on U.S. Research and Development." This Report described the 1977 regulations as an objective attempt to satisfy the statutory requirement that R&D be properly allocated and apportioned to domestic and foreign source income and described the ERTA regime as an incentive. The Report concluded that, compared to the 1977 regulations, the ERTA regime reduced U.S. tax liabilities of affected taxpayers by $100 to $240 million in 1982. The Report also noted that the ERTA regime had different effects on different corporations, but that the additional tax liability avoided in 1982 would (if paid) have reduced domestic R&D spending in that year by between $40 million

and $260 million. On the basis of these findings, the Report recommended a two-year extension of the ERTA regime.

The Deficit Reduction Act of 1984 extended the ERTA regime for an additional two-year period (the first two taxable years beginning after August 13, 1983).

The Consolidated Omnibus Budget Reconciliation Act of 1985 extended the ERTA regime for an additional one-year period (the first taxable year beginning after August 13, 1985).

The Tax Reform Act of 1986 suspended the 1977 regulations for one year (the first taxable year beginning after August 1, 1986) as it applied to U.S.-based R&D. During this one-year suspension, 50 percent of U.S.-based R&D expenses were exclusively apportioned to U.S. source income (a reduction from the 100 percent rule of ERTA). This 50 percent exclusive apportionment was available to taxpayers electing the gross income method, as well as the sales method of apportionment. The taxpayer's remaining R&D expense was apportioned under the 1977 regulations, except that no limitation was imposed on the use of the gross income method of apportionment with respect to the remaining U.S.-based R&D expenses.

The Technical and Miscellaneous Revenue Act of 1988 suspended the R&D regulations (which had been in effect during 1987) for a four-month period (the first four months of the first taxable year beginning after August 1, 1987), during which time 64 percent of U.S.-based R&D expenses were apportioned directly to U.S. source income and 64 percent of foreign-based R&D expenses were apportioned directly to foreign source income. This rule was codified in section 864(f). The taxpayer's remaining R&D expense was apportioned under the rules of the 1977 regulations except that, for taxpayers who elected the gross income method of apportionment, the amount apportioned to foreign source income was required to be at least 30 percent of the amount that would have been apportioned to foreign source income under the sales method. For the remaining eight months of that taxable year and the following year, the 1977 regulations were in effect.

The Omnibus Budget Reconciliation Act of 1989 reinstated Code section 864(f) for the first nine months of taxpayers' first taxable year beginning after August 1, 1989.

The Omnibus Budget Reconciliation Act of 1990 reinstated Code section 864(f) for a fifteen-month period (the last three months of the first taxable year beginning after August 1, 1989 and the first taxable year beginning after August 1, 1990).

The Tax Extension Act of 1991 extended Code section 864(f) for the first six months of the first taxable year beginning after August 1, 1991.

In 1992, Treasury issued Revenue Procedure 92-56, 92-2 C.B. 409, which administratively reinstated the provisions of Code section 864(f) for the last six months of a taxpayer's first taxable year beginning after August 1, 1991, and during the immediately succeeding taxable year.

The Omnibus Budget Reconciliation Act of 1993 (OBRA 1993) extended the provisions of Code section 864(f) for taxpayers' first taxable year (beginning on or before August 1, 1994) following the taxpayer's last taxable year to which Rev. Proc. 92-56 applies or would have applied had the taxpayer elected the benefits of that Revenue Procedure. The 1993 Act also reduced the exclusive allocation percentage from 64 percent to 50 percent. Therefore, for calendar-year taxpayers, the OBRA 1993 extension expired on December 31, 1994.

Current Law

Prior to its expiration, section 864(f) provided that fifty percent of research and development expenses (other than amounts incurred to meet certain legal requirements, and thus allocable to one geographical source) were exclusively apportioned to income sourced in the place of performance of the research. The remaining research and development expenses were apportioned on the basis of either sales or gross income, but subject to the condition that if the gross income based apportionment was used, the amount apportioned to foreign source income could be no less than 30 percent of the amount that would have been apportioned to foreign source income had the sales method been used.

Administration's Recommendation

As stated in the President's fiscal year 1996 budget, the Administration supports the revenue-neutral extension of section 864(f).

In Revenue Procedure 92-56, Treasury stated that it was undertaking a review of Treas. Reg. §1.861-8(e)(3) and further stated that, if necessary, it would propose appropriate amendments to that regulation. This Revenue Procedure also stated that the Treasury and the IRS were undertaking a review of the 1977 R&D allocation regulations. Treasury contemplates proposing new regulations in the near future that are likely to be more favorable to taxpayers than the 1977 regulations.

This concludes my prepared remarks. I would be pleased to respond to any questions that you may have at this time.

Receipts Effect of Permanent Extension of Expiring Provisions 1/

	Expiration Date	Fiscal Years 1996	1997	1998	1999	2000	1995-2000
				($'s in billions)

Department of the Treasury
Office of Tax Analysis

1/ Actual timing of receipts effect will be determined by date of enactment. Five-year totals will generally not be affected.
2/ Assumes retroactive extension with enactment date of 10/1/95.
3/ Assumes extension for taxable years beginning after 8/1/94.
4/ Does not take into account possible program modifications.
5/ Assumes statutory caps are adjusted so as not to be binding.
6/ Credit is available for facilities placed in service before 1/1/97, pursuant to a binding contract in effect before 1/1/96.

Chairman JOHNSON. I appreciate that, because there will be some questions.

Mr. Ross, please.

STATEMENT OF DOUGLAS ROSS, ASSISTANT SECRETARY FOR EMPLOYMENT AND TRAINING, U.S. DEPARTMENT OF LABOR

Mr. ROSS. Thank you. Good morning, Madam Chairman and Members of the Committee, I will briefly summarize my testimony and then submit the full written text for the record.

As you know, the administration did not seek an extension of TJTC, the Targeted Job(s) Tax Credit Program, in its most recent form. We concluded that TJTC did not deliver on its goals. Let me emphasize, however, that that does not reflect an abandonment of the goal of TJTC. In fact, we believe that improving the job prospects of the least advantaged is more important than ever. We have seen a steady decline in the economic prospects of less advantaged workers since the TJTC was enacted in 1978.

While finding jobs for the disadvantaged has always been a challenge, increasingly the challenge is job quality. In 1992, for example, more than three-quarters of all young workers between the ages of 18 and 24 had annual earnings that were too low to support a family above the poverty level. The administration has taken a number of concrete steps to try and address that problem.

The President's Middle-Class Bill of Rights provides individual skill grants to disadvantaged workers so that they can get the skills they need to earn better living, and we are fighting to preserve and, in some cases, expand programs that have a track record of effectively serving disadvantaged young people—the summer jobs program, the Job Corps Program, and youth training efforts modeled after programs like the San Jose Center for Employment and Training. As you know, our welfare proposal also preserves funding for training to help welfare recipients make the transition to jobs.

Despite the growing problem of low-income youth and this administration's commitment to an activist role in solving it, we do not support reauthorizing the TJTC in its present form. We have not come to this conclusion lightly. It is based on literally a dozen studies, and we think if there is going to be an effort to create a new, more effective credit, it has to deal with three very serious problems of the old TJTC.

First, there was great evidence that the great majority of the tax credits under the old program were windfalls to employers who would have hired the disadvantaged target group anyway. While it is true that TJTC eligible groups do suffer from high rates of unemployment, a large fraction of them actually work, mostly in the kinds of low-wage jobs subsidized by TJTC.

Unless employers claiming TJTC subsidies hire workers that either have more significant barriers to productivity or they pay them more or they retain them longer or they invest more in their development than other employers in the normal course of business, participating firms collect a benefit with no corresponding gain to the public. Unless we change behavior, we are getting nothing for our money. In tight times like this, you cannot spend money where you get nothing for it.

Second, TJTC jobs are almost always low wage and low skill, and the typical worker does not remain at these jobs long. According to the Office of the Inspector General, the median TJTC certified worker receives less than $4,000 in total wages before losing the job or leaving their job, and 50 percent do not stay longer than 6 months, which is something you get without the credit.

Third, TJTC participation appears to have little or no effect on earning power or long-term career advancement. In other words, when you compare those who are hired with it and those who are hired without it, the earnings are roughly the same and their long-term unemployment rates are about the same. It does not have any effect on what happens to them over the long run.

Besides these formal studies, there is some pretty distressing anecdotal evidence that you need to take into consideration, if Congress is going to proceed in this area. In some cases, we found Wall Street investment banks have collected the TJTC for young new hires or for summer interns. These were not actually disadvantaged youth, but were college students or recent graduates who lived off savings and scholarships while in school, and thus qualified as "disadvantaged."

For instance, in a number of cases, recent graduates of the Harvard Business School and Wharton School of Business qualified for the TJTC. That is not what this is about. In some—I thought—pretty impressive testimony in front of Congress last year by Charlene Jackson, who is Deputy Administrator of the Texas Employment Commission, and gives some feel for what we are seeing out in the field under the old program. She detailed cases where a consulting group submitted large numbers of falsified information claiming that young people qualified as a disadvantaged family of one, when in fact they were still being supported by middle-class parents.

If the Congress decides to pursue a new tax credit program for the disadvantaged, it should structure the program to avoid some of these problems that plague TJTC.

Let me talk very briefly about four principles that we would recommend as an administration that Congress look at, if they are going to create a new credit.

First, we have got to limit the potential for abuses of the program and target it to people who really need it. To do this, we think eligibility should be based on some clear and easily documentable evidence of economic advantage.

Examples could be current or recent recipients of means tested welfare program, ex-convicts or youths enrolled in State or Federal education or job training programs for the disadvantaged or disabled workers in voc rehab programs. The key is, there is an existing agency that knows whether this is a person who qualifies, who at virtually no extra cost can certify it and say this is someone on welfare. You do not need to go through some long and complex and subject-to-fraud process to find out who they really are.

Second, we have got to deal with this employer windfall problem. All too often, employers have screened for TJTC eligibility and certified their workers only after hiring them. A promising reform in this area would be to require eligible workers to gain tax credit eligibility prior to hiring. In other words, we have got to know who

is eligible first, then if you hire them, it is a conscious act. If you just hire everybody and, after the fact, see if any of them qualify, we are not getting much for our money, and maybe we are getting nothing for our money.

Third, we have got to improve the incentive to provide longer lasting jobs under the TJTC. As I said, half of all hires remained on the job for less than 6 months. A reformed tax credit program should induce employers to provide jobs that last. An employer should receive, therefore, greater reward from the credit when they manage to retain their employees for longer than a couple of months.

Finally, we have got to improve training incentives. The TJTC does not provide enough incentive to build worker skills and thus improve their long-term outcomes. Given the importance of skills in shaping employment prospects, there is a strong case for injecting a learning component into a reformed TJTC.

Madam Chairman, we offer these principles as the starting point and we offer possible discussion between the administration and Congress, should Congress wish to pursue the design of the new tax credit. The details of the approaches discussed here have not been fixed, nor have we really done any cost estimates.

In summary, as my colleague from Treasury stated, the administration would be open to working with Congress in designing a reformed tax credit program, provided that the resources to finance a reformed credit are a supplement to existing proven investments in the disadvantaged, not a substitute.

Thank you very much.

[The prepared statement follows:]

TESTIMONY OF DOUGLAS ROSS
ASSISTANT SECRETARY OF LABOR
FOR EMPLOYMENT AND TRAINING
BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

May 9, 1995

Good morning, Madam Chairman and Members of the Subcommittee. I am pleased to have the opportunity to testify before you on the Targeted Jobs Tax Credit.

The Targeted Jobs Tax Credit (TJTC) was enacted in 1978 to improve the private sector employment prospects of disadvantaged individuals. The credit expired at the end of calendar year 1994.

As you know, the Administration did not seek an extension of TJTC in its most recent form. We concluded that TJTC did not deliver on its goals, and either needed to be reformed or discarded.

Let me emphasize, though, that we are not abandoning the goal of TJTC. Indeed, we believe improving the job prospects of the least advantaged is more important than ever.

Unfortunately, we have seen a steady decline in the economic prospects of less-advantaged workers since the TJTC was enacted in 1978. The groups targeted by the TJTC are precisely those who have suffered most from this decline. Over 11 percent of the American population received welfare payments in 1993 -- a new record, up from less than 8 percent in 1978. Unemployment rates among young, out-of-school high school graduates have increased from 8.8 percent in 1978 to 13.3 percent in 1993 -- and the situation is even worse for dropouts.

The fundamental problem has as much or more to do with job quality as with job quantity. When disadvantaged workers find jobs, their wages are typically very low, and have been dropping. The median income (in constant dollars) of families led by people aged 24 or under has declined by over one-third since 1978, and in 1992 was only $15,700 annually. In 1992, some 76% of young workers 18 to 24 had annual earnings too low to support a family above poverty. Most economists believe that the low wages and low job quality available to disadvantaged youth are a major reason why so many have dropped out of the labor force completely, and why some turn to crime.

The Administration has taken concrete steps to address these problems. Our proposed Middle-Class Bill of Rights provides individual grants to disadvantaged workers to gain needed new skills. We are fighting to preserve and in some cases to expand programs of demonstrated effectiveness in serving disadvantaged youth -- the Summer Jobs program, the Job Corps program, and youth training efforts modelled after the San Jose Center for Employment and Training. And we favor welfare reform that preserves substantial substantial funding for training and other services to help welfare recipients make the transition to private sector jobs.

However, we must take a critical look at the TJTC. We remain open to the possibility that an employment tax credit could be an important part of an effective strategy to improve the job prospects of the disadvantaged. However, the evidence strongly suggests that the TJTC has failed to achieve that goal.

Since 1978 when TJTC was first enacted, Congress has repeatedly passed extensions of the program, including retroactive extensions after the credit had expired. We do not believe that such an extension should be enacted unless the

Congress is able to provide meaningful changes to the program that hold out the strong promise of increased effectiveness. Nor do we believe that a new tax credit program should be instituted unless it includes steps to address the problems that plagued the TJTC. We would be open to working with Congress in designing a reformed tax credit program, provided that the resources to finance a reformed credit are a supplement to existing investments in the disadvantaged, not a substitute.

Let me briefly describe the program and the evidence we have regarding its effectiveness. TJTC was a nonrefundable tax credit available to employers who hire: the economically disadvantaged, including youth aged 18-22; cooperative education students 16-19 years old; ex-offenders; Vietnam-era veterans; individuals receiving general assistance, Supplemental Security Income, or Aid to Families with Dependent Children; or vocational rehabilitation referrals. Economically disadvantaged summer employees aged 16-17 were also included. The program allowed for a tax credit of 40 percent of any portion of the first $6,000 earned by a certified worker within a year of the hire, provided the employee worked at least 120 hours or 90 days. Lower limits (in dollars, credit rate, and hours) apply to summer youth employees.

Administration of the TJTC has been a joint responsibility of the Treasury Department's Internal Revenue Service and the Federal-State Employment Service system. The IRS has been responsible for administering the tax-related aspects of the program, while the State Employment Service Agencies, funded by the Department of Labor's Employment and Training Administration, has been responsible for documenting worker eligibility, vouchering and issuing certifications to employers.

Including the two studies recently issued by the OIG, there have been some twelve studies of the results of the TJTC program completed over the past 15 years. Numerous other publications on the TJTC have reviewed the findings or data of these studies. In general, the research indicates the following:

1. There is evidence that the great majority of the tax credits are windfalls to employers who would have hired the disadvantaged target group members anyway. While TJTC-eligible groups do suffer from high rates of unemployment, a large fraction of the eligible population does work--mostly in the kinds of high-turnover, low-skill jobs subsidized by TJTC. Unless employers claiming TJTC subsidies hire workers with more significant barriers to productivity, pay them more, retain them longer, or invest more in their development than other employers, participating firms collect a benefit with no corresponding gain to the public. Existing studies estimate that from 70 percent to 90 percent of TJTC certifications go to individuals who would have found jobs even in the absence of the credit. The most recent Inspector General's report projects that employers would have hired 92 percent of the individuals even if the credit had not been available.

2. TJTC jobs are almost always low-wage and low-skill, and the typical worker does not remain at these jobs long. Nationally, the OIG found that most TJTC jobs were low-skilled and entry-level, with an average hourly wage of roughly $5.15 per hour. Our own administrative data confirm these low wages. What is even more important is that TJTC jobs are typically of very short duration. The OIG found that the median TJTC-certified worker remains on the job for only about 6 months, and other research has confirmed this finding. The combination of low wages and low tenure adds up to low total earnings. According to the OIG, the median TJTC-certified worker receives about $4,000 in total wages before losing or leaving their job.

3. TJTC participation appears to have little or no effect on

earning power or long-term career advancement. A 1991 GAO report did not find substantial differences in earnings resulting from TJTC work experience when compared with work experience of other TJTC-eligible workers who were not certified under the program. According to our own analysis of Census data, there is little difference between the hourly wages of TJTC eligibles who are certified under the program and those that are not.

Some claim that the work experience gained in jobs subsidized by the credit pays off in better job prospects for the future, counterbalancing the low quality of the immediate jobs. But the evidence does not support this. A 1988 report found that even five years after participation in TJTC, the average annual earnings of minority male youth who had been certified under the program were only about $7,000 per year (1993 dollars), and those of female youth were even less. Also, the Labor Department OIG determined that 35% of TJTC participants were unemployed when they were contacted about a year and a half after entering their TJTC jobs. This compares to 38% in the year before getting the job. Again, there is little evidence of improvement due to TJTC.

Besides the evidence from formal studies, there is also anecdotal evidence on the actual workings of the TJTC in the field. Based on discussions with field personnel from the state employment security agencies (SESAs) who actually run this program, we understand that abuse of the TJTC was frequent. Sometimes abuses were due to outright fraud, and sometimes they resulted from loopholes in the program rules and the difficulty of enforcing eligibility standards. However, we believe that all these abuses raise disturbing questions about the effectiveness of the program.

To take one example, in some cases Wall Street investment banks have collected the TJTC for young new hires or for summer interns. These youth were not actually disadvantaged, but were college students or recent graduates who lived off savings and scholarships while in school, and thus qualified as "disadvantaged". In fact, some of them were recent graduates of Harvard University and Columbia University.

There have also been cases of firms which mass-produce TJTC applications. After they are hired, all youth employees are interviewed. Those who report a low income over the past 6 months are asked to fill out a TJTC application which identifies them as a family of one (i.e. not dependent on their parents). These applications are then submitted en masse to SESAs, with the expectation that they will be rubber-stamped. Upon examination, one SESA has found that the great majority of these applications raise questions as to whether the applicant is actually a "family of one". Upon further review, these middle class students are not disadvantaged -- some are graduates of expensive private universities. Often applicants and their families express amazement, when interviewed, that anyone could think them to be economically disadvantaged.

The testimony of Charlean Jackson, the Deputy Administrator of the Texas Employment Commmission, in front of Congress last year gives some feel for the extent to which this program is abused in the field. Ms. Jackson testified that "The TJTC program is one that invites fraud." She detailed cases where consulting groups submitted large amounts of falsified information claiming that young people qualified as a disadvantaged "family of one", when in fact they were still being supported by their middle-class parents.

She felt that the issue was both that the program rules were difficult to enforce, especially when mail-in certification was used, and that resources to enforce it were limited. Ms. Jackson testified that more cases of abuse could have been uncovered if Texas had the financial resources to perform additional audits.

Ms. Jackson believed TJTC abuses were so frequent that Congress should not extend the program unless a serious attempt to address these problems was made.

If the Congress pursues a new tax credit program for the disadvantaged, it should structure the program to avoid some of the problems that plagued the TJTC. I believe that a thoughtfully designed tax credit program could be an effective tool for improving the employment prospects of disadvantaged Americans. Specifically, I believe the following four principles should apply:

1. Limit the potential for abuse of the program, and target it on the truly disadvantaged. Eligibility for the credit should be based on clear and easily understandable signal of economic disadvantage. Possible examples could be current or recent recipients of means-tested welfare programs, ex-convicts, or disabled workers in vocational rehabilitation programs.

Although this step would limit the eligible population, it would also limit abuses of the program, and focus it on the truly disadvantaged. For example, it is much easier to determine if an individual has been a recent welfare recipient than it is to determine if they are truly economically disadvantaged. In the former case, only a certification from a welfare office is needed. In the latter case, extensive information is neccessary on family income, location of residence, parental support, etc.

In the case of youth, determination of whether an individual is actually "economically disadvantaged" becomes especially complex. Most young people -- whether disadvantaged or not -- go through a period of low earnings at some point when they go to college or get their first jobs. During this period it is difficult to determine whether the youth is still receiving parental support, and if so, how much. The examples given above of college students receiving the credit show the way in which the "economically disadvantaged youth" eligibility group in the TJTC program can be abused.

2. Reduce employer windfall. All too often, employers have screened for TJTC eligibility and certified their workers only after hiring them. A promising reform in this area would be to require eligible workers to gain tax credit eligibility prior to hiring. As discussed above, a number of consulting companies appear to have made it a standard practice to submit all new youth employees of a company for TJTC certification, sometimes using fraudulent means to do so. This practice ensures that the credit will not impact hiring. Any future jobs-related credit should require certification for credit eligibility prior to hiring.

3. Improve the incentive to provide long-lasting jobs under the TJTC. I have already described the low quality jobs that have been subsidized by the TJTC, in which half of all hires remained on the job for less than 6 months. Recent TJTC program rules -- which offered a substantial subsidy for only the first few months of employment -- may even have provided some incentive for rapid employee turnover in order to maximize the credit amount. The program paid employers to provide the same kinds of low-quality jobs that many eligible workers drift in and out of on their own, without subsidies. And it gave too little incentive to hire and retain workers for the long term. Research has shown that job retention -- not just initial hiring -- is one of the greatest problems for low-skill workers.

A reformed tax credit program should induce employers to provide jobs that last. Employers should receive a greater reward from the credit when they manage to retain their employees for longer than a few months. One way of doing this would be to "backload" the credit, perhaps by providing a limited credit

amount for the first few thousand dollars in wages, and then a higher credit for the next several thousand. This would reward employers who retained their workers. Another way to address this problem would be to allow the credit only for employers who retained their workers for some significant period.

4. Improve training incentives. The TJTC does not provide enough incentive to build worker skills and thus improve their long-term outcomes. Given the importance of skills in shaping employment prospects, there is a strong case for injecting a learning component into a reformed TJTC. One way to do this would be by making the work-based learning slots created in conjunction with school-to-work programs eligible for TJTC subsidies. Less ambitiously, legislative and administrative steps could be taken to make participation in TJTC more accessible for low-income school-to-work participants. Besides school-to-work, there is also the possibility of extending the TJTC credit to formal training expenses for TJTC-eligible workers. However, it could be difficult to define which training expenses would qualify.

We are prepared to discuss the design of a new tax credit program with Congress, should it wish to pursue this option. We have presented these principles here as a starting point for discussion. The details of the approaches discussed here have not been fixed, nor have we done formal analysis of the costs and benefits. Also, we have concerns that some of these approaches could have negative side effects such as increased administrative complexity which would diminish their overall effectiveness. However, we do believe that these approaches could improve the TJTC program. Of course, the Administration's position on specific proposals will depend on the overall package, and on what offset is used to finance the reauthorization.

Madam Chairman, this concludes my prepared statement. At this time I would be pleased to answer any questions that you or other Members of the Subcommittee may have.

Chairman JOHNSON. Thank you, Mr. Ross, for your excellent testimony.

Mr. Murphy.

STATEMENT OF PATRICK V. MURPHY, ACTING ASSISTANT SECRETARY FOR AVIATION AND INTERNATIONAL AFFAIRS, U.S. DEPARTMENT OF TRANSPORTATION

Mr. MURPHY. Thank you, Madam Chairman.

On behalf of the Department of Transportation, I would like to thank you for this opportunity to testify today. I would like to summarize my testimony and submit the full testimony for the record.

Two years ago, Congress imposed a 4.3-cents-per-gallon excise tax on transportation fuels, effective October 1, 1993, but temporarily exempted the airlines from paying the tax as it would have applied to aviation fuel. That statutory exemption expires September 30, 1995. Given the improving health of the airline industry and the need to reduce the Federal budget deficit, the administration believes that the exemption should not be extended. This action is also appropriate, given that the other transportation industries have paid their full share of this tax for the past 2 years.

The airlines are today in far better position than they were 2 years ago to absorb the impact of the fuel tax. At the time Congress granted the exemption, the airline industry was undergoing the worst financial crisis in its history.

In 1992, the U.S. aviation industry suffered its worst year ever, with total operating losses of $2.3 billion and net losses of $4.6 billion. The airlines at that time had accumulated over $10 billion in net losses. All major carriers except Southwest had suffered heavy losses. Several airlines, including Eastern and Pan American, had ceased operations and were liquidated during this period, and three more major airlines had filed for bankruptcy protection.

Today, the picture is significantly different. Most airlines have experienced major improvements in their financial condition. As the economy has recovered from recession, so has airline traffic. The airlines have also engaged in a major restructuring of their operations, increased efficiency, cut excess capacity, reduced unit operating costs, and enhancing their competitive strength.

In addition, the three major airlines that had been under bankruptcy protection 2 years ago have since emerged from chapter 11 proceedings. As a result, the major airlines' operating profits grew to $2.4 billion in 1994, and their net loss declined to $603 million. These trends are continuing into 1995. The majors' first-quarter operating profit increased from $85 million in 1994 to $485 million in 1995. Since the first-quarter results are normally low, owing to the extreme seasonality of airline traffic, we expect the airlines to show a strong operating and net profit for 1995.

The FAA now forecasts that the currently robust airline traffic growth will hold for the next 2 years, and then continue at a healthy 4.2-percent growth rate through 2006. The strong growth in traffic, combined with the airlines' ongoing capacity reductions, should result in higher load factors for the industry. This, in turn, should boost operating profits. In view of these factors, we are now optimistic that the airlines' net income will also continue to improve.

Wall Street analysts appear to share this positive outlook for the airlines. The emerging consensus among airline analysts is that the airline fundamentals have improved and should continue to improve. The positive fundamentals include increased traffic, restrained capacity growth, higher load factors, improving revenue performance, cost containment, and financial restructuring. These are not temporary changes.

As Michael Derchin of NatWest Securities has stated, "These are not the type of changes that affect profitability for a quarter or two, but the type that can enhance the profitability picture for this industry for the rest of the decade."

The airlines' recovery has been driven, in part, by the steady decline in fuel costs in recent years. Airline fuel costs have declined from 78-cents-per-gallon in 1990 to about 53-cents-per-gallon today. In 1990, fuel costs accounted for nearly 17 percent of total operating expenses. Last year, fuel costs were about 10.6 percent of total operating expenses.

In this perspective, the impact of a 4.3-cents-per-gallon fuel tax is now far less onerous than it was 2 years ago. Based on the latest reported data, if the tax were imposed on the 12.6 billion gallons of fuel purchased by the airlines in 1994, airline expenses would be higher by $543 million annually, an increase in operating expenses of only 0.7 percent. Moreover, we anticipate airlines will pass through some portion of the tax to passengers and shippers in the form of higher fares and rates and will adjust capacity to make service adjustments. A further reduction on the impact would result from the manner in which fuel tax expenses are handled by the airlines in calculating their income tax liability.

The 4.3-cents-per-gallon fuel tax was applicable to highway gasoline and diesel fuel, maritime fuels, general aviation and commercial aviation fuel. Only the tax on commercial aviation fuel was deferred for 2 years, the reason being to give airlines time to recover.

We have calculated the relative impact of the deficit reduction portion of the Federal excise fuel tax on railroads and motor carriers. We estimate that for 1994, the impact of deficit reduction on Class I railroads was $221 million and $1.78 billion for motor carriers and their users.

In this context, the case for extending an exemption is very difficult as a matter of fairness. Other transport modes have paid the 4.3-cents-per-gallon fuel tax for almost 2 years. By the time the commercial aviation exemption expires, motor carriers and their users alone will have paid as much as $3.5 billion over 2 years. In view of the airline industry's ongoing recovery, there is no longer any justification for granting the airlines preferential treatment compared to the other modes of transportation.

Thank you.

[The prepared statement follows:]

STATEMENT OF PATRICK V. MURPHY
ACTING ASSISTANT SECRETARY OF TRANSPORTATION
FOR AVIATION AND INTERNATIONAL AFFAIRS
BEFORE THE
HOUSE COMMITTEE ON WAYS AND MEANS
CONCERNING THE FINANCIAL CONDITION OF THE AIRLINE INDUSTRY
MAY 9, 1995

Madame Chairman and Members of the Committee, the Department of Transportation is pleased to have this opportunity to comment on the financial condition of the U.S. airline industry.

Two years ago, the airline industry was in the very earliest stages of recovery from the most severe financial crisis in its history. In 1992, the U.S. aviation industry suffered its worst year ever, with total operating losses of $2.2 billion and net losses of $4.6 billion, and had accumulated over $10 billion in net losses from 1990 through 1992. All major passenger carriers except Southwest Airlines had suffered heavy losses. Several airlines, including Eastern and Pan American--two of America's oldest and largest airlines--had ceased operations and were liquidated during this period, and three more major airlines--America West, Continental, and TWA--had filed for bankruptcy protection under Chapter 11; several more airlines were considered by industry analysts to be on the brink of bankruptcy.

I am pleased to report that today's picture is different. Most airlines have experienced improvements in their financial condition. As the economy has recovered from recession, so has airline traffic. The airlines have also engaged in a major restructuring of their operations. As a result, they have increased efficiency, cut excess capacity, reduced unit operating costs, and enhanced their competitive strength. In addition, the three major airlines that had been under bankruptcy protection two years ago have since emerged from Chapter 11 proceedings.

Historic Financial Results

Since 1985 the airlines have ridden a financial roller coaster. From 1985 through 1989, the major airlines as a group had strong net income in every year but 1986. Over the five-year period, they had cumulative net income of over $3 billion, including $1.6 billion in 1988. By the end of 1989, the major airlines had aggregate net stockholders' equity of nearly $14 billion, and long-term debt of nearly $16 billion. The airlines' debt/equity ratio stood at a fairly healthy 53/47 level.

Beginning in 1990, the airlines suffered three consecutive years of massive losses. In 1990, the major airlines lost over $3.6 billion, due primarily to Iraq's invasion of Kuwait, the subsequent Gulf War, and the consequent increase in fuel prices and decline in international airline traffic. The airlines suffered another $1.8 billion loss in 1991 as the economy slid into recession, and $4.6 billion in 1992 (including over $2 billion in one-time charges to reflect changes in the airlines' accounting of pension liabilities). By the end of 1992, the majors' long-term debt had skyrocketed to over $21 billion, and stockholders' equity had plummeted to about $9.2 billion. The industry's debt/equity ratio had climbed to 70/30.

The industry began its recovery in 1993, when the major airlines earned operating profits of $1.4 billion and net income of $454 million. Six of the nine major passenger airlines were profitable in 1993. (These figures somewhat overstate the industry's improvement, as they include "fresh start" accounting for Continental and TWA with their emergence from bankruptcy in 1993.) Although they posted a small net loss of $121.5 million, the major airlines' operating profits increased to $2.4 billion. Five of the nine major passenger airlines posted operating profits and net profits, as did both major all-cargo airlines.

Although long-term debt continued to increase in 1993, ***to $27 billion, net stockholders' equity began to recover, climbing nearly one-third to $12.3 billion.***

The industry's long-term debt declined in 1994 to $27.3 billion, and stockholders' equity grew another 30 percent to a record high of nearly $16 billion. The majors' debt/equity ratio has improved to 62/38.

The overall industry recovery during the last two years has been driven primarily by the general economic recovery from the 1991-1992 recession. In addition, carriers have been significantly aided by the rapid decline in aviation fuel costs since 1990. Because of instability in the oil markets caused by the Iraqi invasion of Kuwait, the industry's average cost of fuel jumped to nearly 78 cents per gallon in 1990. Fuel prices have declined sharply every year since then, falling to 60 cents in 1993 and to 58 cents during 1994. This steep, rapid decline in jet fuel costs has been a primary factor in the airlines' recovery over the last two years. Finally, most major carriers have restructured their operations to improve efficiency and cut costs, in order to become more competitive not only with each other but with low-cost carriers like Southwest and successful new entrants.

Since January 1992, no fewer than 30 new jet airlines have started up domestic U.S. operations, and we have authorized operations for 12 carriers who have not yet commenced service. At this moment, we have 10 more new entrant applications pending before the Department. These and other low-cost, mid-size airlines have filled a void left by the majors in point-to-point, short-haul and medium-haul city-pair markets with dramatically positive results. The larger carriers have been forced by this development to redouble their cost-cutting efforts. They have reduced service on unprofitable routes, expanded service on underserved routes, retired older, inefficient aircraft, and, in some cases, achieved new collective bargaining agreements that allow a more efficient use of labor. In order to improve the efficiency of their operations, airlines have entered into major domestic and international code-sharing and joint-marketing alliances with other carriers. Many have also restructured their debt and equipment leases to improve earnings and cash flow; others have reappraised their entire route structures and operating philosophies. In addition, management leaders at many airlines have increasingly formed partnerships with labor by encouraging employee ownership, primarily through Employee Stock Option Plans. Employees now hold an outright majority share of United, the nation's largest airline, and own large equity shares of many other airlines, including America West, Continental, Northwest, Southwest, and TWA.

These changes in the airlines' operations constitute the most comprehensive restructuring of the industry at least since the development of hub-and-spoke networks in the early and mid-1980s, and perhaps since passage of the Airline Deregulation Act in 1978.

As a result of this restructuring, most airlines have achieved dramatic improvements in their financial position. Northwest, in particular, has made enormous strides in the past two years. After suffering record losses of $386 million in 1992, it earned $81 million in 1993, and ***a record $430 million last year.*** American, America West, and United, which also suffered from heavy losses in 1992, were all solidly in the black by 1994. Southwest, which was the only profitable passenger carrier in 1992, saw its net earnings increase $180 million last year. And ValuJet, less than 2 years old, enjoyed an astounding 25 percent operating margin last year, with net income of over $20 million. Restructuring has also enabled the three major airlines formerly under Chapter 11 protection to reorganize and escape from bankruptcy. Continental emerged from bankruptcy in April 1993, TWA in November 1993, and America West in August 1994.

At the same time, the airlines' recovery has not been uniform. Despite their large aggregate operating profits, the major carriers posted net losses for 1994 of $121.5 million, and a few carriers remain in a weak financial position. Even the weaker carriers, however, have made significant progress in cutting unit costs, rationalizing their route systems, and increasing efficiency. As airline traffic increases with continued economic growth, the industry's fortunes should improve considerably.

Forecast Operating and Financial Results

The airline industry's financial prospects are critically dependent on continued airline traffic growth, which itself is a function of overall growth in economic output. Gross domestic product (GDP) grew by 3.8 percent in fiscal year 1994. At the same time, airline traffic increased by 5.5 percent, from 483 billion revenue passenger miles (RPMs) in FY 1993 to 510 billion in FY 1994.

OMB forecasts continued GDP growth of 3.1 percent in FY 1995, 2.4 percent in FY 1996, and 2.5 percent in FY 1997-2001. Thereafter, the FAA forecasts continued growth in GDP of 2.5 percent in FY 1997 to 2001, and 2.4 percent from FY 2002 through 2006. (The FAA's long-term forecast is based on a consensus of long-term growth forecasts issued by several economic analysts in the private sector.) Furthermore, the FAA forecasts that the currently robust airline traffic growth rates will continue for the next two years, and then continue at a healthy 4.2 percent through FY 2006. The FAA forecasts airline traffic of 537 billion RPMs in FY 1995, 567 billion in FY 1996, and 869 billion by FY 2006.

Most major airlines have announced plans to control or trim their capacity this year, and to continue pursuing reductions in unit costs. Continued strong growth in airline traffic, therefore, should result in higher load factors for the industry. This, in turn, should boost the airlines' operating profits, even as their real passenger yields (revenue per passenger-mile) continue to fall.

We are now optimistic that the airlines' net income should also continue to grow. Long-term debt should continue the slow decline begun in 1994, and net stockholders' equity should increase sharply.

As over the last two years, however, these benefits may not be spread evenly among the carriers. Airlines with high costs or poor route structures may continue to struggle unless they effect significant corrective steps. Highly leveraged carriers are especially vulnerable to upward pressures on interest rates. Nevertheless, we anticipate that even the weaker carriers should progress toward profitability over the next several years, albeit possibly at a slower rate than the healthier airlines.

Airline industry cost structure

The airline industry is labor-intensive. During 1994, salaries and wages accounted for 24.7 percent of the major airlines' total operating expense, and fringe benefits comprised another 9.6 percent. Total labor costs amounted to 34.3 percent of their operating expense, by far the largest expense item.

Fuel and capital costs were the next largest expense groups. The majors' fuel and oil expense was 11.0 percent of operating expense. Total equipment costs (rentals plus depreciation) were 13.7 percent of operating expense. Passenger traffic commissions are also a major airline expense, amounting to 9.4 percent of operating expense. Altogether, labor, fuel, equipment, and commission costs made up 68.4 percent of total expense in 1994.

The distribution of airline expenses has not been static over time. Fuel and oil made up nearly 23 percent of airline expense in 1985, declining to a low of 13.7 percent in 1988 before climbing again to 16.7 percent in 1990 with the Iraqi invasion of Kuwait and the attendant instability in the oil markets. Since that time, the industry's fuel cost has declined as a share of operating expense to a 10-year low of 11.0 percent in 1994.

Traffic commissions grew rapidly and nearly continuously during the last ten years, from 7.8 percent of expense in 1985 to 10.3 percent in Calendar Year 1993, an increase of one-third, before ***declining to 9.4 percent in fiscal 1994.*** Aircraft rentals have also grown from 3.5 percent in 1985 to ***8.5 percent in FY 1994.***

Labor expenses as a share of total expense have fluctuated a great deal over the last 10 years, falling from a high of 38.6 percent in 1986 to a low of 31.9 percent in 1990. They have since increased to ***34.3 percent in FY 1994.*** Depreciation has shown a

similar trend, declining from 5.5 percent in 1985 to 4.3 percent in 1990, and since then *climbing to 4.9 percent in FY 1994.*

Unit costs have also shifted over time. Total operating expense per available seat-mile (ASM) grew from a low of 7.2 cents in 1986 to a peak of nearly 9.3 cents in 1991. Since that time, total unit cost has declined somewhat *to about 9.2 cents per ASM.* Labor costs, which were 2.7 cents per ASM in 1986, have climbed steadily, reaching *nearly 3.4 cents in FY 1994.* Passenger commissions have also grown continuously and rapidly, from 0.6 cents per ASM in 1986 to nearly 1.1 cents in 1993, an increase of over 72 percent in seven years, before *declining in FY 1994 to 1.0 cents* per ASM. Equipment costs (depreciation, amortization, and rentals) have also increased, *from 0.8 cents per ASM in 1986 to nearly 1.4 cents in FY 1994.* Fuel costs, on the other hand, peaked at 1.6 cents per ASM in 1990, and have since declined *nearly one-third to less than 1.1 cents per ASM.*

By functional grouping, the airlines' largest costs were aircraft operating expense, which accounted for *40.1 percent of total operating expense in fiscal 1994.* (Aircraft operating expense consists of flying operations expense, flight equipment maintenance, and depreciation and amortization on flight equipment.) Other major functional groupings are reservations and sales expense (including commissions), which accounted for *16.6 percent* of total expense, traffic servicing at *10.3 percent*, passenger servicing at *9.4 percent*, and aircraft servicing at *6.2 percent* of operating expense. Together these five groups accounted for *82.6 percent of the airlines' operating expenses in FY 1994.*

Effect of the 4.3 cent jet fuel tax

Two years ago, Congress temporarily exempted the airlines from paying the 4.3 cents-per-gallon excise tax on jet aviation fuel. That statutory exemption expires September 30, 1995. At the time Congress granted the exemption, airlines were undergoing their worst financial crisis in history.

The industry is now in a position to accommodate this tax increase. Therefore, we do not support a further extension of the exemption. As I noted earlier, fuel costs have continued to fall, and now represent only *about 11 percent* of the industry's total operating expense. In absolute terms, fuel is now about *56 cents per gallon*, down from 78 cents in 1990 and 64 cents in 1992. In that perspective, the impact of a 4.3 cent-per-gallon fuel tax is far less onerous. *Based on the latest reported data, if the tax were imposed on the 12.1* billion gallons of jet fuel purchased by the major airlines, the airlines' fuel expense would be higher by *$543 million annually*--an increase over actual fuel expense of *7.9 percent*, but an increase in total operating expense of only *0.7 percent*.

The Department of the Treasury estimates that, for every dollar it gains from the aviation fuel tax, it loses about 25 cents in corporate income tax from the airlines. Thus, a very rough estimate of the net effect of the fuel tax on the airlines would appear to be *about $407 million*, or only about one-half of one percent of operating expense. Moreover, we anticipate that the airlines will pass through some portion of the tax onto passengers and shippers in the form of higher fares and rates. We also expect that the airlines will adjust capacity and make equipment and service adjustments to increase fuel efficiency, thus further reducing the tax's cost burden. Thus, the net impact on the industry would be substantially *less than $407 million*.

In this context, the case for extending an exemption is very difficult as a matter of fairness to other transport modes, which have paid increased excise taxes on fuel during the past two years. The Administration's position, therefore, is that there is no longer a justification for exempting the airlines from paying their fair share of energy taxes beyond the current fiscal year.

Recommendations to enhance airline profitability

Because the airline industry is hyper-sensitive to overall economic conditions, the surest road to the industry's recovery is continued economic growth. As Laura D'Andrea

Tyson, then Chair of the President's Council of Economic Advisors and now Chair of the National Economic Council, wrote last year in introducing the Administration's Initiative to Promote a Strong Competitive Aviation Industry, "A strong economy will be the best medicine for what ails the aerospace complex."

Nevertheless, as Dr. Tyson added, "a strong economy cannot alone cure these industries' ills." There is still a role for government policies to promote the financial health of the aviation industry. Two years ago, at the Administration's behest, Congress established the National Commission to Ensure a Competitive Aviation Industry to investigate the causes of the aviation industry's financial woes, and to recommend measures to speed their recovery. The Commission adopted a list of 61 recommended steps to improve the aviation and aerospace industries' viability.

In January 1994, in response to the Commission's recommendations, the Administration unveiled its Initiative to Promote a Strong Competitive Aviation Industry. The Administration adopted 49 of the Commission's recommendations. As of January 1995, the Department has taken a large number of specific administrative actions to implement these recommendations.

Among the Department's most prominent actions are the introduction of new technology and navigation rules to streamline the FAA's air traffic control, which has already significantly reduced fuel consumption and airport delays for many carriers; accelerated implementation of the Global Positioning System; and a comprehensive examination of the High Density Rule affecting the four slot-controlled airports (Kennedy, LaGuardia, O'Hare, and Washington National), in order to determine the rule's impact on airline competition, fares, and service patterns. In addition, the Department has continued to monitor closely the airlines' operating and financial results, has encouraged the entry of new airlines by removing hindrances to market entry and assuring that new carriers are not harmed by unfair competitive practices. We are also continuing to reassess the economic impact of existing regulations in order to minimize regulatory burden on the industry.

Another important way to improving airline profitability is liberalization of routes, fares, and rates. Although the domestic industry has been deregulated for over 16 years, international routes are still subject to severe restrictions in many bilateral aviation markets. Liberalization of our bilateral aviation agreements with our trading partners, therefore, is another important goal of the Administration.

To achieve this, the Administration has adopted "Open Skies" initiatives with a number of our trading partners. The most dramatic fruit of this effort was the recent signing in Ottawa of the new U.S.-Canada aviation agreement. That agreement provides for complete "Open Skies" to be phased in over three years between the U.S. and the Canadian cities of Montreal, Toronto, and Vancouver, and for immediate "Open Skies" in all other U.S.-Canada markets. The Department has just issued temporary exemption authority to six U.S. carriers to provide new service to Montreal, two airlines to Toronto, and six to Vancouver. We expect the new U.S.-Canada agreement to result in several billion dollars in new trade between the two countries.

The Administration has also aggressively pursued "Open Skies" agreements with countries overseas. In the last few weeks, the United States has initialed "Open Skies" agreements with Austria, Belgium, Denmark, Finland, Iceland, Luxembourg, Norway, Sweden, and Switzerland. In addition, the Administration is seeking to improve bilateral agreements with a number of our other trading partners, including China, Japan, Peru, Poland, and the United Kingdom.

Successful implementation of "Open Skies" or liberalized bilateral agreements will provide U.S. airlines with more opportunities to compete on an even footing for increasingly valuable international traffic. Since U.S. carriers are the most cost-efficient in the world, we are confident such opportunities will result in increased profitability recovery.

In addition to the foregoing administrative actions, the Administration has proposed draft legislation to restructure FAA's Air Traffic Control functions in a new government-owned corporation funded by user fees. This would allow for more flexible personnel and procurement policies, ensure that the ATC system is able to respond quickly and efficiently to the growth of the industry and to technological advances, and provide for the highest degree of safety.

Last year, in response to recommendations of the Airline Commission, the Administration supported provisions in proposed legislation to reform the bankruptcy laws, including changes with respect to airlines. Last October Congress enacted the Bankruptcy Reform Act of 1994 we included several of the provisions we supported. In addition, on February 15, 1995, Representative Clinger introduced legislation in H.R. 951 to liberalize the restrictions on foreign ownership of U.S. carriers. Liberalization of foreign ownership rules was included in the Commission's recommendations, and has been adopted by the Administration in its Aviation Initiative and by the Department of Transportation in its recent international aviation policy statement. The Department is reviewing H.R. 951 in light of these factors.

Conclusion

With competitive pressures exerted by low-cost carriers, every major airline has launched a program to cut costs to the bone. These programs have included withdrawal from unprofitable routes and stations, retiring inefficient aircraft, reducing food service, changing distribution channels, shifting to ticketless reservations and booking, cutting commissions, and trading labor concessions for equity stakes in the airlines. These developments reflect the major changes going on in the airline industry as it restructures itself into a more efficient, highly competitive, and low-cost service industry. When these efficiencies are combined with today's health economy, and with our ongoing efforts to promote the health of this important economic sector, we see a profitable era for airlines.

Mr. Chairman, let me once again extend my thanks for the opportunity to present the Department of Transportation's views on the current and future health of the aviation industry. I am confident that, as our economy continues to grow, as U.S. air carriers become more efficient, and as the policies the Department has proposed or has underway are implemented, the aviation industry will grow, flourish, and prosper.

Chairman JOHNSON. Thank you, Mr. Murphy. I thank the three of you for your excellent testimony.

Mr. Ross, I assume from your testimony that the Department of Labor and the administration prefers not to create a new targeted jobs tax credit program, that in fact you think it would be difficult to create a program that would meet the principles that you have laid out, and you prefer the money to go into skill grants. Is that a fair statement?

Mr. ROSS. It is clearly the priority in the President's budget. We are working to consolidate, as you know, a considerable number of these different individual programs and we are trying to integrate them into resources that disadvantaged individuals, as well as laid-off workers, can use, get control of and take some charge of their own destiny.

We do support, as was suggested by Treasury, the continuation of the exclusion fully for employers who are investing in the training of their own workers.

Chairman JOHNSON. You are really making the point that government subsidies should not be aimed just at entry into the work force, but should be aimed at the attainment of quality jobs that will better support a standard of living of which we as a nation could be proud.

Mr. ROSS. I think that is right. Most folks can get first jobs. The point is not to get stuck there. There are some groups, those long-term welfare recipients, those perhaps who are on disability who need that jump start.

Chairman JOHNSON. I appreciate that, and I think that is a very important point. I want to keep my comments limited, as I am going to ask the others to.

Ms. Beerbower, would the Treasury oppose a change in the orphan drug tax credit that would require a company to, in a sense, make good on the subsidy they received early on, if an orphan drug then does become commercially very viable, very successful?

Ms. BEERBOWER. I think we would certainly consider that.

Chairman JOHNSON. Pardon?

Ms. BEERBOWER. We would consider that.

Chairman JOHNSON. The same issue I think needs to be raised in the exclusion of educational assistance. You can go to night law school for $3,000 a year, but we give educational expenses of $5,000. In this time of constrained budgets, is this rational? Would you be interested in looking at some of those kinds of things to better reduce the cost?

Ms. BEERBOWER. Sure, we would be happy to consider them.

Chairman JOHNSON Last, it is accurate to say that your position of support on some of these tax credits is not reflected in the President's budget. In other words, the cost of extension of the R&E, research and experimentation, tax credit, the cost of extension of the orphan drug credit and the allocation rules, and so on and so forth, are not accounted for in the President's budget?

Ms. BEERBOWER. In the President's budget, we support the extension of the credits, but you are correct that there is no financing offset that is provided in the budget, for the reason that we wanted to work with this Committee and with Congress generally to pro-

vide bipartisan financing options for these extensions, and we remain willing to look at—

Chairman JOHNSON. You will be willing to work with us to find offsets in the Code that represent lower national priorities?

Ms. BEERBOWER. Definitely.

Chairman JOHNSON. We appreciate that very much, and I will look forward to your input on that specific aspect.

Mr. Murphy, your statistics in regard to the transportation industry and the equity of extension were very interesting to me. There are others on the panel who are more knowledgeable regarding that matter, and I am going to yield to them.

I will recognize Mr. Matsui, my Ranking Member.

Mr. MATSUI. Thank you, Madam Chairwoman.

I would like to ask Labor, and perhaps Treasury, questions about the TJTC. From your answer to the Chairwoman's question, Mr. Ross, it seemed to me that you really do not want to see this program continue, you would rather like to see it expire, mainly because it cannot be reformed to your specifications. Is that pretty much my understanding?

Mr. ROSS. I would say that we do believe it would be possible. We can imagine the possibility of creating a credit for the disadvantaged that is much more effective than the old one. We would be willing to engage in it, not at the cost of scarce investment dollars for the disadvantaged.

Mr. MATSUI. We are talking about $1.2 billion, and it sounds to me that you are talking about—if you talked really about the disabled, you are really talking about a different kind of credit, because this is a much broader credit.

Let me say this. I would like to see it extended, at the same time it has to be reformed before I give my assent to it. All of you raised very legitimate concerns. I looked at the Inspector General's report, and last year we had some testimony on this issue. You are absolutely right, there is no reason why a Harvard graduate or a Harvard student should be able to qualify for this particular credit. These credits really go only for 6 months or less. I think the mean worker receives only 6 months out of these jobs. It is a rotational situation.

Mr. ROSS. Congressman, I would not want you at the same time to think we are not willing and more than interested in being forthcoming, if the Congress wishes to do this. We think it is important that it be effective based on the lessons of the past, and that hopefully it represents an expansion of our commitment to help the disadvantaged, not a substitute for something that works.

Mr. MATSUI. I am wondering if it would make some sense—and maybe you are already doing this—for you to meet with Mr. Houghton and Mr. Rangel and see if you can come up with something. I think that is the only way we are going to avoid a collision at the end, if you get administration and bipartisan support out of the Committee Members. Maybe you are already doing this. I do not know that. But I would recommend that, because, frankly, we do not want to be in a position where you have reservations and you must oppose the provisions that perhaps Mr. Rangel and Mr. Houghton agree to. It would not make sense.

Mr. ROSS. We do intend, in fact, I believe we even have scheduled time to meet with them yet this week. Yes, we will follow your advice.

Ms. BEERBOWER. The same on the Treasury side.

Mr. MATSUI. Good, and I would say the same with Treasury. Obviously, with the point of making sure that the costs of this is within a range that makes some sense. One thing you may want to consider—and perhaps Mr. Houghton and Mr. Rangel are looking into this—perhaps there could be some recapture provision, have a minimum length of time one would to be able to receive this credit, and whatever time that is would be something you would determine with the two principal sponsors, and then have the provision that if that person does not complete that time, you recapture it from the business.

I mean that is one way to make sure the business thinks it through before they hire that worker, not just put somebody on and take advantage of the credit and then throw them off without a lot of thought. I think the responsibility should be on everyone's side, not only the government and the employee, but the employer has to share in this responsibility and think through the well-being of that employee, as well.

There are some things that I think we need to look at, and that would be one. Perhaps it will not work. Maybe administratively it would be too difficult, but I would hope that you would look at some of these things with the idea of trying to make it work. If you cannot, we will obviously have to make tough calls.

Mr. ROSS. We will do that.

Mr. MATSUI. I thank all of you. Thank you.

Chairman JOHNSON. Mr. Herger.

Mr. HERGER. Thank you very much, Madam Chairman.

I have some questions, if I could. The point was made I believe by both Ms. Beerbower and also you, Mr. Murphy, about the fact that it would appear that the airlines are improving now. I guess my question is, when we look at this airline industry, which for a number of years has been struggling—we have three major airlines that are just pulling themselves out of bankruptcy.—If we look at 1994, even though our GDP, gross domestic product, was growing by 3.8 percent, we do show more than a quarter-billion-dollar loss by the industry. Some $285 million I believe for 1994.

I guess my question perhaps to you, Mr. Murphy, I just wonder what the rationale is at a time when the industry has been doing so poorly, that we are imposing on it a 4.3-cents-per-gallon tax on commercial aviation. Is it the administration's feeling that we can somehow tax what has been perceived by virtually all to be a weak airline into good health?

Mr. MURPHY. Congressman, the airline industry has historically been a very cyclical industry which responds in a magnified way to swings in the economy. Now that the economy has improved and the airlines have made some very fundamental changes, we believe they are on the brink of some very good times and that they have had the benefit of $1 billion over the last 2 years in a fuel tax exemption, and we believe they are now in a position to handle that without jeopardizing in any way their recovery.

Their fuel costs are now running about 55 cents per gallon, down from 70 cents per gallon in the midseventies, just a few years ago. We think the 4-cent-per-gallon tax is something they can absorb. We think the industry can continue to recover, and this will not jeopardize the health of any one airline.

Mr. HERGER. Following up on that again, we are just barely into this year, we are just into May. We have three airlines who have restructured and it would appear that maybe they are getting on their feet again. I have to assume that these three airlines plus the others have been cutting to the bone to try to get back into solvency. Again, I have to ask the question: Do we really feel that a $400 to $500 million annual tax on fuel is somehow not going to put them back into a tailspin?

Mr. MURPHY. We do not think it will put them in a tailspin. We estimated it will represent a 0.7-percent increase in their operating expenses. That is significant, but again we do not think it is going to jeopardize the recovery that is well under way and which I think is reflected by Wall Street.

Mr. JOHNSON of Texas. Will the gentleman yield?

Mr. HERGER. Yes.

Mr. JOHNSON of Texas. Does this mean that your agency is trying to run the airline industry from Washington, DC, and are you in effect saying that taxing is good for America, even if we lose an airline?

Mr. MURPHY. No, sir. We took a position that the airlines needed tax relief 2 years ago and the airlines did get a $1 billion 2-year exemption from the fuel tax. The issue in our mind is whether they continue to need that exemption that the other modes of transportation have not gotten—

Mr. JOHNSON of Texas. It is a judgmental call on your part, without probably even talking to any of the chief executive officer's or any of the airlines.

Mr. MURPHY. Sir, we do talk to the chief executive officer's on a regular basis and clearly none of them are going to—

Mr. JOHNSON of Texas. They do not want a tax increase, do they?

Mr. MURPHY. None of them are going to support a tax increase, Congressman, no, sir.

Mr. JOHNSON of Texas. Thank you.

Mr. HERGER. Concluding, does the administration feel there is a possibility that some of these airlines who again are struggling, could perhaps result in bankruptcy?

Mr. MURPHY. We do not believe this one element could, but I also do not want to leave you with the impression, Congressman, that none of our airlines have problems. There are still two or three airlines that need to continue to restructure. As an industry, we believe they have turned the corner, we continue to have new entry into the industry, and some of our airlines are going to have a very good year this year from a profits standpoint.

Mr. HERGER. Then you are saying the administration feels that it is worth the risk at this time to impose this tax, even though there is a risk of—

Mr. MURPHY. We do not think this one item is going to drive any one airline into liquidation. There are some airlines that have problems that go well beyond this tax issue that have to do with their

fundamental costs, and they are going to have to continue to work on those.

Mr. HERGER. I hope you are correct in your assumptions. I have a major concern with what you are attempting to do. I do not think it is the right thing to do, particularly right now following the incredible loss that the airlines, as a whole, have been dealt just this last year. I also am concerned about the message that the administration is sending the businesses of our country that the minute you begin to look like you are getting your head above water, look out, because here comes the government to take more out of your pocketbook. I am very concerned about that, as well.

With that, I end my questioning, Madam Chair.

Chairman JOHNSON. Thank you, Mr. Herger.

Mr. Zimmer.

Mr. ZIMMER. Thank you.

I would like to ask Ms. Beerbower to respond to a couple of specific suggestions with respect to changes in the R&E credit on behalf of the administration. Assuming that acceptable measures to offset the cost of these proposals could be found, would the administration support providing taxpayers with a one-time election to take a flat 3-percent credit in lieu of the current incremental credit?

Ms. BEERBOWER. We would consider discussing with you the modifications of the research tax credit, but in the context that the most important thing to us about it is that it be made permanent. If in discussing modifications, issues arise as to different groups being helped, hurt or whatever, if that in any way retards making it permanent, making it permanent would be our highest priority.

On a flat rate versus an incremental rate, we have in general tried to have the credit respond to increased research, as opposed to research that would have otherwise been undertaken by the taxpayer. We see a flat credit as subsidizing research that might have otherwise occurred.

Mr. ZIMMER. Even on a one-time basis, you would not be receptive to this effort?

Ms. BEERBOWER. We would consider it, but, as I said, the highest priority of the administration is to make it permanent.

Mr. ZIMMER. Well, assuming that we can make it permanent somehow, and assuming that we can make it revenue neutral somehow, let me go on to the second suggestion. If you had a reform providing taxpayers with an opportunity to adjust their fixed base period to a fresh start approach or by allowing taxpayers to choose any consecutive 4-year period, say out of the previous 8 years as their base period, is that something you would consider?

Ms. BEERBOWER. We would consider it.

Mr. ZIMMER. Would you support it?

Ms. BEERBOWER. Your assumptions are that we have financing options and we have already made it permanent. I think at that point we would be happy to work with you to modify it.

Mr. ZIMMER. This brings me to a larger point. You said just now and before that the administration wants to work in a bipartisan manner to come out with ways to offset the cost of these extensions. We are running out of time. These extensions are about to

expire, and I would like to know whether you today have any suggestions of specific ways that we can offset the revenue loss?

Ms. BEERBOWER. We do have ideas. Again, the importance to us is the bipartisan nature of expressing our ideas, so they are not ideas that we would announce but we are happy to work with you with respect to those ideas.

Mr. ZIMMER. What exactly does that mean? Because Donna Shalala used about the same terminology when she said she wanted to work with us on Medicare, dealing with the anticipated bankruptcy of the Medicare Trust Fund. How do we get going on this bipartisan discussion?

Ms. BEERBOWER. I think one of the things that encouraged us in this way was our experience with respect to GATT, General Agreement on Tarrifs and Trade, and also just recently with the 25-percent health care deduction for the self-employed. We assembled a working group, people presented ideas for financing, the financing options were presented in a bipartisan fashion, and we thought that worked quite well. Particularly in GATT, it was a very successful effort and it was at a staff level with a working group meeting.

Mr. ZIMMER. How did that working group get put together? Who took the initiative to put together the working group?

Ms. BEERBOWER. I cannot recall in GATT. In the 25-percent health area, I think it was the Joint Committee. We are happy to take the initiative. If you take the initiative, we are happy to attend the meeting. We have ideas and we would be happy to discuss them.

Mr. ZIMMER. I just hope we get off the dime, I look forward to working with you.

Thank you very much.

Chairman JOHNSON. Mr. Levin.

Mr. LEVIN. Thank you.

Let me just ask you a question about the excise tax, because I do not really think it is quite fair to say it is a question of hitting business as soon as it is profitable. I think the question here is whether an exemption from a tax that applies to other businesses should be continued. I have an open mind on that. I think it is important that we look at it in a fair way.

Later on, there is going to be testimony that says this. Forget for a moment—though I do not think you can for more than a second—the issue of profitability within the airline industry, which I think is subject to a lot of discussion, what the longer range prospects are.

The airline industry also says you have to look at the comparative impact of taxation among various transportation modes, and I think that is true. I do not know if you have seen Carol Hallett's testimony, but she compares taxation on the various transportation industries and indicates that the airlines are already paying much more. What is the appropriate response?

I think that you would agree we have to look at the overall burden on the various transportation modes. No?

Ms. BEERBOWER. I think your point is an excellent one in terms of putting this issue in context. When Congress enacted the 4.3 cent excise tax, it was intended to apply to all methods of transpor-

tation. At that point, there was a request for a special industry exemption for the airlines to last I believe only during the 2-year period. It was Congress' intention that it apply to all modes of transportation and that this particular exemption be only for the severity of the particular problems that were being faced at that point by the airline industry.

It would be inappropriate, in considering the extension, unless Congress should decide it, rather than in considering whether or not to impose the excise tax on airlines at all, and in that kind of a discussion one would look at tax burdens on relative forms of transportation.

Mr. LEVIN. Should we not do that?

Ms. BEERBOWER. The question before us is whether to extend the exemption for the airlines.

Mr. LEVIN. But it is relevant, is it not, to look at the overall tax burden? Maybe a few years ago we did not apply it to aviation because there was an immediate crisis, so we did not need to look at the larger issue of overall burden. I would think we would have to take into account subsidies, too. I am not sure of the full picture, but do you not think it is appropriate to look at overall tax burden within the transportation industry?

Mr. MURPHY. If I could, Congressman, much of the tax on these transportation companies goes into trust funds, and then one has to look at what does it cost the Federal Government to provide the infrastructure and support for different forms of transportation. We know it is substantially lower, let us say, for the railroads than it is for airlines, where we have to provide radar, air traffic control systems, we have to provide inspectors, and security. There is a cost to the Federal Government, as well as a burden on the industries.

Mr. LEVIN. Has anyone made that analysis?

Mr. MURPHY. Yes, sir, a lot of analysis on that.

Mr. LEVIN. Why don't you send it to us.

Mr. MURPHY. Yes, sir, we will be happy to.

Mr. LEVIN. In other words, answer the question for the record of the relative tax burden and take into account subsidization.

[The following was subsequently received:]

DIRECT FEDERAL TAXES FOR SELECTED TRANSPORTATION MODES
Fiscal Year 1994

Mr. Ross, let me just ask you about the targeted jobs tax credit. I so much applaud what the Secretary and you have been doing in terms of job retraining. I do think it has been somewhat an unheralded effort to this point. In terms of America's future competitiveness, what you are trying to do to restructure training and retraining I think will be more durable than a lot of other things that we are doing.

I hope we can join in a bipartisan basis to do something and do something this session. Within that context—I know you are working on the whole package, you are trying to consolidate, trying to rationalize, trying to squeeze programs, make them more effective—you are a bit hesitant to take the targeted jobs tax credit by itself. I think that is understandable.

Just briefly within your overall effort to rationalize training—and we know how to do training, and you have been a leader for years—we know how to retain in this country. What is your message on the targeted jobs tax credit, that you are willing to work to reform it, that you do not think, no matter what we do, it would be very high up on the priority list of reformation of the system? But, again, you are willing to work to make it as strong as possible? Just summarize with your expertise, and I think your unique commitment combined with Secretary Reich and this administration, where you are coming from on this.

Mr. ROSS. We believe that under any circumstances, but especially in the setting in which dollars are short, that it is critical to invest in things that have demonstrated some ability to earn a return. We all agree that moving particularly low-income young people into the mainstream of the economy has as big payoff, economic and social.

The Job Corps, we know, returns about $1.46 in benefits for every dollar invested. Can it be improved? Sure, but that is a positive return. I can show that to a taxpayer. In TJTC, we were not able to demonstrate consistently any kind of positive return on those dollars. If there is a strong desire to use the tax credit as one of the means of helping the disadvantaged, I think we all agree we have got to learn from the past and get a positive cost benefit out of it.

Second, how much we invest in it needs to be determined in the context not only of the whole budget, which I know all of you are doing, but in the context of alternative investments in the disadvantaged that have some track record. I mean, part of this is, keep what works and get rid of what does not. That is what all of us are being instructed by the electorate to do. That is the framework within which we would like to look at. We are willing to work with you, if there is a desire on the part of the Committee to do so.

Mr. LEVIN. I think there is, and we look forward to working with you.

Thank you.

Mr. ROSS. Thank you, Congressman.

Chairman JOHNSON. Just to clarify the paper that you are going to get back to us from Mr. Levin's remarks, Mr. Murphy, it would be helpful if you would clarify for us all of the government's subsidies that support the different modes of transportation, including

the Highway Trust Fund and the tax sources, so we can get a better view of the role that the government plays in supporting each of our primary transportation modes.

Mr. MURPHY. We will be happy to do that.

Chairman JOHNSON. Thank you.

Mr. Johnson.

Mr. JOHNSON of Texas. Thank you, Madam Chairman.

While you are at it, how about including the costs that the airlines pay to the various airports around the country to provide their sustenance in addition to taxes that go into a trust fund that has not been used properly.

Ms. Beerbower, you were reluctant to talk about airline taxes overall or taxes overall on transportation, because you indicated that this hearing was simply on renewing the airline exemption. However, in your testimony you talked of other things that were not part of this hearing. The oil spill liability tax, for example, which you are pushing. Can you tell me why you want that extra money and what you are going to do with it? Further, why do you intend to take the cap, the statutory cap off in your proposal?

Ms. BEERBOWER. Yes, my hesitancy to discuss the tax burden on the airline industry was a resistance to the use of the word "tax." I think the better expression, which I feel quite comfortable with, is what is the government subsidy of transportation for one industry relative to another, and not focus entirely on the taxes that are borne by those industries.

Mr. JOHNSON of Texas. It is still tax, with any name you put on it. Go ahead and use whatever term you like.

Ms. BEERBOWER. On the Oil Spill Liability Trust Fund, we support the extension of the tax. We have been looking at the current balance—

Mr. JOHNSON of Texas. The tax expired, as I recall, and in one case there was a cap of $1 billion, I believe. When the fund acquired that much money, it automatically went off. I guess it went a little below that and went back on and then ultimately expired totally. Why do we need it?

Ms. BEERBOWER Well, at the current moment you are right that the balance of the fund is in excess of $1 billion dollars slightly because of the investment return. We think that the mechanism needs to be in place because of the fluctuation of the value of the trust fund, to kick it back in should there be a large oil spill liability and the fund is reduced below $1 billion.

Mr. JOHNSON of Texas. Your proposal eliminates the cap.

Ms. BEERBOWER. Our revenue estimating eliminates the cap. It assumes the cap goes up slightly over the years. A question we would certainly be willing to consider is whether or not the $1 billion needs to be increased or not, relative to the cost of the possibility of oil spills or whether $1 billion is adequate. In any case, we think the mechanism needs to be in place to reimpose the tax quickly, should the revenues in the trust fund go below $1 billion.

Mr. JOHNSON of Texas. How is that money being used? Is that being used to offset deficits, or is it being used as it is designed? Has it been tapped recently?

Ms. BEERBOWER. Well, it is currently at $1 billion in the fund. It is my understanding that the fund is used to clean up oil spills. I do not think it goes to another purpose, but we can check on that.

Mr. JOHNSON of Texas. Has there been any deductions from it recently?

Ms. BEERBOWER. Apparently there was a Puerto Rican oil spill about 6 months ago that reduced the balance in the fund below $1 billion and triggered the tax on again.

Mr. JOHNSON of Texas. How did it trigger the tax on, if it expired last year? Why don't you let your assistant talk? I think the Committee would allow that.

Ms. BEERBOWER. This is Elizabeth Wagner, our staff assistant in charge of it.

Ms. Wagner.

Ms. WAGNER. The tax went back on as of last July because of funds that were expended—that was more than 6 months ago, obviously—for a large oil spill near Puerto Rico.

Mr. JOHNSON of Texas. Was that a U.S. ship or a Puerto Rican ship?

Ms. WAGNER I am not sure, sir. Therefore, the tax did go back on as of July 1 last year, and the tax expired as of the end of last year.

Mr. JOHNSON of Texas. There is $1 billion in the fund right now?

Ms. WAGNER. There is $1 billion in the fund right now. There are annual disbursements for smaller spills of between $100 and $200 million per year, and they anticipate that that will continue. Therefore, if the tax is not extended or—

Mr. JOHNSON of Texas. Is that real money or paper money? Is it being invested? Is it drawing interest? Is it real money or is it being used against the debt?

Ms. WAGNER. It is drawing interest, and that is why there is an excess in the fund today. The interest is going into the fund.

Mr. JOHNSON of Texas. Thank you for your testimony. I am not sure that we need to redo that one, if it is operating and functioning the way it is by itself.

Chairman JOHNSON. My understanding of what you are saying is that if there were a big oil spill off the coast of New York City and the fund was drawn down without renewal of the law, there would be no way of replenishing the fund.

Ms. BEERBOWER. That is correct.

Chairman JOHNSON. Thank you.

Mr. Collins.

Mr. COLLINS. Thank you, Madam Chairman.

Mr. Levin, you were referring to the different taxes overall in the transportation industry. A bit of information, and I know there are some other overlapping tax provisions or costs to other industries other than the airline industry as far as transportation.

If you took the laundry list of taxes that the airline industry has collected today versus the fuel it purchases and converted those taxes to per-gallon fuel tax—and this is not including the 4.3 cents per gallon that is projected to be proposed for October—the airline industry will be paying an equivalent to 52.5 cents per gallon with current taxation. As that compares to the trucking industry, it is a little over twice or 100 percent more than the trucking industry.

Compared to the railroad industry, it is better than 600 percent of what the railroad industry is paying.

Mr. LEVIN. Would the gentleman yield?

Mr. COLLINS. Yes.

Mr. LEVIN. I notice that in Ms. Hallett's testimony and that is why I think you would agree that it would be wise for us to have any comments from the administration, because I do think that is relevant, the overall burden.

Mr. COLLINS. I think the gentleman is right, and not only from the standpoint of being a Member of Congress, but also having been in the transportation business myself for some 30 years, and not in the airline business.

The passenger fee was increased when NAFTA was approved for those funds to be applied to the cost of NAFTA. The Highway Trust Fund was increased from 8 to 10 percent, with 2 years of that being applied to deficit reduction. I think the airline industry itself has paid a major portion of the tax.

Mr. Murphy, your testimony suggests that the airlines can now absorb this tax because of recent marginal improvements in their financial statements. I assume that those marginal improvements makes them tax worthy. In the eyes of the Department of Transportation, what type of profits would it take to make them creditworthy so that they would have a reduction in the cost of capital that they have to borrow for investment or borrow for operations, which would lower their cost of operation and increase their tax liability on the other end? What would you say they would have to accumulate in profits over the next few years to put them back into a creditworthy position?

Mr. MURPHY. Our view, Congressman, is that the airline industry has not just undergone some marginal improvements in profits, but that some fundamental structural changes have taken place in the industry over the last few years, and the industry is now in a position to do very well.

In terms of what level of profits are needed for the next few years to raise their credit ratings, I could not answer that question. I think I would have to defer to someone in the investment banking industry. We do know, however, that some of the firms on Wall Street are now firmly recommending that certain airlines are equities and ought to be bought by investors.

Mr. COLLINS. Would not an increase in profitability lower their cost of money, which would increase their tax liability on the other end? You say you do not take that into consideration at all?

Mr. MURPHY. I said I do not know at what point their credit ratings will increase, how much profit that would take.

Mr. COLLINS. You are just focused in on the fact that they are now beginning to improve their situation to make a profit, so that makes them taxworthy. You are not concerned about creditworthiness?

Mr. MURPHY. I do not want to mix creditworthiness and the ability to continue to defer a tax. Our view is again they are in a position to begin to pay that tax that has been deferred for 2 years.

Mr. COLLINS. When you said they are improving financially because of restructuring, is it not true that that restructuring came at the cost of a number of employees through layoffs and also a cut-

back in the purchase of equipment, which again led to layoffs in the aircraft industry? The restructuring may have helped them in one area, but it costs in another, and every time we lost an employee we also lost a tax deduction from a payroll check. Is that not true?

Mr. MURPHY. Certainly both those facts are true. If I could just clarify slightly, the employment levels in the airline industry were growing in the eighties. They have more or less leveled off in the nineties. If we look at all of the people who have left the industry and then all the people who have entered the industry, employment has been flat in the airline industry.

In addition, the airlines have postponed purchases of aircraft. That was one of the problems. There was too much capacity in the system, and we believe they have now wrung most of that excess capacity out of the system, and that is one of the reasons they will return to profitability.

Mr. COLLINS. It came at the expense of individual loss of jobs and employment, which also resulted in the loss of tax deductions through those payroll checks that would have been received by those individuals.

You are interested in the fact that the airline industry is now enjoying a low fuel cost and that this tax will only increase their operation by 0.7 percent. Is that not the figure I remember you saying?

Mr. MURPHY. Seven-tenths of 1 percent, yes, sir.

Mr. COLLINS. Seven-tenths of 1 percent. What would a 10-percent cost increase in fuel do to that operating figure of 0.7 percent?

Mr. MURPHY. I would have to run those calculations, Congressman. I could not do that in my head.

Mr. COLLINS. Well, is it not true that fuel cost is now on an upward swing?

Mr. MURPHY. Fuel has been holding in the 50-cents-per-gallon range for about the last year. Fifty-five cents per gallon is the last figure we have for domestic fuel.

Mr. COLLINS. We will hear testimony on that later.

You mentioned the CEOs. Naturally, they would not prefer to see any type of tax increase on their airline. What about the business community? Will the airline be able to pass along part of this increase to other businesses? The flying public and business executives. Is it not true that an increase in their operations will result in a decrease in their tax liability, which again will affect the revenues of the Federal Government in a different fashion?

Mr. MURPHY. It is true that a large portion of this increase will be passed on to the users of the system.

Mr. COLLINS. Which will increase the cost of their business expense, and lessen the tax liability that they will be exposed to.

Mr. MURPHY. That is true.

Mr. COLLINS. It is a never-ending cycle, is it not, kind of like getting on the beltway and trying to find the end of it.

Mr. Ross, I am not surprised to hear the administration's position on the job tax credit. I had the opportunity to discuss this particular issue with the President the other day, and we both voiced concern about the individual tax credit and how it is working.

I suggest that you look at the concentration of welfare, unemployment, and crime, and you will find it exists actually in about 5 different States or 10 cities around the country, or better than 50 percent or right at 50 percent of all of those. Businesses in the private sector are going in there at their expense, not with any kind of government subsidy, and establishing operations that will employ people, and also focus in on industry that we are losing to other parts of the world.

We have lost a lot of jobs, particularly in the area of textile and apparel. If there is any possibility through favorable tax rates to an individual to a business or manufacturer who would spend their money, take their risk and investment in those areas to create jobs without any further government involvement, I believe that is a program and a plan that would have some purpose and merit to it.

Thank you, Madam Chairman.

Chairman JOHNSON. Thank you, Mr. Collins.

Mr. Hancock briefly, and Mr. Matsui very briefly.

Mr. HANCOCK. Thank you, Madam Chairman.

Mr. Murphy, is your projection that the 4.3-cents-per-gallon tax increase will be absorbed or that some of it will be passed through to the airlines' customers? If in fact it is all passed through, would there be a reduction in their profitability?

Mr. MURPHY. If they were all passed through, we would presume that there would be somewhat less travel, because higher costs would result in less travel. Yes, their profitability could be reduced.

Mr. HANCOCK. If in fact they do not pass it all through, then their profitability is automatically reduced?

Mr. MURPHY. Yes, although we believe that when their costs go up, they will make some adjustments in the efficiency in the way in which they operate their fleet. As the cost of fuel goes up, they look for ways to continue to save fuel.

Mr. HANCOCK. Is that not a little bit on conjecture? Let me ask it this way. Is it more likely that they will continue on the road to profitability without the tax increase or with the tax increase? Which way is more likely?

Mr. MURPHY. Without the tax increase, Congressman.

Mr. HANCOCK. Then I think that answers our question, does it not? We want the airlines to get on a profitable basis. Over the past 5 years, the airline industry, the investors, the stockholders in these companies have lost $13 billion. Now, how do we get into a profitability basis to where those losses can be recovered? I think that is where we have got to go.

Since they cannot pass it all through because it decreases demand for their services, they are going to lose money. If we put the 4.3 October projections in there, they are going to lose money, more money than they are losing now. That is a long way to go to get to profitability.

I especially appreciate the statement about credit-worthiness. It seems to me, when you talk about 0.7 percent, that does not amount to much. That amounts to a whole bunch when you start talking about big business spending or borrowing money. When they borrow money, they carry it out five or six places. Seven-tenths of 1 percent is a big chunk of money. Let's get them back

on the road to profitability before we start talking about taxing them.

Mr. COLLINS. Would the gentleman yield?

Mr. HANCOCK. Certainly.

Mr. COLLINS. I believe the average fuel cost for the industry is about 12 percent of their operating costs. An upswing of 6 percent in fuel costs would nullify the 0.7 percent that the gentleman is referring to.

Mr. HANCOCK. Let's give them another 2 or 3 years before we hit them again.

Thank you.

Chairman JOHNSON. Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chairwoman.

I understand that Treasury will not be here tomorrow on the R&E credit and also the 861 allocation of R&E expenses. I would like to just ask a question on the latter now.

Ms. Beerbower, in your testimony, you indicated that the Treasury Department may come up with new regulations on the 861 allocation issue that would be more favorable to the taxpayers. Could you maybe answer two questions in that respect. When do you think you might have new regulations, and does that mean we would not have to act? Second—and maybe it is premature to ask this question—what do you have in mind in terms of this being more favorable for the taxpayers?

Ms. BEERBOWER. I apologize for not being able to announce the regulations at the same time as the hearing. The timing of the issuance of the regulations should be very soon. We are in the final stages of clearance, and so we hope to issue that very soon. Whether or not that means that this Committee will want to act or not act is clearly in the judgment of the Committee.

I cannot at this point go into the details of the regulations and what they do that make them more favorable than the 1977 regulations, but certainly when they are released, we are happy to brief you and go over what changes are in them.

Mr. MATSUI. When you indicate you will be perhaps making these proposed regulations very shortly, are we talking about a matter of weeks or a matter of months or—

Ms. BEERBOWER. I wish I could always predict. I would have said a matter of days, but do not hold me to that in case there is a delay. We had hoped to release them this morning.

Mr. MATSUI. Thank you very much.

Chairman JOHNSON. I share Mr. Matsui's concern. We are the chief sponsors of the extension legislation. As soon as you are able to release them, I want to set up a briefing for the Committee, so that we can understand which of the problems in that area may need our attention.

Ms. BEERBOWER. Certainly.

Chairman JOHNSON. We will schedule that, if you will let us know as soon as possible when you could talk with us.

Ms. BEERBOWER. Certainly.

Chairman JOHNSON. Thank you.

I thank this panel for your very good testimony, right to the point. I appreciate it.

As this panel is leaving, we are going to ask Mr. Camp to join us. He was unable to get here at the beginning. Dave, if you will try to observe the 5-minute rule, because we have a very long list of people testifying today.

STATEMENT OF HON. DAVE CAMP, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MICHIGAN

Mr. CAMP. Thank you. I will be brief. I want to thank the Chair and my fellow Members.

I am here to testify in favor of H.R. 733, which is legislation that will make permanent the full deductibility for gifts of publicly traded stock to private foundations. I understand the Committee will be hearing from the Council on Foundations later today.

In the interest of time, I will not spend a lot of your time discussing the importance of foundations to our communities. I think we all understand full well the impact these foundations have. In Michigan alone just in recent years, we have had 52 private foundations that were recently founded with publicly traded stock, and their assets total more than $82 million. Their annual grant making is more than $4 million.

I would like to discuss the legislation briefly. Prior to 1984, the foundation population was about 22,000 and it was shrinking. After the 1984 Tax Code amendment which permitted living donors to deduct the full fair-market value of these gifts, the number began to rise, and by 1992 nationwide foundations had grown to 35,000, and that is increasing.

Ten years after that amendment, the provision has sunsetted. The loss of this full deduction has put at risk the formation of new foundations by living donors, and I do not believe we can let this happen.

I would also like to briefly discuss H.R. 734, which is also part of this legislative package introduced by Congressman Jacobs and myself. Specifically, H.R. 734 would permit private and community foundations to establish tax-exempt common investment funds. This legislation fixes a quirk in present law which allows common funds for other charitable organizations such as universities and other public charities, but not community foundations which are also charities.

H.R. 734 would bring these foundations an economy or efficiency of scale which would allow them to make investments which can often make the difference between a good investment and a mediocre one. They would also allow these foundations to use more profitable vehicles for their investments, and in the end that would mean the grant making would increase in our communities and the people that our communities serve would be better off.

There are currently over 450 community foundations across the United States, and in 1993 they gave over $730 million in charitable grants. They are the fastest growing segment of philanthropy today, so we must continue to encourage this growth and offer incentives we can to promote these foundations as a valuable resource to American communities.

This legislation not only gives existing foundations the opportunity to expand and increase the return on their donations, but it will also encourage the creation of other new foundations to

maintain and enhance the fabric of their communities. I encourage support of both of these pieces of legislation.

I want to close by saying that these foundations are an important part of our communities, any community, for that matter, and I would like to see our Committee do what it can to encourage and enhance their activities.

Thank you.

Chairman JOHNSON. Thank you, Mr. Camp.

I, and I imagine every Member, am keenly aware of the growing role that foundation funding is playing in helping communities to meet their most local and pressing needs, and also serving as a vehicle through which we are better able to integrate existing services by providing some muscle at the local level for a better level of integration and overcoming of some of the local turf battles that often prevent more effective services. This is an area of some concern and I appreciate your testimony.

Mr. CAMP. Thank you. I also want to thank the Chair for cosponsorship of both of those bills.

Chairman JOHNSON. Thank you.

Mr. Levin.

Mr. LEVIN. It is a matter I think we are going to spend some time on, so your participation is going to be, as usual, very important.

Mr. CAMP. Thank you.

Mr. LEVIN. Thank you.

Chairman JOHNSON. Thank you, Dave.

The next panel will come forward: Carol Hallett, president and chief executive officer of Air Transport Association; Charles Barclay, president of the American Association of Airport Executives; and William Norman, vice chairman of the Travel and Tourism Government Affairs Council. While each of you has many more things after your names, I think those introductions will do.

We will start with Carol Hallett. We do have a very long agenda, so I would ask that the lights now be employed both for those who are testifying and for those who are questioning.

Thank you.

STATEMENT OF CAROL HALLETT, PRESIDENT AND CHIEF EXECUTIVE OFFICER, AIR TRANSPORT ASSOCIATION OF AMERICA

Ms. HALLETT. Thank you, Madam Chairman and Members of the Subcommittee.

I am Carol Hallett and, as you have indicated, president and chief executive officer of the Air Transport Association of America. I am here on behalf of our member airlines which transport more than 95 percent of all passenger and cargo traffic. You have received my full testimony and I do ask that it be submitted in the record.

My testimony also represents the views of the Airline Pilots Association, the Aerospace Industries Association, and United Technologies Corp. We thank you for the opportunity to discuss the commercial aviation fuel tax that is scheduled to be imposed on October 1 of this year.

The commercial airline industry, as has been stated this morning, has collectively lost more than $13 billion since 1990. The last year of black ink was in 1989. Since 1990, nearly 250,000 U.S. airline and aircraft manufacturing employees have lost their jobs. Seven major passenger airlines have filed Chapter 11 bankruptcy, and three major U.S. airlines have ceased to exist altogether.

Many airline employees have made substantial wage and benefit concessions, and total airline industry concessions now exceed $1 billion annually. Imposition of a 4.3-cents-per-gallon jet fuel tax on our industry would invalidate these employee concessions and seriously undermine the progress made by airlines over the past few years to lower costs, increase productivity and efficiency. Some of the financially weaker carriers may not survive. As Gerald Greenwald, chairman and chief executive officer of the United Airlines recently testified; "dead companies do not pay taxes."

While the industry's losses accumulated by the billions of dollars over the past 5 years, government-imposed taxes and fees increased significantly faster than any other single airline cost. As many of our Nation's industries are reporting record profits, the airline industry, which has not had a profit since 1989, is being hit with this new tax of $527 million, in addition to the estimated $6.5 billion the airline industry already pays annually in federally mandated taxes and fees.

Charts accompanying my written testimony display the rapidly increasing excise taxes and user fees over recent years, as well as the strong relationship between airline losses and these rapidly increasing government-imposed taxes and fees during the same period.

How does the airline industry compare to other industries in transportation with regard to the federally mandated fuel taxes? The commercial trucking industry pays a Federal tax of 18.4 cents per gallon for gasoline and 24 cents for diesel fuel, while the railroad industry pays a total of 6.9 cents per gallon, as Mr. Collins indicated.

To put this into perspective, if the $6.5 billion the airline industry already pays annually in federally mandated excise taxes were instead assessed in the form of a transportation fuel tax on the fuel we buy in the United States., our industry is effectively already paying, as Mr. Collins pointed out, a 52.5-cents-per-gallon tax.

Many suggest that carriers should pass on the additional cost of these new and increased taxes by charging higher air fares. If this were possible, the industry would have done this long ago, rather than confront the numerous adverse consequences associated with losing an industrywide $13 billion.

During the past few years of widespread industry losses, airlines have not been able to raise fares to cover costs. In fact, carriers have been forced to lower their fares to attract customers. Fortunately, many in the new Congress understand the impact of a new half billion dollar tax and we appreciate their willingness not only to testify before you today, but we also greatly appreciate Representatives Collins and Dunn for their strong support in sponsoring the legislation to repeal the commercial aviation jet fuel tax.

We also appreciate the cosponsors of the bill and, more importantly, we are extremely thankful to Speaker Gingrich, to Chair-

man Shuster and the leadership of the House Transportation Committee for their broad bipartisan support. We urgently ask the Congress to continue this momentum and repeal the commercial aviation jet fuel tax.

Madam Chairman, I greatly appreciate the opportunity to appear before you today, and I would be more than happy to respond to your questions.

[The prepared statement and attachments follow:]

Statement of Carol Hallett
President and Chief Executive Officer
Air Transport Association of America
Before the Subcommittee on Oversight,
Committee on Ways and Means
On the Impact of the Commercial Aviation
Jet Fuel Tax on the Airline Industry

May 9, 1995

Madam Chairman and members of the Subcommittee, I am Carol Hallett, President and Chief Executive Officer of the Air Transport Association of America. ATA represents the major carriers of the U.S. airline industry; our members transport more than 95 percent of all passenger and cargo traffic moved on U.S. flag carriers. On behalf of our member airlines,* I appreciate the opportunity to appear before you today to discuss an expiring provision of the tax law which could have a devastating impact on the financial well-being of our industry: the commercial aviation fuel tax scheduled to be imposed on October 1 of this year.

The extreme difficulties faced by our member airlines have been piling up through more than five years of financial losses. Rarely does a day pass that I do not have a discussion with at least one of our C.E.O.'s regarding the adverse consequences this new, additional tax will have on their company. Madam Chairman and members of the Subcommittee, this commercial aviation fuel tax would be a financially crippling blow on this industry.

As you are probably aware, the commercial airline industry has collectively lost more than $13 billion since 1990. The last year of black ink was 1989, when the industry reported a $128 million net profit, slightly better than breakeven. In the intervening period, our industry lost $3.9 billion in 1990, $1.9 billion in 1991, $4.0 billion in 1992, $2.1 billion in 1993, and $285 million in 1994.

Since 1990, nearly 120,000 airline employees and 125,000 U.S. aircraft manufacturing employees have lost their jobs. Further, nearly half of our major passenger airlines have been forced to file Chapter 11 Bankruptcy, and three major U.S. airlines have ceased to exist altogether. Many airline employees whose jobs have not been eliminated have made substantial wage and benefit concessions, and total airline industry concessions now exceed one billion dollars annually. At one company, employees recently gave wage and benefit concessions totalling in excess of $4.9 billion over nearly six years, in exchange for majority ownership of the company. At other carriers, employee concessions have averaged between 10 and 14%.

At a minimum, a new Federal tax in excess of one-half billion dollars annually would invalidate these employee concessions and seriously undermine the progress made by airlines over the past few years to lower costs and increase productivity and efficiency. More likely, the distinct possibility exists that some of the financially weaker carriers simply would not survive. And, as Gerald Greenwald, Chairman and CEO of United Airlines succinctly stated recently: "Dead companies don't pay taxes."

Distressingly, while the industry's losses accumulated by the billions of dollars over the past five years, government-imposed taxes and fees increased significantly more, and significantly faster, than any other single airline cost.

---

* ATA member carriers include: Alaska Airlines, Aloha Airlines, American Airlines, American Trans Air, America West Airlines, Continental Airlines, Delta Air Lines, DHL Airways, Evergreen International Airlines, Federal Express, Hawaiian Airlines, KIWI Airlines, Midwest Express, Northwest Airlines, Reeve Aleutian Airways, Southwest Airlines, Trans World Airlines, United Airlines, United Parcel Service, and USAir. ATA associate members include: Air Canada, Canadian Airlines International, and KLM-Royal Dutch Airlines.

Now, as many of our nation's industries are reporting record profits, the airline industry, which has not had a profit since 1989, is being hit with yet another tax -- a 4.3 cents per gallon fuel tax that is expected to cost the airlines more than $527 million annually. This new tax is in addition to the estimated $6.5 billion the airline industry pays annually in Federally-mandated taxes and fees. In addition to the 10% excise tax on airline tickets and a 6.25% excise tax on cargo shipments, airlines collect a $6.00 International Departure Tax, a $6.50 Customs User Fee, a $6.00 Immigration User Fee, a $1.45 Agricultural Inspection Fee and, at many airports, a $3.00 Passenger Facility Charge. These taxes and fees are in addition to the Federal and state income, local property, and other taxes which all businesses must pay.

Allow me to take a moment to illustrate the staggering increase in government-imposed taxes and fees during the past five years. In 1990, the Passenger Ticket Tax was increased from 8% to 10% as part of an overall deficit reduction package. The additional 2% was deposited directly into the general fund, not the Aviation Trust Fund, in both 1991 and 1992. The timing of this ticket tax increase, coming in the midst of a deep recession and increased fuel costs resulting from the Gulf War, came at the absolute worst time and added more than $1 billion a year to airline costs. (I would note that within twelve months of the imposition of this tax, nearly all of the bankruptcy petitions were filed and Pan Am, Eastern, and Midway Airlines ceased operations.) As a result, however, the airline industry has already made a special contribution of approximately $2 billion for Federal Budget deficit reduction.

As large as the 1990 ticket tax increase was, it is just one example of the many cost increases mandated by the Federal government during this difficult period. Listed below are examples of additional tax and fee burdens placed on the airlines during the past five years:

- 1990: As part of that same deficit reduction package, the cargo and waybill tax was increased from 5% to 6.25%. This tax cost our industry $326 million last year.
- 1990: Congress authorized the Passenger Facility Charge, which cost the airlines $851 million in 1994 alone, and more than $1.4 billion over the past three years.
- 1990: Congress authorized the Agricultural Inspection Fee, to which the airlines paid $63 million last year.
- 1993: Congress authorized an increase in the INS User Fee, from $5.00 to $6.00. This tax cost the industry $288 million last year.
- 1993: The Customs User Fee was increased from $5.00 to $6.50 to help pay for the North American Free Trade Agreement. This fee cost the airlines $295 million last year.

Ironically, with regard to NAFTA, airlines negotiate access to foreign countries through separate individual bilateral agreements. Aviation rights are not part of the NAFTA treaty, and NAFTA had absolutely no effect on U.S. carrier access to the Mexican market. Yet, airlines were asked to pay for the benefits others derive from NAFTA through this increased fee.

Madam Chairman and members of the Subcommittee, the taxes and fees listed above are only those which *increased* during the previous five years, and are in addition to those I mentioned previously. To target any single industry with such a plethora of new taxes -- as well as tax and fee increases -- at a time when cumulative industry losses total more than $13 billion would be almost comical, were it not true.

Three charts following my written testimony visually display the rapidly increasing excise taxes and user fees over recent years, as well as the strong relationship between airline losses and these rapidly increasing government-imposed taxes and fees during this same period.

You might ask, how does the airline industry compare to other transportation industries, such as the trucking and railroad industries, with regard to Federally-mandated fuel taxes? The commercial trucking industry pays a Federal tax of 18.4 cents per gallon for gasoline and 24.4 cents for diesel fuel, while the railroad industry pays a total of 6.9 cents per gallon for diesel fuel.

To put this into perspective, if the $6.5 billion the airline industry already pays annually in Federally-mandated excise taxes were instead assessed in the form of a transportation fuel tax on the fuel we buy in the U.S., our industry is effectively already paying an astonishing **52.5 cents per gallon tax!** Compare this to the commercial trucking industry's 24.4 cents, and the railroad industry's 6.9 cents per gallon. The airline industry in effect pays **115% more** than the trucking industry, and **661% more** than the railroad industry. This clearly demonstrates that the airline industry is already paying government-imposed taxes and fees well in excess of its fair share.

As John Dasburg, President and Chief Executive Officer of Northwest Airlines Corp. stated recently in an article published in the Wall Street Journal:

> **"It is not difficult to appreciate the impact of such significant [government imposed] cost increases on an industry that operates on thin margins of about 2% in its good years. These fees and taxes are not based on profits, but instead must be paid without regard to profit or loss. And because airlines price to demand rather than cost, these cost increases cannot be passed on to customers; the airlines must absorb them.**
>
> **The story of the airline industry in the '90s is a textbook example of the damage that ill-conceived tax policies can do to an industry."**

During our efforts to restrain government-imposed costs, we are repeatedly confronted with the assertion that carriers should simply pass on the additional costs of new and increased taxes by charging higher air fares. Stated simply, if this were possible, the industry would have done this long ago, rather than confront the numerous adverse consequences associated with losing an industry-wide $13 billion over five years. From an economic perspective, the culprit is price elasticity. Price elasticity of demand for air transportation measures the percent of change in air passenger demand in response to a 1% change in airline ticket price. Industry analysts and academicians have concluded that each 1% increase in airline ticket price results in a 1% *decrease* in passenger traffic. During the past few years of widespread industry losses, airlines simply have not been able to raise air fares to cover costs. In fact, carriers have been forced to lower their fares to attract customers.

The commercial airline industry is one of the most energy intensive industries in the United States, with fuel representing the second largest airline expense, next to labor. Consequently, the industry is extremely sensitive to increases in the price of fuel. Unfortunately, while the cost of fuel has been relatively stable over the past few years, the average price per gallon has begun to increase in recent months. Most analysts currently predict that prices are headed in an upward direction, with an average forecast increase of at least 8%, and possibly as high as 14%, during 1995. It should be noted that each one cent per gallon increase in the market price of fuel results in more than a $150 million increase in cost to the airline industry. For the government to increase our tax burden concurrently with an increase in the price of fuel would most certainly exacerbate the fragile airline industry recovery.

It has been nearly two years now since the Administration and Congress established the National Commission to Ensure a Strong Competitive Airline Industry. In the spring of 1993, the industry had just finished reporting what many termed "staggering losses," which at that time totaled almost $10 billion. When the Commission issued its final report to Congress and the Administration in August, 1993, one of its major conclusions was that the amount of taxes imposed on our industry has impeded our ability to return to financial health. The Commission stated:

> **"We believe those (tax) provisions violate responsible principles of common sense and good public policy and we are of the opinion changes must be made to relieve the airline industry's unfair tax burden."**

Ironically, while many in the new Congress clearly understand the industry's precarious financial situation, the Administration has yet to deal with this key aspect of the Commission's report -- the same Commission which the Administration pushed long and hard to create.

Testifying before the House Transportation and Infrastructure Subcommittee on Aviation in March of this year, Patrick Murphy, Acting Assistant Secretary of Transportation, the Administration's witness, reflected on testifying before that same committee two years prior:

"In 1992, the U.S. aviation industry suffered its worst year ever, with total operating losses of $2.2 billion and net losses of $4.6 billion... I am pleased to report that today's picture is different... The industry is now in a position to accommodate this tax increase."

Madam Chairman, if $10 billion in airline losses in 1993 is a problem, logic would have it that nearly $13 billion in cumulative losses two years later is an even larger one. Unfortunately, the Administration does not see it this way.

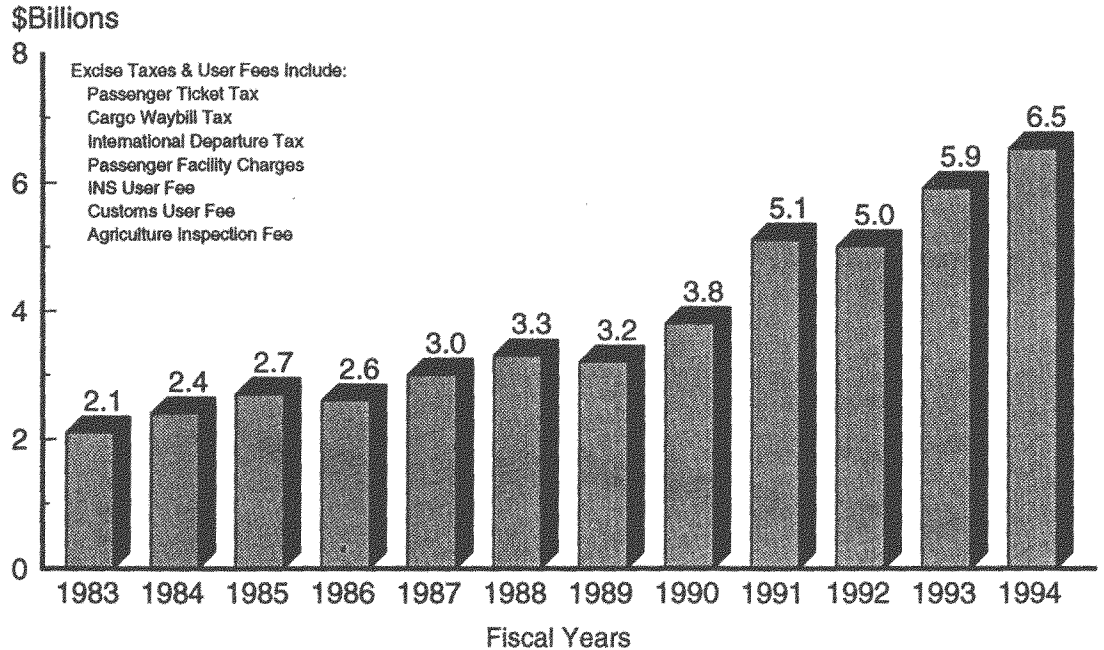
Fortunately, many in the new Congress understand with clarity the impact of a new half-billion dollar annual tax on an industry which has not made a profit since 1989. We are most grateful to you, Madam chairman, for allowing us to testify before you today. We are also very appreciative of Rep. Mac Collins (R-GA), and Rep. Jennifer Dunn (R-WA) for their strong support in sponsoring legislation, H.R. 752, to repeal the commercial aviation jet fuel tax, and to the 21 members of the Ways and Means Committee who are cosponsors of this bill. The industry is also extremely thankful to Chairman Shuster and the leadership of the House Transportation and Infrastructure Committee for their broad, bi-partisan support.

It is with these thoughts that we today urgently ask the Congress to continue this momentum and repeal the commercial aviation jet fuel tax. Repealing this tax is a necessary and critical step in creating an economic environment for a sustained airline industry recovery.

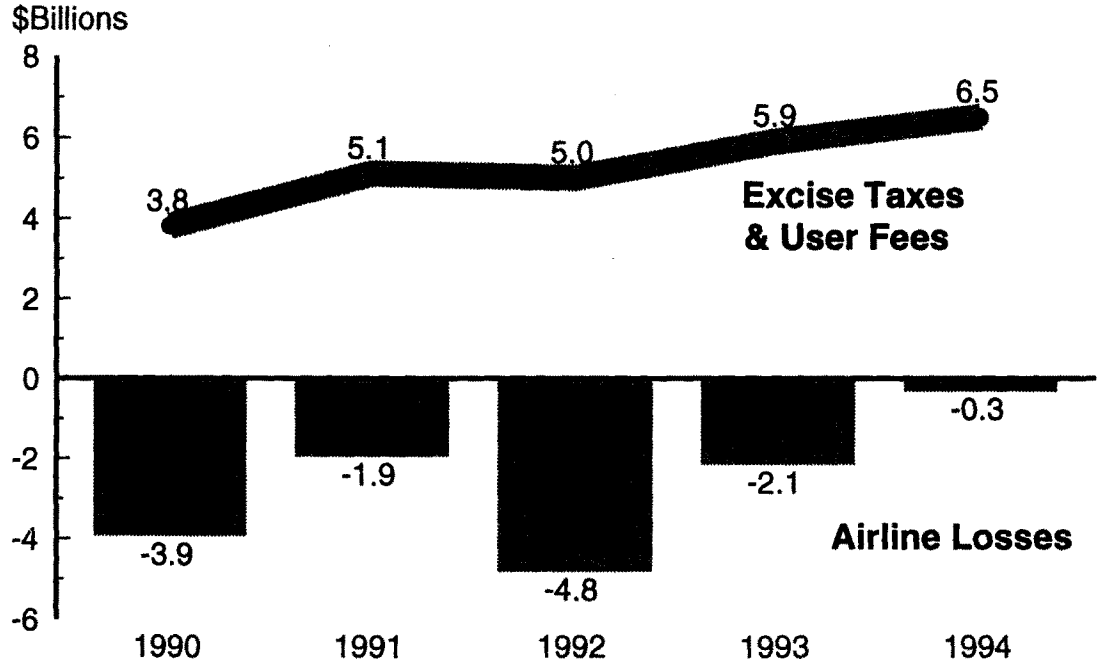
Let me close by quoting Daniel Webster, who stated nearly 175 years ago: "The power to tax is the power to destroy."

With that, Madam Chairman, I would be happy to answer any questions you or any member of the committee might have.

AIRLINE EXCISE TAXES & USER FEES RISING RAPIDLY



AIRLINE TAXES ARE RISING WHILE LOSSES CONTINUE



GOVERNMENT RELATED COSTS INCREASE FASTEST

	1988	1990	1992	1994*	ANNUAL PERCENT CHANGE

* 12 Months Ended Sep, 1994

Chairman JOHNSON. Thank you for your testimony.
Mr. Barclay.

STATEMENT OF CHARLES M. BARCLAY, PRESIDENT, AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES AND FORMER MEMBER, NATIONAL COMMISSION TO ENSURE A STRONG COMPETITIVE AIRLINE INDUSTRY; ON BEHALF OF AIRPORTS COUNCIL INTERNATIONAL-NORTH AMERICA,

Mr. BARCLAY. Thank you, Madam Chairman.

I would like to submit my testimony and just make three brief points for the Committee.

In 1993, when the Airline Commission first got together, we asked some financial experts to come in and give us an overview of the industry, and the picture was startling even for those of us who thought we knew something about aviation. It was an industry that up to that point had lost in the preceding 3 years $10 billion. To put that in perspective, that is a larger loss than all the profits of all the airlines added together since the Wright Brothers flew.

The industry was a junk bond rated industry in its entirety, with the exception of Southwest Airlines. The major three carriers that were looked on as the strongest just a few years earlier had debt-to-equity ratios of 80 to 20 to 90 to 10. When the bankers who came in to testify before us said that they wanted to see balance sheets with 50 to 50 debt-to-equity ratios in order to loan money through normal channels to an industry like the airlines, and the airlines needed to borrow.

The last piece of this picture was an industry that needed to borrow $100 billion between 1993 and the year 2000 simply to meet the Federal noise rules for quieter aircraft and to re-equip the fleet even for the most modest projections of passenger growth.

As a result, the numbers simply did not add up and the people on the commission said, well, it also does not add up that we can run a modern economy without an airline industry in this country that at least has the financial wherewithal to attract enough capital to re-equip itself. The bar to look at is not bare profitability, it is can they make enough money to re-equip themselves.

As a result, among our 61 recommendations, we recommended that the fuel tax not go into place, that it was ill-advised at that time. Now that it is 1995, the picture has changed in that the airlines have lost $13 billion over the last 5 years, their balance sheets obviously have not improved, and they still have, according to Boeing, about an $80 billion need to invest in new aircraft between now and the year 2000. To impose this tax on the airlines in 1995 would be seriously illadvised.

The second point is that airport executives and operators are careful watchers of the airline industry. They are our partners, they are our tenants on our airports, and they are critical instruments of local economies in the communities where my members work. The airport industry is unanimous in its opinion that this ill-timed tax should not be levied on a struggling industry that is critical to our economy.

The final point I would like to make, Madam Chairman, is to ask the Members not to accept the argument, even if you are convinced on the merits of the case by the industry, you have to wake up the morning after the vote and say I did not want to do it, but the rules made me do it.

The BEA, Budget Enforcement Act, revenue offset rules have many good reasons for their existence. One of them cannot be, though, to damage a critical industry that our economy needs in the future, if we are to succeed.

Thanks very much. I would be happy to answer your questions.

[The prepared statement follows:]

STATEMENT OF CHARLES M. BARCLAY, A.A.A.
PRESIDENT, AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES
ON BEHALF OF AMERICAN ASSOCIATION OF AIRPORT EXECUTIVES
AND AIRPORTS COUNCIL INTERNATIONAL-NORTH AMERICA

> "[W]e believe there are several tax provisions that impede the ability of the industry to return to financial health. We believe those provisions violate reasonable principles of common sense and good public policy and we are of the opinion changes must be made to relieve the airline industry's unfair tax burden."
>
> "Change, Challenge and Competition"
> August 1993 Report of the
> National Commission to Ensure a Strong
> Competitive Airline Industry

Madam Chairman and members of the subcommittee, my name is Charles Barclay. I am President of the American Association of Airport Executives (AAAE). I am appearing today on behalf of AAAE and the Airports Council International - North America (ACI-NA). AAAE is the professional organization representing men and women who manage primary, commercial service, reliever and general aviation airports which enplane 99 percent of the passengers in the United States. ACI-NA represents the local, state and regional governing bodies that own and operate commercial service airports in the United States, Canada and Bermuda. ACI-NA member airports serve more than 90 percent of the U.S. domestic scheduled air passenger and cargo traffic and virtually all U.S. scheduled international travel. I am also appearing today as a former member of the National Commission to Ensure a Strong Competitive Airline Industry.

We in the airport community are committed to making our nation's system of airports work efficiently, safely and economically. As such, we are keen students of our airline partners and follow with great interest all public policy issues which impact their financial health. I appear before you today to discuss the commercial aviation fuel tax

scheduled to be imposed on October 1, a government action which, if allowed to go into effect, will have severe adverse consequences on the airlines financial health as well as the financial health of airports.

Let me introduce this discussion by reviewing with you the state of play at the time the transportation fuels tax was enacted during the summer of 1993.

In the three preceding years, the airlines had lost a cumulative total of $10 billion. As a result of this terrible financial condition, Congress passed legislation to establish a National Commission to Ensure a Strong Competitive Airline Industry. I was honored to be selected to serve on the Commission.

The 4.3 cent per gallon transportation fuels tax was proposed in the Senate in June 1993, as a substitute revenue raising measure for the House-passed, broad based energy tax known as the BTU tax. Both the Btu tax and the ultimately enacted transportation fuels tax were part of an ambitious deficit reduction package. During its consideration of the transportation fuels tax, the Senate exempted commercial aviation in recognition of its financial weakness. Notwithstanding that determination, the joint House-Senate conference committee, searching for additional revenues to reach the targets which had been established, reduced the commercial aviation exemption to two-years.

In requesting that you prevent this new tax from going into effect, I suggest that you look at what has happened to the industry in the 21 months which have ensued since the adoption of the exemption and suggest that you do that in concert with a review of the Administration's response to the Commission's comments on tax policy headlined above.

In January 1994, the Administration released its "Initiative to Promote a Strong Competitive Aviation Industry" a response to the National Commission's work. Nowhere in that 23 page outline does the word "tax" appear. As a matter of fact, the Chair of the Council of Economic Advisors states in that document,

> "A strong economy will be the best medicine for what ails the aerospace complex. We believe that the recent budget reconciliation legislation, which reduces the deficit, along with other Administration initiatives, have put the economy on course for strong and sustainable growth."

So how has the "strong economy" affected the airline industry? For 1993, the industry lost $2.1 billion. For 1994, it looks like the industry will have lost another $100 million, thus bringing to five the consecutive years during which the airlines have lost money.

Bad as those results are, they do not reflect the impact of the commercial aviation fuel tax. On October 1, the imposition of this new tax will tap in excess of $500 million per year. Put another way, as the industry slowly lifts itself out of financial shambles, the fuel tax will siphon desperately needed cash from the industry, which is exactly what the National Commission articulated with reference to the fuel tax:

> "[A]t a time when the United States is looking for ways to strengthen the airline industry, an additional tax seems ill-advised."

Madam Chairman, that tax is as ill-advised today as it was in 1993. Two years after its initial consideration, the distressing economic situation which faced the industry continues. We agree that a healthy economy is a key component for airline industry profitability. Repealing the commercial aviation fuel tax is a necessary step in creating an economic environment for sustained industry recovery.

While my colleague from the carrier side, Mrs. Hallett, has spoken eloquently of the job losses in the airlines as well as the manufacturing sector, I would like to point to another potentially adverse aspect of this tax.

Airport infrastructure is financed by a blend of various user fees, such as the 10% excise tax on each ticket, Passenger Facility Charges, bonds, and fees levied on airport users, e.g. airlines and concessionaires. One of the steps airlines take when financially stressed, in addition to layoffs and deferring purchases of aircraft and engines, is to cut operating costs. To cut operating costs, carriers reduce frequencies, use smaller planes in certain localities, and pull out of marginal markets. While users pay for the airport infrastructure, it is in the marginal, smaller communities in greatest need of air service that are hit the hardest. The fuel tax increase would have the unfortunate unintended effect of penalizing marginal markets. In summary, airport executives and operators ask you not to impose this ill-timed tax on a struggling industry that clearly cannot afford it. Madam Chairman, I appreciate the opportunity to appear before you today. I will be pleased to respond to any questions you may have.

Chairman JOHNSON. Your last admonition is one we all feel keenly and we will do our best, but it is not possible simply to ignore the estimators in our work.

William Norman, please.

STATEMENT OF WILLIAM S. NORMAN, PRESIDENT AND CHIEF EXECUTIVE OFFICER, TRAVEL INDUSTRY ASSOCIATION OF AMERICA; AND VICE CHAIRMAN, TRAVEL AND TOURISM GOVERNMENT AFFAIRS COUNCIL

Mr. NORMAN. Madam Chairman and Members of the Subcommittee, on behalf of the Nation's travel and tourism industry, I appreciate the opportunity to testify before you this morning. I ask that my full testimony be placed in the record.

I am here to express the travel and tourism industry's strong support for legislative proposals that would extend the exemption of jet fuel taxes as contained in the Omnibus Reconciliation Act of 1993.

I am William Norman, president and chief executive officer of the Travel Industry Association of America. I also serve as vice chairman of the Travel and Tourism Government Affairs Council, and it is on behalf of the council and its campaign to keep travel competitive that I appear before you today.

The U.S. travel and tourism industry generated an estimated $416 billion in expenditures in 1994, which equal more than 6 percent of the Nation's GNP, gross national product. Last year, travel and tourism was once again the Nation's leading export, generating $75 billion in expenditure from 44 million international visitors, and from the 46 million Americans traveling abroad who spent $53 billion, creating a $22 billion trade surplus.

Travel and tourism directly employs 6.2 million people and ranks second only to health care in employment. State and local communities are increasingly turning to travel and tourism to grow their economies, so much so that 34 States and the District of Columbia rank travel and tourism as one of their three top employers.

While the news about the size, scope and importance of travel and tourism for the Nation's economy is positive, some in public office have come to view the travel industry as nothing more than a tax generator and have constantly sought to increase our taxes and fees, which only hampers our ability to be jobs generators.

Our specific concern here this morning is the Federal jet fuel tax exemption which expires in October of this year. In 1993, Congress recognized that the airline industry had lost billions of dollars and had been forced to lay off tens of thousands of employees. Thus, airline jet fuel was exempted from the 4.3-cents-per-gallon increase and the Federal excise tax on motor fuel.

While the most dramatic and direct effect of applying this tax to aviation fuel would be on the airline themselves, such a fuel tax increase would also have an impact on other travel segments, such as hotels, restaurants, car rentals, amusement and attractions, as well as tour companies and others whose customers fly to their destinations.

Alarmingly, should continued price competition force the air carriers to absorb part or all of this increased fuel cost, it could further erode airline profitability, leading to additional airline layoffs

and a reduction in the number of flights, which would also harm the travel industry by offering business and leisure travelers fewer travel options, especially where there is no easy substitute for air travel. Fewer flights could lead to fewer passenger trips, resulting in reduced demand for lodging, meals, retail shopping, tours and attractions.

Madam Chairman, the travel and tourism industry has learned a valuable lesson concerning the corrosive effect of excessive taxation during the past year. For example, in 1990, the New York State Legislature approved a new 5-percent surtax on all hotel rooms costing more than $100 per night. Supporters of this higher tax projected the State to realize an additional $60 or $70 million annually, with few or no negative consequences.

To the surprise of no one in the travel and tourism industry, this higher tax had a dramatically negative impact, first and foremost on the lodging industry, but also on shops, restaurants, theaters and tour companies. Most of the negative effect was felt in New York City, where lower room occupancy rates forced hotels to lay off thousands of employees. Instead of collecting more tax revenues, New York actually lost millions of dollars, as business and leisure travelers went to lower cost destinations.

We recognize that other modes of transportation are paying the additional 4.3 cents per gallon for fuel. However, it is important to note that Congress has already mandated that airlines collect specific excise taxes in lieu of fuel taxes. The Federal Government is already collecting a 10-percent tax on airline tickets, as well as an array of other taxes and user fees, including a $3 passenger facility charge at many airports. This 10-percent tax on airline flights is already too high, and now the airline industry is threatened with even more taxes.

The travel and tourism industry strongly asks that the jet fuel tax exemption be extended, especially during this year of the White House Conference on Travel and Tourism. This year, as never before, our industry is focused on seeking new ways to grow and conduct business, generate more jobs, expand our export growth and provide even better travel experience for our customers. Higher taxes on the travel industry and its customers will only hamper our ability to achieve these goals and objectives.

Thank you very much, Madam Chairman.

[The prepared statement follows:]

STATEMENT OF WILLIAM S. NORMAN
PRESIDENT AND CEO, TRAVEL INDUSTRY ASSOCIATION OF AMERICA
AND VICE CHAIRMAN TRAVEL AND TOURISM GOVERNMENT AFFAIRS COUNCIL

Madame Chairman, on behalf of the nation's travel and tourism industry, I appreciate the opportunity to testify before you this morning. I am here to express the travel and tourism industry's strong support for legislative proposals that would extend the exemption for jet fuel taxes as contained in the Omnibus Reconciliation Act of 1993.

I am William Norman, President and CEO of the Travel Industry Association of America (TIA). TIA is the national, non-profit organization representing all components of the U.S. travel and tourism industry. I also serve as Vice Chairman of the Travel and Tourism Government Affairs Council, a coalition of 36 national associations, corporations and labor organizations. An affiliate of TIA, the Council is comprised of key elements of the travel and tourism industry, including all modes of transportation, accommodations, food service, travel agents, tour sales, recreation and attractions, as well as state and local travel and tourism officials. It is on behalf of the Council, and its *Campaign to Keep Travel Competitive*, that I appear before you today. A list of the Council's membership is attached to this statement.

Importance of Travel and Tourism

The U.S. travel and tourism industry generated an estimated $416 billion in expenditures in 1994, which equaled more than 6% of the GNP. Last year travel and tourism was once again the nation's leading export, generating $75 billion in expenditures from 44 international visitors while the 46 million Americans traveling abroad spent $53 billion...creating a $22 billion trade surplus, which accounts for 40 percent of the nation's total services trade surplus. Travel and tourism is the nation's third-largest retail industry, behind automotive dealers and food stores. It directly employs nearly 6.2 million people and ranks second only to health care in employment. The industry also supports another 5.8 million jobs through indirect and induced sales.

States and local communities are increasingly turning to travel and tourism to grow their economies -- so much so that thirty-four states and the District of Columbia rank travel and tourism as one of their top three employers. Travel and tourism jobs are rapidly increasing, with industry employment in the last ten years expanding at a rate more than twice that of the rest of the economy, and forecasters tell us travel and tourism employment will grow in excess of 30 percent over the next twelve years. Increasingly, these are top quality jobs, as more than 650,000 executive jobs exist in all segments of travel and tourism today.

Extending The Jet Fuel Tax Exemption

While the news about the size, scope and importance of travel and tourism for the nation's economy is positive, an insidious factor that has significantly threatened the growth and vitality of this industry is government-imposed taxes, fees and surcharges. Travel and tourism companies and their customers are willing to pay their fair share of taxes and fees -- and in 1994 travel and tourism generated $56 billion in tax revenue for Federal, state and local governments. Unfortunately, however, some in public office have come to view this industry as nothing more than a tax-generator and have constantly sought to increase our taxes and fees, which only hampers our ability to be a jobs-generator.

Our specific concern here this morning is the Federal jet fuel tax exemption, which expires in October of this year. In 1993, Congress recognized that the airline industry had lost billions of dollars and had been forced to lay off tens of thousands of employees. Thus, airline jet fuel was exempted from the 4.3 cent increase in the Federal excise tax on motor fuel. While the most dramatic and direct impact of applying this tax to aviation fuel would be on the airlines themselves, such a fuel tax increase would also have an impact on other travel segments such as hotels, restaurants, car rentals, amusements and attractions, as tour companies and others whose customers fly to their destinations, and hundreds of cities and dozens of states whose economies are dependent on travel and tourism.

Indirect impacts on other segments of travel and tourism from a new Federal tax on aviation fuel could come in at least two different ways. If the airlines choose to pass along the total fuel cost increase of more than $500 million annually to their customers through higher ticket prices, this

could result in greatly reduced demand for flying, which would impact all the other components of travel and tourism whose customers usually fly to reach those destinations.

On the other hand, should fierce price competition force the carriers to absorb part or all of this increased fuel cost, it could lead to additional layoffs at the air lines themselves, and a reduced number of flights, which would also harm the travel industry by offering business and leisure travelers far fewer travel options where there is no easy substitute for air travel. This could easily lead to fewer trips being taken and would lead to reduced demand for lodging, meals, retail shopping, tours and attractions.

The travel and tourism industry has learned a valuable lesson concerning the corrosive effect of excessive taxation during the past few years. In 1990, the New York State Legislature approved a new 5% surcharge that applied to all hotel rooms costing more than $100 per night. This money was to be used to help reduce the state's budget deficit. Supporters of this higher tax believed the state could realize an additional $60 or $70 million annually, and that there would be no negative consequences.

To the surprise of no one in the travel and tourism industry, this higher tax had a dramatically negative impact, first and foremost on the lodging industry, but also on shops, restaurants, theaters and tour companies. Most of the impact was felt in New York City, where lower room occupancy rates forced hotels to lay off thousands of employees. Meetings and convention business fell in excess of 30% over a four year period. Instead of collecting more in tax revenue, New York officials drove business and leisure travelers to less-taxed destinations and the State of New York actually lost millions of dollars in revenue. The hotel tax surcharge was finally repealed last year, but not before the damage was done to New York's travel and tourism economy.

In the case of New York's higher taxes, you could argue that travelers at least had other options for places to visit or conduct meetings. But, if a higher Federal tax is levied on jet fuel, there will be no way to avoid the tax; especially for longer trips that require air travel. And yes, fuel costs for other modes of transportation are paying the additional 4.3 cents per gallon for fuel, but Congress had already mandated that airlines collect specific excise taxes in lieu of a fuel tax. The Federal government is already collecting a 10% tax on airline tickets, as well as an array of other taxes and user fees, including a $3.00 passenger facility charge at many airports. This 10% Federal tax on airline flights is already too high, and now the airline industry is threatened with even more taxes.

Should Members of Congress seek further counsel on this issue, they need look no further than the final report issued by the *National Commission To Ensure A Strong Competitive Airline Industry* in early 1994. The National Airline Commission called on Congress to "relieve the airline industry of its unfair tax and user fee burden." The travel and tourism industry strongly agrees and asks that the jet fuel tax exemption be extended. Especially during this year of the White House Conference on Travel and Tourism, this industry is seeking new ways to grow, new innovative ways to conduct business and provide even better travel experiences for our customers. Higher taxes on the travel industry and its customers will only hamper our ability to be a leading jobs-producer.

Chairman JOHNSON. I thank the panel for your comments.

Mr. Barclay, you heard the testimony of Mr. Murphy of the Department of Transportation. He claims that Wall Street analysts share his outlook that the airline industry is in an increasingly strong position, because over the last few years they have made structural changes in their cost base that positioned them well. How do you respond to his testimony?

Mr. BARCLAY. I think there is a tremendous difference between analysts that might be looking at market timing and brief periods in which an industry may do better than they have done before and long-term profitability. This is an industry that the economy has got to have running adequately and efficiently, and the long-term picture is simply very bleak. No one would put their money—

Chairman JOHNSON. To be more specific, certainly capacity has dropped severely through the restructuring. That does make higher loads possible. I personally have experienced the cancellation of a flight that was at roughly the same time as another flight just to reduce cost, at some inconvenience to passengers. Certainly, there are improving revenue streams and there has been a restructuring of the financial obligations of the industry.

Reducing capacity and restructuring the financial base and renegotiating contracts, all those kinds of things have long-term outyear affects. I think you do have some responsibility to meet more aggressively the claim that some on Wall Street see you now as well positioned for the future. This is one of the fundamental differences between the two sets of testimony, what is the state of health of the industry. I think it is significant that the industry has restructured its cost base so extensively that it now feels free to engage in what I think are rather outrageous competitive fare wars.

Mr. BARCLAY. Well, there is no doubt that the horizon of the industry looks better because of the numbers Mr. Murphy was talking about that are operating profits. This is an industry that has built 50 billion dollars' worth of debt over this recent period that you have got to factor in, and that is why they have no net profit. The fact that they may be coming out and earning profits in Wall Street cycles is not the correct long-term picture to look at for the industry, in our view.

Chairman JOHNSON. Thank you.

Would anyone else care to comment?

Ms. HALLETT. Madam Chairman, I think it is very important to respond in a little more detail. Certainly it is true that you can get different analysts to give different projections. However, many of the administration's numbers refer to operating profits. This figure does not include interest costs or debt service, and we use in the industry net profit, which includes all of those costs.

Treasury and Mr. Murphy say that the FAA, Federal Aviation Administration, reports the industry had an operating profit of $2.6 billion and a net profit of $1.2 billion for the fiscal year 1994. I want to point out that this is truly an accounting sleight of hand, because fiscal year 1994 includes the last quarter of calendar year 1993, and that is the quarter in which both Continental and TWA emerged from bankruptcy and, therefore, all of their debt service costs were written off.

In addition to that, our figures, the ATA figures that we have received from the Department of Transportation say that the calendar year loss for 1994 was $285 million for our industry. That certainly does not even relate to what we have heard this morning. I might point out that the first quarter of this year, 1995, we have had a loss of $88 million for new profit loss for this quarter. We are just simply not talking from the same sheet of music, and I think it is very important to keep in mind that you have to talk in terms of net profit, or it just does not compute.

Chairman JOHNSON. I think your point is very well taken. Thank you.

Mr. Levin.

Mr. LEVIN. Just to follow up, I very much agree with Mrs. Johnson's comments. I think it would be helpful if you would zero in on this issue, the overall standing of the airline industry and also the amount of taxes and other assessments, whatever one wants to call them, that are borne by the industry as compared with other modes of transportation.

There is a need to be fair here across the transportation industry, and I think it is true that the notion was that the exclusion of aviation would be temporary. I would add that unless there was reason to make it permanent, and that is the issue. I do not think we can resolve this today, but I think you and Treasury and everybody else in the next days should try to boil down your argument.

I just want to emphasize the reason for this is it is not going to be easy to find these monies. We are truly in a budget crunch and we have held this separately from the deficit, but in the end I think this all going to be rolled together. I do not mean in terms of one legislative package necessarily, but we are going to have to look at all sources of income and all expenditures, and I think we should get away from the kind of caricatures on the one hand that you really have an easy cushion at the moment. That clearly is not true, or, on the other hand, that the government is just being unreasonable as to knee-jerking it. I do not think that is true.

We have a problem and we all have to be part of the solution. You heard us ask the agencies to supply us with an assessment of the tax shares of the respective parts of this critical industry, and I think you should give us your analysis of it, including your assessment of the present and longer term economic condition. Clearly, the airline industry is critical and we here have to know what we are doing. I think the Chairwoman would very much welcome your boiling this down, and so would I.

Ms. HALLETT. Thank you, Mr. Levin.

I appreciate your comments and certainly we will be happy to submit additional written testimony in response.

I would like to just reiterate comments that were made this morning by not only the Members of the Subcommittee, but also in testimony, and to reiterate that in the case of the transportation industry entities involved, it is important to point out that we are indeed paying $6.5 billion in taxes, and that is a variety of taxes, some of which goes into the Aviation Trust. We have not in any way shirked our responsibility to more than pay our fair share.

As Mr. Collins indicated, if you put all of these costs together, we are currently paying 52.5 cents per gallon in tax. If we add the 4.3 cents, that would then take us up another 4.3 cents over the 52, and it is just a matter of how can you continue to keep people employed and airlines in the sky. For every 1-percent increase in ticket prices, there is an automatic 1-percent decrease in passenger traffic, and this has been true over the many years. We would welcome the opportunity to submit some more information to you.

[The following was subsequently received:]

Air Transport Association

Carol B. Hallett
President & Chief Executive Officer

May 30, 1995

The Honorable Sander Levin
2230 Rayburn HOB
Washington, D.C. 20515

Dear Congressman Levin:

I appreciate the opportunity to respond to the question you posed to me during the Oversight Subcommittee hearing on the jet fuel tax waiver extension.

Effectively, you asked that I provide you with information demonstrating the relative tax burdens of the airlines, as compared to other segments of the transportation industry, and how the airlines have already contributed to deficit reduction despite losing over $13 billion over the last five years.

With respect to the relative tax burdens of the airline industry compared to other sectors of the transportation industry, I think it is necessary to look into the taxes paid by airlines which differ from those other transportation sectors as well as any of those taxes which compensate the government for services. In effect, all transportation companies pay income taxes, and I am not aware of any substantial differing treatment within the transportation sector in the computation of income taxes.

In addition to income taxes, various transportation sector modes pay user fees and excise taxes. According to the Congressional Research Service, airline user fees and excise taxes exceed those paid by the trucking and railroad sectors by 115% and 661%, respectively. In exchange for those taxes and user fees, the airlines receive certain government provided services. According to the Congressional Budget Office's most recent cost allocation study, airlines pay 113% of the cost to the government for the services provided. Since the carriers are anticipated to pay to the government $6.5 billion in user fees and excise taxes in 1995, that 13% surplus amounts to $845 million which is effectively our contribution towards balancing the budget.

In addition to the $845 million in excess of services which the carriers will pay in user fees and excise taxes in 1995, there is an existing uncommitted balance in the aviation trust fund of $4,890,941.03. Since 95% of the fees paid into the trust fund are derived from the airlines, the airlines have also already paid $4,401,846.90 to offset the deficit (95% of the uncommitted balance).

Clearly, the airline industry pays substantially more than its fair share. I am not aware of any other industry which is paying so much, in comparison to others in the sector. Nor, for that matter, am I aware of any industry which pays so much more than the cost of service and receives such mediocre quality service from the government.

I hope that this answers your question. If there is any further information I can provide, please don't hesitate to contact me.

Sincerely,

Carol Hallett

Carol B. Hallett
President & CEO

Mr. LEVIN. Good. We need to finish this, so I think this is going to be one of the most difficult decisions and it is kind of easy for us to even sign a bill. It is harder to enact it in this situation.

Let me put it this way, and then I will finish. If the excise tax had been considered today instead of a few years ago, I think it would have been much harder for the airlines industry to have been excluded. It was because it was in a clearly precarious position.

I think the issue has somewhat changed. It is in a better position and now we need to argue out, I hope on a bipartisan basis—there is no reason for anything else—why you should continue to be excluded from it. In order to do that, we have to look at the entire transportation industry and projections as to the continued health or lack of it in this vital industry. You need to help us, and we will argue this out and try to come to a rational conclusion.

Thank you very much.

Chairman JOHNSON. Thank you, Mr. Levin.

Mr. Collins, briefly.

Mr. COLLINS. Thank you, Madam Chairman. I will talk fast. That is impossible. [Laughter.]

You know, you looked pretty good, Mr. Levin, standing there yesterday with that muscle in your hand. I liked the comparison you did with the cost of it here versus the cost in Japan. You made a very good point there. Your point on the tax on the airline industry was not nearly as impressive, for whatever that is worth.

Mr. LEVIN. If you will yield—

Mr. COLLINS. I do not have much time. I have got to be brief.

Mr. LEVIN. I am not at all unsympathetic to your position. I just think we need to be hardheaded on everything.

Mr. COLLINS. I've got you.

Ms. Hallett, it has been mentioned here this morning that the cost of fuel for the aviation industry is at a low point. However, I understand it is beginning to rise some. Some people suggest that, with it at a low point, this would be the appropriate time to impose this tax, because it would not be felt near as hard by the industry. What is your position? What do you think about that statement?

Ms. HALLETT. First of all, Mr. Collins, I think it is important to point out that just this year we have already seen an increase in the first few months of this year 1995. As an example, we are always about 2 months behind in terms of a lag to tell you exactly what the cost is today versus 2 months ago. In February, the cost was 56 cents per gallon. Since that time, we have had a continuing increase. In fact, crude was 10 percent just very recently, and now we know that there is going to be an increase of between 8 and 14 percent for the entire year.

We have just received, in fact, a very interesting report and it is one in which the front page says jet fuel prices to soar in 1995 adding $4 billion to costs. While that is worldwide, that impact directly on U.S. carriers is going to be extremely difficult for us to handle, without having to either continue layoffs or obviously make fewer purchases of aircraft, which relates, of course, to a decrease in the number of employees with those companies, and it is a snowball effect.

I guess the most important point I could make is that for each 1-cent-per-gallon increase in taxes or in the cost of fuel, there is an automatic $150 million increase in costs to our industry. If we have that kind of cost increase for every 1-cent-per-gallon increase, then obviously I think the handwriting is on the wall. It is going to be a very difficult year. There will not be profits and we will not be able to continue to employ as many employees as we have right now.

Mr. COLLINS. I think that is very well put, Ms. Hallett.

I want to refer to one other thing that you just mentioned, and that is a continued cancellation or further reduction or stall off in purchasing of equipment. When you look at your balance sheet, you look for depreciation, interest and profit to cover the cost of indebtedness. Is that not a fair statement?

Ms. HALLETT. Absolutely.

Mr. COLLINS. The way you get a depreciation schedule or cost figure down is not to purchase, and it will gradually go down over the time this equipment is depreciated out. That is also prolonging the purchase and requiring airlines to operate older equipment in order to stall off the purchase of equipment to lower that depreciation factor and to lower the indebtedness that you are having to meet.

Mr. Barclay mentioned that by the year 2000, the industry is going to have to purchase $80 billion in equipment. Was that the figure I heard you say?

Mr. BARCLAY. The industry estimates it at $15 billion a year between now and the end of the century.

Mr. COLLINS. This is going to have a reverse effect on what you are doing by increasing depreciation cost, lowering the profit structure and increasing the indebtedness.

Ms. HALLETT. That is absolutely correct.

Mr. COLLINS. It is a falsehood for the Department of Transportation—and I do not know why the Department of Transportation is even engaged in this conversation. It seems like it should be between the Ways and Means Committee, Congress, and the Department of the Treasury, not the Department of Transportation. They are just supposed to be the regulatory agency and not a taxing agency. Needless to say, they were here with their bells on to denounce this bill. They are really shooting themselves in the foot in the long run with anticipated revenues based on their approach to this tax and other taxation.

We appreciate your comments. Thank you, Madam Chairman.

Chairman JOHNSON. Thank you.

There are two brief questions to which I would like your response. Is there any difference in how this tax would hit long-haul versus short-haul carriers?

Ms. HALLETT. Of course, it is simply based on the amount of fuel that is purchased. Obviously, it is the amount of fuel that is purchased and the amount of flights that are flown.

[The following was subsequently received:]

Air Transport Association

Carol B. Hallett
President & Chief Executive Officer

May 10, 1995

The Honorable Nancy L. Johnson
Chairman
Committee on Ways and Means
Subcommittee on Oversight
343 Cannon House Office Building
Washington, D.C. 20515

Dear Madam Chairman:

I would like to thank you once again for the opportunity to testify before your Subcommittee on the commercial aviation jet fuel tax which is scheduled to be imposed on October 1, 1995.

I very much appreciate your interest in this issue and would like to offer a bit of clarification on a question which you asked regarding the potential competitive implications of the tax between short-haul and long-haul carriers.

To the extent that a greater amount of fuel is burned during an aircraft's ascent to cruising altitude then during cruise, carriers with a higher frequency of short-haul service would incur increased fuel burn costs due to the fact that a greater percentage of their total flight time would be utilized for achieving ascent to cruising altitude. Thus, carriers having a higher percentage of short-haul flights will be impacted more by the imposition of the aviation jet fuel tax than long-haul carriers.

I hope this clarifies my response during the hearing. If you have any further questions, please let me know.

Sincerely,

Carol

Chairman JOHNSON. That seems like a logical answer to me. Someone suggested to me that there was a difference, and I wanted to be sure whether there was a difference or there was not a difference. I hear you saying there is not a difference, and that is logical and I accept it.

Could you also comment on why, when you have overcapacity, you need to buy new airplanes?

Ms. HALLETT. Among other things, Madam Chairman, we are confronted with a number of different problems that we are responding to, by buying new planes that are quieter, for instance. Of course, there was legislation passed by Congress around 1990 that required all aircraft, by the year 2000, to meet stage 3 aircraft requirements to be quieter than the stage 2 aircraft that were primarily flown at the time. That would have been the old 727s, 737s, and a variety of other aircraft.

Today—and Mr. Barclay made reference to this—today, those new aircraft that are being purchased, of course, meet the stage 3 requirements. It i s obviously beneficial. As an example, the Boeing 777, which is a two-engine aircraft, it has a much greater capacity than does maybe its sister, the 757, and, therefore you can carry more people and have fewer airplanes landing in lieu thereof.

What we are looking at is the need to provide greater capacity, while at the same time meeting government regulations of not only stage 3, which is going to cost, as was mentioned, some $15 billion a year in upgrading of equipment to meet these requirements. It is almost endless. I am beginning to sound like a broken record, because one thing leads to another, all of which leads to increased costs for our industry, and that is one of the reasons why this increase in the fuel tax would be so detrimental to not only our short-term, but our long-term ability to meet the needs of the people.

Chairman JOHNSON. Thank you very much. I appreciate your comments. Thank you for your participation today.

The next panel will consist of Bernard Zahren, president of Zahren Alternative Power Corp., in Avon, Connecticut; and Francis Barkofske, vice president, external affairs, Zeigler Coal Holding Co., in Illinois.

It is a special pleasure to welcome Mr. Zahren to this hearing, as he is one of the examples of the ingenuity and vitality of my district.

STATEMENT OF BERNARD J. ZAHREN, PRESIDENT, ZAHREN ALTERNATIVE POWER CORP., AVON, CONNECTICUT; ON BEHALF OF SOLID WASTE ASSOCIATION OF NORTH AMERICA

Mr. ZAHREN. Does your vitality carry through lunch?

It is a pleasure to be here this morning. I am representing the Solid Waste Association of North America, which has approximately 5,400 members and basically represents many of the municipal landfill operators in this country.

We are here in support of an extension of the section 29 incentive for alternative fuels as it applies to landfill gas. Landfill gas is that gas which is generated in a landfill through the natural decomposition of the organic materials in the landfill.

We believe that the section 29 credit is a viable alternative to what we consider a current unfunded Federal mandate to the mu-

nicipal level of the landfill industry. The comments made earlier by Treasury indicated that the section 29 credit was a stimulus passed in 1980 to help other types of fuels become economically viable. Most of those other fuels were eliminated from the section 29 in 1992 by the Congress. Most of those fuels were things such as Devonian shale, tight sands, coalbed methane, and so forth, which had to be explored for in order to be used.

Landfill gas is a little different. Landfill gas comes out of every landfill, whether we go after it or not, and it is a very, detrimental greenhouse gas. According to the EPA, Environmental Protection Agency, the methane content of landfill gas is approximately 22 times more harmful to the atmosphere and the greenhouse gas problem than carbon dioxide. Therefore, reduction of the methane emissions from landfills is a very strong priority for the current Administration's commitment to reduce greenhouse gases to 1990 levels by 2000, as well as the world ecological and environmental concerns.

In line with that, the EPA is about to come out with a set of regulations this August covering the new source performance standards under the Clean Air Act. In the estimation of the Federal Government, the EPA, there will be approximately 10 percent of the 6,000 landfills in the United States that are currently either active or in the process of closing that will have to comply.

By complying, they will have to put in a collection system, collect the landfill gas and dispose of it. Our estimate of that cost for approximately 600 landfills, which is 10 percent of the total, would be somewhere in the neighborhood of $1.5 billion. Therefore, we feel that, first of all, these NSPS standards will amount to an unfunded Federal mandate which is being passed on to local communities, and the only alternative, particularly for a municipally owned landfill, will be to pass on that cost to every citizen of that municipality that has their trash picked up and disposed of at the landfill.

How do we turn this into a positive? Well, instead of spending $1.5 billion to simply dispose of this gas and flare it off to get rid of it, which is the primary objective under the NSPS standards, we propose that these 600 and, in fact, as many as 700 to 800 of these sources of landfill gas could economically be developed as an alternative fuel.

I disagree with Treasury on the statement that we no longer need an incentive for alternative fuels. I think we are far from out of the woods on the energy crisis, and economic utilization of approximately 600 more landfills would save on the order of 27 million barrels of imported oil per year, if we can use this fuel instead of flaring it.

I also disagree with Treasury on the revenue neutral side of this picture. If, instead of spending $1.5 billion in unfunded mandates, which are simply costs that will have to be borne by local residents, we turn around and employ private capital to build an energy recovery system, the typical rule of thumb is that private developers such as myself will spend approximately three times the total that it would cost just to collect the gas.

Instead of $1.5 billion to simply collect and flare off the gas, we are talking a new capital investment by private industry of approximately $4.5 billion to recover and use this gas. By doing so, as an entrepreneur, I would look at a project and I would not even entertain entering into a project unless I could make something in the neighborhood of 10 percent or better on my capital investment.

If you work that equation out, 10 percent of a $4.5 billion investment, roughly $450 million a year in additional profits—I do not know exactly what you folks in Congress plan to do with the income tax structure—currently at 35 percent, but that would be a Federal tax of approximately $157 million. Our estimate of the total section 29 tax credits available for these same 600 landfills—and I believe Treasury and the EPA, Evironmental Protection Agency, would agree with this—is in the neighborhood of $100 to $130 million a year. That is based on a year 2000 baseline, given another 4 years to develop these additional landfills.

Therefore, we believe that the implementation of incentives to encourage development of landfill gas as an alternative fuel not only strongly supports the administration's commitment to the reduction of greenhouse gases and to the global environment, but also provides an opportunity to increase taxes which will exceed by a considerable amount the amount of taxes given back in the form of this credit.

It is also not possible usually to use 100 percent of this credit. There are things such as alternative minimum tax, and so forth, which do not allow a developer such as myself to fully utilize the credit. I would argue that this is more than revenue positive, if we can effectively utilize this gas as an alternative fuel. I believe that the current sentiment in Congress, while you are concerned about a balanced budget and revenue neutral items, is to also be concerned about the unfunded Federal mandates, and this is a very large one when it comes down to State, municipal, and local government entities that operate these landfills and also the private operators of landfills.

Therefore, we strongly support, if not an indefinite extension of this credit, at least a 4-year extension of the in-service date, which is now due to expire for projects that do not have a binding contract by December 31, 1995, and are not in service by December 31, 1996. If Congress does not act this year to extend this incentive, we believe development on many of these potential projects will grind to a halt by December 31 of this year.

Likewise, we are seeking an extension of the sunset date on the back end of the credit for at least a comparable number of years, in other words, to the year 2011—or, if permanent, that would be lovely, also—but some extension longer than 2 years for the in-service date and the sunset date is our wish list here this morning.

We do not agree with Treasury. We would be happy to provide them with our revenue estimates from new taxes projects, and to support any other positions that we have taken relative to why they should support this from the Clinton administration's viewpoint of supporting greenhouse gas emission reductions.

The EPA is spending a lot of money on what they call the EPA Methane Outreach Program, which is intended to get States, electric utilities, municipalities and private developers to all cooperate in the use of landfill gas to reduce this methane emissions problem. Without this incentive, I think those of us on the private side who are being called on to provide the capital will have to largely walk away from this potential opportunity. Therefore, we would urge you to consider an extension of the section 29 Federal tax credits.

Thank you.

[The prepared statement follows:]

Testimony of

Bernard J. Zahren
President
Zahren Alternative Power Corporation
appearing on behalf of
The Solid Waste Association of North America

before

Subcommittee on Oversight of
the Committee on Ways and Means

May 9, 1995

Madam Chairwoman, members of the committee, my name is Bernard Zahren.

I am president of Zahren Alternative Power Corporation. We are in the business of tapping methane gas at landfills and using it to generate electricity. ZAPCO has 11 such projects operating currently, making it the fourth largest landfill gas company in the country if one measures by number of projects in operation, but we are much smaller if the measure is the kilowatt hours of electricity produced. Our projects tend to be fairly small in size.

I am here today on behalf of the Solid Waste Association of North America. SWANA is an association for landfill owners and operators, as well as for other solid waste management professionals. Most members of the association are local government officials charged with disposing of solid waste. There is also a separate trade association -- the National Solid Waste Management Association -- for private landfill owners. Both associations are supporting the effort that brings me before this committee today.

SWANA strongly encourages the committee to extend the section 29 tax credit.

The section 29 tax credit is a credit that encourages people to look for fuel in unusual places. The credit was originally enacted in 1980, and it has been extended three times since then. The amount is adjusted each year for inflation. It was $5.76 for the equivalent of each barrel of oil that a taxpayer produces in alternative fuels in 1994. The figure for 1995 production won't be announced by the Internal Revenue Service until April next year.

The credit used to apply to a large number of alternative fuels, including gas from Devonian shale, tight sand formations, coal seams, geopressured brine and biomass, oil from shale or tar sands, and synthetic fuels from coal. However, the list was cut back to just two fuels the last time Congress extended the credit in 1992. The two that still qualify are "gas from biomass" and "synthetic fuels produced from coal." An example of "gas from biomass" is methane produced by decomposing garbage at landfills.

The idea was to get people to look in places for fuel that they would not look if left on their own. Thus, the credit phases out automatically if oil prices return to levels that make it economic to produce these fuels without the subsidy provided by the tax credit. The credit was not available for the first two years after it was enacted because oil prices were in this range.

There is a deadline for placing projects in service to qualify for the credit. Projects that produce the remaining two fuels still qualifying for tax credits must be in service by December next year.

We are asking Congress to extend this deadline for another four years through December 2000 for the two fuels that still qualify.

Projects that are in service by this deadline qualify for tax credits currently on the fuel they produce through 2007. This is the "expiration date" for the credit, as opposed to the deadline for placing projects in service. We are asking that this expiration date also be pushed back by four years.

It is important that Congress act this year to extend the credit before work grinds to a halt on projects that are under development as developers conclude there is too great a risk these projects won't be finished in time to place in service by December next year. Synthetic coal fuel projects have long lead times. Landfill gas projects have shorter lead times. Work will stop on many new projects well before the deadline at the end of next year unless Congress has taken steps to extend the credit. There is no sense in continuing to pour money into a project for which the credit is a necessary inducement if the project can't get into operation in time to qualify.

Why should Congress extend the credit?

Before I answer this question, please understand that what drove Congress to enact the section 29 credit in the first place in 1980 is not what has led it to extend it in the 1990's. The credit was originally part of a strategy for making the United States less dependent on imported oil. The Arab oil embargo was still fresh in people's minds. The country had just gone through not only painful energy

shortages, long lines at gasoline stations, inflation and high interest rates driven by spiralling prices for oil, but also a deep recession due to the high interest rates. Congress was determined that the country not be held hostage again to one side's interests in the Middle East conflict. It enacted a series of measures aimed at encouraging business to use energy more efficiently and at inducing business to rely more on renewable fuels -- like sunlight, wind, geothermal fluid and waste -- and to tap previously untapped resources for fuel. The section 29 tax credit was part of this strategy.

By 1992, the sense of urgency was gone. The logic for continuing the credit for many of the fuels covered was gone. Thus, Congress kept it only for two fuels -- basically landfill gas and synthetic fuels from coal. In the case of landfill gas, there is an unfunded mandates problem and there are important environmental reasons for continuing the credit. In the case of synthetic fuels from coal, the United States has tremendous coal reserves, but coal can be a dirty fuel and there was a desire to keep efforts underway to develop coal-based fuels as an alternative to burning straight coal.

SWANA's interest is landfill gas. Decomposing garbage produces methane. Methane is a potential health and safety hazard, as it will find an outlet from the landfill. The gas has two possible outlets. It can migrate underground to adjoining properties, where it kills or stunts vegetation by displacing oxygen from the ground. Alternatively, it can escape into the atmosphere. Contaminants in the gas contribute to air pollution and mix with sunlight to create smog. During the 1980's, there were more than two dozen life-threatening explosions and at least three deaths due to landfill gas accumulation in nearby structures.

Landfill owners take steps to control the gas either by installing "passive" systems, like trenches, barriers and vents to prevent gas from migrating underground and to give it an outlet into the atmosphere, or by installing "active" systems where the gas is pumped to the surface and either flared, vented, or collected for use as fuel.

Use as fuel is still infrequent. There are approximately 6,000 active and recently-closed landfills in the United States. At the end of 1990, gas was being collected for fuel at just 97. In 1995, the figure is still only 143.

Last year, the federal Environmental Protection Agency created a special Landfill Methane Outreach Program in an effort to encourage more collection of landfill gas for use as fuel. Methane is a greenhouse gas that contributes to global warming. It is the second largest contributor to global warming after carbon dioxide, and landfills are the single largest identified source of methane emissions,

accounting for more than a third of total methane released by the United States.

Greenhouse gases are expected to increase by 14.5% during the 1990's. The Clinton administration committed in April 1993 to hold greenhouse gas emissions to 1990 levels. The Landfill Methane Outreach Program is an effort to avert this increase. EPA is preparing a report to Congress on barriers to landfill gas projects, it has set up a hotline to cut through red tape, and it is in the process of signing cooperative agreements with states and utilities to encourage more landfill gas utilization.

Congress should extend the section 29 tax credit because there is unfinished business at the nation's landfills. Word about the credit was slow to get out. Most landfill owners have only recently become aware of it, and having become aware, the pace of landfill gas development is increasing noticeably. There was almost a 50% increase in landfill gas projects in the last five years. The credit needs more time to reach its potential.

EPA estimates that approximately 750 of the estimated 6,000 active and recently-closed landfills in the United States are candidates for landfill gas production. It won't happen without the credit.

Congress should also extend the credit because it is a reasonably low-cost response to the problem of unfunded mandates. From the standpoint of SWANA, most of whose members are local government officials, the federal government has imposed standards on landfill operations, but provided no money to implement them. The Environmental Protection Agency proposed "new source performance standards" for landfills in May 1991, and it has revised them twice since then. As currently proposed, the new standards would require any landfill with a design capacity or solid waste in place of at least 2.5 million metric tons, and whose nonmethane organic compound emissions are expected to exceed 50 metric tons a year, to install a control system.

The credit is an inducement to the private sector to do the municipality's work. We are opposed to dropping the credit but leaving the federal mandates in place.

The new source performance standards will not take effect until the federal government reissues them in final form. That is currently expected to occur in August, but they have been delayed a number of times, so the publication date may be delayed further. In the meantime, many landfill owners are unwilling to commit to landfill gas projects because they want to see what the final rules require. They are quickly backing up against a wall, since section 29 requires not only that landfill gas projects be in service by December next year to qualify for tax credits, but also that there be a binding contract for the project by the end of

this year. There isn't much time left for binding contracts, and if the rules are delayed again, there will no time at all.

Congress should also extend the credit because this is something tangible the United States can point to that it is doing to reduce greenhouse gas emissions that contribute to global warming. Let me read from an editorial in The Economist magazine from April 8, 1995.

> "Hyprocrisy is nothing new in international politics. But when the topic is global warming, the ability of governments to say one thing and do another is, let's say, breathtaking. As the Berlin climate-change summiteers waffled on this week, official delegations held countless press conferences proclaiming how worried their governments were that the accumulation of greenhouse gases could lead to catastrophe. At countless closed meetings, each country then refused to do anything much about it."

Rich countries committed in 1993 to reduce greenhouse gas emissions to 1990 levels by the year 2000. The Environmental Protection Agency has concluded it is impossible for the United States to meet this commitment without taking aggressive steps to encourage more landfill gas collection at landfills.

Cindy Jacobs, manager of the Landfill Methane Outreach Program at EPA, gave some interesting statistics in a talk last year. The Clinton administration is counting on 43% of the reductions in greenhouse gas to come from the efforts it is making through the Landfill Methane Outreach Program and its other "green programs." Methane accounts for 18% of total greenhouse gas emissions -- the second largest contributor to global warming after carbon dioxide. However, methane is about 20 times more effective than carbon dioxide in trapping heat in the atmosphere, so its contribution to global warming is far out of proportion to its percentage in the mix of total gases. Landfills are the largest identified source of methane in the United States, and the United States accounts for 35% of total landfill methane emissions worldwide.

Many air pollution officials -- not just at EPA but also at the state and local level -- would like to see the tax credit extended.

Finally, let me speak briefly to the economics of landfill gas projects and why most such projects won't be built without the tax credit. Landfill gas is more expensive to collect and use as fuel than to flare. Once collected, it is too impure and has too low an energy content to be put in pipelines and mixed with natural gas, so there is a limited market for it. The market is basically potential industrial consumers within a one- or two-mile radius of the landfill.

There often aren't any such people. Consequently, at most projects, the developer of the project will install electric generating equipment -- which adds to the cost -- to use the gas for generating electricity.

The electricity is sold to the local utility. Thus, in most projects, the source of revenue to cover the costs of the project is revenue from electricity sales. The developer needs about 5¢ to 6¢ per kilowatt hour from the utility in most cases to make the project economic. Utility "avoided costs" -- the amount that the utility is prepared to pay a wholesale supplier for electricity -- are in the 3 to 4¢ range in areas of the country where additional capacity is needed. They are roughly 2 to 2 1/2¢ a kilowatt hour in other areas. The developer might get a slightly higher average price from the utility under a long-term contract because of the way the escalators and capacity charges are calculated under such contracts. The tax credit is worth about 1¢ per kilowatt hour. The bottom line is that it is the difference currently between whether or not a project is economic.

In conclusion, Congress should extend the section 29 tax credit for the two fuels that qualify currently.

It should do this because there is still unfinished business at the nation's landfills, the credit is an inexpensive way of getting the private sector to do the municipalities' work in carrying out unfunded mandates involving landfills, and the credit is important to carrying through on the commitment the United States has made to reduce greenhouse gas emissions.

Chairman JOHNSON. Thank you.
Mr. Barkofske.

STATEMENT OF FRANCIS L. BARKOFSKE, VICE PRESIDENT, EXTERNAL AFFAIRS, ZEIGLER COAL HOLDING CO., FAIRVIEW HEIGHTS, ILLINOIS

Mr. BARKOFSKE. Thank you, Madam Chairman.

My name is Frank Barkofske. I am vice president of external affairs of Zeigler Coal Holding Co., an Illinois-based company, right outside of St. Louis, Missouri.

I have filed written testimony with the Committee in support of extending the deadline for synthetic fuels under section 29 for nonconventional fuels, the time period for which the facility should be put in production.

In the time alloted to me this afternoon, I would like to briefly describe two things, Madam Chairman. One is a project we have called the ENCOAL project, which has been qualified for the section 29 treatment, and the second briefly describes the importance of the project extending the deadlines.

My colleague to my left has already gone into section 29(c) and the time constraints. In order to save time, I would simply say we are under those same constraints as his biomass project is.

Our ENCOAL project is located adjacent to a coal mine in Wyoming. This is a project which is funded, 50 percent by the Department of Energy, and 50 percent by my company. It involves a total expenditure of approximately $90 million, of which DOE, the Department of Energy, is funding $45 million and we are funding $45 million.

It involves a new and advanced technology of converting low-rank coals; by low-rank coals, I mean those that have a great deal of moisture, a low heating value, and a relatively low sulfur coal, into a product of a higher heating value, and removing the moisture from it as well as reducing the sulfur in the coal.

Through a treatment process, the coal is actually chemically converted from one product, meaning the Powder River Basin coal—and by the way, this can also be used for lignite coal in Texas as well as in North Dakota, and we are in the testing stages of developing the same product for some of the Midwestern, higher sulfur coal.

Through a chemical process, the coal is dried, and then heated to a high temperature, and a liquid is then created, and is turned into a gas which is then cooled down, and results in a liquid fuel, very similar to a number six fuel oil.

The second component, which is the coal component, results in a coal product in where the BTU, the heating value, is raised from approximately 8,300 to over 11,000 BTUs.

The sulfur is reduced even further, from approximately 1.2 pounds of sulfur per billion BTUs, to 0.8 percent of sulfur per million BTUs. Approximately a 25-percent reduction in the sulfur of this already low-sulfur coal.

This has an application both to Wyoming coal, but it also has a benefit to other parts of the country. Under the Clean Air Act, as the Chairman is well aware of, the phase II compliance, which is

the year 2000, requires that coals be further reduced in their sulfur emissions.

This product, which is created by the ENCOAL process, is referred to in some places as supercompliance coal. It is going to overcomply, which means that other coals can then be blended in it, as well as being used to earn emission credits.

This is not simply a regional process. We are doing it in Wyoming because we have a coal mine there, and it is adjacent to it, and we have a fuel that is able to be used for the process. As I said, there are other projects around the country.

For instance, we are currently in discussions with ALCOA for a project in Rockdale, Texas, next to their lignite mine, in which they will use this for their power purposes in their aluminum plant.

We feel that we are simply on the cutting edge of this, and that it would be a mistake to cut off a project. We cannot market a commercial size project of this time with its status of section 29(c). With the expiring tax credit, we are finding that investors will not put in the $200 to $400 million required for a commercial size plant.

We think this would be a mistake, to stop a program that should be commercially adaptable, that is, environmentally doing what it should do, and as well as the section 29 purpose, to have independent fuels being developed so that our energy needs are met by our own coals, and our own energy fuels.

The last point I would like to make, Madam Chairman, is the AMT, alternative minimum tax. Alternative minimum taxpayers cannot presently take advantage of section 29 credits.

Zeigler happens to be an alternative minimum taxpayer. We are finding that many of the people who would invest in the commercial program are also not able to take advantage of it.

I commend this Committee for having recommended that the AMT tax be eliminated as of January 1, 2000. However, because of the time constraints, we do not believe that is going to help our commercial project, because already, people are beginning to wonder whether or not this credit is going to be available.

If they cannot take it now, the year 2000 is going to be too late. We would ask also, that the Committee consider eliminating that as a preference for this type of a project.

[The prepared statement follows:]

TESTIMONY OF
FRANCIS L. BARKOFSKE, VICE PRESIDENT - EXTERNAL AFFAIRS
ZEIGLER COAL HOLDING COMPANY
BEFORE THE SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
ON THE
PRODUCTION TAX CREDIT FOR NONCONVENTIONAL FUELS

MAY 9, 1995

Madame Chairman and members of the subcommittee, I am pleased to appear before you today to discuss the value of the production tax credit for nonconventional fuels. My name is Frank Barkofske, Vice President for External Affairs for Zeigler Coal Holding Company. Zeigler Coal is an Illinois-based company with its headquarters in Fairview Heights, just east of St. Louis, Missouri.

I am here today to testify in support of extending the placed in service date under Code section 29(g)(1) from January 1, 1997 to January 1, 2000, and eliminating the binding contract deadline of January 1, 1996 for synthetic fuels produced from coal. These dates were set in the 1992 Energy Act.

Section 29 tax credits are available as incentives to clean coal facilities for coal-derived clean fuels that are sold before January 1, 2008. However, under current law, these credits are available only if the qualified fuels are produced in facilities placed in service before January 1, 1997 and if there is a binding contract for such a facility entered into before January 1, 1996.

THE ENCOAL PROJECT

ENCOAL Corporation, which is owned by a subsidiary of Zeigler Coal Holding Company, has built and is now operating a first-of-its-kind coal upgrading plant near Gillette, Wyoming. Using a new and advanced technology called Liquids-from-Coal (LFC), the plant is capable of converting up to 1,000 tons per day of low-rank Powder River Basin coals into low-sulfur, high-quality solid and liquid fuels.

Low-rank coals abound in the Powder River Basin and throughout much of the West. While low in sulfur, these coals tend to have high moisture levels and lower heating values than most eastern U.S. coals. The LFC process subjects the coal to significant changes in chemical composition and removes moisture to produce higher quality fuels.

In the LFC process, coal is dried and heated so that part of the coal is converted to a gas. The gaseous vapors are cleaned and cooled, then condensed to form a liquid that can be used as an industrial fuel. This liquid also has potential as a feedstock for transportation and the production of chemicals. A low-sulfur, clean-burning solid fuel is also produced which has a higher heating value than the raw coal and has up to 25 percent of the sulfur content removed. We have tested the LFC process on other coals and have found it equally effective in raising the heating value and removing sulfur content.

The technological breakthrough represented by the LFC process will make the synthetic coal particularly attractive for power-generating companies that must reduce sulfur dioxide emissions to comply with the 1990 Clean Air Act Amendments. Currently, the technology has been successfully tested on Alaskan Lignite, Powder River Basin Subbituminous, Dakota Lignite, and Texas Lignite. Current possibilities for commercial facilities related to the ENCOAL project include Triton's Buckskin Mine near Gillette, Wyoming and Zeigler's properties near Rockdale, Texas.

In the case of the ENCOAL project, royalty revenue for the U.S. government could be as high as $45 million.

The ENCOAL project is one of the most successful projects in the Department of Energy's Clean Coal Technology program. The Department of Energy and ENCOAL entered into a cooperative agreement in September of 1990. DOE and ENCOAL are equally sharing the project's cost of $90 million. As part of that agreement, the DOE stands to receive royalties from the licensing of the ENCOAL process equal to an amount up to the $45 million federal expenditure. DOE authorized a final installment on the ENCOAL project in September 1994.

SECTION 29--AN INCENTIVE FOR "NON-CONVENTIONAL" FUELS DEVELOPMENT

In 1980, following the second major oil shock in seven years, the Congress enacted section 29 tax credits. Section 29 was intended to provide incentives for the production of alternative (or non-conventional fuels). Section 29(c)(1)(C) provides incentives to promote the construction of facilities that produce new, synthetic fuels from coal. Billions of dollars have been invested in these projects by private sector companies and the federal government over the past decade to develop and demonstrate new coal based alternative fuel technologies.

LARGE CAPITAL REQUIREMENT DELAYS MAKE DEADLINES UNREALISTIC

Zeigler Coal and other companies that have invested millions of dollars in promising new clean coal technologies will not be able to meet these deadlines. In some cases, these dates are unrealistic due to extraordinary up-front capital investment and expenditure requirements. Uncertain returns require extensive market analysis by potential investors. In addition, investors are unlikely to invest in "risky" clean coal technology projects that are not projected to deliver consistently above average returns on the investment. It is important that returns on investment match the risk involved in new technologies. Building a commercial sized clean coal plant could require an investment of up to $400 to $500 million. This level of investment will only happen if risks are minimized. The section 29 credit is intended to get new clean coal technologies off the ground by minimizing such risks.

CLEAN COAL COMMERCIALIZATION REQUIRES LONG LEAD TIMES

The long lead times needed for plant planning and construction make these deadlines unrealistic. It is often difficult to quickly meet all federal, state, and local permitting and regulatory requirements in order to build a major industrial plant. It is especially difficult for the coal industry to quickly meet permitting and regulatory requirements because of environmental, worker safety, and other related concerns. Construction of clean coal plants can often be delayed due to logistical and technical obstacles. Many coal mines, which are likely locations for clean coal plant construction, are located in remote areas with limited access to building materials. In short, materials delayed at any point during the transportation process can hold up construction. Assembling and fine-tuning new clean coal technologies can also lead to delays.

RECENT IRS ACTION INHIBITS USE OF SECTION 29

Stability in the tax system is also important. For example, one obstacle to meeting the current deadlines for some companies can be directly attributed to a recent IRS action. The Internal Revenue Service raised uncertainty for Zeigler Coal and other companies due to a recent series of private letter rulings withdrawing eligibility for section 29 credits from several coal companies. As Kennecott has outlined in it's testimony, 100 people lost their jobs due to the uncertainty caused by a delay

related to the IRS withdrawal of private letter action. Potential investors in Zeigler Coal's clean coal technology project were also given cause for concern due to this action.

The IRS issued a private letter ruling (PL8836071) on June 17, 1988 to Shell Mining Company (which owned the ENCOAL project at that time) in which they ruled that the synthetic fuels derived from coal are qualified fuels under section 29(c)(1)(C) of the Internal Revenue Code. On February 14, 1995, the IRS issued a withdrawal of the private letter ruling, effectively disqualifying the synthetic fuels produced from coal at Zeigler Coal's ENCOAL plant. Zeigler Coal immediately requested that the service reconsider its withdrawal of the 1988 ruling under which ENCOAL had already made commitments and expenditures of nearly $45 million. I am pleased to report that last week we received notice that the IRS had reconsidered its withdrawal and has now reinstated its 1988 ruling. It is my understanding that other companies also had their private letter ruling withdrawn and, after appealing the IRS action, had the withdrawal rescinded.

Despite these obstacles to advancing new clean coal technology projects, Zeigler Coal and other companies would like to move beyond the demonstration phase to the commercial phase.

CLEAN COAL TECHNOLOGY HELPS MEET PHASE II OF THE CLEAN AIR ACT

Advancing clean coal technology from the demonstration phase to the commercialization phase will help meet the mandated goals for Phase II of the Clean Air Act. Coal is the primary and most abundant energy source in the United States. Over fifty-seven percent of electricity is produced from coal. In 1990, Congress amended the Clean Air Act to require reduced sulfur emissions and other pollutants from coal-burning power plants. Phase I facilities (110 power plants) began their reductions on January 1, 1995 and all plants must be in compliance by the Phase II date, January 1, 2000. Utilities and industry were expected by Congress to make widespread use of alternative clean fuels produced from coal to help achieve these reductions. Clean coal projects can help the power generation industry meet Phase II of the Clean Air Act.

THE ALTERNATIVE MINIMUM TAX IS A BARRIER TO ADVANCING "NONCONVENTIONAL FUELS" TO COMMERCIALIZATION

I would like to commend the Committee on Ways and Means for reporting a bill to the House floor to repeal the alternative minimum tax (AMT). Companies interested in acquiring a license to use the ENCOAL coal synthesizing process in their operations are often AMT payers. Unfortunately for Zeigler Coal, currently an AMT payer, the repeal date does not come soon enough to spur the commercialization of the ENCOAL project. In short, we would like to have the section 29 credit available as an offset against AMT liability prior to the year 2000. Without this relief, Zeigler is unlikely to build another plant to synthesize coal into cleaner liquid and solid fuels.

The AMT undermines U.S. "non-conventional" fuels tax and clean coal appropriations policy. The government has provided Section 29 tax credits to encourage the development of alternative fuel sources. However, companies engaging in a "good faith" clean coal technology partnership with the government are discouraged from advancing the most successful projects to commercial use due to the inability of AMT paying companies to offset the credit against AMT liability. This contradiction in policies does not make sense. If the advancement of clean coal technology is good energy and environment policy for regular taxpayers to undertake, it is good policy for AMT payers to undertake as well. The intent of the AMT is to ensure all companies pay some tax. The AMT is not intended to undermine U.S. energy and environment policy. We would like you to consider further AMT relief as of January 1, 1996 for new clean coal technologies, as a supplement to the extension.

CONCLUSION

Madame Chairman and members of the subcommittee, I want to thank you for the opportunity to testify before you today. Zeigler Coal strongly supports the extension of the "placed in service" requirement for synthetic fuels derived from coal from January 1, 1997 to January 1, 2000 and repeal of the binding contract clause. I hope that my testimony has provided you with the information you need to offer this recommendation as part of a second tax bill this year. Thank you.

Chairman JOHNSON. I thank you for your testimony. It is interesting that in both the technologies that you talk about, one of the pressures that you are responding to are changes in Federal law to achieve environmental goals, that at the time we passed the law setting those goals, we did not have the technology to achieve them.

Around here, we call it technology pressing law, and you are the technology we press.

Mr. BARKOFSKE. And we can now put it into effect.

Chairman JOHNSON. It is interesting that there is a response, and with some very favorable spinoff. However, in your cases, and in the cases of others who have talked to us about this law, who are not currently covered by it, the issue really is not so much development of technology. It is really operating subsidies until you get big enough to be able to capitalize your own development.

That is a little different issue than keeping these credits in place throughout the life of the program that is needed to achieve compliance by the year 2000.

I would ask you to get back to us about what kinds of things we might look at to more directly tailor this support system, to, in a sense, the shorter term issue of creating the volume of demand that would allow you to commercialize the technology in a way that it is self-supporting.

It does not seem to me that that is a 5-year project. It seems to me that that is less than 5 years. And I am not saying that so much from my knowledge of landfill issues, or clean coal technology, as I am from some other approaches that are also interested in this.

That basically, they have a product, they have a technology that meets a very real need, but if they could lower their production costs for the product, they would be a big market competitor.

They cannot lower their production costs until they increase their volume. They cannot increase their volume until they lower their production costs. There is a place for government to help new technologies to get, in a sense, commercialized and viable, by subsidizing them through that period of volume growth.

At some point with the number of landfills that you mentioned, Bernie, and the timeframe within which States and local governments need to comply, I mean, there is clearly a demand.

What is that really essential need, that allows this demand to be met in a way that lowers the cost for local and State government because you have a viable product out there?

Mr. ZAHREN. We have a viable product from a technology standpoint, if you are going to make electric power, which is the predominant use of landfill gas today. Of 150 or so projects that are in production, using landfill gas, over 100 of them make electric power. The rest simply send the gas to a nearby boiler unit of some sort.

If we are to develop the 600 additional landfills, it is my belief that we will not be able to make electric power at most of those sites, and that is due to another Federal initiative which is currently underway, which I believe in, and that is the deregulation of the electric utility industry.

The FERC, Federal Energy Regulatory Commission, has just come out with a proposed major new set of regulations that will unbundle the transmission and the generation of electric power. Because of all of this, none of the utilities are anxious to buy our power today at rates that will allow us to be competitive.

Most of my 11 projects make power for 5- to 6-cents-per-kilowatt hour. Go back to our home State and ask Northeast Utilities what they will pay for power today. It is 2.6 cents.

I cannot make additional projects work at that kind of power rate. We do not have a need for a subsidy to make up the difference in electric rates, but a need for, indeed, R&D, research and development, to find new markets for the gas. I believe those markets will be in vehicle fuel, which is developing quickly, and results from another Federal set of mandates for the nonattainment air pollution areas, to convert fleets of over 20 vehicles to operate on an alternative fuel.

That can be done in the form of liquified natural gas, compressed natural gas, methanol, and potentially other products, all of which can be manufactured from the methane contained in a landfill.

I can not do that in the next 24 months, because the technology is largely unproven and undemonstrated. I can make electric power tomorrow, but I'm not building any more projects because I can't get the electric power contract.

I think the utilization of the gas is very dependent on new and different technologies for the use of the gas, which will take more than a year or two to implement.

Chairman JOHNSON. Thank you. That is very interesting. You see your market changing, and so actually this is the development credit for you?

Mr. ZAHREN. It is development; yes.

Chairman JOHNSON. Well, if you think about timeframes, that would be helpful to us.

Do you care to make a comment, Mr. Barkofske?

Mr. BARKOFSKE. Yes, I would, Madam Chairman.

Let me just say that our demonstration plan, which is the plant I described out in Wyoming, has proved itself.

The DOE considers it one of the flagships in their clean coal technology programs, and I think there is going to be filed in the record a copy of a letter from the DOE on the project.

We have a good project which is meeting the needs of clean coal technology, environmentally superior, and is domestic energy. The trouble we are having is to interest someone to build that first commercial plant, which is a $200 to $400 million expenditure.

We are finding that they are telling us, and we believe it because we would do the same thing—that without this section 29 tax credit, at least to the year 2008, as provided for in current law, the risk factor involved on this, the need to invest the capital is such that they have better needs for their money.

We believe that if we get one commercial plant going during this time period, then the economics of that process will carry itself.

So we are not asking—while my colleague indicated it would be nice to continue these credits forever, we are not seeking that from this Committee.

We are simply saying that we cannot meet the January 1, 1996, deadline for a binding contract, and the January 1, 1997 deadline for a plant in service for this size of an operation.

We are not asking for any additional help on our demonstration plant. We are simply saying let's go into the year 2000, which coincides with phase II of the Clean Air Act, to allow us to market this concept, and to get someone such as, hopefully, ALCOA, to put in a project like this, and definitely prove that on a commercial size it will make sense.

Chairman JOHNSON. Are you saying, then, that really, all you need is the time to get one project up and running under section 29?

Mr. BARKOFSKE. Yes, ma'am. I think that conceptually, since you are looking at 2 to 3 years for finishing a project, that is what we are looking at in the time phase of January 1, 2000. If it cannot carry its load after that, then I agree with some comments that have been made, that, it ought to fall by the wayside.

We do not think it will. We think this is a good project, and we have just run out of time to market it on a commercial size.

The DOE under our agreement, has a chance, once we license one of these plants, to begin to recoup the $45 million that they have expended for the project. Whether they will get it all back or not, I do not know, but there will be a revenue-raising aspect in it.

It is one of these things, that you see the light out there, it is not too far out there, and you are reaching for it, and we just cannot make it, Madam Chairman, and we are asking for Congress' help to extend the deadline.

Chairman JOHNSON. Once you build this plant, then you have an obligation to repay some of the DOE moneys?

Mr. BARKOFSKE. Our obligation is based on any licensing fee we have for this project, they get a certain percentage of it, up to the amount they have expended. Yes, ma'am.

Chairman JOHNSON. Perhaps you could give us a little more detail on that agreement, so that we could see that mechanism more clearly.

[The following was subsequently received:]

Department of Energy
Washington, DC 20585

The Honorable J. Dennis Hastert
U. S. House of Representatives
Washington, D.C. 20515-1314

Dear Congressman Hastert:

This is in response to your letter of March 30, 1995, requesting an evaluation of the success and commercial viability of the ENCOAL Clean Coal project as well as whether the Federal Government will be repaid as a result of the recoupment provisions in the associated Cooperative Agreement.

The ENCOAL plant began operations (production of coal fuels) in May 1994. It is producing both a low-sulfur, coal-derived liquid fuel (CDL) similar in quality to a low-sulfur No. 6 fuel oil and the second is a solid, process derived high-Btu fuel (PDF).

Process operating variations are still under study to identify ways to improve the stability of the solid product. ENCOAL has demonstrated that the PDF can be transported in rail cars by shipping it to Muscatine Power & Water in eastern Iowa under a thin blanket of Powder River Basin coal. This technique produced a blend which was successfully test burned in December 1994. A report on all commercial testing of both liquid and solid products will be issued in the near future.

The technical achievements to date support the participants in their belief that the project has a high success potential. The number of major utilities requesting ENCOAL's products for blending purposes, has increased markedly since the plant started operation.

The participant projects that PDF can be sold at a market price (on an equivalent energy content basis) normally expected for low sulfur eastern bituminous coal without any government support and/or credits. CDL product prices are dependent on the volatility of the oil sector, and PDF prices to the energy sector. The commercial economics remain to be confirmed, however, and the data from the extended operating period are factors essential to that assessment.

If brought to commercial viability, the ENCOAL project will help serve U.S. energy interests and enhance opportunities for economic growth. In addition, the project will help ensure a sustainable environment through the development of new technology. In short, the ENCOAL project has earned my strong support and is an excellent example of a successful public/private sector partnership.

You also asked about the recoupment of the federal government's investment of $45 million. If the ENCOAL project is not brought to commercial viability, the government will not recoup it's investment. However, if the project were to be licensed commercially, the federal government could receive royalties up to the $45 million public investment.

The Comprehensive Report to Congress, issued in June 1990, is enclosed. Meanwhile if we can be of assistance in any other way, please contact us.

Very truly yours,

Patricia Fry Godley
Assistant Secretary
for Fossil Energy

Enclosure

REPAYMENT AGREEMENT

ARTICLE I — GENERAL OBJECTIVE

The purpose of this agreement is to set forth the terms and conditions under which ENCOAL Corporation (defined herein as the Participant) shall repay to the United States Department of Energy (DOE) an amount up to (i.e., not to exceed) the Government's share of total project costs paid under Cooperative Agreement No. DE-FC21-90MC27339.

ARTICLE II — DEFINITIONS

"Contracting Officer" means the DOE official authorized to execute awards, financial agreements, and amendments thereto on behalf of DOE and who is responsible for administering this Repayment Agreement.

"Cooperative Agreement" means the financial assistance award made by the United States Department of Energy (DOE) to the Participant, Instrument Number DE-FC21-90MC27339 on _____ 1990 and subsequent amendments.

"DOE" means the United States Department of Energy and any successor department or agency.

"DOE share" means the portion of the total project costs paid by DOE under the Cooperative Agreement.

"Government" means the government of the United States, including DOE.

"Licensing Contractor" means the TEK-KOL partner designated under the TEK-KOL Partnership Agreement to undertake the primary licensing and development activities relating to the commercialization of the Demonstrated Technology.

"Participant" means ENCOAL Corporation and its successors and assigns.

"Project" means the set of activities described in Article XI (Allowable Pre-Award Costs) and in Attachment A, Statement of Work, of the Cooperative Agreement.

"SMC" means Shell Mining Company.

"TEK-KOL" means the California General Partnership between SGI International, a Utah corporation with offices in La Jolla, California, and SMC, the developers of the LFC Technology. TEK-KOL has entered into an Agreement of even date herewith to develop and commercialize the Demonstrated Technology on behalf of the Participant.

"Total project costs" means the total amount of allowable direct and indirect costs incurred by the Participant and paid, in part, by DOE under the Cooperative Agreement.

"United States" means any of the several States of the United States, the District of Columbia, the Commonwealth of Puerto Rico, and any territory or possession of the United States.

ARTICLE III — TERM OF THIS REPAYMENT AGREEMENT

This Repayment Agreement shall become effective on the date specified in the Cooperative Agreement as the end of Phase III (Operation) or as may be extended by any subsequent contract modifications, except that if the Participant unilaterally withdraws or terminates its participation under the Cooperative Agreement, this Repayment Agreement shall become effective on the date the Cooperative Agreement is terminated. This Repayment Agreement shall expire 20 years from its effective date or on the date the entire DOE share has been repaid, whichever occurs first. This Repayment Agreement may be terminated upon a determination by the Secretary of Energy or designee that repayment places the Participant at a competitive disadvantage in domestic or international markets.

ARTICLE IV — DEMONSTRATION TECHNOLOGY

(A) Demonstration Technology

For purposes of this Repayment Agreement, the "Demonstration Technology" shall consist of the mild gasification process based on the Liquids-from-Coal (LFC) Technology developed by TEK-KOL. The process involves deep drying and heating coal under carefully controlled conditions causing chemical changes in the coal. The chemical changes result from decomposition or pyrolysis of the coal producing gases and solid residue. The solids are further processed and stabilized producing a new fuel form, Process Derived Fuel (PDF). The gases are cooled and partially condensed, forming a second new fuel form called Coal Derived Liquid (CDL). The remaining residue gases are burned in the process for heat. Collectively, the licensable Demonstration Technology consists of everything inside the Technology Envelope as more fully described in APPENDIX 1 to this Agreement.

(B) Technology Rights

ENCOAL represents that is has obtained from SMC sufficient rights in the patented and unpatented technology, including copyrighted works and operating expertise, to enable ENCOAL to fulfill its obligations under the Repayment Agreement.

ARTICLE V — AMOUNT OF REPAYMENT

(A) The amount of the Participant's repayment obligation shall be based only on the sale, lease, or licensing of the Demonstration Technology, as defined in Article IV, in applications and for use at facilities located in the United States. The amount of repayment shall be 5 percent of the gross revenues from the sum of all royalties and licensing fees during

commercialization of the Demonstration Technology. Equipment sales/leases are not a revenue producing activity for the Participant and do not contribute to repayment.

For purposes of determining the amount of repayment, commercialization shall be deemed to have begun on the effective date of this Repayment Agreement or the day after commissioning of the first full scale commercial plant using the Demonstration Technology, whichever occurs later.

(B) License Fees

The Participant shall pay DOE an amount equal to 5 percent of the gross revenues from the aggregate license fees paid to ENCOAL, TEK-KOL, or any authorized licensor of TEK-KOL for use of the Demonstrated LFC Technology. In its License Agreement with TEK-KOL, the Participant requires that TEK-KOL include in all contracts or agreements with any entity which acquires the right to license the use of the Demonstrated LFC Technology, a provision requiring that all such license and sublicenses and associated revenues be reported on an annual basis to TEK-KOL. SMC and TEK-KOL have agreed to commercialize the Demonstration Technology on behalf of ENCOAL. TEK-KOL's agreement with the Participant includes an obligation to report all of this information to the Participant. The address of TEK-KOL's representative is as follows:

TEK-KOL Partnership
3366 N. Torrey Pines Court #220
La Jolla, CA 92037
Ph. (617) 452-0841

(C) Commercialization and Repayment Guarantee

SMC Performance Guarantee on behalf of ENCOAL for commercialization and repayment are included in Attachment A to this Repayment Agreement.

ARTICLE VI — SCHEDULE OF REPAYMENTS

Payments to DOE shall be calculated on an annual basis, and shall be due within 60 days after each 1-year period following the effective date of this Repayment Agreement.

ARTICLE VII — REPORTING AND RECORD RETENTION REQUIREMENTS

(A) Annual Report to DOE

Within 60 days after the end of each 1-year period, the Participant shall submit a written report to DOE which, for the 1-year period just elapsed, provides the applicable data described below:

(1) The total dollar amount of license fees and royalties paid for use of the Demonstration Technology;

(2) Quantities and descriptions of Demonstration Technology transactions under which license fees were paid;

(3) The total amount of revenue reported by each entity identified in ARTICLE V.

(4) The total amount owed and paid to DOE, and the amount of the DOE share remaining to be paid in succeeding years under this Repayment Agreement.

(B) Period of Retention

With respect to each annual report to DOE, the Participant shall retain, and shall contractually require TEK-KOL to retain, for the period of time prescribed in this paragraph, all related financial records, supporting documents, statistical records, and any other records the Participant reasonably considers to be pertinent to this Repayment Agreement. The period of required retention shall be from the date each such record is created or received by the Participant and TEK-KOL until 3 years after one of the following dates, whichever is earlier: the date the related annual report is received by DOE; or the date this Repayment Agreement expires or the final payment to DOE is received. If any claim, litigation, negotiation, investigation, audit, or other action involving the records starts before the expiration of the 3-year retention period, the Participant and TEK-KOL shall retain the records until such action is completed and all related issues are resolved, or until the end of the 3-year retention period, whichever is later. The Participant shall not be required to retain any records which have been transmitted to DOE by the Participant.

(C) Authorized Copies

Copies made by microfilm, photocopying, or similar methods may be substituted for original records. Records originally created by computer may be retained on an electronic medium, provided such medium is "read only" or is protected in such a manner that the electronic record can be authenticated as an original record.

(D) Access to Records

DOE and the Comptroller General of the United States, or any of their authorized representatives, shall have the right of access to any books, documents, papers, or other records (including those on electronic media) which are pertinent to this Repayment Agreement. The purpose of

such access is limited to the making of audits, examinations, excerpts, and transcripts. The right of access described in this paragraph shall last as long as the Participant retains records which are pertinent to this Repayment Agreement.

(E) Restrictions on Public Disclosure

The Federal Freedom of Information Act (5 U.S.C. § 552) does not apply to records the Participant is required to retain by the terms of this Repayment Agreement. Unless otherwise required by law or a court of competent jurisdiction, the Participant shall not be required to disclose such records to the public.

(F) Flow Down of Records Retention and Access Requirements

In any contract or other agreement subject to the reporting requirements described in Article V, Sections A and B, the Participant shall include clauses substantially similar to the records retention and access requirements set forth in sections (B) and (D) of this Article.

Mr. BARKOFSKE. I will be glad to file that with—

Chairman JOHNSON. As you can tell from the preceding discussion, there are concerns about evenhandedness of public policy, and there are those who believe that this credit gives you all an unfair advantage against other sources of fuel.

Do you care to comment on that? I would by happy to hear your comments.

Mr. BARKOFSKE. Right now? Later, Madam, or right now?

Chairman JOHNSON. Yes. Right now.

Mr. BARKOFSKE. Oh, good.

We do not think the tax credit will unduly give advantage to this product. What it is doing is it is making an alternative available for people who want to have a supercompliance coal out there, that is able to be shipped across the country at reasonable rates, and burned in their power plant.

It is not going to, in any way, undercut any of the existing fuels. It simply gives the potential buyer for a utility, or an industrial complex, the advantage of being able to use an alternative source.

I would be silly if I stood here and said that it is going to be able to compete day in and day out with any of the other power plant sources.

If I might take just 1 minute. Let's take the ALCOA for example. Their aluminum plant is in Texas. We have lignite reserves adjacent to that plant. They also own and control some of those.

By putting the ENCOAL plant in between the lignite deposit and their aluminum plant, they would be able to avoid a processing step which is otherwise required in bringing that lignite into it. It is an ideal situation, it is one of those unique situations that the environment has improved, and once again, we are able to use a domestic source of power. That is just one instance of where it fits in.

This is not going to be a massive situation. I do not think anybody thought the clean coal technology projects were going to replace natural gas or coal.

We have over a billion tons of coal in our company, so we are not looking to replace all that. It simply fills a niche that we believe is out there, and that would bring to fruition this government program.

We have encouraged government, and company participation. This was a 50/50 deal between our company and the DOE, and we want to see it come to fruition.

Chairman JOHNSON. Thank you.

Mr. ZAHREN. I would also say the same thing with regard to landfill gas. Landfill gas contains approximately 50 percent of the methane content in natural gas. In order to clean it up and make it competitive with natural gas, for any use, whether it be in a boiler or as vehicle fuel, or to make electric power, what you have, is an expensive process.

Much of that technology is not proven yet. We have quotes from a number of chemical engineering firms, in the neighborhood of $1.5 to $2 per million BTUs for the cleanup cost of making landfill gas comparable to natural gas.

The amount of the credit today is 99-cents-per-million BTUs. That hardly makes us competitive with natural gas on a straight-

up basis, if it costs $1.50 to just clean the gas up, to be able to bring it to the point where it is even comparable to natural gas.

I would assume your economics are similar.

Mr. BARKOFSKE. Yes.

Mr. ZAHREN. It is not making us more competitive than conventional fuels. It is only subsidizing a part of the difference between the two.

Chairman JOHNSON. Thank you very much. I appreciate the quality of your testimony, and I appreciate this opportunity. It is too bad C–SPAN is not recording this kind of a hearing, because it gives people a lot more insight, I think, as we discuss each of these credits, as to the critical role that the Federal Government does play, and continues to play in both supporting troubled industries through hard times, and initiating creative responses to problems we face in the environment, or elsewhere, and responding to the educational needs of our people.

Thank you very much for your testimony, and with that, we will go to the next panel.

Mr. BARKOFSKE. Thank you very much, Madam Chairman.

Mr. ZAHREN. Thank you.

Chairman JOHNSON. Thank you.

Janet Tully, the director of community employment and training of Marriott International; Shepard Bailey, the director of tax, Pizza Hut; John Wright, president of Wright Foods of McAllen, Texas, on behalf of the National Restaurant Association; and Dave Edwards, vice president, associate relations, the A&P.

Janet Tully, would you proceed, please.

STATEMENT OF JANET M. TULLY, DIRECTOR OF COMMUNITY EMPLOYMENT AND TRAINING, MARRIOTT INTERNATIONAL, INC., WASHINGTON, DC; ON BEHALF OF THE COMMITTEE FOR EMPLOYMENT OPPORTUNITIES

Ms. TULLY. I am pleased to testify today on behalf of both Marriott International and the Committee for Employment Opportunities. My printed statement describes our group and the list of employers in it.

We have been working for months to seek remedies to cure the ills of the old TJTC, Targeted Job Tax Credit Program. Frankly, I was a little surprised at Mr. Ross' comments this morning because it dealt mostly with the old program, and we have all been working very hard, and we did speak with him about some of the new things that we are planning.

We are committed to a fundamentally changed model of the TJTC. We want everyone to look past the timeworn letters of TJTC and see the whole new concept.

I have managed TJTC for Marriott since 1979, so I have known this program inside and out, in all its incarnations. Please believe me when I say that the new Houghton-Rangel model would totally alter the focus of the employer in the most basic ways.

This fresh concept deals with the main criticism of TJTC head on. Would we hire those workers anyway?

The Houghton-Rangel model puts this matter to rest. All TJTC-eligible job applicants are preidentified by employers, and therefore, given extra consideration.

The new law would require that employers prescreen applicants to determine probable eligibility prior to the job offer, as part of the application process.

This kind of levels the playingfield. We are all looking for the best applicants for the job. Most TJTC-eligible folks are not going to be in that category.

By knowing that this person is TJTC-eligible, it will give them some preferential treatment, and they will be considered equally in the interview process.

Marriott welcomes that change. We hire over 50,000 workers a year, and upon passage of this bill we are planning to change all of our application forms.

TJTC prescreening questions will be printed on the first page, to make sure that this section is completed before the main application.

Most of the employers in the office of the CEO are planning to do the same thing. It will not be possible for us to issue a memo saying TJTC is back, it is business as usual. We, and all employers, will have to retrain all hiring managers regarding TJTC.

This will significantly change our hiring practices. At Marriott, our managers in the past always did seek TJTC-eligible people. We do outreach to different community-based organizations. We put job orders into the local job service. We work with the local disability organizations, and we have a lot of programs that were set up under this.

This will just increase our participation, once this renewal is passed.

The new Houghton-Rangel model would also encourage retention of these workers. We agree with Secretary Reich and Mr. Ross, that the credit can be backloaded to encourage employers to retain workers, provided that there is enough up front credit to offset the extra training costs.

The new TJTC would provide this backloading. In regard to retention, incidentally, the Treasury has expressed concern that some employers might let workers go after 1 year when they are no longer TJTC-eligible.

To be perfectly honest, I cannot imagine that an employer would deliberately turn over an experienced employee. Why would we, after spending 12 months training, coaching and counseling employees, deliberately let them go, just to start from scratch with a new, low-skilled, inexperienced TJTC worker? This makes no sense, and it is definitely not good business.

Training, coaching, and counseling. I cannot overemphasize how much costly time and effort is involved in hiring and keeping TJTC workers. This is why the credit has to offset the initial costs. The majority of TJTC-eligible people are folks who have little or no work history, minimal education, and minimal skills.

Many of these folks have not experienced much success in their lives. They expect to fail, and in many cases that is a self-fulfilling prophecy.

On occasion, our managers have even supplied new hires with alarm clocks so that they can get up on time. It did not seem to follow a logical path. They just said I did not wake up in time, and that is why they were late for work.

This experience teaches them the basic life skills that most of us take for granted.

One of the common causes for termination is excessive absenteeism. No call, no show, is a big problem. Coaching and counseling, and sitting down and explaining to these people how important it is for them to show up for work, and how, if you have a headache, that is not an acceptable excuse for not coming into work; how just missing a bus is not going to be an excuse.

If you are consistently late, it is not because the bus came early; it is because you did not leave your house on time.

We have to sit and work with these people, and spend a lot of extra time coaching them, in order to make them successful employees.

Without an incentive to offset the up front costs in doing this, most managers would not spend the time required.

Like most employers, Marriott credits the wage cost to the unit level. The logic is that even though a person may not be a 100 percent at first, at least with the credit it is not costing the unit the full wage.

We endorse the Houghton-Rangel model, which is user friendly, easily understood, reduces government administration, and it uses more objective eligibility standards.

Most importantly, the model fundamentally changes the focus of the program, gives a leg up to TJTC applicants, and fosters outreach to persons with barriers to employment.

That is my central message. I just want to comment on a couple of things that Mr. Ross spoke about this morning, and showed some of his concerns, and to show that we have addressed them.

One of his concerns was that we limit the potential for abuse of the program by targeting it on the truly disadvantaged.

This new program does target on the truly disadvantaged. It has more objective criteria, and focuses on persons eligible for means tested or public assistance programs.

Students on Pell grants, you are not going to find many Harvard graduates who went through on any Pell grants, are truly disadvantaged, and that is going to handle some of the abuse in the youth category.

They want to say that we should reduce the employer windfall. The new program addresses this concern with the prescreening. Of course, we need the blessing of EEOC, the Equal Employment Opportunity Commission, to make sure we are able to do that.

This is something that we would not have minded doing in the past, except for those concerned. I really believe that the employers are, in prescreening, going to make sure that they more than target the TJTC-eligible folk.

Improve the incentive to provide long-lasting jobs. I feel in backloading the credit we are going to make sure that that happens.

Thank you very much.

[The prepared statement and attachment follow:]

STATEMENT BY
JANET M. TULLY, MARRIOTT INTERNATIONAL
ON TARGETED JOBS TAX CREDIT
FOR
THE SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS

May 9, 1995

I am pleased to testify for both Marriott International and the Committee for Employment Opportunities. My printed statement describes our broad coalition of employers, associations and public interest groups. We have been working for months to seek remedies to cure the ills in the old TJTC program. We're committed to a **fundamentally changed model.** We want everyone to look past those timeworn letters **"TJTC"** and see a whole new concept. The old program was a job opportunities model. It allowed employers to hire first, then screen for eligibility based mainly on family income. The new model, based on a different core principle, moving people from welfare to work by encouraging employers to seek out, pre-identify, hire and **retain** people who currently or potentially depend on public assistance and turning them into productive taxpayers. **The focus has changed.** The new program focuses the hiring manager's attention on the eligible job applicant before the hiring decision is made. It focuses the supervisor's attention on integrating the new worker into the mainstream workplace. And it focuses the employer's attention on retaining the worker as the size of the credit increases over time.

I've managed TJTC for Marriott since 1979, so I've known this program in all its incarnations. Please believe me when I say that the new Houghton-Rangel model would **totally alter the focus of the employer in the most basic ways.**

This fresh concept deals with the main criticism of TJTC head-on---would we have hired these workers anyway? the Houghton-Rangel model puts this matter to rest: **All TJTC-eligible job applicants are pre-identified by employers and therefore given extra consideration. The new law would require that employers pre-screen applicants to determine probable eligibility prior to the job offer as part of the application process.**

Marriott will welcome this change. We hire over 50,000 workers a year, and upon passage of this bill we are planning changes to all of our application forms. TJTC pre-screening questions will be printed on the first page to make sure that this section is completed before the main application.

It won't be possible for us to issue a memo saying "TJTC is back, it's business as usual." We and all employers will have to retrain all hiring managers regarding TJTC. This will significantly change our hiring practices

The new Houghton-Rangel model would also encourage retention of these workers. We agree with Secretary Reich that the credit can be backloaded to encourage employers to retain workers, provided that there is enough upfront credit to offset the extra training costs. The New TJTC would provide a 35

percent credit for the first six months of wages, and 45 percent in the second six months, and that is adequate.

In regard to retention, incidentally, Treasury has expressed concern that some employers might let workers go after a year when they're no longer TJTC-eligible. To be perfectly honest, I can't imagine that employers would deliberately turn over experienced employees. Why would we, after spending 12 months training, coaching and counseling employees, deliberately let them go, just to start from scratch with a new, low-skilled, inexperienced TJTC worker? This makes no sense.

Training, coaching, counseling: I can't overemphasize how much costly time and effort is involved in hiring and keeping TJTC workers. This is why the credit has to offset the initial costs. The majority of TJTC-eligible people are folks who have little or no work history, minimal education, and minimal skills. Many of these folks have not experienced much success in their lives. They expect to fail, and in many cases that's a self-fulfilling prophecy. On occasion, our managers have supplied new hires with alarm clocks so that they can get up on time. This experience teaches them basic life skills that most of us take for granted. They have to learn that their behaviors affect their co-workers and their company, not only themselves. Dependability is a very important skill, which can be learned only on the job. If you don't show up for your shift, everyone has to work harder, to cover for you. You have to learn how to accept criticism, to learn that your supervisor is only trying to help you, not put you down. Lessons like these take time to learn, and they require skill and patience to teach.

Without an incentive to offset the upfront costs in doing this, most managers would not spend the time required. Like most employers, Marriott credits the wage cost to the unit level. The logic is that even though a person may not be 100 percent productive at first, at least with the credit it is not costing the unit the full wage.

We endorse the Houghton-Rangel model, which is user-friendly, easily understood, reduces government administration, and it uses more objective eligibility standards. But most importantly, the model fundamentally changes the focus of the program, gives a leg up to TJTC eligible applicants and fosters outreach to persons with barriers to employment, and that is my central message.

Mr. Bailey.

STATEMENT OF H. SHEPARD BAILEY, DIRECTOR OF TAX, PIZZA HUT, INC.; ON BEHALF OF THE NATIONAL COUNCIL OF CHAIN RESTAURANTS

Mr. BAILEY. Good afternoon, Madam Chairman. My name is Shepard Bailey. I am the director of tax at Pizza Hut, Inc., based in Wichita, Kansas, and I am here today on behalf of the National Council of Chain Restaurants in support of the enactment of a permanent targeted jobs tax credit.

Before I begin my presentation on Pizza Hut's past experiences with TJTC, I would like to emphasize that Pizza Hut is one of the largest employers of individuals from the groups targeted by the former TJTC Program.

As such, Pizza Hut is well aware of the concerns that have been raised with respect to certain aspects of the program, as well as the manner in which it was used by some employers, or consultants.

Pizza Hut, as well as Pepsico, Inc., through its other restaurant divisions, have been involved with other employers in providing recommendations to Congressmen Houghton and Rangel, of ways to develop an employer tax credit that would address these concerns.

Pizza Hut commends Congressmen Houghton and Rangel for developing the draft legislation you have before you today, and we look forward to working with these congressmen, as well as you, the Members of this subcommittee, to enact this important legislation.

TJTC is an effective and efficient hiring incentive. Since 1990, Pizza Hut has provided job opportunities to over 30,000 TJTC-eligible applicants. These job opportunities represent the all important first steps for inexperienced workers to acquire the most basic skills absolutely necessary to advance in today's competitive job market.

For the 5-year period just ended, Pizza Hut has experienced a compounded annual growth rate in TJTC hires of over 20 percent.

Pizza Hut is committed to finding new and innovative ways to reach out to individuals who might not otherwise have job opportunities made available to them.

One program, Jobs Plus, designed to seek out, accommodate, employ and train persons with disabilities in every Pizza Hut unit, is a clear example of how TJTC is used to achieve its intended result.

This initiative has allowed over 13,000 persons with severe disabilities to become productive members of our work force.

Today, due in large part to Jobs Plus, Pizza Hut is heralded as the Nation's leading employer of persons with severe disabilities.

As for many employers presently using TJTC, the tax credit provided by TJTC was an important factor in Pizza Hut starting the Jobs Plus Program.

Now we all know that today's marketplace demands that companies provide the best products at the lowest possible price.

For many companies, including Pizza Hut, labor expense represents the single largest component of their cost structure.

TJTC allows companies to offset the added cost of training individuals who have little or no work experience. TJTC gives restaurant managers the extra ability to hire and train individuals who need additional support, while still allowing the managers to control their labor costs.

The absence of TJTC will force companies to find new ways by which to reduce their labor expense, such as automation, thereby reducing the number of these "first job" opportunities.

Our strong endorsement of TJTC is evident throughout the Pizza Hut organization. In addition to our outreach programs, Pizza Hut has a full-time staff dedicated to providing assistance and training to our restaurant managers on how to better focus recruitment efforts on those groups that typically are more difficult to access, such as general assistance and AFDC recipients.

By promoting these types of corporate efforts, TJTC helps reduce the dependence on governmental support programs, a certain type of welfare reform, if you will.

Each year, Pizza Hut invests a significant amount of capital to promote program usage where it must occur, in our restaurants. To this end, we have developed an incentive program to reward our restaurant managers for successfully hiring and retaining TJTC employees.

Through the use of this bonus incentive, we have been able to achieve the tremendous growth mentioned earlier in my testimony.

These three ingredients—outreach, support staff, and incentive, have been the winning combination which allows Pizza Hut to be a leader in the hiring and retention of TJTC employees.

There is, however, a cost in real dollars, associated with each of these three elements. The presumption that TJTC is a windfall for business is without merit.

Much like any tax incentive, or economic stimulus, TJTC is a partial offset to the investment of real and incremental dollars.

In closing, I would like to leave you with these thoughts. I respectfully submit that this new TJTC is a good and sound program. It helps create that ever-important "first job" for thousands of our citizens each year.

TJTC's tax benefits support employers' most innovative outreach programs for the previously unemployed and for the profoundly disabled.

To promote employer commitment to the program, first, the new TJTC should be made a permanent part of the Tax Code. Second, the certification process should be uniform in all 50 States.

If Congress can do this, employers will be able to continue creating "first-job" opportunities for thousands of economically disadvantaged, or physically disabled citizens each year.

Thank you very much.

[The prepared statement follows:]

STATEMENT BY H. SHEPARD BAILEY
DIRECTOR - TAXES, PIZZA HUT, INC.
HOUSE COMMITTEE ON WAYS AND MEANS
OVERSIGHT SUBCOMMITTEE
MAY 9, 1995

Good morning. My name is Shep Bailey. I am the director of tax at Pizza Hut, Inc., based in Wichita, Kansas. I am appearing on behalf of the National Council of Chain Restaurants, in support of the enactment of a permanent Targeted Jobs Tax Credit (TJTC).

Before I begin my explanation of Pizza Hut's past experiences with TJTC, I would like to emphasize that Pizza Hut is one of the largest employers of individuals from the groups targeted by the former TJTC program. As such, we are naturally aware of the concerns that some have raised regarding certain aspects of that program, as well as the manner in which it was used by some employers. Pizza Hut, as well as PepsiCo, Inc. through its other restaurant divisions, has been involved with other employers to provide recommendations to Congressmen Houghton and Rangel of ways to develop a new employer tax credit which addresses those concerns. Pizza Hut commends Congressmen Houghton and Rangel for developing the draft legislation you have before you today. We look forward to working with Congressmen Houghton and Rangel, and you, the members of the Committee to enact this important legislation.

TJTC is an effective and efficient hiring incentive. Since 1990, Pizza Hut has provided job opportunities to over 30,000 TJTC eligible applicants. These job opportunities represent the all-important first steps for inexperienced workers to acquire the skills necessary to advance in today's competitive job market. For the 5-year period ended 12/31/94, Pizza Hut has experienced a compounded growth rate in TJTC hires of over 20%. This is in spite of the most recent 14-month hiatus in the program.

Pizza Hut is committed to finding new and innovative ways to reach out to individuals who might not otherwise have job opportunities available to them. One program, Jobs Plus, originally designed to designate one position in every Pizza Hut unit for persons with disabilities, is a clear example of how TJTC is used to achieve its intended result. This initiative has allowed over 13,000 persons with severe disabilities to become productive members of our workforce. Today, due in large part to Jobs Plus, Pizza Hut is heralded as the nation's leading employer of persons with severe disabilities. As for many employers presently using TJTC, the tax credit provided by the program was an important factor in Pizza Hut starting the Jobs Plus program.

Pizza Hut recently conducted a survey of our restaurant managers to determine overall satisfaction with the performance of employees with disabilities hired through Jobs Plus. The results were great. Ninety-seven percent of the managers reported that there were no performance problems with Jobs Plus employees. Additionally, 71% of the managers reported that their Jobs Plus employees had been sourced through a collaborative effort with an outside rehabilitation agency.

Two significant points are clearly based on the results of our Jobs Plus survey, 1) TJTC, through Jobs Plus, helped to dispel the myth that performance of employees with disabilities is unfavorable as compared to other employees, and 2) that TJTC is a vehicle by which the time gap between public employment training programs for those with disabilities, and their hiring by the private sector can be shortened.

Today's marketplace demands that companies provide the best products at the lowest possible price. For many companies, including Pizza Hut, labor expense represents the single largest component of their cost structure. TJTC allows companies to offset the added cost of training and turnover of individuals that have little or no work experience. The absence of TJTC will force companies to find new ways in which to reduce their labor expense, such as automation thereby reducing the need for people.

Unfortunately, the "on-again, off-again" approach to TJTC has been a barrier to Pizza Hut's effort to grow our program much beyond the 10% mark as a mix of our total employee base. Our restaurant managers are constantly on the lookout for ways in which to manage their costs. TJTC gives managers the extra ability to hire and train individuals who need additional support while still allowing the managers to control their labor costs.

Our strong endorsement of TJTC is evident throughout the Pizza Hut organization. In addition to our outreach programs, Pizza Hut has a full-time staff dedicated to providing assistance and training to our restaurant managers on how to better focus recruitment efforts on those groups that typically are more difficult to access, such as General Assistance and AFDC recipients. By promoting these types of corporate efforts, TJTC helps reduce the dependency on governmental support programs.

Our TJTC staff also works closely with the various state employment security agencies to reduce the often burdensome documentation required of employers to obtain certification. Our ability to streamline this part of the TJTC process has resulted in a material improvement in program usage at the restaurant level. Several states have sought out our assistance in developing a better mousetrap, thus encouraging more employers to embrace the program. This type of working relationship between the private sector and the states is critical due to the complexity caused by 50 states administering a single federal program in 50 individual ways.

Each year, Pizza Hut invests a significant amount of capital to promote program usage where it must occur, in our restaurants. To this end, we have an incentive program designed to reward our restaurant managers for successful hiring and retention of TJTC employees. Through the use of this bonus incentive, we have been able to achieve the tremendous growth mentioned earlier in my testimony.

These three ingredients, outreach, support staff, and incentive have been the winning combination which allows Pizza Hut to be a leader in the

hiring and retention of TJTC employees. There is, however a cost, in real dollars, associated with each of these three elements. The perception that TJTC is a "windfall" for business is invalid. Much like any tax incentive or economic stimulus, TJTC is an off-set to the investment of real dollars.

On eight occasions prior to today, Congress has improved upon the program to ensure the original legislative intent. To further promote utilization and long-range commitment, Congress could improve once again by taking the following actions. First, make the TJTC a permanent part of the tax code. Next, provide private sector employers relief from the fear of litigation through the development of an EEOC-approved, pre-job offer TJTC questionnaire. Both of these actions would then allow employers to make long range plans, as well as dedicate the resources, to support much needed outreach programs necessary for program success. And finally, develop a standardized certification process. This would eliminate the burden on employers caused by varying administrative procedures at the state level.

Thank you.

Chairman JOHNSON. Thank you, Mr. Bailey.
Mr. Wright.

STATEMENT OF JOHN WRIGHT, PRESIDENT, WRIGHT III FOODS, INC., MCALLEN, TEXAS; ON BEHALF OF NATIONAL RESTAURANT ASSOCIATION

Mr. WRIGHT. Thank you. My name is John Wright, and my wife, Melinda, and I, own Burger King franchises on the Mexican border in South Texas. We started our business with 1 restaurant in 1976 and have grown to 9 restaurants with 336 employees today. We have survived despite citrus freezes, hurricanes, oil spills, and peso devaluations in 1976 and 1982, and we are now enduring the effects of the devaluation of December 1994.

Our SMSA, standard metropolitan statistical area, has the highest unemployment rate in America, and the lowest per capita income. The population of Hidalgo, in Cameron County, Texas, is approximately 800,000, and is 85-percent Hispanic. The Rio Grande Valley is home to well over 100,000 U.S. citizens who are migrant workers.

Their seasonal employment too often locks them into a cycle of low education and poverty. One of the few ways to break this cycle is to provide incentives to private sector employers who hire these and other disadvantaged individuals, and provide them on-the-job training and work experience. Each year, in March and April, huge numbers of families leave their homes in South Texas to follow the agricultural crops in the north. As students leave with their families in April, their spring semester is ruined, and because they do not return until October, their fall semester is disrupted also. Too often, these families are forced onto public assistance between October and May, if not year around. These are the young people we were able to employ through the Targeted Job Tax Credit Program.

From 1986 through 1993, we used the TJTC Program, and our experience was gratifying. Through the offices of the Texas Employment Commission, we placed job orders, prescreened, interviewed, and hired numerous young people in this targeted group. With the TJTC Program, they got job experience that provided them a way to break out of the migrant population. Our organization is now filled with such employees, including production leaders, assistant managers, even restaurant managers, who came to us through this TJTC Program. They have learned the skills of teamwork, communication, coordination, and personal responsibility that are required in the workplace.

The restaurant business is unique in its requirement that employees master both the disciplines of production management and of retailing. In addition, every employee, regardless of their previous experience or lack thereof, learns to deal with our customers in ways that will bring them back to Burger King.

The 104th Congress should enact TJTC reform legislation which would create opportunities in the private sector for these and other high-risk young people. Those others in the restaurant business offer many disadvantaged individuals their first stable job, and their first stable social environment, so they can learn and grow.

TJTC is an excellent incentive to hire, train, and retain these youngsters. As an employer who stopped participating in the pro-

gram because of its complexity, I encourage you to establish a simplified process that would minimize the bureaucratic hurdles that now confront small business owners who want to participate. It should be administered through State employment commissions, thereby helping large and small employers, and expanding the number of disadvantaged individuals who benefit. The program should target, among others, less educated and less skilled workers.

This is a valuable program that should be revised, simplified, and retained.

Thank you.

Chairman JOHNSON. Thank you, Mr. Wright.

Mr. Edwards.

STATEMENT OF DAVID EDWARDS, VICE PRESIDENT, ASSOCIATE RELATIONS, GREAT ATLANTIC AND PACIFIC TEA CO. (A&P), MONTVALE, NEW JERSEY

Mr. EDWARDS. My name is Dave Edwards and I am vice president of Associate Relations for the Great Atlantic and Pacific Tea Co., headquartered in Montvale, New Jersey.

I appreciate this opportunity to testify on behalf of my company and the Food Marketing Institute.

A&P operates over 1,100 supermarkets in the United States. In addition to operating as A&P, we operate as Waldbaum's Food Mart in Connecticut and Massachusetts, Waldbaum's on Long Island, Food Emporium in Manhattan, Super Fresh in the Mid-Atlantic States, Kohl's in Milwaukee, and Farmer Jack in Michigan.

A&P's total employment in the United States exceeds 67,000. A&P has participated in the TJTC Program for many years, and I have managed the program at A&P since 1992.

The Food Marketing Institute, FMI's membership, is composed of large multistore chains, small regional firms, and independent supermarkets.

We recognize that there have been criticisms of the old TJTC Program, and would like to pledge our support for a new improved TJTC Program as outlined in the discussion draft offered by Congressmen Houghton and Rangel, and the work done by the Committee for employment opportunities.

Their changes offer improvements which will allow our industry to continue utilizing this effective program.

Strong local economies begin with strong neighborhoods. Supermarkets play an important role in creating and maintaining strong neighborhoods. They also provide many young people with their first work experience.

These characteristics provide supermarkets with the unique opportunity to play a leadership role in developing programs to address the social and economic challenges of the neighborhoods and communities they serve.

Many companies, including A&P, have found that a good way to increase store manager awareness and program support is to credit the store earning the tax credit with their TJTC dollars on the individual store profit and loss statement.

There is no doubt that this practice has contributed to the fact that TJTC new hires have longer retention rates than non-TJTC new hires.

This practice has the additional advantage of increasing the operating profits in locations that serve the TJTC-eligible community.

At times, these tax credits have made the difference in a decision to close a store or consider opening a new store in a specific location.

TJTC has encouraged retailers to operate stores in areas where many TJTC-eligible employees reside.

Many of these people are unable to travel in their neighborhoods. By our being there, we often provide the first job, and first formal training that many of these people ever receive.

TJTC has been the vehicle for many to take the first step from dependency to becoming a taxpayer.

The TJTC Program is one reason why more supermarkets operate today in depressed areas compared to two decades ago.

Supermarkets offer a wide variety of products at competitive prices. The reopening of inner city stores has made food and other staple items more affordable in areas where the need to stretch the purchasing power of dollars and food stamps is paramount.

The TJTC Program has served to make these stores more viable, and failure to continue the TJTC Program could result, over time, in more than a loss of jobs.

The issue is do you believe people in these categories should be helped? If so, who is better prepared to do it? Business or the government?

I think the answer is business, because we provide real jobs. TJTC has been one of the most cost efficient and effective programs for encouraging private sector employers to hire people who are not currently in the work force.

Over the years, many employers have come to realize that TJTC provides the incentives needed to cover the added costs of training and supervising disadvantaged workers, and that TJTC workers can do a good job.

The TJTC Program is an effective program that provides employment, especially in the inner cities, and it should be continued.

We support the changes proposed by the Committee for Employment Opportunities and the Houghton-Rangel discussion draft.

Once adopted, these changes will allow the program to continue to be viable for our industry, as well as potential future TJTC applicants.

Thank you very much for this opportunity, and I would be pleased to answer questions at this time.

Chairman JOHNSON. I hear that you are all in support of the reform program.

Do you support the radically simple approach, where only those who qualified for means-tested programs or Pell grants would be eligible?

You can get back to me on this. I mean, the reason for looking at this, if we are going to do anything in this area, is that it is very hard for small businesses to participate in a program that requires precertification, preidentification, or making sure somebody qualifies.

Since we want to simplify this, you need to think about what would be the impact on your programs if you were only allowed to accept people for this program who were either eligible for a means-tested program or for Pell grants.

There may be some other examples. Certainly disability programs, voc-rehab programs, and things like that, would qualify. You need to think about that.

Then what would be the impact of, with a backloaded requirement, particularly on small business, and particularly on neighborhood businesses, that don't have a backup of an A&P behind them. I mean, what are the accounting problems here. All of you, except for you, Mr. Wright—I am not sure—are part of bigger chains that have the sophistication to just give you the information.

What does backloading do to the participation of small businesses in this program?

Ms. TULLY. I think that the basic, the 35 percent, up front, will help offset the training programs on that, and the backloading will cover that. Mostly, their tax people will take care of it later on, but they know at least that they are paying them reduced wages in the beginning, when they are expending that extra effort.

Chairman JOHNSON. In other words, it is a problem for small businesses because they do not have a tax person.

Ms. TULLY. They do not have a human resource office. Yes. There is no question about that.

Chairman JOHNSON. Yes. That is right. Backloading does make it more complicated. While it could be an incentive to retaining the employee, maybe there are other ways of retaining an employee without getting into a level of complexity that would make it hard for small businesses to participate.

One of the things that has been significant about this program, and just from the information that I—and I am not an expert—but it has been over the time, clearer and clearer to me, and a greater concern, it is the big corporations that are able to do this.

If it is going to be primarily a big corporation program, which it might well be—and it does not mean that it would not be useful—should we require, to qualify for these benefits, that a company should actively recruit? They should actively recruit, actually go into the neighborhoods where there are the majority of people who need this kind of support.

Should we make that a qualification for participating in the program, for a company to demonstrate that they have an affirmative recruitment program?

Mr. EDWARDS. We do not think you should. Many of the people that are in these categories are very reluctant to go to places where we would recruit.

They are uncomfortable with the process. They know where the local store, or the local business facility is in their community, and they may know somebody who works there.

They are more comfortable, in many cases, going right to the location to apply for the job, and I think if you specifically eliminated those that came directly to the store location, you would effectively eliminate many of the people that the program tries to get at.

Chairman JOHNSON. Other comments?

I was not suggesting that you would not also be able to hire off the street.

One of the things that has been remarkable about affirmative action, the whole affirmative action approach, is not so much the quota system, but the requirement on employers to affirmatively recruit, and that has meant that jobs are advertised in areas where they have not been advertised, and has provided really much greater access.

It is really that kind of recruitment effort that Pizza Hut has made toward the disabled, but it could easily be made in neighborhoods of certain cities.

Beyond the walk-in eligibility, and certainly the neighborhood service, that employers using this credit could provide, the issue of recruitment does interest me.

I am going to yield to my colleague, Mr. Portman.

Mr. PORTMAN. I thank the Chairwoman and thank you all for being here today.

It was very interesting for me to hear your statements, from personal experience.

There are a number of studies, of course, that are very troubling to me and to others who are fiscal conservatives, trying to figure out ways to decrease our budget deficits. This program, net, maybe $250 million a year. Perhaps you can correct me.

It is a revenue hit to the government as are all of our tax credits. We want to make sure it works and works properly. If you look at the GAO, General Accounting Office, study, look at the Department of Labor studies, they would indicate that many of these people would be hired anyway.

That conclusion is only affirmed in my district among the employers with whom I have spoken. They have come forward, these employers, and said we get the tax credit, we are happy to receive that from the Federal Government, but, frankly, we would hire these people anyway.

This is a program that I am very skeptical about. I was very pleased to learn, a couple of days ago, about the reforms, and I have now had a chance to look at them, and then to hear your comments, all four of you supporting the reforms being promoted by Mr. Houghton and Mr. Rangel, and I am very pleased to see that.

I guess if I could ask a couple questions about the reforms and see whether they get at the kinds of problems that I perceive that are in the program currently.

Ms. Tully, you talked about the importance of the screening, and I guess you are indicating that the so-called windfall in the program now, which again I think has been evidenced by some of the studies, and again, some anecdotal evidence, would not occur with screening because people would not be hiring folks, they would otherwise hire, that in fact they would only be hiring people eligible for the credit because they would have to go through a certification process in advance.

Why do you think that the windfall would not continue to be there?

Ms. TULLY. You know, right now, one big problem that we have is the job market is becoming very small. We have now, at Marriott, people who are with college degrees, applying for secretarial

positions, for entry-level positions as bellmen, front-desk clerks. It is a very competitive job market out there.

These folks are competing with college graduates for entry-level positions. When you are saying we would hire these people anyway, I cannot totally agree with that. I do not think we would be hiring these people anyway.

I just want to say, we really do not totally agree with the OIG, Office of Inspector General, study. I frankly believe in some cases, when you know what your outcome is going to be, and you ask questions that will give you the kind of outcome you want, then you have the kind of report you want.

That is how I feel about the way the particular survey was conducted.

I do not feel now, and it is only now with welfare reform, we are saying that people are going to be 2 years on and out—where are these people going to go?

They are going to have to find jobs. And where are the people with the jobs trying to—

Mr. PORTMAN. Let's back up a moment. You would dispute the findings—

Ms. TULLY. I would dispute those findings; yes, sir.

Mr. PORTMAN [continuing]. The 1994 audit findings of the 92 percent. You would dispute the premise of my question, which was assuming the current program leads to people receiving a credit who would hire these same employees anyway, why are we giving the credit and how can we improve the program.

Your answer to that is that you do not agree with my premise. You think that in fact there is not a problem in the current system with regards to folks being hired anyway?

Ms. TULLY. No. I agree that there is some problem in the current system. I agree with that. I do not feel that all the people hired under TJTC in the past would have been hired anyway. I do feel now that—

Mr. PORTMAN. Instead of 92 percent, you think it is closer to 50 percent? What would your gut tell you?

Ms. TULLY. I can only speak for Marriott, and I know that we have a lot of outreach programs for people we have hired, who probably would not have had the opportunity, had we not been involved in these outreach programs because of the targeted job tax credit. Definitely with that. I feel very strongly that prescreening will make sure that employers give preferential treatment up front.

Something we would have liked to have done in the past is to make sure that all the people that we are hiring, that are TJTC-eligible, to give them an extra chance, knowing, of course, that when you are hiring a TJTC person, you are going to spend a lot of time and effort, up front, coaching and counseling, and working for these people.

Some of these people are going to be well worth it, given the opportunity, and that is really what TJTC is about, is actually giving these people the opportunity, making us spend a little bit of extra time, and not just saying, "Hey, you just did not make it, goodbye, you are out of here."

The manager is going to spend some extra time working with these folks to get them over that first hurdle.

Mr. PORTMAN. Mr. Bailey is physically moving back and forth in his chair as if he might want to say something. I think you understand my question and my concern.

Do you have a response to it?

Mr. BAILEY. Yes. Aside from what some have called abuses, whereby wholesale attempts are made by some users to certify within certain categories—I have a fundamental problem with this being characterized as corporate windfall, or corporate welfare.

I think that in fact, as the law is intended, TJTC is designed to provide a level footing, a level playingfield for individuals that otherwise might not have it, and at the same time protect or compensate the employer for taking that additional measure of risk.

If the program is administered, whether we are talking the old program or the new program, in the way in which it was intended, absolutely, I have a fundamental problem with regarding it as corporate welfare, or a corporate windfall.

Mr. PORTMAN. Again, just very briefly—I do not know how much time I have, Madam Chairwoman—but I will just restate the fundamental concern, and that is that many of these people would have been hired anyway, whether you believe it is 92 percent or 50 percent.

Why should you get a tax credit when your competitor, or another business, is not in your line of work, does not get a tax credit for hiring these same people? That many of these entry level jobs go begging now. In my area, we have about 3.3-percent unemployment.

Our white-collar problem, incidentally, Ms. Tully, is probably more dramatic in my area right now because of the changes at the middle management level out weighing the entry level. That is our problem.

Those people get no support from the Federal Government. In fact they go to the employment services, which is geared toward blue collar and toward entry level, and they are not getting any help.

With the scarce Federal dollar, in fact we are in a situation where we have no dollars, so everything we are giving, we are borrowing to give to corporations.

The question is, how can the program be streamlined to make it work better to handle that concern?

That is my question. I am not calling it corporate welfare. I did not use the word windfall. That was a term used in the study, and the administration has used it.

The fundamental premise I think continues to be true, that at least some of these people, maybe it is not 92 percent, maybe it is 50 percent, would have been hired anyway in the course of ordinary business.

Why should you be receiving a tax credit to do that? I think what Pizza Hut has done with the disabled community is exceptional; that sort of outreach. Maybe, that is required, as the Chairwoman indicates.

Maybe, that should be part of the Federal requirement, should the tax credit be available. Those are the kinds of questions that I am going to have over the next several weeks as we look at the program.

Do you have any comments?

Mr. EDWARDS. Yes. Certainly, in any case, some of the people, no matter what you do, the TJTC-eligible person, at times, is going to be your best candidate.

There is never going to be a program where you would bring in 100 people, and say that there might not be somebody that was TJTC-eligible, that would not have been hired anyway.

The program is never going to be 100 percent perfect. But the prescreening is certainly going to level the playingfield more toward the TJTC-eligible person.

While you could say that some might be hired anyway, the new program will insure many more targeted individuals will be hired. We think that makes a pretty good return on investment for a fiscal conservative like yourself.

Mr. PORTMAN. A good answer.

Chairman JOHNSON. Mr. Ramstad.

Mr. RAMSTAD. Thank you, Madam Chair, I want to applaud your leadership in calling this hearing today on the expiring tax provisions under consideration.

I certainly agree with much of what has been said, that the process under which these items are extended every few months, to put it very mildly, makes business planning extremely difficult. I mean, it is absurd, in terms of any long-range planning for business, not to know the rules of the game, so to speak.

I am hopeful we can deal with each of these provisions this year on a permanent basis.

I would like to ask any of the Members of this panel a couple of questions.

First of all, I am curious as to your reaction to Doug Ross' testimony this morning from the Labor Department, which I assume is the administration's position.

Ms. Tully, or Mr. Bailey, Mr. Wright, Mr. Edwards, would you care to comment?

Mr. BAILEY. I would be glad to.

I think that Mr. Ross' testimony seems to call for the solutions which in fact have been incorporated in Congressmen Houghton and Rangel's draft legislation, and in fact seemed to be a relatively strong endorsement of the very elements in this new draft legislation, not getting into whether I necessarily agree with Mr. Ross' criticisms of the old program.

The things that Mr. Ross is recommending as improvements, as ways to craft this legislation in such a fashion that he would feel comfortable, and the administration would feel comfortable in supporting, are in fact elements of the new draft legislation. I am quite comfortable with his recommendations.

Mr. RAMSTAD. That was precisely my question, whether the critique that he leveled is addressed by the elements of the legislation before us, Mr. Houghton's bill.

Do you agree with that, Ms. Tully?

Ms. TULLY. Very much so. I believe they are.

Mr. RAMSTAD. I see the other two witnesses nodding affirmatively.

Let me ask you a question Mr. Wright. I am just curious. Even though you no longer participate in the program, have you continued hiring individuals from the targeted group?

Mr. WRIGHT. We got out of the program due to the complexity of it.

To respond to Congressman Portman's question a minute ago, we are in an area where given the language and life skills of the TJTC population, we would not ordinarily hire from this group.

These are young people who go to both of your States in the spring of the year and return to the Rio Grande Valley in the fall of the year.

They do not have the life skills that we talked about. No one in their family has ever had a checking account. English is their second language. These are clearly people who ought to be targeted by a Federal program. They would not ordinarily comply with those requirements that Burger King or my company would have.

Mr. RAMSTAD. Well, I thank you, Mr. Wright, for that response.

I just want to conclude, Madam Chair, by saying that I, too, classify myself, or characterize myself as a fiscal conservative. I think my record supports that characterization.

My bias is in favor of revamping this, along the lines of the Houghton bill. I think you put it best, Mr. Edwards, you said that business can do it a lot better than government. I think that, succinctly, is the reason why we should give this legislation every serious consideration.

I want to thank the witnesses for being here today.

Chairman JOHNSON. I would like to thank the witnesses also. Your experience is very helpful to us.

The next panel will be Susan Oven, manager of the targeted jobs tax credit services for Dayton Hudson Corp. in Minneapolis; James Hubbard, the director of the National Economic Commission of the American Legion; and Scott Shipman, senior manager, government affairs, Shipman, Maison and Associations of Chicago.

While the panel is assembling, I would like to yield to my colleague from Minnesota.

Mr. RAMSTAD. Thank you again, Madam Chair.

I want to welcome this next panel, particularly Ms. Oven, Susan Oven, who represents the International Mass Retail Association. As you said, Ms. Oven is a manager of TJTC services at Dayton Hudson in Minneapolis and has provided me with important input on this program.

I know that Dayton Hudson is a very active participant in this program, having hired, Madam Chair, over 138,000 TJTC-eligible individuals over the last 10 years.

So given this experience and this tremendous buildup, Ms. Oven is in an excellent position to give our Committee insight today, and I really appreciate your coming here today, Susan. It's good to see you again. And welcome to all the witnesses.

Chairman JOHNSON. Thank you. Welcome, Ms. Oven, you may proceed.

STATEMENT OF SUSAN OVEN, MANAGER, TARGETED JOBS TAX CREDIT SERVICES, DAYTON HUDSON CORP., MINNEAPOLIS, MINNESOTA; ON BEHALF OF INTERNATIONAL MASS RETAIL ASSOCIATION AND NATIONAL RETAIL FEDERATION

Ms. HUDSON. Thank you.

It is my pleasure to speak to the Committee today in support of the revised TJTC Program. As Congressman Ramstad indicated, I have been involved with the TJTC Program at Dayton Hudson since 1988.

It is my job to help our stores with all aspects of managing this program. Basically, I am where the rubber meets the road. When the law is passed, it is my job to see that it is implemented, correctly and accurately, at all our stores.

I have submitted written testimony, and what I would like to talk to you about today is some of my experiences that I think illustrate the benefits of this program.

I am here today not only on behalf of my employer, but I speak also for the National Retail Federation, and the International Mass Retail Association.

As retailers, I think that we all are extremely mindful of the need to maintain the health of our economy.

If consumers in our economy are not willing to spend, we are out of business. When I speak in support of the targeted jobs tax credit, I am mindful that we want a program that works in the overall economy. We do feel that this is such a program, and has been for us.

Let me tell you a little bit about my experiences with TJTC as an employer. My job is to help our stores find and recruit TJTC-eligibles, and my written testimony speaks to that overall goal. I want to tell you what it is like to be an employer and hire a TJTC-eligible person.

I am going to tell you about a couple people that I think will show you what happens at that employer-employee relationship.

The first young woman I want to tell you about came to us from a YWCA Teen Mom Program, a program designed to get young mothers off of welfare. She was a student going to school to study nursing, in a nursing assistant program, and worked for me part-time in a telephone capacity.

From the time that she was hired, she began learning the job functions. It was apparent that she was a bright young woman.

A training program was not an issue for her. Listen to some of the things that she did not know. She did not know that you needed to come to work every day that you were scheduled.

She did not know that you needed to come to work on time. She did not know that if you were going to be late, or needed to call in sick, you needed to do that before your shift started.

Those sound like very elementary things for an employee, or a potential employee to know. This young woman had no role models. There was no one in her family that had a job. This was her first job.

There was no way that she was going to know those things before she came to work for us.

Janet Tully referred to the coaching and counseling that you go through with a new employee. Normally, most companies have a probationary period. In our case, an employee is expected to be up to speed in the first month.

I would say it was easily the first 3 months. This young woman got to the point where she was all of the expectations that we had for our employees, things that were a mystery to her when she first came, no longer were.

I think that the time that we spent with her is fairly typical of what an employer goes through with a TJTC-eligible person, and time is money.

No employer is going to choose an expensive hire without an incentive. They are going to look for the best employee at the lowest cost to them.

I will tell you about another young woman that still works for me. The first young woman did graduate from school and went on to a job in her field.

By the time she left, she was a wonderful employee, and we hated to lose her. I will tell you about someone that still works for me.

She came to us from State Services for the Blind. She is vision-impaired because of a sight loss from Lupus. She uses a special computer screen that enlarges text, so she can see printed words on her computer screen and do her job in that fashion.

Her biggest obstacle was not her vision, or lack of vision. Her biggest obstacle was really lack of confidence. This was her first job also, and she had lost her vision at a fairly young age. She was very frightened to come to work for us.

Despite the fact that she had support from State Services for the Blind, and we had recruited her—so she should have known that we wanted her as an employee, and were willing to go the extra mile to assimilate her into the work force—it was still a tough learning period for her.

Ultimately, we placed her in charge of all of our training, and actually, for the last few years, she has either done all of the training, or trained the trainer in our department.

Her abilities eventually outstripped her disabilities. I just want to summarize and say that I think the investment that this tax credit encourages employers to make for the truly disadvantaged in our society is a perfect fit with what the Congress is looking to do in terms of welfare to work progression.

I urge your support of the program, because I think it will make a valuable contribution toward that goal.

Thank you.

[The prepared statement follows:]

STATEMENT OF SUSAN OVEN
MANAGER, TJTC SERVICES DAYTON HUDSON CORPORATION
ON BEHALF OF INTERNATIONAL MASS RETAIL ASSOCIATION AND
NATIONAL RETAIL FEDERATION

Madam Chairman, Committee Members,

My name is Susan Oven. I am the Manager of TJTC Services for the Dayton Hudson Corporation, headquartered in Minneapolis, Minnesota.

I am testifying on behalf of the International Mass Retail Association (IMRA). IMRA represents more than 170 mass retailers, including discount department stores, warehouse clubs, and off-price stores, as well as 570 major suppliers. IMRA's retail members operate more than 54,000 retail stores and employ over a million individuals. In terms of sales volume, IMRA's members represent the vast majority of the $245 billion mass retail industry in the United States.

The discount retail sector is often referred to as the "new engine" for job creation. Since 1991, the number of jobs in the discount retail industry alone increased over 48% and has represented over 20% of job growth in the U.S. since the economic recovery which began in 1991. The number and nature of retail jobs has caused the Targeted Jobs Tax Credit offering to be a real factor in retailers' willingness and ability to employ TJTC eligible individuals.

Dayton Hudson Corporation, my employer and a member of IMRA, is the nation's 15th largest employer, with about 175,000 employees. Our operating companies include Target stores (an upscale discount retailer), and several department store companies, including Mervyn's, Marshall Field's, Hudson's and Dayton's. We operate over 930 retail stores in 33 states.

In Dayton Hudson alone, since 1984, we have utilized the Targeted Jobs Tax Credit program as an incentive to seek out, hire, train and retain over 120,000 TJTC-eligible individuals.

We rely on TJTC to help offset the incremental costs of hiring and training individuals who do not come "work ready." Without TJTC, we would be far less likely to hire, train and retain most of those who are participants in the program. (When we refer to individuals as not "work ready," we mean those who do not have experience, training, or a track record of being at work at scheduled times, who do not have basic customer service skills, or who cannot perform entry-level job requirements without extra training and investment on our part.) TJTC has motivated our hiring, training, and retention of such individuals.

In our efforts to utilize the TJTC offering, we have, for 10 years, maintained an internal staff to work with all of our stores on TJTC, to develop relations with state employment agencies, to educate our hiring managers and to give evidence to our entire company of the value of our being active participants in TJTC.

This committee and other members of Congress are now deliberating on the alternatives of continuing or ending this program.

There are several reasons we find TJTC to be effective in its purposes:
First, TJTC places the incentive to hire with the employer. While the hiring manager does not know for a fact that a given applicant is TJTC qualified, that manager looking at a given application form has a very clear indication of that qualification (e.g. periods of unemployment, lack of work experience, spotty employment history, etc.).

Second, once an individual is hired and working, the employee's TJTC qualification is known, and the TJTC credit has a significant influence on our willingness to retain eligible employees.

Third, because of the TJTC credit, every district of our various businesses has direct contact with numerous local agencies which help place disabled workers, AFDC recipients, and members of other under-employed groups. We also have a national agreement with GoodWill Industries to place their candidates, many or most of whom are TJTC eligible.

In short, TJTC is an important factor in our efforts to hire, train, and retain those eligible under TJTC regulations.

What we hear you asking is, "Does TJTC truly result in the hiring, training, and retention of individuals whom you otherwise would not hire, train and retain?"

Our answer is: yes. I will briefly address each of these phases of employment.

1. Hiring

   It would be helpful if we were allowed to determine eligibility prior to employment offer. But as stated earlier, we have become skilled at "guessing" and, in fact, have a clear record of employing TJTC eligibles.

2. Training

   We are more patient and give added effort to the development of job skills in TJTC eligibles because of financial incentives offered through TJTC.

3. Retention

   Our willingness to continue employment of TJTC eligibles is greatly increased, in spite of skills deficiencies, as a direct result of the TJTC program.

The off-again/on-again history of the program has been disruptive to the optimal fulfillment of the objectives of TJTC. If such intermittence continues, it will erode further the willingness of businesses and involved government agencies to give it appropriate support.

Therefore, we argue not only that TJTC is effective and should be renewed prior to the December 31, 1994 expiration date, but also that you give TJTC either permanent status or a long-term life of five to ten years.

If Congress contemplates substantive changes in a renewed TJTC program, representatives of our company would be eager to be of counsel to you and your staff organizations on issues of concern.

Thank you, Mr. Chairman, for this opportunity to testify in favor of TJTC being renewed on a permanent or long-term basis.

Chairman JOHNSON. Thank you very much for your excellent comments.

Mr. Hubbard.

STATEMENT OF JAMES B. HUBBARD, DIRECTOR, NATIONAL ECONOMIC COMMISSION, AMERICAN LEGION, WASHINGTON, DC

Mr. HUBBARD. Thank you, Madam Chair, for this opportunity to testify on behalf of our 3.1 million members.

I am here not as an employer representative, but as the representative of a constituency that exists out there, a lot of whom need help.

Let me summarize, briefly. We know that black and Hispanic veterans experience higher rates of unemployment than their white counterparts.

We know that a black male veteran is twice as likely to suffer the rigors of unemployment than a white male veteran.

Of all the veterans with a disability rating of 60 percent or more, over two-thirds are out of the work force. The unemployment rate for veterans, as a group, is below that for the population in general; but the unemployment rate for male veterans between 20 and 35 years old is up to 11.8 percent.

There is strong evidence that the subsidy involved in the operation of TJTC is seriously overstated. If you put a veteran to work, or anybody on TJTC, to work earlier, or at all, than they otherwise would have gone to work—welfare payments, unemployment compensation, other general assistance payments are significantly reduced. That is a cost savings.

We believe that there needs to be a study done on this, to get away from this static analysis that we do when we examine the cost of these things.

Let me put something else in perspective. The airline folks were saying that a 4.2 cent additional tax on airline fuel is going to cost jobs in the industry. In fact somebody mentioned Boeing losing 50,000 people.

That makes headlines. The Armed Forces lay off 250,000 on an annual basis, and nobody knows it, and nobody seems to care.

Half of these people released are married. They will need immediate assistance in order to provide for their families. More than 30 percent of them are minorities. Some of them will return to the inner cities where unemployment is endemic.

Eleven percent of those people released from the armed forces are women. In some cases, the spouses of former service people will need assistance in finding meaningful employment.

With the exception of the very limited funds available under the Job Training Partnership Act, title IV(c), TJTC is one of the few tools available to employers across the nation to help these people coming out of the armed forces.

In conclusion, Madam Chair, we believe that TJTC is one of the most efficient and cost-effective of Federal programs.

With TJTC nobody loses. Economically disadvantaged workers gain an opportunity to demonstrate their ability to become productive members of society. They move toward financial independence.

Employers are able to hire a capable work force and receive a tax credit. The public assistance rolls are reduced as workers move from welfare and unemployment roles to the tax roles.

We would like to see an extension of TJTC, with the particular model being the reforms introduced by Mr. Houghton and Mr. Rangel.

Thank you, Madam Chair.

[The prepared statement follows:]

STATEMENT OF JAMES B. HUBBARD
DIRECTOR, NATIONAL ECONOMIC COMMISSION
THE AMERICAN LEGION
TO
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

May 9, 1995

The American Legion is pleased to present to this committee the views of our 3.1 million members on the Targeted Jobs Tax Credit proposal before the Congress. In the best of all possible worlds, we would like to see this program made permanent. As this committee is aware, the checkered history of TJTC over the past several years has caused the program to be much less effective than would be the case if it were permanent. Each hiatus between extensions causes more confusion and more employers drop out causing fewer veterans to be hired.

We are extremely pleased that the proposal expands the eligibility from serving only Vietnam era veterans to veterans who are economically disadvantaged. It is right and proper that this nation should offer an employment subsidy targeted at workers or potential workers who have borne the burden of unemployment at a rate higher than the rest of society. In our view, the historical imbalance seen in the distribution of unemployment can only be remedied by the creation and continuance of incentives for employers to make extra efforts to hire those targeted workers, which include the disabled, minorities, veterans and others. TJTC has served these groups well by creating an "employment advantage" for these groups.

Veterans have been one of the beneficiary groups served by TJTC for some very good reasons. Apart from the fact that these men and women donated a portion of their lives, and in some cases risked their lives for our country, some of them are now chronically unemployed. They need the assistance of this nation and TJTC can help. The data tabulated by the Department of Labor and published as WORKFORCE 2000 AND AMERICA'S VETERANS is still valid. Consider the following from that report:

Black and Hispanic veterans experience higher rates of unemployment than their white counterparts.

A black male veteran is more than twice as likely to suffer the rigors of unemployment than a white male veteran.

Of all the veterans with a disability rating of 60% or higher, more than two-thirds are out of the labor force.

While the unemployment rate for veterans is somewhat below that for the population in general, the unemployment rate for male veterans between 20-35 years is up to 11.8% according to a Department of Labor Survey.

The Targeted Jobs Tax Credit works. The Wharton School of Business at the University of Pennsylvania has concluded that the program has been effective in fulfilling the objectives for which it was intended. TJTC also works for veterans. Between twenty-five and thirty thousand veterans per year have obtained meaningful employment through the TJTC program.

There is also strong evidence that the subsidy involved in the operation of TJTC is seriously overstated. It is very likely that welfare payments, unemployment compensation, and other general assistance payments made to unemployed workers are significantly reduced when TJTC induces employers to recruit and hire eligible people. We believe that the Departments of Labor and Health and Human Services should jointly do a study of the dollar amount of transfer payments saved by those employed through the TJTC program.

This committee should also be aware that as the United States military begins to grow substantially smaller, there will be more veterans on the street seeking work. In the next five years, the size of the armed forces will be reduced by approximately 500,000 people. Over one half of the people released are married, and will need immediate assistance in finding employment in order to meet the responsibilities of caring for a family. More than 30% are minorities, some of whom will return to the inner cities where unemployment is endemic. About 11% of those released will be women. In some cases, spouses of former service men and women will also need assistance in finding meaningful employment. With the exception of the very limited funds available under Title IV-C of the Job Training Partnership Act ($9.0 million), TJTC is one of the only tools available to the employment services across the nation to help these people. Funding for a program under the Service Members Occupational Conversion and Training Act has run out.We are not concerned with those members of the military who have learned a marketable skill while on active duty. We are concerned with those who have served their country in the infantry, armor or artillery branches of the Army or the Marine Corps or in the Air Force, Navy or Coast Guard where the skills learned are not directly transferrable to the civilian workforce. Many of these people are minorities from inner cities who will qualify for TJTC. As I have mentioned before, many of these same people are married with families. TJTC can be an important tool for them.

The American Legion has concluded, Mr. Chairman, that TJTC is one of the most efficient and cost effective of all federal assistance programs. With TJTC nobody loses. Economically disadvantaged workers gain an opportunity to demonstrate their ability to become productive members of society and to move toward financial independence. Employers are able to hire a capable work force and receive a tax credit. The nation's public assistance rolls are reduced as workers move from the welfare and unemployment rolls to the tax rolls. The American Legion respectfully urges a permanent extension of the TJTC program.

Chairman JOHNSON. Thank you very much, Mr. Hubbard.
Mr. Shipman.

STATEMENT OF SCOTT D. SHIPMAN, SENIOR MANAGER, GOVERNMENT AFFAIRS DEPARTMENT, SHIPMAN, MAISON & ASSOCIATES, LTD., CHICAGO, ILLINOIS; ACCOMPANIED BY R. WALTER SHIPMAN, PRESIDENT, SHIPMAN, MAISON & ASSOCIATES, LTD.

Mr. SHIPMAN. Thank you, Chairman Johnson.

Madam Chairman, Members of the Committee, my name is Scott Shipman. I am the government affairs manager with the firm of Shipman, Maison & Associates. We are a tax financial services firm based in Chicago.

Through our CEO, we have been involved with the TJTC Program since 1978, and I think of people providing testimony today, we might bring a little different perspective to this hearing, the idea being we suggest using software systems to help manage the administration of the TJTC Program, such as streamlining of the TJTC process, if you will, could help this program be more beneficial not only to the applicants but to the State governments currently administering TJTC, as well as the employers.

Madam Chairman, through use of software, you can use this software at the local, State, or Federal level, and provide pools to job applicants, if you will, ready to go to refer to job placements, currently, that employers need.

I believe Congressman Houghton himself suggested the process, the mechanics of this system, are what I would call "lurchy." They take a long time. It is very inefficient and it takes taxpayers' money to do such a program.

What we are here to suggest, and inform you of, is that maybe software might be a good way to help this program along through more efficiently and more economically managing TJTC.

Specifically this system can help certify a TJTC applicant in 10 minutes. That is pretty quick. In some States, that takes months, and naturally, the applicant has to fill out lots of paperwork and the employers are forced to bear a burden of waiting, and trying, and coaching to get this paperwork processed.

Also, many of the States are just completely inundated with paper. Some of it is accurate, some of it is not. Some of it is not legible. It is very burdensome to them, seeing how their funding is cut and their staffs are cut every year by the discontinued use of this program.

Through software, and through the use of suggesting applicant pools to the employers, the system would be smoother and more easily managed.

For example, this system would fit in very nicely with the Department of Labor's one-stop shopping concept.

You would have in the corner of a one-stop shopping center a TJTC booth, where an applicant could go, be prescreened, vouchered and certified, again, in less than 10 minutes.

If you will allow this illustration. Software systems could help the administration of this program in much the same way ATMs help banking. That is, provide accurate, faster service at less cost.

Other programs that this system could complement would be the Immigration and Naturalization's I–9 Program. Through the use of Social Security numbers, TJTC screening could help with that program also, as well as the Jobs Training Partnership Act.

In the latter half of 1994, our home state of Illinois tested this system. This isn't some idea that we just kind of dreamed up. It has actually been used and was used very effectively out in the field.

A local employment staff could go to the field, take care of applicants much more quickly on their place or residence, and help the employers receive the tax credit, and provide a much quicker and better service than currently existed before.

We would hope that this program could be expanded to all States who are interested, and if not, the Department of Labor itself.

I thank you for inviting us today. I think it is a great forum to address these issues, and I look forward to your comments.

[The prepared statement follows:]

STATEMENT OF SCOTT D. SHIPMAN
SENIOR MANAGER, GOVERNMENT AFFAIRS DEPARTMENT
SHIPMAN, MAISON & ASSOCIATES, LTD.

Introduction

Thank you, Chairman Johnson. Madame Chairman, distinguished members of the committee, and honored guests, my name is Scott Shipman, Senior Manager-Government Affairs, for the firm of Shipman, Maison & Associates, Ltd. Our firm, based in Chicago, Illinois, is a tax/financial services firm.

Our firm, through its CEO, has been involved with the Targeted Jobs Tax Credit (TJTC) program since its creation in 1978, and while we support modification and extension of the program, we bring a unique perspective on *how* to more economically administer the TJTC program through the use of software technology. This, while simultaneously providing the state agencies with the ability to offer more services to their community.

Madame Chairman, our firm suggests modifying the administration of the TJTC program by the use of a software system, capable of fully administering a State or Federal TJTC program. This system has been tested on a pilot basis in our home state of Illinois. The system manages administration of the TJTC program faster, more efficiently, and more accurately, as it helps the state focus on servicing the applicant and employer communities at less cost to the taxpayer. We do not mean to suggest that the various states relish not being able to respond even faster, they don't, they merely lack the resources which limit their production and effectiveness. Essentially, a software system would do for the TJTC program that which ATM's have done for banking - provide faster service at less cost.

Specifically, this system manages the TJTC program by systematically organizing the TJTC process, starting with the state's ability to issue a certificate in less than 10 minutes, through *initiating* employer/community services rather than *reacting* to demands made upon them. This improvement in TJTC administration gives the local employment office the strength to serve its community, to more efficiently provide "employee pools" of TJTC qualified workers for job placement, consistent with the original intent of the TJTC legislation in 1978. This enhanced service increases employer participation in this and other programs offered by the local employment office, increasing the local office effectiveness and reducing the cost to operate same. For example, the system would complement the concept of the Department of Labor's "one-stop shopping" program, the Department of Naturalization and Immigration's I-9 administration, and the Jobs Training Partnership Act (JTPA). All with less staff than currently exists, resulting in less cost to the taxpayer.

The Illinois Department of Employment Security (IDES) has tested this software system on a pilot project basis, and on a more limited basis, by the state of California's Economic Development Department (EDD). In the areas where the software was used, IDES has been able, with less staff, to respond to employers needs by being able to more accurately and more efficiently process TJTC applicants and satisfy the information needs of the employers, while simultaneously reporting data to the Department of Labor (DOL). Additionally, DOL using existing forms from their ET Handbook 377 and the system we propose, would have accurate, statistical data totaled daily, and available for review and analysis. Again, the cost to the taxpayer would be far less than that which is currently in existence.

I would like to thank you for giving this program the attention it deserves, and for the opportunity to address these issues in this forum. Obviously the technology we suggest to modify the administration of the TJTC program is far more extensive than can be covered in the time allotted today. Accordingly, we have summarized our position in the text of our written testimony. I invite you to review our written testimony, as you may find it informative. Should you or the committee have any questions regarding my testimony, I would be more than happy to try to answer them at this time.

Overview

Essentially, in order to administer the TJTC program, a local employment office is responsible for the identification, verification and certification of an applicant, and "refer" the applicant to an employer for job placement. Our intent herein is to analyze each aspect of TJTC administration, and provide examples of comparing/contrasting local office activity with/against that which can be by utilizing software systems. The service aspect of administration is very important, as many office staffs are overburdened with current workload, hence, slow to respond to the needs of the community employer regarding TJTC certified applicants' jobs placement. With computer software, the exact opposite would be the creation of larger TJTC qualified "pools" - as was the design in 1978.

1.) Identification

The identification process is the first step in determining which applicants are eligible for TJTC certification. Eligibility determinations are made based on an applicant's membership in one of the nine targeted groups, generally: those receiving some sort of welfare or state aid, those who have been to vocational rehabilitation programs, those who have served in the military between 1964 and 1975, young adults between the ages of 18-23, years old, or are 16 or 17 years old at the time of hire, (summer youth category), those applicants convicted of a felony, or those applicants who are in a cooperative education program.

Currently, when an applicant visits a local employment office, the applicant must first complete a form, and "register" with that office before TJTC screening can begin. Naturally, completing forms, (all manually) and registration creates long lines with potentially slow service, and is subject to local custom.

Through the use of technology, software systems offer: on-line access to information, easy, and uniform targeted group identification, and standardization of service.

- o On-Line Access: Software can be linked with other state and federal agencies to provide comprehensive information.

- o Target Group Identification:
  All questions used to interview an applicant are on screen. A simple "Y" for "Yes" entry will identify the correct target group.

- o Standardization:
  The screening process eliminates pre-screening forms for the applicant to complete. Questions concerning the nine targeted categories are on the screen before the interviewing officer and are worded to standardize the entire interview hence not left subjectively to the interviewer.

Through the use of software, eligibility determination can be reached in two minutes or less, per applicant. Local offices not having software available take much longer.

2.) Verification

The second step of TJTC administration involves verification, i.e. the vouchering process. Verification means that once an applicant is identified as a member of a targeted group, the applicant must provide specific documentation evidencing eligibility in a particular target group.

Once the local office verifies that the documents prove that the person is a member of a targeted group, the office will issue a voucher for the applicant to take to an employer who has job openings. In return for hiring this vouchered applicant, upon certification, the employer may receive a tax credit. Currently, vouchers can take 30 minutes per

applicant to complete, and are often unreadable with carbon copy and/or sloppy handwriting. For those offices with TJTC software, computer data entry takes 1 minute or less, with legible results. Thus, service is greatly enhanced as applicants may now be referred to employer job openings by the local job service office. Since the software is mobile, it can be "loaded" on a notebook computer, or laptop, and set up at a job fair, or other on-site screening. Again, this service enhances local office involvement in the community.

3.) Certification

The third and final step in TJTC administration is the issuance of the certificate. This document evidences that the applicant is a member of a targeted group, and once this applicant has worked for an employer for the required period of time, the employer may take a tax credit of 40% of the first $6,000 of the members' qualified wages. At the local office level, the steps necessary to issue a certificate may take 15, 30, or 45 minutes or longer to complete, whereas with a software system, certification is issued at the touch of a button.

The local office address, applicant address, date, social security number, etc. is automatically recorded and stored as a result of the initial screening or registering process. The local office official needs to sign and date the certificate, then mail it to the employer. Again, because the system is mobile, the software may be set up anywhere there is an electrical outlet, and the local office will be in service. This entire process from registration to certification is done in less than 10 minutes, and there is no duplication of data entry upon return to the office.

4.) Reporting

All local employment offices need to report TJTC activity to a central state office, for monitoring, and reporting to regional and DOL offices. At the local office level, it currently takes *hours* to compile the quarterly report and includes running the risk of errors which require additional hours to reconcile. Each level of "roll-up" again requires innumerable hours to compile. Utilizing software, the entire quarterly data is accurately compiled *daily* and reported, with the touch of a button.

Real world examples drive the need for a software system. Many employers or employer representatives call the local and state employment offices to inquire about the status of a person sent in for TJTC determination, or call about the status of the certification. This checking is extremely time consuming for the local office, particularly if the request is (as often the case) more than 2 years old. Because of the volume, the local office staff person has to stop current processing, and manually retrieve stored files to find the information. Some states have to shut down the entire process when conducting status searches. Hence, quite naturally, the states are reluctant to perform the search until a more opportune time, thus creating additional bottlenecks and more employer questions. With the software system, a simple entry of the applicants' social security number would retrieve the answer immediately.

Recently, a local employment office had two opportunities to use the software system. In one instance an employer inquired as to the number of individuals the office had interviewed, and of those interviewed, the number of those individuals determined to be TJTC eligible. The local office was able to give this employer complete reports, by target group, in less than 5 minutes. By contrast, a local office had three employment officers servicing applicants manually, while another officer used the software system. At the end of the day, each officer reported totals. The three officers who serviced applicants manually were still accumulating totals, while the officer with the software was finished, had accurate data, with no need to reconcile errors.

Additionally, officers utilizing a manual process have to return to their office, prepare and record the appropriate vouchers and mail them to the employer for the appropriate employer signature, receive the vouchers in return from the employer then prepare certificates and mail to the employer. Officers utilizing software may issue vouchers and certificates on site, thus permitting the employer to allow the eligible employee to go to work not needing to return to the local job service office for additional information. This simple step encourages local participation by the employer of other state services and programs.

Comparison: Manual Versus Software TJTC Administration

To review, basic TJTC administration involves identifying who is eligible for the program, verification as to being a member of a target group, and certifying the individual for the employer. The following is a chart contrasting the speed, accuracy, and ability of the current local employment office (manual) procedure versus a software based system:

Identification

Manual	Software
Screening: 5-10 Minutes	2 Minutes or Less
Register: By Paper	Electronically
Other Data: Calling other Agencies	Database
Questions: Subjective, by locale	Objective

Verification

Application: Paper, with Carbon Copies	Electronically
Time: 10-30 minutes by hand	1-3 minutes
Accuracy: Varies, by locale	Objective

Certification

Application: By Paper, Typed	Electronically
Time: 15, 30, 45 Minutes or more	Seconds
Accuracy: Variable	Total

TJTC federal funding is proportional to the number of certificates issued. The funds received for the TJTC program does not cover the full cost necessary to administer the program. Therefore, time is taken away from other employment security office duties, including job placement. By computerizing the TJTC process, the local office could consider scheduling opportunities to address other areas of responsibility and possibly provide even more service to the local community such as job placement "pools", hence, once more, getting back to the original intent of the TJTC program.

Conclusion

Our testimony will close with some recommendations and a final thought regarding the TJTC program.

To Modify The TJTC Program:

- o Extend the program for at least 6 years.
- o Offer a credit for 2 years - 25% first year, then 75% second year, to encourage retention.
- o Set the minimum salary to qualify at $6 per hour.
- o Reinstate 23 and 24 year olds as a targeted group.
- o Make all veterans an eligible target group.
- o Add a targeted group to include those over 55 years old.
- o Add a targeted group to include those who have exhausted unemployment insurance benefits.
- o Eliminate the Letter of Request, and issue certificates for individuals hired through the State Employment Service Agency (SESA).
- o Allocate funding for automation.
- o Increase funding for advertising the program. Comments from employers who have "heard something" about the program still leaves a lot to be desired.

The TJTC program has provided an incentive for employers to hire the disadvantaged. While modifications are necessary and appropriate to enhance the program, administration of the program needs to be improved. Current technology is available to help assist the local office in providing a complete service to the community so that all who seek jobs will be referred to an employer who has openings. Through software, the local office will be able to reassert its position in the community, rather than be just the alternative for those seeking employment. A software system would benefit the employer, the applicant, and the local office by saving each of these entities time - of which, in the business world, there is never enough.

Chairman JOHNSON. Thank you.

One way to crystalize this issue, perhaps, since this is the last panel that will testify on the targeted jobs tax credit is, is it more efficient, more effective, and fairer to provide the benefit to the employer, to hire this kind of applicant, and presumably provide the support and training that they need?

Is it fairer to that applicant, and better policy, to provide a skill grant or a training grant so that they can develop the needed skills or learn proper on-the-job work habits, giving them a better choice of employers?

Really, in this group, it is not a question of whether we subsidize this group or not. We really understand that we have to subsidize this group.

The question is, do you do it more effectively by providing the employer a break, or by, in a sense, bringing that person into the general job training, skill development program, that States make available? Briefly, because we do have several more panels, could you comment briefly on that larger issue.

I can see a lot of work has gone into the restructuring proposal. I would just point out to you, Mr. Hubbard, that the eligibility criteria, at least in this brief summary, says veterans who are either currently receiving or have received public assistance in the 18 months prior to hire.

Mr. HUBBARD. That is correct.

Chairman JOHNSON. It is a very limited focus on very low-income veterans?

Mr. HUBBARD. That is correct.

Chairman JOHNSON. OK. Thank you. I just wanted to be sure you were aware of that.

Mr. HUBBARD. That is correct. With respect to training grants as opposed to subsidizing an employer, I agree with the previous comment, that business does it better.

Business is in a much better position to know exactly what kinds of skills they need, then to recruit people and train them in those skills.

Chairman JOHNSON. Thank you.

I yield to Mr. Portman.

Mr. PORTMAN. I thank the Chairwoman. I assume you heard the dialog from the previous panel, and that you might suspect I have some of the same questions for you all.

First of all, thank you for being here and sharing your insights with us.

I would say in response to Ms. Oven saying that—I think your quote was, "this is a perfect fit with regard to welfare to work." I would disagree with that.

I think it is not a perfect fit, when you have, again, the kind of evidence that I have seen, whether it is the GAO report, the Inspector General's report, the other Department of Labor report, or my own, again, companies back home, who give me anecdotal evidence, which indicates that they would have hired many of these people anyway.

The fact is that many employers—and that probably is not true with regard to Ms. Oven's company or the other companies of people represented here. I would say that from what I know of it—and

I am trying to find out more—that most employers, in fact, who are participating in this program, or at least most of the employees, are hired, as any other employee would be hired, to fill an entry position.

Then, after the employee is hired, to determine whether that employee fits the criteria set forth under the tax credit. If they then fit, the employer can qualify for the tax credit and apply for it.

That seems to me to be quite strong evidence of the fact that these people would have been hired anyway.

And again, I think the Houghton proposal is a leap forward. I think it has some problems with it, but I think we need to target more precisely—if we are doing a welfare-to-work program, let's target those people who are on public assistance.

Why provide, according to the Department of Labor, 92 percent of this subsidy to people who would have been hired anyway, and only 8 percent to those who would not have been? Given the scarce Federal dollars, we have got to be more cost effective, we have got to be more targeted.

I would say to Mr. Hubbard's comments, I agree with you, and I think the Houghton approach does a pretty good job.

It is not just Vietnam-era veterans, incidentally. It also would apply to other veterans. I think that is a good example of a way to target the program more precisely to the problem.

I look forward to working with the panel members. You know much more about this program than I and others who have been involved in it do. You have had good experiences figuring out ways to target the program more precisely to the problem, and not be satisfied with the status quo.

Any comments, Ms. Oven, as to your experience, or how we might target it better with regard to precertification, or other ideas?

Ms. OVEN. Yes, I would be glad to comment.

I am not sure if you are aware, that in order for us to comply with EEO requirements, there are many of the TJTC category questions from the old program that we are not legally permitted to ask until a job offer has been made.

That really limits an employer's ability to know, for sure, whether or not we are hiring a TJTC candidate. About the only way we can know for sure is if we go to a community agency, a United Way agency or something like that, and recruit candidates, which our company does.

Even then, for example, if we recruit from an agency that places persons with disabilities, we can ask that they refer TJTC candidates to us. That is not a guarantee. Our screening for candidates is done after the offer is made to comply with EEO, equal employment opportunity, requirements.

With the new proposal, that issue needs to be addressed as a part of that, because we are talking about protected classes, and no company's legal department is going to let them ask those questions, and take that kind of risk, in violation of the EEOC, Equal Employment Opportunity Commission.

Mr. PORTMAN. I understand the problem, and I think there would need to be some sort of a safe harbor provision, or some way to be sure that people felt comfortable.

I hear from employers, beyond that, that even in areas that might be considered safe under existing EEO law, they are afraid of the possibility of litigation, even if groundless, would then cost them enormous amounts in terms of defending themselves.

They are just not willing to get into it at all, and they would rather just wait and see whether the criteria are met after the fact. But again, that gets to the problem, as I see it with the current program, which is that we are not targeting those dollars as precisely as we should.

Mr. Hubbard, do you have a comment?

Mr. HUBBARD. Yes, Mr. Portman, I do.

With regard to these people being hired anyway, if that were the case, I do not think that the unemployment rate for male veterans between 20 and 35 would be as high as 11.8 percent.

A good many of these people are veterans of the armed forces, who served in the combat arms, who do not have skills that are applicable to the job market, except perhaps for some things about initiative and the work ethic, and those kind of things which they learn in the military.

There is another issue here which these people face, and that is one of certification in some cases. For example, a medic who treated gunshot wounds in the Persian Gulf cannot get a job in Washington, DC, without going back to school, just to treat gunshot wounds. That is another whole issue that we are actively involved in with the Department of Labor.

Veterans do face some rather major hurdles out there, and I am not convinced that employers would hire them anyway, were it not for TJTC.

Mr. PORTMAN. That is a good observation. I think it is, frankly, a further argument for further targeting of the existing program.

Mr. HUBBARD. Perhaps.

Mr. PORTMAN. Mr. Shipman, any comments on our colloquy here?

Mr. SHIPMAN. Congressman, the burden on the States to help process this program is significant. Funding keeps getting cut, and staffs keep getting cut every year.

The lack of continuous legislation is a very big pain to them. They, just as businesses cannot plan, neither can the States.

They need a strong signal, and a financial signal, from this body, on which way this program is going.

It is very hard to take care of applicants when their is no way to provide for them otherwise.

Mr. PORTMAN. That is a good point. I think it holds true for the private sector as well, as you indicate. We need to make this permanent, I believe, or disband it and try something new, and I do not like the idea of the temporary extensions.

I would just ask one more question, I think we have another panel ready to go, and that is, with regard to the screening we talked about, Ms. Oven, assuming we could have some sort of EEO safeguards, do you see a concern with self-certification? In other words, if we do not have documentation from a public assistance agency, or as you indicate, from a United Way agency, and so on, how do we deal with the self-certification matter?

Do you have any thoughts on that? This is really an administrative question, administration of the program. But I see that as one

of the potential problems with the reform that we are talking about.

Ms. OVEN. My understanding is that the new program has identified objective criteria for the proposed categories.

I am not sure that the new program has a self-certification provision. You mean the employees themselves come and say they are TJTC-eligible? I am not aware of what provision the new proposal has for the employee, potential employee to know, unless they are working with an agency such as the United Way agency, that informs them of that.

Mr. PORTMAN. Mr. Hubbard.

Mr. HUBBARD. I do not think the vast majority of people who are eligible for TJTC even know what it means.

Mr. SHIPMAN. Let me just comment further with regard to veterans. There would be a way to certify that that individual qualified, assuming that was one of the criteria as it is in the Houghton approach.

Mr. HUBBARD. People who leave the armed forces these days attend something called Transition Assistance Program. It is run by the Veterans Employment and Training Service at the Department of Labor. In that program, they are told to visit the office at the State employment security agency when they get back home and get ready to look for a job.

The counselors in the State employment security agencies are aware of TJTC. If it comes back into being again, they will begin to ask these people to determine whether they are eligible for TJTC. The system exists.

Mr. SHIPMAN. Congressman, if I may, in the State of Illinois, using a software system, you would have objective criteria throughout the State.

If someone discharging from the military moves back to their hometown and it would be St. Louis on the Illinois side, the questions asked of them, in east St. Louis while they were in Chicago, would be exactly the same. That way you don't have variances by local custom or by State. It would be flat.

Mr. PORTMAN. That is a good point.

I thank you all very much for your testimony and for coming today to give us some insights.

I would now like to call my distinguished colleague from Indiana, Mr. Jacobs.

Mr. JACOBS. Thank you, Mr. Chairman.

I would rather be a neighbor than a colleague, actually, Ohio and Indiana.

Mr. PORTMAN. Well, you are both.

Mr. JACOBS. Thank you.

Mr. PORTMAN. Doubly blessed.

Mr. JACOBS. I appreciate that.

I have come to testify in favor of the bills, H.R. 733 and 734, gifts of appreciated property, and the scheme of it is quite simple. We want to encourage charitable giving, and we can do so by allowing donors to deduct the current market value of the gift to worthy causes.

The law expired or, rather, sunsetted at the beginning of this year, and its effect has been so salutary that it seems logical that it should be extended not only in time, but also in description.

Rather than stock alone, let us say you have a piece of property that might be useful for a foundation to help children or something like that. It has appreciated in value. You could either keep it and let it pass through your estate with, in most cases, no tax incident, or you could make the gift to the foundation and the government would not collect tax on the appreciation, but on the other hand, the government never would have got the tax, anyway. Cost is roughly $57 million per year, and obviously, I think it is in the public interest to work very well.

Here is the surprise of the day. That is it.

Mr. PORTMAN. I thank my neighbor, as well as a colleague.

I have to recuse myself here perhaps. My wife was at one time an employee of a private foundation which suffered under not knowing whether these extensions would occur, and I would tend to be quite biased in favor of your proposal.

Let me ask you a couple of questions, though, with regard to how this might work. As a general rule, right now to other 501(c)(3)s, it is my understanding that you do get the market value and not the cost basis, but with regard to private foundations, there is a distinction. Is that correct?

Mr. JACOBS. I am sorry, Rob. I didn't quite—

Mr. PORTMAN. With regard to a contribution to a 501(c)(3), say, a social service agency or some other charitable gift, you would be permitted to get the market value of your publicly traded stock as compared to your cost basis.

Mr. JACOBS. Yes, that is correct, and that has been the law for some time. Unfortunately, it was set up in a way that it would sunset.

I don't know of any serious complaints about it. It has worked pretty well.

Mr. PORTMAN. Let me ask you if you know what percentage of gifts to private foundations are now made in the form of publicly traded stocks. Do you have any sense of that?

Mr. JACOBS. The answer to your question is not complicated. No, I do not know.

Mr. PORTMAN. OK.

Mr. JACOBS. I know that, generally, when the law was not in effect, there was a serious diminution of contributions, and when it was reenacted or enacted, there was an increase, but I can't tell you exactly what percentage that is.

By the way, I should say that Mr. Camp is my cosponsor or I am his cosponsor. We are partners in this thing.

Mr. PORTMAN. You would be full partners.

With that, I will return to the Chairwoman to ask you further penetrating questions.

Mr. JACOBS. Good for you. Don't you love it how people dance all over the lot, "Madam Chair," this and that?

Mr. PORTMAN. I never know whether to call her "Chair," "Chairwoman," or "Madam Chair."

Mr. JACOBS. If it is "Mr. Chairman," why isn't it "Ms. Chairwoman"? Did we ask that today?

By the way, may I say one other thing? My sister used to say when people addressed her as "Madam," generally solicitors, and salespeople, she would always say—and I haven't the slightest idea what this meant, but she would always say, "Don't call me 'Madam.' I just work here." Now, I don't know what that meant.

Chairman JOHNSON. Dave Camp did testify earlier and mentioned that you were in this together, and we do appreciate that bipartisan support, frankly, that is a very important little provision that we do have to consider, thank you for your testimony.

Mr. JACOBS. Thank you, and I appreciate the indulgence of the Committee, even for the dull humor.

Chairman JOHNSON. The next panel is Willie Brown, medical records clerk of the Hampton VA Hospital; Paul Speranza, the secretary and general counsel of Wegmans Food Markets, Rochester, New York; and Frederick Hunt, president of the Society of Professional Benefits Administrators, on behalf of the American Society of Association Executives.

We will start with Mr. Brown, and you will observe the lights, if you please, as we have two more rather long panels after this.

STATEMENT OF WILLIE BROWN, MEDICAL RECORDS CLERK, HAMPTON VETERANS ADMINISTRATION HOSPITAL, HAMPTON, VIRGINIA; ON BEHALF OF THE SECTION 127 COALITION

Mr. BROWN. Good afternoon, Madam Chairwoman and Members of the Subcommittee.

I am pleased to testify on behalf of the Section 127 Coalition in support of the permanent extension of section 127 of the IRC, Internal Revenue Code.

The Section 127 Coalition is a diverse group of businesses and their associations, labor organizations, educational institutions, and human resource experts that are committed to making section 127 a permanent part of the Tax Code.

My name is Willie Brown, and I am a medical records clerk at the Hampton Veterans Administration Hospital in Hampton, Virginia. In addition, I am also a student at Thomas Nelson Community College, also in Hampton.

Quite simply, section 127 is what makes my education possible. I support a family. I am married and have three children. Section 127 allows me to receive up to $5,250 a year in tax-free reimbursements from my employer for tuition, books, and fees for education and training that is not job related.

I am nearing the completion of my associate's degree in public administration, and I hope to continue my education at Christopher Newport University in Newport News, Virginia.

Many of my courses are not purely related to my current job. If I had to pay Federal, State, and local taxes on this benefit out of my pocket, I just couldn't do it.

As president of the Thomas Nelson Community College Student Council, I know that many students are in the same position. Indeed, many are economically disadvantaged. Students have had to stop taking classes when section 127 has expired from time to time. They simply cannot afford to see their already small paychecks further reduced by the tax they would have to pay if they take these

classes, and I understand that this Committee is considering whether or not section 127 should be made a permanent part of the Tax Code.

In reading the history of this issue, it appears that this Committee and Congress originally enacted section 127 for several reasons. Specifically, according to the explanation of the 1978 bill, section 127 was passed because prior law gave rise to an inequitable administration. In addition to the complexity of the tax system, it may have acted as a disintentive to continuing education, particularly among those at the lower end of the economic scale, and those same reasons, they still exist today.

I see much in the news these days about efforts to get the IRS out of citizens' lives. Section 127 does just that by eliminating bureaucratic questionings about whether a class is job related or not. More importantly, section 127 promotes upward mobility among the work force. Yet, it is largely funded by employers, not the Federal Government. Employers provide these benefits to their employees because they see a return on the investment of the employee's education. With additional training and education, these same employees will be able to take on more complex tasks and assume more responsibility. At the same time, numerous studies have shown that education continues to be the ticket to higher earnings.

According to the Bureau of Census, the mean annual earnings of a high school graduate is $18,737. For those with an associate's degree, the mean annual earnings rise to $24,398. College graduates have a mean annual earnings of $32,629. In essence, by enabling employers to provide tax-excludable education to relatively low-paid workers, Congress is ensuring that these workers will use that education to do better work, increase their salaries, and pay higher taxes.

Making section 127 permanent would mean that the Federal Government is encouraging upward mobility. Indeed, you will be promoting a higher standard of living and making work more rewarding by permanently extending section 127.

I would also note that there are even more compelling reasons to make section 127 permanent now than there were when the law was first changed in 1978.

Today, workers change jobs more frequently. There is more international competition, and rapidly changing technology requires a more-skilled and a more regularly trained work force.

Last, as you may know, Coopers & Lybrand completed a study in 1989 of Federal data to determine the characteristics of the beneficiaries of section 127. In that study, nearly 99 percent of section 127 recipients earned less than $50,000. Seventy-one-percent earned less than $30,000, and 36 percent less than $20,000.

Several weeks ago, the Department of Education released the data necessary to bring the study up to date. That update is underway, and a revised study will be provided to this Committee as soon as it is complete.

Madam Chairwoman, I am appreciative of the opportunity to testify before you on this matter.

Chairman JOHNSON. Thank you, Mr. Brown. Your testimony is very helpful.

I would like to recognize Mr. Speranza now.

STATEMENT OF PAUL S. SPERANZA, JR., CORPORATE SECRETARY AND GENERAL COUNSEL, WEGMANS FOOD MARKETS, INC., ROCHESTER, NEW YORK

Mr. SPERANZA. Thank you.

Good afternoon. I am Paul Speranza, and I am corporate secretary and general counsel for Wegmans Food Markets, Inc., which is headquartered in Rochester, New York.

I want to thank you, Congresswoman Johnson, Members of the Subcommittee, and staff for the opportunity to speak to you today on behalf of Wegmans.

Because of our extremely positive experience with the Wegmans scholarship program, we strongly urge you to permanently extend the exclusion for employer-provided educational assistance, pursuant to IRC section 127, through the bill presently before Congress, submitted by Congressman Levin on January 4 of this year. That is entitled Employee Educational Assistance Act of 1995, which, coincidentally, is H.R. 127 or through any other appropriate legislative vehicle.

Wegmans employee scholars have been taking advantage of section 127 since 1984. Since the Wegmans scholarship program began in 1984, Wegmans has awarded over $25 million in scholarships to over 7,200 employees.

Wegmans spent $4 million in 1994 on 2,230 current employee scholarship holders, and Wegmans plans to add another 700 new scholarship recipients in 1995.

Wegmans receives a tax deduction for these expenditures whether they are considered compensation to the scholarship recipient or a scholarship benefit under section 127. Hence, our concern is purely for the financial welfare or our employees and others similarly situated throughout the United States.

Scholarships are awarded to employees who demonstrate excellent work performance, above-average academic achievement, and these two factors account for 50 percent of the decision to award a scholarship. The specifics of the program are set forth in my written testimony.

Section 127 helps people help themselves. Beneficiaries of section 127 are better educated. Hence, they can help themselves. Once educated, these people will have substantially greater earning power and, therefore, pay higher taxes of all kinds, income tax, property tax, sales taxes, and so forth, throughout their lives which will more than offset the tax exemption received under section 127.

Further, making the exclusion permanent is critically important. Parents and college students are on extremely tight budgets. Without a permanent exclusion, they can't financially plan. This exclusion has been extended numerous times, making the administration of a scholarship program extremely difficult.

Trying to explain to over 2,000 families why the dollars they thought they had are no longer there is very difficult. Explaining how to apply for a refund after the fact is also very difficult; for example, 6 pages of forms and instructions as to how to go about doing that. This leaves a very negative impression of our representatives in Washington.

Wegmans has always placed a premium on education at all levels. This scholarship program is just one of several programs it

sponsors through large donations of money, and the donations of money and time of many of its employees. These programs are key elements of Wegmans' success.

Wegmans employs approximately 24,000 individuals. According to the New York State Department of Labor, it is listed as one of the top 10 private employers in New York State.

In a front-page article in The Wall Street Journal on December 27, 1994, which favorably described Wegmans, one nationally renowned industry expert stated, "We consider them," meaning Wegmans, "the best chain in the country, maybe the world."

The television show "Wall Street Week" did a followup piece on its weekly national television show which featured a Wegmans scholarship winner describing the importance of his scholarship. He stated that he could not afford a private education without Wegmans' help.

Wegmans has always been in the forefront of providing top wages, benefits, and working conditions for its employees and has been nationally recognized for its efforts. Some of Wegmans' honors include being named by Fortune magazine as the best supermarket retailer in America in serving its customers.

Being included in the recently published book entitled "The 100 Best Companies to Work for in America."

Being recognized by Working Mother magazine for the fifth consecutive year as one of the best 100 companies for working mothers in America.

Receiving a Point of Light Award by President Bush for having the best corporate charitable program in America, the Work Scholarship Connection Program assists economically disadvantaged youth; being named the top produce retailer and top deli trendsetter, and being recognized as having the best video departments in America by various industry publications.

Section 127 has been an integral part of many of Wegmans' success stories. Wegmans is successful because of its motivated and educated work force. If Wegmans can do this, so can others.

A permanent exclusion for employer-provided educational assistance makes it much easier for all American businesses to educate its employees. It is only through education that Americans can maintain and improve its status in the world economic community.

Thank you.

[The prepared statement follows:]

PAUL S. SPERANZA, JR. ON BEHALF
OF
WEGMANS FOOD MARKETS, INC.

May 9, 1995 Subcommittee on Oversight Hearing of the Committee on Ways and Means - Exclusion for Employer-Provided Educational Assistance (Code Section 127)

Good afternoon, I am Paul Speranza. I am Corporate Secretary and General Counsel for Wegmans Food Markets, Inc. which has its headquarters in Rochester, New York. I want to thank you Congresswoman Johnson, members of this Subcommittee and staff for the opportunity to speak to you today on behalf of Wegmans Food Markets, Inc. Because of our extremely positive experience with the Wegmans Scholarship Program, we strongly urge you to permanently extend the Exclusion for Employer-Provided Educational Assistance pursuant to Internal Revenue Code Section 127 through the bill presently before Congress submitted by Congressman Levin on January 4, 1995 entitled "Employer Educational Assistance Act of 1995" which coincidentally is HR 127 or through any other appropriate legislative vehicle.

Wegmans Food Markets, Inc. employee scholars have taken advantage of Section 127 since 1984. Since the Wegmans Scholarship Program began in 1984, Wegmans has awarded over $25,000,000 in scholarships to over 7,200 employees. Wegmans spent $4,000,000 in 1994 on 2,230 current employee scholarship holders, and Wegmans plans to add another 700 new scholarship recipients in 1995. The program pays 50% of tuition up to a maximum of $1,500 per academic year. Wegmans receives a tax deduction for these expenditures whether they are considered compensation to the scholarship recipient or a scholarship benefit under Section 127, hence, our concern is purely for the financial welfare of our employees and others similarly situated throughout the United States. To be eligible, employees must be continuously employed for at least 21 months by the time they plan to use the award and they must work an average of ten hours per week. Scholarships are awarded to employees who demonstrate excellent work performance, above average academic achievement, and these two factors account for 50% each of the decision to award a scholarship. There are no restrictions on fields of study. Winners are required to work 300 hours per year to be eligible to renew their awards and scholarships are renewable for up to a total award of four years. Winners must continue to demonstrate excellent work performance, and they are reviewed annually by their supervisors. An independent agency judges the academic portion of the scholarship application by using a committee made up of varied experts in the field of education. A committee of store managers judges the work performance portion of the scholarship application based on performance appraisals submitted by the applicant's department manager and store manager.

Internal Revenue Code Section 127 helps people help themselves. Beneficiaries of Section 127 are better educated, hence they help themselves. Once educated, these people will have substantially greater earning power and therefore, pay higher taxes of all kinds (income, real property, sales, etc.) throughout their lives which will more than offset the tax exemption received under Section 127. Further, making the exclusion permanent is critically important. Parents and college students are on extremely tight budgets. Without a permanent exclusion, they cannot financially plan. This exclusion has been extended numerous times, making the administration of a scholarship program extremely difficult. Trying to explain to over 2,000 families why the dollars they thought they had are no longer there is very difficult. Explaining how to apply for a refund after the fact is also very difficult. This leaves a very negative impression of our representatives in Washington.

Wegmans Food Markets, Inc. has always placed a premium on education at all levels. This scholarship program is just one of several programs it sponsors through large donations of money and the donations of money and time of many of its employees. These programs are key elements of Wegmans' success. Wegmans Food Markets, Inc. employs approximately 24,000 individuals. According to the New York State Department of Labor, it is listed as one of Top Ten Private Employers in New York State. In a front page article in The Wall Street Journal on December 27, 1994 which favorably described Wegmans, one nationally renowned industry expert stated, "We consider them (Wegmans) the best chain in the country, maybe the world." The television show "Wall Street Week" did a follow-up piece on its weekly national television show, which featured a Wegmans' scholarship winner describing the importance of his Wegmans Scholarship. He stated that he could not afford a private college education without Wegmans' help. Wegmans has always been in the forefront of providing top wages, benefits, and working conditions for its employees and has been nationally recognized for its efforts. Some of Wegmans' honors include being named by Fortune magazine as the Best Supermarket Retailer in America in serving its customers, being included in a recently published book entitled, The 100 Best Companies to Work for in America, being recognized by Working Mother magazine for the fifth consecutive year as one of the Best 100 Companies for Working Mothers in America, receiving a Point of Light award by President Bush for having the Best Corporate Charitable Program in America (the Work Scholarship Connection Program assists economically disadvantaged youth), being named the Top Produce Retailer and Top Deli Trendsetter, and being recognized as having the Best Video Department in America by various industry publications. Section 127 of the Internal Revenue Code has been an integral part of many of Wegmans' success stories. Wegmans is successful because of its motivated and educated work force. If Wegmans can do this, so can others. A permanent exclusion for employer-provided educational assistance makes it much easier for all American businesses to educate its employees. It is only through education that America can maintain and improve its status in the world economic community.

Chairman JOHNSON. Thank you, Mr. Speranza.
Mr. Hunt.

STATEMENT BY FREDERICK D. HUNT, JR., PRESIDENT, SOCIETY OF PROFESSIONAL BENEFITS ADMINISTRATORS; ON BEHALF OF AMERICAN SOCIETY OF ASSOCIATION EXECUTIVES

Mr. HUNT. Good afternoon. My name is Fred Hunt. I am president of the Society of Professional Benefits Administrators, but today I am speaking for an even larger constituency, and that is the ASAE, American Society of Association Executives, where I have served as a volunteer on the government affairs and the insurance industry committees.

ASAE is a not-for-profit, tax-exempt, umbrella organization, organized to serve and represent association executives such as myself. ASAE's membership includes about 22,300 association executives as well as suppliers of goods and services to the association community. Approximately one-third of ASAE's association executives manage charitable and philanthropic organizations. The remaining two-thirds manage professional societies and trade associations.

The more than 10,400 associations, including many that you have heard from today in this room, are managed by ASAE members which include international, national, regional, State, and local associations, as well as multitiered federations. At one point, we added up to see what is the constituency, and we discovered it was about 287 million people, which is pretty good. It obviously shows that there is overlap in this country, but it shows that almost every American gets touched by the association community.

Let me add, parenthetically, that this is really a threefold testimony. You are really getting three different perspectives.

Most association executives such as myself are employees, and thus, we can tell you from an employee point of view in a field where continuing education and new fields is very important. Most of us are employers. We employ people, and so we know what we are looking for, what we want to hire.

Third, associations, much like yourselves, end up being clearinghouses. When people have complaints, when there are trends, when there are needs, they come to us, just as you have heard most of the testimony today. It has been on behalf of associations.

Please look at this as really three testimonies in one. Fortunately, they all three agree.

ASAE is testifying today on behalf of the many organizations it represents, virtually all of whom have a keen interest in the reinstatement and continuation on a permanent basis of IRC section 127.

As such, ASAE strongly urges Congress to permanently extend section 127 of the IRC providing an exclusion from income for the value of the employer-provided education assistance.

As you know, the important provision expired on December 31, 1994, and with it went the hopes of many middle class and, I would say also, senior executives. Many industries are changing today, as well as, of course, the lower income. This is an across-the-scale issue.

Associations and other employers will also suffer if this provision is not extended. They use section 127 as a valuable retraining tool within their industries for workers who lose jobs or whose jobs have become obsolete. In short, section 127 helps associations, businesses, and workers develop the skills they need to compete in today's changing global economy.

Specifically, section 127 allows employers, including associations, to provide up to $5,250 per year to each of their employees in tax-free reimbursements for tuition, books, and fees that are not directly related to their job.

Congress has continually affirmed its support for this program since its inception in 1978. Since then, more than 7 million Americans have been able to work and attend classes in order to improve their skills and quality for better jobs. These individuals are from large, medium, and small associations, companies, and other employers throughout the country.

The section 127 program is the only way that many millions of working men and women can contribute to further their education while they perform their responsibilities to their families, employers, and hold down their jobs.

Continuing education is a vital factor in the growth and promotion of America's work force, and I would say you have heard a number of good things; to summarize, seeing the light.

Mr. Portman had a good point that these things pay, and I think you should look at this section 127 as a revenue raiser. This is going to generate money. You have heard all three of us mention there is a direct correlation. More education means more income which means more income taxes, and for that $5,250 that somebody may get, they may learn how to use a computer. They may learn how to get a college degree, whatever it may be. These are the things that will allow them to go up, and we have spent lots of money, certainly, throughout saying education means better jobs. I think this is a revenue raiser. It is an investment rather than an expense.

The ASAE thanks you very much, and I hope you will look at the written record for more thorough recommendations that we have to offer today.

[The prepared statement follows:]

STATEMENT OF FREDERICK D. HUNT, JR.
ON BEHALF OF
THE AMERICAN SOCIETY OF ASSOCIATION EXECUTIVES (ASAE)

Good afternoon. My name is Frederick D. Hunt, Jr. and I am President of the Society of Professional Benefits Administrators (SPBA). I am testifying this afternoon on behalf of the American Society of Association Executives (ASAE), where I serve as a volunteer on the ASAE Government Affairs Committee.

ASAE is a not-for-profit, tax-exempt, umbrella organization organized to serve and represent association executives. ASAE's membership includes approximately 22,300 association executives, as well as suppliers of goods and services to the association community.

Approximately one-third of ASAE's association executives manage charitable and philanthropic organizations; the remaining two-thirds manage professional societies and trade associations. The more than 10,400 associations managed by ASAE members include international, national, regional, state, and local associations, as well as multi-tiered federations and coalitions.

If you count up the memberships of all organizations which have representation in ASAE, more than 287 million individuals, companies, churches, universities, and other types of groups are represented. Of course, this figure includes many duplications, since many individuals and companies belong to more than just one association — but it illustrates the magnitude of how Associations Advance America.

ASAE is testifying today on behalf of the many organizations it represents, virtually all of whom have a keen interest in the reinstatement — and continuation on a permanent basis — of IRC Section 127. As such, ASAE strongly urges Congress to permanently extend section 127 of the *Internal Revenue Code*, providing an exclusion from income for the value of employer-provided education assistance.

As you know, this important provision expired on December 31, 1994. With it went the hopes of thousands of middle-class employees who use these benefits to attend school and further their education.

Associations, businesses and other employers will also suffer if this provision is not extended; they use section 127 as a valuable retraining tool for workers whose jobs have become obsolete. In short, section 127 helps associations, businesses and workers develop the skills needed to compete in today's changing global economy.

Specifically, section 127 allows employers, including associations, to provide up to $5,250 per year to each of their employees in tax-free reimbursements for tuition, books and fees for non-job-related education.

Congress has continually affirmed its support for this program since its inception in 1978. Since then, more than seven million Americans have been able to work and attend classes in order to improve their skills and qualify for better jobs. These individuals are from large, medium and small associations, companies and other employers throughout the country. The section 127 program is the only way that many millions of working men and women can continue to further their education while they perform their responsibilities to their

families and employers, hold down their jobs, and enhance their own skills for the constantly changing workplace.

Continuing education is a vital factor in the growth and promotion of America's workforce. It enables individuals to broaden their skills and knowledge and keep pace with changing technology.

Government statistics tell us that the majority of U.S. workers now have less than four years of high school, yet nearly two-thirds of all new jobs in our economy will soon require more than a high school education. America must deal with this problem quickly. And one means of answering this dilemma is to provide an incentive to individuals and employers to making a permanent commitment to life-long education.

Section 127 education assistance benefits are a prudent and economically sound investment in the American workforce. Nobody can disagree that continuing education and training of the U.S. worker are fundamental to meeting the challenges of the global economy, and enabling our nation to compete effectively against formidable competition.

Why should America's associations be so concerned about Section 127 extension? Because we are both employers as well as "servants" of our own memberships, i.e., the myriad of trade and professional organizations which rely upon the educational infrastructure as the backbone of our economic health and progress.

Virtually all associations have a vital stake in insuring that our members — whether they are individuals, corporations, universities, or other types of organizations — are able to continuously educate their employees in their own unique ways.

According to the key study entitled ***The Value of Associations to American Society,*** jointly conducted by the Hudson Institute, the American Society of Association Executives, and the ASAE Foundation, associations are now more deeply immersed in education than in any other activity, save conventions. Even this statistic may be slightly misleading, since most conventions and trade shows are directly related to educational programming and product and technical displays which keep entire industries and professions educated about new goods and services.

Some other reasons for ASAE's strong support of Section 127:

- Association members spend nearly $5.5 billion annually to fund their own employee and member educational needs and to organize or facilitate industry-specific educational programming.

- According to ASAE's estimates, nearly 90% of associations now offer educational programs and services to members.

- Education-based associations serve the public by improving the technical skills as well as the leadership and management abilities of both members and non-members.

- A very special place for association education is found in translating general discoveries and principles into the concrete requirements of particular industries and professions. This

capacity places association in a leading role to train and retrain the future workforce, and to advance society's needs.

- Association education serves the interests of members by increasing their productivity, enabling them to meet requirements for continuing education, helping to define their profession, and providing an important source of revenue. The public interest is directly related to this self-interest of specific industry and professional groups.

In closing, Mr. Chairman, employee education assistance has been repeatedly embraced by Congress and a majority of U.S. employers as one of the country's proven "competitiveness" policies. And this policy is all about empowerment, private sector initiative, and marketplace dynamics. It is time to make the ***Employee Educational Assistance Act*** permanent law.

Thank you.

Chairman JOHNSON. Thank you very much.

One of the things that you have heard in this hearing is that every extender that we adopt has to be paid for. One of the things that interests me is the structure of the programs and, therefore, their cost.

You can go to evening law school for $3,000 a year, why is it necessary to offer more than $5,000 worth of educational expenses? If someone is working full time, it is awfully hard to build up that amount of tuition cost at the same time. Would you comment on whether this would be a functional program at, say, $3,000?

Mr. SPERANZA. Why don't I start with that. First of all, I am not sure how many law schools you can go to for $3,500, but that aside, I have seen the real benefits of this program and our community in the communities where we do business.

I will give you two examples in my own department, for example. I hired a secretary, a single parent who couldn't afford an education. Secretaries don't make a lot of money, a high school graduate.

Chairman JOHNSON. I don't disagree with you. It is the merit of the program. I have lost people from my staff because I didn't have the ability to do this for them, and they wanted to finish school and they couldn't afford any other way. I see its mobility implications and the power it has to simply allow people to get the education they need that they couldn't otherwise afford, but what are the dollar dimensions of the necessary support?

If you get 3,000 dollars' worth of support for tuition and books and you are working full time, is that enough?

Mr. SPERANZA. All I can say as a practical matter from our experience, it has been enough. Most of our employees are in New York State. We have a good public education system. You can get a college education at a State college, the State University of New York, for example, for a tuition of $2,500. Those dollars are very important, and as I said before, I have seen people who could not afford, who were using every penny to put food on the table for their children.

Chairman JOHNSON. Oh, I agree.

Mr. PORTMAN. They didn't have the opportunity and now they do. They have graduated. I have one particular secretary who got a 4.0 average at a local school, and now she is an executive in our company. She could not have had that opportunity without a scholarship, and we have a number of stories like that.

Mr. HUNT. I would be worried about setting a number, just because numbers end up causing problems. I see your concern, and I think it is a good one.

I think the nice part, again going back to Mr. Portman's thing, is whatever your investment is, whatever the person makes, you are going to see it coming back in taxes, and I know there is some—

Chairman JOHNSON. The number in the law now—

Mr. HUNT. I am sorry?

Chairman JOHNSON [continuing]. The number in the law now is $5,250.

Mr. HUNT. Yes, ma'am.

Chairman JOHNSON. That is a reduction from a higher number that we adopted a few years ago. These numbers are important from the point of view from the Congressional Budget Office estimating the possible cost of this program.

If $3,000 is about as much as anybody really uses anyway and if that will do the job, then we want to bring that number down. That is really what I am asking.

Mr. Brown, do you have any comment on that? Do you know what it cost you per year?

Mr. BROWN. Last year, was about $4,000.

Chairman JOHNSON. That is interesting.

Mr. BROWN. I think limiting the number would sort of limit the opportunities of the schools you could choose.

Chairman JOHNSON. Yes, it does. It would certainly do that. It would focus you on the public institutions—

Mr. BROWN. Right.

Chairman JOHNSON [continuing]. The lower we drop the tuition. That is absolutely true.

Mr. BROWN. I guess the other important part of it is there is a company where I live, and 82 percent of their employees go to my particular community college. The numbers of those employees had dropped off with the expiration of 127, and this company looks for their employees to come to school to help increase their productivity as far as the company is concerned. When those numbers go up or go down, it gets kind of monotonous at times.

Chairman JOHNSON. Thank you very much.

I am going to recognize Mr. Levin of Michigan, and then he will recognize our other colleagues.

Mr. LEVIN. Mr. Portman will come after me.

All right. I will be brief. I think that the distinguished Chair of the Subcommittee has put her finger on some of the problems and the need, and your testimony is so important. I think we have to go in our thinking beyond the days when there was a rigid separation between work and education.

I am finding more and more as I go into plants, for example, the intimate relationship between the workplace and learning the skills and upgrading your skills.

I think this provision is today far more significant than it was when it was passed. In that sense, legislation—it doesn't always happen—was ahead of its time.

Let me ask you, one of the criticisms is that this program benefits too many higher paid workers. What is your experience? Who have been the main recipients? I think the beneficiaries are the companies as well as the workers, but in terms of the participants, what has been your experience, any of the three of you?

Mr. BROWN. If it is beneficial for higher paid workers, especially at my institution, that hasn't happened.

Colling-Myers, which is a furniture company, Chic-Fil-A, which is a fast-food chain, offer $2,000 benefits. They give their employees—who are still making basically minimum wage or maybe 50 to 75 cents more than the minimum wage—give them $2,000 to go to school, and there is a vast number of those that are attending school.

As a matter of fact, I would say that a majority of the 11,000 and some odd students that attend my institution, are in lower income jobs. We are talking $30,000 and below.

Mr. SPERANZA. If I could respond to that question as well, Congressman, in our industry which is the food industry, there are not necessarily well-paid jobs at entry level. The skills they learn at college can get them into some higher paying jobs, but to put it in perspective, when you are talking about $5,000 as an upper limit for help, our program is much less than that.

A private college education today probably costs $25,000 to $30,000. We are not talking the upper end or even the upper middle. You are talking about people who are scraping by, who have no alternative but a community college or a State school, and this covers a good portion of that tuition, not all of it necessarily. We think people should help themselves, also, but that is the group we are targeting. It is the people coming out of high school, the people who are struggling to perhaps try college, people who have lost jobs, career changes, and that sort of thing. We think the target is right on.

Mr. HUNT. I think there is another factor to remember as well. We often talk about highly paid. I heard earlier they were talking about Boeing aircraft, when they laid off umpteen people. You might have been a $100,000 engineer. You just got laid off. You're a zero-dollar engineer, but people are going to say, "You know that $100,000 guy? Well, he needs to suddenly get retrained for something."

Also, I think that there are a lot of stories that are going on now. We are hearing that bank tellers are going to be rare nowadays. There are going to be a lot of major changes in white-collar jobs.

I am 48, and there are a lot of people just a year or two ahead of me who finished college before computers were really known. They have no background. They are going to be stymied. They may be making a lot of money now, but they are hitting a glass ceiling and all that, or if they get laid off, where are they going to go?

Keep in mind when you talk about upper income and all, it may be the income that they are making today, and they may need to be retrained. Be looking at that.

I think it is one of these nice things that we will do. Plus, if that $100,000 former Boeing engineer is reemployed, he is going to be paying pretty high taxes and at the highest tax rate.

I think as you said, it is one of those nice things. It is a win-win for the government and for all segments of society.

Mr. LEVIN. Thank you very much.

Mr. PORTMAN. I think my colleague from Michigan is correct in saying the program, in some respects, was ahead of its time.

Mr. Hunt, you had referred to some of the dialog we had had earlier. I was talking about the white-collar issues in my district and the fact that there is so much transition. I believe now that the typical kindergartner will have 14 careers in his or her life. I think this is an important provision.

I will say, getting back to the fiscal conservative role and our need to target and to streamline these programs, that it is not a perfect program. It could be improved.

One thing that many of us, of course, have thought about, which is consistent with Mr. Levin's question is some kind of means testing. The $100,000 engineer, if he is laid off from Boeing, that is one thing, and he would be receiving unemployment assistance for some period of time, but if he continues at $100,000 a year and is being retrained for a new job, he is still getting $100,000 a year, although his prospects for the job he has are not good. He is being retrained.

Should he receive the same exclusion from income, which is all the more important to him, at $100,000 than it is for somebody making $35,000, the person at the lower level, that is one question I have had of this program. Is there an appropriate means testing in this program? What would that mean for you and others?

Mr. HUNT. I think that one of the things we are seeing today is there is often a big difference. It is not, hot and cold, being fired. There is handwriting on the wall.

I will pick on the poor, old bank tellers again. If I were a bank teller right now, I have not been fired, but my guess is that I don't have a long career ahead of me. That is a shrinking field, and it is the same with a number of different industries as you look around. Things that used to be big, thriving industries are shrinking, senior bank executives being another example.

I think that is one of the things, and perhaps we see it in the association field. Somebody will say, "Yes, I have been in this part of the industry, but gosh, I see the trend is going to be over here." You get to the point, all right, he is making $100,000 today, but he knows that is going to fizzle out in a few years, that whole area of business. He can either ride it down, and then you have got him down here and what to do, and of course, usually it happens when he is at the height of his mortgage and everything else, or you can make it a smooth transition.

I think that there is a factor there, and again, I think it is one of those things that pays for itself in terms of even when the person is at the higher level, he is probably going to get a pay raise if he has got a better education or he has learned about things, how to use computers, or whatever it may be.

One of the nice things that is most cost effective in terms of the association programs is they tend to be very targeted. You may be a college graduate and suddenly find yourself in midlife crisis and don't know what you are doing. You can go and get some specific course through association, and that usually costs a lot less.

Mr. PORTMAN. Your suggestion is that even at the $100,000 level, in the end it is a good bargain for the government to provide some assistance for retraining or additional education because even that person will be a net cost to the government should that person sort of fall off the fast track and end up being in need of public assistance or some other government subsidy?

Mr. HUNT. I think so, but like you, I am a fiscal conservative. I probably just think that is hard to say, and yet, when I kind of think through the math of it, if the person is down for a few years, you are certainly going to see his tax revenues go down. If you go across at that level, you are paying big tax dollars. Common sense kind of walks me through and says it does pay out.

Mr. SPERANZA. I have just one comment.

Mr. PORTMAN. Yes, Mr. Speranza.

Chairman JOHNSON. The anecdote of the $100,000 individual, I think, is quite dangerous.

Mr. HUNT. Exactly.

Mr. SPERANZA. We don't have any $100,000 people in our industry that benefit from this program, nowhere near that. They bag groceries.

I think there may be a person or two, that may sneak through at that level of income, but when we are talking about the people in our industry, which is a very basic industry, we don't see that. If there is going to be a means test and I would prefer that there wouldn't be. It should be done in such a way that you don't have substantial Government intervention and more paperwork which discourages the very people who need the help, I think that would be a key consideration.

Mr. HUNT. That is very valid. That goes to our earlier testimony.

Mr. PORTMAN. Are there any other improvements you could see for the current program? One idea, of course, I guess, under 162, you can take a miscellaneous deduction, an itemized deduction for job-related training currently, and some have argued that this provision isn't necessary because it should be job related and you can go through the paperwork to get the deduction if it is job related.

Do you think that would make any sense to try to have some link to the job?

Mr. SPERANZA. I could speak to that. In our kind of program, absolutely not. For example, what we are trying to do is train people for the future, give them additional skills.

We are starting out at entry level. We have got people in the program who have gone to medical school, to law school, graduate programs, and so forth, but the bulk of them community colleges, State schools, and so on. I wouldn't think that that would be the way to go.

Mr. PORTMAN. Absolutely.

I yield to the gentleman from Michigan.

Mr. LEVIN. I have been thinking about that, and since we have a common interest here, if it would otherwise be covered, I don't think it would be scored as costing or saving several billion dollars. So there must be considerable numbers.

Mr. PORTMAN. Who are not in that category.

Mr. LEVIN. I think so.

Mr. PORTMAN. Yes.

Mr. LEVIN. Otherwise, by abolishing section 127, we would get close to a zero cost or cost savings.

Mr. PORTMAN. I think, if the gentleman will yield back, I think you are correct, and my only question was whether there is an argument for making the section 127 exclusion from income job related, not so much that section 127 would subsume all the activities, but is there a way to narrow the current exclusion and, therefore, have it more targeted? I am not sure I would support that, personally, but I throw that out as an idea for further clarification.

Mr. LEVIN. Thank you.

Mr. HUNT. I think you would find people would be getting into spitting matches constantly with IRS where you would have conservative tax departments of companies.

If one of his baggers, for instance, says, "Gee, I would really like to have his job, to be general counsel of the company some day," and he wants to go to law school, obviously I think the IRS would look and say no way does law school have anything to do with bagging.

I think you would constantly be in a spitting match over that, and this is what I have heard from oldtimers, meaning pre-1978.

Mr. PORTMAN. That also gets to your concern about the cost of the compliance and paperwork in the program.

Mr. HUNT. Or just the general chilling effect that it would have on people, and especially we are talking about looking ahead to changes. There are things that we don't know that are going to happen in, say, the year 2000 that we are probably all have to be retrained for that would not necessarily be job-specific. Is the IRS going to always be on the cutting edge of knowing what is going to be best for me?

Mr. PORTMAN. Right.

Mr. SPERANZA. The bottom line, Congressman, is to allow people to help themselves. You have people at the entry level jobs who are trying to get ahead. If you have job related training only, why would somebody want to get an education to be a better cashier? They want to get into management and so on. For an industry like ours and similar situated industries, it makes no sense.

The last comment I would have is we think the program is so important we would like to keep it just the way it is with the permanent extension, but if that can't be, the second best thing is lowering the amount.

Mr. PORTMAN. The $5,250 amount?

Mr. SPERANZA. Correct.

We would certainly want it the way it is, but I would hate to get rid of the whole program, which is very, very effective, because of the cost constraints.

Mr. PORTMAN. One final question. We now have an official Chairman here sitting in the chair and everything, but, Mr. Brown, your personal experience when you went back to school or went to school, was this directly related to your responsibilities at work or was it to broaden your horizons and get into other areas?

Mr. BROWN. I started off actually in a work study situation. My reasons for wanting to go to school—well, I had ambitions of being a public administrator, basically a medical administrator. I got into a public administration curriculum.

A lot of the courses that I take are basically governmental courses. I have had courses in social work, fiscal administration, you know, different things like that. Of course, you have the other classes that really have nothing to do with that particular job, like your electives and things like that, but for me, it is very beneficial for what I want to do at the VA, Veterans Administration, hospital, or in some type of medical system of being an administrator as opposed to a worker.

I am starting off at the entry level where I work in the Medical Records Department. Basically, I take care of over 1 million records at the hospital. By getting this type of degree, it will help me achieve what I ultimately want to do, and that is to be a public administrator in a medical field.

When I look at the way this Tax Code is, two different entities benefit from this. The hospital benefits because I get more education. I will be able to put more into my job, and eventually as far as promotion is concerned, and the government comes out as well because the more I make, the more taxes I pay.

The local government is a beneficiary as well because the more I make, the better house I may live in or the better neighborhood. My property taxes go up. They are making money, and that is just how I see the whole thing.

Mr. PORTMAN. Thank you all for your testimony. I appreciate it.

Mr. SPERANZA. You are welcome.

Mr. HERGER [presiding]. Thank you very much. We appreciate your testimony. Thank you.

The next panelists will step forward, please. They are Linda Chase, vice president, corporate affairs, Auto Club of Hartford, Connecticut, on behalf of the Society for Human Resource Management; Pamala Easley, payroll supervisor, Vinnell Corp., on behalf of American Payroll Association; Robert D. Williamson, president, American Society for Payroll Management; Stafford E. Thornton, president, American Society of Civil Engineers; and Ross J. McVey, assistant controller, director of tax, Telephone & Data Systems, Inc.

Ms. Chase, if you would begin your testimony, please.

STATEMENT OF LINDA CHASE, VICE PRESIDENT, CORPORATE AFFAIRS, AUTO CLUB OF HARTFORD (AAA), HARTFORD, CONNECTICUT; ON BEHALF OF SOCIETY FOR HUMAN RESOURCE MANAGEMENT

Ms. CHASE. Thank you.

My name is Linda Chase. I am the vice president of corporate affairs for the Automobile Club of Hartford in Hartford, Connecticut, which is an affiliate of the American Automobile Association, also known as AAA.

I am testifying today, however, on behalf of the SHRM, Society for Human Resource Management. SHRM is the leading voice in the human resource profession. SHRM represent the interests of more than 66,000 professional and student members in 435 chapters from all 50 States.

On behalf of SHRM, I wanted to thank you for this opportunity to appear before this Subcommittee to express our support of a permanent extension of section 127 of the IRC.

I would also like to thank Congressman Shaw of the Full Committee and also Congressman Levin of this Subcommittee for all of your work. We do appreciate that support.

I would like to offer for your consideration AAA's approach to human resources, we do place a high value on education, mutual respect, and the shared value of our employees, and we feel that there are no guarantees of success in the business world. However, AAA has found that if we invest in our employees and challenge ourselves to learn, we can achieve a level of service in the motoring, travel, and insurance industry that is unparalleled, and I will tell you why.

The only tool, the only resource that our competitors cannot reproduce is our people. They can build new facilities and they can

pay their workers less and they can take shortcuts in customer service, but our people are unique, and that is what makes AAA a leader in our field.

In the same way, if we are to be a productive and competitive Nation, we must use our limited resources wisely. Section 127 represents the kind of investment worthy of Federal support.

On the average, employees with 4 or more years of college earn 70 percent more than employees with only a high school degree. Higher income leads to increased tax liability, and the government easily recoups its investment over the trained worker's lifetime.

Section 127 is the right tool for the entire business community. Businesses don't just give away money. We provide educational assistance because it helps us attract good workers, keep them, and help them to become even more productive employees, and that is why temporary extensions of 127 have been unsatisfactory. The temporary extension brings about tremendous administrative problems as long-range plans for training are disrupted.

While there is another IRC, section 132, that allows for the narrow exclusion of strictly job related assistance, businesses cannot comply with a standard that requires us to guess whether the IRS will consider it job related every time we send a worker for training.

Limiting our employees to only job related education also restricts employers in their efforts to cross train employees and promote from within.

While education is important for everyone, low-income workers, in particular, rely on employer-provided assistance to improve their career prospects. These employees, who may be hired initially to take care of routine administrative functions, take advantage of section 127 to gain skills for higher paying jobs.

Limiting these workers to job related education only is, in essence, relegating them to training for skills that cannot help them get ahead. The American dream is all about advancing through hard work and education, not just maintaining the same status in the same job.

I am an example of a lower paid, lower income worker that has risen in one particular company because of section 127. At AAA, I have been there for 13 years, and I started coming out of college where I had a very narrow degree. I went to AAA as an entry-level telemarketing representative and became an auto travel counselor. From there, I moved into the public relations field, and I didn't know anything about it. I had to be educated on the job, and my company supported that.

From there, I moved into human resources, and today I am the vice president, after 13 years. I highly support section 127's extension.

Laid-off employees, in turn, are also affected by the loss of section 127. In Connecticut, we have an awful lot of downsizing going on, and through section 127, in some cases, laid-off workers often have the shock of the job loss somewhat lessened when their former companies pay for training for other jobs available in the community that they could assume.

Without section 127, the laid-off employees would be taxed on that training at the very time they have no income and desperately need help in securing another job.

With section 127, on the other hand, our workers have a chance to broaden their educations and prepare for the higher skilled jobs they currently do not have, but are within reach through education.

I would like to thank this Subcommittee for its time today, and I hope that you will continue to call in AAA and the Society for Human Resource Management as you seek to restore and extend the exclusion for employee educational assistance.

Thank you.

[The prepared statement follows:]

STATEMENT OF LINDA CHASE
VICE PRESIDENT FOR CORPORATE AFFAIRS, AUTO CLUB OF HARTFORD
ON BEHALF OF THE
SOCIETY FOR HUMAN RESOURCE MANAGEMENT

Madame Chairman, my name is Linda Chase and I am the Vice President for Corporate Affairs of the Auto Club of Hartford in Hartford, Connecticut, part of the American Automobile Association, also known as AAA. I am testifying today on behalf of the Society for Human Resource Management.

SHRM is the leading voice of the human resource profession, representing the interests of more than 66,000 professional and student members in 435 chapters from all 50 states.

On behalf of SHRM, I wanted to thank you for the opportunity to appear before the Subcommittee to express our support of a permanent extension of Section 127 of the Internal Revenue Code.

SHRM members work for organizations employing over 80 million American workers. SHRM, however, has no corporate members-- only individuals. This protects the independence of our human resource professionals and allows them to continue in their role of being effective liaisons between employers and employees.

As human resource professionals work to recruit, train and retain employees, we hear directly from both employers and employees regarding which programs work. Since we also administer those programs, human resource professionals are uniquely positioned to give balanced input on which are the best and most effective policies in the workplace-- and I can tell you unequivocally that Section 127 works.

I would also like to thank Congressman Shaw of the full Committee and Congressman Levin of this Subcommittee for introducing H.R. 127, legislation that would permanently extend Section 127. We appreciate their work and the support of other members of Congress who have demonstrated their commitment to continuing education by cosponsoring this bill.

Madame Chair, Congress has a difficult job. As elected representatives, we recognize that you are challenged daily to make tough choices. You must weigh options, balance competing interests and make policy judgments based on what is best for the nation.

Although I am not elected to public office, I offer for your consideration AAA's approach to human resources: we highly value education, mutual respect and the shared values of our employees.

There are no guarantees of success in the business world. However, AAA has found that if we invest in our employees and challenge ourselves to learn, we can achieve a level of service in the motor, travel and insurance industry that is unparalleled.

I'll tell you why: The only tool, the only resource, that our competitors cannot reproduce is our people. They can build new facilities, pay their workers less, and take shortcuts in customer service. But our people are unique, and that is what makes AAA a leader in our field.

As part of its training initiative, AAA makes broad use of Section 127, educational assistance. Our workers like it, and I can testify of its impact on our workforce. Educational assistance is one of the tools that AAA uses to make it the company it is today.

In the same way, educational assistance is a key tool for all of America, and Section 127 represents a solid investment for the government. The Bureau of the Census confirms what we already know when it reports that education is the key to higher income. On average, employees with four or more years of college earn 70 percent more than employees with only a high school degree. Greater income leads to increased tax liability, with the government easily recouping its investment over the trained worker's lifetime.

Section 127 is the right tool for employees because it represents an unparalleled opportunity for workers. It empowers workers. It gives them a chance to broaden their expertise in many areas, beyond typical work-based training.

Madame Chair, Section 127 is the right tool for the entire business community. Businesses don't just give away money. We provide educational assistance because it helps us attract good

workers, keep them, and help them to become even more productive employees.

And that is why temporary extensions of Section 127 have been unsatisfactory. The temporary extensions bring about the tremendous administrative as long range plans for training are disrupted. While there is another Internal Revenue Code Section, Section 132, that allows for the narrow exclusion of strictly job-related assistance, businesses cannot comply with a standard that requires us to guess whether IRS will consider it job-related every time we send a worker for training. Limiting our employees to only job-related education also restricts employers in their efforts to cross-train employees and promote from within.

Although it hurts business, the loss of Section 127 is even worse for two groups-- current employees and laid off workers. Our employees have their educations disrupted in many instances, and their career aspirations are therefore put on hold.

While education is important for everyone, low income workers in particular rely on employer provided assistance to improve their career prospects. These employees, who may be hired initially to take care of routine administrative functions, take advantage of Section 127 to gain skills for higher paying jobs. Limiting these workers to job-related education only, is in essence relegating them to training for skills that cannot help them get ahead. The American Dream is all about advancing through hard work and education, not just maintaining the same status in the same job.

Laid off employees, in turn, are also affected by the loss of Section 127. In Connecticut we have had a lot of down-sizing. With Section 127, laid off workers often have the shock of the job loss somewhat lessened when their former companies pay for training for other jobs available in the community. Without Section 127, these laid off employees would be taxed on that training at the very time they have no income and desperately need help in securing another job.

With Section 127, on the other hand, our workers have a chance to broaden their educations, and prepare for the higher skilled jobs they **currently do not** have, but that are within reach through education.

We are in a fierce competition with other countries of the world, and our economic prosperity is at stake. We must use all of our available tools and resources to win.

I thank the Subcommittee for its time today, and I hope that you will continue to call on the Automobile Club of Hartford and the Society for Human Resource Management as you seek to restore and extend the exclusion for employee educational assistance.

Mr. HERGER. Thank you, Ms. Chase, for your testimony.
Ms. Easley.

STATEMENT OF PAMALA EASLEY, PAYROLL SUPERVISOR, VINNELL CORP., FAIRFAX, VIRGINIA; ON BEHALF OF AMERICAN PAYROLL ASSOCIATION

Ms. EASLEY. It is a pleasure for me to testify today on the important issue of the tax treatment of employer-provided educational assistance under section 127 of the IRC.

My name is Pamela Easley, and I am here on behalf of the APA, American Payroll Association.

The APA is a nonprofit, professional association representing over 11,000 companies and individuals on issues relating to wage and employment tax withholding, reporting, and depositing. Over 85 percent of the gross Federal revenues of the United States are collected, reported and/or deposited through company payroll withholding.

Under our system of voluntary compliance, payroll professionals, like me and my colleagues, are the Nation's tax collectors. For nearly 10 years, I have supervised the payroll operations for Vinnell Corp. in Fairfax, Virginia. Vinnell is a government contractor that, among other things, provides operations and maintenance assistance to U.S. military bases worldwide.

As part of its employee benefits package, Vinnell will reimburse its employees for up to $1,500 in tuition expenses per year which, as I will discuss later, I take full advantage of.

The APA strongly supports the withholding exclusion for education benefits under section 127. The on-again-off-again treatment of this important provision by Congress, however, has created an enormous amount of extra work for U.S. businesses. These problems are intensified when authorization expires midyear and is then reinstated retroactively, as was the case in 1993, and we fear may be the case this year.

In addition, this lack of permanency creates a hardship for working Americans and strains relationships between U.S. businesses and their employees.

First, I will discuss the administrative burdens that these repeated expirations have created. In 1993, when the provision was last reinstated, our company experienced a great deal of extra and costly paperwork. The worst problems came in making the adjustments for employees who had educational expenses in 1992. Because the authorization was reinstated retroactively, these employees had, in effect, overstated their income on their 1992 tax returns and were, thus, entitled to get money back for the Federal and State income taxes and for their share of FICA.

Vinnell was entitled to reimbursement for the employer's portion of FICA, but had to go through a great deal of time and costly paperwork to collect it.

In order to enable employees to get their refunds, we had to calculate the difference in the taxable wages for employees entitled to reimbursements, complete a W–3C, the cover sheet for corrected wage statements, and process and distribute corrected wage statements, W–2Cs.

We then had to ask the employees to sign a statement promising that they would not seek a FICA reimbursement from the government, and then we needed to manually cut checks to reimburse employees for FICA overpayments out of our own account.

Meanwhile, we had to tell the employees that in order to get a Federal tax refund, they would have to file an amended tax return. We made it as easy as we could for employees by providing them with copies of form 1040–X so they could amend their tax returns, but it was up to the individual employee to complete the form and send it in to the IRS.

To straighten out our own books and remain in compliance, we had to file amended quarterly tax returns, form 941–C and form 843, request for refund, seeking a refund for both the employer's and employee's portion of FICA.

It took me, along with my two assistants, a full week to sort out the problems. Figuring in labor and overhead, I estimate we spent about $3,000 on this project, and that is with only about 20 employees in our headquarters office taking classes.

I shudder to think about the time and money spent by my colleagues at Vinnell's parent company, BDM International, where I am told some 500 employees were affected.

The changes in the tax status of section 127 causes enormous confusion for employees who receive the benefit. Each time the provision expired, my staff, along with our human resources department, spent endless hours explaining and assuring our employees that the company was not voluntarily taking a promised benefit away.

The employees thought they were to receive a tax-free benefit for educational expenses for a certain amount and budgeted accordingly. In fact, the amount is reduced, and they don't understand why.

Although we forewarned the employees, the messages did not really get through until the workers saw the difference in their take-home pay.

I would like to stress that management at Vinnell realizes that they do not have to offer their educational benefit under increasingly difficult section 127. We could alternatively offer them under the more stable section 132 exclusions, but Vinnell has made the business decision to allow employees to advance their careers by enrolling in a broad range of courses, not just those they need for their current jobs.

Through this policy, we avoid the undesirable situation in which we would agree to reimburse one employee for a particular course that was necessary for the job, but we would have to say no to other employees who may want to take the same course in order to advance their careers.

At this point, I would like to talk a little bit about my own circumstances. In addition to being a payroll supervisor, I am also a student benefitting from Vinnell's educational assistance program.

I have been enrolled at the Woodbridge campus of the Northern Virginia Community College for 2 years. So far, I have taken four courses, and I have a grade point average of 4.0.

I am here to testify that the $1,500 that I had been receiving from Vinnell is vitally important to me. Three years ago, my hus-

band had his second open heart surgery after suffering a massive heart attack. He is now totally disabled. As a result, I am the sole wage earner for my family. I also have a 14-year-old daughter and a 16-year-old son. They, too, would one day like to go to college, and I would like to be a role model and provide financial assistance for them.

There is one last point that I would like to make. In conversations with my colleagues, a clear profile of the kind of employees who benefit the most from section 127 has emerged. Like myself, they tend to be women. Many are single parents. All are struggling financially. The educational assistance they get from their employers may be one of the few financial breaks they ever get in their lives.

I urge you to give full commitment to this important provision and make it permanent as proposed in H.R. 127, the Employee Educational Assistance Act of 1995. If that proves impossible, however, I hope you will stop hitting U.S. businesses with unnecessary and costly paperwork. This can be accomplished if you set the expiration date at the end of the year and not allow the provision to lapse. If you opt once again making the withholding exclusion retroactive, I urge you for the reasons outlined to work quickly and reinstate it this calendar year.

Thank you again for this opportunity to present my views as a paraprofessional and as a student. I would be pleased to answer any questions from you or your staff.

[The prepared statement follows:]

Testimony of the
American Payroll Association

Presented by Pamala Easley, CPP
Payroll Supervisor, Vinnell Corporation

It's a pleasure for me to testify today on the important issue of the tax treatment of employer-provided educational assistance under Sec. 127 of the Internal Revenue Code.

My name is Pamala Easley and I am here on behalf of the American Payroll Association (APA). The APA is a non-profit professional association representing over 11,000 companies and individuals on issues relating to wage and employment tax withholding, reporting and depositing. Over 85 percent of the gross federal revenues of the United States are collected, reported and/or deposited through company payroll withholding. Under our system of voluntary compliance, Payroll Professionals are the nation's tax collectors.

For nearly 10 years, I have supervised the payroll operations for the Vinnell Corporation in Fairfax, Virginia. Vinnell is a government contractor that, among other things, provides operations and maintenance assistance to U.S. military bases world-wide. As part of its employee benefits package, Vinnell will reimburse its employees for up to $1,500 in tuition expenses per year.

The APA strongly supports the withholding exclusion for education benefits under Sec. 127. The on-again, off-again treatment of this important provision by Congress, however, has created an enormous amount of extra work for U.S. businesses. These problems are intensified when the authorization expires mid-year and is then reinstated, retroactively, as was the case in 1993 (and, we fear, may be the case this year.) In addition, this lack of permanency creates hardship for working Americans and strains relationships between U.S. businesses and their employees.

First I will discuss the administrative burdens that these repeated expirations have created.

In 1993, when the provision was last reinstated, our company experienced a great deal of extra and costly paperwork. The worst problems came in making the adjustments for employees who had educational expenses in 1992. Because the authorization was reinstated retroactively, these employees had, in effect, overstated their income on their 1992 tax returns, and were thus entitled to get money back for their federal and state income taxes and for their share of FICA. Vinnell was entitled to reimbursement for the employer's portion of FICA, but had to go through a great deal of time and costly paperwork to collect it.

In order to enable employees to get their refunds, we had to:

- Calculate the difference in taxable wages for employees entitled to reimbursements;
- Complete a W-3c, the cover sheet for corrected wage statements; and
- Process and distribute corrected wage statements (W-2c's).

We then had to ask employees to sign a statement promising that they would not seek a FICA reimbursement from the government. And then we needed to manually cut checks to reimburse employees for FICA overpayments out of our own account.

Meanwhile, we had to tell employees that in order to get a federal tax refund, they would have to file an amended tax return. We made it as easy as we could for employees by providing them with copies of the Form 1040X so they could amend their tax returns. But it was up to the individual employee to complete the form and send it in to the IRS.

To straighten out our own books and remain in compliance, we had to file amended quarterly tax returns (Forms 941c) and a Form 843 (Request for Refund), seeking a refund for both the employer's and employees' portion of FICA.

Processing the reimbursements for employees who took classes in 1993 was a bit easier because the changes applied to the current calendar year. However, we still had to reimburse employees for the money that we had withheld and reduced their taxable income up until the point that the provision was reinstated. Again, those checks had to be cut manually. And then we, as a company, had to adjust our federal tax liability.

It took me, along with my two assistants, a full week to sort out the problems. Figuring in labor and overhead, I estimate we spent about $3,000 on this project -- and that's with only about 20 employees in our headquarters office taking classes. I shudder to think about the time and money spent by my colleagues at Vinnell's parent company, BDM, International, where I'm told some 500 employees were affected.

The change in the tax status of Sec. 127 causes enormous confusion for employees who receive the benefit. Each time the provision expired, my staff, along with our Human Resources Department, spent endless hours explaining and assuring our employees that the company was not voluntarily taking a promised benefit away from them. Employees thought they were to receive a tax free benefit for educational expenses for a certain amount and budgeted accordingly. In fact, the amount is reduced and they don't understand why. Although we forewarned employees, the message didn't really get through until workers saw the difference in their take home pay.

Our workers' confusion and frustration is compounded if they talk to friends and family members at other companies where withholding isn't taken out. And that brings up another problem: Many companies have begun to avoid this hardship for employees by gambling on the deduction being reinstated. As a result, they don't withhold.

When the provision expired in 1992, the APA took a straw poll among mostly large employers. Twenty-one of the 29 respondents to our informal survey -- more than 72 percent -- gambled on Congress enacting a retroactive extender, as it had done five times previously. As a result, they did not follow the letter of the law and neither reported nor withheld, as they were required to do.

On the other hand, compliant companies like Vinnell were, in effect, punished for their compliance. We had to spend the time and money revisiting our records and going through the procedures I have already outlined.

To date, I have gotten assurances from management that Vinnell is committed to its educational assistance benefit and has no plans to terminate it, despite the burden it has caused. It maintains this commitment even though the benefit:

- now costs as much as $167 more per employee. (The extra cost is incurred when an employer absorbs its share of FICA, as well as federal and state unemployment on the tuition reimbursement);

- causes extraordinary administrative burden and costly paperwork for businesses that must correct their wage records each time there is a retroactive change; and

- causes employee relations problems and low morale.

It seems to me, some other companies would think about discontinuing this voluntary, pro-employee benefit under these harsh circumstances.

I'd like to stress that management at Vinnell realizes they do not have to offer their educational benefit under the increasingly problematic Sec. 127 exclusion. We could, alternatively offer them under the more stable Sec. 132 exclusion. But Vinnell made the business decision to allow employees to advance their careers by enrolling in a broad a range of courses -- not just those they need for their current jobs. Through this policy, we avoid the undesirable situation in which we would agree to reimburse one employee for a particular course that was necessary for the job, but would have to say "No" to other employees who may want to take the same course in order to advance their careers.

In addition to being a Payroll Supervisor, I am also a student benefitting from Vinnell's educational assistance program. So I know, from my own personal experience, just how important the withholding exemption is and just how hard working Americans are hit by the non-permanent status of this provision.

I have been enrolled at the Woodbridge campus of the Northern Virginia Community College for two years. I am working towards three Associate degrees: in computer science, accounting and business administration. So far, I have taken four courses and have a 4.0 grade point average.

Although I still have a long way to go to complete my course requirements, I fully intend to apply my credits from NOVA towards a bachelor's degree at a four-year school. My career goal is to develop payroll software packages for companies like Vinnell.

I am here to testify that the fifteen hundred dollars that I had been receiving from Vinnell is vitally important to me. Three years ago, my husband had his second open heart surgery after suffering a massive heart attack. He is now totally disabled. As a result, I am the sole wage earner for my family. I also have a 14-year old daughter and a 16-year old son. They, too, would one day like to go to college. I would like to be a role model for them and provide financial assistance for them.

But with the future of Sec. 127 so cloudy, I wonder if I will be able to afford to continue my own education, let alone help out my children. Before Sec. 127 expired, I was reimbursed for the full cost of my courses, up to $1,500. Now, however, once the various taxes are taken out, I will receive only about two-thirds of that. As long as Sec. 127 is defunct, I must come up with the difference on my own. And once I transfer to a four year college, my costs will increase by as much as 380 percent.

There is one last point I would like to make. Through conversations with my colleagues, a clear profile of the kind of employees who benefits the most from Sec. 127 has emerged. Like myself, they tend to be women. Many are single parents. All are struggling financially. The educational assistance they get from their employers may be one of the few financial breaks they ever get in their lives. I urge you to give a full commitment to this important provision and make it permanent as proposed in H.R. 127, the Employee Educational Assistance Act of 1995. If that proves impossible, however, I hope you will stop hitting U.S. businesses with unnecessary and costly paperwork. This can be accomplished if you set the expiration date at the end of the calendar year and not allow the provision to lapse. If you opt to once again make the withholding exclusion retroactive, I urge you, for the reasons outlined already, to work quickly and reinstate it this calendar year.

Thank you again for this opportunity to present my views as a Payroll Professional and as a student. I would be pleased to answer any questions from you or your staff.

Mr. HERGER. Thank you, Ms. Easley.

Mr. Williamson, if you would testify, please, and if we could try to keep our testimonies to approximately 5 minutes if we could, please.

STATEMENT OF ROBERT D. WILLIAMSON, PRESIDENT, AMERICAN SOCIETY FOR PAYROLL MANAGEMENT, NEW YORK, NEW YORK

Mr. WILLIAMSON. Thank you, Mr. Chairman. This will be very succinct.

Thank you for the opportunity to appear before the Subcommittee today. We appreciate the Subcommittee's interest in hearing from the payroll community because our members, the managers responsible for payroll and employment taxes of large firms, are the people who have had to handle the administrative consequences of the on-again-off-again status of the tax break for nonjob related educational assistance.

Section 127 has caused problems in payroll for more than a decade. It has expired six times and has been restored retroactively five times.

By 1992, many employers ignored the expiration of the tax break in anticipation of the usual restoration. We did a survey at that time, and it showed it was about 50/50.

Compliant employers had tax reimbursements they made during the last 6 months of 1992 and included the amounts on their W–2 forms and employment tax returns. They were sorry they did because the following year OBRA 1993 restored the tax break retroactively. This changed formerly compliant employers to noncompliant, and the formerly noncompliant to compliant.

To make the administrative consequences worse, ASPM's, American Society for Payroll Management, recommendation that corrections to tax returns and information statements for 1992 that could be reported on 1993 forms was turned down. The result? The formerly compliant, now noncompliant employers issued W–2Cs, W–3Cs, 941–Cs, and State forms, and affected employees presumably corrected their individual 1040 tax returns. Thus, the formerly noncompliant made compliant by OBRA 1993 did nothing and we are off the hook.

Today, May 9, the payroll people are in the same quandary. Should they act on the expiration of the tax break or should they blink and wait for another retroactive reinstatement?

Here is what Clark G. Case, payroll manager of the city of Winston-Salem, North Carolina, has to say:

> We are paying educational assistance as fully taxable income to Federal income tax, FICA, and State taxes. The last time section 127 expired, we continued to pay it as nontaxable, counting on Congress to retroactively activate it. This time,

this means this year,

> I decided that the odds of its extension were not as good as before. We have complied with the taxability. I talked to the guys who do payroll in another State, and they have made the opposite decision and are not taxing the payments because they got burned when they complied the last time. If Congress extends it, it had better be permanent or they will never get me to comply again. It is a real pain to reinstate W–2s and everything else you have to do if it goes past the end of the year. I have already budgeted to increase the benefit by enough to offset the taxability effect on the employees for the coming fiscal year. This almost doubles the cost of

the benefit, but the people who use it are almost uniformly our employees who make less than $24,500 a year, and the taxability effect puts too much of a burden on them to go back for college credit.

Sensible tax policy and good business practice require that section 127 should be permanently settled one way or the other. If it is to be reinstated, the effective date should be January 1, 1995, with relief for compliant employers that would allow them to correct the amounts of tax withheld by adjusting other amounts later in 1995. If the tax break is not reinstated, similar relief should be given to noncompliant employers, the people who incorrectly guessed the 1995 roll of the dice to permit corrections later in 1995 without penalty or interest assessments.

Thank you, Mr. Chairman.

[The prepared statement follows:]

AMERICAN SOCIETY FOR PAYROLL MANAGEMENT

Testimony of Robert D. Williamson, President
before the
Subcommittee on Oversight
May 9, 1995
on
Sec. 127 Employer-Provided Non-Job-Related Educational Assistance

Madame Chairwoman:

Thank you for the opportunity to appear before the Subcommittee today. We appreciate the Subcommittee's interest in hearing from the payroll community because our members, the managers responsible for payroll and employment taxes at large firms, are the people who have had to handle the administrative consequences of the "on-again, off-again" status of the tax break for non-job-related educational assistance. Section 127 has caused problems over more than a decade: it has expired 6 times and has been restored retroactively 5 times:

History of Section 127 Provisions
(source: 1993 Green Book)

1978	Enacted (through 1983)
1983	Expired Dec. 31, 1983
1984	Retroactively extended through 1985 (adopted $5,000 limit)
1985	Expired Dec. 31, 1985
1986	Extended retroactively through 1987 (increased limit to $5,250)
1987	Expired Dec. 31, 1987
1988	Extended retroactively through 1989 (made inapplicable to graduate level courses)
1989	Extended through Sept. 30, 1990
1990	Expired Sept. 30, 1990; retroactively extended through 1991 (repealed graduate level restriction)
1991	Extended through June 30, 1992
1992	Expired July 1, 1992
1993	Extended retroactively through Dec. 31, 1994

By 1992, many employers ignored the expiration of the tax break in anticipation of the usual restoration. (A survey conducted among ASPM members showed that the split between compliant and non-compliant was 50-50.) Compliant employers taxed the reimbursements they made during the last 6 months of 1992 and included the amounts on their W-2 forms and employment tax returns. They were sorry they did because in the following year OBRA 1993 restored the tax break retroactively. This changed formerly compliant employers to non-compliant and the formerly non-compliant to compliant. To make the administrative consequences worse, ASPM's recommendation that corrections to tax returns and information statements for tax year 1992 be reported on 1993 forms was turned down. The result? The formerly compliant (now non-compliant) employers issued W-2c's, W-3c's, and 941c's and related state forms, and affected employees presumably corrected their individual 1040 tax returns. The formerly non-compliant made compliant by OBRA 1993 were "off the hook".

Today, May 9, payroll people are in the same quandary: should they act on the expiration of the tax break, or should they "blink" and wait for another retroactive reinstatement? Here's what Clark G. Case, payroll manager for the City of Winston-Salem, North Carolina, has to say:

"We are paying educational assistance as fully taxable income subject to federal income tax, FICA and state taxes. The last time Section 127 expired, we continued to pay it as nontaxable counting on Congress to retroactively activate it. This time I decided that the odds of its extension were not as good as before, so we have complied with its taxability. I talked to the guys who do payroll at another state and they have made the opposite decision and are not taxing the payments because they got burned by complying last time. If Congress extends it, it had better be permanent or they will never get me to comply again. It is a real pain to restate W-2's and everything else you have to do if it goes past an end of a year. I have already budgeted to increase the benefit by enough to offset the taxability effect on the employees for the coming fiscal year. This almost doubles the cost of the benefit, but the people who use it are almost uniformly our employees who make less than $24,500 per year and the taxability effect puts too much of a burden on them to go back for college credit."

Sensible tax policy and good business practice require that Section 127 should be permanently settled one way or the other. If it is to be reinstated, the effective date should be January 1, 1995 with relief for compliant employers (who taxed 1995 reimbursements) that would allow them to correct the amounts of tax withheld by adjusting other amounts withheld later in 1995. If the tax break is not reinstated, similar relief should be given non-compliant employers, the people who incorrectly guessed the 1995 roll of the dice, to permit corrections later in 1995 without penalty or interest assessments.

Mr. HERGER. Thank you, Mr. Williamson.
Mr. Thornton, if you would testify, please.

STATEMENT OF STAFFORD E. THORNTON, PRESIDENT, AMERICAN SOCIETY OF CIVIL ENGINEERS; ON BEHALF OF AMERICAN ASSOCIATION OF ENGINEERING SOCIETIES

Mr. THORNTON. Good afternoon. My name is Stafford Thornton. I am a registered professional engineer and the president of the American Society of Civil Engineers. I also serve as the director of the Technical Assistance Center at the West Virginia Institute of Technology.

My statement today is being endorsed by the AAES, American Association of Engineering Societies, which represents 800,000 engineers in this country.

I am pleased to be here today to speak in support of permanent extension of 127. ASCE, American Society of Civil Engineers, respectfully recommends a permanent extention of section 127 retroactive to December 31, 1994.

The ASCE as the country's oldest national engineering society, has 115,000 members working in private practice, government, research, and academia. The Society's major goals are to develop engineers who will improve technology and apply it to further the objectives of society as a whole, to promote the dedication and technical capability of its members, and to advance the profession of civil engineering.

ASCE is a strong supporter of the bill introduced by Congressman Levin, the Employee Educational Assistance Act of 1995, which could make section 127 permanent. This bill currently has 87 cosponsors. The legislation has always enjoyed strong bipartisan support on both sides of Capitol Hill.

The American Society of Civil Engineers believes reasonable educational assistance paid for by an employer should not be considered as additional employee income. ASCE supports this exclusion for undergraduate, graduate, and continuing education courses. Currently, section 127 allows employers up to $5,250 per year for each of their employees in tax-free educational benefits.

Over the years, section 127 has been allowed to expire only to subsequently be reinstated, sometimes retroactively. On at least one other occasion, the exclusion for 127 for graduate studies was curtailed, which had a particularly harmful impact on our members.

This unpredictable handling of section 127 has caused confusion among employers and employees, and has tended to discourage rather than promote employer paid educational assistance.

The economic vitality and global competitiveness of the United States are critically dependent upon a highly trained technical work force. Graduate and continuing education for the American civil engineering work force is not a luxury, but rather an essential element of professional practice.

Keeping pace with new and expanding fields of technology demands ongoing education if America is to successfully meet the new reality of intense global competition.

Our members are committed to lifelong learning. There are seven fundamental canon areas. The Code of Ethics states that engineers

shall continue their professional development throughout their careers and shall provide opportunities for the professional development of those engineers under their supervision.

Another facet of this issue is the need to produce quality, educated engineers who can compete with foreign engineers, since it is the policy of most foreign governments and employers to send their students to U.S. universities where foreign students now constitute more than half of the graduate student bodies in many technical fields.

According to the data we have seen, section 127 benefits do not accrue disproportionately to higher paid employees. Nearly 99 percent earn less than $50,000, 71 percent less than $30,000, and 35 percent less than $20,000.

Civil engineers, despite meeting rigorous educational standards, are not among the most highly compensated professionals when compared to other professions. ASCE research reports the average starting salary for civil engineers be $32,000. Having to pay tax up to $5,250 a year, which is the cap under section 127, would certainly be a great burden on many of these people, particularly the ones with families.

With respect to revenue considerations, the modest impact of section 127 on the Treasury, ASCE strongly believes that the benefits to society far outweigh the cost.

On behalf of ASCE and AAES, thank you for allowing me to appear before the Committee today, and I will be happy to respond to any questions.

Thank you.

[The prepared statement follows:]

STATEMENT OF STAFFORD E. THORNTON, P.E.
PRESIDENT, AMERICAN SOCIETY OF CIVIL ENGINEERS

Good afternoon Madam Chair and members of the subcommittee. My name is Stafford E. Thornton. I am a Registered Professional Engineer and the President of the American Society of Civil Engineers (ASCE). I also serve as Director of the Technical Assistance Center at the West Virginia Institute of Technology. My statement today is being endorsed by the American Association of Engineering Societies (AAES), which represents 800,000 engineers nation-wide.

OVERVIEW

I am pleased to be at this important hearing today on extending certain tax code provisions to urge support for Section 127 of the Internal Revenue Code (IRC), which allows individuals to receive tax free employer paid educational assistance. ASCE, which has a long-standing position in support of Section 127, respectfully recommends permanent extension of Section 127 retroactive to December 31, 1994.

AMERICAN SOCIETY OF CIVIL ENGINEERS

The American Society of Civil Engineers, founded in 1852, is the oldest national engineering society in the United States. Membership, held by 115,000 individual professional engineers, is about equally divided among engineers in private practice; engineers working for federal, state or local governments; and those employed in research and academia. The Society's major goals are to develop engineers who will improve technology and apply it to further the objectives of society as a whole, to promote the dedication and technical capability of its members and to advance the profession of civil engineering.

AMERICAN ASSOCIATION OF ENGINEERING SOCIETIES

The American Association of Engineering Societies (AAES) is a multi-disciplinary organization dedicated to advancing the knowledge, the understanding and the practice of engineering in the public interest. Located in Washington, DC, AAES includes 28 engineering and scientific societies with over 800,000 members in industry, government and education.

THE EMPLOYEE EDUCATIONAL ASSISTANCE ACT OF 1995

ASCE is a strong supporter of the bill introduced by Congressman Levin, H.R. 127, the Employee Educational Assistance Act of 1995 which would make Section 127 permanent. This bill currently has 87 co-sponsors. This legislation has always enjoyed strong bi-partisan support on both sides of Capitol Hill.

ASCE believes reasonable educational assistance paid for by an employer should not be considered as additional employee income. ASCE supports exclusion of employer-paid educational assistance for undergraduate, graduate and continuing education courses from the employee's gross income for tax purposes. Currently, Section 127 allows employers to provide up to $5,250 per year to each of their employees in tax-free reimbursement for tuition, books and fees for non-job or job related education. Key benefits of Section 127, which was first enacted in 1978, are the reduced administrative inequities and tax code complexities associated with not having to determine whether certain educational or training courses are job-related. For example, a civil engineer with technical expertise in bridge design but in need of business or management training could use Section 127.

Over the years Section 127 has been allowed to expire, only to be subsequently reinstated (sometimes retroactively). On at least one other occasion the exclusion under Section 127 for graduate study costs was curtailed, which had a particularly harmful impact on our members. This unpredictable handling of Section 127 by the Federal Government has caused confusion among employers and employees, and has tended to discourage rather than promote employer-paid educational assistance.

The economic vitality and global competitiveness of the United States are critically dependent upon a highly trained technical work force. Graduate and continuing education for the American civil engineering work force is not a luxury, but rather an essential element of professional practice. Keeping pace with new and expanding fields of technology demands on-going education if America is to successfully meet the new reality of intense global competition. Our members are committed to life-long learning. The Seventh Fundamental Canon of ASCE's Code of Ethics states: "Engineers shall continue their professional development throughout their careers, and shall provide opportunities for the professional development of those engineers under their supervision".

Another facet of this issue is the need to produce quality educated engineers who can compete with foreign engineers since it is the policy of foreign governments and employers to send their students to U.S. universities where foreign students now constitute more than half of the graduate student body in many technical fields.

Extension of Section 127 is also important because:

- For many Americans, employee educational assistance benefits are the only way they can obtain a college or graduate-level education.

- The program is a proven one. According to the American Society for Training & Development (ASTD), since 1978 more

than seven million Americans have been able to work and attend classes in order to improve their skills and qualify for better jobs.

- This program is of special importance to women and minorities, as well as to workers who are at the bottom of the career ladder and who need better skills in order to move up.

- Section 127 benefits are used by employers to retrain workers either for other work within the company or, in the case of layoffs, for other employment in the community.

Contrary to the perception of some people, Section 127 does not confer disproportionate benefits on higher-paid workers. According to an analysis of the Department of Education's National Post-Secondary Student Aid Survey by Coopers & Lybrand in 1989, Section 127 benefits appear to be distributed in a manner closely paralleling earnings among the labor force as a whole. Benefits did not accrue disproportionately to higher-paid employees. Nearly 99% earned less than $50,000, 71% less than $30,000 and 35% less than $20,000.

Civil engineers, despite meeting rigorous educational standards, are not among the most highly compensated professionals when compared to other professions. ASCE research reports that the average starting salary for civil engineers was $32,000 in 1993. Mid-career civil engineers with Master's degrees or engineering licenses received salaries averaging $50,000 - $58,000 in 1993. Some may ask: "What kinds of courses are Section 127 recipients likely to take?" Again, referencing the Coopers & Lybrand study, nearly half of those with identified majors who were using Section 127 benefits were taking business-related courses. The remainder were taking, in descending order, courses in engineering, health science/nursing, education and computer science.

Another important consideration for Congress is the revenue loss associated with the tax exclusion for employer paid educational assistance. The most recent Joint Committee on Taxation (JCT) cost figure was the $545 million estimate for an 18 month extension that was generated in 1993. We expect that a new JCT cost estimate will be forthcoming. The JCT cost estimates for Section 127 have varied considerably over the years. Whatever the relatively modest cost to the U.S. Treasury associated with Section 127, ASCE strongly believes that the benefits to society far outweigh the cost.

Madam Chair, on behalf of ASCE and the AAES, thank you for allowing me to appear before the committee today. I would be happy to respond to any questions.

Mr. HERGER. Thank you very much, Mr. Thornton.
Mr. McVey, please.

STATEMENT OF ROSS J. MCVEY, ASSISTANT CONTROLLER AND DIRECTOR, TAX OF TELEPHONE & DATA SYSTEMS, INC., MIDDLETON, WISCONSIN

Mr. MCVEY. Good afternoon. My name is Ross McVey. I am the assistant controller and director of Tax of Telephone and Data Systems, or TDS. We welcome and appreciate the opportunity to provide testimony in support of the permanent addition of the exclusion for employer-provided educational assistance.

TDS is a diversified telecommunications company providing telephone, cellular telephone, and radio paging services in 37 States throughout the United States. TDS provides these services through its three subsidiaries, TDS Telecom, United States Cellular Corp., and American Paging. These subsidiaries have operations in approximately 225 business locations. While the TDS family employs over 5,000 people, a majority of these individuals are working at a typical small business located in rural America.

TDS's continued expansion into new markets, combined with the technological advances in the telecommunications industry and with increased competition, place greater demands on our company and our employees. The continued success of TDS depends, in large measure, on a well-educated and well-trained work force.

A hallmark of TDS has been its investment in the continuing education and training of its employees. To this end, TDS maintains an employer-provided educational assistance plan.

During 1994, TDS spent over $500,000 in educational assistance. The exclusion from income and payroll taxes of employer-provided educational assistance payments benefits the employee, the employer, as well as the Nation.

A well-educated and well-trained work force is vital to the Nation. We must strive to be a leader, a leading competitor in the global economy. The need for highly skilled employees will continue to increase in the information age. As more of the Nation's citizens move into professional and technical careers, our standard of living will increase.

For these reasons, education should be a top priority of the government. We believe that the investment the government makes now will be recouped many times over in the life of an individual.

The educational assistance program has been a valuable asset to TDS. The educational assistance program at TDS helps to increase employee loyalty, morale, and productivity. We believe that a well-educated and well-trained employee is more flexible and can adapt quicker to a changing business environment. This is important to TDS as we reorganize and modify our operations to meet customer demands.

In addition, the technological changes in the telecommunications industry will require our employees to pursue educational and training opportunities not only within their chosen field, but also in other areas that affect TDS.

The employee benefits in several ways from an employer-provided educational assistance program. Often, this is the only fi-

nancial assistance available. A full-time employee generally is not eligible for traditional forms of student aid.

In addition, the opportunities for advancement are much greater when an employee completes their bachelor's degree or obtains an advanced degree. The educational assistance will allow an employee to complete their education much sooner than if the employee were to finance the full cost of their own education. Currently in my department, 35 percent of the employees have either been accepted into a graduate program or are working on an advanced degree.

The repeal of the exclusion from income of employer-provided educational assistance payments would significantly hamper continued improvements to the American work force by adding considerable cost to both the employee and the employer in terms of income and payroll taxes.

The exclusion from income of employer-provided educational assistance under section 127 of the IRC was first enacted in 1978. The provision was originally set to expire in December of 1983. Subsequent to that, the provision has been extended at least six times.

While recognizing the budgetary constraints that are pervasive throughout tax legislative changes, the temporary status of this provision only helps to reduce the efficiency of congressional activity.

To summarize, TDS strongly advocates the permanent adoption of the exclusion from income of employer-provided educational assistance. An educational assistance program benefits the employee, the employer, and the Nation.

We would like to stress that for many of our employees, an educational assistance program is the only means of obtaining a higher education in a reasonable amount of time.

I thank you very much for the opportunity to present TDS's views here today.

[The prepared statement follows:]

Testimony of Ross J. McVey

on Behalf of
Telephone and Data Systems, Inc.

Concerning Extension of IRC Section 127

Good morning, my name is Ross J. McVey and I am the Assistant Controller and Director - Tax of Telephone and Data Systems, Inc. or TDS. We welcome and appreciate the opportunity to provide testimony in support of the permanent addition of the exclusion for employer provided educational assistance to the Internal Revenue Code. TDS is a diversified telecommunications company, headquartered in Chicago, Illinois, providing telephone, cellular telephone, and radio paging services in 37 states throughout the U.S. and the District of Columbia. TDS provides these services through its three subsidiaries, *TDS Telecom, United States Cellular Corporation, and American Paging, Inc.* The subsidiaries have operations in approximately 225 business locations. So while the TDS family employs over 5,000 people, a majority of these individuals are working at a typical small business located in suburban and rural America.

TDS's continued expansion into new markets combined with the technological advances in the telecommunications industry and with increased competition place greater demands on our company and our employees. The continued success of TDS depends in large measure on a well educated and well-trained workforce. A hallmark of TDS has been its investment in the continuing education and training of its employees. To this end, TDS has maintained an employer-provided educational assistance plan for the past several years. Since 1993, TDS has spent over $500,000 in educational assistance. The exclusion from income and payroll taxes of employer-provided educational assistance payments benefits the employee, the employer, as well as the nation.

A well-educated and well-trained work force is vital to the nation. We must strive to be a leading competitor in the global economy. The need for highly skilled employees will continue to increase in the information age. As more of the nation's citizens move into professional and technical careers, our standard of living will increase. For these reasons, education should be a top priority of the government. We believe that the investment the government makes now will be recouped many times over in the life of an individual's career.

The educational assistance program has been a valuable asset to TDS. The educational assistance program at TDS helps to increase employee loyalty, morale, and productivity. We believe that a well-educated and well-trained employee is more flexible and can adapt quicker to a changing business environment. This is important to TDS as we reorganize and modify our operations to meet customer demands. In addition, the technological changes in the telecommunications industry will require our employees to pursue educational and training opportunities not only within their chosen field, but also in other areas that affect TDS.

The employee benefits in several ways from an employer-provided educational assistance program. Often, this is the only financial assistance available. A full-time employee generally is not eligible for traditional forms of student aid. In addition, the opportunities for advancement are much greater when an employee completes his bachelor's degree or obtains an advanced degree. The educational assistance will allow an employee to complete his education much sooner than if the employee were to finance the full cost of his education. Currently in my department, 35 percent of the employees have either been accepted into a graduate program or are working on an advanced degree.

The repeal of the exclusion from income of employer-provided educational assistance payments would significantly hamper continued improvements to the American work force by adding considerable costs to both the employee and the employer in terms of income and payroll taxes. Section 162 of the Internal Revenue Code, in its present form, allows an employee to deduct from income amounts incurred for education or training which maintain or improve skills in his present position or meet the express requirements of his employer. The educational expenses are not deductible if the education qualifies the employee for a new trade or business. Additionally, the employee may deduct the expenses only if he itemizes deductions and the educational expenses combined with other miscellaneous deductions exceed two percent of his Adjusted Gross Income (AGI). Expenses paid for by the employer may be excluded from income of the employee as a working condition fringe benefit under Section 132 if the education or training is work related as defined in Section 162. Much of the course work undertaken by employees at TDS would not qualify under Sections 132 and 162 because the education would qualify them for another trade or business.

The exclusion from income of employer-provided educational assistance under Section 127 of the Internal Revenue Code was first enacted in 1978. The provision was originally set to expire on December 31, 1983. Subsequent to that date, the provision has been extended seven times. The latest extension expired on December 31, 1994. The temporary nature of this provision adds needless complexity and time to both Congressional and business activities. Each of these expirations required Congressional review and analysis. While recognizing the budgetary constraints that are pervasive throughout tax legislation changes, the temporary status of this provision only helps to reduce the efficiency of Congressional activity.

The continuing expiration and extension of this provision have a negative impact on business as well. This additional burden is best illustrated by the most recent extension of the provision after it expired on June 30, 1992. The exclusion of employer-provided educational assistance was then retroactively reinstated for taxable years beginning after June 30, 1992 as part of the Omnibus Reconciliation Act of 1993. Therefore, companies that had followed the existing tax law and treated such assistance as taxable income for amounts paid in the last half of 1992, were required to handle the administrative burden created by the reinstatement of this exclusion in the following year. The typical small business did not and does not have the staff or specialized knowledge to properly address this change. The result is that additional costs were incurred by businesses to ensure compliance with the tax law. To eliminate the additional time and complexity surrounding this provision, we strongly advocate the permanent addition of this exclusion to the existing tax law.

In conjunction with making this provision permanent, we urge Congress to index the cap on the exclusion. The limit on excludable benefits is currently $5,250. The cap was last increased as part of the Tax Reform Act of 1986. Tuition expenses for education have risen faster than the rate of inflation for the past several years. Between 1980 and 1993, the Consumer Price Index increased 75 percent. During the same period, tuition at public universities increased 207 percent and tuition at private institutions increased 220 percent. In order for the exclusion to remain effective, the cap should be indexed at least for the rate of inflation.

To summarize, TDS strongly advocates the permanent adoption of the exclusion from income of employer provided educational assistance. An educational assistance program benefits the employee, employer and the nation. Again, we would like to stress that for many of our employees, an educational assistance program is the only means of attaining a higher education in a reasonable amount of time. The benefits to TDS and our economy are a more competitive and adaptable work force. By making this provision permanent, both Congress and business save time and reduce costs. Indexing the cap on educational assistance will keep the exclusion meaningful if education costs continue to rise.

Mr. HERGER. Thank you very much, Mr. McVey.

Ms. Chase, you mentioned that you are, if I understood correctly, a product of this program and that it had helped you and enabled you to go on for further education and better yourself in your employment.

I guess my question would be, within your company, if section 127 were to be allowed to expire, how would you anticipate that that might influence your company as far as continuing to provide tuition assistance for other employees as you were able to?

Ms. CHASE. I am afraid that it becomes another more administrative burden. In human resources, we are trying to balance such things as COBRA and such things as Family Medical Leave Act. We have State law to follow. We have Federal law to follow. I don't think that it would go away, but I think that we would have to gear up to just handle the administrative burden that would be associated with that if it was handled differently.

Does that answer your question?

Mr. HERGER. More or less.

Do you feel your company would continue? Do you think there might be a possibility that your company or others might, perhaps, be cut because of that?

Ms. CHASE. I believe we would continue, but it would be another point I would have to sell to my CEO. Yes, but I do believe it would continue.

Mr. HERGER. OK. During good times, if your company is doing well, obviously that would be something you would do. Perhaps, if times were a little bit tougher, that might be an area that could be done away with.

Ms. CHASE. It could be cut.

Mr. HERGER. Mr. McVey, I understand you have a company in the Happy Valley of California.

Mr. MCVEY. Happy Valley, California. Yes, sir. I certainly do.

Mr. HERGER. It is good to have you with us.

Mr. MCVEY. We have 23 employees in the State of California, and 2 of them are currently engaged in the continuing education program. Two of your constituents would be directly affected by this program.

Mr. HERGER. I appreciate you letting me know that.

If section 127 were allowed to expire, a deduction for some job related education expense would be permitted, subject to the floor on miscellaneous itemized deductions under section 162. What would be the administrative burden associated with determining whether education expenses are job related?

Mr. MCVEY. At the present time, we are trying to go through that in order to comply with the law as it currently reads, and it is a particularly burdensome task to have to go through and figure out whether 5,000 employees are or are not in school and get them to send us a copy of their class list and try to decide whether that particular course is job related based on their job description.

Admittedly, there are some times when you simply guess. The reinstitution of section 127 would relieve us of that particular burden. It will eliminate future controversies with the Internal Revenue Service when they come back to do an audit, and that can only benefit both sides.

Mr. HERGER. Thank you very much.

Mr. Levin will inquire.

Mr. LEVIN. Thank you.

I think, Mr. Herger, your question on sections 162 and 127 is, indeed, a cogent one, and I think the answer is very helpful.

Let me just say I think all of your testimony was very helpful, and you added some increased evidence of the bureaucratic mess that is created by on-again-and-off-again, and it would be much preferable if we could decide on a public policy and make it permanent, and I hope all of us will keep that in mind.

With both your personal stories, and across-the-board professional experiences, your testimonies have been illuminating.

Thank you very much.

Mr. HERGER. I thank this panel. With no further questions, we thank you for joining us.

If the next panel would step forward, please. Wayne Ashworth, president of Virginia Farm Bureau, Richmond, Virginia, on behalf of the American Farm Bureau; John Young, president of the National Council of Agricultural Employers; Abbey Meyers, president, National Organization for Rare Disorders; Lisa Raines, vice president, government relations, Genzyme Corp.; James A. Joseph, president and chief executive officer, Council on Foundations; Jesse J. Thompson, founder, Provident Benevolent Foundation; and Joseph A. Licata, vice president of employee benefits, Salomon Brothers.

Mr. Ashworth, if you would present your testimony, please.

STATEMENT OF C. WAYNE ASHWORTH, PRESIDENT, VIRGINIA FARM BUREAU, RICHMOND, VIRGINIA; ON BEHALF OF THE AMERICAN FARM BUREAU FEDERATION

Mr. ASHWORTH. Yes, sir. Mr. Chairman and Members of the Oversight Subcommittee, I want to thank you for the opportunity to appear before you today representing the American Farm Bureau Federation.

I am Wayne Ashworth, president of the Virginia Farm Bureau. The Virginia Farm Bureau represents more than 114,000 member families. I have been involved in the Farm Bureau in one capacity or another since 1963. The American Farm Bureau is the Nation's largest general farm organization. The Farm Bureau has members in all 50 States and Puerto Rico, representing some 4.4 million member families nationwide. Farm bureau and ranch members are engaged in the production of virtually every agricultural commodity grown commercially in the United States.

I am here to present the views of the AFBF, American Farm Bureau Federation on the Federal Unemployment Tax Act (FUTA), and unemployment insurance (UI), coverage of temporary aliens agricultural workers admitted to the United States under the H2–A Program

When the UI Program was created, agricultural employers were exempt. In 1976 the Federal law was changed to extend eligibility to employees of certain agricultural employers. When UI coverage was extended to agricultural workers, payroll taxes were likewise extended to the employers. Temporary alien workers were exempted from FUTA taxes.

Workers under the H2–A Program are admitted to the United States to work for limited periods of time and are employed across the United States. They work in tobacco, apples and vegetables in my home State of Virginia and in the States of Kentucky and Tennessee. They work in tobacco and vegetables in North Carolina. They work in fruit, vegetables and nursery crops in New England and New York. They are employed in sheep herding in 12 western States, including North Dakota, South Dakota, Wyoming, Montana and California.

The policy resolutions adopted by the elected voting delegates of the member State Farm Bureaus at the 76th annual meeting of the AFBF, in January 1995 specifically addressed the issue of FUTA coverage for H2–A workers and opposed the imposition of Federal unemployment insurance payroll taxes on H2–A employers. The Farm Bureau policy is clear in its opposition to extending UI to H2–A workers and request that the H2–A FUTA exemption be extended permanently.

There are several reasons why UI should not be extended to H2–A workers. H2–A workers must return to their home countries at the conclusion of their employment and cannot remain unless they have secured additional employment with an H2–A certified employer. Due to their immigration status as temporary alien agricultural workers, H2–A workers are unable to meet the statutory unemployment eligibility test of being willing, able and available to work.

To force employers of H2–A workers to pay into the UI system would only serve to undermine the insurance feature of the program. In effect, employers would be forced to pay for insurance protection for their employees against financial loss associated with unemployment, despite the fact that no such injury can occur.

In addition, there is little in the way of additional revenue to the Federal Unemployment Trust Fund to be realized, if FUTA taxation is extended to the wages of H2–A workers. Employers are required to pay a FUTA tax of 0.8 percent on the first $7,000 an employee earns. This is taxable wage base. If 15,000 H2–A workers in any given year—in 1993, the U.S. Department of Labor certified 17,000 H2–A slots—earned as much as a taxable wage of $7,000, the employers' tax liability to the Federal Government under FUTA would be approximately $56 per worker. Therefore the total collected from the H2–A FUTA tax at the Federal level would be $840,000.

Extension of the FUTA to H2–A workers do not result in a tax windfall for the Federal Government, but does entail additional compliance requirements for farmers and ranchers. Employers would be responsible for significantly higher tax liability to State employment security agencies. Employees pay up to 6.2 percent of payroll for FUTA. 5.4 percent of that amount is paid to the States for the payment of benefits.

Imposition of the FUTA tax for H2–A workers would result in yet another regulatory burden for farmers. Not only is there the direct cost of the FUTA tax to consider, but also the indirect cost of additional recordkeeping and reporting responsibilities.

For these reasons, Congress should make the H2–A FUTA tax exemption permanent. H2–A workers will never be able to meet the ready, willing and available test to receive benefits, even if taxes are paid for them.

I thank you for the opportunity to testify here today. If you have any questions, I would be willing to try to answer them.

[The prepared statement follows:]

STATEMENT OF THE AMERICAN FARM BUREAU FEDERATION

Presented by
C. Wayne Ashworth
President, Virginia Farm Bureau

Madame Chairman, members of the Oversight Subcommittee, I want to thank you for the opportunity to appear before you today representing the American Farm Bureau Federation. I am Wayne Ashworth, President of the Virginia Farm Bureau. Virginia Farm Bureau represents more than 114,000 member families. I have been involved in Farm Bureau in one capacity or another since 1963.

The American Farm Bureau is the nation's largest general farm organization. Farm Bureaus in all 50 states and Puerto Rico represent some 4.4 million member families nationwide. Farm Bureau's farm and ranch members are engaged in the production of virtually every agricultural commodity grown commercially in the United States.

I am here to present the views of the American Farm Bureau Federation on Federal Unemployment Tax Act (FUTA) and Unemployment Insurance (UI) coverage of temporary alien agricultural workers admitted to the United States under the H-2A program.

When the UI program was created, agricultural employers were exempt. In 1976, the federal law was changed to extend eligibility to employees of certain agricultural employers.

When UI coverage was extended to agricultural workers, and FUTA payroll taxes were likewise extended to their employers, temporary alien workers were also exempted from FUTA taxes.

H2-A workers are admitted to the United States under Section 101(a)(15)(H)(2)(a) of the Immigration and Nationality Act to perform agricultural labor tasks, generally for limited periods of time. H-2A workers are employed across the United States: they work in tobacco, apples and vegetables in my home state of Virginia, and in the states of Kentucky and Tennessee; they work in tobacco and vegetables in North Carolina; they work in fruit, vegetables and nursery crops in New England and New York; and they are employed in sheepherding in twelve western states including North Dakota, South Dakota, Wyoming, Montana and California.

The policy resolutions adopted by the elected voting delegates of the member state Farm Bureaus at the 76th annual meeting of the American Farm Bureau Federation in January 1995 specifically addressed the issue of FUTA coverage for H-2A workers and opposed the imposition of federal unemployment insurance payroll taxes on H-2A employers.

Farm Bureau policy is clear in its opposition to extending UI to H-2A workers and requests that the H-2A/FUTA exemption be extended permanently. The H-2A/FUTA exemption has been granted for specified periods of time, usually two to three years. The most recent exemption expired on January 1, 1995.

There are several reasons why UI should not be extended to H-2A workers. H-2A workers must return to their home countries at the conclusion of their employment, and cannot remain unless they have secured additional employment with an H-2A certified employer. Due to their immigration status as temporary

alien agricultural workers, H-2A workers are unable to meet the statutory unemployment eligibility test of being willing, able, and available to work. To force employers of H-2A workers to pay into the UI system would only serve to undermine the insurance feature of the program. In effect, employers would be forced to pay for insurance protection for their employees against financial loss associated with unemployment, despite the fact that no such injury can occur.

In addition, there is little in the way of additional revenue to the federal Unemployment Trust fund to be realized if FUTA taxation is extended to the wages of H-2A workers. As I mentioned before, employers are required to pay a FUTA tax of 0.8 percent of the first $7,000 an employee earns (the taxable wage base). If 15,000 H-2A workers in any given year (in 1993, the U.S. Department of Labor certified 17,000 H-2A slots) earned as much as the taxable wage base of $7,000, their employers' tax liability to the federal government under FUTA would be approximately $56 per worker. Therefore, the total collected from the H-2A FUTA tax at the federal level would be $840,000. Extension of FUTA to H-2A workers does not result in a tax windfall for the federal government, but does entail additional compliance requirements for farmers.

Employers would be responsible for a significantly higher tax liability to state employment security agencies; employers pay up to 6.2 percent of payroll for FUTA, based on their experience rating; 5.4 percent of that amount is paid to the states for the payment of benefits. Thus, employers would be subject to a significant state tax liability for Unemployment Insurance (which would vary somewhat by jurisdiction) should Congress fail to correct the law to exempt H-2A wages from FUTA.

Imposition of the FUTA tax for H-2A workers would result in yet another regulatory burden for farmers. Not only is there the direct cost of the FUTA tax to consider, but also the indirect costs of additional record keeping and reporting responsibilities. These added costs for farmers, unlike most other business operations, cannot be readily recouped in the form of higher prices for farm commodities. Unfortunately, farmers do not set commodity prices, the marketplace does. When prices are low, all the farmer can do is withhold commodities from the market in hopes of a better price at a later date. With highly perishable commodities, a farmer is only able to withhold commodities from the market for a very short period of time, if at all. If farmers are unable to recoup the added cost of FUTA taxes, it is a direct hit on net farm income. For perishable crops, margins are already razor thin.

For these reasons, Congress should make the H-2A/FUTA tax exemption permanent. H-2A workers will never be able to meet the "ready, willing, and available" test to receive benefits, even if taxes are paid for them.

Thank you for the opportunity to testify. I look forward to answering any questions you may have.

Mr. HERGER. Thank you very much, Mr. Ashworth.
Mr. Young, if you would testify, please.

STATEMENT OF JOHN H. YOUNG, PRESIDENT, NATIONAL COUNCIL OF AGRICULTURAL EMPLOYERS

Mr. YOUNG. Mr. Chairman and Members of the Oversight Committee, I want to thank you for giving me the opportunity to testify before you today representing NCAE, the National Council of Agricultural Employers.

I am John Young, president of the National Council of Agricultural Employers, and executive director of the New England Apple Council, a member of NCAE. I am also the owner and operator of Mapadot Farm, an apple orchard in New Boston, New Hampshire. We rely on the H2–A Program to secure apple pickers for our annual harvests, as do most of the members of the New England Apple Council.

The National Council of Agricultural Employers is the only national association focusing solely on farm labor and immigration issues from the farm management point of view. Our membership includes agricultural employers in 50 States who employ approximately 75 percent of the agricultural work force in the United States. NCAE's members include farm cooperatives, growers, packers, processors and agricultural associations. NCAE represents virtually all of the more than 3,000 employers who use the H2–A temporary agricultural worker program.

The H2–A worker program is the program under which aliens are admitted temporarily to perform agricultural work in the United States. Employers only become eligible to use the H2–A program after the U.S. Department of Labor has certified that sufficient U.S. workers are not available to fill their jobs.

The H2–A aliens are admitted to work for a specific employer for the duration of a specific temporary or seasonal agricultural job such as apple harvesting in my own case. After the H2–A alien completes the work contract for which he was admitted, he is then required to return to his or her home country, unless the stay is extended to work on another H2–A contract.

The payrolls of H2–A aliens (then called H2) were exempted from FUTA taxes when the unemployment insurance coverage was first extended to agricultural employers in 1976. The H2–A workers, along with most other categories of nonimmigrant aliens, were excluded from UI benefits by the same legislation. Congress has regularly renewed the H2–A FUTA tax exemption, most recently through December 31, 1994.

The exemption of H2–A payrolls from FUTA taxes is entirely consistent with the "insurance" concept which is at the heart of the UI program. Even if H2–A workers were not statutorily excluded from UI benefits, they would nevertheless be ineligible to receive benefits because they cannot remain in the United States and meet the availability for work test once they leave the employ of the employer who petitioned for their initial admission or extension of stay. It is not reasonable to require employers to pay premiums to protect workers who are barred from receiving the benefit the premiums purchase. Congress should, in fact, make the FUTA exemp-

tion on H2–A payrolls permanent, as it did with the H2–A exemption from FICA taxes, for which the same rationale applies.

My fellow panelist has pointed out that the revenue that would be added to the Federal coffers, if this exemption is not continued, is very small, well under $1 million. The total added cost to the affected farmers of imposing this tax is not reflected in the Federal portion. Most State laws exclude from State unemployment taxes the same payrolls that Federal law excludes from Federal taxation. The added State UI tax burden that farmers would incur by ending this exemption is substantial. For many farmers, it would amount to an immediate increase of more than 6 percent in their payroll costs because of the high UI experience rating resulting from the seasonal nature of farm work.

It is sometimes argued that H2–A payrolls should be taxed, even though H2–A aliens cannot receive UI benefits, in order to equalize employers tax obligations for U.S. and alien workers or to preclude an incentive to employ aliens or to discourage employers from employing them. This argument fails on two grounds.

First, H2–A aliens are already very expensive, as reflected by the low level of use of the program—about 17,000 H2–A aliens employed nationwide in 1994. The range of benefits farmers are required to provide in job opportunities certified for employment of H2–A workers is substantially above that received by the average U.S. farm worker. Added to this is the substantial cost of transportation and housing of the H2–A. The high cost of the H2–A program is the reason most frequently cited by farmers for the current low use of the program.

Second, it is not the role of the unemployment insurance program to seek to "discourage" employers from employing H2–A workers, when sufficient qualified domestic workers are not available to fill employers' job opportunities.

This is particularly true, given that Congress has throughout the history of U.S. immigration law taken the position that provisions for the temporary employment of aliens are needed and are in the national interest. If the unemployment insurance program is expanded from an insurance-based program for compensating workers who have temporary periods of involuntary unemployment into a program for advancing other agendas, the very integrity of the system and the protections it affords to working men and women will be threatened.

I urge the Subcommittee and the Congress to permanently exempt the payrolls of H2–A workers from FUTA taxes retroactive to January 1, 1995. Thank you for your attention, and I will be happy to respond to questions.

Mr. HERGER. Thank you very much.

Ms. Meyers.

STATEMENT OF ABBEY S. MEYERS, PRESIDENT, NATIONAL ORGANIZATION FOR RARE DISORDERS, INC., NEW FAIRFIELD, CONNECTICUT

Ms. MEYERS. Thank you.

I am Abbey Meyers, president of the National Organization for Rare Disorders, which is known as NORD. We are a group of approximately 135 national voluntary health agencies concerned

about orphan diseases, and we worked together in the early eighties to help pass the Orphan Drug Act of 1983. This law has become one of the most successful Federal laws passed by Congress in the last 20 years. It has created financial incentives to entice pharmaceutical manufacturers into developing drugs that ordinarily have little commercial value.

One of these incentives is a tax credit which is 50 cents on every dollar a company spends to develop a drug for a rare disease. These drugs are sold to very small populations of people and they ordinarily would cost more to develop than they would make a profit once it is on the market. It allows companies to save 50 cents out of every dollar that they spend on clinical trials. It is an extraordinarily important law, but every few years this tax credit expires and then Congress has to determine when it is going to reauthorize the tax credit, and it is usually months to a year or more before this reauthorization occurs.

We would like to see the orphan drug tax credit made permanent in the Tax Code, because it would give certainty to companies who cannot now make a decision as to whether to invest in an orphan drug's development, if they do not know whether they are going to have the tax credit every year when the credit expires.

We also feel it is extremely important that they carry forward the tax credit, because many of the orphan drug companies are small pharmaceutical and biotechnology companies that are not yet profitable and, therefore, they cannot use the tax credit. They cannot sell it, they cannot trade it, and they cannot use it until they become profitable. If they could carry that credit forward to future years when they are profitable, it would help enormously, especially in the biotechnology field, where the most promising treatments for genetic diseases would be developed. It would really help to encourage other companies to get involved with orphan drug development.

Eventually, we would like to see that tax credit cover preclinical research, too, but it is most imperative now that we reauthorize this credit immediately to make sure that companies do not lose the credits that expired in 1994.

I also have to say that Japan passed an Orphan Drug Act last year. The European Union will be passing an Orphan Drug Act within the next 2 years. We have to stay competitive with these other countries and make sure that the incentives of the Orphan Drug Act are strengthened, because there will be a large amount of competition in the near future in this area, and orphan drugs are a very important export of the United States.

Thank you.

[The prepared statement follows:]

STATEMENT OF ABBEY S. MEYERS
PRESIDENT, THE NATIONAL ORGANIZATION FOR RARE DISORDERS, INC

Madam Chairman and Members of the Subcommittee:

Good afternoon, I am Abbey Meyers, President of the National Organization for Rare Disorders, Inc. (NORD). NORD is a national non-profit voluntary health agency that represents the 20 million Americans who suffer from over 5,000 rare diseases and disorders. NORD's membership includes 138 national voluntary health organizations and support groups dedicated to the identification, treatment and cure of rare "orphan diseases."

An orphan disease is a condition that affects fewer than 200,000 Americans. Hereditary diseases account for approximately 4,000 of these 5,000 little known diseases. Because so few people are affected by each disorder, the pharmaceutical industry is reluctant to develop drugs to treat such illnesses due to the limited potential for profit. However, combined together rare diseases affect an estimated 20 million people in the United States alone, clearly adding major financial burdens to our nation. More importantly, the absence of effective treatments for these ailments causes severe disability and needless death among our fellow Americans.

The Orphan Drug Act of 1983

When I first testified before Congress fifteen years ago, rare disease patients were literally being "orphaned" by doctors, researchers, and pharmaceutical firms, and even by our government. Since drug companies would not manufacture treatments, scientists were not interested in spending years researching compounds that may never make it to the market. In 1983, Congress passed the **Orphan Drug Act** aimed at solving the orphan drug dilemma. It provided economic incentives to entice pharmaceutical companies into developing drugs of "limited commercial value" to treat or cure rare diseases. Finally, millions of profoundly desperate patients were given the hope that they so critically needed.

The Act has been enormously successful. During the ten years prior to the enactment of the law, only ten orphan products were developed by the industry. In the twelve years since, approximately 600 orphan products have been designated by the Food and Drug Administration (FDA) and 111 have been approved for marketing.

The Orphan Drug Tax Credit

One of the major incentives of the Orphan Drug Act is a tax credit of 50 cents on every dollar that a company spends for clinical research to develop an orphan drug. This was seen as a very necessary and positive way to attract companies into this field of research and development. However, the tax credit has had a very limited impact for several reasons. First, it expires every couple of years -- forcing Congress to spend valuable time deciding whether or not to grant reauthorization, and if so, whether the credit should be made retroactive to the date when it expired. This is why we are here today. These recurring gaps in the very existence of the orphan drug tax credits bring a great deal of uncertainty to manufacturers who are already hesitant to launch expensive clinical trials. Furthermore, such an uncertain fate tends to scare away prospective investors who are needed to provide the start-up capital for this research.

Therefore, the National Organization for Rare Disorders, Inc. (NORD) recommends that the Orphan Drug Tax Credit be made permanent, or at least extended for another five years.

Another reason for the limited impact of the tax credit involves its narrow application. Many small companies that are not yet profitable cannot use the tax credit because it cannot be carried forward to a profitable year. Therefore, the companies which are best suited to develop treatments for rare genetic disorders, the biotechnology industry, very often cannot use the tax credit. It is important to note that just last month, the Director of the National Institutes of Health (NIH) submitted a report to the Senate, entitled "Gene Therapy on Hereditary Rare Diseases". This NIH report strongly contends that biotechnology and gene therapy are the areas of scientific research which offer the most promise for discovering safe and effective treatments for the vast majority of rare orphan diseases. Everyone agrees that it is wise to invest in research where the technology actually has the highest probability of succeeding. The ability of a small company to carry the orphan tax credit forward is just that -- a smart investment in the most promising research.

According to the Department of the Treasury, only $18 million was claimed during 1992 by the pharmaceutical industry in orphan drug tax credits. This relatively tiny sum was claimed mostly by large multinational companies. When we look at the big picture, this small amount claimed indicates how little they invested in orphan drug research. The lions share of orphan drug development is being performed by small pharmaceutical and biotechnology companies because they are willing to develop products that have smaller annual sales. We believe that the orphan tax credit should be restructured to provide these innovative companies (and their investors) with at least some degree of certainty about such important business ventures in the interest of the public health.

Therefore, the National Organization for Rare Disorders, Inc. (NORD) recommends that companies be allowed to carry the Orphan Drug Tax Credit forward to a profitable year.

A third reason the orphan credit has not shown greater results is because it may only be applied to the costs incurred for clinical research, in other words human trials. Essential pre-clinical trials -- such as expensive toxicology tests -- are not covered by the orphan credit. The U.S. National Commission on Orphan Diseases, in its 1989 report to Congress, recommended that the tax credit should be applicable to such pre-clinical testing.

Therefore, the National Organization for Rare Disorders, Inc. (NORD) recommends that the Orphan Drug Tax Credit be applied to pre-clinical research costs.

Madam Chairman, while others may offer further suggestions for the restructuring of the orphan drug tax credit, NORD does not. For example, we do not support the expansion of the tax credit to cover post marketing R&D. We believe that once a drug is approved and on the market and a company wants to study it for another orphan disease, then an orphan drug designation may be obtained for that new use. The tax credit would then apply to that new clinical research.

Anyone familiar with NORD's position on pharmaceutical issues throughout the years realizes that we do not shy away from criticizing the drug industry when necessary and we do not believe that the Orphan Drug Act is perfect. There have been a few problems. Three or four companies have developed drugs that have become extraordinarily profitable. We feel that these cases represent abuses of the intent of the law and we have recommended that Congress change the Act to prevent future abuses. However, that is a separate issue from the tax credits.

The fact is, more than 100 of the 111 orphan drugs on the market are **true** orphan products that have limited commercial value in comparison to drugs for prevalent diseases like arthritis or hypertension. Without orphan drug incentives, companies will choose to invest their limited resources in research and development of only the most profitable drugs for prevalent diseases. Orphan drugs on the market today include drugs for Wilson's disease, lead poisoning, dystonia, carnitine deficiency, porphyria and other diseases that have never been heard of by most people. Clearly, these treatments would not have been developed without the incentives of the Orphan Drug Act.

Madam Chairman, the National Organization for Rare Disorders celebrates one of the newest drugs to reach the market. Twenty years ago, academic scientists were studying a rare hereditary kidney disease, Cystinosis, which killed children during adolescence. They discovered that the drug cysteamine could prevent these children from losing their kidneys and going blind. Over the next two decades, the scientists searched for and indeed begged manufacturers to adopt this drug, but no company was interested because less than 300 children in the United States have Cystinosis. The scientists could not allow the children to die, so they continued to buy the raw chemicals and distribute cysteamine as an investigational drug. Periodically, they would run out of money and would have to beg and borrow in order to find the resources to keep the experimental treatment available. Finally, a generic drug company stepped forward and agreed to produce this treatment in a form which made FDA marketing approval possible. Today, children with the fatal hereditary metabolic disease, cystinosis, have been given a new life because the orphan drug, Cystagon, is now available from Mylan Pharmaceuticals.

Many more orphan drugs would be developed if manufacturers could rely on dependable tax credits that won't expire when they least expect it. Orphan drug development is an area where the government plays a vital role by meeting a societal need that is not being met by the private market. There is much more our government can do to alleviate suffering, and avoid disability and death if the orphan drug tax credit can be enhanced.

Madam Chairman, the United States is running the risk of falling behind in the highly competitive world of medical technology. By way of comparison, Japan enacted an Orphan Drug Act in 1994. During this first year, the Japanese have already approved 50 new rare disease protocols. The Japanese government subsidizes 50% of the cost of all research on all new orphan drug products, totaling several millions of dollars each year. Germany has reserved $840 million in an annual fund to support biotechnology research. Last year they solicited applications for funding of 30 gene therapy protocols, but they received 180 applications for those funds, mostly for rare genetic diseases. France allocated $50 million for gene therapy research last year, but the United States has reserved zero. The European Union (EU) has set aside $336 million for pharmaceutical R&D, encompassing nine priority areas (Article 20, Treaty of European Union). One of those priority areas is rare diseases. This year, the EU is drafting orphan drug legislation more expansive than ours -- with 10 years of market exclusivity and a wider definition of orphan status.

In our opinion, the Orphan Drug Act is the most significant piece of health care legislation in the last two decades. We are very pleased that the President indicated his support for the extension of the orphan drug tax credit in his FY'96 Budget Request to Congress earlier this year. We fully support the enactment of **H.R. 1566 "The Orphan Drug Tax Credit Amendments of 1995"**, recently introduced by Chairwoman Johnson and the ranking minority member of this subcommittee, Mr. Matsui. This legislation takes a first step in the right direction by 1) extending the tax credit permanently and 2) by allowing companies to carry the credit forward to a profitable year.

Madam Chairman, we appreciate having the opportunity to present our views before this Subcommittee. We offer our continued advice and support to you and your staff. Thank you.

Mr. HERGER. Thank you very much, Ms. Meyers, for your testimony.

Ms. Raines.

STATEMENT OF LISA RAINES, VICE PRESIDENT, GOVERNMENT RELATIONS, GENZYME CORP., CAMBRIDGE, MASSACHUSETTS; ON BEHALF OF BIOTECHNOLOGY INDUSTRY ORGANIZATION

Ms. RAINES. Thank you, Mr. Chairman.

My name is Lisa Raines and I am vice president of Genzyme Corp., a biotechnology company headquartered in Cambridge, Massachusetts. I am here today both on behalf of my company and the BIO, Biotechnology Industry Organization, which represents more than 570 biotechnology companies, State university centers and related organizations in 47 States.

Mr. Chairman, the biotechnology industry strongly supports enactment of H.R. 1566, Mrs. Johnson's bill to make the orphan drug tax credit permanent and to amend it so that the credit can be carried forward in the same way that the research and experimentation credit can be carried forward. This legislation will facilitate increased research into drugs to treat rare diseases for which no treatment is available, particularly by the small biotechnology companies that currently perform about half of all orphan drug research.

In the 10 years prior to the enactment of the Orphan Drug law, only seven drugs were approved by the Food and Drug Administration for treatment of rare diseases. In the 12 years since enactment, over 100 drugs have been approved for marketing, and about 600 are in various stages of development. This is concrete objective evidence of the success of the orphan drug program, perhaps one of the most clearly successful programs that Congress has enacted in the last 20 years.

My company Genzyme was the first and only company to develop an FDA, Food and Drug Administration, approved treatment for Gaucher disease, a severely debilitating and sometimes fatal genetic disorder with a worldwide patient population of under 5,000. We are now developing orphan drugs for a number of other rare diseases, including a variety of genetic diseases and rare cancers.

Still there is more research that needs to be done for the 20 million Americans that suffer from one of about 5,000 rare diseases. By reducing the risk and cost of developing treatments for millions of seriously ill Americans, the orphan drug tax credit plays an important role in creating an incentive for private companies to tackle these diseases.

Since the enactment of the orphan drug tax credit in 1983, it has been temporarily extended four times, most recently until December 31, 1994. It has since expired, thereby effectively increasing the cost of orphan drug research and reducing the incentive to developing orphan drugs.

The effectiveness of the tax credit to encourage the development of products that take 10 to 12 years to develop is compromised if companies cannot depend on it to last through the entire clinical development process. Uncertainty about the availability of the credit for the entire process has almost certainly led some compa-

nies to conclude that they cannot afford to develop orphan drugs. In the absence of these treatments, ineffective yet expensive health care interventions will continue to be a cost to the taxpayer.

H.R. 1566 would make the orphan drug tax credit permanent, and by reducing uncertainty about the net aftertax cost of orphan drug development, this legislation would better enable companies to financially commit themselves to the lengthy and arduous process of developing these products.

In fact, my company is prepared to make the following public commitment. If the orphan drug tax credit is made permanent, we will reinvest every cent of the tax savings attributable to the credit in orphan drug research. While no company can forecast its future circumstances or where scientific advances may take us, we do feel confident that we can keep this commitment for the foreseeable future.

In addition to making the credit permanent, we believe that the credit should be restructured as is provided in the bill to permit companies to carry the credit forward or back. Under the credit's existing structure, a company can only claim the credit if it has incurred corporate income tax liability in the same year as the credit is earned. It has to be used or lost that same year.

Of course, if the company loses money that year so it has no current tax liability, then it loses the credit forever. This is what happens to most biotechnology companies. It happened to my company for the first 10 years it was in existence. The last 2 years have been the first 2 that we have actually been able to use the credits that we have earned.

Restructuring the orphan drug tax credit to permit carryforward and carrybacks would also make it more closely resemble the research and experimentation tax credit on which it was modeled. Not only would such a restructuring increase consistency among two similar tax credits, it would eliminate the orphan drug credit's current discrimination against small development stage biotech companies at the same time as it increases the incentive for these companies to invest in orphan drug development.

Thank you for the opportunity to express the biotechnology industry's views.

[The prepared statement follows:]

STATEMENT OF LISA RAINES
VICE PRESIDENT FOR GOVERNMENT RELATIONS
GENZYME CORPORATION, CAMBRIDGE, MASSACHUSETTS

Madam Chairman and members of the Subcommittee, my name is Lisa Raines and I am vice president for government relations of Genzyme Corporation, a biotechnology company based in Cambridge, Massachusetts. I am here today on behalf of both Genzyme and the Biotechnology Industry Organization (BIO), which represents more than 570 biotechnology companies, state biotechnology centers, and related organizations in 47 states and more than 20 countries.

The biotechnology industry strongly supports enactment of H.R. 1566, a bill to make the orphan drug tax credit permanent and to amend it so that the credit can be carried forward in the same way that the research and experimentation credit can be carried forward. This legislation will facilitate increased research into drugs to treat rare diseases for which no current treatment is available, particularly by the small biotechnology companies that currently perform about half of all orphan drug research.

I am pleased to note that this bill is being offered on a bipartisan basis by the Chairwoman, Mrs. Johnson, and the ranking minority member of this subcommittee, Mr. Matsui. This legislation enjoys the support of both the patient and provider communities, it has no known opposition, it is consistent with the President's call on Congress to extend the orphan drug credit, and it would have a minimal impact on federal revenue receipts. The biotechnology industry urges swift enactment of the Johnson-Matsui bill.

Success of the Orphan Drug Legislation

The Orphan Drug Act is unanimously recognized as one of the most effective pieces of legislation enacted by Congress in the last twenty years. The Act provides a variety of incentives for companies to develop drugs with limited commercial potential to treat patients with rare diseases, which are defined by law as conditions affecting fewer than 200,000 Americans.

In the ten years prior to enactment of the orphan drug law, only seven drugs were approved by the Food and Drug Administration (FDA) for treatment of rare diseases. In the twelve years since enactment, over 100 drugs have been approved for marketing and approximately 600 drugs are in various stages of development.

My company, Genzyme, was the first and only company to develop an FDA-approved treatment for Gaucher disease, a seriously debilitating and sometimes fatal genetic disorder with a worldwide patient population of under 5,000. We are now developing orphan drugs for a number of other rare diseases, including genetic diseases (cystic fibrosis and Fabry disease) and rare cancers (myelogenous leukemia, thyroid cancer, and Kaposi's sarcoma).

Still, there is more research that needs to be done for the 20 million Americans that suffer from one of about 5,000 rare diseases. By reducing the risk and cost of developing treatments for millions of seriously ill Americans, the orphan drug tax credit plays an important role in creating an incentive for companies to tackle these diseases.

Orphan Drug Tax Credit Amendments (H.R. 1566)

Bringing a new drug for a rare disease from bench to bedside is a lengthy and expensive process which typically consumes ten to twelve years of research costing many millions of dollars. The effectiveness of a tax credit to encourage the development of such products is compromised if companies cannot depend on it to last through the entire clinical development process.

Since enactment of the orphan drug tax credit in 1983, it has been temporarily extended several times, most recently until December 31, 1994. It has

since expired, thereby effectively increasing the cost of orphan drug research and reducing the incentive for developing orphan drugs. Uncertainty about the availability of the credit for the entire clinical development process has almost certainly led some companies to conclude that they cannot afford to develop orphan drugs.

H.R. 1566 would make the orphan drug tax credit permanent. By reducing uncertainty about the net, after-tax cost of orphan drug development, this legislation would better enable companies to financially commit themselves to the lengthy and arduous process of developing orphan drugs. In fact, my company is prepared to make the following commitment: If the orphan drug tax credit is made permanent, we will reinvest every cent of tax savings attributable to the credit in orphan drug research. While no company can forecast its future circumstances or where scientific advances may take us, we feel confident that we can keep this commitment for the foreseeable future.

In addition to making the credit permanent, we believe that the credit should be restructured -- as is provided in H.R. 1566 -- to permit companies to carry the credit forward or back. Under the credit's existing structure, a company can only claim the credit if it has incurred corporate income tax liability in the same year as the credit is earned. If the company loses money that year, so that it has no current tax liability against which the credit can be offset, then the credit is lost forever.

Restructing the orphan drug tax credit to permit carryforwards and carrybacks would make it more closely resemble the research and experimentation tax credit, which can be "saved" and applied to a company's future tax liability. Not only would such a restructuring increase consistency among two similar tax credits, it would eliminate the orphan drug credit's current discrimination against small, development-stage biotechnology companies at the same time as it increases the incentive for these companies to invest in orphan drug development.

Most small biotech firms have yet to bring their first product to market. Until its first product receives FDA approval and begins generating revenues, a small company will generally be unprofitable. Since unprofitable companies have no current tax liability against which to utilize the orphan drug credit, these companies get no benefit from the credit. Yet some small biotech companies perform more orphan drug research than some large pharmaceutical companies that have tax liabilities against which to offset their credit. Restructuring the credit would eliminate this tax inequity between large and small companies, while providing both with an important incentive to include orphan drugs in their research portfolios.

Making the tax credit permanent and restructuring it so that the credit can be used in tax years other than the one in which it was earned has been scored by the Joint Committee on Taxation to cost $157 million over the next five years. Such an amount is a small investment to provide an incentive for research that can be so effective in improving the quality of life of so many.

Other Proposals for Restructuring the Orphan Drug Tax Credit

While the biotechnology industry supports enactment of H.R. 1566 as drafted, we would like to encourage you to consider the addition of two additional restructuring proposals.

First, the credit could be made available for preclinical research, which is the laboratory and animal research that necessarily precedes human testing. Such preclinical research is fundamental to the discovery process of orphan drugs. As currently structured, the credit only applies to clinical (human testing) research.

And second, the credit could be made available for orphan drug clinical research that is conducted after the product receives FDA approval. Contrary to popular belief, clinical research does not end when a product is approved for marketing. For example, companies typically continue to conduct clinical trials to better understand the effect of different dosing regimens. In addition, FDA strongly encourages companies to conduct pediatric clinical trials with approved drugs so that they can be dosed appropriately for children. Similarly, a drug that is approved to treat one form of cancer may be tested against a second type of cancer. As currently structured, none of these post-approval clinical trials would be eligible for the credit.

Conclusion

Madam Chairman, I thank you for inviting me to testify before this Subcommittee. I would be happy to answer any questions.

Mr. HERGER. Thank you for your testimony.
Mr. Joseph.

STATEMENT OF JAMES A. JOSEPH, PRESIDENT AND CHIEF EXECUTIVE OFFICER, COUNCIL ON FOUNDATIONS

Mr. JOSEPH. Mr. Chairman, I am James A. Joseph, president and chief executive officer of the Council on Foundations. The council is a nonprofit charitable membership association of grant-making foundations and corporations. Our members number almost 1,400. Together they hold the bulk of the assets of the foundation community and make the bulk of that community's charitable grants each year.

I am pleased to testify today in support of permanent restoration of the highly important tax provision enacted in 1984 and sunsetted at the end of last year which permitted living donors to deduct the full value of publicly traded stock given to private foundations. Our experience strongly suggests that if the deduction is not restored, this critically important class of charitable giving will virtually disappear.

America's private foundations contribute more than $10 billion annually to charitable organizations large and small that advance scientific and medical research, strengthen the American educational system, help the poor and disadvantaged, and provide disaster relief, to name just a few of the multitude of charitable purposes of foundation grants.

Mr. Chairman, I have attached to my statement a document we call "Philanthropy's Great Grants," which tells the story of several important uses of private foundation grants. The expired charitable deduction before the Subcommittee, if restored, will provide a powerful incentive for Americans to make permanent conversions to charitable use of stock now held solely for private and personal benefit.

I would like to briefly highlight five good reasons to restore this charitable deduction. First, with pending government cutbacks in spending, the importance of giving to private foundations is greater than ever. While foundations clearly do not have the capacity to replace the likely spending cuts, they can provide invaluable assistance in the coming transition. Now more than ever, it is important to stimulate giving to foundations.

The second reason is that the expired charitable deduction has proven effective in stimulating increased giving. When the full value deduction for gifts of publicly traded stocks to private foundations was reinstated in 1984, lifetime giving to foundations skyrocketed.

The third reason is that the public charitable benefit far outweighs any revenue losses. Reinstatement of this deduction will generate benefits to charitable enterprises and the public far greater than any estimate of its effect over the next several years can suggest.

The fourth reason, IRS and Treasury have reported no problems or evidence of abuse. From time to time, Congress has expressed concern about the potential overvaluation of gifts to charity. It is important to emphasize to this Subcommittee that the charitable

deduction under consideration here permits full value deductions only for gifts of publicly traded stock.

The fifth and final reason, restoring the deduction will accelerate charitable benefits and produce more effective new foundations. In sum, Mr. Chairman, restoring the charitable deduction for gifts of publicly traded stock to private foundations presents a rare opportunity to transform substantial wealth now held for personal purposes to a major resource permanently dedicated to the support of sound and creative charitable works. For this reason and many others, I strongly urge you to renew this deduction and to make it a permanent part of the IRC.

Thank you very much for this opportunity to testify before you.

[The prepared statement and attachments follow:]

Statement of

JAMES A. JOSEPH
PRESIDENT AND CEO
COUNCIL ON FOUNDATIONS

Madame Chair and Distinguished Members of the Subcommittee:

Good morning, I am James A. Joseph, President and CEO of the Council on Foundations. The Council is a nonprofit, charitable membership association of grantmaking foundations and corporations. Our members now number over 1,375. Together they hold the bulk of the assets of the foundation community and make the bulk of that community's charitable grants each year.

I am pleased to testify here today in support of permanent restoration of the highly important tax provision, enacted in 1984 and sunseted at the end of last year, which permitted living donors to deduct the full value of publicly traded stock given to private foundations.[1] With the expiration of that provision, donors may now deduct only the cost basis of such gifts of stock. Our experience strongly suggests that, if the deduction is not restored, this critically important class of charitable giving will virtually disappear.

The Unique Contribution of Private Foundations

America's private foundations contribute more than $10 billion annually to charitable organizations, large and small, that advance scientific and medical research, strengthen the American educational system, help the poor and disadvantaged, and provide disaster relief -- to name just a few of the multitude of charitable purposes of foundation grants.[2]

---

1 Section 170(e)(5).

2 Attachment I to this statement, entitled About Foundations provides more data on the capacity and limitations of foundations and their role in the charitable sector. For simplicity, the references throughout this statement which mention giving to "private foundations" or to "foundations" are contributions to grantmaking, nonoperating private foundations which constitute the great preponderance of all private foundations. Different charitable deduction rules apply to contributions given to foundations classified as "operating" or "pass-through" private foundations.

Private foundations have made major improvements in American life throughout the 20th century. They have, for example, been responsible for:

... The Salk polio vaccine
... The pap smear
... The cure for yellow fever
... Sesame Street
... The Emergency 911 response system

I have attached to my statement a document we call Philanthropy's Great Grants which tells the story of these and several other important uses of private foundation grants.[3]

The expired charitable deduction before the Subcommittee this morning -- if restored -- will provide a powerful incentive for Americans to make permanent conversions to charitable use of stock now held solely for private and personal benefit.

FIVE GOOD REASONS TO RESTORE THIS CHARITABLE DEDUCTION

#1-- With Pending Cutbacks in Government Spending, the Importance of Giving to Private Foundations Is Greater Than Ever

Foundation giving at roughly $10 billion a year is small in comparison to total U.S. charitable giving of over $120 billion or in comparison to a $1.5 trillion federal budget. Yet foundations are uniquely structured to readjust priorities, accommodate to change and refocus their support on emerging needs. The genius of foundations is to be found in the quality of their grantmaking rather than in the quantity of their resources.

Changes in governmental funding will -- of necessity -- force many American charities to reassess their capacity to respond. Such charities, both new and well-established, benefit greatly from being able to look to private foundations for assistance in going through such a transition. Because of their independence, foundations can provide the "research and development" funds for new and more efficient modes of coping with the problems that will confront these charities. Equally important, foundations have already proven themselves adept at working with government to streamline service delivery and discover cost-effective alternatives to traditional approaches. The heightened budgetary pressures on government will greatly increase the need for such work.

In short, while foundations clearly do not have the capacity to replace the likely spending cuts, they can provide invaluable assistance in the coming transition. Now, more than ever, it is important to stimulate giving to foundations.

---

3 Attachment II.

#2 -- The Expired Charitable Deduction Has Proven Effective in Stimulating Increased Giving

Going well beyond the reforms recommended by Treasury in 1965, the Tax Reform Act of 1969 -- for the first time -- limited to the donor's cost basis the amount of charitable deduction that could be claimed for gifts of appreciated property to private foundations. The impact on lifetime giving to private foundations was devastating. Data compiled by The Foundation Center indicates that the rate of formation of new private foundations in the 1970s dropped over 42 percent -- from an average of 137 per year in the 1960s to 79 per year in the 1970s.[4] There is uniform agreement among practitioners in the field that most of the foundations formed in the 1970s were by bequest -- non-bequest giving simply dropped dramatically.

The full value deduction for gifts of publicly traded stock to private foundations was reinstated in 1984. Lifetime giving to foundations rebounded. Indeed, the 1980s and early 1990s brought a sharp reversal of the experience of the 1970s -- and a substantial increase in the number of new private foundations formed. According to The Foundation Center, the average number of private foundations formed in the 1980s grew to 246 per year compared to only 79 per year in the 1970s. One state -- Michigan -- has already identified over 50 new foundations formed in the past six years with publicly traded stock. The impact of the restored deduction could hardly be clearer.

As the 10-year life of the deduction was nearing its end in 1994, the Council on Foundations received an unprecedented number of phone calls from all across the country. The callers were attorneys, accountants, estate planners and other professionals who all had numerous clients wanting to give publicly traded stock to private foundations. No data is yet available to measure the number of private foundations formed at the end of 1994 as the sun set on the deduction, but we know there were many.

We need not guess, then, at the effectiveness of the charitable deduction for encouraging contributions of publicly traded stock to private foundations. When full deductibility was not in effect, very few foundations were created during donors' lifetimes. When full deductibility was reinstated in the law, lifetime giving responded promptly and markedly. The full deduction has plainly proved its worth.

#3 -- Public Charitable Benefit Far Outweighs the Revenue Loss

The Joint Committee estimates that restoring this deduction will produce a revenue loss of $286 million over the remaining part of the current fiscal year and the next five years. If the capital gains tax reduction included in the House-passed Contract with American becomes law, the revenue loss would drop by more than half of that amount to $128 million.

---

4 Foundation Giving (1994 Edition), p. 27. Figures are for foundations with $1 million or more in assets or making grants of $100,000.

If the Joint Committee's revenue loss numbers are accurate, donors will be contributing appreciated stock to foundations in excess of $1 billion over the period of the estimate -- or roughly $200 million per year on average. Those figures, however, considerably understate the benefit that charity will realize from the restored deduction in the intermediate and longer term.

Our experience indicates that donors who create private foundations during their lifetimes --- and see for themselves the year-to-year good that foundations can accomplish --- are far more likely to make substantial bequests to their foundations at death than are well-to-do individuals without this background. Often such bequests are very large. Some range into the hundreds of millions of dollars.

Hence, reinstatement of this deduction will generate benefits to charitable enterprises -- and the public -- far greater than any estimate of its effect over the next several years can suggest.

A recent report by The Foundation Center illustrates the classes of charitable activity we can expect these enlarged foundation funds to support:[5]

1992 Grants of Largest Foundations

Subject	Amount	Percent
Education	$1,346,910,000	25.4
Health	943,836,000	17.8
Human Services	847,256,000	16.0
Arts and Culture	674,525,000	12.7
Public/Society Benefit*	590,217,000	11.1
Environment and Animals	255,130,000	4.8
Science and Technology	214,697,000	4.0
International Affairs, Development and Peace	178,956,000	3.4
Social Science	142,901,000	2.7
Religion	114,546,000	2.2
Other	2,740,000	0.1
TOTAL	$5,311,715,000	100.0

[*Includes civil rights, community development and volunteerism]

5 The Center's report is based on data for 1992 (the latest year available) resulting from a survey of grantmaking by foundations representing 52 percent of all grant dollars.

4 -- IRS and Treasury Have Reported No Problems or Evidence of Abuse

From time to time Congress has expressed concern about the potential overvaluation of gifts to charity. It is important to emphasize to this Subcommittee that the charitable deduction under consideration here permits full value deductions ONLY for gifts of publicly traded stock. Other types of appreciated property which may be more open to overstatement are simply not included. Gifts of land, privately held stock, partnership interests, works of art and even bonds are not included. In short, a donor to a private foundation can make use of this provision only by giving away appreciated property for which there is a recognized value published in the newspaper on the day of the gift. Overvaluation is simply not possible.

More generally, over the past 25 years, private foundations have established an admirable track record of compliance with the stringent anti-abuse rules imposed on them by the 1969 Act. Yes, there are occasional abuses, as there are in any sector, but the Internal Revenue Service -- on the basis of three nationwide audits -- has found that private foundations are among the most conscientiously compliant groups under its jurisdiction.

The core reforms enacted in 1969 for private foundations have worked well to keep out those who would abuse the system. The Council on Foundations has consistently supported the basic structure of this stricter system of regulation.

#5 -- Restoring the Deduction Will Accelerate Charitable Benefits and Produce More Effective New Foundations

Even if this charitable deduction is not reinstated in the income tax law, some individuals will doubtless create foundations by bequests at death. That was the experience even during the 1970s. With bequests to foundations fully deductible for estate tax purposes -- as they have been ever since the advent of the estate tax -- that pattern of giving would naturally recur.

Waiting to give by bequest, however, is a pattern far less advantageous for charity than lifetime giving. It deprives charitable endeavors of the use they could have made of the resources during the lives of the donors. Experience shows that, with the income tax deduction in effect, many private foundations are created during the donor's 40s, 50s and 60s. When those gifts are postponed to the donor's death, many years of foundation distribution are altogether lost to charity. One can be speculative about the magnitude of the loss, but it must at least be very considerable.

A separate point underscores the desirability of encouraging lifetime contributions. It has also been our experience in working with new foundations that they succeed with far fewer missteps if they begin operations during the life of the donor and can be guided by him or her while they are growing, learning and developing experience with philanthropy. Again and again, as we work closely with family foundations, we see that donors who get personally involved in their foundations during their lives tend to involve their families and begin family traditions of ongoing charitable commitment and wise giving. More effective foundations and more altruistic family traditions result.

In sum then, restoring the charitable deduction for gifts of publicly traded stock to private foundations presents a rare opportunity to transform substantial wealth now held for personal purposes to a major resource permanently dedicated to the support of sound and creative charitable works.

For these reasons, I strongly urge you to renew this deduction and make it a permanent part of the Internal Revenue Code.

ABOUT FOUNDATIONS

What is a Foundation?

Foundations are nonprofit organizations that suppport charitable activities in order to serve the common good. They provide this support by making grants to other nonprofit agencies, or through operating their own programs. In some cases, such as scholarships and disaster relief, foundations may make grants to individuals. Education, public health, scientific research, the arts, social services, religious organizations and the environment are just a few of the areas in which foundations provide funding

Foundations are created with endowments--money given by individuals, families or corporations. They make grants or operate programs with the income earned from investing the endowments. While foundations are exempt from federal income tax, they pay an "excise tax" on their net investment income each year.

The Tax Code distinguishes between private grantmaking foundations, which generally make grants from endowment income, and public charities, which generally raise money from the public for various causes and then operate institutions or programs such as universities or hospitals. Both foundations and public charities may use the term "foundation" in their titles, but very different laws apply to the organizations.

Why are Foundations Unique -- What do They do Best?

The governing boards of foundations are not subject to public elections nor (in most cases) are they subject to the concerns of corporate shareholders. Since most foundations have permanent endowments, they do not need to raise funds each year from the public in order to continue their work. Freed from these constraints, foundations are perfectly positioned to act as the research and development arm of society.

In its 1965 Report on Private Foundations, the Treasury Department recognized the special nature of foundations by describing them as "uniquely qualified to initiate thought and action, experiment with new and untried ventures, dissent from prevailing attitudes, and act quickly and flexibly." Foundations reflect the innovative spirit of the individuals and corporations that endow them. They provide risk capital for new approaches to tackling social problems and can make long-term commitments to addressing community needs. To list just a few examples of their impact, private foundations were the impetus behind the development of the Salk polio vaccine, the beginnings of the Head Start program and the production of *Sesame Street*.

How Many Foundations are There?

According to the 1994 edition of *Foundation Giving*, published by The Foundation Center, there are over 35,000 private, community, operating and corporate foundations in the United States:

- 31,604 private independent foundations
- 1,897 private corporate foundations
- 353 community foundations
- 1,911 operating foundations

At least 75 percent of all foundations are small and unstaffed; they are run either by volunteer boards or professionals (bank trust officers or lawyers). There are fewer than 6,800 foundations that have more than $2 million in assets or make over $200,000 in grants, yet these foundations hold 91% of foundation assets and are responsible for 90% of all foundation grant dollars disbursed. Of these larger foundations, roughly one in four have paid staff.

How Much do Foundations Give Each Year?

Together, grantmaking foundations held over $175 billion in endowment assets and made grants totaling approximately $10 billion to charitable causes in 1992. Yet, this annual grant amount is only eight percent of the $124.3 billion that Americans contributed to charity in the same year. According to *Giving USA 1994*, published by the American Association of Fundraising Counsel, total private philanthropic giving in 1992 was (in billions of dollars):

--	Individuals	$ 99.18	81.4%
--	Bequests	8.15	6.7%
--	Independent & Community Foundations	8.64	7.1%
--	Corporate Foundations	1.60	1.3%
--	Direct Corporate Giving	4.32	4.8%
		$121.89	100%

What is the Capacity of Foundation Giving?

In virtually every significant area, foundations lack the resources to replace most government programs and, as noted below, the focus of foundations' grantmaking is often legally limited or directed by the donor. Total foundation grantmaking for 1992 is approximately equal to:

1) The annual budget for the National Institutes of Health
2) 20 percent of the amount (almost $53 billion) that the government spent on education, training, employment and social services in 1993,[1] and
3) Less than 10 percent of the $125 billion in government spending on Aid to Families with Dependent Children, food stamps and Medicaid.[2]

What Limits are there on Grantmaking Focus?

Governing boards of some foundations have broad discretion regarding the charitable causes to which foundation grants may be directed; other boards are sharply limited -- often legally -- by the mandate of the foundation donor. For example, some foundations are restricted to making grants only for medical research, for assisting artists or for scholarships. Many foundations must restrict their grantmaking to a specific geographic area.

Where Do Foundation Grant Dollars Go?

According to *Foundation Giving*, in 1992, foundation grant dollars were distributed as follows:

	% of Grant Dollars	% of Grants
Education	25	23
Health	18	13
Human Services	16	21
Art & Culture	13	15
Public/Society Benefit*	11	12
Environment & Animals	5	5
Science & Technology	4	3
International Affairs	3	3
Social Science	3	2
Religion	2	2
TOTAL	100%	100%

* "Public/Society Benefit" grants include those for community development, public affairs, civil rights, social action and voluntarism.

How Does Giving by Foundations Differ from United Way Campaigns and Direct Giving by Individuals?

Private, community and many corporate foundations have endowments and thus are free from the uncertainties, struggles and costs of annual fundraising campaigns. By prudently managing their investments, they are able to provide a steady source of funding from the income and growth of the endowments while striving to keep the value of the endowment even with inflation. Thus, when economic downturns reduce individual giving, foundations are often able to maintain their grant levels.

How Do Foundations Work with Government?

In addition to making occasional grants to government, several foundations have taken steps to collaborate with Federal, state and local governments to streamline service delivery and explore cost-effective alternatives to traditional social services. Foundations have provided a source of non-partisan expertise and a perspective that extends beyond one administration's time in office. Foundations stimulate institutional reform through studies and support governmental change by funding model projects that have the potential for replication.

PHILANTHROPY'S GREAT GRANTS

The developments described here have touched the lives of nearly every American--and yet not many Americans would readily make the connection that foundation grants helped make them happen. Because foundations serve as society's research and development arm--by funding programs that explore new problem-solving approaches--much of value is learned from those foundation-funded experiments that don't work out as well as the wide-impact successes described here.

White Lines on the Highway

In the early 1950s, engineer-inventor Dr. John V. N. Dorr had come up with a "revolutionary highway theory." He postulated that at night and when it was rainy, snowy or foggy, drivers hugged the white lines painted in the middle of highways. Dorr believed this led to numerous accidents and that painting a white line along the outside shoulders of the highways would save lives.

Dorr convinced highway engineers in Westchester County, New York, to test his theory along a stretch of highway with curves and gradients. The decrease in accidents was dramatic, and a follow-up test in Connecticut had similar results. Dorr then used his own foundation, The Dorr Foundation of New York, to publicize the demonstration's results.

Although state funds are now used to paint white lines on the shoulders of this nation's highways, every person who travels in a motor vehicle is indebted to Dorr and his foundation for the implementation of this life-saving discovery.

Emergency 911

Dial "911" any time of day or night from any telephone in the United States, and an operator will spring into action to determine the type and location of the emergency, send appropriate personnel and equipment to the scene, and tell you what to do until help arrives. It is such an important safety net that 911 is often one of the first phone numbers parents teach their children.

Efforts to create a national emergency medical response system began in 1966, when the National Highway Safety Act authorized funds for ambulances, communications and training programs. These efforts were augmented in the early 1970s when the Robert Wood Johnson Foundation provided 44 grants in 32 states for regional emergency medical services--the largest sum of private funds ever allocated for this purpose. The foundation program demonstrated the concept of a regionalized, systematic approach. Following these grants the federal government stepped in and made a series of grants that resulted in today's nationwide 911 system.

The Pap Smear

Cervical cancer is one of the easiest cancers to treat, when caught early. Until the 1940s, however, there was no simple, inexpensive test for diagnosing this disease. During the 1940s, however, there was no simple, inexpensive test for diagnosing this disease.

Dr. George N. Papanicolaou first discovered that cervical cancer could be diagnosed, before a women presented any symptoms, in 1923. Although he reported his findings, pathologists dismissed them, unwilling to believe cancer could be detected in individual cells. Dr. Papanicoulaou later wrote, "I found myself totally deprived of funds for continuation of my research...At a moment when every hope had almost vanished, The Commonwealth Fund...stepped in." Support for Dr. Papanicolaou's highly speculative work proved crucial to the development and eventual acceptance of the Pap Smear--the basic and now routine diagnostic technique for detecting cervical cancer.

Invention of Rocketry

The development of rocket science was a necessary precursor to space exploration, of strategic importance to America, as well as satellite communications, which touches our lives today in innumerable ways. It was foundation money that permitted a scientist to develop the technology that helped this nation become the first to place a man on the moon.

After having built a rocket that could travel in a vacuum, physics professor Robert H. Goddard received a small grant from the Hodgkins Fund of the Smithsonian Institute to build a high-altitude version of it. He succeeded in 1926, when he launched a rocket that flew 41 feet in the air for 2.5 seconds. A subsequent launch caught the attention of neighbors, police and reporters--who considered his efforts a joke--and Harry Guggenheim. Guggenheim consulted with Charles Lindbergh on the feasibility of Goddard's ideas, and it was Lindbergh who persuaded Guggenheim's father, Daniel Guggenheim, to provide four-year's support for Goddard's work. Ultimately, the Daniel and Florence Guggenheim Foundation funded Goddard's work for 11 years.

"Sesame Street"

Every day, 75 percent of this nation's preschool children learn their ABCs, colors and numbers from a huge yellow bird, a frog, a garbage-can "grouch," and a host of brightly colored puppets--along with a few human actors--on "Sesame Street." The children who tune in have fun while learning the basic cognitive and social skills they need to make the transition from home to school. In an average week the show reaches 16 million viewers; it is the most widely viewed children's series in the world.

Although "Sesame Street" is self-supporting today, this was not always the case. During the early 1960s the National Education Association endorsed the idea of making preschool

Yellow Fever Vaccine

By the beginning of this century Boston and Baltimore had experienced a total of 50 yellow fever epidemics and Charleston, South Carolina; Galveston, Texas; the Mississippi Valley and New Orleans, Louisiana had lost tens of thousands of people to the illness. Victims were being buried day and night.

Beginning in 1915, the Rockefeller Foundation funded a 30-year, all-out effort to eradicate this disease. Foundation physicians and scientists travelled to the cities and jungles of South America and West Africa, where they set up on-site laboratories and investigated causes of the disease. Many Rockefeller researchers died of the fever during the course of their work, but in 1936, foundation efforts paid off with the development of the first successful yellow fever vaccine. More than 1 million people were vaccinated in 1938 (with a 90 percent success rate) and during World War II, more than 34 million doses were manufactured and distributed free to Allied governments and health agencies. In 1951, foundation scientist Dr. Max Theiler received the Nobel prize in medicine for his work on the yellow fever vaccine.

Polio Vaccine

It was only 40 years ago people that in this country and the world lived in fear of the deadly, crippling effects of polio. Just recently, in December 1994, the Pan American Health Organization announced that polio finally has been eradicated from the Western Hemisphere. The visions of people in iron lungs and heavy braces have been all but erased from this nation's memory because of the Salk vaccine developed by Dr. Jonas Salk in 1953.

Salk was able to establish and equip his virus laboratory, located at the University of Pittsburgh, because of a 1948 grant from the Sarah Scaife Foundation (later known as the Sarah Mellon Scaife Foundation). Other foundations also supported Salk's work, but it was the Scaife foundation that put up the initial risk capital and provided a followup grant two years later.

Public Libraries

Going to the local library and borrowing books for free is a privilege most Americans take for granted. Yet less than a century ago the idea of equal access to books and educational materials was revolutionary and controversial. It was the generosity and vision of one man, Andrew Carnegie, that created more than 2,500 libraries worldwide during the early 1900s.

Nearly every community that requested support from Carnegie or his foundation--Carnegie Corporation of New York--received it, and by the 1920s funds from Carnegie and his foundation had led to the construction of 1,679 public libraries in the United States alone. Today, these libraries, each a monument to the grand architectural style of the time, are an integral part of this nation's public library network.

education available to all children, but funds available within school budgets were not sufficient for such programs. In 1966, Carnegie Corporation of New York underwrote a feasibility study on the use of television for preschool education. Carnegie, along with the Ford and John R. and Mary Markle foundations and others then gave Children's Television Workshop grants to launch "Sesame Street."

The Hospice Movement

In the early 1970s, long-term care for the terminally ill was a frustrating and saddening experience for families. A group led by Florence Wald, dean of the nursing school of the Yale-New Haven Medical Center, asked foundations to fund a feasibility study on opening a hospice in New Haven, Connecticut.

Simultaneous support from the Van Ameringen Foundation, the Ittleson Family Fund and The Commonwealth Foundation assisted in establishing and staffing a hospice to care for 100 terminally ill patients in their homes as well as a 44-bed facility. This program became a model for hospital and home care of terminally ill patients and a training center for hospice workers.

World Hunger

In the 1960s, the threat of widespread starvation in developing nations was one of the most pressing issues facing world leaders. Developing nations lacked the resources for the large-scale food production required to feed their expanding populations. A collaboration betwen the Ford and Rockefeller foundations created research centers, which brought together scientists from around from around the world to develop improved varieties of wheat and rice.

Two centers, the International Rice Research Institute in the Philippines and the International Maize and Wheat Improvement Center in Mexico created new varieties of rice and wheat that greatly enhance yields. The results were astounding--where just a short time before experts had predicted famine, countries quickly became self-sufficient, providing food at a low cost. Called the Green Revolution, this effort to improve agricultural practices also led to more jobs and goods for trade.

Mr. HERGER. Thank you very much, Mr. Joseph.
Mr. Thompson.

STATEMENT OF JESSE J. THOMPSON, FOUNDER, PROVIDENT BENEVOLENT FOUNDATION, CHARLOTTE, NORTH CAROLINA; ACCOMPANIED BY ROBERT S. MARQUIS, KNOXVILLE, TENNESSEE

Mr. THOMPSON. Mr. Chairman, my name is Jesse J. Thompson. I live in Charlotte, North Carolina. I appreciate the opportunity to appear before you and the other Subcommittee Members.

I am very much concerned with the question of reenactment of section 170(e)(5) of the IRC. Both my family and I believe strongly in gifts to charity through private foundations. It is my hope that by sharing with you some of my experiences with private foundations, we can show some of the good which they can accomplish.

My family made its living in the coal industry and we were very fortunate. Through a combination of hard work and good luck, we built a successful business that employed hundreds of workers. We have not, however, ever forgotten where we came from.

As a family, we now wish to share our good fortune with people in the areas where our family built our business. We feel strongly that we have been blessed and we wish to share our blessings with the communities and the people in the communities who helped us. Through our private foundations, we hope to be able to give something back to the communities and the people in Tennessee, Kentucky and Virginia who made our success possible.

Shortly before his death in 1987, my father established the Thompson Charitable Foundation, a private foundation which, when completely funded, will hold assets in excess of $70 million. Since its inception, the Thompson Charitable Foundation has distributed millions of dollars to charities and public works in our region.

I would like to focus on three projects which I believe illustrate the contributions which private foundations can make to the public good.

Buchanan County, Virginia, is located in the heart of the coal country. The people of Buchanan County have relied upon wells for their water supply for generations. Not surprisingly, the quality of the water has been quite low. In 1991, with the aid of a $1 million contribution from the Thompson Charitable Foundation and a Federal grant, Buchanan County built a modern water supply connected to the John Flannagan Dam Reservoir. Most Americans take issues like their water supply for granted. Now the citizens of Buchanan County also can have that luxury.

Scott County, Tennessee, is a coal mining community located in Tennessee's Cumberland Mountains. Like many rural communities, its needs are generally underfunded and ignored because it lacks the political clout of larger more urban counties. With an average annual income of less than $12,000 per year, the people of Scott County must struggle to meet the needs of the community.

The problem manifested itself in Scott County's school buildings, which had deteriorated to the point where it was difficult for the children to get a good education. The Thompson Charitable Foun-

dation provided approximately $1 million of the funding needed to build and equip new schools.

The entire community gathered in support of this project and the partnership has proven to be an overwhelming success. Scott County now boasts a new elementary school and its high school and middle schools have been rebuilt and equipped with state-of-the-art equipment. The long-term results have been even more rewarding. These schools recently won the Governor's Award, which recognize the national level achievement of Scott County's students.

My father lost his wife and several friends to cancer. As a result of his personal experience, he became acutely aware of the strain placed on families who were required to travel across the country in order to get the specialized care that cancer treatment so often requires. His concern led to the establishment of the Thompson Cancer Survival Center in Knoxville, Tennessee. During the financially difficult early years of its existence, the Thompson Cancer Survival Center was dependent upon the Thompson Charitable Foundation for the funding needed for this project to which my father was so dedicated. My father ultimately died of cancer.

These are but three examples of the important work that private foundations help to make possible. There are many more. These examples not only demonstrate the type of projects to which private foundations contribute, but also show that private foundations are often the catalysts which change dreams to reality.

I have seen the positive impact that they can have, and I have created my own private foundation, the Provident Benevolent Foundation, in Charlotte, North Carolina. Unfortunately, I have not yet fully funded it. I want to continue funding it. In fact, I have been doing so with appreciated stock. Now that section 170(e)(5) is no longer in effect, as a practical matter, I am penalized for contributing to Provident Benevolent, rather than public charities.

Of course, you might say I still have the ability to give directly to public charities. Many worthwhile projects will find their way to a private foundation which public charities are not interested in. Private foundations have played an important role in the charitable giving network. They can continue to do so. In this time of concern with controlling government spending, both public and private foundations are instruments for help.

I invite you to visit the Thompson Charitable Foundation and the Provident Benevolent Foundation and see for yourself the good works in which they have participated. I urge you to reinstate section 170(e)(5) so that private foundations can continue to grow and to help individuals and communities in need.

Mr. Chairman, sitting directly behind me is Robert S. Marquis from Knoxville, Tennessee. He has been our family's attorney for 20 years. He is a tax attorney and he has helped several individuals set up foundations. He has with him today a statement supporting the reenactment of section 170(e)(5) and, with your permission, I would like to ask that his statement be submitted for the record.

Mr. HERGER. Without objection, so ordered.

Mr. THOMPSON. Thank you very much.

[The prepared statement follows:]

STATEMENT OF ROBERT S. MARQUIS

Attorney and Principal
McCampbell & Young, P.C.

**STATEMENT OF ROBERT S. MARQUIS
BEFORE THE SUBCOMMITTEE ON OVERSIGHT,
COMMITTEE ON HOUSE WAYS AND MEANS,
U.S. HOUSE OF REPRESENTATIVES,
on May 9, 1995**

Madam Chairman:

My name is Robert S. Marquis and I am an attorney practicing in Knoxville, Tennessee. I appreciate the opportunity to appear before you and the other SubCommittee Members. I am here to encourage you to reinstate § 170(e)(5) of the Internal Revenue Code, and to share with you my real world experience concerning its importance. The only evidence I intend to offer is based on my own personal experiences which I believe support my position.

As an attorney working in Knoxville, Tennessee, since 1973, my practice is devoted primarily to estate planning. As is common among practitioners in this area, I have worked extensively with charitable organizations, serving both as counsel and as a director of several private and public foundations. I am here on behalf of certain of my clients who have specifically requested me to testify before you concerning the reinstatement of § 170(e)(5). But I am also here in my capacity as both a member of the estate planning bar and as a concerned citizen. Without exception, both the clients and other practitioners with whom I have spoken share my concern regarding the singular importance of this statute to charitable giving in general and to charitable activities in our community in particular.

Greater Knoxville has a population of approximately 500,000. In our area, I have participated in the establishment of approximately a dozen private charitable foundations and have worked with several others. I think it important for you to understand how and why these private charitable foundations came to be created and how, at least in my experience, they are operated.

There is no precise demographic profile of the donor who desires to establish a private charitable foundation -- indeed, I once had a retired school teacher who wanted simply to establish a private foundation to finance the needs of underprivileged band members -- but I would have to say that most of the donors which whom I work are wealthy. Most have achieved high levels of success and the wealth which so often accompanies it. They recognize and appreciate their good fortune, and desire simply to give something back to the community and the people who provided them with the opportunity to succeed.

Private foundations usually bear a strong resemblance to their founders. Such individuals typically possess a strong work ethic and a fierce determination to accomplish their goals.

Thus, just as small businesses are often more responsive to the needs of the market, so too are private foundations often more attentive and more responsive to the needs of the communities they serve. As a result, the cost-effectiveness of private foundations is unique.

Since we live an era where public funds have grown increasingly scarce, and the resistance to tax increases is almost universal, the competition for these funds is fierce. Add to this mix the very real concern we all share with respect to both budget deficits and the national debt, and the need for, and importance of, charitable giving is readily apparent. Irrespective of the provisions of the Internal Revenue Code, some level of charitable giving will always take place. Nevertheless, we all recognize that the Internal Revenue Code creates a powerful incentive for Americans to increase their charitable giving. Conversely, common sense tells us, and my experience confirms, the expiration of § 170(e)(5) has created an equally powerful disincentive to their charitable giving.

To be blunt about it, private foundations have been eliminated as a lifetime planning option for many of our clients. While the economic issue here is fairly obvious, the psychological issue is not. I have observed first hand the special relationship which founders have with their private charitable foundations. That is, private foundations allow their donors to become actively involved in the charitable works to which their foundations contribute. This frequently stimulates the founder's desire to give even more to the foundation.

Remember also that the worthy causes to which we are all asked to contribute seem endless. Who among us hasn't invoked the defense "I gave at the office?" But the pool of wealthy donors is limited. Private foundations occasionally have returned the joy to charitable giving to our clients by providing both donor and donee with a common forum. There is a very real efficiency gain to be found here which should not be underestimated.

Finally, private foundations are required by the federal tax code to make distributions each year and public charities always reap the benefits. Our clients understand this, and now ask why we discriminate against private foundations. The answer escapes me. And let us not forget that a contribution to a private foundation is irrevocable; the charitable giving which the annual distributions of private foundations represent is not subject to an individual's change of mind.

These are practical realities. I know from my own experience that private foundations work, and that the ultimate beneficiaries of the reinstatement §170(e)(5)will be the communities they serve. And in a world of limited public resources, can we afford to discourage charitable giving?

Thank you for the opportunity to appear before you today.

Respectfully submitted,

Robert S. Marquis

Mr. HERGER. Thank you very much, Mr. Thompson. We certainly appreciate more than we can express the generosity of yourself, your father and your family. Certainly, that type of caring is the backbone of our country, and what a great example you are. Again, thank you.

Mr. THOMPSON. Thank you.

Mr. HERGER. With that, we will move to our last panelist, Mr. Licata.

STATEMENT OF JOSEPH A. LICATA, VICE PRESIDENT, EMPLOYEE BENEFITS, SALOMON BROTHERS, INC., NEW YORK; NEW YORK, ON BEHALF OF AMERICAN PREPAID LEGAL SERVICES INSTITUTE, NATIONAL RESOURCE CENTER FOR CONSUMERS OF LEGAL SERVICES, HOTEL TRADE ASSOCIATION OF NEW YORK, HOTEL TRADES COUNCIL, AFL–CIO PREPAID LEGAL FUND, AND LABORERS INTERNATIONAL UNION; ACCOMPANIED BY GERALD MANN, ADMINISTRATOR AND CHIEF COUNSEL, DISTRICT COUNCIL 37 MUNICIPAL EMPLOYEES LEGAL SERVICES PLAN, NEW YORK, NEW YORK

Mr. LICATA. Thank you, Mr. Chairman.

My name is Joseph Licata. I am vice president of employee benefits for Salomon Brothers, Inc. With me here today is Mr. Gerald Mann, administrator and chief counsel of District Council 37 Municipal Employees Legal Services Plan. His testimony is also submitted on behalf of the American Prepaid Legal Services Institutes, the National Resource Center for Consumers of Legal Services, the Hotel Trade Association of New York, and the Hotel Trades Council AFL–CIO Prepaid Legal Fund, and the Laborers International Union.

On behalf of the 7.6 million Americans who access employer provided legal services plans, I would like to thank you for the opportunity to submit testimony in support of restoring equity to this employer provided benefit by reinstating its favorable tax treatment.

While my employer Salomon Brothers may not immediately evoke thoughts of moderate income working families, in fact, over two-thirds of our employees or approximately 3,600 workers are middle-class workers of moderate means, for example, our clerks, support staff, secretaries, telephone operators and courier staff, to name a few. Virtually all of the employees who are enrolled in our legal benefits plan, over 600 in number are wage earners in the low- to middle-income salary range. As with AT&T, Raft, Proctor & Gamble, Sears and many other corporations, it is on behalf of these important members of our team that we urge Congress to restore equity to the tax treatment of this benefit.

The firms management at Salomon Brothers, while generally not electing to participate in our legal benefits plan, is satisfied with providing this benefit for the staff because it contributes to the well-being of these critical members of the firm and thus increases our firm's productivity as a whole. In limiting the stress associated with legal issues by allowing these employees access to legal advice, this benefit provides tremendous value to our work force.

We strongly support H.R. 540 introduced by Representative Charles Rangel to make permanent section 120 of the IRC, thereby restoring equity to the treatment of this employment benefit.

In light of the fact that this employment benefit is provided to and for working middle-class Americans, allowing for its favorable tax treatment coalesces well with the national clamor for middle-class tax relief.

Specifically, in terms of middle-class tax relief, reinstating the favorable tax treatment of this particular employee benefit provides tremendous value to the taxpayer for the cost, because it allows low- and moderate-income wage earners access to legal advice which they would not otherwise be able to afford.

Having access to legal advice represents to a moderate-income wage earner the difference between a swift favorable resolution of a problem and a stressful long-term morass with an unfavorable outcome. Tax relief that could provide such an enormous benefit to working families, a benefit to families' security, stability and financial situation, constitutes the highest possible rate of return on taxpayer investment.

Employer-provided group legal plans have time and again proven their value in extending low-cost legal advice to working Americans. The reality for middle-class wage earners is that they cannot afford the services of an attorney and thus cannot afford to obtain advice for issues relating to child support enforcement, adoptions, wills, landlord-tenant situations and consumer debt problems.

Employers are pleased to provide this important benefit, because it removes troubling legal distractions from their employees which, left unattended, limit the employees' productivity. As a result, legal benefits plans enjoy broad support from corporate, consumer, labor and insurance groups. Because it provides access to legal advice, this employer-provided benefit assists working Americans in avoiding the family disintegration and job disruption that can result from neglected legal issues.

Examples of the multilevel cost effectiveness of this benefit abound. A working mother seeking to enforce an order of child support gains access to the assistance of a lawyer through this legal benefits plan and avoids the need to rely on public assistance. A consumer debt problem without legal advice can lead to a garnished salary, an eviction, the loss of a job, and dependency on public assistance.

The relatively minor cost of providing this favorable tax treatment is repaid innumerable times by keeping the wage-earner focused on his/her job, keeping a family in housing and intact, and removing the threat to moderate-income workers to remaining self-sufficient. In the last two renewals of the legal plan at Salomon Brothers, the cost of our premiums has not increased for my firm.

Employer-provided legal benefit packages produce economies in both the purchase of legal services for a large group and in the delivery of these services at a reduced price. Such economies in the provision of legal representation for the needs of average working Americans dovetails well with other types of legal reform this Congress has adopted in the last few months. Because they provide a cost-effective approach, these employer-sponsored legal benefit

plans are in the best American tradition of pragmatic, voluntary group action to meet common needs.

In the last session of Congress, this bill enjoyed broad support among both Republicans and Democrats, with 220 Members signing on as cosponsors. Already this session, this bill has 31 cosponsors and a "dear colleague" letter has yet to be circulated. Speaker Gingrich himself was among the cosponsors of this bill last session and has voiced support of the bill again this session.

In summary, we would highlight that, without this benefit, low- and moderate-income wage earners would not have access to legal advice from the private bar, the consequences of which are severe impediments to the self-sufficiency of these working families. Restoring equity to the tax treatment of this benefit by placing it on an equal footing with other statutory fringe benefits is a goal worth achieving this session, given that this employer-paid benefit provides so many concomitant valuable advantages to working Americans.

As one aspect of middle-class tax relief, a high return on the cost of this benefit is realized for the millions of working Americans who gain access to critical legal advice through its operation. By promoting economies in the purchase and delivery of legal advice, this benefit constitutes an important facet of legal reform.

We respectfully urge the Subcommittee to act favorably on H.R. 540. Thank you, Mr. Chairman, for letting me speak on this issue.

Mr. HERGER. Thank you for your testimony, Mr. Licata.

Mr. Young, it has been argued that H2–A workers are less expensive to employ than U.S. workers. Your testimony is responsive to this question, do wages paid to H2–A workers count against the FUTA wage threshold, and just what does this mean?

Mr. YOUNG. Yes, Mr. Chairman. My statement was that the wages paid to H2–A workers are higher than wages paid to the average U.S. farm worker and that the program is not an expensive one. We are not using the minimum wage, but we are using what is called an adverse effect wage rate, which is substantially higher. In the case of New York and New England, it is based at $6.21 an hour in 1995.

But the wages of H2–A workers prior to the exemption expiring were counted in the base number. They counted toward reaching the threshold that are necessary, but they were not taxed.

Mr. HERGER. Thank you.

Mr. Ashworth, do H2–A workers tend to work for the largest or the smaller agricultural employers?

Mr. ASHWORTH. I think that it would probably be more the smaller farms, but not excluding large farms. In my experience of working H2–A workers, being a small farmer myself, it was a godsend to have this type of labor, and smaller farms I think probably benefit as much or more than the larger farms.

Mr. HERGER. Why is their a need for this?

Mr. ASHWORTH. The H2–A worker is not eligible for Federal unemployment, so it would not be fair to pay a premium or a tax per se on something that could not be collected. Being that when this job is over, the H2–A worker comes under contract, and when this job is completed, this person will return to their original home in their own country.

Mr. HERGER. In the past, the rationale for the FUTA tax exemption for H2–A workers is that this group does not collect unemployment benefits. To your knowledge, has there been any change in the status or treatment of these temporary agricultural workers that would suggest employers should now begin paying FUTA taxes?

Mr. ASHWORTH. I know of no change that would create a need for employers to pay this tax. The exemption expired at the end of 1994, and what we would ask is for it to be retroactive to January 1, 1995 permanently.

Mr. HERGER. Are there any other categories of labor upon which employers are required to pay FUTA employment taxes? Where the employees are not permitted to draw the benefits or the laborers are permitted to draw the benefits?

Mr. ASHWORTH. I am not aware of any.

Mr. HERGER. Thank you.

Ms. Raines, while all of us would agree that it makes sense to encourage the development of orphan drugs, there is a tension between the need to provide a credit that is meaningful and the need to minimize the cost to the Treasury. It is difficult to know whether a 50-percent credit strikes the appropriate balance. What would the level of the credit be to encourage the development of needed drugs without an undue loss to the Treasury under your estimation?

Ms. RAINES. Let me say first that the 50-percent credit which has been in effect for the last 12 years has had a significant impact in increasing the number of orphan drugs in development. Clearly, a bigger credit would encourage more and a smaller credit would encourage less. I think that people in business take that into account when calculating what is the anticipated cost of developing a product.

What you are going to do if you reduce the credit is reduce the likelihood of development of those products that are most marginal in terms of the potential of returning the investment that is made. Recognize, too, that these are very high risk investments, that 9 out of 10 drugs do not work and do not make it to the marketplace. Under those circumstances, the market dictates that you go after the drugs that are likely to make it to the marketplace, and that have big markets out there waiting for them. Clearly, you can ratchet the tax credit up or down and anticipate the effects to be different.

The cost of this credit is lower than the cost of any other credit that this Committee has had under discussion today. The Joint Tax estimate is under $170 million over 5 years, and that includes the changes that would make the credit more valuable and more of an incentive for smaller companies, not by changing the percentage, but by allowing the credit to be carried forward to the future.

Mr. HERGER. If Congress were to allow this credit to expire, what do you feel the result would be?

Ms. RAINES. Already, companies have said that uncertainty about the orphan drug law itself and the credit has discouraged them from developing products for those markets. I am aware of several companies that probably prefer not to be named publicly who are no longer doing orphan drug research.

We have made a commitment to orphan drug research in a number of areas where it just makes sense, regardless of the credit, for us to continue. Whether we will start new programs in the absence of the credit is another question.

Mr. HERGER. Particularly with those drugs with little usage. The drugs that were for special needs would particularly be hard hit. Even though the drugs may be very effective, because there would not be much of a sale for them, they would have a difficult time.

Ms. RAINES. That is absolutely correct.

Mr. HERGER. Thank you very much.

Mr. Joseph, I have a couple of questions for you, if I could. What percentage would you estimate of gifts to private foundations are made in the form of publicly traded stock? Would you have any estimate of that?

Mr. JOSEPH. Mr. Chairman, there is no quantitative data available, but if you look at the period in which this provision was in effect, during that period we averaged about 256 new foundations a year for that decade. In the decade before we only had 79. The only quantitative data is from the State of Michigan who reported that there were 52 foundations in the last 6 years formed with appreciated stock in the State of Michigan.

Mr. HERGER. I am not sure if you have any data on this, but in general the stock is usually maintained or sold as part of the endowment, and, if sold, is that within a short time after receipt or over a period of time that the market need would indicate appropriate? Do you have any knowledge on this?

Mr. JOSEPH. No, we do not have any data on that. I can look at what is available and provide what I can, but it is mostly anecdotal and reports from individual lawyers, accountants, attorneys, and real estate planners who call our offices.

Mr. HERGER. Thank you very much.

I thank each of the Members of our panel for your testimony. With that, we will conclude this Subcommittee of Oversight of Ways and Means. Again, thank you very much.

The Subcommittee stands adjourned.

[Whereupon, at 4:35 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

BEFORE THE

COMMITTEE ON WAYS AND MEANS

OVERSIGHT SUBCOMMITTEE

UNITED STATES HOUSE OF REPRESENTATIVES
WASHINGTON, D.C.

HEARING DATE - MAY 9, 1995

Statement of Stephen A. Alterman
President
Air Freight Association
1220 19th Street, N.W.
Suite 400
Washington, D.C. 20036

H.R. 752 - A Bill to Repeal the Tax on Commercial Aviation Fuel

The Air Freight Association is a nationwide trade organization representing the interests of United States all-cargo airlines. Our membership includes virtually all of the country's major all-cargo carriers, as well as other companies and individuals with a stake in the air freight marketplace. A current Membership List is attached hereto. On behalf of our membership, we urge that H.R. 752, a Bill to repeal the tax on commercial aviation fuel, be enacted by the Congress of the United States. In support of this position, the Association states as follows:

At the present time, the airline industry is exempt from the 4.3 cent per gallon tax on aviation fuel. This exemption was based on a recognition that the United States airline industry generally has been experiencing difficult financial times and that a 4.3 cent fuel tax increase would only exacerbate these problems. However, by its terms, the exemption expires on September 30, 1995 (26 U.S.C. 4092(b)) and the industry is again faced with a significant potential financial liability. Current estimates indicate that, as an industry, the airlines will pay more than **$527 million** annually in these new taxes alone. These fees are in addition to the **$6.5 billion** the industry and its customers already pay annually in passenger and cargo taxes.

While airline fortunes have improved somewhat in the past two years, it will literally take years to recover from the recent history of losses. Over the past four years alone, the industry has lost upwards of $13 billion. In addition, during this time period, over 100,000 airline jobs have been lost. Indeed, even in the best of times (and even for the most profitable companies), the profit margin for industry members is slim.[1] Now is not the time to reverse any gains made by imposing a new tax on the airline community.

Moreover, it should be recognized that, contrary to the assertion of some observers, the airline industry, and its users, fully pays for the services used. Both the 10% passenger ticket tax and the 6.25% cargo waybill tax raise enough money the support the private portion of the nation's aviation system. And the "public contribution" of slightly over $2 billion annually is not a subsidy, but rather payment for the use of the system by the military and public aircraft.

In short, the airline community should not be expected to pay a disproportionate share of the nation's tax burden. We do not oppose the user fee concept, but it is unfair to expect us to subsidize the rest of society. The imposition of the added 4.3 cent per gallon tax would be just such an unfair burden.

Accordingly, the Air Freight Association urges that H.R. 752 be enacted and the 4.3 cent per gallon levy be repealed. Thank you very much for the opportunity to comment on this important issue.

---

[1] The Air Transport Association has stated that the industry's highest annual profit was only 2.6% of revenue (in 1988).

STATEMENT OF

CAPTAIN J. RANDOLPH BABBITT, PRESIDENT

AIR LINE PILOTS ASSOCIATION

BEFORE THE

SUBCOMMITTEE ON OVERSIGHT

COMMITTEE ON WAYS AND MEANS

U.S. HOUSE OF REPRESENTATIVES

MAY 9, 1995

THE IMPACT OF THE JET FUEL TAX ON THE AIRLINE INDUSTRY

Good morning, Madam Chairman, and members of the subcommittee, I am Captain Randolph Babbitt, president of the Air Line Pilots Association, which represents 42,000 pilots who fly for 37 airlines. I am also a former member of the National Commission to Ensure A Strong Competitive Airline Industry, which was created in 1993 by Public Law 103-13. I appreciate this opportunity to discuss with you a provision of the tax code which will have a devastating effect on our industry, namely the 4.3 cents per gallon tax on commercial aviation fuel which is scheduled to take effect on October 1 of this year.

Since 1990 alone, U.S. airlines have lost a combined total of more than $12.8 billion. While the financial suffering has been substantial, what is clearly most distressing is the toll these losses have had on the industry's employees. During this time, 120,000 U.S. airline employees and 125,000 U.S. aircraft manufacturing employees have lost their jobs. Time and time again, airlines have asked employees for relief and they have responded with pay and benefit concessions totaling in the billions of dollars. It is significant to note that at one company, employees recently gave wage and benefit concessions in excess of $4.9 billion over six years in exchange for majority ownership of the company. At other carriers, employee give-backs have averaged between 10 and 14%.

After this disastrous economic period, our airline industry is finally beginning to make a slight recovery. According to industry sources, U.S. air carriers ended 1994 with a cumulative loss for the year of $100 million, compared to the previous year's loss of $2.1 billion. Further, we were able to avoid any bankruptcies, and no significant asset sales or mergers occurred. Passenger traffic is beginning to increase, and capacity is becoming rationalized as carriers learn to live in low yield markets.

This very modest turnaround may, however, be quickly wiped out if the government is allowed to impose the 4.3 cents per gallon tax on jet fuel beginning on October 1 of this year. It is estimated that this new tax will cost the industry more than $527 million annually, and due to the elasticity of air travel demand, airlines will simply not be able to pass the tax on to the consumer. Industry analysts have in fact concluded that each 1% increase in the price of an airline ticket results in a 1% decrease in passenger traffic. We believe that imposition of this tax will not only invalidate the employee concessions I alluded to earlier but will also lead to an untold number of lost jobs, and perhaps, lost airlines.

Commercial jet fuel has never been taxed, and it never should be. The airline industry already reels under a host of taxes and user fees that are estimated at $6.5 billion annually. These include the 10% excise tax on airline tickets and a 6.25% excise tax on cargo shipments, a $6.00 International Departure Tax, a $6.50 Customs User Fee, a $6.00 Immigration User Fee, a $1.45 Agricultural Inspection Fee, and at many airports, a $3.00 Passenger Facility Charge. These are in addition to the Federal and state income, local property, and other taxes which businesses must pay. Taken together, the taxes and fees paid by the airlines are equal to a 52.5 cents per gallon

tax. In addition, in 1990, the Congress mandated that the airlines phase out the nosier "Stage 2" aircraft with quieter "Stage 3" jets by the year 2000. This will entail either replacement, re-engining, or installing hush kits on a great deal of the existing fleet. At a time when the industry is only beginning to eke out a profit after years of heavy losses, every additional operating expense distracts U.S. airlines from the costly legislative requirement to update their fleets

Nearly two years ago, the Administration and the Congress established the National Commission to Ensure a Strong Competitive Airline Industry, on which I was proud to serve. After careful and exhaustive examination of the industry's precarious financial condition, we concluded that the airlines are already over taxed and imposition of any new taxes, particularly the fuel tax, would be ill-advised. The Commission could see no good public policy reason for changing the tax treatment of airline fuel, one of the industry's two highest cost items. I strongly supported that decision then and I do now. All this tax can do is hurt--hurt airline travelers, hurt airline employees, hurt airlines, hurt airports, and therefore in the long run, hurt this country.

The Air Line Pilots Association is particularly grateful that many members of Congress have recognized that imposition of the fuel tax would be unconscionable and that legislation has been introduced in both the House and Senate to repeal it. We strongly support H.R. 752 as introduced by Rep. Mac Collins(R-GA) and S. 304 as introduced by Senator Rick Santorum (R-PA)., and urge favorable action as soon as possible. By repealing the fuel tax the Congress will demonstrate its commitment to this beleaguered industry and its employees and give them the opportunity to remain competitive in the global marketplace. Thank you for your consideration.

SUBMITTED STATEMENT OF THE AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS TO THE SUBCOMMITTEE ON OVERSIGHT OF THE HOUSE WAYS AND MEANS COMMITTEE ON THE SECTION 127 EXCLUSION FROM TAXABLE INCOME OF EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE

MAY 9, 1995

The AFL-CIO appreciates this opportunity to provide its views on Internal Revenue Code Section 127. H.R. 127, a bill introduced by Representatives Sander Levin (D-MI) and Clay Shaw (R-FL), would make permanent the Section 127 exclusion from taxable income of employer-provided educational assistance. This bill has and deserves the AFL-CIO's strong support.

Increased investment in worker education and training is a national economic imperative. Despite that, the Congress appears close to scaling back, perhaps drastically, the federal government's already inadequate expenditures in these areas. The December 31, 1994 expiration of Section 127 will make this bad situation even worse.

Since it became law in 1978, Section 127 permitted more than seven million workers to exclude employer-provided educational assistance from their incomes for federal income tax purposes. Section 127 thereby encouraged these workers, more than 99% of whom earned less than $50,000 per year, to take courses and pursue other opportunities for education and training, and to update and improve their skills.

In unionized sectors, Section 127 also contributed to the establishment and expansion of collectively bargained educational assistance programs, one of the most important and far-reaching collective bargaining innovations of the 1980s. During that decade, an impressive array of collectively bargained programs that allow workers to upgrade their skills and further their education was put in place by unions and employers in the auto industry, the telecommunications industry, the steel industry and many others, in the service, manufacturing, public and private sectors.

Examples include the UAW-Ford Education, Development and Training Program (EDTP) which was established in 1982; similar programs involving the UAW and General Motors and the UAW and Chrysler; The Alliance for Employee Growth and Development, which was established in 1986 between the Communications Workers of America (CWA), the International Brotherhood of Electrical Workers (IBEW) and AT&T; the Enhanced Training Opportunities Program (ETOP) covering IBEW represented AT&T manufacturing workers; programs involving the CWA and AmeriTech, NYNEX, U.S. West, Bell Atlantic, Bell South and Cincinnati Bell; programs involving the IBEW and GTE, NYNEX, AmeriTech, U.S. West, United Telecom, Alltel, Allnet and the Centel Division of Sprint; the Service Employees International Union's Lifelong Education and Development Program, and its outgrowths such as the Career Ladder

Program at Cape Cod Hospital in Massachusetts; The Education Fund covering workers represented by the American Federation of State, County and Municipal Employees (AFSCME) District Council 37 employed by New York City; the Upward Mobility Program established between AFSCME District Council 31 and the State of Illinois; the Joint International Association of Machinists (IAM)/Boeing Quality Through Training Program; and the Institute for Career Development, a joint effort of the United Steelworkers of America and the major steel companies. This is just a partial list.

These programs often serve both active and displaced workers, and provide a wide range of services, such as individualized educational planning and assessment, pre-paid tuition for approved courses, and personal enhancement opportunities to brush up on reading, writing and mathematics skills. Hundreds of thousands of workers have gained access to employer-provided educational assistance as a result.

Despite these highly successful collectively bargained programs, most U.S. employers still invest far too little in the education and training of their workforce, particularly those workers who are not college graduates. When the federal government should be encouraging such investments, allowing the Section 127 exclusion to expire sends precisely the wrong message.

Without the Section 127 exclusion, many workers will not be able to afford to pursue education and training opportunities, even with employer assistance. Including contributions for Social Security and Medicare, taxes could cost workers 25% or more of their educational assistance benefit even though their cash earnings have not increased. Since 99% of the workers receiving educational assistance under Section 127 have earnings of $50,000 per year or less, and 71% have earnings of $30,000 or less, many workers who are eligible for educational assistance will no longer be able to afford to take advantage of it.

Laid-off workers, who badly need educational assistance to retrain and qualify for new jobs, will be among those who are hurt the worst. After Section 127 was scheduled to expire at the end of 1987, the UAW noted that applications from laid-off workers for educational assistance dropped at all of the major auto companies in 1988.

The Section 127 exclusion is estimated to cost a modest $300 million per year in lost tax revenues. This is a small price to pay for encouraging and enabling workers to take advantage of employer-provided educational assistance. There can be little doubt that the Treasury recoups the public's investment many times over in higher tax revenues on the increased stream of future earnings that additional worker education and training make possible.

The AFL-CIO urges the Congress to make the Section 127 exclusion permanent. Eight times since 1986, the Section 127 exclusion has been scheduled to expire. Seven times, it has been extended by the Congress, on six of those occasions retroactively. Every time Section 127 has been scheduled to expire, the resulting uncertainty has been detrimental to the utilization of employer-provided educational assistance. The time has come to recognize the important public purpose served by the Section 127 exclusion, end the counterproductive uncertainty, and make the exclusion permanent.

STATEMENT OF
THE AMERICAN FEDERATION OF TEACHERS
ON SECTION 127, THE EXCLUSION FOR EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE

SUBMITTED TO
THE SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES
FOR THE HEARING RECORD OF
MAY 9, 1995

The American Federation of Teachers appreciates the opportunity to share its views on the tax exclusion for employer-provided educational assistance. The AFT strongly supports swift action on H.R. 127, which would restore and make permanent the Section 127 exclusion for employer-paid educational benefits.

A well educated, highly skilled workforce is essential if our country is to meet the challenges of today's global economy. Since 1978, Section 127 has helped more than 7 million working Americans to attend classes in order to improve their skills and expand their economic opportunities.

The AFT's 875,000 members include teachers, classified school employees, paraprofessionals, and health care workers who have benefited from the educational opportunities made possible through Section 127. AFT locals throughout the country collectively bargain for educational benefits in their contracts, and better teachers, paraprofessionals and nurses result from the additional education they receive.

Section 127 can also play a significant role in helping our nation's school system meet its teaching needs. Current projections suggest an increasing demand for teachers through this decade and into the next century due to retirement, attrition, and a growing student population. In addition, we are already facing teacher shortages in a number of key specialty areas such as math, science, English as a second language, vocational education, computer science, foreign languages, and special education.

Many programs of teacher education and retraining which have been designed to increase the supply of teachers in shortage areas could be jeopardized in the absence of Section 127. Our teachers have participated in programs that pay for credits in special education, bilingual education, and vocational education, as well as other fields where shortages exist. The Intensive Teacher Institute offered by the State of New York, for example, currently pays for 18 credits to encourage teachers to become certified in bilingual special education.

In addition to their role in increasing the supply of teachers in critically short specialties, employer-provided educational benefits have also proved to be an important tool in attracting teaching candidates from other sources. A number of AFT locals

throughout the country have negotiated career ladders for their paraprofessionals and school aides, which help them to earn their college degrees through employer-paid educational assistance, release time, and summer stipends. More than 7,000 paraprofessionals in New York City have utilized the career ladder negotiated by their local, the United Federation of Teachers (UFT), to obtain their college degrees. Many of them have moved up in the education system, becoming teachers, guidance counselors, school secretaries, and assistant principals. Others have graduated from college and gone on to success in other fields. Over 6,000 UFT members are currently using the career ladder, and many more will enter it in the fall. In Baltimore, some 800 paraprofessionals a year are earning college credits through the career ladder negotiated by their local, and similar programs are under way in Massachusetts, Ohio, Florida, Oregon, Pennsylvania, and other sites throughout the country.

The success of these programs is particularly satisfying, since many of the participants are single parents who came to the classroom from the welfare rolls, often with no employment history and without even a high school diploma. Many of these individuals simply could not afford to take advantage of the opportunities offered through career ladders if they had to pay taxes on their educational benefits.

Restoration of Section 127 is also extremely important to health care workers represented by AFT whose contracts provide for tuition reimbursement by their employers. These educational benefits allow nurses and other health care workers to obtain Bachelor of Science degrees and to upgrade their skills and train for better jobs in a variety of critical medical specialties.

Section 127 has been highly successful in helping AFT members and other workers who wish to improve their skills and expand their economic opportunities by preparing themselves for better jobs. The AFT strongly believes that Section 127 should be restored and made a permanent part of the tax code. Since its enactment in 1978, the provision has been extended seven times, sometimes retroactively after a lapse of several months. This kind of uncertainty makes planning difficult and creates paperwork burdens for employers and employees alike. It can also discourage the participation of low-income workers who fear that they may have to pay taxes on their educational benefits.

Education is the key to increasing our economic productivity and ensuring that we can compete internationally in the 21st century. The permanent restoration of Section 127 will be a wise investment in America's workers and our nation's future.

Governmental Affairs
American
Hotel & Motel
Association

May 17, 1995

The Honorable Nancy L. Johnson
Chairwoman, Subcommittee on Oversight
Committee on Ways and Means
U.S. House of Representatives
Washington, DC 20515

Dear Chairwoman Johnson:

The American Hotel & Motel Association, the trade association of the lodging industry, representing in excess of 10,000 properties through a federation of state and local lodging associations, offers the following comments for the record of the Subcommittee's May 9, 1995 hearing on the Targeted Jobs Tax Credit (TJTC). As a member of the Committee for Employment Opportunities we wish to endorse the testimony of that group as presented to you by Janet M. Tully of Marriott International.

TJTC has proven to be an effective program for companies in our industry, having a positive effect on the hiring of individuals in the designated categories. The existence of a partial tax credit has helped offset higher training costs, initial lower productivity, and the extra expenditure of management time necessary to bring these employees up to levels of productivity equivalent to others in the work force. By allowing companies a method of offsetting those costs, TJTC has created a positive incentive to seek out and hire qualifying individuals.

Much has been made recently of reports and statements suggesting that many if not most individuals hired under TJTC would have been hired anyway to fill positions and that therefore TJTC is ineffective. While we do not believe this has been the case, we agree that the fundamentally changed model presented to this subcommittee will resolve that issue once and for all. TJTC exists because it was recognized that some individuals need help in breaking into the job market. TJTC provides that help by creating an incentive for employers which balances out the extra costs associated with training these individuals in the job skills needed in the work place. In addition, the new approach identifies individuals for willing employers to bring into the work force.

Despite the fact that this program has been disrupted several times by limited extensions which have been allowed to lapse and by short term renewals, it continues to be strongly supported both by business groups and individuals who are benefited by the opportunities created. TJTC should remain available on a reliable basis into the future to continue the salutary effect it has had on bringing into the work force individuals in the targeted disadvantaged categories.

We urge the Subcommittee to pass the revised version of TJTC presented to it and to do so on a permanent basis to ensure that this workable program remains available and is no longer threatened by periodic interruption.

Sincerely,

James E. Gaffigan
Vice President, Governmental Affairs

STATEMENT OF THE AMERICAN SOCIETY FOR TRAINING AND DEVELOPMENT

The American Society for Training and Development (ASTD) appreciates the opportunity to submit testimony for the record, regarding the reauthorization of Section 127 of the Internal Revenue Code, Employer-Provided Educational Assistance.

The American Society for Training and Development (ASTD), represents more than 58,000 workplace-based specialists in training, learning and performance. Members work in multinational companies, small businesses, virtual corporations, industry associations, government agencies, and colleges and universities.

ASTD's mission is to provide leadership to individuals, organizations and society in order to achieve work-related competence, performance and fulfillment.

As the pace of economic and technological change accelerates, the ability of workers and enterprises to learn and adapt becomes a core element in global competition. Success in the global economy therefore, requires companies to become high performance workplaces that integrate a skilled and educated workforce with technology, efficient systems of work organization, and continuous innovation. As a result, learning and the ability to create, extend and apply knowledge have become a critical component in the practices which result in high performance.

To build and maintain a skilled workforce, incentives are needed that encourage future training and education. For this reason, ASTD strongly supports the reauthorization of Section 127, which has been used by more than 7 million Americans workers, to pursue college or graduate-level education.

SECTION 127 BENEFITS

Section 127, which expired on December 31, 1994 allowed employers to provide up to $5250 a year in nontaxable reimbursements or direct payments to employees for non-job-related tuition, fees, and books for both undergraduate and graduate courses.

Workers have used Section 127 to improve skills and obtain better jobs. Without this tax exclusions, many workers will not be able afford courses needed to enhance their capabilities.

A 1989 study showed that nearly 99 percent of workers using the Section 127 benefit earned less than $50,000 a year, 71% earned less than $30,000 a year, and 35 percent earned less than $20,000. Taxes could cost those workers 25 percent or more of the benefit, which employers would have to withhold from their take-home pay.

Additionally, employers have used Section 127 as a valuable tool for retraining workers for other work within the company or, in the case of layoffs, for other employment in the community. The benefits have been an important way to maintain a competitive, well-trained workforce in today's global marketplace.

IMPACTS OF THE EXPIRATION OF SECTION 127

The history of Section 127 clearly points to the need for Congress to make this tax provision permanent. Prior to the enactment of Section 127, which occurred in 1978, only specifically "job related" education was excluded from gross taxable income. As a result, Congress enacted Section 127, which was designed to reduce administrative inequities arising from uncertainties often reflected in conflicting court decisions over what was and was not job-related education; reduce tax code complexity; and remove disincentives to upward mobility.

Since 1978, Congress has extended Section 127 seven times and, on six of those occasions, applied it retroactively. Although Congressional extensions have been positive, the uncertainty regarding the status of Section 127, has frequently discouraged workers and employers form using the tax exclusion. As a result, more than 1,000 workers at a major manufacturer already using Section 127, dropped out of classes when their educational assistance became taxable.

Further, the expiration of Section 127 has left only job-related training assistance exempt from an employees' gross taxable income under a separate and permanent section of the revenue code - 1.162.5.

MAKING SECTION 127 PERMANENT

Legislation (H.R. 127) that would reauthorize and make Section 127 permanent, has been introduced by Representatives Sander Levin (D-MI) and Clay Shaw (R-FL). Although ASTD recognizes that many programs may not be funded based on the current fiscal situation, ASTD strongly encourages Congress to support this bill, which would ensure that low and middle-income workers may continue to pursue lifelong learning through training and education.

CONCLUSION

Continuous education and training of the U.S. workforce is critical to meeting the challenges of the global economy. Through Section 127, employers have an opportunity to retrain workers and ensure that individuals obtain the skills needed to move into high wage jobs.

ASTD appreciates the opportunity to comment on the reauthorization of Section 127, and is supportive of the committee's efforts to examine this very important issue.

STATEMENT OF
THE AMERICAN SOCIETY OF MECHANICAL ENGINEERS
ON THE INTERNAL REVENUE CODE SECTION 127
EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE PROVISIONS

SUBMITTED TO THE WAYS AND MEANS COMMITTEE
U.S. HOUSE OF REPRESENTATIVES
MAY 9, 1995

The American Society of Mechanical Engineers (ASME) strongly supports legislation to make permanent the Internal Revenue Code Section 127 exclusion for employer-paid educational assistance. Section 127 expired on December 31, 1994.

The 125,000-member ASME is a worldwide engineering society focused on technical, educational, and research issues. It conducts one of the world's largest technical publishing operations, holds some 30 technical conferences and 200 professional development courses each year, and sets many industrial and manufacturing standards.

We strongly support congressional efforts, in particular H.R. 127, to make permanent the Section 127 Internal Revenue Code employee educational assistance provisions. These provisions allow employers to provide their employees tax-free reimbursements for tuition, books, and fees for non job-related educational assistance.

Pressures of international economic competition are shaping a new environment for employer-employee relationships, requiring greater job flexibility, job mobility, and frequent updating of skills. The American demographic trend toward an older work force, the continuing shift toward a service economy, and rapid advances in knowledge and technology clearly point to the need for public policies which support and encourage lifelong education.

Continuing education and retraining programs are especially critical for engineers to keep up-to-date with rapidly changing technology in their field or to switch areas of engineering specialization. Moreover, a well-trained engineering work force is vital to our nation's economic well-being.

Section 127 of the Internal Revenue Code has exempted qualified employee educational assistance from employee federal income taxes. The Section's expiration has caused confusion and concern among participants in this program. In the absence of Section 127, the law requires employees to pay taxes on tuition payments made by their employers unless the courses are strictly "job-related." The expiration of the Section 127 provisions is keeping many engineers from pursuing the advanced degrees they need to compete, and to help our nation compete, in the ever-changing world of engineering technology.

Section 127 has had an important role to play in the retraining of engineers employed by the defense dependent industries impacted by defense downsizing. Employee educational assistance would provide these engineers with the opportunity to continue their education in new fields of engineering technology which can be used in both military and civilian applications. This in turn would assist the defense industry in expediting the conversion of their products from defense to domestic markets.

Section 127 works. Since 1978, employee educational assistance has enabled more than seven million American workers to upgrade their skills and keep pace with new competitive, technological, and industrial developments. Over 95 percent of the participants in ASME's continuing education courses in the Society's professional development program have been supported by their employers through tuition reimbursement.

We believe that Section 127 is analogous to the GI Bill of Rights: an investment in the future. In our experience, continuing education is an investment, not a fringe benefit. It should be considered a business expense, required for a company to remain competitive. With the appropriate mix of educational programs, we can improve our quality of life while improving the nation's industrial competitiveness and balance of trade; we can improve productivity while improving the quality of our products.

Finally, we believe that permanent implementation of Section 127 would not be a revenue loser for the federal treasury. We believe the revenue foregone from not taxing employee educational assistance will be recovered many times over in additional tax revenues from economic activities generated by a continuously employed, well-educated work force. It should also be noted that the "cost" of Section 127 is very low compared to the alternative of expanding direct funding for educational programs and retraining.

In conclusion, we urge Congress to move expeditiously to make Section 127 a permanent part of the Internal Revenue Code. It is a critical component of the national effort to enhance the education, job skills, and retraining of American workers. Clearly, Section 127 is a cost-effective investment in the future of America.

STATEMENT OF THE ASSOCIATION OF AMERICAN RAILROADS
on the
ELIMINATION
of the
1.25 CENT-PER-GALLON DEFICIT REDUCTION FUELS TAX
submitted to the
SUBCOMMITTEE ON OVERSIGHT
OF THE
HOUSE COMMITTEE ON WAYS AND MEANS

May 9, 1995

The Subcommittee on Oversight's hearing on the October 1, 1995, expiration of the aviation jet fuel exemption from the Transportation Fuels tax presents an opportunity to examine a clear tax inequity assessed against America's railroads. Effective October 1, 1995, the railroads will be unfairly left as the only transportation mode paying the 1.25 cents-per-gallon deficit reduction fuel tax. It is simply discriminatory to require railroads to pay 1.25 cents more per gallon towards deficit reduction than their major competitors. The Association of American Railroads strongly urges, as a matter of fundamental fairness, that all modes of transportation should pay the same fuel tax toward deficit reduction.

I. UNDER CURRENT LAW BOTH RAILROADS AND THEIR MAJOR COMPETITORS CONTRIBUTE EQUALLY TO DEFICIT REDUCTION.

Prior to the 1990 Reconciliation Act, the sole purpose of the transportation fuels tax was to finance the Highway Trust Fund. Therefore, railroads (like other off-highway users) did not pay this tax. The 1990 Act arbitrarily extended the fuel tax beyond its historical role as a highway user fee, by introducing a 2.5 cents-per-gallon deficit reduction tax on transportation fuels.

The original 2.5 cent tax was payable by most transportation modes (except barges) into the general fund of the Treasury. The 1993 Reconciliation Act imposed an additional 4.3 cents-per gallon deficit reduction rate on all transportation modes, in addition to modifying the 2.5-cents rate. At present and until October 1, 1995, both railroads and trucks pay a combined deficit reduction rate of 6.8 (4.3 plus 2.5) cents-per-gallon of transportation fuel.

II. UNDER 1993 AMENDMENTS SCHEDULED TO TAKE EFFECT ON OCTOBER 1, 1995, RAILROADS WILL BE AT AN UNFAIR COMPETITIVE DISADVANTAGE, BECAUSE THEY WILL BE REQUIRED TO PAY MORE TOWARDS DEFICIT REDUCTION THAN THEIR COMPETITORS.

Under the 1993 Reconciliation Act, the 2.5-cents tax paid by highway users will be redirected into the Highway Trust Fund. Thus, on October 1, 1995, railroads will be left as the only payers of the original deficit reduction tax at a rate of 1.25 cents-per-gallon. As a result, on October 1, 1995, highway users will pay only 4.3 cents-per-gallon into Treasury's general fund, while railroads will pay 5.55 (4.3 plus 1.25) cents-per-gallon for deficit reduction. Thus, the railroad industry will be at an unfair competitive disadvantage, unless the deficit reduction rate levied on the railroads is reduced to the level of its competitors.

III. THE DEFICIT REDUCTION FUEL TAX IMPOSED ON RAILROADS SHOULD BE REPEALED, TO THE EXTENT THAT ANY PORTION OF THE TAX PAID BY HIGHWAY USERS IS DIVERTED TO THE HIGHWAY TRUST FUND.

Tax equity requires the recognition of basic differences regarding the financing of infrastructure used by competing modes of surface transportation: (1) the Highway Trust Fund, funded by highway user taxes, provides the financing for the construction and maintenance of the public roads used by trucks, while (2) the railroad industry operates over its own privately funded rights-of-way, with respect to which the industry pays significant property taxes. Thus, the railroads's fuel tax payments should never be diverted to the Highway Trust Fund; such a result would unfairly force the railroads to pay for the infrastructure used by their competitors (in addition to their own). Moreover, because the railroads do not enjoy, require, or want a trust fund, the diversion of the excise tax paid by trucks into the Highway Trust Fund should be balanced by the repeal of the fuel tax paid by railroads.

IV. ALTERNATIVELY, TO AVOID ANY REVENUE SHORTFALL, THE SAME AMOUNT OF TAXES RAISED BY THE 1.25-CENT RATE ON RAILROADS CAN BE GENERATED BY REQUIRING DEFICIT REDUCTION PAYMENTS AT A LOWER RATE BY ALL MODES OF TRANSPORTATION.

The alternative proposal would allow fuel taxes paid by the other modes to be directed into their respective trust funds in a revenue neutral manner, with all modes contributing equally to deficit reduction. For example, a .028 cent-per-gallon tax on fuel used by the same transporters, including railroads, subject to the 1993 deficit reduction tax would raise enough revenue to eliminate the 1.25-cent discriminatory tax on railroads. As long as the fuel tax is viewed as an appropriate vehicle for deficit reduction, all transporters should be required to make equal contributions.

CONCLUSION

Competing modes of surface transportation should be required to make equal contributions to deficit reduction. The Association of American Railroads urges the elimination of the 1.25 cent-per-gallon deficit reduction tax on railroads (scheduled to take effect on October 1, 1995) as a matter of fundamental fairness.

STATEMENT OF J. VERNON HINELY
CHAIRMAN AND CHIEF EXECUTIVE OFFICER
CARBONIC INDUSTRIES CORPORATION
on the
ELIMINATION OF THE UNINTENDED TAX SUBSIDY FOR CARBON DIOXIDE PRODUCED AS A BY-PRODUCT OF ETHANOL
submitted to the
SUBCOMMITTEE ON OVERSIGHT
of the
HOUSE COMMITTEE ON WAYS AND MEANS

May 9, 1995

I. INTRODUCTION

The Subcommittee on Oversight's hearing on the expiration of the aviation jet fuel exemption from the Transportation Fuels tax presents the opportunity to review a related issue involving the way in which the fuel tax exemptions for ethanol have disrupted the traditional carbon dioxide ("CO2") market by virtue of the unintended subsidy made available to ethanol-based CO2. I and others in my industry strongly urge, as a matter of fundamental fairness, the enactment of legislation to "back out" the cost advantage that ethanol producers obtain when they co-generate CO2 for sale in the retail market.

The Cato Institute recently identified the ethanol tax subsidies as a prime target for "corporate welfare reform." At the very least, these tax subsidies should be reduced, because a federal subsidy is unnecessary to the extent current law already enables ethanol producers to supplement their revenues by selling CO2 at retail.

II. THE CARBON DIOXIDE INDUSTRY MATURED WITHOUT THE AID OF FEDERAL SUBSIDIES

A mature (half billion dollar a year) CO2 market developed in this country without the benefit of federal government subsidies. Refined CO2 has countless commercial applications, including food preservation, beverage carbonation, water treatment, and firefighting. Because there are few natural CO2 gas wells, the primary source of CO2 is as an industrial by-product, particularly from ammonia production and petroleum refining.

CO2 is a gas that is found naturally in our atmosphere. The commercial production of CO2 begins with CO2 in a gaseous state; liquid CO2 is produced by cooling and compressing carbon dioxide gas under high pressures. Below -69.9 degrees Fahrenheit, liquid CO2 freezes to form a solid (known commonly as "dry ice").

It is uneconomic to transport crude CO2 gas, even over a distance as short as a quarter of a mile. For this reason, CO2 refining operations[1] are located at the source -- that is, a CO2 company's recovery and processing equipment must be connected to an unrelated supplier's industrial plant. The economics of transporting raw CO2 also explains why there is no national wholesale market for this commodity; instead, there are overlapping regional wholesale markets.

The aggregate wholesale market is a "seller's market," characterized by sharp competition for reliable streams of CO2 of sufficient purity and volume. Not surprisingly, longterm "take or pay" supply contracts are prevalent. The typical CO2 supply contract has a term of 15 years and calls for a fixed price.

---

[1] A merchant liquid carbon dioxide plant consists of filtration, compression, and refrigeration equipment with related controls, instrumentation, and storage.

III. THE ETHANOL MARKET AS WE KNOW IT TODAY WOULD NOT EXIST BUT FOR FEDERAL TAX SUBSIDIES.[2]

Ethanol is an alcohol that may be produced from a variety of feedstocks, although about 95 percent of current ethanol production is derived from corn. Beginning in 1978, the Congress enacted five tax incentives to encourage the use of ethanol in gasoline and diesel: (a) exemptions from the motor fuels excise taxes on gasoline and diesel (generally referred to as the "Gas tax"); (b) a blender's tax credit; (c) a small ethanol producers tax credit; (d) tax deductions for clean-fuel burning vehicles; and (5) the alternative fuels production tax credit. Since the enactment of the first Gas tax exemption, the ethanol fuels market has expanded from a few million gallons per year prior to 1978 to over a billion gallons per year today.[3]

A. The Gas Tax Exemption Has Been The Most Effective Federal Tax Incentive In Stimulating Ethanol Production.

The Gas tax is imposed at the rate of 18.4 cents per gallon on gasoline and 24.4 cents per gallon on diesel used in highway motor vehicles. 11.5 cents of the 18.4 cents rate (17.5 cents of the diesel tax rate) finances the Highway Trust Fund.[4] While the Gas tax has always had an expiration date (and is currently scheduled to expire on October 1, 1999) it has always been extended before expiration.

1. The Internal Revenue Code Provides For Three Tiers Of Exemptions, Depending On The Percentage Of Ethanol Per Gallon Of Gasoline.

Gasohol -- blends of gasoline and ethanol that are at least 10 percent ethanol -- is exempt from 5.4 cents of the 18.4 cents Gas tax; thus, gasohol is taxed at only 13 cents per gallon. Mixtures of gasoline and ethanol that are at least 7.7 percent ethanol are exempt from 4.16 cents of the Gas tax, and mixtures that are 5.7 percent ethanol are exempt from 3.08 cents of the Gas tax. Straight alcohol fuels also qualify for Gas tax exemptions. Ethanol that qualifies for the Gas tax exemption must meet two definitional requirements. First, the ethanol cannot be derived from petroleum, natural gas, or coal (including peat). Secondly, the ethanol must be at least 190 proof (or, 95 percent pure alcohol, determined without regard to any denaturants). The Gas tax exemptions for ethanol expire after September 30, 2000.[5]

2. The Economic Benefit Of The Gas Tax Exemption Goes To Ethanol Producers.

The Gas tax is levied -- and the exemption is claimed -- at the time gasoline is removed from a "terminal" (a gasoline storage and distribution facility that is supplied by pipeline or vessel). Although the owner of the gasoline (e.g., a major oil company) is liable for the Gas tax, it is the ethanol producer that receives the economic benefit of the

---

[2] The market information in this section was drawn from a recent analysis of the Federal tax incentives for ethanol: Alcohol Fuels Tax Incentives and EPAs Renewable Oxygenate Requirement, by Salvatore Lazzari, Specialist in Public Finance, Economics Division, Congressional Research Service, The Library of Congress (94-785 E) October 7, 1994.

[3] Further Administrative actions by the Environmental Protection Agency ("EPA") and Internal Revenue Service ("IRS") artificially increase the demand for ethanol. First, the EPA interpreted the Clean Air Act as giving it discretion to require that a portion of required oxygenates be derived from renewable resources, and mandated 30 percent; the U.S. Court of Appeals for the District of Columbia, however, struck down this rule on April 28, 1995. The EPA requirement effectively mandated the use of ethanol, as the technology for producing the alternative -- methanol from biomass -- is experimental and uneconomic at present; if the court case is not appealed, the case would not prevent refiners from using etanol voluntarily. Secondly, the IRS has ruled that ETBE (Ethyl Tertiary Butyl Ether, a compound --not an alcohol-- resulting from a chemical reaction between ethanol and isobutylene) qualifies for the blenders tax credit noted above.

[4] The other components of the 18.4 and 24.4 cents tax rates are a 6.8 cents Deficit Reduction rate and a .1 cent Leaking Underground Storage Tank ("LUST") rate.

[5] Regarding the difference between the dates of expiration of the Gas Tax and the exemptions, the exemptions have always been drafted to expire after the Gas Tax

Gas tax exemption. This is so because ethanol producers set their prices to be equal to the Federal tax subsidy plus the current price of unleaded gasoline[6]. Further, it is the invoice supplied by the ethanol producer that the Internal Revenue Service ("IRS") relies on in determining whether taxpayers that claimed Gas tax exemptions have complied with the definitional requirements as to source and proof of ethanol.

Note that the IRS's acceptance of an ethanol producer's invoice as proof of compliance with source and purity requirements is not misplaced. Because ethanol producers are makers of alcohol, they are closely monitored by the Bureau of Alcohol, Tobacco, and Firearms ("ATF"). Thus, the IRS can be fairly confident that an ethanol producer will have few (if any) opportunities to engage in noncompliance.

B. Ethanol Tax Credits Are Available In Lieu Of the Gas Tax exemption.

The "Blenders" credit is 54 cents per gallon of ethanol that is used in a mixture of alcohol and gasoline and sold as a fuel or used by the blender in its trade or business as a fuel. A separate 10 cents per gallon credit is provided for small ethanol producers (defined as one with ethanol production capacity of not more than 30 million gallons per year). A 54 cents per gallon credit is also available for straight ethanol. While the Gas tax exemption reduces revenues to the Highway Trust Fund, the ethanol credits reduce general revenues.

The alcohol fuel credits are designed to provide the same economic benefit as the 5.4 cents Gas tax exemption. Generally, a taxpayer has the choice of the credit or the exemption, but not both.[7] Taxpayers prefer the Gas tax exemption over the income tax credit, primarily because the exemption provides an immediate tax benefit while the credit is not claimed until an income tax return is filed (and is useful only to the extent of tax liability). Further, the exemption is more profitable, because the amount of credit is subject to tax and so the after-tax benefit is reduced to 35 cents per gallon (a 54 cents credit minus the 54 cents included in income and taxed at the 35-percent corporate income tax rate).

C. The Ethanol Industry Is Now Using Its Government Subsidized Cost Advantage to Compete In The Retail CO2 Market.[8]

Fermentation of grain in an ethanol plant generates CO2: 6.8 pounds of CO2 are produced per gallon of ethanol.[9] Utilizing their enormous capacity to generate CO2, ethanol producers are competing directly with traditional CO2 companies selling at retail.[10] The vast quantities of CO2 available to ethanol producers is a direct but unintended consequence of the Federal tax subsidies for ethanol. Because ethanol producers source their raw CO2 from themselves at virtually no cost,[11] they enjoy a competitive edge over traditional CO2 companies that purchase and refine CO2 without the benefit of a Federal tax subsidy.

---

[6] See page 5 of the 1994 CRS analysis cited in note 2, above.

[7] A mixture that is more than 10 percent ethanol is eligible for both the exemption and the credit, but in such a case the credit is reduced by the amount of the exemption.

[9] As calculated by the Congressional Research Service in the memorandum, dated February 15, 1994, entitled "Carbon Dioxide from Ethanol Production" by David E. Gushee, a senior fellow in environmental policy.

[10] See "Improve Ethanol Project Economics With Carbon Dioxide Recovery Capability," from the Sept./Oct. 1993 issue of Fuel Reformulation magazine.

[11] See the Congressional Research memorandum cited in note 9, above.

IV. A FEDERAL TAX SUBSIDY IS UNNECESSARY TO THE EXTENT CURRENT LAW ALREADY ENABLES ETHANOL PRODUCERS TO SUPPLEMENT THEIR REVENUES BY SELLING CO2 AT RETAIL.

A. Groundwork For A Corrective Amendment Was Laid During The Last Congress.

The unintended effect of ethanol subsidies on the CO2 industry was the subject of a hearing during the last Congress where I testified before another subcommittee of the Ways and Means Committee.[12] Further, the staff of the Joint Committee on Taxation ("Joint Tax") did some preliminary work on estimating the revenue that could be raised by backing out the unintended tax subsidy for ethanol-based CO2. The proposal described herein does not involve the imposition of a new tax and would be designed to enhance revenues.

B. Current Law Should Be Amended To Reduce The Ethanol Tax Incentives By An Amount That Corresponds To The Advantage Gained In The Retail CO2 Market.

1. The Proposal Would Provide Reduced Exemption Rates For Ethanol That Is Co-generated With CO2, (Just As Current Law Already Provides Different Rates Depending On The Percentage of Ethanol).

Except in the case of alcohol produced by small ethanol producers, the proposal would provide different rates for ethanol that is co-generated with marketable quantities of refined CO2. The invoice rendered by an ethanol producer would indicate whether the alcohol was co-generated with CO2 for sale at retail. Just as under current law, ATF monitoring of ethanol production facilities should obviate any concern about non-compliance with the proposed definitional requirement. In this regard, note that the logistics of recovering and refining CO2 requires the location of a merchant liquid CO2 plant at the site of the ethanol production facility. (In contrast, the sale of CO2 by-product as crude gas eliminates much of the capital and operating expense associated with refining CO2 for sale at retail).

2. The Reduced Rates Would Be Designed To Enhance The Revenue Raised By The Proposal.

In the first instance, the reduced exemptions would not be prohibitive; that is, the rates should be set so ethanol remains competitive with other oxygenates (such as methanol). At the same time, the exemptions should take into account the supplemental revenues generated by retail sales of CO2, because it is in the retail market that ethanol producers realize the cost advantage made possible by the Federal tax subsidy.

As a starting point, the cost advantage enjoyed by ethanol producers can be quantified as follows:

(a) The average purchase price of crude CO2 is $15 per ton (exclusive of transportation and other indirect costs);

(b) It takes 294 gallons of ethanol to produce a ton of CO2 (6.8 pounds of CO2 is produced for every gallon of ethanol; and two thousand pounds divided by 6.8 is equal to 294); thus,

---

[12] See "Testimony of J. Vernon Hinely, Chairman and Chief Executive Officer of Carbonic Industries Corporation, before the Subcommittee on Select Revenue Measures of the Committee on Ways and Means, on September 23, 1993."

(c) For every gallon of ethanol, a producer saves 5 cents ($15 -- the per ton purchase price for crude CO2 -- divided by the 294 gallons of ethanol required to produce a ton of CO2).

While the 5 cents per gallon savings is a clearly identifiable cost advantage that ethanol producers have over traditional CO2 companies, the revenue estimate should assume the rate reduction that would result in the smallest decline in production of ethanol-based CO2.

3. Conforming Amendments To The Ethanol Tax Credits Would Be Necessary.

Because the ethanol tax credits are designed to be equivalent to the Gas tax exemptions, the credits should be conformed to the applicable rates for ethanol that is co-generated with refined CO2

V. CONCLUSION

The Congress never intended to subsidize the production of carbon dioxide, yet that is exactly what has occurred as a result of the Gas tax exemption and related provisions of the Internal Revenue Code. As a matter of fairness and equity, I urge the enactment of the proposal that would mitigate the effects of the ethanol tax subsidy on the carbon dioxide industry by reducing the tax subsidies for ethanol that is produced as part of a process that includes co-generating and refining carbon dioxide for sale at retail.

STATEMENT OF THE COLLEGE AND UNIVERSITY PERSONNEL ASSOCIATION, SUPPORTING EMPLOYEE EDUCATIONAL ASSISTANCE (I.R. CODE SECTION 127)

The College and University Personnel Association (CUPA) is a nonprofit association that represents over 1,700 private and public college and university human resource departments throughout the United States and has an individual membership of more than 6,000 members. Our primary mission is to provide information and leadership to college and university human resource departments. Therefore, CUPA would like to submit the following written statement for the record in support of Section 127 Educational Assistance of the Internal Revenue Code (IRC).

As you are aware, Section 127 allows employers to provide up to $5,250 a year in nontaxable reimbursements or direct payments to employees for tuition, fees, and books for both undergraduate and graduate courses. Although not specifically classified as a fringe benefit, Section 127 is treated similarly to and is comparable with other benefits such as health care insurance, pension plans, and life insurance. If employers choose to provide educational assistance benefits to their employees, they must offer the benefits to all employees on a nondiscriminatory basis, which does not favor highly compensated employees.

Section 127 of the IRC was enacted first as part of the Revenue Act of 1978. Prior to 1978, only educational assistance provided by an employer to an employee that related to the individual's job was excluded from an employee's gross taxable income. The "job-related" test contained in Internal Revenue Regulation 1.162-5 was confusing and resulted in both the Internal Revenue Service and the courts making arbitrary decisions as to what type or types of employer-provided educational assistance successfully met the test of job relatedness. Additionally, most entry-level employees were unable to claim an exemption for an educational expense because their job descriptions and responsibilities were not broad enough to meet the test. In effect, only highly skilled individuals were able to use job-related educational assistance.

The 1978 effort to enact legislation to cover employer-provided educational assistance was led by Representatives Guy Vander Jagt (R-MI) and Frank Guarini (D-NJ) and received wide bipartisan support. The sponsors of the legislation believed that enactment of the provision would help to meet three goals: (1) clarify the tax treatment of employer-provided non-job-related educational assistance and job-related educational assistance; (2) reduce the inequity among taxpayers; and (3) provide less-educated and skilled employees with opportunities for upward mobility and advancement through employer-provided educational assistance. Since the 1978 enactment, supporters of Section 127 inside and outside of Congress believe the provision continues to meet the goals expressed by the original supporters of the legislation.

Due to revenue constraints, Congress has reinstated Section 127 predominantly through one to two year extensions. The last reinstatement was enacted in the Omnibus Budget Reconciliation Act of 1993 (OBRA '93) and expired on December 31, 1994. In the 104th Congress, Representatives Clay Shaw (R-FL) and Sander Levin (D-MI), Charles Rangel (D-NY), David Camp (R-MI), and Richard Neal (D-MA) have introduced a bill to reinstate Section 127 retroactively and make it a permanent part of the IRS code.

As an association that represents human resource departments at higher education institutions, CUPA is in a unique position to evaluate the effectiveness and significance of Section 127 benefits, from the perspective as both the providers of educational instruction and human resource professionals.

As higher education professionals, we witness firsthand the usefulness of Section 127 benefits as they are applied by the private sector and their employees to educational pursuits. Like any other benefit, employers are not required to provide Section 127 benefits to their employees. Nevertheless, employers provide these benefits to their employees because they see value and a return on the investment in their employees' education. Employees use Section 127 benefits to keep current with changing trends in rapidly advancing fields such as engineering and computer programming, to broaden their skills and knowledge, and to improve basic reading, writing, or mathematical skills, if necessary.

Finally, as evidenced during the last economic recession, the utility, value, and flexibility of Section 127 was demonstrated readily. Companies that endured layoffs offered Section 127

benefits as outreach programs to their laid-off workers. Many of these employees were retrained for other positions with their current employer or for other employment opportunities within the community. In instances when Section 127 expires and the benefits are taxable, these unemployed individuals who receive these benefits cannot afford to pay taxes on them out of the unemployment compensation they receive. This situation discourages the laid-off employees from receiving the very training they need to rejoin the work force.

We see the significance of offering these benefits to employees to continue their education. College and universities have a difficult time competing with the private sector for employees in terms of compensation. Our members have found that Section 127 benefits are an effective recruiting method for prospective employees who might otherwise choose to work in the more highly compensated private sector. Like their counter parts in the private sector, higher education institutions also realize how important educational assistance is as an investment in human capital. By offering Section 127 benefits, the institutions receive a better-skilled, better-educated employee.

Temporary extensions of Section 127 lead to a great deal of uncertainty in the tax code. Individual recipients of Section 127 benefits -- as well as employers -- encounter the tax implication of this uncertainty every year as they wonder whether Congress once again will temporarily extend Section 127 or make it permanent. Consequently, many employees who would like to continue their education through Section 127 benefits curtail or terminate their education. When Section 127 expires, employers still may offer educational assistance but must include the dollar value of the benefit in the individual's compensation, which makes it subject to federal and state income tax withholding as well as social security and Medicare Hospital Insurance taxes. As a result of the inclusion of the benefits in their compensation, many employees must terminate their continuing educational pursuits because of tax liability.

While reviewing the role of the federal government in the workplace, Congress should consider that the one vehicle that encourages employer investment and assistance toward the goal of providing educational assistance to workers is not a permanent section of the Internal Revenue Code. The continued uncertainty in the tax code regarding Section 127 benefits is an impediment to employers who want to provide worker training and educational assistance. It is essential that Congress makes Section 127 permanent.

CUPA fully appreciates the deficit problems that face this country and the difficult choices that must be made in the budgetary process to determine which programs will be funded and which ones will be eliminated. Section 127 Educational Assistance benefits are a prudent and an economically sound investment in the workforce of this country. The result of this investment in human capital will be a better educated and more technically skilled worker who will help America's economy to compete internationally. The continued education and development of the U.S. worker are fundamental to meeting the challenges of the international marketplace. CUPA urges Congress to make a sound commitment to the continued education of the U.S. work force by making Section 127 of the Internal Revenue Code permanent.

**SUBMITTED STATEMENT OF
THE COMMUNICATIONS WORKERS OF AMERICA
TO THE SUBCOMMITTEE ON OVERSIGHT OF THE
HOUSE WAYS AND MEANS COMMITTEE
ON THE TAX EXCLUSION FOR
EMPLOYER-PROVIDED EDUCATIONAL ASSISTANCE**

The Communications Workers of America (CWA), a labor union representing more than 600,000 working men and women in the telecommunications, printing, and broadcasting industries and in the public sector, wishes to add its voice to those organizations that have testified in support of Section 127 of the Internal Revenue Code, which allows workers to receive up to $5,250 of tax-free, employer-provided educational expenses.

CWA respectfully requests the permanent extension of Section 127, retroactive to December 31, 1994. Over the years this section of the tax code has been shown to be a proven means for the education, training and retraining of American workers.

Our own union has used this tax exclusion extensively since its enactment. To date, workers represented by CWA in such telecommunications companies as AT&T, Ameritech, Bell South, U.S. West, Cincinnati Bell, Bell Atlantic and NYNEX have all improved their skills through use of the exclusion.

We have found it to be an invaluable tool which contributes to American productivity and competitiveness in the global marketplace. This tax exclusion helps our union members to acquire additional skills so they can maintain future employment security in new fields and new occupations, whether inside or outside the companies we represent.

To give some examples:

In 1994, in the U.S. West "Pathways to the Future" program, **13,283** employees used the exclusion to enroll in at least one course or program during the year. This represents approximately **27 percent** of the employees eligible. The enrollment-related expenditures (tuition, required fees and books) totaled **$13,587,644.**

During the life of the program, January 1993 through December 1994, **17,588** employees (**36 percent** of those eligible as of January, 1994) have enrolled in at least one course or program during this period. Related expenditures for tuition, fees and books totaled **$23,763,821**, or an average of **$1,351** per student.

It is interesting to note that since January 1, 1995, when Section 127 expired, there has been a dramatic drop in enrollments at U.S. West.

At AT&T, a program has been developed in conjunction with CWA and the International Brotherhood of Electrical Workers (IBEW), called, "The Alliance for Employee Growth and Development".

Funded by AT&T, and jointly administered by the company and its two unions, the program covered **2,909** active AT&T bargained-for employees and **2,140** laid-off AT&T bargained-for employees during the period from May 1, 1994 through April 30,1995. The Alliance paid out **$3,096,158** for tuition, fees and books to help in the training and retraining of these workers.

The bottom line is that this is one part of the tax code that works. The telecommunications industry is constantly undergoing change. In order for its workers to keep productive in this world of new technology and change, they must be constantly trained and retrained.

The world of telecommunications is also highly competitive. We estimate that since the break-up of AT&T in 1984, hundreds of thousands of workers have lost their jobs because of bottom line downsizing by AT&T and the Bell telephone companies. Retraining programs based on Section 127 have enabled tens of thousands of these workers attain the new skills they need to go on to other jobs, and thus not become a burden upon society.

For these and many other reasons, the Communications Workers of America (CWA) urges the subcommittee to extend Section 127 on a permanent basis, and make it retroactive to December 31, 1994.

Connecticut Farm Bureau Association, Inc.

FOR THE RECORD
Permanent Extension of H-2A - FUTA Tax Exemption

Subcommittee on Oversight
House Ways and Means Committee

Dear Chairwoman Johnson and Subcommittee Members:

On behalf of 4000 members families of the Connecticut Farm Bureau, and more than one hundred Connecticut farms that utilize the H-2A program, I urge your consideration in making permanent the exemption from the provisions of the Federal Unemployment Tax Act for wages of H-2A employees.

H-2A workers are admitted to the United States under Section 101(a)(15)(H)(2)(a) of the Immigration and Nationality Act to perform agricultural labor for limited periods of time. H-2A workers are employed across the United States. In Connecticut, H-2A workers are employed by farmers that produce apples, vegetables and tobacco.

The vast majority of Connecticut farms that employ H-2A workers are family farms. Though H-2A workers are employed throughout the growing season, the greatest number are employed during the critical harvest season, especially for the apple harvest. Without H-2A workers, many of these farms would not survive due to the scarcity of a trained and motivated local labor supply which is within economic means of the farm enterprise.

The permanent extension of the FUTA exemption is crucial to the farms involved in the H-2A program, because it is one of the factors that helps maintain the costs of the program within economic reason for the Connecticut farmer. If farmers using H-2A workers were not exempt from FUTA, federal, as well as state unemployment taxes would increase and result in a significant negative impact upon Connecticut producers. These increased costs would be especially burdensome in Connecticut. Connecticut producers already face one of the highest costs of doing business in the nation. Unfortunately, very few of these high or increased costs can be passed onto the consumer, because Connecticut farm products face stiff national and international competition where farm production costs are generally much lower.

Connecticut agriculture needs the H-2A program as well as a permanent exemption from FUTA in these regards. Your positive consideration of our request would be greatly appreciated.

Sincerely,

Norma O'Leary

Norma O'Leary
President

The Honorable Michael D. Crapo, M.C.
TESTIMONY BEFORE THE
HOUSE WAYS AND MEANS COMMITTEE
SUBCOMMITTEE ON OVERSIGHT
HEARING ON TAX EXEMPTION EXTENSIONS
FEDERAL UNEMPLOYMENT TAX (FUTA)

Tuesday, May 9, 1995

RE: RENEWAL OF FEDERAL UNEMPLOYMENT TAX ACT EXEMPTION FOR H-2A AGRICULTURAL WORKERS

Chairman [Nancy] Johnson, Ranking Member Robert Matsui, and distinguished Members of the Subcommittee on Oversight, I appreciate the opportunity to testify today concerning the need to renew the Federal Unemployment Tax Act (FUTA) exemption for H-2A agricultural workers.

The H-2A program (administered by the Immigration and Naturalization Service) brings in foreign temporary workers under Section 101(a)(15)(H)(ii)(a) of the Immigration and Nationality Act to perform specific jobs. Without this exemption, these workers would be forced to return home to their own country since they are here under contract to do one specific job. As of December 31, 1994 this exemption once again has terminated, and needs to be renewed retroactively to January 1, 1995. Employers are concerned that paying these federal (and state) unemployment taxes for H-2(A) workers would be an undue burden. I have previously submitted a letter this year to the Subcommittee on Human Resources on this matter, and again appreciate Chairman Johnson's gracious consideration and the cooperation of her Oversight Subcommittee on my requests.

It is my hope that the House Ways and Means Committee will agree with my position and the position of many sheepherders in Idaho in permanently extending the FUTA exemption for H-2A for agricultural workers. Thank you for your consideration of this meritorious extension proposal and I look forward to working with Members of the Ways and Means Committee in furthering this extension.

IDAHO FARM BUREAU FEDERATION

FOR THE RECORD
STATEMENT OF THE IDAHO FARM BUREAU FEDERATION
Re: FUTA/H-2A Exemption

May 16, 1995

United States House of Representatives
Ways and Means Subcommittee on Oversight

Madam Chairman and Members of the Subcommittee:

The Idaho Farm Bureau Federation strongly supports the permanent exemption of H-2A workers from the Federal Unemployment Tax Act (FUTA). When Unemployment Insurance (UI) was created by Title III of the Social Security Act of 1935, agricultural employers were specifically excluded. The law was amended in 1976 to include certain agricultural employers. However, **temporary agricultural workers admitted to the United States under the H-2A program were exempted and have been on four other occasions since that time.** The most recent exemption expired January 1, 1995.

The IFBF supports a **permanent FUTA exemption for H-2A workers** for the following reasons:

1. H-2A non-immigrant alien workers are admitted to the United States only for the period of their specific work contract.
2. H-2A workers **must return home at the end of the employment period** and cannot meet the "ready, willing, and available to work" statutory requirement of unemployment insurance.
3. The current situation has placed agricultural employers in the position of collecting and paying payroll taxes for benefits their employees will never receive.
4. There are only 17,000-19,000 H-2A workers in the United States. Total estimated revenue is $816,000-840,000.
5. Imposition of a FUTA tax for H-2A workers increases the regulatory burden for farmers and creates additional indirect record keeping costs for the farmer as well as the federal government.

The American Farm Bureau Federation represents 4.4 million member families and specifically opposes the deduction of federal unemployment taxes from the wages of H-2A workers. The 45,000 member family Idaho Farm Bureau Federation's policy recognizes the unique nature of agricultural employment and is consistent with the AFBF's position. It is for these reasons that **we respectfully request that Congress make the H-2A/FUTA tax exemption permanent**.

Respectfully submitted,

Dennis Tanikuni
Assistant Director of Public Affairs

INDEPENDENT PILOTS ASSOCIATION

May 22, 1995

The Honorable Bill Archer
Chairman
House Ways and Means Committee
1102 Longworth House Office Bldg.
Washington DC 20515

Dear Chairman Archer:

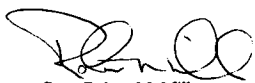
The Independent Pilots Association (IPA), the labor union representing over 1,800 airline pilots flying for United Parcel Service (UPS), writes in support of extending the commercial aviation fuel tax scheduled to be imposed on October 1 of this year. The airline industry has lost more than $13 billion since 1990, and the imposition of the fuel tax this year will likely cause greater financial losses.

The Omnibus Budget Reconciliation Act of 1993 requires the aviation industry to pay a 4.3 cents per gallon tax on jet fuel beginning in October unless an extension is granted. This fuel tax will cost U.S. airlines more than $527 million annually. For UPS in particular, it will cost approximately $15 million annually. Already the airline industry pays approximately $6.5 billion in Federally-mandated taxes and fees. To mandate and further burden the industry with an additional tax is unfair.

Nearly 120,000 airline employees and 125,000 aircraft manufacturing employees in the U .S. have lost their jobs since 1990. Further taxing an industry that is operating on thin profit margins will result in additional job losses. In addition, a fuel tax that costs the airline industry more money will hurt employees who have already given wage and benefit concessions.

As the airline industry continues to struggle to maintain profitability, it makes no sense to burden the industry and its employees with a tax increase. The IPA respectfully requests your support for extending the aviation fuel tax exemption.

Sincerely,



Capt. Robert M. Miller
President, IPA

THE IMPACT OF TARGETED JOBS TAX CREDIT ON EMPLOYMENT OPPORTUNITIES FOR PERSONS WITH DISABILITIES

Written Testimony Presented to the House Committee
On Ways and Means United States Congress
by Steve Zivolich

May 9, 1995

This written testimony will address the critical impact of the TJTC program on employment opportunities for persons with significant disabilities.

Integrated Resources Institute

Integrated Resources Institute (IRI), is a national non-profit agency that was established in 1988 to provide research, educational support and technical assistance to businesses and government agencies developing innovative employment opportunities for persons with disabilities.

Since it was founded, IRI has been instrumental in creating more than 15,000 job opportunities for workers with disabilities. These employment efforts have been accomplished with the active collaboration of three corporate partners: Pizza Hut Inc., Brinker International, and Restaurant Management Company. The employment outcomes and research were also fostered by grants from the U.S. Department of Education: Projects With Industry, Social Security Administration, Health and Human Services, and the Department of Labor.

It is our experience that these 15,000 jobs and related corporate commitments are a dramatic demonstration of the positive impact of TJTC. The Pizza Hut program initiative to hire persons with disabilities (Jobs Plus) began in 1988, four years prior to the passage of the ADA. TJTC was and is the primary reinforcement for Pizza Hut and these other national corporations to engage in this innovative employment effort. As a result, Pizza Hut is not only one of the largest users of TJTC, it is also the largest employer of persons with significant disabilities in the nation.

IRI's experience in designing and coordinating these corporate employment initiatives has convinced us that TJTC must be renewed to continue these positive employment opportunities for persons with disabilities.

Highest Unemployment Rate

Persons with disabilities represent at least 10% of TJTC participants under the categories of Disabled Veterans, Vocational Rehabilitation, and SSI/SSDI. In addition, the unemployment rate for 19.1 million working age persons with disabilities is estimated at 66% by the most recent Harris and associates national survey of 1994. For persons with significant disabilities (those likely to qualify under current TJTC regulations), the rate of unemployment is known to be even higher. For example, the unemployment rates for 1.9 million developmentally disabled working age individuals have been estimated at 87% (Kiernan and Stark, 1989).

According to Census Bureau data, the unemployment trend for persons with disabilities is not improving. For example, between 1980 and 1988 the proportions of working-disabled men, aged 16 to 24 years, working full-time, declined, while the unemployment rate steadily increased. As a result, the

ratio of earnings between men with disabilities and men without also fell. Similar changes were also reported for women of working age. After substantial relative gains in the 1960s and 1970s, persons with disabilities are losing economic ground in the 1980s and 1990s (Yelin, 1991). At the same time, the survey conducted by Harris and Associates documented the strength of this group's desire to work, and their frustrations about barriers to employment (Harris, 1994). In that survey, 79% of the respondents indicated that they would like to work if given the opportunity.

After three years of ADA implementation, disabled advocates realize that there has been no perceivable increase in hiring patterns by private industry. The majority of ADA litigation and employer focus has been directed to current employees with back injuries, filing complaints related to termination and accommodations. ADA is essentially a poorly funded EEOC sanctioning effort, that has little if any positive impact on the employment rate for persons with disabilities. I am not proposing that ADA is not essential to the long term Congressional goal of eliminating employment discrimination toward persons with disabilities. Rather, I am pointing out the importance of having a program like TJTC that rewards the private sector for doing the right thing, that is hiring persons with disabilities, rather than assuming that the remote possibility of punishment under ADA will really have the desired effect alone.

The cost of unemployment to U.S. taxpayers for persons with significant disabilities in SSI/SSDI and medical payments alone exceeds $57 billion each year. Of the 2.2 million SSI recipients with significant disabilities, only 172,000 or 8% are working. Social security further reports that less than 1/2 of 1% of these potential workers return to the labor force annually (Social Security Administration, 1991). In addition, SSI claims based on disability have increased by 20% since 1984, which demonstrates the lack of control on expenditure growth for a welfare approach to disabilities.

SSI was developed 17 years ago to insure persons with significant disabilities maintained an economic income above the poverty level. However, at this time, SSI benefit levels are substantially below the federal poverty level. As one state administrator commented at an SSI public meeting "...the SSI Program is simply inadequate to meet basic human needs (food, shelter, clothing, etc.)..." (SSA, 1991).

As a positive alternative to SSI and welfare the TJTC program has helped IRI to develop corporate employment programs such as "Jobs Plus" with Pizza Hut Inc., Restaurant Management Company and "TeamWorks" with Brinker International. Both Pizza Hut and Brinker have now received the National Employer of the Year Award from the President's Committee on Employment for Persons with Disabilities. The Pizza Hut Jobs Plus program alone is recognized as the most successful corporate effort to date, with more than 14,000 TJTC incentive disability placements since 1988. These TJTC corporate efforts were mentored by the OSER supported employment initiatives, and Projects With Industry and are now a significant component of federal, state, and local agency emphasis and services. The success of the

RSA federal initiative and TJTC is evident through several other significant corporate initiatives such as Marriott and McDonalds.

These private sector, corporate led efforts rely heavily on a public funded supported employment training strategy, as well as Targeted Job Tax Credit (TJTC). Rehabilitation advocates have reported that TJTC has helped offset some of the additional support employees with disabilities require from employers. As a result, the rehabilitation field believes that TJTC has had a significant positive effect on hiring (ARC, 1993).

Comparative Benefit-Cost Analysis of TJTC

In 1991 we concluded a two-year economic evaluation study comparing the resource costs and pecuniary outcomes of a TJTC employment program serving individuals with significant disabilities for the Social Security Administration.

The research focused on the benefit - cost of placing and supporting TJTC and SSI eligible persons with significant disabilities into employment.

The economic analysis utilized was an ex post facto evaluation study analyzing the costs and pecuniary outcomes of an employment program serving individuals experiencing significant disabilities in Pizza Hut over two years.

Characteristics of Sample Population

Fifty-nine TJTC participants from 10 states were included in the Job Plus Mentor (JPM) program sample. Inclusion in the evaluation study was based on entry and participation in the program between July 1, 1990 and January 31, 1991 (a six month period). Seventy-five percent of the participants were identified with some level of intellectual disability, while the remaining 25% were described in terms of other primary disabilities. The majority of participants (67%) did not finish high school, with 33% attending 12 or more years of school. Seventy-eight percent of the sample were Caucasian, 9% African American, and 7% Hispanic. The majority of JPM participants (84%) received SSI only, while the remaining 16% received SSI and/or SSDI benefits.

Collection of Cost Data:

Costs for the JPM program were collected on a program expenditure basis. Costs that may have been incurred through employer tax credit programs (TJTC) were also reviewed. All JPM employers participated in Target Job Tax Credit subsidies and received, on the average, $1,415 per client.

Collection of Benefit Data (Pecuniary):

According to Benson (1978), Cohen (1979), Gramlich (1981) and Taggart (1981), employment earnings are used as the major pecuniary outcome measure in employment and training benefit-cost research. In response to this convention, benefits for the study were based on wages earned for hours employed. Due to the impact of earnings data on subsequent taxes paid and reductions in welfare (transfer) payments, these latter categories were also assessed as benefits associated with each of the employment options in the study (Thornton, 1985; Collignon, Dodson, & Root, 1977; Dodson, 1979; Hill & Wehman, 1983).

Data Reduction:

Cost data from the program were converted into mean cost per worker. Program outcomes (benefits) were initially transformed into five categories: 1.) average hours worked per week, 2.) average hours worked per month, 3). average hourly wage, 4.) monthly earnings, and 5.) annual gross earnings. From these data two additional categories were added to the analysis: 6.) State and federal taxes paid on gross earnings and 7.)reductions in Supplemental Security Income (SSI) due to monthly wages.

Tax calculations were assessed at 23% of annual gross earnings. This percentage was initially established by Pechman and Okner (1974) and subsequently used by Thornton (1985), Hill, Hill, Wehman, and Banks (1985) in determining annual state and federal taxes paid by low wage earners with disabilities.

Reductions in welfare payments were computed using the SSI's standard income adjustment formula for earned income. Tax and SSI reduction formula were applied to the earnings of each participant in the JPM programs.

Rationale for Configuring Costs and Benefits:

Program costs are viewed as no cost to the participant but clearly translate into costs for taxpayers and society. Earnings benefit the participant, have no effect on the taxpayer, but when both perspectives are totaled, they equal a benefit to society. State and Federal taxes are a cost to the participant but a benefit to the taxpayer. By totaling these perspectives, the benefits and costs nullify each other, having zero impact on society at large.

Determining the benefit or cost status of Supplemental Security Income (SSI) reductions from the three perspectives is somewhat more complex. When SSI payments are reduced due to wages earned from work, this translates into a reduction of income that would have been available if the participant had not worked. Therefore, the reduction in SSI is seen as a cost to

the participant. From the taxpayer's perspective, the reduction is seen as a benefit in two ways: First, the amount of the reduced payment is a tax savings, and second, the cost of administering those funds is also saved. Thus, the taxpayer's benefit is computed by adding the reduction in SSI to the savings in administrative costs (Barnett, 1985; Thornton, 1985). From society's perspective, the reduced SSI payment is viewed as a transfer of funds from one group of people in society (the participants in the study) to another group (other welfare recipients). Hence, the reduction in SSI payments is just a shift of funds (transfer payment) and does not constitute a savings to the society as a whole. In contrast, society observes the obviated administrative costs for SSI as a savings in actual resources. Therefore, the latter are observed as a benefit to society (Barnett, 1985; Thornton, 1985).

Results: Benefit-cost Analysis:

Individuals in JPM programs benefited $1,584 annually from their participation in this TJTC model. The benefit-cost ratio for the taxpayer's investment in JPM programs equaled .74, while the ratio from society's perspective was 1.21. Thus, for every taxpayer dollar invested in JPM participants, taxpayers realized a return of 74 ¢ and society $1.21, see (Table 1).

Table 1: JPM Program Analysis:

Job Plus Mentor Program (Program B-C Analysis)			
Component	**Participant**	**Taxpayer**	**Society**
Benefits (Pecuniary)			
A. Outputs			
1. Gross Earnings	$3,978	0	$3,978
2. State & Federal Taxes	($915)	$915	0
B. Reduced Dependence On Transfer Programs (SSI)			
1. Reduction In SSI	($1,479)	$1,479	0
2. Reduction In Admin. Costs	0	$148	$148
Total Annual Benefits/Person	$1,584	$2,542	$4,126
Costs (Pecuniary)			
A. Inputs			
1. Total Annual Cost/Person	0	$2,006	$2,006
2. Target Job Tax Credit	0	$1,415	$1,415
Total Annual Cost/Person	0	$3,421	$3,421
Benefit-Cost Ratio		0.74	1.21

The benefit-cost research clearly indicates, TJTC dollars invested in the Jobs Plus program as substantially efficient. From participant, taxpayer, and society perspectives, this translates into increased levels of productivity which were not realized when greater resources were spent on individuals receiving welfare, (SSI) approaches.

Clients with significant disabilities in the Jobs Plus program experienced increased benefits by choosing to participate in the Jobs Plus program as opposed to welfare. From a public policy perspective, the Jobs Plus program clearly satisfies Cohn's (1979) criteria for public funding (B/C > 1). The return to society exceeds the point of parity for each TJTC dollar invested. These data provide a sound rationale for public support of the TJTC program.

Clearly, the programmatic strategies utilized by the Pizza Hut TJTC model reflect substantive improvement in maximizing the economic efficiency of each TJTC dollar spent on employment activities for persons with disabilities.

Benefits to Participants with Disabilities

The benefit-cost data presented is compelling in terms of describing the potential effects of TJTC policy decisions on the earning power of individuals with significant disabilities, their marketability in competitive labor markets, and the fiscal impact of habilitation decisions on taxpayers and society at large.

Three Year TJTC Survey

Through 1989 to 1991 we surveyed 4,972 TJTC employees with disabilities hired by Pizza Hut. The results indicated dramatic increases in employment opportunity, wages and tenure.

74.9% of the workers reported that they had been unemployed for the previous 6 months prior to their job with Pizza Hut. For the majority of these workers it was also their first job ever, as well as their first pay check.

The average weekly wage for these TJTC hires was a 104% increase over their previous reported wage income.

The annual turnover rate for TJTC hires was tracked at 29%, which is five times superior to non-TJTC co-workers turnover which was 170% for the same period.

Recommendations

The Pizza Hut, Brinker, and RMC TJTC programs for persons with disabilities are providing a necessary bridge between publicly funded rehabilitation programs and privately supported employee assistance programs in corporate institutions. These private sector demonstrations of TJTC programs are establishing an economically efficient and programmatically sound model for emerging public and private industry partnerships.

The conceptual framework for the TJTC programs could undoubtedly serve as a model for private industry to begin assuming the primary responsibility for post-school employment training of individuals with significant disabilities, if Congress would implement the following programmatic changes.

√ **TJTC should be made a permanent tax statute to avoid private sector reluctance associated with termination dates and the doubt of renewal.** Employers often take a wait and see attitude regarding renewal which reduces hiring activity.

√ **Develop a standardized one page TJTC authorization form for all State employment certification sources to utilize.** Currently there are 50 different

forms in use, which unduly burdens multi-state employers from implementing the program.

√ **Expand the TJTC program to all persons with disabilities.** Currently the program requires persons to be registered with their state rehabilitation agency or SSA. However, only 10% of persons with disabilities who are structurally unemployed are registered with state rehabilitation or receive SSA support.

Summary

The TJTC program had provided a necessary incentive as a bridge between publicly funded rehabilitation programs and privately supported employee assistance programs in many corporate institutions.

TJTC programs have established an economically efficient and programmatically sound model for emerging public and private industry partnerships to employed persons with disabilities. The framework of the TJTC program could undoubtedly serve as a model for private industry to expand it's TJTC efforts and begin assuming the primary responsibility for employment training of individuals with significant disabilities.

These efforts have the potential to have an even greater impact on the reduction of structural unemployment, if the program expands to all persons with disabilities and implements the efficiency strategies that have been recommended.

Structurally Unemployed

Persons with disabilities represent 10% of all TJTC authorizations. They also have the highest unemployment rate of any identified minority group.

Employment Opportunities to the Disadvantaged

TJTC jobs are providing essential initial job training and career opportunities to persons with significant disabilities who are essentially unskilled. The TJTC opportunities present the most efficient training possible for this population, by teaching job skills on the job.

Employers to Seek Out and Hire the Disadvantaged

The TJTC program is an essential component to reaching the ADA goals of employment and elimination of discrimination for workers with disabilities. Employment opportunities for disadvantaged individuals with significant disabilities have been driven in large part by TJTC.

Cost Effective Outcomes for Society

Our research indicates a positive return to taxpayers for each TJTC hire in the first year. In addition, the superior retention rate and on the job training opportunities further supports this taxpayer investment for workers with disabilities.

Improved Income, Training, and Retention

TJTC has dramatically impacted employment, wages, training and retention rates for persons with disabilities.

Thank you for the opportunity to share my written observations of a federal tax incentive program that is highly effective in its multiple goals that benefit: taxpayers, employers, employees with disabilities and our country.

I urge you, on behalf of the 9.9 million unemployed Americans with disabilities who have stated that they want to work, if just given the chance, to re-authorize, expand, and make TJTC a permanent tax credit.

STATEMENTS OF INTERNATIONAL UNION, UNITED AUTOMOBILE, AEROSPACE & AGRICULTURAL IMPLEMENT WORKERS OF AMERICA (UAW), AND UAW-GM LEGAL SERVICES PLAN, UAW-FORD LEGAL SERVICES PLAN, UAW-AAI LEGAL SERVICES PLAN

The International Union, United Automobile, Aerospace & Agricultural Implement Workers of America (UAW) and the UAW Legal Services Plans (UAW-GM Legal Services Plan, UAW-Ford Legal Services Plan, UAW-Chrysler Legal Services Plan, and UAW-AAI Legal Services Plan) submit this statement to the Ways and Means Committee in strong support of H.R. 540 to permanently reinstate Section 120 of the Internal Revenue Code, making the employee benefit of prepaid legal services tax exempt and preserving the access of working and retired families to the legal system.

The Legal Service Plan came into being under the protective umbrella of the Internal Revenue Code Section 120, first enacted in 1976. This law placed prepaid legal services plans funded by employers for their employees on the same footing as other tax exempt employee benefits such as health benefits. The UAW has been in the forefront of the development of prepaid group legal services, with the first operation, UAW Chrysler Legal Services Plan, opening in 1978. For the next ten years, Section 120 expired seven times, each time receiving temporary extensions. However, group legal services continued to gain wide popularity. UAW-GM Legal Services Plan began operations in 1983 and UAW Ford Legal Services Plan began operations in 1985. On June 30, 1992, Section 120 expired and has not been renewed despite vigorous lobbying by unions and prepaid supporters and although 218 members of the House of Representatives co-sponsored a bill to reinstate the exemption. We believe that now is the time to reinstate Section 120 in order to realize Congress' original goal in creating Section 120--extending low cost, quality legal services to middle-income, working and retired Americans--during this period of renewed commitment to providing relief and balance to working and retired people.

Traditionally legal services have only been available to the very rich or the very poor. Average working Americans have been shut out of the legal system, since they did not qualify for legal aid programs and yet were unable to allocate limited financial resources to legal representation. As a result, most middle income Americans simply went without any legal assistance. This began to change after the implementation of Section 120. Unions like the UAW began taking increasing interest in negotiating group legal service plans as a means of assuring that their members have access to quality, low cost representation. Employers also supported legal services plans as they saw that for an extremely modest sum of money per worker, the employees are provided with a means of solving troubling legal issues while remaining productive members of their company.

The Legal Services Plan is now in its sixteenth year of operation. More than 800,000 workers and retirees are covered by our Plans, and when families are included more than two million persons are eligible for services under the Legal Services Plan. Although there are many prepaid plans out there, the UAW Legal Services Plan is the largest and is representative of the types of legal services provided to workers and retirees eligible for this type of benefit. Prepaid legal service plans have proven

themselves to be extremely cost effective and even the most comprehensive plan generally costs less than $100 per year per worker. Unlike many other fringe benefits, costs have not skyrocketed but instead have remained relatively stable throughout the years.

Legal Services Plans provide personal legal services on a variety of legal matters including estate planning, probate, consumer problems, the sale and purchase of homes, credit reporting problems, domestic issues, and other personal legal problems. Without Legal Service Plans, middle income people often cannot afford to see an attorney despite the seriousness of the problem they may be facing. However, prearranged access to an attorney allows people to call on an attorney when they first face the trouble, before it is too late. Because of Plans like the UAW Legal Service Plans, houses need not be lost, cars need not be seized, utilities need not be cut off, and debt problems need not grow into insurmountable problems. Through early identification and intervention, problems can be solved and stopped thereby avoiding costly distractions and disruptions to the worker's job.

The Legal Services Plan is a law firm with more than 400 attorneys, with more than 70 offices, located in the following 18 different states:

Alabama:	2 offices
Delaware:	1 office
Georgia:	2 offices
Illinois:	3 offices
Indiana:	8 offices
Kansas:	1 office
Kentucky:	1 office
Louisiana:	1 office
Maryland:	1 office
Michigan:	27 offices
Minnesota:	1 office
Missouri:	3 offices
New Jersey:	2 offices
New York:	6 offices
Ohio:	15 offices
Oklahoma:	1 office
Texas:	1 office
Wisconsin:	2 offices

In areas where there are not a sufficient number of employees and retirees to warrant establishing a Plan office, a "Cooperating Attorney" system was developed to provide benefits. Plan staff attorneys are dedicated not to serving the business or corporate or political concerns of their clients, but to solving the everyday problems of working and retired families. Our experience supports the idea that if problems are caught early, they can be resolved simply. More than 50% of Plan cases are resolved in two hours or less with advice and counseling to the client who needs help dealing with the system.

Another hallmark of this benefit is estate planning. More than 24% of the cases the Plan handles are for this type of matter. Because working families have access to legal advice, they are able to adequately prepare for their spouse, minor children, and disabled children. Without the legal service benefit, most of these people would not consult a lawyer at the planning stage thereby avoiding numerous problems for their family at their own disability or death. Beginning in August 1990, the UAW Legal Services Plan counseled hundreds of clients as to their legal rights and protection, as these workers prepared to leave for Operation Desert Storm. Wills and powers of attorney were drafted and advice was given to families of soldiers. This type of benefit not only provides tremendous peace of mind to the effected worker, but also provides a real service in terms of reducing or eliminating legal problems at the injury, disability or death of the worker.

At other times, though, Plan clients need more because they are sued or threatened with the loss of a home or another significant injury. Prepaid legal services, like the UAW Legal Service Plans, usually provide in-court representation for these clients who would otherwise give up since they would be unable to pay for the necessary legal services. Typical of these types of cases are the clients who pay contractors significant sums of money to have needed home improvement work completed, only to have no work at all done or shoddy unacceptable work completed. Although our retirees are often the victims of these scams, they are also perpetuated on honest, working people who expected fair work for a fair price.

Prepaid legal services plans assist middle-income Americans at many critical points in their lives. Typical cases handled by prepaid legal services plans include defective consumer purchases, vacation property scams, investments gone wrong, credit reporting problems, guardianships, landlord tenant problems, insurance problems, collection of disputed debts, claims arising out of the sale or purchase of real estate and defense of foreclosures and forfeitures. In 1994, more than 245,000 new cases were opened in Plan staff offices. Another 60,000 referrals were provided to retirees and workers who lived in areas without a Plan staff office. The types of cases handled under these Plans broke down as follows*:

Wills, Probate, and Estate Planning:	24.2%
Real Estate:	24 1%
Consumer cases:	20%
Family and Other Matters:	31.7%

Prepaid legal services for middle income workers and retirees address the historical imbalance that occurs when parties to a dispute are unequal financially. The UAW Legal Services Plan, like other prepaid legal services, has from the beginning sought to correct that imbalance. Without access to a legal service plan, these problems would remain unresolved, regardless of the merits of their case.

*See attachment to this document for a complete listing of Plan cases.

The Joint Committee on Taxation estimates that the revenue loss associated with Section 120 is such a small percentage of the federal budget that it would have no impact on it. However, if Section 120 is not reinstated permanently, the creation of new plans will be discouraged, while benefit dollars are shifted to other tax favored benefits. We will return to the day when middle income working and retired people were all but shut out of the legal system. This is one tax benefit that was truly aimed at working and retired people and which gave this same group of people meaningful access to our legal system. We urge you to support H.R. 540 and to reinstate and make Section 120 permanent

Some comments from our members and clients:

I find this service to be invaluable! I feel secure in contacting the service because I won't be "taken" money-wise. I like knowing that I can trust their services..I feel I can ask her advice before I do something dumb. Thank you. Burr Ridge, Illinois

My wife and I had our wills made out by one of your attorneys and were well satisfied. The second case was a problem between a hospital and me and a collection agency. Once I showed (the attorney) all the bills and receipts, he took over. He sent the agency a letter that he was representing us and all the threatening letters stopped coming. I would not hesitate to use the services any time needed. Burr Ridge, Illinois

Before my husband's death, we used the service for the legal work involved in buying our home. As a surviving spouse, I believe this to be a very valuable service. I don't know the name of the attorney who helped us for this but I do remember he was very helpful in answering our questions and helping us with the contract. Kansas, Missouri

We really feel the plan has been beneficial to us. [The attorney] saved us $2,000 with just a phone call when we purchased our lake lot. He has been most helpful and fact we have the legal service has helped resolve problems quickly. We plan to use the plan to draw up a will and ..a problem with an easement. Kansas, Missouri

I don't know what I would have done had it not been for the UAW lawyers. I have used them for bankruptcy, food stamps for my daughter and grandchildren who live with me am in the process of having my late husband's estate probated. I always look to UAW for help and advice. Oklahoma City, Oklahoma

Any legal matter is a stressful situation. Having an attorney to represent your interests not their bank account is a real relief. It is a valuable service to all UAW employees. Oklahoma City, Oklahoma

I feel this program is one when you need to use it can be invaluable. I don't have any idea how much in legal fees in the past few months I would have spent. I would definitely recommend the Legal Service to other workers who need advice of a legal problem. [My attorney] was a great asset to me through a very difficult time in my life. She provided answers to questions that would affect the rest of my life. I found her to be a great attorney as well as person. She will always have my greatest thanks for the help she gave me. Her answers to questions I had were factual and to the point. She kept me advised at all times and I would go to her for any problem. Anderson, Indiana

I consider the UAW-Ford Legal Services Plan a great benefit and importance in this day and age. It is extremely expensive to get legal help and advice especially being retired. Along with my health benefits it is comforting to know that this program is available. My thanks to UAW and Ford for making life a little easier. Clearwater, Florida

Being on a pension and considering my age, this is a necessary benefit. I could never afford to pay an attorney. In this particular case, the attorney was able to save me approximately $10,000 on the last part of my transaction, which I felt they were trying to swindle me. Attorney [ ] wrote a letter and the other party backed down. Clearwater, Florida.

Without this service that have been instances when a problem would remain a problem due to the cost of an attorney. This service has enabled me to improve my quality of life by having counsel when need to solve or work through situations that you otherwise would have to tolerate. I thank Ford & UAW for this service and would miss if it were not available to me. I hope this service becomes a permanent part of our benefit package. The office staff is responsive to needs presented and have in all cases allowed a workable solution to be found. Louisville, Kentucky

We were both very happy with the services provided. It eased our minds to know our affairs were put in order and especially made easy through the no expense condition from one of many benefits as a Chrysler employee. Thank you for this benefit and I do plan on using it for future needs. Milwaukee, Wisconsin

The UAW legal service is very good in many ways. They assist us so fast and jump right on our case. The lawyers that work for us are honest. This has saved me lots of money and time. Janesville, Wisconsin

I feel the program is worthwhile. I like the feeling I get when I know I can call for opinions on matters that concern me. I handle a lot of problems over the phone. I get comfort to

know I have access to the legal system, without having to come up with retainers. St. Paul, Minnesota

I thank God for the UAW Legal Services Plan, because it has helped me and saved time and money because I don't have to lose a lot of time off my job to handle some legal matters and the attorneys are really helpful in explaining my situations as well as represent me when in need. In my opinion, we couldn't do without this benefit and I don't want to lose it. St. Louis, Missouri

[The attorney] and her assistant were invaluable to me in the process of gaining guardianship of my mother. There were times during the first year that they assisted me when I was unsure of what to do. They have a great staff. St. Louis, Missouri

My income is so low that I can't pay myself so I am very pleased that UAW Chrysler Legal Services Plan Attorneys are available. Detroit, Michigan

I was extremely pleased with the way in which my probate was handled. Things were resolved with excellent legal advice and in a very timely and professional manner. [The attorney] proved to be very resourceful, available and courteous. I can't say enough good things about her. At a very stressful time in my life following my mother's death, she offered both legal and emotional support in a most appropriate manner. Both attorney and assistant were very prompt in returning phone calls and assuring that the case would be expedited. I strongly recommend the GM Legal Services to other UAW members. Thanks again for a job well done. Pontiac, Michigan

I was grateful to use this service upon the death of my husband. It was a great help during a difficult time. Kalamazoo, Michigan

It was unfortunate that legal services were required but [the attorney]'s professionalism certainly made the ordeal easier on my wife and me. Livonia, Michigan

I was very happy with the job that the [the attorney] performed for me. He took me by my hand and without him I would have lost some money. He is also helping us with the contract for the house we are purchasing. He takes his time to explain every question have so that I feel secure in dealing with the real estate. This is one of the best services the UAW has offered. Livonia, Michigan

This service is a great help to us because on a fixed income it's hard to make ends meet Thank you very much. Atlanta, Georgia

Statement of

Arthur A. Coia, President

Laborers' International Union of North America, AFL-CIO

May 9, 1995

The Laborers' International Union strongly supports pending legislation, H.R. 540, which would reinstate the exclusion from employee taxable income of contributions by employers to group legal service plans under Section 120 of the Internal Revenue Code.

Our Union is uniquely qualified to testify on issues affecting this important benefit for workers. Beginning as far back as 1971, in Shreveport, Louisiana, and soon after in Ohio and Massachusetts, we pioneered in the development of group legal services plans in the belief that access to legal services was as important to our members as medical care and pension benefits.

Twenty-four years later, we are convinced that we made the right decision. Thousands of workers every year find that they are able to get competent legal help through negotiated group legal services plans on serious family, financial, housing and consumer problems. Workers whose family incomes would not otherwise allow them the luxury of retaining a lawyer are able through these plans to use the justice system to assert their rights and seek remedies.

What we have been able to accomplish through qualified group legal service plans is precisely what Congress intended when it enacted section 120 in 1976. By placing legal services in the same tax category as other statutory benefits, it established the public policy principle that employers and unions should be encouraged to work out means to make basic legal services available to workers.

Section 120 was originally enacted as a five-year experiment. Policy makers were concerned about whether the benefit would wind up accruing only to highly-paid executives, whether employer contributions would be insufficient to finance the arrangement and whether inflationary pressures would escalate the cost of legal service plans, as has happened in the case of medical care.

But in considering section 120's fate in 1981, Congress agreed that none of these evils manifested themselves during the five-year trial period. In fact, legal service plans were shown to benefit low and moderate income workers on a non-discriminatory basis. The modest funding formula used to finance these plans not only was shown to provide more than adequate financial support, but costs barely increased during the period. In light of this record, Congress extended the provision for three more years, then extended it five more times for shorter periods.

Even in the face of expirations and retroactive reenactments, section 120 served its purpose. There are now approximately 3.2 million employees and retirees covered by qualified group legal service plans at an average cost of under $100 per worker per year. Since these plans also provide access to essential legal services for family members, a total of 7.6 million Americans now benefit from employer-provided legal services.

Employer-paid legal services plans have so clearly proven their value that almost no one opposes them. Everyone agrees they are a good idea and that they work. The only excuse for letting section 120 expire was that the government needed the $85 million per year attributed to section 120. That was a tax increase on middle class Americans and, to a lesser extent (because of Social Security contributions), on enlightened employers who provided this proven benefit. Reinstating section 120 would rescind that tax increase.

Plans Solve Problems.

The legal services plan tax provision excludes from an employee's gross income the first $70 contributed by his employer to a qualified legal services plan. These plans provide advance arrangements for meeting personal legal needs, especially for legal services that prevent or settle disputes. Legal services plans:

>promote individual happiness and family harmony by preventing or resolving serious legal problems

>increase the quality of justice by making legal advice more available to the average citizen

>improve economic productivity, because an employee distracted by legal difficulties isn't fully effective.

Legal services plans enjoy broad, strong support from labor, consumer, bar and insurance groups. There is no opposition to legal services plans. Plans are in the best American tradition of pragmatic, voluntary group action to meet common needs.

Section 120 puts legal services plans on an equal footing with other statutory fringe benefits. Legal services plans benefit primarily middle and working class Americans and are especially popular with union members. Even the most comprehensive plans seldom cost more than $150 per family per year.

Legal services plans exhibit considerable diversity in structure, cost and benefits, depending on the group of people covered--their number, geographic distribution, family situation, etc.--and the funding available.

Plans members receive mainly preventive legal services that often make it possible to avoid litigation or serious or protracted remedial services. Thus, group legal plans tend to preserve employee morale and productivity and assist in unlocking our overburdened judicial system.

Why Plans Work

What is it about legal plans that creates "win-win" situations, where everybody benefits? Basically, it is that transaction costs are reduced when advance arrangements are made on a group basis for providing needed legal services. Advance payment is not as important as advance arrangements that make legal services readily available. These advance arrangements dramatically reduce the time, cost and uncertainty involved in selecting and consulting a lawyer when a legal question arises.

People covered by a plan contact a lawyer more often, but at an earlier point in the course of a problem. More people receive legal advice, about more matters, but matters are handled at lower cost and in a way that minimizes disputes and litigation.

Plans Help Working People.

In enacting section 120 in 1976 Congress meant to encourage more equal access to legal help for middle income Americans. You succeeded. The Treasury's own June 1988 study of legal services plans found that "plans covered by section 120 did provide relatively greater access to legal services to production workers and union members" (than to professional and administrative employees). "(T)his pattern stands in stark contrast to most other kinds of employee benefits, which are relatively less available to production employees." (emphasis added)

Without section 120 a business has an unfair advantage in any dispute with a consumer. The business' legal expenses are deductible but the consumer's are not. The landlord's legal bills are deductible, the tenant's defense of his home is not. Legal services plans offer a way for tenants, consumers and the large majority of Americans to enjoy better access to legal help without the federal government taking the expensive step of making personal legal expenses deductible or vastly expanding federal legal aid.

No Bureaucracy

I must mention that these plans are privately administered. The lawyers who provide services to plan members are mostly in private practice, and all are subject to state rules of practice. The plans themselves are regulated through ERISA like other employee benefit plans.

Tax Increase Threatens Progress

All employees covered by an employer-paid group legal services plan suffered a tax increase when section 120 expired. So did contributing employers, who now have to pay Social Security payroll taxes on their contributions.

Almost as important to employers as the payroll taxes they have to pay is the administrative burden of accounting for the contribution. Consider, for instance, plans covering retired workers. Retired employees now incur a tax liability for contributions made on their behalf by their former employers, who are required to issue W-2 or 1099 forms for them.

So far, few existing plans have been terminated because section 120 expired, but as plans come up for renegotiation in a period of tough global competition, health care cost pressures and static wages, the taxability of legal services plan contributions can only work against them compared to tax-favored benefits.

Section 120's expiration has also deterred additional employers from beginning to offer group legal service benefits, given that other non-taxable benefits are readily available. Where taxable group legal service benefits are offered in a flexible benefit plan, they have been in some instances slighted in favor of other non-taxable benefit options.

State income tax ramifications are also important. Many states' personal income tax laws follow federal income tax exclusions. Since section 120 expired, employees in those states effectively have seen an increase in their state income taxes.

Tax Revenue Insignificant

While the current taxability of plan contributions threatens their future, it is producing insignificant tax revenue to the federal government. The Joint Committee on Taxation's latest estimate was that letting Section 120 expire would produce $85 million in revenue, an infinitesimal percentage of the federal budget. Even that estimate is too high, because it ignores shifts in contributions that are already occurring from legal services plans to health benefits and others that remain tax-exempt.

In conclusion, Congress should rescind the back door increase on middle class Americans resulting from the expiration of Section 120 and reinstate the Congressional policy of encouraging private efforts to achieve justice more efficiently for the average citizen.

The Louise and Claude Rosenberg, Jr. Family Foundation

Phillip D. Moseley, Chief of Staff, Committee on Ways and Means

Reference: Statements re Gifts of Publicly-Traded Stock to Private Foundations

My name is Claude Rosenberg, Jr., and I am writing on behalf of myself and my wife, Louise J. Rosenberg. I am a registered Investment Advisor, founder of RCM Capital Management of San Francisco, California, managers of (mainly) institutional monies of over $20 billion invested in common stocks and bonds. I have over forty years of experience in the investment field, have authored four books on investing, and am the author of a well-accepted book on philanthropy, entitled *Wealthy and Wise: How You and America Can Get the Most Out of Your Giving* (Little, Brown & Co., published October, 1994). My wife and I are strongly-committed advocates of, and participants in, philanthropy through both personal contributions and involvements and through a private foundation, The Louise and Claude Rosenberg Family Foundation, which we formed December 23, 1986. It is important to state that we plan to continue supplementing our foundation giving through significant personal charitable contributions, and that we would benefit from the deductibility from the use of appreciated securities--hence, the recommendations made herein would be costly to us personally.

While we favor the *general* use of readily marketable stock at full market value as tax-deductible contributions to private nonoperating foundations, we believe that new regulations that will ensure enhanced use of such funds to worthwhile causes should accompany a restitution of full market value benefits to contributors. Our position, described specifically below, is motivated by the following: a) that serious social ills permeate our nation; b) that a significant decline in funds to certain social needs will occur in our (proper) quest for the elimination of waste from government expenditures; c) that transfer of funds from Federal to state governments, while preferable, will not provide the necessary solutions to our social problems; d) that the private sector can accomplish "more with less" than the public sector in many endeavors now dominated by government; and e) that enhanced philanthropic contributions, combined with the amazing volunteer force already serving the nonprofit sector, constitutes the most efficient and most desireable way to alleviate, and in many cases eliminate, many of our nation's worst social problems.

Despite these facts and this reasoning, we contend that allowing private nonoperating foundations to be bolstered anew through *the use of fully deductible gifts at market price would be shortsighted without encouraging greater and more imminent use of such funds than the current mandated five percent (pre-operating and related expenses) of corpus rule.* **The five percent payout may give our government(s) a fair return when donations are made in cash, but the costs to government(s) from allowing the avoidance of capital gain taxes along with a five percent payout seem less fair. This is especially important to consider because of America's serious deficits (Federal, along with many states and local communities), as well as the existence of the**

aforementioned debilitating social conditions of our nation. *In short, our government should become more certain that more critical improvements to our society result from private foundation efforts than has been the case. Our government should encourage a new wave of responsible philanthropy that should favorably alter charitable donations and lead to a highly positve trend for volunteerism, as well as an enhanced spirit of cooperation amongst our citizenry.*

Our proposed rules are divided into two parts: first, pertaining to **new contributions to private foundations**; and second, to **existing money within such entities.**:

New Contributions to Private Foundations: Tax deductibility of donations should be tied to two factors: first, to the amount of capital appreciation (market value versus original cost) of the donated asset; and second, to the subsequent payout ratio to be made by the donor's foundation from such asset. The higher the percentage of market value over cost, the higher the required subsequent donation payout ratio (and vice versa). Thus, a donated common stock that carries a 99 percent gain over its cost would receive little or no deductibility under a 5 percent payout plan, but it would receive full deductibility if it were segregated into a new entity within the recipient private foundation and become committed to, say, a 50 percent payout. Likewise, a donated stock with a 50 percent gain over its cost might require perhaps a 25 percent annual payout to receive its full deductibility as a gift.

This suggestion should be considered as a temporary encouragement for more money to flow to the private sector at this particular time. As our country's social and financial conditions improve, it would be hoped that terms would become more favorable for giving, with less restrictions on the use of appreciated securities. **Still, the concept of relating tax deductibility to the amount of appreciation of assets donated, along with donor choice of payout ratio, seems valid and eminently fair to all parties.**

Existing Money in Private Foundations. Legislators must be careful not to tamper unnecessarily with the five percent payout mandated from private foundation *existing assets*. Protection of purchasing power (being hedged against inflation) is important for foundations as it is for individuals. Despite this warning, study should be made to determine whether increased payouts *from existing assets* can be encouraged in the event of significant (well above average) asset growth within private foundation portfolios. Foundation personnel, including original donors, should not lose sight of the principal missions of their institutions: To provide opportunity for those to which opportunity is not readily available; To foster greater accomplishments from the private sector; To benefit America through its unique system of free enterprise supplemented by associations of private citizens willing to cooperate and make reasonable sacrifices for the good of the whole.

Thank you for your consideration of these recommendations. Respectfully submitted,

Claude Rosenberg, Jr. Louise J. Rosenberg

The Louise and Claude Rosenberg, Jr. Family Foundation

Supplemental Sheet to statements made by Louise J. Rosenberg and Claude Rosenberg, Jr. in letter to Phillip D. Mosely, Chief of Staff, Committee on Way and Means, on May 20, 1995, subject "Statements re Gifts of Publicly-Traded Stock to Private Foundations."

TESTIMONY OF JACKIE R. MCCLAIN
EXECUTIVE DIRECTOR OF HUMAN RESOURCES, AFFIRMATIVE ACTION, THE UNIVERSITY OF MICHIGAN

AT A HEARING OF THE SUBCOMMITTEE ON OVERSIGHT,
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

Thank you Mr. Chairman and members of the sub-committee for allowing me this opportuntiy to provide this statement for the record:

I have the privilege of serving as the Executive Director of Human Resources and Affirmative Action at the University of Michigan at which some 26,000 faculty and staff provide services to 47,900 students in 20 schools and colleges. In this capacity, I am acutely aware of the critical need for the enactment of legislation which would make the exclusion for employer provided education assistance (Section 127) a permanent part of the Internal Revenue code.

As you know, Section 127 permits employees to receive up to $5,250 annually in tuition reimbursement from their employers on a tax-free basis. One essential aspect of this provision is that it applies to both undergraduate and graduate education. Such assistance enhances job satisfaction and encourages continual upgrading of skills and knowledge. Such assistance may be the only realistic means of seeking such educational opportunities for many employees of the University of Michigan.

Since 1990, between 1200 and 2300 University of Michigan staff members have annually utilized our tuition reimbursement program. The program has cost approximately $500,000 annually but has greatly benefited not only the employees receiving the assistance, but the departments benefiting from their enhanced capabilities. Many employers such as the University of Michigan are willing to provide funding for employees to secure additional education, however, many of the employees who might take advantage of this benefit find the taxation on such benefits to be prohibitive. Therefore, extension of this exclusion is critical to their ability to capitolize on the assistance.

In support of the extension I would offer the following statements:

1. **The permanent extension of this exclusion would provide educational assistance benefits to many low and moderate income employees who seek to better themselves.**

Many of our employees have enrolled in area community colleges in order to seek continuing education while working full-time, often with family obligations as well. A 1989 Coopers and Lybrand survey indicates that 71% of the Section 127 beneficiaries earn under $30,000. This would seem consistent with the University of Michigan experience. This tax exclusion is especially important for women and minorities and those in lower paid positions who need improved skills to qualify for increasingly complex and technical jobs. These are often the individuals who have few resources to seek such educational opportunities on their own and for whom even the taxation of the benefit becomes burdensome.

2. **With rapid advances in technology, the need for retraining and re-education of employees to maintain a stable workforce is a critical employer issue.**

Employers throughout the United States are experiencing rapid changes and growth in the use of technology. With the advent of the daily use of computers and specialized computer programming, as well as telecommunications and internet communications, the employees of today requires a skill base which must change frequently to allow them to fully utilize technology in the effective performance of their job.

For such employers, movement toward the use of technology is both cost effective and pro-employee. We have adopted the practice, not of replacing employees who lack technical skills, but of providing employees with the opportunity to obtain such skills.

Employers benefit from a highly skilled, computer literate workforce through increased productivity and enhanced customer service. However, especially among our lower to mid-level employees - who have perhaps the most to gain from continuing education to obtain the necessary technological skills - educational opportunities may be simply out of reach when employer provided or subsidized training is taxable in nature.

3. **The lack of a permanent extension results in uncertainty for both employers and employees and presents numerous problems.**

At the exclusionary limit of $5,250 advanced under this legislation, employees could experience the added cost of approximately $1000 to $2000 in

their tax bill. Faced with the uncertainty of whether educational assistance accepted in the near term might vary in cost to this degree, many employees will likely choose to act conservatively and either eliminate or reduce the educational assistance they accept.

Further, the uncertainty and confusion surrounding the actual employee cost of employer provided educational assisstance undermines what I believe is widely considered a valuable employee benefit. As a Human Resources professional, and more particularly, as a Human Resources professional at an institution of higher learning, I believe this confusion sends employees precisely the wrong message about the importance and value of continuing education.

One only needs to look to the legislative history of Section 127 to understand the reason for current uncertainty. Since the Revenue Act of 1978, Congress has legislated five extensions of Section 127, but each time only temporarily. Repeatedly, the Section has lapsed, and then been reinstated retroactively. The permanent extension of this provision would achieve what has repeatedly been the will of congress, while reducing educational planning uncertainties for employees and administrative difficulties for employers.

STATEMENT
BY
CONGRESSMAN JOE MOAKLEY
ON H.R. 540, LEGISLATION TO RESTORE
SECTION 120 OF THE INTERNAL REVENUE CODE

Madam Chairperson and Members of the Subcommittee, thank you for holding this hearing on legislation to restore Section 120 of the Internal Revenue Code. I am a strong supporter of H.R. 540 and urge the Members of this subcommittee to report this measure favorably.

Section 120 of the Internal Revenue Code was first enacted in 1976 and it was so successful that Congress renewed it seven times. It encourages employers to pay for preventive legal services for employees and their families by excluding from their income the first $70 per year contributed to a qualified legal service plan.

Employer-financed group legal service plans have become a safety net for more than 2.5 million Americans. Members of the plan are able to gain access to affordable and qualified legal representation to settle disputes. In many instances, members are able to avoid personal disasters, like losing a family home, declaring bankruptcy due to insurmountable debt problems, or losing custody of a child.

In Massachusetts, section 120 has benefitted more than 120,000 members and their families. These people are not wealthy, they are hard working, tax paying, middle class Americans. They are teachers, policemen, firemen, waiters, government workers, electricians, carpenters and autoworkers.

Not only does Section 120 benefit employees but it is good for businesses. Because employees are able to contact lawyers upon learning of the problem, they are able to resolve them quickly and avoid costly litigation. Thus, employees are much more productive at work because they are not distracted by legal problems.

There is no organized opposition to group legal services plan. It enjoys the broad bi-partisan support of labor, consumer, bar, and insurance groups. These plans are a sensible approach to help people avoid costly, and disastrous legal problems.

I urge my colleagues to reinstate section 120 of the Internal Revenue Code. It benefits hard-working middle class Americans before it is to late.

STATEMENT OF MARY KELLER, VICE PRESIDENT

MORGAN GUARANTY TRUST COMPANY OF NEW YORK

Oversight Subcommittee

Committee on Ways & Means

United States House of Representatives

May 9, 1995

On behalf of the Morgan companies, including Morgan Guaranty Trust Company of New York, one of America's leading financial institutions, I congratulate and thank the Committee on Ways & Means for considering reinstatement of Section 127 of the Internal Revenue Code, the income exclusion for employer-provided educational assistance, and urge prompt approval of legislation that would restore Section 127. We also thank Congressmen Levin, Shaw, Camp, and Rangel -- and the many other members of this House who have worked to secure permanent reinstatement of Section 127.

This statement is submitted for the record of the Oversight Subcommittee's hearings concerning various expired provisions of the Internal Revenue Code, and we ask that a copy of this statement be made part of the record.

Morgan has long advocated a permanent extension of Section 127. In 1988, we testified before the Senate Finance Committee in support of legislation to restore Section 127 and make it a permanent part of the tax code -- and we have previously submitted statements in support of the program. During this time, Section 127 has survived on temporary extensions alone, some lasting only a matter of months. These temporary extensions were surely to be preferred to the alternative of letting the program die -- but they have worked a hardship on employees trying to plan for their education. We are hopeful, therefore, that these hearings will result in permanent reinstatement of Section 127 -- or, failing that, long-term extension of the program.

We believe in tuition assistance. Morgan provides hundreds of thousands of dollars in tuition assistance to its employees each year. We believe that the Morgan program is typical of the educational assistance programs offered by other major corporations and financial institutions. Our program is open to any full-time employee with at least six months service. We provide reimbursement for approved courses leading to undergraduate or graduate degrees and job-related certificates. Employees must receive a grade of "C" or better (or "Pass" in a "Pass/Fail" course) to qualify for reimbursement. Our employees have been enrolled in courses at private and public colleges and universities and have participated in special certificate programs at institutions like the American Institute of Banking, the educational affiliate of the American Bankers Association.

Our own experience supports the numerous studies that have found that Section 127 primarily benefitted low and moderate income employees. This year, much attention has

been given to the merits of a middle class tax cut. Without Section 127, middle class employees receiving educational assistance from their employers actually face the prospect of a tax *increase* -- an increase that they can only avoid by giving up tuition assistance. In short, employees will be penalized for pursuing their education. As we look for ways to encourage employees to pursue training opportunities, this simply makes no sense.

Some people are concerned by the alleged costs of this program. We believe that these concerns are misplaced. First, since Section 127 was part of the tax code for roughly 17 years, those who advocate its termination are looking for ways to raise money -- not save money -- by imposing a new tax on the middle class. Second, and more important, we believe -- and have always believed -- that Section 127 pays for itself.

A few simple illustrations -- based on our own experience -- should make this clear. At Morgan, a secretary who obtained her undergraduate degree through the tuition program subsequently became an assistant vice-president of the bank, making twice the salary she would have made in her secretarial position. A messenger who joined the program after joining the office staff was appointed an officer soon after obtaining his degree, earning nearly twice the salary he would have earned in a normal clerical career path. A former mail clerk who worked his way through the ranks and obtained an undergraduate degree in business administration later earned in excess of $100,000 as a vice-president of the bank.

These are admittedly dramatic success stories -- but they are real. In 1992 we reviewed a random sampling of employees who participated in the Morgan tuition assistance program in 1987. We found that -- between 1987 and 1991 -- salaries for several of the employees had increased by more than 40% -- with some increases ranging as high as 106%. These salary increases are well in excess of adjustments accounted for by inflation or customary step-increases. Although we have not conducted a current survey, we know of numerous employees who were hired in clerical or administrative positions, participated in the tuition assistance program, and now hold professional positions. Some are officers of the bank.

It should be self-evident that these employees have paid and continue to pay taxes well in excess of the tax revenues foregone by allowing them to receive their tuition payments tax-free. Reviewing the individual tax liability of a typical employee who obtained a college degree through a tuition assistance program, we believe that -- over a five year period -- the Federal government would realize a 900% gross return on its initial tax "investment."*

---

* In 1988 we reviewed the hypothetical example of a clerical employee earning between $20,000 and $24,000 during five years in which she pursued an undergraduate diploma with assistance from the bank. We assumed that the employee obtained an undergraduate degree, and -- five years later -- earned $55,000. Assuming no dependents or other income, and taking only the standard deduction, we calculated that this employee would have paid about $13,500 in taxes in 1987 alone -- almost $9,000 more than the taxes she would have paid if she had remained in a clerical track and were earning $29,000. Assuming further that this employee had received $1,800 in tuition assistance in each of the years that she was in college, the total tax foregone while she was in school would have amounted to $3,090 -- only one-third of the total increased tax which the employee later paid in a single year. Using reasonable assumptions, we calculated that -- over the five year period following her education -- the Federal government realized a 900% return on its initial tax investment, a total of $28,000 in additional taxes. Even factoring in a reasonable interest rate on the foregone revenues, the return on investment would have exceeded

Admittedly, this conclusion is based on a rough cut analysis. Nevertheless, we believe it is fair to assume that -- for most workers -- the increased training made possible by Section 127 translates into higher income -- and higher taxes. Without Section 127, it is fair to assume that many employees will abandon or cut back on their educational plans. To the extent that workers abandon their education the government will not realize any increased tax revenues whatsoever.

Of course, the purpose of providing educational assistance is not to generate tax revenues. The purpose of educational assistance is to enhance the skills of the workforce. An educated workforce is a more productive workforce. Increased productivity makes American businesses more competitive worldwide. And, while increased revenues to American business also mean more tax revenues for the government, they also provide new jobs and strengthen the American economy. Without Section 127, the opportunity to enhance the competitive skills of the workforce through tuition assistance programs may be lost or, at best, delayed.

Another compelling reason to retain Section 127 is the role that it plays in helping minorities and women who want to continue their education but cannot afford to do so on their own. Morgan is deeply committed to equal employment opportunity -- and our tuition refund program is an integral part of our efforts to attract and keep minorities and women. Our program is open to anyone who meets the program's criteria and is willing to do the work. Women have historically accounted for nearly 80% of the employees participating in our program -- and better than 50% of the participants have been members of racial and ethnic minority groups. These employees, by their participation in the tuition assistance program, have demonstrated the will to succeed despite financial obstacles. For them, employer-provided educational assistance is not a "fringe" benefit or a "frill." It is, instead, critical to their continued pursuit of their educational objectives. These employees are going to school at night and on weekends. They work hard at their education. They deserve our support.

Without any government bureaucracy, and with minimal paperwork, Section 127 has helped hundreds of our employees to obtain college and graduate diplomas. In 1994, our employees were enrolled in undergraduate programs in 49 colleges and universities in New York and New Jersey, ranging from small community colleges to nationally recognized universities like Fordham, Hofstra, and Rutgers. (A list of these schools is attached.) It is one of the true success stories in the tax code -- and it pays for itself many times over its costs. When the Senate Finance Committee approved Section 127 in 1978, the Committee observed that the then-current practice of taxing tuition payments worked as a "disincentive to upward mobility." That concern is no less valid today. Simply stated, there is no good reason to tax employees for pursuing their education -- and many good reasons not to. If this nation is to maintain a workforce capable of competing in an increasingly competitive world economy, we must retain Section 127.

We thank you for this opportunity to express our views.

---

*(...continued)
500%. Of course, the increased tax revenues would be likely to continue year to year over the taxpayer's lifetime.

STATEMENT OF GERALD MANN, ADMINISTRATOR AND CHIEF COUNSEL, DISTRICT COUNCIL 37, MUNICIPAL EMPLOYEES LEGAL SERVICES PLAN

Mr. Chairman and Members of the Committee, my name is Gerald Mann and I am submitting this statement as Administrator of the District Council 37 Municipal Employees Legal Services Plan, a prepaid legal services plan for the approximately 130,000 employees of New York City and related agencies who are represented in collective bargaining by District Council 37 of the American Federation of State, County and Municipal Employees, AFL-CIO. I am also here today on behalf of the National Resources Center for Consumers of Legal Services, the American Prepaid Legal Services Institute, and others.

My comments concern Section 120 of the Internal Revenue Code which expired on June 30, 1992 and which is the subject of H.R. 540, introduced by Representative Rangel, now pending before your committee. Section 120 determines the tax treatment of qualified group legal service plans. It provides that contributions made by an employer to and the value of any legal services received by the employee under such a plan can be excluded from the employee's taxable income.

Section 120 has been extended by Congress seven times in 1981, 1984, 1986, 1988, 1989, 1990, and 1991. H.R. 540 proposes that Section 120 be made a permanent provision of the tax code.

The record of seven Congressional extensions following intensive legislative review, suggests that Section 120 has stood the test of time as good public policy. Our discussion over the years with members of Congress indicate that there is virtually no substantive opposition to the idea of encouraging employers to provide legal services benefits in the same manner as they provide health care and other benefit programs designed to assist employees and their families.

There is no question about the need for making basic personal legal services available to moderate income families at reasonable cost. Clearly, the average family cannot afford the high cost of personal legal services. This problem has been documented in the American Bar Associations landmark study of the legal needs of the low and moderate income public. These figures tell us that about 50 percent of us will encounter a problem in the next twelve months which a lawyer could help resolve, yet only 21 percent of low income households will actually obtain legal services.

The growth of prepaid legal services and the recognition of its value by both labor unions and employers indicate that it is the innovative legal services delivery system which could surmount current income barriers and provide access to justice for the moderate income American.

The rationale for legal services as a benefit for employees is much the same as that for medical and other insurance benefits: to assure the personal well-being of employees and their families so that they can continue to be permanent and productive members of the work force. Legal plans offer employees preventive legal care -- preventing a minor problem from becoming a major legal entanglement through early treatment.

For some -- too poor to afford private legal assistance, yet employed and earning just enough to make them ineligible for government-financed legal aid -- lack of access to legal services is not just an inconvenience. It can be a matter of survival. For many low and moderate income working Americans, current economic conditions have increased their need for legal help in regard to potentially devastating personal problems such as child support enforcement, housing, evictions, consumer debt, divorce and custody, and child abuse.

At the legal services plan office in New York, we often see clients with multiple problems. A serious unresolved legal problem tends to create a domino effect on the life of a moderate income family. A debt problem can lead to a garnished salary, eviction, disintegration of the family unit, and in some cases, even loss of a job, dependency on public assistance and homelessness. The relatively small cost of the legal services plan is repaid many times by keeping the family intact and self-sufficient.

Of the approximately 10,000 new cases our office handles each year, almost 3,000 involve consumer problems and debt, 2,000 cases involve a landlord seeking to evict our workers and 3,000 matters involve family problems, such as enforcement of child support, divorce, adoptions, family violence and abuse and neglect of children.

Today's economic uncertainties and the realistic fear of loss of a job has had a devastating effect on family relationships. Incidents of family violence have increased as has child abuse and neglect.

Working grandparents have had to assume the burden of raising and supporting young children because a generation of parents have been incapacitated by drug and alcohol abuse. In all of this, a lawyer's intervention is necessary to assist in maintaining what remains of the family structure.

We represented a 43-year-old woman who works for New York City's Department of Social Services as a computer operator. Her husband, who began to physically abuse our client had left the home. Our client is now the sole support of two children, ages 7 and 12. Family emergencies had caused her to fall behind in rent payment and she now faces eviction proceedings.

She worried constantly about the effect of neighborhood drug traffic and violence upon her children. During one office visit, she began crying and was unable to stop. She threatened suicide, and had to be taken to a hospital's psychiatric department by the emergency medical service. The legal service we provided enabled her to avoid eviction, file for divorce, obtain child support and be placed in an outpatient counselling program.

I am able to report the she remains gainfully employed and is now capable of maintaining her family unit.

These New York City public employees, all working people of modest means, would not have been able to afford legal services from the private bar. The consequences of their not having access to a lawyer would have been severe.

Employer-paid group legal benefits plans make legal representation available to participants at a fraction of what medical and other benefit plans cost. By placing legal services on the same tax footing as other more expensive statutory benefits, Section 120 has encouraged employers to look to group legal benefits plans as an inexpensive way to enhance real employee compensation.

When our low income members and fixed income retirees received their 1994 W-2 forms requiring payment of income tax on the cost of their legal services coverage, they were outraged. To many of our members, the additional tax burden is a real economic hardship. It is difficult for them to understand why Congress has elected to single out this needed protection for inequitable treatment.

Legal plans have become an important consideration in employers' desires to provide fringe benefits which contribute to employee well-being while keeping costs under control. While the cost of health insurance benefits have tripled over the last 165 years, the cost of the legal service benefit plan I am familiar with have risen less than 40 percent over the last 15 years, or about 2.6 percent per year.

We urge Congress to finally resolve the issue of permanence for Section 120 and the other tax provisions expiring this year. The lack of an exemption has inhibited the adoption of legal plans by employers because of unpredictable tax consequences.

The time has come to make Section 120 permanent. Qualified group legal plans, which millions of working Americans depend on for basic legal advice, will be in serious jeopardy if Congress fails to renew Section 120. The provision's demise has already caused the termination of a number of legal benefits plans.

On the other hand, the cost of the Treasury of a permanent Section 120 is minuscule, if any. In today's world of scarce pre-tax benefit dollars, employers, instead may shift the amount of the contribution to other forms of tax-free statutory benefits.

What then would be the real results of the provision's permanent demise:

- The elimination of a valuable employee benefit for a major portion of the 2.75 million employees, plus members of their families, who are now covered;
- The loss of tax dollars that can be saved by reductions in the use of our courts to resolve minor disputes as a result of preventive legal services available to employees through qualified group legal service plans; and
- Decreased productivity in the workplace due to an increase in employee personal and legal problems.

In these difficult economic times, many middle class working Americans express little confidence that our political and legal institutions represent their interests. Working people will view a Congressional decision to abandon their employer-provided legal benefits as yet another example of a hit on the middle class. Further, the contention that our legal system exists only for the wealthy will be reinforced.

We now ask that Congress acknowledge its wisdom in having created Section 120 and having sustained its existence for 16 years by passing legislation which would make this provision a permanent part of our tax laws. H.R. 540 would accomplish this goal and we urge its adoption.

NATIONAL ASSOCIATION OF COLLEGE AND UNIVERSITY BUSINESS OFFICERS

Written Testimony of

Mr. Ralph H. Beaudoin
Vice President for Finance and Treasurer
The Catholic University of America

I commend the Subcommittee on Oversight of the Committee on Ways and Means for holding timely hearings to examine issues related to recently expired tax provisions and look forward to exploring with you in detail the importance of tax provisions that strengthen our work force and the nation's competitiveness in the world economy.

On behalf of the National Association of College and University Business Officers (NACUBO), I would like to express support for H.R. 127, legislation that would permanently reinstate Section 127–*Employer-Provided Educational Assistance* of the Internal Revenue Code which expired December 31, 1994. NACUBO is a membership organization representing chief financial officers, as well as business managers and administrators, at more than 2,100 of the nation's colleges and universities. The association is dedicated to promoting sound fiscal and administrative management of higher education institutions. The higher education associations listed above join NACUBO in this statement.

Since its enactment in 1978, Section 127 has provided needed and important tax relief to the many thousands of workers who have benefited from receiving educational assistance from their employers. It is in the nation's best interest to reinstate this provision of the tax law and make it permanent. A continuation of this form of tax relief is important for the following reasons:

- Section 127 makes education affordable for members of the work force who might otherwise be unable to attain additional training or higher education.

- Section 127 allows workers at all levels, but most importantly, at low-and-moderate income levels, to receive education to enhance their skills, retrain to prepare for new or modified jobs based on technological change, and prepare for new occupations.

- Section 127 encourages employees to attain advanced skills and education.

- Section 127 encourages employers in all sectors–public and private, profit and nonprofit–to provide educational assistance to their employees and promote the acquisition of new and higher skills in the work force.

Section 127 encourages employers to provide educational and training programs to their employees. In particular, low-wage and low-skilled employees have been supported in their efforts to seek specialized education necessary for job advancement, and employers have been encouraged to promote training and increase the technological sophistication of their work forces.

Section 127 has played a major role in providing opportunity, support, and access to millions of working Americans in obtaining education and training that is vital to the economic competitiveness of our country. Now, more than ever before, this provision is an important component of a national commitment to work force training. Section 127 is one very important way to provide encouragement for working Americans who seek to improve their skills. The provision also exemplifies good public policy by helping the individual and also contributing to upgrading the nation's work force and maintaining our competitiveness.

Today, the world's economy depends upon communications and information as competitive tools. The race to obtain information drives the technologies necessary to produce it. Knowledge grows and new opportunities present themselves. This rapidly increasing pace of technological advancement on a world-wide basis requires that America's

work force have access to new knowledge through continuing training and education. Only then can we take full advantage of the opportunities.

Rapid technological change also presents new ethical issues for our society. Medical breakthroughs in genetic engineering, transplants, life sustaining machines, and *in vitro* fertilization are but a few of the areas of ethical concern. More education in the liberal arts and in particular, ethics will be necessary for our society to face the social and ethical questions that technological breakthroughs are posing and will continue to pose.

Continual changes in our nation's economy and world markets lead to the displacement of American workers. We can expect to be displaced *at least twice* (and many futurists indicate many Americans will change their careers as many as seven or eight times) during our work life. We can no longer count on permanent employment with a single employer. Even corporations best known for long-term commitments to their employees such as IBM and AT&T have had to abandon these long-standing traditions. Americans need the opportunity to improve and update their knowledge in order to maintain their contributions to our society and our economic way of life.

It is not surprising that adult students returning to school to obtain undergraduate and graduate education represent the largest growing sector of the nation's student body. Global competitiveness is very much felt at the personal level and Americans are responding in record numbers by increasing their knowledge and skills through education. As a society, we need to encourage their effort by providing access and encouragement through measures like Section 127.

As we approach the 21st century, more of the "hired hands" will be replaced by the "hired minds." American brain power will be necessary to maintain the country's competitive position and safeguard its way of life. The developed intellect is the vital capital needed to solve the problems we face now and will meet in the future. Section 127 is one way to contribute to the formation of our country's intellectual capital.

On behalf of NACUBO and the other organizations that join in this testimony, we urge you to support H.R. 127, a bill that will make this important provision a permanent part of the Internal Revenue Code.

We are grateful to the Committee for this opportunity to express our interest and concern.

Statement of
Sanford T. Rosenthal, EA
National Association of Enrolled Agents

Oversight Subcommittee
Committee on Ways and Means
U.S. House of Representatives

On behalf of the National Association of Enrolled Agents, I wish to submit this statement for the record.

NAEA appreciates the opportunity to present this statement on behalf of its approximately 9,000 Enrolled Agent members and to speak for the individual and business taxpayers whom we represent. Enrolled Agents are professional individuals whose primary expertise is in the field of taxation and taxpayer representation. As the Sub-Committee members well know, the Enrolled Agent profession was created by an Act of Congress in 1884 to provide for competent and ethical representation of claimants before the Treasury. We are proud to say we have been diligently fulfilling our responsibilities for the past 111 years.

Enrolled Agents establish their expertise in taxation and taxpayer representation by either passing the Internal Revenue Service's comprehensive two-day examination on federal taxation or by serving as an IRS employee in an appropriate job classification for at least five years. NAEA Members maintain their expertise by completing at least 30 hours of continuing professional education each year. Our Members work with more than four million (4,000,000) individual and business taxpayers annually.

It is in our role as the voice for our Members and for the general taxpaying public that NAEA submits this statement for the record on certain expired and expiring tax provisions.

I would like first to thank the Ways and Means Committee for its prompt action in extending and making permanent the deduction for medical insurance premiums for the self-employed. This is critically important for the many small businesses with which Enrolled Agents typically work. While I understand that revenue constraints limited the amount deductible to 25% in 1994 and 30% for the following years, I would ask that you consider revisiting this issue again. This is a priority for all small business owners, and for reasons of fairness and equity with other forms of businesses, the amount deductible by the sole proprietors should eventually be increased to one hundred percent (100%).

Benefit to Small Business and the Nation's Economy by Permanent Extension of Expired and Expiring Tax Provisions

These provisions include the targeted jobs tax credit, the exclusion for employee educational assistance, and the tax credit for research and experimentation. Each of these provisions offers employers and employees the ability to "bootstrap" to higher levels of productivity, with subsequent increased income, and eventual permanent increases in income tax revenue resulting from the higher incomes.

Targeted Jobs Tax Credit

This tax credit provides incentives to employers to hire individuals who might otherwise have a difficult time finding employment. The benefit to the employee is eventual self-sufficiency and self-esteem. Society benefits by the employment of marginalized workers who, by being brought into the workforce, can support themselves and their families.

The targeted groups might be periodically modified as social and economic changes warrant. For example, in times of high unemployment, those who have been unemployed for more than one year should be included as a targeted group. Maimonides said hundreds of years ago that "it's better to teach a man to fish than to give him fish". It's a better use of scarce resources to

provide incentives to employers to reach those who are out of the work force. Reinstatement and extension of the targeted jobs tax credit is particularly timely in light of calls for replacement of welfare with work. In view of the benefit to individuals, families and society, it is recommended that the targeted jobs tax credit be reinstated and made a permanent part of the tax code.

Employee Educational Assistance

Employee educational assistance enables workers to obtain non-job related education which will increase their productivity, and benefit both themselves and their employers. It is of particular importance to lower-income workers and to those who are just starting out and who find they need additional education, if they are to move ahead.

According to the well-known Coopers & Lybrand study, "Who Benefits? At What Cost?", the distribution of benefits closely matches earnings among the labor force as a whole. Seventy-one percent (71%) of Section 127 recipients earn less than $30,000 per year and more than one-third (36%) earn less than $20,000 per year. The majority of those using Section 127 benefits are taking business-related courses, followed by courses in engineering, health science/nursing, education and computer science. Less than one-half of one percent are attending professional schools.

The repeated expiration and reinstatement of Section 127 has been very damaging and discouraging to those using employee educational assistance to improve their work skills. Employees are forced to choose between rolling the dice on Congressional reinstatement of this exclusion or having to pay taxes on tuition reimbursement. Many, because of their relatively low incomes, simply drop out of school.

The improvement of the skills of our nation's workforce should be encouraged in every way possible. Employers need to motivate employees to upgrade their skills just as the G.I. Bill motivated our war veterans in years gone by. We believe that this is a cost-effective mechanism, a partnership between employers, employees and the federal government which works very well. Therefore, it is recommended that Section 127 be reinstated and made a permanent part of the tax code.

Tax Credit for Increasing Research Activities

As a California resident, I can attest to the beneficial effect of increased research activities in my state. Many of today's high tech companies started out as small businesses, in some cases they literally began in someone's garage. Research has benefited employers who develop new, improved products that result in more income and profit. Employees benefit by the availability of new jobs. As a nation, we all benefit from maintaining our ability to compete in the global marketplace. This provision also substantially enhances several major tax bills under consideration by Congress.

The R&E tax credit, as the other provisions mentioned before, has suffered from periodic lapses and subsequent reinstatement. It needs to be extended before the June 30 expiration date and made a permanent part of the tax code.

Conclusion

The National Association of Enrolled Agents thanks the Sub-Committee for the opportunity to comment on these provisions. Congresswoman Johnson's efforts in furthering the improvement of the Internal Revenue Code are appreciated by our Members, both as tax professionals and as taxpayers. We stand ready to assist you in this endeavor.

NCSSSA *National Conference of State Social Security Administrators*

May 4, 1995

Phillip D. Mosely, Chief of Staff
Committee on Ways and Means
U.S. House of Representatives
1102 Longworth House Office Building
Washington, D.C. 20515

Dear Mr. Mosely:

This is in response to the call for written statements for the hearing on several recently expired provisions of the tax laws to be held May 9, 1995 by the Subcommittee on Oversight of the Committee on Ways and Means. The National Conference of State Social Security Administrators wishes to address the exclusion for employer-provided educational assistance.

Let me first provide some background on our organization. The NCSSSA was formed more than 40 years ago and represents more than 70,000 state and local governmental employers across the nation. We have enjoyed an excellent working relationship with the members of both chambers of Congress and their staffs during this time. The NCSSSA also has developed direct lines of communication with the Social Security Administration and the Internal Revenue Service that are used to address the myriad of employment tax and coverage issues governmental officials must face each day.

It is this wide range of coverage and reporting issues that brings us to address the exclusion for employer-provided educational assistance. The rules, regulations and procedures of federal employment taxes, as well as, social security and medicare coverage appear to change almost daily. Today's rapidly evolving technology that is required to withhold, deposit and report employment taxes and to maintain proper social security and medicare coverage on the nation's state and local governmental employees didn't even exist until recent years.

While this speaks only of those state officials involved in employment taxes and social security/medicare coverage, it could well speak for any employer in America. The demand for highly motivated and well educated employees is greater than ever. It is a constant struggle to keep up with the requirements of the workplace and continuing education for employees is a must for any successful enterprise, public or private.

There is a cost to maintain an efficient and well run organization and that cost erodes the profits of private firms and uses much needed tax dollars for public agencies. The provision excluding employer-provided educational assistance is a simple, cost-efficient tool that benefits both the employee and the employer. One should remember the adage, "Knowledge is the only instrument of production that is not subject to diminishing returns."

A well educated, knowledgable work force is vital not only for businesses and public organizations, but for America as a whole. Each individual's life should be a continuing education. Congress has an obligation to encourage, even lead, the nation's work force to better training and higher levels of skill. That is why the NCSSSA believes that, for the good of the nation, the exclusion for employer-provided education assistance should be reinstated.

If you have any questions, please contact me at (502)564-3952 or PO Box 557, Frankfort, Ky 40602-0557.

Sincerely,

Patrick L. Doyle

Patrick L. Doyle, Chair-Person
NCSSSA Legislative Committee

Statement of
William A. Bolger
on behalf of the
National Resource Center for Consumers of Legal Services

The National Resource Center for Consumers of Legal Services strongly supports H.R. 540, which would reinstate the exclusion from employees' taxable income for the first $70 contributed by their employers to qualified group legal services plans under Section 120 of the Internal Revenue Code.

The National Resource Center is a non-profit research and education organization working to improve the legal system. Since our founding in 1972 our primary focus has been on legal services plans because of their potential for encouraging preventive law for the average American.

1. Legal Services Plans Have Proven Their Value.

Plans help families. Legal services plans provide the average American with same access to preventive legal services that wealthy individuals and large businesses have always had. They enable people to avoid legal difficulties and more quickly solve problems that do arise, thus unburdening the court system and keeping employees on the job, undistracted by legal problems. Legal services plans:

>promote family harmony by preventing or resolving serious legal problems

>increase the level of justice by making legal advice more available to the average citizen

>improve economic productivity by keeping employees on the job and focused on their work

>help both the public and private portions of the legal system function more efficiently

Why plans work. Legal services benefit everyone because transaction costs are reduced when advance arrangements are made on a group basis for providing needed legal services. Advance payment is not as important as advance arrangements that make legal services readily available. These advance arrangements dramatically reduce the time, cost and uncertainty involved in selecting and consulting a lawyer when a legal question arises. People covered by a plan contact a lawyer more often, but at an earlier point in the course of a problem. More people receive legal advice, about more matters, but matters are handled at lower cost and in a way that minimizes disputes and litigation.

Legal services plans exhibit considerable diversity in structure, cost and benefits depending on the group of people covered--their number, geographic distribution, family situation, etc.--and the funding available. The plans are privately administered. The lawyers who provide services to plan members are mostly in private practice, and all are subject to state rules of practice. The plans themselves are regulated through ERISA like other employee benefit plans.

Congress was right. In enacting section 120 in 1976 Congress meant to encourage more equal access to legal help for middle income Americans. You succeeded. The Treasury's own June 1988 study of legal services plans found that "plans covered by section 120 did provide relatively greater access to legal services to production workers and union members" (than to professional and administrative employees). "(T) his pattern stands in **stark contrast** to most other kinds of employee benefits, which are relatively less available to production employees." (emphasis added)

Section 120 puts legal services plans on a more equal footing with other statutory fringe benefits. Even the most comprehensive plans seldom cost more than $150 per family per year.

Section 120 was originally enacted as a five-year experiment. Policy makers were concerned about whether the benefit would wind up accruing only to highly-paid executives, whether employer contributions would be insufficient to finance the arrangement and whether inflationary pressures would escalate the cost of legal service plans, as has happened in the case of medical care.

But in considering section 120's fate in 1981, Congress agreed that none of these evils manifested themselves during the five-year trial period. In fact, legal service plans were shown to benefit low and moderate income workers on a non-discriminatory basis. The modest funding formula used to finance these plans not only was shown to provide more than adequate financial support, but costs barely increased during the period. In light of this record, Congress extended the provision for three more years, then extended it five more times for shorter periods.

Even in the face of expirations and retroactive reenactments, section 120 served its purpose. There are now approximately 3.1 million employees and retirees covered by qualified group legal service plans at an average cost of under $100 per worker per year. Since these plans also provide access to essential legal services for family members, a total of 7.6 million Americans now benefit from employer-provided legal services.

Employer-paid legal services plans have so clearly proven their value that almost no one opposes them. Everyone agrees they are a good idea and that they work. The only excuse for letting section 120 expire was that the government needed the $85 million per year attributed to section 120.

2. Letting Section 120 Expire Was An Unfair Tax Increase On The Middle Class.

All employees covered by an employer-paid group legal services plan suffered a tax increase when section 120 expired. So did contributing employers, who now have to pay Social Security payroll taxes on their contributions. Reinstating section 120 would rescind that tax increase.

Almost as important to employers as the payroll taxes they have to pay is the administrative burden of accounting for the contribution. Consider, for instance, plans covering retired workers. Retired employees now incur a tax liability for contributions made on their behalf by their former employers, who are required to issue W-2 or 1099 forms for them.

So far, few existing plans have been terminated because section 120 expired, but as plans come up for renegotiation in a period of tough global competition, health care cost pressures and static wages, the taxability of legal services plan contributions can only work against them compared to tax-favored benefits.

Section 120's expiration has also deterred additional employers from beginning to offer group legal service benefits, given that other non-taxable benefits are readily available. Where taxable group legal service benefits are offered in a flexible benefit plan, they have been in some instances slighted in favor of other non-taxable benefit options.

State income tax ramifications are also important. Many states' personal income tax laws follow federal income tax exclusions. Since section 120 expired, employees in those states effectively have seen an increase in their state income taxes.

Tax revenue insignificant. While the current taxability of plan contributions threatens their future, it is producing insignificant tax revenue to the federal government. The Joint Committee on Taxation's latest estimate was that letting Section 120 expire would produce $85 million in revenue, an infinitesimal percentage of the federal budget. Even that estimate is too high, because it ignores shifts in contributions that are already occurring from legal services plans to health benefits and others that remain tax-exempt.

Congress should rescind the back door increase on middle class Americans resulting from the expiration of Section 120 and reinstate the Congressional policy of encouraging private efforts to achieve justice more efficiently for the average citizen.

3. Legal Services Plans Enjoy Broad Support.

Legal services plans are supported by consumer groups, business, the bar and the labor movement. There is no longer any opposition to them. The few early skeptics have been proven wrong. Bar groups that felt threatened now recognize that plans enable more people to afford timely legal assistance.

A bill identical to H.R. 540 was cosponsored by 220 members of both parties, including both Speaker Gingrich and Subcommittee Chair Nancy Johnson. Legal services plans are not controversial and Section 120 is not costly.

Please restore equal tax treatment for legal services plans by enacting H.R. 540. There is no simpler, cheaper or easier way to make the legal system work better.

Statement
of the
National Society of Professional Engineers
on the
Tax Exclusion of Employer-Provided Educational Assistance

May 24, 1995

The National Society of Professional Engineers supports legislation (H.R. 127) to make permanent the tax exclusion for employer-provided educational assistance (Section 127 of the Internal Revenue Code).

The National Society of Professional Engineers (NSPE) was founded in 1934 and represents over 65,000 engineers in over 500 local chapters and 52 state and territorial societies. NSPE is a broad-based disciplinary society representing all technical disciplines and all areas of engineering practice, including government, industry, education, private practice, and construction.

Section 127 of the Internal Revenue Code allows individuals to exclude from their gross income the value of educational assistance provided by an employer through an employee educational assistance program. The provision is a key plank in our nation's workforce preparation program, benefitting employees of all educational and experience levels. Section 127 plays an important role in assisting engineers in their career-long education. Formal courses are an essential component of an engineer's continuing professional development, particularly given the rapid pace of technological change.

Furthermore, as the nation's industrial and manufacturing base shifts in response to global military and economic changes, there is a need to provide engineers and other highly-skilled worker opportunities to shift with those trends. Most often, these shifts require the acquisition of new knowledge and skills. Tax incentives that encourage employers to incorporate tuition assistance into their continuing education programs are an appropriate response to these challenges facing the engineering profession.

The Section 127 tax incentive provides a mechanism for the government to encourage private sector development of a strong workforce base on which to build future economic stability. Also, the tax incentive relies on existing education and training resources already available, rather than establishing costly, new programs.

NSPE seeks permanent enactment of Section 127 because short-term extensions prevent beneficiaries from making long-range education plans with confidence. In fact, some eligible participants may choose not to avail themselves of the benefit as a result of the uncertainties involved with temporary extension.

Section 127 is a sensible use of tax policy to enhance the preparation of our nation's workforce. It has our full support.

PRE-PAID LEGAL SERVICES, INC.

Representative Nancy L. Johnson
Subcommittee of Oversight, Committee on Ways and Means
U.S. House of Representatives
Washington DC 20515

Dear Representative Johnson:

I am writing to urge your support of H.R. 540 not only because this legislation is personally good for Pre-Paid Legal Services, Inc., a major employer in southern Oklahoma and the only pre-paid legal services company that is publicly held. It is also good for workers in America, more of whom will be able to receive this product as a benefit. Our comprehensive plan of legal benefits for the whole family should be on equal footing with health insurance as a tax deductible expense. Studies have shown that this type of product contributes to employee well-being and productivity. Favorable tax treatment of this benefit certainly needs to be reinstated.

Please add your valuable support to H.R. 540. Let's provide a great value to our work force through this benefit. Working Americans certainly need low-cost legal advice. Group legal service plans should be on equal footing with other statutory fringe benefits.

We appreciate your help and we thank you for the tireless efforts you give for our great country.

Cordially,

Harland C. Stonecipher

Harland C. Stonecipher
Chairman
Chief Executive Officer

STATEMENT
OF
THE HONORABLE CHARLES B. RANGEL
ON THE TARGETED JOBS TAX CREDIT AND EMPLOYER PROVIDED GROUP LEGAL SERVICES
BEFORE THE SUBCOMMITTEE ON OVERSIGHT OF THE COMMITTEE ON WAYS AND MEANS

MAY 9, 1995

Madame Chair I am sorry that I was unable to appear before the Subcommittee in person and so I am submitting this testimony for the record.

I want to indicate my strongest support for the extension of the Targeted Jobs Tax Credit program and the renewal of the exemption from taxation of the value of employer provided group legal services. Both of these programs are important to those in our communities who are less fortunate. One enables many to enter the work force for the first time. The other helps the working person to feel secure in an ever complex society.

TARGETED JOBS TAX CREDIT

I want to join my colleague from New York, Congressman Amo Houghton, in introducing the revised extension of the Targeted Jobs Tax Credit. The changes we are proposing are as a result of the hearings held last Congress where the Committee heard extensive testimony from Secretary of Labor Robert Reich on how the credit needed to be better targeted and designed. It is also a reaction to a compelling need to help people move out of welfare.

One of my biggest concerns about the welfare reform bill that the House has passed is the assumption that so many on welfare and so many fathers of children on welfare are just going to pick themselves up and find a job. Ah, if it was so easy we would not have a welfare problem. We know that most of the people on welfare want to work, but have neither training nor opportunities to secure work. In my district 14 applicants show up for each fast food job opening. Why does the manager have to hire a welfare mother or unemployed youngster when the manager can take on someone older with work experience? We need job training and incentives for employers to encourage them to hire these targeted people.

I have supported the Targeted Jobs Tax Credit since its inception back in 1978. In the last several years it was responsible for helping over 450,000 people per year enter the work force. Many of these people have been on welfare, from families on welfare, or would otherwise be on welfare. Many of those hired have begun successful working careers getting the basic skills necessary to stay in the working world.

In New York City the welfare agencies have turned to America Works, a private organization, to help ready and place welfare mothers in the work force. One of America Works' important tools is the Targeted Jobs Tax Credit. The funds from the credit help influence employers to take on the welfare mother as well as provide some of the operating costs of the America Works training and placement program.

I commend the Targeted Jobs Tax Credit community for working with Congressman Houghton, myself and the Department of Labor to revise the credit to answer many of the issues raised by the Labor's Inspector General and Secretary Reich. The emphasis will now be towards identifying those eligible up front before employment so that we will know that employers are truly targeting instead of just gleaning. The targeting will be directed more closely to those on assistance so that the program's cost will be offset by decreases in various forms of welfare spending. The financial incentives will be focused on retention of employees by increasing the benefit as tenure is extended.

We need to give hope to a generation of families on welfare. The hope of a better future worth working towards. Without it we are compelled to see future generations in the same predicament. Without that hope we are compelled to see more young people in prison and more out of wedlock children. We need to provide incentives to employers to create that hope with a job and a future. The Targeted Jobs Tax Credit is one of the incentives that can help employers do just that.

I am certain that we can create bi-partisan support for the Targeted Jobs Tax Credit. I hope that the Committee will make the extension of the program a very high priority.

I want to thank Chairman Archer and Chairwoman Johnson for allowing the issue of employer provided group legal services to be heard at this hearing. I recognize that in 1993 the exemption of this benefit was not renewed while others were. However, it is still very clear to me that it is important enough to raise again at this hearing on expired provisions.

I have introduced H.R. 540 to extend the exemption from January 1, of this year. Already, this bill has 34 co-sponsors without even a "Dear Colleague" being circulated. I am sure that this bill will be supported by a large bi-patisan proportion of the House.

More than 2.5 million Americans were covered by employer provided legal service benefits. Without the tax exclusion, many employers have considered dropping this benefit and millions of Americans will lose their safety net when they face legal problems. Where programs continue working people are subject to an increase in their tax liability

Group legal service plans insure that participants will get legal counsel before their difficulties become disasters: before houses are lost or tenants are evicted, before cars are seized and utilities disconnected, before divorce or custody proceedings get out of hand. These plans improve productivity by helping employees quickly resolve legal difficulties that otherwise distract them, make them anxious or cause them to lose work time.

During the debate on welfare reform considerable attention was given to the issue of child support. Group legal services allows working mothers to secure legal help to make sure that they can recover child support from an absent father. It is pretty tough to hire an attorney for support orders that might yield a few hundred dollars per month. This benefit makes sure the mother and children keep the lion's share of the award.

Section 120 encourages employees to pay for preventive legal services for employees and their families. This section allows employees to exclude from their income the first $70 contributed by an employer to a qualified legal services plan.

Congress has extended §120 benefits seven times. A Treasury Department report stated that §120 and the group legal services plans they encourage helped middle income workers exactly as intended. Legal services plans have proven their value over the sixteen years that §120 had been in effect. These plans enjoy broad support from consumers, labor, the bar, and insurance companies.

Extension would cost under $100 million annually even assuming that without §120, none of the money now going to qualified legal plans would be diverted to other tax favored benefits.

Legal representation should not be the exclusive privilege of the wealthy. Working class families should have access to legal assistance for their personal problems too.

May 19, 1995

Mr. Phillip D. Moseley
Chief of Staff
Committee on Ways and Means
U. S. House of Representatives
1102 Longworth House Office Building
Washington, D. C. 20515

Dear Mr. Moseley:

I am writing to request the permanent extension of the tax exclusion for employer-provided educational assistance, as scheduled for discussion by the Subcommittee on Oversight of the House Ways and Means Committee on May 9, 1995.

As an employee, I have benefited enormously from my employer's education assistance plan. If not for tuition reimbursement, it is doubtful I would have had the financial resources to pursue my undergraduate degree. It was not financially possible for me to have funded my own education. To have waited a year or longer to deduct these expenses from income was not feasible.

In addition, because I was able to apply the tuition reimbursed from one semester of study to the following semester, very little out-of-pocket expense was incurred. And, without the education, it would be very difficult to advance in my chosen profession.

As an employer, I have also benefited greatly from our ability to help employees retain and gain the skills needed to remain successfully employed. As many other employers, we constant update processes to achieve greater efficiency. Many of our employees, who are in the middle-to-low income brackets, advance their skill levels with the help of our education assistance plan. They keep up with new technology and, therefore, continue to add value.

The tax exclusion permits a win-win-win situation for everyone. Our employees win because they achieve personal growth and can derive some comfort from knowing their skills are transferable. The company wins because

educated employees add value and enhance the products and services we provide. And, of course, our shareholders win as we are able to maintain our competitiveness in the marketplace.

The implications are larger than individual companies, too. As employees are trained or retrained by their employers, they gain valuable skills that will permit then to remain gainfully employed members of society. This is particularly important when you consider that the education system in this country is woefully lacking when compared with those of other industrialized nations.

Please continue to exclude from income amounts paid or incurred by an employer for educational assistance provided to an employee under Code Sec. 127, up to $5,250 per individual per year.

Sincerely,

Patricia A. Riccio

Patricia A. Riccio
Employee Benefits Manager

SUBMITTED FOR RECORD ONLY

WRITTEN TESTIMONY OF ROSEBUD SYNCOAL PARTNERSHIP

SUBMITTED TO THE SUBCOMMITTEE ON OVERSIGHT

OF THE COMMITTEE ON WAYS AND MEANS

HEARING DATE MAY 9, 1995

Chairperson Johnson, members of the Committee, Rosebud SynCoal Partnership is pleased to have the opportunity to submit testimony concerning the Production Tax Credit for Nonconventional Fuels (Section 29) and a possible extension of this credit. Rosebud SynCoal strongly supports a continuation of the Section 29 tax credit.

Rosebud SynCoal Partnership (Rosebud) is a general partnership between Scoria, Inc. an indirect subsidiary of Northern States Power Company, and Western SynCoal, a wholly owned subsidiary of Western Energy Company (WECO), an indirect subsidiary of The Montana Power Company. Rosebud owns and operates a 300,000 ton-per-year clean-coal demonstration facility at Colstrip, Montana. The SynCoal® product from that facility is eligible for the Section 29 tax credit.

Rosebud advocates a two-year extension of the "placed in service," "binding contract," and "production" deadlines in Code Section 29(g). Rosebud further believes that such an extension should be limited annually to the first one million tons of solid nonconventional fuels produced and sold from a qualifying facility at any one location and that these tax credits should not be negated by the application of Alternate Minimum Tax. A two-year extension of Section 29 and allowing the credits to offset AMT liability, together with a one (1) million tpy per facility per site cap, would allow companies the opportunity to demonstrate the technical scale-up potential to commercial scale of the involved technologies. This proposed cap is also large enough to allow for the capacity necessary to demonstrate market acceptance of the alternate fuel.

Rosebud believes that Congress created the Section 29 tax credit to recognize and help manage the substantial risk during the precommercial development stages of alternative energy projects. However, once commercialization is achieved the necessity for tax credits diminishes. Our experience and research suggest that nonconventional solid fuels from coal can be competitive with other fuels when those facilities can operate at two to three million tons-per-year of product produced and sold. A two-year extension of Section 29, and allowing the credits to offset AMT liability, together with a one million tpy cap would allow several promising technologies the opportunity to advance to the threshold of economic commercialization and is consistent with the original purposes of the Tax Credit for Nonconventional Fuels.

The federal budget issues currently facing our country make the fiscal impacts of any proposed extension a critical aspect of the legislative process. A limitation based upon facility size efficiently targets the incentive at a level appropriate to support technology development, while preventing abuse of this incentive as a tax shelter. Additionally, this approach leverages the incremental new public investment represented by the incentive against billions of dollars in prior strategic investments which have been made by both the public and private sectors under programs such as the Clean Coal Technology Program.

Rosebud and WECO have a long history in the development of alternative solid fuels. In the late 1960's and early 1970's, WECO conducted research into improving the

quality of low rank coals. Significant technical problems with this early work soon became apparent and WECO was unable to develop the technologies.

By the early 1980's, WECO became aware of a concept advanced by Mountain States Energy (MSE), the company that for many years operated the Department of Energy's (DOE's) Magneto Hydro Dynamics(MHD) research facility in Butte, Montana. WECO and MSE conducted bench tests on a process to remove moisture and sulfur that were promising enough to warrant the construction of a pilot plant. WECO built and operated a 130 lb/hr pilot plant in Butte. Results from the pilot plant led WECO to submit a proposal to the DOE in Round 1 of the Clean Coal Technology Program.

In June of 1990, negotiations between WECO and DOE concluded with the commitment to build and operate a $69 million, 300,000 tpy demonstration project at Colstrip, Montana. WECO then formed a partnership with Northern States Power that led to the formation of Rosebud. Construction began in December of 1990 with the demonstration operational phase beginning in April of 1992. The plant was declared to be in-service in August 1993.

The experience gained from bringing forth a new energy product from the concept stage to the threshold of market acceptance has given WECO and Rosebud valuable perspectives on the evaluation of new technologies. We also have gained an appreciation of the importance and the role of federal tax incentives and the time necessary to develop technology and markets for new products.

New energy technologies must go through several stages of development to prove viability. Bench scale tests of technological concepts must be followed by construction and operation of larger pilot plant facilities which, if successful, are then followed by even larger demonstration phases before commercial operations are possible. Attempts to shortcut these steps lead to unacceptable technical risk and increase the probability of failure. Some companies have attempted to shortcut the development process with devastating results.

Technology development activities require long lead times for planning, permitting, financing, construction and startup. Rosebud's experience has shown that a generous allowance of time is necessary to resolve the many unforeseeable issues that confront all technology developments. For example, Rosebud's demonstration plant took 15 months to shake out after initial startup and no amount of expenditures could have resolved these issues much sooner.

Following a measured development program increases the likelihood of success and mitigates risk. Federal tax credits play a role in the development of new technologies by mitigating market risk and allowing the private sector to fund and develop these technologies.

IRS has complicated Rosebud's developmental activities when they recently withdrew the private letter ruling qualifying Rosebud's current facility and took nearly a year to rule on two private letter ruling requests for the next generation developments. IRS did subsequently issue the requested rulings and has communicated that the withdrawn letter ruling will be reinstated. However, these actions have significantly increased the perceived project risk for next generation developments that are crucial to the ultimate commercialization of these technologies.

The attached development schedule is aggressive and shows why an extension of the inservice date and binding contract dates are necessary for continuing technology development.

Rosebud's plant is now operating at well over design capacity at high availabilities; however, the market has been slow to accept the new product.

Rosebud's experience has shown that once a new technology has successfully made the jump to small scale demonstration, market acceptance is critical to promote the technology's development to a commercial level. Utility and industrial fuel customers are concerned about reliable supply. In our case, their fuel needs are typically severely mismatched with the relatively small production capacity represented by an initial demonstration scale operation, such as our 300,000 tons per year facility.

This mismatch makes long-term commitments from the customers that are needed to support these facilities or next generation facilities nearly impossible because of the perceived physical supply risk being absorbed by the customer. However, without committed customers, these facilities cannot be financed or operated which, in turn, results in stagnation of the technology development. That is why the continuation of the Section 29 tax credits is so important.

If the Section 29 tax credit is extended by the 4th quarter of 1995, Rosebud plans to build two (2) next generation SynCoal production facilities, approximately 500,000 tons per year each. These facilities would allow Rosebud to scale up the technology to a scale of 3 to 5 times greater than the throughput design of our existing demonstration process reactors. This design threshold is intended to allow demonstration of static fluid bed reactor technology at one scale less than that required for full scale commercial deployment, but large enough to secure commercial fuel contracts with customers.

The specific projects are: 1) an expansion of the Colstrip, Montana demonstration site and 2) a plant integrated into Minnkota Power's M.R. Young power plant site near Center, North Dakota. These next generation projects would employ different aspects of the specific knowledge gained at the Colstrip demonstration project, providing efficient opportunities to advance the technology. These advances would allow further opportunities to gain the additional knowledge and experience necessary to ultimately commercialize this technology. At the same time these projects would result in construction investments totaling nearly $80 million, increasing the tax base, directly and indirectly they would provide approximately 400 new permanent jobs and increase economic activity by about $30 million per year.

The development activities of alternative fuel producers like Rosebud provide opportunities for the United States to take better economic advantage of our existing industrial and utility infrastructure while displacing imported foreign energy sources. These projects would produce value added products from low quality domestic feedstocks. They would continue the significant progress made in reducing environmentally threatening emissions while efficiently using our most abundant energy resource--coal.

When the United States Congress enacted Code Section 29 in 1980, it did so to encourage the domestic production of alternative fuel sources to decrease our dependence on the use of imported energy. In 1980 petroleum imports were 6365 Mbbl/day or 37.3 percent of our total petroleum use. By 1994, petroleum imports had grown to 8017 Mbbl/day or 45.5 percent of our total petroleum use. The projections for 1995 indicate that 53 percent of our petroleum needs will be met by imports. The original purpose for Section 29 is even more pressing today as the United States is demonstrating increased dependence on imported oil.

Nonconventional fuels like SynCoal® have shown a direct ability to displace petroleum products in both utility and industrial applications. SynCoal® has been used in place of natural gas and propane in direct fired kiln operations and has shown an ability to deslag utility boilers more effectively than fuel oil.

The U.S. Congress enacted Code section 29 in 1980 to encourage the domestic production of alternative fuel sources to decrease our dependence on the use of imported energy. Section 29 provides an incentive for the production and sale of fuels from designated non-conventional sources. The Senate Finance Report accompanying the enactment of Code section 29 stated that:

> The Committee believes that a tax credit for the production of energy from alternative sources will encourage the development of these resources by decreasing the cost of their production relative to the price of imported oil.
>
> **These alternative energy sources typically involve new technologies and some subsidy is needed to encourage these industries to develop to the stage where they can be competitive with conventional fuels.** Information gained from the initial efforts at producing these energy sources will be of benefit to the entire economy.[1]

Based on this legislative history, Rosebud believes that Congress originally intended to limit the credit to noncommercial scale production facilities. We submit that this original intent was proper and it forms the basis of our recommendation for a limited, targeted extension of Section 29.

Section 29 is a performance based incentive that only can be realized upon the sale of the nonconventional fuel product produced from the qualified facility. The taxpayer bears all technology and production risks and only receives the incentive after establishing its technical and operating capability and actually consummates a sale of the alternate fuels product. This structure minimizes the public's risk of providing incentives that do not provide the desired beneficial effects especially when limited to the production levels that support logical technology development.

An extension of Section 29 would provide important benefits for the United States. As mentioned previously, the evolution of a viable nonconventional fuels industry would contribute to the energy security of our nation. Additional benefits include further environmental and energy technology development that would assist in achieving compliance with Clean Air Act requirements, while providing additional employment for US workers. The successful development of a domestic nonconventional fuel industry would also lead to technology transfer in the international marketplace. Such endeavors would improve our trade deficits with other nations.

Rosebud believes there are important and compelling reasons to extend Code Section 29 and would urge this Committee and Congress to look favorably on a limited, targeted extension.

---

STATEMENT OF SAFETY-KLEEN CORP., ELGIN, ILLINOIS

Re-refining of Used Engine Oil

Safety-Kleen's Role in Managing Wastes

Safety-Kleen is the world's leading recycler of automotive and industrial hazardous and non-hazardous waste fluids. The Company processes and reclaims more than 200 million gallons of contaminated fluid each year collected from approximately 400,000 customers. The Company believes that only through proper handling can the hazardous waste portion of the world's wastes be safely managed to ensure the preservation of human health and the environment.

Safety-Kleen is exceptionally proud that the vast majority of its customer base is made up of small businesses, where jobs are being created and where the economy is having it's greatest current successes. Safety-Kleen's unique U. S. distribution system includes a network of 160 branches to collect wastes, 9 solvent Recycle Centers, one used oil processing facility and one used oil re-refinery to recycle, reclaim, or re-refine these wastes. Through these facilities, the Company provides services to customer locations throughout the United States.

The Company collects used lubricating oil from 64,000 customer locations in the U. S. These customers consist of car dealers, oil change outlets, gas stations automotive garages and many other small businesses. In addition, Safety-Kleen provides service to many of the nation's largest companies.

In short, Safety-Kleen teams effectively with small business, removing what used to be environmental and human health concerns and allowing those small businesses to do what they do best -- serve their customers and the economy.

Safety-Kleen's two used oil re-refineries in East Chicago, Indiana and Ontario, Canada processed approximately 112 million gallons of used oil during 1994. Since the majority of Safety-Kleen's customers are small businesses, the Company plays an additional key role beyond simply picking up used oil and other wastes. Safety-Kleen provides, as a matter of course, comprehensive and up-to-date information on the often complex environmental regulations and procedures with which its customers need to comply.

The Used Oil Issue

According to U.S. EPA figures, approximately 1.4 billion gallons of used oil are generated annually. Only about half of this amount is collected for recycling. Of the used oil collected, approximately 85% is burned as fuel and 15% is re-refined into base lube stock for reuse.

The adverse affects to the environment of improper disposal of used oil are as startling as they are well documented. One gallon of stray oil can render one million gallons of water undrinkable. Additionally, used oil frequently contains elevated concentrations of toxic metals, such as lead, which are picked up from contact with engine parts during use.

In response to the potential environmental damage posed by the improper management of used oil, the U.S. EPA promulgated used oil management standards in March, 1993, aimed at ensuring that used oil is managed in a manner that is fully

protective of human health and the environment. The used oil management standards appear in title 40 of the Code of Federal Regulations (CFR) part 279.

Although these regulations focus on proper management, they also recognize the value of used oil as a resource that can and should be reused, either through re-refining into lube stock or through burning as a fuel in appropriate units. Thus, the used oil management standards assume that used oil will be recycled, and are written in a manner to encourage collection and reuse.

Benefits of Re-refining

Officials with the U.S. EPA as well as significant elements of the environmental community have stated that re-refining is the preferred option for the recycling of used oil. Re-refining is considered by many "a higher use" than burning as fuel for energy recovery. Oil can be re-refined and re-used an unlimited number of times with no loss of quality, essentially renewing a resource once thought to be non-renewable. A state-of-the-art re-refinery, such as Safety-Kleen's East Chicago re-refinery, is capable of handling almost any used oil stream and converting it into quality lube stocks equivalent in all respects to virgin material.

Only two gallons of used oil are required to produce one gallon of lubricating oil, whereas, approximately 13 gallons of crude oil are required to produce one gallon of virgin lubricating oil. Re-refining also uses about one-third of the energy required to produce the equivalent amount of virgin lubricating oil. Thus, re-refining of used oil plays a role in reducing dependence on foreign energy sources and fossil fuels, both in regard to feedstocks used to produce lubricants and to energy requirements for the re-refining process.

The Re-Refining Process

Safety-Kleen's re-refineries use advanced technology (thin film evaporation and hydrotreatment which is the most evolved form of re-refining). This process provides the highest quality lube stock and produces the least amount of waste. In addition to the primary product, lube stock, the re-refining process also produces other useful products, such as asphalt extender, which is used in the manufacture of shingles or asphalt for roadways.

Safety-Kleen's re-refineries have pioneered many of the more innovative techniques used in re-refining. The promise of this new technology has led Safety-Kleen to invest in excess of $75 million of property, plant and equipment at the East Chicago, Indiana plant.

The Used Oil Industry

Safety-Kleen and Evergreen Oil Inc, of Newark, California produce the vast majority of re-refined oil in the United States. Re-refined oil makes up only about 15% of the total oil recycled in the country. At this time, the majority of used oil collected in the United States is processed for use as fuel by approximately 200 processing facilities. Both Safety-Kleen and Evergreen operate state-of-the-art re-refineries capable of producing quality lube stock that meets applicable industry standards for lubricants. Despite existing re-refiners success in producing quality products, the capital investment required to build or upgrade existing facilities into state-of-the-art re-refineries, coupled with slim profit margins, have generally discouraged entry into re-refining by other businesses.

In addition to raising the quality and the reputation of re-refined oil, Safety-Kleen's used oil collection and management procedures, which were modeled after the procedures it uses to manage hazardous waste, are the most stringent in the U.S. and have set a standard for environmental protection for the rest of the industry.

Quality of Re-refined Oil

Re-refining technology has made major advances over the past 15 years. The successful adaptation of refining technologies such as hydrotreating, a process which removes or destroys contaminants such as chlorinated compounds, allows the production of re-refined lube stock that meets or exceeds the standards set for lube stock refined from virgin oil.

Safety-Kleen has received International Standards Organization (ISO) 9002 accreditations for both its East Chicago and Breslau, Ontario, re-refineries. The Company's high-quality lube stock is blended, either by Safety-Kleen or by independent compounders-blenders or major oil companies, into a wide range of products. Safety-Kleen's own brand of engine oil made with re-refined lube stock is America's Choice, which is sold at Wal-Mart stores and other retailers.

Improvements in the quality of re-refined oil have led to increased market acceptance and interest. Several of the major oil companies are marketing their own brands of engine oil blended from re-refined lube stock produced by Safety-Kleen or Evergreen. Additionally, re-refined oil meeting the International Lubricant Standardization and Approval Committee's (ILSAC) GF-1 specifications received another important acknowledgement of its quality. The American Automobile Manufacturer's Association has stated that any oil, including re-refined motor oil, displaying the American Petroleum Institute's certification mark "starburst symbol" is suitable for use by its members (Chrysler Corporation, Ford Motor Company, and General Motors).

Both the U.S. government and a number of state governments are seeking to increase the market for re-refined oil by encouraging their own agencies to buy it through procurement preference guidelines. The U.S. EPA's Office of Solid Waste, Municipal and Industrial Waste Recycling Section, designated re-refined oil as an item that agencies should purchase in 1988 after careful review of its quality. Re-refined oil was also designated for preferential procurement by operating units (the Park Service, GSA, etc), of the Federal Government in an Executive Order 12873 on ***Federal Acquisition, Recycling, and Waste Prevention*** issued by President Clinton on October 20, 1993.

Additionally, in 1994, Safety-Kleen received the prestigious "Green Seal" certification for its re-refined engine lubricants. Green seal, an independent, non-profit organization, awards its certification to products found to cause significantly less harm to the environment than other, similar products.

Economics

Entry into the re-refining business has been expensive for Safety-Kleen. Factors that hinder entry into the business include high capital costs required to produce quality lube stocks, and the extensive and complex requirements covering regulatory compliance, operating permits and waste water discharges. The Company showed no return on its investment in the oil re-refining business from initial entry in 1987 until 1994, when a small profit was made.

Since the price of lube stock is tied to the cost of virgin crude, which has been relatively low over the past few years, profit margins are slim. The capital investment in the re-refineries and the cost of operating the Company's collection system represent fixed costs that cannot be adjusted downward.

Conclusion

Beyond the obvious benefits to small businesses nationwide and to the environment, government and industry endorsement of high-quality re-refined lube stocks, such as those produced by Safety-Kleen, underscores the importance of recycling used oil through re-refining. Because of the cost structure of the industry, however, re-refiners face stiff obstacles in order to produce re-refined products.

The process and promise of re-refining includes benefits to the environment as well as decreased reliance on imports. The hundreds of millions of gallons of used oil that have thus far been re-refined represent conservation of an important resource and protection of U.S. waterways and groundwater from improper disposal.

Re-refiners, who necessarily operate on a smaller scale than the major oil companies, are directly affected by the price of crude oil without the economies of scale of the major oil companies. Additionally, re-refiners must compete for used oil in the marketplace with used oil processors, or those organizations which convert used oil into fuels of various types. These oil processors naturally have lower levels of capital investment at a lower cost structure.

Thus, the extra costs associated with collecting and re-refining used oil are conceptually comparable to the costs associated with extracting crude oil from difficult-to-access deposits, or "non-conventional sources" and should be afforded comparable tax incentives.

In summary, we believe that a tax incentive as discussed here would have significant multiple benefits for the country; including helping our country's increasingly important small business community, helping to keep the environment clean for us and for future generations, and assisting an industry that can play an important role in helping America achieve true energy independence.

STATEMENT OF
SECTION 29 COALITION
ON SECTION 29 NONCONVENTIONAL FUELS TAX CREDIT

SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

May 9, 1995

The Section 29 Coalition supports the extension and improvement of the section 29 nonconventional fuels tax credit. The members of the coalition are companies involved in the production of gas from biomass and synthetic gas from coal or lignite.

Background of the Credit

The nonconventional fuels tax credit was enacted in 1980 as a means of encouraging the production of alternative forms of energy. The credit was set at $3.00 (plus an inflation adjustment) per barrel-of-oil-equivalent, and was designed to phase out during periods of high oil prices.

The principal effect of the credit during the 1980s was to stimulate the drilling of gas wells in eligible geological formations -- specifically, in tight sands, Devonian shale, and coal seams. However, Congress allowed the authorization for new wells in those formations to expire at the end of 1992. Gas produced from old wells in those formations will continue to qualify for the credit through 2002.

Refocused Credit

In the National Energy Policy Act of 1992, Congress extended the authorization for new energy "facilities" specified in section 29 -- specifically, for facilities used to produce gas from biomass or synthetic fuel from coal or lignite. To qualify under the 1992 extension, such a facility must be placed in service by the end of 1996, pursuant to a binding contract in effect by the end of 1995. Fuel produced in such a facility will qualify for the credit through 2007.

The net result of Congress's actions in letting part of section 29 expire and in extending the authorization for new facilities was to sharply refocus the credit. As refocused, the credit has essentially three effects: It promotes the production of clean fuels from coal and lignite; it promotes the recovery and productive use of methane produced in landfills; and it promotes the production of gas from other biomass -- such as wood waste.

The credit has helped stimulate the commercial development of coal gasification technology, under which high-sulphur coal or lignite can be efficiently transformed into a clean-burning gas. The first commercial-scale coal gasification facilities to be used in this country by electric utilities in power generation are scheduled to go into service in the next year. The success of the projects could lead to widespread use of coal gasification in the next century as a replacement for aging conventional coal-fired power plants. Compared to a conventional power plant, a power plant fueled with synthetic gas from coal or lignite will reduce emissions associated with acid rain to levels far below Clean Air Act standards, while also sharply reducing carbon dioxide emissions.

Similarly, the credit has stimulated more than 100 projects around the country to recover and use the methane gas generated in the decomposition of organic material in landfills. In the typical case, the gas is used on the landfill site to generate electricity. In other cases, the gas is piped off-site to an industrial plant or other gas consumer. Most of the projects are small, but, in their absence, the gas would simply be wasted. In cases where the landfill operator does not sell the landfill gas, the operator will collect sufficient quantities of the gas to prevent gas migration, and will flare the collected gas. The credit has encouraged companies to develop the technology to efficiently recover and use the landfill gas, thereby preventing the waste of a valuable resource.

Recommendations

The job of the section 29 credit is not finished. In the next century, gasification has the potential to be the preferred technology for the clean use of coal and similar fuels in generating electricity. Gasification is both cleaner and more efficient than conventional technologies. But because of the enormous cost of commercial-scale gasification facilities, the commercial feasibility of the technology needs to be demonstrated thoroughly before many utilities will be able to take the risk of adopting the technology. An extension of the authorization period for the section 29 credit would encourage more utilities to adopt the technology in the near future. The commercial feasibility of the technology could be fully demonstrated by early in the next century.

The credit also is needed as a continuing stimulus to encourage landfill owners to recover and use the methane gas produced in landfills. Many landfills around the country remain as possible candidates for landfill gas recovery and use, and new landfills will continue to come on line. The EPA has long promoted, and continues to promote, the environmental benefits of landfill gas recovery and use. Currently, the EPA is engaged in these efforts through its Landfill Methane Outreach Program. The section 29 credit not only is consistent with that program, but is essential to its success.

To ensure the continued benefits of the section 29 credit, Congress should extend the authorization period for new section 29 facilities for another four years. As a practical matter, if the authorization period is not extended for at least four years, the credit will provide no incentive for companies to construct coal gasification facilities or other such major projects because of the multi-year lead-times for those projects. In conformity with the four-year extension of the authorization period, Congress also should extend the 2007 date for the availability of the credit for four more years, through 2011.

Congress also needs to improve the credit in two respects:

First, Congress should amend the unrelated person sale rule to eliminate unnecessary red tape. Section 29 requires producers of eligible fuel to sell the fuel to unrelated persons to qualify for the credit. That rule creates an unnecessary burden in cases where an eligible fuel is best used on the site of production for the generation of electricity. For example, if a utility produces synthetic gas from coal and desires to use it on site to generate power, the utility must enter into an arrangement under which a third party will own either the gasification unit or the power generation unit; an unrelated person sale of the gas will result. Clearly, the tax law should not force taxpayers to take artificial steps such as this in order to take advantage of the credit. The Treasury has previously testified that the administration does not oppose eliminating the unrelated person sale rule. We suggest eliminating the rule in cases where the taxpayer uses fuel on the site of production to generate electricity and sells the electricity to unrelated persons; in those cases, the sale of the electricity can serve as an arms-length indicator of the volume of energy used and produced.

Second, Congress should clarify that the credit applies to synthetic fuels produced from petroleum coke, as well as from coal and lignite. Like coal and lignite, petroleum coke is a solid, impure, organic substance that can be used for fuel. Its heating value is higher than that of most coals, while its ash and moisture content are lower. A byproduct of petroleum refining, petroleum coke is produced in ever larger quantities because of the declining quality of the world's oil supply, while, at the same time, its continued utilization as a fuel is of increasing environmental concern due to its high sulfur content. The inclusion of petroleum coke in section 29 would provide an incentive for companies to demonstrate the gasification of the material on a commercial scale, thereby converting petroleum coke to a clean-burning fuel for use in the next century.

Summary

The section 29 credit represents an efficient mechanism for encouraging the development of alternative energy technologies, including technologies that let companies sharply reduce emissions associated with acid rain to meet the tightening Clean Air Act standards. Congress should extend the credit for another four years and also adopt appropriate amendments to improve the credit.

SMITHFIELD FOODS, INC.

IN SUPPORT OF THE

TARGETED JOBS TAX CREDIT (TJTC) PROGRAM

Smithfield Foods, Inc. is a $1.8 billion pork processor primarily located in the Mid-Atlantic United States with peripheral operations in Wisconsin and Utah. The Company operates numerous meatpacking plants throughout these regions employing large numbers of unskilled and semi-skilled workers for the work requirements of the meatpacking industry. The job positions, while not requiring extensive educational background, do require significant on-the-job training after hire date in order for the individual worker to be proficient and efficient in the production process. Meatpacking jobs lend themselves to the lesser skilled individual and provide prime possibilities for TJTC eligible people.

Under this program, Smithfield has put more than 600 people to work over the past few years who might otherwise have remained unemployed and on the welfare roles. This program has come under sharp criticism recently from the Labor Department for its supposed inefficient and wasteful nature. This claim, while always a possibility with any incentive program of government, is not the case with Smithfield Foods, Inc. Since 1981, Smithfield Foods, Inc. has actively recruited the hard-to-hire person utilizing the TJTC program as a key screening process. This program has been used to hire those who otherwise would not have been hired by our Company. This program has resulted in Smithfield actively pursuing employment of work release prisoners and disadvantaged youths as well as social services dependent welfare recipients.

In contrast to allegations made by the DOL that these people would be hired anyway, Smithfield has actively offered an alternative for convicted felons, to give them a job while imprisoned that continues after their release. Our success rate in retaining these employees after their imprisonment period has been good. We have in no way attempted to churn TJTC employees with other TJTC people once the credit has run, but rather have made every attempt to retain employees; the very nature of our business dictates retaining a trained workforce to the extent we possibly can. In addition, DOL has alleged that TJTC people are hired on a part-time basis with little or no benefits, I again challenge this premise. The vast majority of TJTC persons at Smithfield Foods are full-time, 40-hours plus employees and all employees receive a full compliment of benefits including vacation, health and life insurance and attendance bonuses. I have attached to this letter some statistics supporting our utilization of the program which I ask be reviewed and considered as well as specific case analysis of people hired who have remained long after the credit has expired.

I feel it unfortunate that a program that can work and does work to improve society is likely to be eliminated. I am not embarrassed to admit that Smithfield Foods, Inc. has benefitted from these tax credits over the past years; this is the reason the program was enacted. I do, however, feel very strongly that in the case of our Company, the program has worked exactly as it was supposed to. A tax credit program was passed as an incentive for industry to hire those members of society with limited skills and problem backgrounds. In return for this, industry is rewarded with a modest financial incentive in the form of tax credits for hours worked. This is a successful program, both for industry and for society.

This is not a wasteful program, and properly structured, this can be an important avenue for those seeking real gainful employment. I urge your support for renewal of the program and thank you for your time and consideration.

C. Larry Pope
Controller

The following information is being submitted in an effort to provide an optimistic view regarding the future of the Targeted Jobs Tax Credit (TJTC) Program. This information not only voices our support for the program, but outlines procedures which we have implemented that have proven to be effective in accomplishing objectives in both the public and private sectors.

Smithfield Foods, Inc. has been a long time participant in and supporter of programs that were created to provide assistance for disadvantaged individuals. We recognize the importance of a cooperative relationship between the public and private sectors and actively strive to maintain this relationship. The proactive measures we have taken to become involved with public service agencies and their purposes clearly demonstrate our concern and dedication to becoming an integral part of the solution to many problems we face when attempting to provide assistance for the less fortunate. Our most important resource is our human resource. The very nature of our business requires that we employ, train and retain a productive workforce. Through the TJTC program we are able to provide employment opportunities for disadvantaged individuals who may only need just that, "the opportunity".

As stated in the Department of Labor's TJTC ET Handbook 377, "TJTC is intended to further the partnership between the employment and training system and the private sector in dealing with problems of the disadvantaged and unemployed. TJTC is a significant part of this effort and a cost-effective way of increasing private sector employment opportunities. It offers taxpaying businesses incentives to increase the number of job opportunities available to the disadvantaged and to retain these workers in the critical first year of employment". The purpose and objectives behind this program could not be more appropriate. Especially when our country faces problems concerning unemployment and Welfare Reform. We do not feel that problems that may appear to exist with TJTC are within the structure of the program itself, but in the manner in which the program is implemented. Proper implementation requires teamwork and effort on the part of both the private and public sectors. We have recognized this deficiency. We have created and implemented a new approach that has proven to be mutually beneficial in both sectors.

In 1993, the position of Human Resources, Government Incentive Program Coordinator (GIPC) was implemented in one of our facilities. The results have been extremely successful and we are considering implementation on a corporate level. The primary responsibility of this position is to act as a liaison between the company and the public sector in the Human Resources arena. A Coordinator was hired into this position and brought with him seven (7) years of pubic sector experience in programs designed to assist

disadvantaged individuals in finding employment. Knowledge and experience in both the private and public sectors have proven to be the key ingredients in eliminating existing obstacles that may inhibit proper program implementation and prevent any private sector employer from utilizing programs in the manner in which they were intended.

The following information outlines the responsibilities of the GIPC. These are essential components attributed to our success.

* **EDUCATION**

  Educating the Human Resources Department on the purpose of TJTC and other Government Programs.

* **PUBLIC RELATIONS**

  Creating and actively maintaining positive working relationships with all public service agencies charged with the responsibility of assisting disadvantaged individuals in becoming gainfully employed (i.e. Department of Social Services, Department of Corrections, Department of Rehabilitative Services, JTPA Agencies, etc.)

* **RECRUITMENT**

  Presentations at the above-mentioned agencies for clients who are job-ready and are actively seeking employment. These presentations educate clients on our industry and the types of employment available.

* **ASSESSMENT**

  Potential employees are referred for individual assessment. Topics are discussed such as requirements necessary to become and remain employed, reliable transportation, and what positions might be most suitable for the client based on their needs. If deficiencies exist that absolutely prevent an individual from being considered for employment (i.e. no transportation), suggestions are offered on how the obstacle may be overcome.

* **ELIGIBILITY DETERMINATION**

  Potential employees are screened for TJTC eligibility and informed of other programs that can be of assistance when seeking employment with any employer. Individuals who have demonstrated a strong desire for opportunity will be considered for employment as vacancies arise.

* **RETENTION**

  Once individuals are employed, they are informed that the GIPC is always available for assistance should problems arise during their employment. They are encouraged to discuss potential problems with the GIPC in an effort to resolve them before they become problems that may affect their employment.

The following statistics and employment profiles justify the information presented above and strongly contradict the negative results and criticism produced by the investigation conducted by the Office of the Inspector General (OIG).

Total employees hired under the program over the past five years 612

THE FOLLOWING IS A SMALL SAMPLE OF EMPLOYMENT PROFILE SUMMARIES FOR INDIVIDUALS WHO WERE HIRED INTO COMPANIES WITHIN SMITHFIELD FOODS, INC. UNDER THE TARGETED JOBS TAX CREDIT (TJTC) PROGRAM. PERSONAL/CONFIDENTIAL INFORMATION IS BEING WITHHELD IN ACCORDANCE WITH THE PRIVACY ACT.

EMPLOYEE #1

HISTORY:	* Female - 18 years of age * Single mother * Previous work history - none * Department of Social Services referral AFDC and Food Stamp Recipient * High School/GED - Yes
ASSESSMENT/ SCREENING:	10/25/93
TARGET GROUP:	B - DISADVANTAGED YOUTH (18-22 yrs. old) H - AFDC RECIPIENT
START DATE:	10/27/93
STARTING WAGE:	$ 6.00
CURRENT WAGE:	$ 7.58
BENEFITS:	Yes
COMMENTS:	Employee has been employed for 1 year and 6 months. She is currently employed in our Cut Department, self-sufficient and has not had to return to the welfare system.

EMPLOYEE #2

HISTORY:	* Male - 48 years of age * Married, father of one * Previous work history - Military USAF * High School/GED - Yes
ASSESSMENT/ SCREENING:	8/13/93
TARGET GROUP:	C - DISADVANTAGED VIETNAM ERA VETERAN
START DATE:	9/20/93
STARTING WAGE:	$ 5.96
CURRENT WAGE:	$ 7.56
BENEFITS:	Yes
COMMENTS:	Employee has been employed for 1 year and 7 months. He has been re-trained to be a skilled production worker in the meat production industry.

EMPLOYEE #3

HISTORY:	* Male - 33 years of age * Single * Previous work history - Construction (sporadic) * Department of Corrections referral * High School/GED - Yes
ASSESSMENT/ SCREENING:	9/13/93
TARGET GROUP:	G - DISADVANTAGED EX-OFFENDER
START DATE:	9/20/93
STARTING WAGE:	$ 5.96
CURRENT WAGE:	$ 7.58
BENEFITS:	Yes
COMMENTS:	Employee was incarcerated 11/89 - 8/93. Upon release, he was referred for employment. After demonstrating a strong desire to "make it work" he was provided an employment opportunity, trained and continues to be a productive employee in our AB Pack Department.

EMPLOYEE #4

HISTORY:
* Female - 31 years of age
* Single mother
* Previous work history - Retail (last employment 5/88)
* Department of Social Services referral
* High School/GED - Yes

ASSESSMENT/ SCREENING: 8/06/93
TARGET GROUP: H - AFDC RECIPIENT
START DATE: 9/20/93
STARTING WAGE: $ 5.96
CURRENT WAGE: $ 8.06
BENEFITS: Yes

COMMENTS: Employee has been employed for 1 year and 7 months. Previously, she had not been gainfully employed for over 5 years. She is currently employed in our AB Pack Department and has substituted as Crew Leader on occasion.

EMPLOYEE #5

HISTORY:
* Male - 24 years of age
* Disabled
* Previous work history - Varied, not working more than 4 months in one location.
* High School/GED - No

ASSESSMENT: 11/09/94
TARGET GROUP: D - SUPPLEMENTAL SECURITY INCOME RECIPIENT
START DATE: 11/12/94
STARTING WAGE: $ 6.17
CURRENT WAGE: $ 7.70
BENEFITS: Yes

COMMENTS: Employee has been employed for 5 months. He was hired in our Plant Clean-Up Department responsible for sanitation according to USDA regulations. He has recently been promoted to Crew Leader.

SOUTHWEST AIRLINES
PILOTS' ASSOCIATION

Phillip D. Mosely
Chief of Staff
Committee on Ways & Means
1102 Longworth HOB
Washington, D.C. 20515

Dear Mr. Mosely:

On behalf of the approximately 2,000 pilots of Southwest Airlines, I am writing to request that the October 1st imposition of commercial jet fuel taxes be not simply postponed but removed from current law entirely.

The airline industry has, as a whole, recently begun to show some signs of improvement. Unfortunately, this improvement is marginal at best. The industry hasn't made a profit in 5 years. Analysts expect, but will not guarantee, a profit for the industry in 1995. The projected return on investment for 1995 is minimal, less that 1%, whereas a good return for American industry as a whole is in excess of 5%.

The 'return' of profits is not universal. Numerous airlines are struggling, notably Continental, USAir and TWA, not to mention Reno Air, Kiwi, Midway and others. The imposition of fuel taxes will make their fight to survive almost insurmountable - and extinct carriers pay no taxes.

Employee groups have made many sacrifices in an effort to return their carriers to some semblance of profitability. United, Northwest and TWA are examples wherein labor groups gave up tens and hundreds of millions of dollars in wage concessions. USAir is struggling to survive and its unions are working on a package of wage cuts and concessions at this time. Continental and America West employees have had no contracts or raises in years. At SWA, our pilots recently accepted a contract with no scheduled raises for five years. Are our sacrifices for the sake of our employers to be sacrificed? If that isn't enough, 120,000 airline employees have been cut or furloughed since 1990 - and the cutting is not yet finished.

In 1990 Congress increased taxes and authorized airports to begin charging Passenger Facility Charges. These two items alone added a further burden of $2 billion dollars annually to an industry losing hundreds of millions of dollars each year. The fees and taxes imposed by Congress are required to be paid regardless of profitability. Since 1990 the industry has lost an incredible $12.8 billion! Passenger and cargo taxes total over $6 billion annually. Is there something wrong with this picture?

This fuel tax, if imposed, is estimated to cost the industry some $527 million annually. The cost to Southwest Airlines will be approximately $30 million - double our profit in the first quarter. Can SWA and the other carriers pass this cost on to the consumer through higher fares? The answer, simply put, is NO. The industry is going through what most analysts consider one of the final phases of deregulation, one in which competition is severe. Fares simply cannot be raised in this market. The end results will be lower profits for some and larger losses for most, with predictable economic consequences.

The airline industry is beset with serious financial, labor, and competitive difficulties. The National Airline Commission recommended NO to the 4.3 cents-per-gallon fuel tax. And so, too, do the pilots of Southwest Airlines.

We strongly recommend this untimely tax be laid to rest. Please repeal the onset of the October fuel tax on the basis of good economic policy, not just for Southwest Airlines, but for the entire industry, their employees and the nation as a whole.

Sincerely yours,

Gary L. Kerans
President

JOHNSON ANNOUNCES HEARING ON THE RESEARCH AND EXPERIMENTATION TAX CREDIT AND THE ALLOCATION OF RESEARCH EXPENSES UNDER INTERNAL REVENUE CODE SECTION 861

Congresswoman Nancy L. Johnson (R-CT), Chairman, Subcommittee on Oversight of the Committee on Ways and Means, today announced that the Subcommittee will hold a hearing to examine issues relating to the research and experimentation (R&E) tax credit and the temporary rule for allocating research expenses between U.S. and foreign source income under Internal Revenue Code section 861. **The hearing will take place on Wednesday, May 10, 1995, in the main Committee hearing room, 1100 Longworth House Office Building, beginning at 10:00 a.m.**

BACKGROUND:

Section 41 of the Internal Revenue Code provides for a research and experimentation tax credit equal to 20 percent of the amount by which a taxpayer's qualified research expenditures for a taxable year exceed its base amount for that year. The R&E credit, which was enacted on a temporary basis in 1981, has been extended several times since, most recently in the Omnibus Budget Reconciliation Act of 1993 (the "1993 Act"). The credit is currently scheduled to expire after June 30, 1995.

The 1993 Act also provided a temporary rule for allocation of research expenses between U.S. and foreign source income. The 1993 Act rule generally is identical to temporary rules in effect prior to the 1993 Act for allocating research expenses, except that the portion of U.S.-incurred research expenses allocated to U.S. source income (and the percentage of foreign-incurred research expenses allocated to foreign source income) is 50 percent instead of 64 percent. The 1993 Act's temporary rule generally expires for taxable years beginning after August 1, 1994.

Chairman Johnson and Ranking Democrat Robert Matsui have sponsored H.R. 803, a bill to extend permanently the R&E credit. In announcing the hearing, Chairman Johnson stated, "Before Congress moves forward on legislation to extend the credit, I believe it's critically important to evaluate whether the credit's current structure is effective in achieving the goal of stimulating long-term research activities, and to examine proposals for improving its design to better meet the rapidly changing circumstances of global competition."

FOCUS OF THE HEARING:

The Subcommittee on Oversight will examine the effectiveness of the current credit and possible structural modifications to improve its utility in stimulating long-term research and experimentation activities. The current research credit is incremental in nature, rewarding companies for increasing their research expenditures (as a portion of gross receipts) above the average expenditures they made (as a portion of gross receipts) during the period from 1984 through 1988. To the extent that companies' current year research expenditures are significantly below or far above their base spending amounts, the credit becomes a less efficient policy tool.

In particular, the Subcommittee is interested in receiving testimony regarding the effectiveness of the current credit in stimulating long-term research and experimentation activities and regarding potential alternatives to the current structure of the credit, such as giving taxpayers some choice over their base period, or doing away with the base completely and providing a lower rate of credit on all qualified expenditures. In addition, the Subcommittee will receive testimony on whether the 1993 Act's temporary rule for allocating research expenses between U.S. and foreign source income should be extended.

SUBCOMMITTEE ON OVERSIGHT

DETAILS FOR SUBMISSIONS OF REQUESTS TO BE HEARD:

Requests to be heard at the hearing must be made by telephone to Traci Altman or Bradley Schreiber at (202) 225-1721 no later than the close of business, Friday, April 28, 1995. The telephone request should be followed by a formal written request to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. The staff of the Subcommittee on Oversight will notify by telephone those scheduled to appear as soon as possible after the filing deadline. Any questions concerning a scheduled appearance should be directed to the Subcommittee staff at (202) 225-7601.

In view of the limited time available to hear witnesses, the Subcommittee may not be able to accommodate all requests to be heard. Those persons and organizations not scheduled for an oral appearance are encouraged to submit written statements for the record of the hearing. All persons requesting to be heard, whether they are scheduled for oral testimony or not, will be notified as soon as possible after the filing deadline.

Witnesses scheduled to present oral testimony are required to summarize briefly their written statements in no more than five minutes. **THE FIVE MINUTE RULE WILL BE STRICTLY ENFORCED. The full written statement of each witness will be included in the printed record.**

In order to assure the most productive use of the limited amount of time available to question witnesses, all witnesses scheduled to appear before the Subcommittee are required to submit 200 copies of their prepared statements for review by Members prior to the hearing. **Testimony should arrive at the Subcommittee on Oversight office, room 1136 Longworth House Office Building, no later than 5:00 p.m. on Friday, May 5, 1995.** Failure to do so may result in the witness being denied the opportunity to testify in person.

WRITTEN STATEMENTS IN LIEU OF PERSONAL APPEARANCE:

Any person or organization wishing to submit a written statement for the printed record of the hearing should submit at least six (6) copies of their statement, with their address and date of hearing noted, by the close of business, Wednesday, May 24, 1995, to Phillip D. Moseley, Chief of Staff, Committee on Ways and Means, U.S. House of Representatives, 1102 Longworth House Office Building, Washington, D.C. 20515. If those filing written statements wish to have their statements distributed to the press and interested public at the hearing, they may deliver 200 additional copies for this purpose to the Subcommittee on Oversight office, room 1136 Longworth House Office Building, at least one hour before the hearing begins.

FORMATTING REQUIREMENTS:

Each statement presented for printing to the Committee by a witness, any written statement or exhibit submitted for the printed record or any written comments in response to a request for written comments must conform to the guidelines listed below. Any statement or exhibit not in compliance with these guidelines will not be printed, but will be maintained in the Committee files for review and use by the Committee.

1. All statements and any accompanying exhibits for printing must be typed in single space on legal-size paper and may not exceed a total of 10 pages including attachments.

2. Copies of whole documents submitted as exhibit material will not be accepted for printing. Instead, exhibit material should be referenced and quoted or paraphrased. All exhibit material not meeting these specifications will be maintained in the Committee files for review and use by the Committee.

3. A witness appearing at a public hearing, or submitting a statement for the record of a public hearing, or submitting written comments in response to a published request for comments by the Committee, must include on his statement or submission a list of all clients, persons, or organizations on whose behalf the witness appears.

4. A supplemental sheet must accompany each statement listing the name, full address, a telephone number where the witness or the designated representative may be reached and a topical outline or summary of the comments and recommendations in the full statement. This supplemental sheet will not be included in the printed record.

The above restrictions and limitations apply only to material being submitted for printing. Statements and exhibits or supplementary material submitted solely for distribution to the Members, the press and the public during the course of a public hearing may be submitted in other forms.

Note: All Committee advisories and news releases are now available over the Internet at 'GOPHER.HOUSE.GOV' under 'HOUSE COMMITTEE INFORMATION'.

*****

Chairman JOHNSON. The hearing will come to order.

Good morning, ladies and gentlemen. Yesterday, the subcommittee received testimony on over half a dozen narrow provisions of the tax law which have either expired or will expire in the near future. Our mission is to review the policy objective of each provision and evaluate whether or not the provisions are meeting the objectives.

In the past, many of these were extended routinely without examining the actual structure of the provision. In fact, we never did routinely have hearings on expiring provisions. At this time in the committee's history, we are going to methodically not only hold hearings, but reevaluate the structure of the provisions and the relevance of the policy behind them, not only to this year, but to the next decade.

In the subcommittee today, we will continue this process by focusing on two very important but very complicated tax provisions which are meant to encourage research and experimentation by American businesses. Section 41 of the Internal Revenue Code provides a 20-percent tax credit for taxpayers who spend money on qualified research expenditures. The research credit first was enacted on a temporary basis in 1981. The level of the credit and the structure of the credit have been changed several times since 1981.

The challenge is twofold. First, we want to design a credit which stimulates more research activity rather than just rewarding a taxpayer for research activity which would have occurred anyway. This policy objective is what lies behind the decision to structure the credit to apply only to incremental increases in the taxpayer's research activity. The technical details of implementing this policy involve establishing base periods which serve as a reference point for measuring the amount by which a taxpayer has increased his research activity. Second, we need to be mindful of the revenue effect of the research credit.

The concept of an incremental credit and the limitation on unusually high research expenditures are both meant to hold down revenue losses. The current section 41 uses a fixed base period as the reference point to determine whether or not a taxpayer has increased his research activity enough in order to be eligible for the incremental credit. One side effect of this feature is that some taxpayers may not be able to qualify for credit because their base period is unusually high and so their current research spending never passes the incremental test in section 41. It seems unfortunate to exclude deserving research programs from the credit merely because of an accident of timing or how their law defines the base period or the economic experience of their company in succeeding years.

The subcommittee also will receive testimony regarding the rules applicable to allocating research expenditures between domestic and foreign-source income. American research activity has kept our Nation at the cutting edge of high technology. It helps maintain our high standard of living essential for our economy to grow in the 21st century.

We want to do all we can to encourage our businesses to expand their research effort and therefore we will not be looking just at renewing the research and development tax credit, but also the possi-

bilities of restructuring and the costs associated with those restructuring proposals.

I yield to my colleague and ranking member, Mr. Matsui.

Mr. MATSUI. I thank the Chair for her comments, and I appreciate the fact that she is holding these hearings on both section 861 and the renewal of the R&D credits. Since 1981, when the credit was first established in this country, it has been modified four times and extended six times. Obviously that creates major problems for U.S. businesses, in the sense of the issue of certainty. As a result of that, I welcome the opportunity to try to make these credits eventually permanent.

Almost all studies indicate that these credits reduce not only the cost of doing business, but also they stimulate over $1 for each $1 spent in terms of additional research and development over the short term. In the long term, they produce $2 for every $1 spent in the area of R&D. This obviously is an important stimulus to U.S. industry, and this credit, as a result of that, must be continued.

Thirty-four Governors have supported the credit, over 200 major companies that use the credit seek its permanent extension, and U.S. companies spend $75 million a year on R&D, and they need to continue and have an incentive to continue to be competitive in the world market.

Our major trading partners—Japan, for example, provides a 20-percent incremental credit up to 10 percent of their current tax liability; Canada provides a flat rate credit of 20 percent; and Germany provides incentives through grants, special depreciation allowances for equipment, and deductibility for their R&D expenses. So Canada, Japan, Germany, our major three trading competitors and partners, along with the United States, all have credits.

As the Chair has indicated, we must look at restructuring this credit as we make it permanent. The base period was established between 1984 and 1988, and for some research-intensive companies, this credit is not as helpful as it could be; and as a result of that, it is my hope that we could not only modify it, but also make it permanent.

In terms of the 861 allocation rules, yesterday we heard from the Treasury Department, and they have indicated that soon they will be coming out with new regulations that would be more favorable to the taxpayers than the 1977 regulations. It will be important that we hear from witnesses regarding Treasury's comments, and also, hopefully, we will be seeing Treasury's recommendations very shortly.

Again, I look forward to working with the Chair and other members of this subcommittee and the full committee on restructuring and making permanent these two very, very important aspects of U.S. competitiveness.

Thank you.

Chairman JOHNSON. I thank my colleagues for testifying today and welcome you to our hearing Hon. Anna G. Eshoo.

STATEMENT OF HON. ANNA G. ESHOO, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF CALIFORNIA

Ms. ESHOO. Good morning, Madam Chairwoman, and thank you to each of the members of the subcommittee for this opportunity to testify before you. I would like to commend you for holding hearings on this all-important issue on the research and development tax credit, which is of course a crucial tax provision which encourages companies to invest in new products and manufacturing technologies in return for a reduced tax burden.

I would also like to salute my colleague, Bob Matsui of California, who has been a tireless advocate of the R&D tax credit.

Last Congress, Members on both sides of the aisle succeeded in retroactively authorizing the R&D tax credit for 1 year, as well as extending it for an additional 2 years. We did this for one simple, good reason; the R&D tax credit works. It has proven to be a cost-effective way to create jobs and innovative products.

Now it is time, I believe, to make this tax credit permanent, and I am proud, Madam Chairwoman, to be an original cosponsor of your bill, H.R. 803, which would achieve this goal.

Many of us from California recognize that tax incentives create jobs and capital investment in the high technology and biotechnology industries. Many of these businesses are located in my congressional district, which is so distinguished, the home of Silicon Valley, and which boasts the most biotechnology, computer, and software companies of any region in the United States.

The tax experts of these companies have told me that when this tax credit was first implemented in 1981, they believed that they would finally receive the necessary incentives to reinvest or to invest R&D dollars at the level of their international competitors, and they were right. Today, computer and software companies reinvest on average 13 percent of their sales revenues in R&D, compared with a 7-percent average for U.S. businesses overall. The reinvestment rate is even higher for biotechnology companies, which put 30 to 60 percent of their revenues into R&D.

These investments have produced substantial economic growth, exactly the outcomes that we want to produce by keeping it on the books and also making it permanent. Between 1972 and 1992, the average growth rate for computer and software technology companies was approximately 27 percent, over nine times the growth rate of the national economy during that period. I think the figures are most provocative and tell the best story.

Not surprisingly, software, computer, medical, and biotechnology firms are driving job growth throughout the country, and these are very good paying jobs for our people. Yet with this success, the R&D tax credit has been extended for just months at a time. This is a short-term tax plan, and I think that it undermines the economic growth we are trying to promote.

Research and development requires long-term planning and financial stability in order to succeed. In other words, the companies that do this need to have something that is reliant, a reliant public policy. These legislative stops and starts weaken the high technology industry's ability to use this tax provision effectively. I urge this subcommittee to improve the effectiveness of the R&D tax

credit by removing the uncertainty which results from these short-term extensions.

I believe H.R. 803 accomplishes this goal by making the credit permanent, and I urge its swift passage.

I would also like to offer my support for two additional tax provisions important to the high technology community. The first is making retroactive, extending, and making permanent the research expense allocation rule which allocates 50 percent of U.S. research expenses to U.S. source income—this expired provision encourages companies to spend their research dollars in our country and is an important complement, I believe, to the R&D tax credit—and finally, to review the proposal to improve the existing tax credit by extending it to teams of companies and not-for-profit scientific research organizations. Because more and more research is now being done under the umbrella of not-for-profits and consortia, this could greatly improve the effectiveness of the R&D tax credit.

Let me thank you again, Madam Chairwoman, for your leadership on this issue and so many others, to all of the members of the subcommittee, and most especially for holding this very important hearing on this all-important issue for the future competitiveness and growth of our Nation.

Thank you.

Chairman JOHNSON. Thank you very much.

Mr. Neal, a valued member of our committee, a colleague.

STATEMENT OF HON. RICHARD E. NEAL, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

Mr. NEAL of Massachusetts. Thank you very much, Madam Chairperson, and members of the subcommittee.

Yesterday, Madam Chairperson, I would note that you made reference to Elvis during your opportunity to testify, and every time that Elvis had a chance, he brought up his support for making the R&D credit permanent.

Chairman JOHNSON. I am glad to know that.

Mr. NEAL of Massachusetts. We monitored that very carefully.

Let me thank you and commend you this morning, Mrs. Johnson, for holding this hearing. This credit is due to expire on June 30, 1995. You and I have worked with the New England delegation, as well as The New England Council, which deserves, I think, enormous credit for having advanced this issue as well.

Last fall, our delegation sent a letter to President Clinton requesting a permanent extension of the research and development tax credit be included in the budget. Research and development is extremely important to corporations, especially those involved in the high technology industries.

Massachusetts has the fifth highest spending on research and development in the Nation. Massachusetts is well represented at this hearing today, and you will learn from our distinguished witnesses how important research and development is to the Commonwealth of Massachusetts.

In 1981 President Reagan signed into law a 4-year R&D tax credit to help stimulate the growth and competitiveness of our technology-based economy. This program was highly successful. One dollar of R&D credit stimulates approximately one additional

dollar of private research and development spending over the short term and as much as $2 of extra R&D in the long term. Research and development investment supports thousands of highly skilled employees in some of our growth industries.

Unfortunately, the benefits of the R&D credit have been hampered by the credit's temporary nature and uncertain future. Corporations have not been able to rely on the credit and plan for long-term investment. I believe our Tax Code should provide taxpayers with certainty.

U.S.-based R&D is critical to our continued economic growth. The R&D credit provides a significant incentive for U.S. companies to perform R&D in the United States, providing high-skilled, high-paid jobs for American workers.

This credit requires companies to increase their current R&D spending above a predetermined base before they are eligible to receive the credit. Since 1981 the credit has been extended five times and changed to reduce the benefits available to certain companies. Failure to make the credit permanent has substantially reduced its value to businesses. Corporate research planners cannot rely on the incentive provided by the R&D tax credit if it is extended for 12 to 18 months at a time.

Foreign governments are competing fiercely for U.S. research investments by offering tax and other financial incentives. We can no longer assume American companies will automatically choose to site their R&D operation in the United States. A permanent and robust U.S. R&D tax credit is essential to help ensure U.S. companies keep the majority of their R&D function and R&D jobs in the United States.

New England would substantially benefit from a permanent R&D credit. New England is still trying to recover from difficult economic times. A permanent R&D credit would provide a significant incentive for New England companies to perform research and development in New England. The technological innovations perfected through research and development are necessary to assist New England companies that are undergoing defense conversion to compete in the marketplace.

The first step is to make the R&D credit permanent. I know that some of us would like to see these changes made. However, providing taxpayers certainty should be our first goal.

I look forward to hearing additional testimony over the next few days and want to thank you personally for the efforts that you have extended on behalf of the R&D credit.

Chairman JOHNSON. Thank you, Mr. Neal.

You are absolutely right about how important this is to New England. It is interesting that the first two Members are from opposite ends of the Nation; it shows how very important this is.

Mr. Meehan.

STATEMENT OF HON. MARTIN T. MEEHAN, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

Mr. MEEHAN. Thank you, Madam Chairwoman, members of the subcommittee. I have been working on this issue as a cochair of the Manufacturing Task Force, which is part of the Northeast-Midwest Congressional Coalition, and we had hearings around the country.

I had no idea about Elvis' support for this, and I am glad that Congressman Neal has brought that forward.

I am pleased to offer testimony on the need to extend and improve the research and experimentation tax credit now contained in section 41 of the Internal Revenue Code.

Since the Great Depression, between 65 and 80 percent of all productivity improvements can be attributed to the use of new technology. Some studies have shown that for every $1 that an individual business realizes from the investment in R&E, society as a whole realizes $2, $3, or even more dollars.

Research plays a critical role in the competitive status of the United States. It is a downpayment on future economic vitality. Without adequate R&E, our businesses will eventually lose the race for discoveries and innovations that form the basis for new products, new services, new manufacturing processes, market share, and ultimately, world influence.

Ultimately, the United States share of R&E has fallen for the first time in 20 years, and more research is being conducted overseas by U.S. companies. As cochair of the Northeast-Midwest Congressional Coalition on Manufacturing, I hosted hearings throughout the Northeast and Midwest during the 103d Congress and had numerous meetings with manufacturers, economic development offices, economists throughout the country, to talk to them about the types of policies that would help small and medium-sized manufacturers survive and prosper. Based on these discussions, the Task Force identified the R&E tax credit as a key contributor to U.S. manufacturing success.

We also determined that its potential could be significantly enhanced if a few key modifications were adopted: First, make the research and experimentation tax credit permanent; and second, extend it to cooperative research.

A permanent R&E credit would give companies more fiscal certainty to plan for long-term expenditures and to discover and develop new products and technologies. Moreover, extending the credit to cooperative research with institutions, such as Federal labs, working with universities, would greatly encourage joint ventures in research and experimentation. The advantage of such ventures is that they would spread the risk of research, making companies more willing and able to undertake activities leading to product and process innovation.

Technology is a driving factor in enhancing productivity and prosperity. A permanent and extended R&E tax credit is essential to continue the business and employment growth that has again begun to develop in our region and my home State of Massachusetts.

Technology development is particularly critical to the firms in the Northeast. The region's high cost of living requires manufacturing firms to pay higher wages. These higher wages can only be sustained through high-value-added manufacturing that comes from research and development.

When American technology and manufacturing ruled the world, we had no need to examine how technology was produced or how it was disseminated throughout our manufacturing base. We must now carefully examine the means by which this technology, instead

of merely developed in the United States, is deployed and actually used by our small and medium-sized manufacturing base. We must work together to fashion the right mechanism whereby technology can be developed and transferred in the most economically efficient manner.

The proposed modifications will improve the credit in a fiscally responsible way. By stimulating industry-led collaborative efforts, the modified credit will maximize limited private and public sector R&E funds, and it will encourage firms to better allocate scarce research resources to projects that advance both their individual and collective goals. Throughout the Tax Code, we can construct the framework for research partnerships that are truly industry led in the most efficient manner possible.

I encourage the subcommittee to enact this important improvement to the R&E tax credit when it is considered in the coming weeks. Thank you very much. My compliments to you for having this hearing.

[The prepared statements follow:]

STATEMENT OF REP. MARTY MEEHAN AND BOB FRANKS
CO-CHAIRS OF NORTHEAST-MIDWEST CONGRESSIONAL COALITION
CO-CHAIRS OF THE NATIONAL TASK FORCE ON MANUFACTURING

Dear Madam Chairman and Members of the Subcommittee on Oversight: We are pleased to offer testimony on a matter of great importance to states in the Northeast-Midwest region and across the nation that rely on the jobs and economic activity that a healthy manufacturing base provides—the need to extend and improve the research and experimentation tax credit now contained in Section 41 of the Internal Revenue Code.

In our capacities as co-chairs of the Northeast-Midwest Congressional Coalition and the National Task Force on Manufacturing, we examined the need for a permanent and improved R&E tax credit as part of a larger assessment of tax and finance alternatives aimed at strengthening the nation's manufacturing sector. Since the Task Force was launched early in the 103rd Congress, we have heard from manufacturers and policy experts during forums we convened in Washington and around the region. During these sessions, we discussed at length manufacturing finance needs and incentives with experts such as former Senator Paul Tsongas and George Hatsopoulos, CEO of ThermoElectron in Waltham, Massachusetts, who emphasized the need for a permanent and predictable R&E tax credit. Numerous economists, economic development officers, and small and mid-sized manufacturers themselves were consulted about the types of policies that would help them survive and prosper.

Through the extensive efforts of Task Force members—such as Congresswoman Johnson—we identified the R&E tax credit as a key contributor; we also determined that its potential could be significantly enhanced if a couple of key modifications were adopted. Based on this analysis, we included the following as the fourth recommendation in the Task Force report, ***Getting Back to Work: Breathing New Life into American Manufacturing:***

> *"Make the research and experimentation tax credit permanent and extend it to cooperative research."*

We believe that such an action is important to manufacturing and important to the economy of our region. A permanent R&E credit would give companies more fiscal certainty to plan for long-term expenditures and to discover and develop new products and new technologies. Moreover, extending the credit to cooperative research with institutions such as federal labs (or universities working with the labs) would encourage a greater number of joint ventures in research and experimentation; the advantage of such ventures is that they would spread the risk of research and make companies more willing and able to undertake activities leading to product and process innovation.

As the Task Force report noted, technology—rather than labor cost—is the driving factor in enhancing productivity and prosperity. A permanent and extended R&E tax credit is essential to continue the business and employment growth that has again begun to blossom in our region. Technology development is particularly critical to firms in the Northeast. The region's high costs of living require manufacturing firms to pay higher wages. These higher wages can only be sustained through high value-added manufacturing that come from research and development. The R&E tax credit being discussed today by the committee is one of the best vehicles to encouraging this important research and development.

To further increase the benefits of a permanent R&E credit, we believe the committee should consider extending the R&E tax credit to collaborative research. We would like to submit more detailed analysis for the record on this point. Essentially, bringing together firms with similar interests and needs, federal labs, and universities could provide the catalyst for innovation and creativity that could lead to widespread economic growth. Other nations have developed and nurtured highly successful technology development and deployment mechanisms based on such collaboration, and we in the United States must begin to promote this type of environment.

In closing, Chairwoman Johnson, we urge the Committee to make the credit permanent and to increase the incentive for collaborative R&E efforts. In this way, the greatest potential can be garnered from private and public research efforts, and the manufacturers of this country can begin to regain their competitive advantage.

THE BENEFITS OF A PERMANENT, EXTENDED R&E TAX CREDIT

1. R&E Is Essential to Our National Competitiveness

Real economic growth always has been dependent on development and application of new science, innovation, and technology. Since the Great Depression, between 65 and 80 percent of all productivity improvements have been attributable to the use of new technology. Indeed, studies have shown that for every $1 dollar that individual businesses realize from their investment in R&E, society as a whole realizes $3 or more. High technology firms alone represent a significant importance to our nation. As indicated in the recent OSTP study, while high technology firms comprised only 0.7 percent of all U.S. firms (excluding sole proprietorships), their importance to the national economy far outstrips their numbers. They are the source of a disproportionately large share of employment, sales, and export growth. And they are the source of innovation from which flow much of the improvements in our nation's standard of living.

Not surprisingly, therefore, research plays a critical role in the competitive status of the U.S. It is a down payment on future economic vitality. Without adequate R&E, our businesses will eventually lose the race for discoveries and innovations that form the basis for new products, new services, new manufacturing processes, market share and ultimately, world influence.

Unfortunately, the U.S. share of R&E has fallen for the first time in 20 years, and more research is being conducted overseas by U.S. companies. Moreover, when our industries do make the necessary outlays, the commercialization of new technology and its assimilation into the manufacturing process are being accomplished more swiftly by our competitors. According to the National Science Board:

- *U.S. R&E stagnated in the late 1980s and continues to stagnate into the 1990s, showing a growth rate of only 0.4 percent, as foreign rivals increase their R&E investments.*
- *U.S. spends too few dollars on industrial R&E and makes poor use of the ones it does spend.*
- *Corporate laboratories are under severe financial stress and being forced to shift to shorter-term R&E.*

2. More Collaborative R&E on Manufacturing Process and Other R&E Must be Encouraged

There is little doubt that the current R&E credit stimulates product innovation and improvements to existing products. Accelerating advances in product design and manufacturing technology have re-shaped the manufacturing environment and the global marketplace for goods. Manufacturing firms are coping to adjust to a new environment where production runs are shorter, product cycles are quicker, and failure-free and timely production at decreasing costs is a condition for survival. The effects of these dramatic changes are intensified as an increasing number of smaller industrial firms enter the economic landscape with fewer workers with greater skill demands.

In this arena, process technology plays an increasingly prominent role. Access to and adoption of new technologies can outweigh transportation and labor considerations. Small and medium-sized manufacturers are particularly at risk due to limited technical and financial resources for acquiring and implementing off-the-shelf productivity tools.

Moreover, mere investment in new technologies may not be enough to address the challenge of international competition for domestic and international markets. U.S. companies also must benefit from instituting a continuous improvement process based on first upgrading their technologies and training. All companies must develop new expertise and integrate it with the traditional skills in order to modernize their factories with various advanced manufacturing techniques. Frequently, small companies that invest in new technology cannot afford the additional engineering talent required to organize their operations in ways that fully exploit the technologies they have adopted.

The ability to adapt to technological change is also an increasing requirement along the manufacturing food chain. Large companies, foreign and domestic, are becoming more concerned about their supplier's technological and organizational abilities. Manufacturers along the supply chain feel these competitive pressures manifested in the form of requirements for better quality, greater reliability, and more timely delivery. However, the small supplier usually cannot meet these demands without investing in new technologies. Without such investments they are operating far below their potential — their methodologies and management practices are inadequate to ensure that American manufacturing will be globally competitive.

3. *Collaborative R&E is Done To a Greater Extent in Foreign Nations*

The problem is exacerbated by the increasing tendency of foreign competitors to engage in collaborative R&E. Our foreign competitors have increased their investment in research, often acting in teams that leverage their investments. In the U.S. today, approximately 200 industry consortia have been established under the 1984 Act, and new groups are forming as companies band together to face stiff global competition. However, this represents a small amount of the R&E pool. Little over 1 percent of all research is conducted cooperatively. Of the $150 billion in research and development conducted in the United States, only approximately $2 billion is conducted by consortia.[1]

By contrast, more than four times the relative percentage of R&E conducted cooperatively in Japan is collaborative, and about one-fifth of all joint research (or 6 percent of total R&E) is "horizontal" collaboration — collaboration among competing firms. Collaborative European projects include ESPRIT in information technology, RACE in advanced communications, BRITE in advanced materials and manufacturing, VLSIC for high capacity memory chips, ICOT for the fifth generation computer, and TRC for joint research on magnetic levitation and other technologies.

The U.S. must do more to promote cooperative research if we are to keep pace with our principal trading partners.

4. *The Collaborative Credit Will Benefit Firms Not Encouraged by the Current Incremental Credit*

The proposed enhancement to the R&E tax credit will promote cooperative research. The cooperative credit will assist companies that are otherwise increasing their R&E expenditures above the "base," regardless of how that base is defined in the section 41 incremental credit. Equally important, however, it also will benefit companies that cannot take immediate advantage of the incremental credit either because they do not have taxable income against which the credit can be offset, are subject to the limitations of the Alternative Minimum Tax, or whose R&E falls below the base. It also includes smaller firms that may be disinclined to invest the needed amounts in process or other technologies not perceived to inure to the bottom line immediately but need to make the investment to remain competitive in the long-run.

The ability to share in the results of cooperative research that is "incentivized" or encouraged by the enhanced credit is a direct benefit to all participants in a cooperative venture. In essence, the leveraged research is disseminated to small and large firms alike, both profitable and currently unprofitable firms, and the indirect benefit of the credit is spread to the entire membership of the project. For firms that are below the "base," cooperation will allow them to "catch up to the fold" with immediately rewardable R&E expenditures.

The National Academy of Engineering also endorsed the idea of a collaborative R&E tax credit. Specifically, a recent Academy Study Commission, looking at various measures to increase the level of stability of R&E tax policy, recommended that the U.S.:

---

[1] According to a recent survey Alliance for Collaborative Research, companies conduct research and development with consortia for four major reasons: (1) to reduce the cost of conducting research by spreading the cost, (2) to reduce the risk of conducting high-tech research in untried areas, (3) to reduce redundant research within an industry -- for example, innovations needed to meet an industry-wide standard or solve a broad problem, and (4) to conduct research which will only benefit the firm after a long period. Much of this research would not be conducted without the umbrella of the consortia because of the factors above -- risk, costs, and few short term benefits.

- 35% of consortia research reduces redundancies.
- 30% of consortia research spreads risks.
- 20% of consortia research spreads costs.
- 15% of consortia research will benefit only in the long term.

replace the current incremental Research and Experimentation tax credit with a permanent tax credit on the total annual R&E expenditure of a company to encourage an increase in the level and the stability of R&E activity across business cycles. In addition, extend the R&E tax credit to cover industry-sponsored R&E in universities, and other institutions, and the industrial contribution to R&E performed as a part of a consortium that includes government laboratories.

As the committee is actively considering changes that would reward collaborative R&E — similar to the changes contained in S. 666 introduced last Congress by Senators Danforth and Baucus — I would like to focus my comments on the credit as it relates to collaborative R&E.

5. Collaboration Encourages New R&E, which is the Purpose of the R&E Tax Credit

Collaboration in areas of engineering research, for example, often concentrates on R&E that is not being performed by the private sector on an individual firm level. For example, much collaborative R&E focuses on unit manufacturing process R&E, which has been recognized by the National Research Council as grossly underfunded at a national level. While manufacturing process R&E can significantly improve the quality of products, lower costs, reduce scrap and improve the environmental integrity of manufacturing processes, it is difficult for any single manufacturer to capture the benefits of such research as opposed to the benefits of product-specific R&E. However, over the longer term such research has long range effects on our National industrial base and our National security.

Encouraging research that would not otherwise be conducted, as the Subcommittee knows, is the underlying justification of the R&E tax credit. Stimulating a change that would enhance and encourage collaboration would greatly advance the underlying policy goals of the current law, while incorporating sound science and engineering policy considerations.

6. Collaboration Also Reduces Duplication

Changes that would accelerate growth of collaborative enterprises is one of most important steps that can be taken to stimulate R&E in our tax code. Of course, when such a modification does not stimulate new R&E, it ensures R&E will be conducted through consortia for an altogether different reason. Much of the research being performed on process or environmental technology could be streamlined through consortia, which typically provide a more efficient vehicle for R&E activity. This consideration is highly important during a period when, as the National Science Foundation points out, our private and public R&E resources are increasingly limited, and we have reduced the level of R&E as a function of GDP for the first time in more than 20 years.

7. Collaboration Assists in Technology Deployment

Finally, apart from reducing duplication of research or stimulating new R&E, consortia provide a fertile and robust environment for the deployment of technology, once developed. The consortia environment combines both suppliers and users of process R&E so the widest market for the implementation of such technology is assured.

Technology deployment is the means by which advanced manufacturing technologies, either equipment, software, processes or management techniques, find their way from development to the factory floor. Sustained, expeditious, and effective technology deployment is essential to help our manufacturing sector generate desperately needed economic development.

Beyond generalizations, the slow rate at which new technology is adopted in the U.S. is a demonstrable barrier to the deployment of new inventions and concepts into manufacturing industries. U.S. industry experts state that approximately 90 percent of new discoveries require 25 to 75 years to achieve widespread implementation in the U.S. The mean implementation time is approximately 55 years. By comparison, many of our trading partners bring new technology to fruition in much shorter time frames. This comparison is particularly salient when examining the Japanese, who claim a 400 percent faster adoption rate than the U.S. in R&E and automation.

The Committee must keep in mind that the final goal of the R&E tax credit is not merely to stimulate new R&E spending, but to commercialize or deploy technology that results from that spending.

Conclusion

When American technology and manufacturing ruled the world, we had no need to examine how technology was produced or how it was disseminated throughout our manufacturing base. We must now carefully examine the means by which this technology, instead of merely being developed in the U.S., is deployed and actually used by our small and medium-sized manufacturing base. We must look towards encouraging process R&E as opposed to simply product R&E. We must work together to fashion the right mechanism whereby technology can be developed and transferred in the most economically efficient manner. I believe a collaborative tax credit modification to existing law is a cost-effective means to achieve this objective.

The proposed modifications will improve the credit in a fiscally responsible way. By stimulating industry-led collaborative efforts, the modification credit will maximize limited private and public sector R&E funds, and it will encourage firms to better allocate scarce research resources to projects that advance both their individual and collective goals. The modification will also stimulate new research — research unlikely to be undertaken individually because it is too costly, too risky, or too long-term. Finally, by making efficient use of public and private R&E resources, the modification will fully and cost-effectively advance the main policy rationale behind the existing credit.

In today's world, maintaining latest technology is not just a question of market share, it is a question of survival. In technology-intensive industries, failure to keep up with technological advances will have immediate repercussions, not only for the firms involved, but for the entire U.S. industry. Through the tax code we can construct the framework for research partnerships that are truly industry-led in the most efficient manner possible. I encourage the Committee to enact this important improvement to the R&E tax credit when it considers the credit in the coming weeks.

Chairman JOHNSON. Thank you very much for your testimony.

This has certainly been all along a very bipartisan issue; it has been Matsui-Johnson, it has been Johnson-Matsui. We intend to work very closely on it.

I appreciate your bringing our attention to the issue of team research, and particularly as we look at the goal of a balanced budget, one of the things that does come to mind is the inefficiency of government trying to support certain kinds of research that really does need to be done, and it may be possible to use some of that money to fund a credit that would help the private sector work more creatively on some of the difficult projects that we know need to move forward.

That is by way of saying that everything that we do is going to have to be paid for; but it is also true that this law was written, now, almost 15 years ago. Companies have changed dramatically, the economy has changed dramatically; and I urge you to share with us thoughts you have about how it ought to be modernized, because we are going to look at that, we are going to cost them out, and we are going to see what are our options in terms of making this a more powerful actor in our economy for all the reasons that you so eloquently set forth in your testimony.

I thank you for your good words, your support, and your thought in this area, and look forward to working with you.

I yield to my colleague, Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chair. I don't have any questions for the three witnesses. I appreciate all of their testimony, particularly Anna Eshoo who is a colleague of mine from California, who is involved with the accounting changes for the incentive stock options and helped, obviously, the high technology industry in California and nationally there. I appreciate that very much.

Of course to Rich Neal, a colleague on the committee, who undoubtedly will be very involved in this, and Marty Meehan. We want to thank all of you for your testimony today, and we look forward to working with all three of you. Thank you.

Chairman JOHNSON. Mr. Ramstad.

Mr. RAMSTAD. Thank you, Madam Chair. I would like to associate myself with the remarks of the distinguished chairwoman, as well as the ranking member of the subcommittee. I also want to thank the three witnesses for being here today. It is refreshing to work together in a bipartisan, pragmatic way on something.

If there is anything we can agree on, it is certainly the extension of this important tax credit. As one who, like the three of you, represents a high technology district, certainly 300—and my good friend and cochair of the House Medical Technology Caucus might disagree, but I think 300 of at least the finest medical technology and biotechnology firms in the world, we recognize the importance of this credit. I don't think there is anywhere else in the Federal budget that we get as much bang for our buck.

We are talking about spending, over the 6 years, given a permanent extension of R&D, of the R&D tax credit, about $8 billion—$1.1 billion this year, going up to a little over $2 billion in the year 2000.

I would like to ask if you know of any studies as far as the macroeconomic—we all know in our respective districts, high tech-

nology districts but as far as the macroeconomic effects, in terms of job creation, capital formation, what we are talking about? What does it mean, $1 returned for every $1 of tax credit?

I mean, for example, when we look at capital gains, we know—we had economist after economist come to our subcommittee, and Alan Sinai sat there and told us that the macroeconomic effect of reducing capital gains tax rates would be to create about 1.4 million new jobs over the 5 years.

Perhaps we should wait until more technical witnesses come before the subcommittee.

Mr. NEAL of Massachusetts. Mr. Ramstad, I would just offer kind of an anecdote on that.

In Massachusetts, the link between our public and private university system and, I think, the growth of the high technology industry is substantial evidence as to how these events play out. I clearly think that as we take up in this subcommittee, over the next few weeks, budget deliberations and discussions, we will have a chance to crystallize some of those issues as we determine what ought to remain and what ought to go.

But I think that I cannot emphasize enough how important this has been to our university system across the State, which has a reputation, I think most would agree, that is second to none in the country. The link between those institutions and the growth of the high technology industry offers substantial evidence in support of extending this credit permanently.

Ms. ESHOO. I was just going to add, Representative Ramstad—and thank you for your nice comments—to underscore what I had stated in my testimony, that demonstrates the extraordinary growth from 1972 to 1992 for computer and software technology companies which was approximately 27 percent—this is over nine times the growth rate of the national economy during that period.

I know that you are asking specifically for something else, and I believe in the following panel you will hear testimony taken from a study that was conducted that will, in my view, directly underscore or answer the question that you have directed to us.

Thank you anyway.

Mr. MEEHAN. I headed a study that had a 3-to-1 ratio in terms of the investment that would result.

I would point out that my emphasis here is on manufacturing jobs. I believe that manufacturing is the engine that drives the economy, and our ability to produce products and to have more people working in manufacturing is critical because of the spinoff and multiplier effect of manufacturing jobs in general. So I think it is significant.

With regard to the budget issues, having supported, myself, a balanced budget, I feel it is very important that when we make determinations about where we can cut taxes—and personally, I believe there are very, very small instances where we can—this should be a priority. We should provide the $8 to $9 billion in cuts up front to pay for it. Ultimately, as we get to a balanced budget, we will all have some very, very difficult choices to make.

I don't believe the country can afford very much in terms of tax cuts. This is one of the tax incentives that we have to find the cuts for and make it work, because it is critical.

Mr. RAMSTAD. Well, thank you again, Madam Chair.

I certainly agree with all three of you. I look forward to working together with you for enactment of a permanent R&D tax credit.

Thank you, Madam Chairman.

Chairman JOHNSON. Thank you very much.

Thank you for your interest in this. We will be looking at options, so as you think about those things, don't hesitate to bring them forward. We will also be looking at a flat credit versus the structure in the current law. We will also be looking at how to pay for it, and one of the ways to look at that is, are there other portions of the tax system we impose on business that are less important, that are less significant in terms of rewarding the kind of behavior that is going to keep us a cutting-edge nation in 10 years. So all of that is on the table, and your thoughts will be welcomed.

Thank you for your testimony.

The next panel will be Mr. Gandhi, the associate director of Tax Policy and Administration for the U.S. General Accounting Office; Christopher Anderson, the general counsel, Massachusetts High Technology Council in Massachusetts; Michael Hooker, president of the University of Massachusetts on behalf of The New England Council; Doug Olesen, president and chief executive officer of Battelle Memorial Institute in Columbus; and Judith Pensabene, director of Federal Affairs and Counsel for Baltimore Gas & Electric Co.

At this moment, I am going to yield to my colleague, Mr. Portman, for purposes of an introduction.

Mr. PORTMAN. I thank the Chairwoman. I just wanted to make a special introduction of a fellow Ohioan. Doug Olesen is president and chief executive officer of the Battelle Memorial Institute in Columbus, Ohio, which is now, I believe, Dr. Olesen, the world's largest contract research organization with offices all around the country—laboratories all around the country—but, again, headquartered in Columbus, Ohio.

Dr. Olesen has also been very involved in the community, Columbus, and statewide. I want to commend him for that and welcome him today.

Thank you, Madam Chairwoman.

Chairman JOHNSON. We will start with Mr. Gandhi.

STATEMENT OF NATWAR M. GANDHI, PH.D., ASSOCIATE DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES, GENERAL GOVERNMENT DIVISION, U.S. GENERAL ACCOUNTING OFFICE

Mr. GANDHI. Thank you, Madam Chairman.

Madam Chairman, Mr. Matsui, and members of the subcommittee, we are pleased to be here today to discuss several issues we believe are important to your deliberations on the research tax credit.

Congress created the credit in 1981 on a temporary basis to enhance the competitive position of the United States in the world economy by encouraging the business community to do more research. The credit applies to qualified research spending that exceeds a base amount. Currently, the rate of credit is 20 percent of the spending.

On the basis of our past work and newly available data, we have four major observations to make. First, the research tax credit is primarily earned by large corporations in the manufacturing sector. For example, in tax year 1992, corporations earned almost $1.6 billion of credits. Most of these credits, some 71 percent, were earned by corporations with assets in excess of $250 million. Within the manufacturing sector, which earned 76 percent of the credit, the four industries that earned the most credits were chemicals, including drugs, electronic, and nonelectronic machinery, and motor vehicles.

The amount of the credit earned is not equivalent to the revenue cost of the credit because not all of the credit earned can be used immediately. The Joint Committee on Taxation has estimated that if the credit were extended, its annual revenue cost would be approximately $2.2 billion by fiscal year 1998.

Our second observation is that the research credit is basically a transfer of money from all taxpayers to those taxpayers who exceed the base research spending. This transfer is to induce changes in the productive activities within the economy. It is commonly held that society generally benefits more from R&D spending than from nonresearch spending, but data to measure such benefits are very limited, making it difficult to determine conclusively whether the research tax credit provides a net benefit to society.

Now, the third observation. Congress in 1989 revised the rules for calculating the base. Before 1989 the base was calculated in such a way that a link was established between current spending and future base amounts. The link substantially reduced the credit that was available in the future years. In an earlier study, we estimated that, at the margin, the credit at the time provided companies a benefit of 3 to 5 cents per $1 of additional research spending. We further estimated that each $1 of taxes forgone stimulated between 15 and 36 cents of research spending. Although the amount of research spending stimulated by the credit was well below the credit's revenue cost, total benefits could have been much higher.

The 1989 revision broke the link between the current spending and the future base by creating a fixed base, as opposed to the moving average base that existed before. This revision should have increased the amount of research spending stimulated by the credit.

At the same time, available evidence suggests that the fixed base of the credit has become too generous for some corporations in the sense that a large portion of the credit they receive is for spending they would have done anyway. On the other hand, some other corporations are unable to earn any credit, resulting in less overall research being stimulated.

If the credit is extended in its current form, Congress may want to provide for reviewing and adjusting this base as needed.

Our last observation is that the research credit has been difficult for IRS to administer. This conclusion was based on a survey of IRS revenue agents who audited large companies. These agents questioned the credit claimed by 79 percent of the corporations in which the credit was audited, and 54 percent of the agents found at least one aspect of the credit difficult to audit.

About one-fifth of the agents said the definition of "qualified research" was unclear. In 1994 the Treasury Department issued final regulations that may resolve this uncertainty. However, IRS confirms we still have to distinguish innovative research from routine research. That is because innovative research qualifies for the credit; routine research does not.

In conclusion, Madam Chairman, given the lack of empirical evidence for evaluating the credit's net benefits to society, we have not taken a position as to whether the research credit should be made permanent or allowed to expire.

We have, however, concluded that if the Congress decides to extend the credit, it may also want to ensure that the credit provides an attractive incentive to most recipients at an acceptable revenue cost. One way this could be done is by requiring that the base be reviewed and adjusted as needed.

That concludes my oral statement, Madam Chairman. I request that my written statement be placed in the record. I welcome any questions that you and the other Members may have. Thank you.

[The prepared statement follows. Due to its size, Objectives, Scope, and Methodology, Appendix I, is being retained in committee files.]

ADDITIONAL INFORMATION ON THE
RESEARCH TAX CREDIT

SUMMARY STATEMENT OF
NATWAR M. GANDHI
ASSOCIATE DIRECTOR, TAX POLICY AND ADMINISTRATION ISSUES
GENERAL GOVERNMENT DIVISION
U.S. GENERAL ACCOUNTING OFFICE

Madam Chairman and Members of the Subcommittee:

We are pleased to be here today to provide information on the research tax credit and to discuss several issues that we believe are important to your deliberations on the future of the credit.

In 1981, Congress created the research tax credit to encourage business to do more research. It believed that an increase in research was necessary to enhance the overall competitive position of the U.S. economy. Since its enactment on a temporary basis in 1981, the credit has been extended six times and modified four times. The credit has always been incremental in nature. Taxpayers are to receive a credit only for qualified research spending that exceeds a base amount. The current rate of credit is 20 percent of that incremental amount of spending.

On the basis of our past work[1] and newly available data, we have the following four major observations to offer:

-- The research credit is primarily earned by large corporations in the manufacturing sector.

-- The credit's net benefit to society would ideally be evaluated in terms of the ultimate benefits derived from the additional research that it stimulates and not just on the basis of how much research spending it stimulates for a given revenue cost. However, once the decision has been made to provide some form of credit, the amount of spending stimulated per dollar of revenue cost is a relevant criterion for assessing alternative designs for the credit.

-- The revisions that Congress made in 1989 should have increased the amount of research spending stimulated per dollar of revenue cost. However, available evidence suggests that the fixed base of the credit has become too generous for some corporations, in the sense that a large portion of the credit they receive is for spending they probably would have done anyway. At the same time other corporations are unable to earn any credit, resulting in less overall research being stimulated. If the credit is extended in its present form, Congress may want to provide for reviewing and adjusting this base as needed.

-- The research credit has been difficult for the Internal Revenue Service (IRS) to administer, primarily because the definition of qualified research spending was unclear. In 1994, the Treasury Department issued final regulations that may resolve this uncertainty. However, IRS and firms will still have to distinguish innovative from routine research.

Now I will elaborate on each of these points.

---

[1]Preliminary Analysis of the Research and Experimentation Tax Credit (GAO/GGD-88-98BR, June 1988); The Research Credit has Stimulated Some Additional Research Spending (GAO/GGD-89-114, Sep. 1989); Pharmaceutical Industry's Use of the Research Tax Credit (GAO/GGD-94-139, May 1994); Information on the Research Tax Credit (GAO/T-GGD-95-140, April 1995). The objectives, scope and methodology of this testimony are discussed in appendix I.

CORPORATIONS USING THE RESEARCH CREDIT

In tax year 1992, corporations earned almost $1.6 billion worth of research credits.[2] Most was earned by large corporations in the manufacturing sector--71 percent by corporations with assets in excess of $250 million and 76 percent by manufacturing corporations. Within the manufacturing sector, the four subsectors that earned the most credits were those producing chemicals (including drugs), electrical equipment, motor vehicles, and nonelectronic machinery. (See Tables 1 and 2 for more details.)

The amount of credit earned is not equivalent to the revenue cost of the credit because not all of the credits earned can be used immediately. The general business credit limits the use of the research credit by combining it with other credits for the purpose of computing an overall limit on the reduction of a company's tax liability.[3] Although corporations earned almost $1.6 billion of research credits and had other general business credits totaling $4.5 billion (including carryforwards from prior years), they were able to use only $1.1 billion of general business credits against 1992 tax liabilities. The Joint Committee on Taxation has estimated that, if the credit were extended, by fiscal year 1998, its revenue cost would be approximately $2.2 billion per year.

EVALUATING THE CREDIT

The research credit is basically a transfer of money from all taxpayers to those taxpayers who exceed their base research spending. This transfer is meant to induce changes in the productive activities within the economy. It is commonly held that society benefits more from research and development spending than from nonresearch spending. But data to measure such benefits are very limited.

If the activities encouraged by the credit are, in fact, more beneficial to society than activities discouraged by this reallocation of resources, then the credit would be considered sound tax policy. We know of no studies that show whether the credit is better than alternative forms of government incentives aimed at encouraging research. We do know that the more research spending the credit stimulates per dollar of revenue cost, the better the credit would compare to other policies.

As we explain in the next section, the base calculation for the credit has an important effect on the incentive provided for increased research spending. Other factors also affect the incentive. These include the rate at which research expenses reduce tax liability, limits on the amount of general business credits that may be claimed, reductions in research expense deductions by the amount of credit claimed, and the carryover provisions for companies without sufficient tax liability to claim the credit. These factors, which affect individual

---

[2]These data were extracted from the IRS' Statistics of Income and exclude credits earned by individuals and partnerships. The data include S corporations, which represented about 30 percent of the corporations earning a credit but accounted for only 2.4 percent of qualified spending and 4.1 percent of the credit earned.

[3]The general business credit includes such tax credits as the targeted jobs credit and the low income housing credit. Research credits accounted for about 86 percent of the current year general business credits of companies earning a research credit in 1992. The general business credit cannot exceed net income tax minus the greater of (1) the tentative alternative minimum tax or (2) 25 percent of the net regular tax liability above $25,000.

companies differently, are important in determining the incentive for increased research spending provided by the credit. For example, in 1992 about 79 percent of the corporations earning research credits had accumulated more general business credits than they could use. This meant that additional research credits earned by these corporations could not be used against current tax liabilities, thus reducing the marginal incentive provided by the credit.

ISSUES RELATING TO THE BASE OF THE CREDIT

The rules for determining the base spending amount to be used when calculating the credit have a critical impact on the credit's effect.[4]

To stimulate the most research spending per dollar of tax revenue forgone, the credit should be designed to give a benefit for research spending that firms undertake above and beyond the amount they would have spent in the absence of the credit. Conversely, no reward should be given for research that firms would have undertaken anyway. Unfortunately, it is impossible to determine accurately the amount of qualified research that firms would have undertaken without the credit. When discrepancies exist between this "ideal" base for the credit and whatever base is used in practice, the result is that firms are rewarded either too much or not enough for their spending behavior.

Prior to 1990, the base of the regular credit was equal to the average of qualified expenditures for the 3 previous tax years or to 50 percent of the current year's expenditures, whichever was greater. Although this base may have been a fairly good approximation of the ideal base, it had a serious flaw. The moving average base established a link between the taxpayer's current spending and future base amounts in a manner that substantially reduced the incentive provided to many companies. Specifically, each dollar spent in any year raised the base by 33 cents in each of the next 3 years, thus reducing the credit available in those years.

In our 1989 study, we estimated that, at the margin, the previous credit provided companies a benefit of 3 to 5 cents per dollar of additional research spending. We further estimated that this incentive stimulated between $1 billion and $2.5 billion of additional research spending between 1981 and 1985 at a cost of $7 billion in tax revenues. Thus, each dollar of taxes forgone stimulated between 15 and 36 cents of research spending. Although the amount of research spending stimulated by the credit was well below the credit's revenue cost, total benefits could have been much higher.

The revision of the credit in 1989 significantly increased the effective incentive of the regular credit by breaking the link between current spending and future base amounts. For most credit recipients, this new base is related to the ratio of research spending to gross receipts during the period 1984

---

[4]Corporations can receive credits three different ways. First, they can earn credits for undertaking research themselves. For convenience, we will refer to this as the "regular" credit. Corporations can also earn credits for funding basic research by qualified organizations (primarily universities). This basic research credit accounted for less than 2 percent of the total amount of research credit earned in 1992, and the rules for computing this credit are different from those for the regular credit. Finally, corporations can receive flow-through research credits from other taxpayers. Flow-through credits also accounted for less than 2 percent of total research credits in 1992. The remainder of our testimony will focus on the regular research credit.

through 1988. To arrive at the base amount, this ratio or "fixed base percentage," as it is known, is multiplied by the taxpayer's average annual gross receipts for the 4 years preceding the current tax year.

One concern about the current base is that the spending behavior that individual firms exhibited from 1984 through 1988 may not be reflective of the spending that those firms would engage in now if the credit did not exist. The current base is appropriate as long as firms' ratios of spending to gross receipts are fairly constant over time. To the extent that taxpayers change their spending behavior over time, the credit computation would be too generous for some taxpayers, resulting in undue revenue losses. At the same time, it would deny others the opportunity to earn the credit, thus stimulating less overall research. Our analysis of corporate taxpayer data indicates that the accuracy of the credit's base has eroded significantly since 1989, which suggests the need for some adjustment to ensure that the credit provides an attractive incentive at an acceptable revenue cost.

Our analysis shows that the current computation rules are too generous for most corporations that earn the credit, in the sense that a large portion of the credit they receive is for spending they probably would have done anyway. We also found some evidence that many corporations earning the credit prior to the 1989 revision were unable to earn it in 1992.[5]

Our analysis first determined how many corporations' current research spending was at least double their base amounts. Corporations in this situation become subject to a special rule, that resets their base amount equal to half of their current year's spending. Large numbers of corporations being subject to the special rule indicates a problem with the credit's design for two reasons. First, the effective incentive that the credit provides in this situation is cut in half, because each additional dollar a corporation spends raises its base by 50 cents. Second, given that other studies' most optimistic assumptions imply a stimulative effect of no more than 30 percent, it is unlikely that the credit leads corporations to come close to doubling their spending on research. Consequently, a significant portion of the credit earned by corporations whose current research expenditures are far above their bases is earned for spending that they probably would have done anyway.

We have found that, in 1992, almost 60 percent of the corporations that reported some regular research spending on their tax return were subject to the special 50-percent base rule. These corporations accounted for about 19 percent of the regular spending done and 40 percent of the regular credit earned by all corporations reporting spending. Small corporations were much more likely to be in this situation than were large corporations. We have not yet determined the reasons for this. (Table 3 provides additional information on the characteristics of these corporations.)

Our second analysis involved tracking the credit-earning experience of individual corporations from 1989 through 1992. Unfortunately, the database that we were able to construct

---

[5]Although our evidence concerning cases where the base is too low is stronger than our evidence concerning the opposite problem, this may simply be due to the fact that the former situation is much easier to detect. Corporations that earn a research credit in a given year report both their current research expenditures and their base amount on IRS form 6765. However, if research spending does not exceed the base amount, no credit will be earned and, therefore, no form will be filed. IRS databases do not contain information on research spending by companies that do not file the form.

included only corporations with assets of at least $50 million, so we can provide no insight into the experiences of smaller companies. The roughly 1,600 corporations that we could examine accounted for about 73 percent of the research credit earned in 1989.

The corporations we studied exhibited a wide variety of credit-earning patterns over the 4-year period, but the percentage of them that earned a credit declined every year between 1989 and 1992. In 1989, 65 percent of these corporations were able to earn a regular credit, but by 1992 less than 54 percent of them could. We do not know how much of this decline can be attributed to the change in the credit's design after 1989, but the pattern does indicate that a growing number of large corporations are not able to surpass their historic rates of spending (see Table 4 for more details.)

ADMINISTRATION OF THE RESEARCH CREDIT

In our earlier work, we concluded that the credit was relatively difficult for IRS to administer. This conclusion was based on our survey of IRS revenue agents who audited large companies for tax years 1981 through 1986. The survey found that these IRS revenue agents questioned the credit claimed by 79 percent of the corporations in which the credit was audited, and that 54 percent of the revenue agents found at least one issue or aspect of the credit difficult to audit. Revenue agents most frequently cited the following four reasons for questioning research expenditures: Rather than for qualifying, innovative research, the expenditures were for (1) adapting existing capabilities, (2) routine or cosmetic alterations, (3) overhead and administration, or (4) ordinary testing. In general, most of these agents found it difficult to distinguish spending for new products or functions from spending that paid for routine or cosmetic changes.

Our interviews with IRS for our 1994 report indicated that this difficulty remained. IRS officials reported that they were required to make difficult technical judgments in their audits concerning whether research was directed to produce truly innovative products or processes. An IRS official stated that, although examination teams often included engineers and other specialists enlisted to address technical issues that arose, IRS still had difficulty matching the technical expertise of the companies' specialists.

In our 1989 survey, about one-fifth of the revenue agents said the definition of qualified research was unclear. One reason cited was the lack of final regulations. The succession of proposed regulations issued in 1983, 1989, and 1993 to define qualified research under section 174 of the tax code created uncertainty about the definition of qualified research and contributed to the difficulty in auditing the research credit. All research spending that qualifies for the credit must first qualify under section 174. In 1994, Treasury issued final regulations that may resolve the uncertainty about the definition of qualified research spending. However, the difficulty of distinguishing innovative from routine research remains.

Audits of the research credit can be burdensome for both IRS and the taxpayer because the audits must determine whether research expenses, such as wages and supply costs, were made in support of research activities that qualify for the credit. The taxpayer is thus required to show that expenses supported qualified research activities. Where detailed project accounting does not exist, both IRS and the taxpayer may find it difficult to separate out after the fact the cost of personnel employed in specific projects. Thus, according to an IRS official, the costs of administering the credit are substantial for both IRS and the taxpayer.

In summary, Madam Chairman, given the lack of empirical information for evaluating the credit's net benefit to society, we have not taken a position as to whether the research credit should be made a permanent part of the tax code or allowed to expire. We have, however, concluded that, if the Congress decides to extend the credit in its current form, it may also want to ensure that the credit provides an attractive incentive to most recipients at an acceptable revenue cost. One way this could be done is by requiring that the base be reviewed and adjusted as needed.

That concludes my summary statement.[6] We welcome any questions that you may have.

[6]This summary statement for the record has been abridged to meet the Committee's formatting requirements. The complete version of the testimony includes information on the history of the credit, more detailed information on industry use of the credit and on corporations subject to the base limitation, and a description of the methodology used to obtain this information. Copies of the complete version, entitled Additional Information on the Research Credit (GAO/T-GGD-95-161), may be ordered by mail from, U.S. General Accounting Office, P.O Box 6015, Gaithersburg, MD 20884-6015. Orders may also be placed by calling (202) 512-6000 or by using fax number (301) 258-4066, or TDD (301) 413-0006.

Table 1 : Number of Corporations Earning Research Credits, Amount of Qualified Spending, and Amount of Credit Earned by Asset Class, 1992

	Corporations earning research credits			Percent of total		
	Number	Qualified spending ($ million)	Credits earned ($ million)	Corporations	Qualified spending	Credits earned
Asset range						
Less than $250,000	1,615	$308	$17	14.8%	0.8%	1.1%
From $250,000 to $1 million	2,377	316	25	21.8	0.8	1.6
$1 million to $10 million	4,144	1,842	129	37.9	4.6	8.2
$10 million to $50 million	1,485	2,025	121	13.6	5.1	7.6
$50 million to $100 million	364	2,865	72	3.3	7.2	4.6
$100 million to $250 million	321	1,683	96	2.9	4.2	6.1
$250 million or more	622	30,719	1,119	5,7	77.3	70.9
Total	10,928	$39,757	$1,580	100.0	100.0	100.0

Note : The numbers are based on sample data and consequently are subject to sampling error. Totals may not equal the sum of the details due to rounding.

Source: GAO analysis of IRS statistics of income data on corporations for tax year 1992.

Table 2 : Percent Distribution of Corporations, Qualified Spending, and Credit Earned by Industrial Sector, 1992.

	Corporations earning research credits		
Industry	Percent of corporations	Percent of qualified spending	Percent of credit
Agriculture	1.2	0.2	0.3
Mining	0.2	0.4	0.2
Construction	0.5	0.1	0.2
Manufacturing	65.3	76.6	75.8
Transportation and public utilities	1.7	8.2	6.2
Wholesale trade	5.6	1.3	2.1
Retail trade	1.3	0.3	0.5
Finance	0.9	0.6	1.1
Services-medical, business	23.3	12.3	13.5
Total all industries	100	100	100

Note : The percentages are based on sample data and consequently, are subject to sampling error. Totals may not equal the sum of the details due to rounding.

Chairman JOHNSON. Thank you very much, Mr. Gandhi.
Ms. Pensabene.

STATEMENT OF JUDITH K. PENSABENE, DIRECTOR, FEDERAL AFFAIRS AND WASHINGTON COUNSEL, BALTIMORE GAS & ELECTRIC CO., BALTIMORE, MD., ON BEHALF OF ELECTRIC POWER RESEARCH INSTITUTE

Ms. PENSABENE. Good morning, Chairman Johnson, members of the subcommittee. My name is Judy Pensabene, and I am director of Federal Affairs for Baltimore Gas & Electric Co. Prior to my joining the company, I served for 5 years as counsel to the Senate Energy and Natural Resources Committee, where we had oversight for the research and development programs at the Department of Energy.

I appreciate the opportunity to provide testimony on behalf of the member companies of the EPRI, Electric Power Research Institute, regarding the nature of collaborative research and the potential benefits of the specific collaborative R&D tax credit modification as an incentive to promote this highly efficient approach to research and development. I have filed a statement for the record, and I will try to summarize that here so that we can move ahead.

As you examine the existing R&E credit and determine whether you would like to make it permanent, we want to bring to your attention the need for collaborative research that is not specifically addressed in the credit now, and to discuss benefits that would inure if the credit were specifically expanded for that type of research.

We therefore support the inclusion of a 20-percent credit for investment in collaborative research performed by 501(c)(3) not-for-profit scientific and educational organizations as an important part of the R&E credit that you are considering. It would serve as an incentive for the private sector to maintain its commitment to collaborative research.

We are moving toward an era of increasing budget cuts and Federal challenges, funding challenges that are in the offing right now as evidenced by the recent Budget Committee proposal to cut 50 percent out of just one section of the Department of Energy's R&D budget. When we couple that with the competitive arena in which the utility industry is now moving, we are looking at a double hit, if you will, upon our R&D infrastructure in the energy related field.

The technology development programs that are at the Department of Energy are very similar to the type of thing that EPRI does. I would like to talk to you a little bit about EPRI, give you a little background on it, and then proceed to tell you why I think this collaborative research credit would be a very good way to help meet some of these downward pressures on our general R&D infrastructure funding.

EPRI was founded in 1972 by leaders of the electric utility industry in response to a proposal by Congress, at that time occasioned by rolling blackouts in the Northeast United States, to place a mandatory funding requirement on the utilities for a federally conducted research program. The utilities responded by suggesting that they form a private sector consortium to conduct this research

in order to assure relevance of the R&D with respect to the industry and its customers.

EPRI's membership includes more than 700 electric utility members, ranging from the investor-owned utilities like BG&E to public and rural electric cooperatives. They represent about 70 percent of the total electricity sales.

Contributions to EPRI are approved by public utility commissions to ensure that their activities have the broadest public benefit. EPRI manages more than $500 million in research engaging in the kind of research that a utility on its own could not engage in because it is too costly and it is too risky. By joining forces and by joining together in this collaborative effort, EPRI members conduct research such as the Department of Energy does, that is a very broadly applicable research to the electric utility industry—research that would not be undertaken by the private sector on its own.

Under the existing credit, not only is there not an incentive, but there is really a disincentive for this kind of collaborative effort. Because of the way the IRS has interpreted the rules, 35 percent of all costs for collaborative research are disallowed. They not only take the 35 percent off with respect to the contracted-out costs, but—for other reasons—they disallow additional sums against those amounts that the utility industry has paid into for the collaborative research.

We believe that it would be wise for the Congress to consider putting a real incentive into this R&E credit for collaborative research. As I have already indicated, it is the most efficient way to do this very broadly applicable type research, and given that the Federal Government is going to make broad cuts across the board in this type of research, this would be a way to create real incentives to support research vital to our infrastructure.

Thank you very much. I would be happy to answer any questions you may have.

[The prepared statement follows:]

STATEMENT OF JUDITH K. PENSABENE
DIRECTOR, FEDERAL AFFAIRS AND WASHINGTON COUNSEL
BALTIMORE GAS & ELECTRIC CO., BALTIMORE, MD.
ON BEHALF OF MEMBERS OF THE ELECTRIC POWER RESEARCH INSTITUTE

Chairman Johnson and members of the Subcommittee, I appreciate the opportunity to provide testimony on behalf of the member companies of the Electric Power Research Institute (EPRI) regarding the unique nature of collaborative research and the potential benefits of a specific collaborative R&D tax credit modification as an incentive to promote this highly efficient approach to research and development. As difficult funding decisions are being made regarding the nature and level of federal support for technology research and development, we believe it is imperative to examine appropriate ways to encourage the private sector to fund more of these activities.

Federal funding challenges coupled with the transition to a competitive market environment in the utility industry has brought about a foreseeable strain on investment in R&D. Together these factors naturally have an impact on a company's investment in longer term R&D and result in an unintentional "double-hit" to this energy R&D infrastructure. Therefore, we support the inclusion of a 20% credit for investments in collaborative research performed by 501(c)3 not-for-profit scientific and educational organizations as an important component of the R&E credit. It would serve as an incentive for the private sector to maintain its commitment to collaborative research.

An examination of the technology development programs at the Department of Energy shows that EPRI serves as the Department's direct private sector counterpart. As a former counsel on the Senate Energy and Natural Resources Committee, I was responsible for oversight of these programs at DOE, and I can affirm that EPRI has played a pivotal role in the development and deployment of renewable energy , safety enhanced nuclear, cleaner coal-burning, efficient transmission and distribution, and environmental control technologies. EPRI uses an integrated, systems-wide approach to meet the needs of the utility sector, the ultimate customers for these technologies. Due to the scale of these technology areas and their relevance to the overall utility operations, joint investment in research will continue to be necessary to produce technology advances even in light of impending historic changes within the industry. Competition occurs in the strategic application of these technologies into individual systems. BG&G and other member companies will continue to value EPRI as the organization that will take us into the next generation of utility technologies.

ABOUT EPRI

EPRI was founded in 1972 by leaders of the electric utility industry. Due to rolling blackouts in the northeastern United States, Congress was proposing a mandatory fee from utilities to sponsor a federally-conducted research program. The utility industry responded by requesting that it be allowed to establish a private consortium to conduct the research in order to assure the relevance of its R&D to the industry and its customers. Hence, EPRI was founded and has met these criteria ever since.

Membership includes approximately 700 electric utility members ranging from investor-owned, to public, and rural electric cooperatives representing approximately 70% of our nation's electricity sales. EPRI's research covers the breadth of technologies relating to the generation, transmission and distribution, and end-use of electricity. EPRI has a core program that conducts high-risk, cutting-edge science and technology development that provides the basis for new applied technologies in the years to come, as well as, an environmental and health program that distinguishes the possible risks associated with such issues as electromagnetic fields, climate change and air, land and water quality.

EPRI manages research on behalf of its members and has operated as a 501(c)3 organization for the past 20 years. This status requires EPRI to operate in a manner that allows non-discriminatory access to research results. EPRI manages more than $500 million dollars in R&D annually. Membership in EPRI is voluntary and technology priorities are set by member companies. Member company dues are approved by State Public Utility Commissions ensuring that market driven research is consistent with the public interest. EPRI conducts research that is vital to assuring the efficient and economical production and use of electricity with an emphasis on safety, health, and the protection of the environment. The founders of EPRI made a strategic decision not to develop an in-house R&D infrastructure that could become antiquated or that would determine R&D priorities. EPRI draws on the expertise of universities, small business, and many other entities to carry out research and development projects. Due to the unique nature of EPRI, it is able to conduct highly-leveraged, non-duplicative research that would very likely not be carried out by individual member companies or otherwise.

VALUE OF A COLLABORATIVE R&E TAX CREDIT

The goal of an R&E credit was not just to promote R&E but to promote technological innovations that will have a practical, positive impact on the American public's standard of living. In contemplating changes to the credit, the committee should seek to encourage firms to leverage their limited R&D dollars through collaboration. This presents an excellent opportunity to think about the best ways to structure the credit to achieve its ultimate goals.

Again, proposed federal budget cuts across the board suggest that the credit be modified to reward private R&D activities that may be able to absorb some of this research and disseminate the results to the broadest public base possible. The structure of qualified collaborative 501(c)3 research meets both the scale and public benefits tests of this potential shift in responsibility. By pooling resources for R&D, consortia leverage limited individual R&D investment.

THE CURRENT CREDIT

The R&D tax credit is equal to 20% of the excess of (i) a taxpayer's "qualified research expenses" for the taxable year over (ii) the base amount.
Under the current Internal Revenue Code for the R&E credit, "Qualified research expenses" are defined as the sum of (i) in-house research expenses and (ii) contract research expenses. In-house research expenses can be generally viewed as expenses for research directly conducted by the taxpayer (e.g., amounts paid to an employee for research and amounts paid for supplies used in the conduct of that research). Contract research expenses are amounts which will be paid by the taxpayer to a third party for research.
A taxpayer is only entitled to take into consideration for purposes of determining the amount of "qualified research expenses" 65% of the cost of the research contract. This arbitrary 65% ceiling on creditable contract research expenses reflects a decision by Congress to eliminate from the credit, amounts paid for third-party contractor overhead. In other words, Congress determined that for each dollar spent on contract research, 35 cents was for overhead and 65 cents was for qualified research expense.

The statute, however, is silent as to the treatment of membership contributions to a collaborative research consortia. The Internal Revenue Service ("IRS") has taken the position in the utility industry that membership dues paid to a collaborative research consortia should be treated as contract research expenses and thus subject to the 65% ceiling/35% reduction. However, the IRS has taken the additional step of disallowing substantially all of the consortia's overhead expenses from the calculation prior to the 65% ceiling. Instead of 65 cents out of every research dollar spent by the consortia qualifying, now only a significantly lower amount is qualified. Essentially the

IRS is eliminating the overhead TWICE: first, by excluding it from the contract research expense definition; and second, by requiring a consortia member to reduce its contract research expenses by 35% as if such expenses still contained all of the consortia's overhead. This occurs under current law despite the fact that companies do collaborative R&D precisely because it is more efficient to pool resources.

CONCLUSION

The subcommittee's re-examination of the existing R&E credit creates an opportunity to recognize the benefits and efficiencies of collaborative R&D. By stimulating industry-led collaborative efforts, the credit will leverage increasingly scarce research dollars and encourage more efficient use of R&D resources. Collaborative efforts eliminate duplicative research projects, thereby minimizing the cost of the credit to the federal government. The collaborative credit will also stimulate new research -- research unlikely to be undertaken individually because it is too costly, too risky or too long-term. Finally, by making more efficient use of private R&D resources, the collaborative credit will fully and cost-effectively advance the aim and policy rationale behind the existing credit.

Chairman JOHNSON. Thank you.

You will notice that the timing lights are in use. We have a number of panels today, and I hate to limit your comments, but if you would try to abide by the lights, I would appreciate it.

Mr. Olesen.

STATEMENT OF DOUGLAS E. OLESEN, PRESIDENT AND CHIEF EXECUTIVE OFFICER, BATTELLE MEMORIAL INSTITUTE, COLUMBUS, OHIO

Mr. OLESEN. Good morning, Madam Chairwoman—Mr. Portman, thank you for that introduction—and members of the subcommittee. I appreciate the opportunity to be here today to testify on behalf of this very important issue to the competitiveness of this country.

As Mr. Portman indicated, my name is Douglas Olesen. I am president and chief executive officer of Battelle Memorial Institute, which is the world's largest independent research and development organization. Our business is one that serves business across the spectrum of industrial sectors of this country and around the world. We work for small businesses on the one hand, and Fortune 100 companies on the other. As such, we have, I think, an unparalleled opportunity to watch the decisionmaking process in the industrial sector as they go about allocating R&D dollars and making priority decisions among those dollars.

We also track and predict R&D spending in this country every year; we have done that for more than two decades. I have some publications here that deal with R&D spending predictions in the United States for both government and industrial spending, which I will provide to the subcommittee in addition to my prepared statement. These forecasts are published widely in the Wall Street Journal, Business Week, and a lot of other publications every year and are well known for their accuracy, their depth, and content.

What comes out of our studies of R&D is an obvious increasing level of pressure on industrial organizations because of the global competitiveness that they face. This global competitiveness is causing fundamental changes in the R&D structure of this country, much greater pressure on industry to get greater returns out of R&D spending than they ever have in their past.

Also, this greater competition fuels a demand to move more products to market faster than companies have ever done in history, and it also provides pressure to move R&D expenditures much more toward shorter term, existing product improvement kinds of R&D, and increasingly puts pressure on our ability to ensure a long-term investment in our technology base of this country, which ultimately is the base that will generate breakthrough technologies that will be able to revolutionize entire industrial sectors.

It is in this atmosphere that I certainly recommend for your consideration that we give every consideration possible to providing mechanisms by which we can enhance the private sector R&D capacity of this country; and the R&D tax credit is a given individual device by which that can be accomplished. It certainly provides incentives to pay attention to longer term commitment to R&D and will help offset the concern now being felt that long-term R&D is being sacrificed for shorter term.

I also believe that the tax credit, as it has been used, has to some extent failed to fulfill its potential because of the significant changes that have occurred and the undependability of the application of the tax credit. So I would recommend for your consideration, first, that the tax credit be made permanent so that long-term research investments can be viewed with some stability, which is absolutely required if someone is going to stick with long-term R&D.

The second change I would recommend strongly is eliminating the base amount, making the credit nonincremental so that it is based on actual expenditures over the long term.

In total, I believe that the R&D tax credit in this way can be a major incentive to producing long-term research gains which are important to the competitiveness of this country.

Thank you.

[The prepared statement follows:]

STATEMENT OF DR. DOUGLAS E. OLESEN
PRESIDENT AND CHIEF EXECUTIVE OFFICER
BATTELLE MEMORIAL INSTITUTE
COLUMBUS, OHIO

Madam Chairman and Members of the Subcommittee, I appreciate the opportunity to testify before you today on an issue that is very important to the competitiveness of this country.

My name is Douglas Olesen. I am President and Chief Executive Officer of Battelle Memorial Institute. For those of you who don't know, Battelle pioneered the concept of contract research through the vision of our founder in the 1920s. Gordon Battelle, an industrial leader from Ohio, saw the need for an independent research and development capability to serve the evolving industrial enterprise that was forming in this country in the 1920s. He directed that his estate be used to establish a not-for-profit institute to serve this need.

Over the ensuing 65 years, Battelle has grown to become the world's largest independent contract research and development organization, with many offices and laboratories throughout the United States. Our technological achievements have ranged from materials research that aided the steel and aircraft industries, to the development of the office copier (the Xerox machine), to key involvement in the development of hundreds of new products, many of which we all use every day, such as the sandwich coin, compact discs, holograms, and even golf balls that resist splitting.

In 1994, Battelle conducted nearly $1 billion in research and development for industry and government. Our industrial clients range from small businesses to the largest corporations in the Fortune 100. Many of our industrial clients look upon us as a bridge that can link basic research to a finished product on the store shelf. Putting technology to work for industry and government is our goal and the underlying basis of our business.

With our long history of working hand-in-hand with industry on practical technologies, I believe we can offer a well-informed perspective on the issue at hand. In fact, our contract research work for industry serves as the means by which many companies utilize the R&D tax credit. Additionally, since Battelle is taxed under subchapter C, just as any corporation, we have also utilized the R&D tax credit ourselves, with our own internal research projects.

In our business, it is vitally important for us to monitor industrial R&D trends. For instance, every year we produce a forecast of R&D spending in the United States. Over the past two decades, those forecasts have been reported on widely in publications such as the *Wall Street Journal* and *Business Week*, and they have come to be known for their accuracy.

One of today's most important trends affecting industrial R&D that we have witnessed is the pressure from ever-stronger global competition. This unprecedented competition from around the world has served to increase pressures for companies to maximize the return from their technology investments. Greater competition has also fueled demands to move more new products to the marketplace faster than ever, leading many companies to direct more of their R&D investments toward short-term development and immediate problem-solving to reduce costs and link R&D investments more closely to specific products. But also, the increasing global competition has led to concerns over ensuring the health of our long-term technology base and has increased pressure on many companies' ability to sustain long-term research and development programs that can lead to the breakthrough technologies that can dramatically transform an entire industry. Today, businesses must juggle these various demands--which often appear to be mutually exclusive.

In this atmosphere, we need to do everything we can to encourage the build-up of private sector R&D capacity. The R&D tax credit is a very significant element for government to provide a business climate that stimulates both short- and long-term

industrial research in the private sector. Obviously, a tax credit cannot do this job alone. In all my years in the technology business, I have never heard anyone say that they conducted any research or did not conduct a research project solely because of a tax credit. Nevertheless, the R&D tax credit represents the type of positive action that can be one of the most effective methods for government to promote industrial research and create a business environment that nurtures growth and competitive strength in the private sector.

The R&D tax credit provides an added economic incentive to invest in research and development, thereby offsetting a portion of the rising R&D costs that we will witness as technology continues to grow more complex and more expensive. Further, the tax credit can serve as a more efficient method for government to support industrial R&D than direct funding of specific R&D projects, because it allows industry to make the decisions about what technology is needed to improve our industrial competitiveness. Today, we are living in a world that has become more consumer-pull rather than technology-push. Because consumers are becoming increasingly sophisticated, technology development is more and more focused on a rapid response to consumer needs, and the leaders of industry know those needs better than anyone else. The primary goal of a government technology policy, I believe, is simply to create a business atmosphere that encourages growth, competitiveness, and technological risk-taking. In such an atmosphere, our industrial leaders are better able to make the necessary technological investments that will help keep them competitive over the long term.

By establishing this positive, risk-friendly environment, we can build competitive capacity in the private sector and establish a sound blueprint for creating jobs and sustaining economic growth.

I believe, however, that the R&D tax credit, over the past several years, has not been able to fulfill its potential. The R&D tax credit would more effectively meet its goal with two changes that I would like to submit to the Committee.

First, I recommend that the credit be made permanent.

Research is often a long-term endeavor, and a permanent R&D tax credit would better allow industry to plan long-term research investments. Since the credit has been allowed to expire five times in the past 14 years, industry has not been able to count on the credit being available for long-term R&D commitments. As a result, it has been more difficult for planned long-term R&D projects to come in line with ever-increasing business demands to lower costs and obtain a rapid return on investment.

The second change I would recommend is eliminating the base amount, making the credit non-incremental, and basing the credit on actual R&D expenditures.

Companies that maintain a constant R&D investment over a number of years should be rewarded for their long-term efforts, as well as those companies that increase their R&D investments from one year to another. It is through this long-term investment that companies can best develop the depth in their research and development efforts that will give them the capability of developing breakthrough technologies.

In conclusion, I would like to stress the importance of building competitive strength in the private sector. Over the past few years, overall industrial R&D spending has been flat or has shown only moderate increases, and R&D spending in the government sector is now on the decline. Yet, in most major industries, technology is a critical driver in today's global marketplace.

The companies that can capture the best technology and bring it to the marketplace the quickest, the companies that can use technology to offer their products and services faster, better, and cheaper—those are the companies that will have a strong competitive advantage. For today and tomorrow, one of the most effective ways to build

a solid and long-term competitive edge will be through technology. Our investments in technology are among the most critical investments we are making today.

Certainly, there are a number of government policies that affect R&D spending levels and that can help provide industry with the added incentive to increase technological investments. The R&D tax credit is one such tool that we can utilize more efficiently to establish a business climate that stimulates the development of innovative technologies, industrial growth, and economic well being.

Thank you.

Chairman JOHNSON. Thank you, Mr. Olesen.
Dr. Hooker.

STATEMENT OF MICHAEL HOOKER, PH.D., PRESIDENT, UNIVERSITY OF MASSACHUSETTS, ON BEHALF OF THE NEW ENGLAND COUNCIL, BOSTON, MASS.

Mr. HOOKER. Madam Chair, members of the subcommittee, my name is Michael Hooker, I am president of UMass, the University of Massachusetts. I am pleased to have the opportunity to testify before you this morning on an issue that I believe is critical not only to sustaining our economic recovery, but also to securing our economic prosperity in a highly competitive knowledge-based economy of the 21st century. I am testifying today on behalf of The New England Council.

The Council is the nation's oldest regional business organization comprised of the leading manufacturers, service industries, colleges and universities, financial institutions, public utilities, and technology companies in the six-State New England area.

I want to commend you, Madam Chair, for holding hearings on the need to permanently extend the R&D tax credit and for your leadership along with that of Representative Richard Neal of Massachusetts in introducing H.R. 803, a bill to permanently extend the credit.

I also want to acknowledge the efforts of Massachusetts Governor William Weld, who has been a tireless advocate and leader among the Nation's Governors for a permanent Federal increase. My remarks this morning will focus less on the structure of the credit and more on the importance of permanence for the credit.

Let me begin with some specifics of the New England economy and why research and development is so important there. To appreciate where we are, we must realize where we have been. The recession of the late eighties and early nineties was longer and deeper for New England than for any other region of the country. New England lost 850,000 jobs during this time period. This amounts to 25 percent of the jobs lost nationwide and 13 percent of our region's total employment. Only 37.5 percent of the jobs are back. While our economy has clearly improved, we still have a long way to go to get back to the prerecession levels.

When you are preparing nearly 60,000 students for the workplace, as we are this year at UMass, these employment numbers are of great concern.

Despite the results of the recession, I believe that New England can have a very bright future and a robust economy. We are home to some of the best research universities and teaching hospitals in the world, education is a major component of our economy, and we have the highest concentration of educational facilities of any region in the country. New England produces highly educated and innovative individuals.

Gone, for the most part, are the days of agriculture in New England. Today, the New England economy is based on knowledge and information. It is no coincidence that clustered around New England's educational institutions are small, startup firms and entities that grew out of the research and the work that is performed and nurtured by our institutions.

Our recovery has been fueled largely by entrepreneurship in small and medium-sized firms, many based on sophisticated technology. Absent an environment conducive to growing these kinds of new businesses, we are doomed to a prolonged period of stagnant growth and limited opportunities for this and future generations.

New England is at a crossroads. We have the potential to grow and prosper in some of the most advanced and exciting markets in the world, creating high-paying and meaningful jobs. The business climate is a critical component of our success. The Federal Government has a very important role in promoting the development of this potential. Public policies that encourage and require long-term investment are necessary for our economic future.

Incentives like the R&D tax credit have helped New England's emerging industries to grow and thrive. Our high technology, biotech, software and chemical sectors all benefit from the credit. For these industries, research activities translate directly into high-wage jobs, which is music to the ears of those 60,000 UMass students who will soon be looking for work. In fact, it is the cost of wages and salaries related to R&D that make up most of the credit-eligible expenses. Indirectly, research is the key to tomorrow's products, methods, and new sources of economic development.

Although the R&D tax credit has proven to be an effective means of increasing private sector investment and improving the Nation's overall competitiveness, its incentive value is limited because of its temporary nature and uncertain future. In order for the private sector to fully realize the benefits of this credit, it must be made a permanent feature of the Tax Code. This is the only way to encourage the long-term growth that is most needed in New England.

Most R&D projects span over 5 to 10 years. A temporary credit can actually inhibit a company's ability to judge and plan for more lengthy projects. In most cases, it is the longer term projects that are more risky, yet also that provide the most economic benefit in the years ahead.

The New England Council strongly believes that a permanent R&D tax credit will significantly enhance its incentive value and improve the competitive position of the region. In fact, the Council coordinated a letter signed by over 100 companies which was sent to the New England congressional delegation and the congressional leadership supporting permanence for the credit.

Now, more than ever, New England needs a business climate which fosters the development of new technologies and industries. Research and development can lead to advances in science and technical knowledge, which in turn lead to productivity improvements and long-term economic growth.

I urge you to enthusiastically support and enact H.R. 803.

Thank you, Madam Chair.

[The prepared statement and attachment follow:]

THE
NEW ENGLAND
COUNCIL

Testimony of Dr. Michael Hooker
President, University of Massachusetts

On Behalf Of
The New England Council

Before
the U. S. House of Representatives
Committee on Ways and Means
Subcommittee on Oversight

May 10, 1995

Madame Chair and Members of the Subcommittee, my name is Michael Hooker I am the President of the University of Massachusetts. I am pleased to have the opportunity to testify before you this morning on an issue that I believe is critical to sustaining an economic recovery not only in New England but across the nation as well.

UMASS is a public university system with facilities located on five different campuses in the state. Beginning with our flagship in Amherst we also have campuses in Lowell, Dartmouth, Boston and the Medical Center in Worcester. First established in 1863 as a land grant university, UMASS was chartered to support the state's agriculture and mechanical arts.

I am testifying today on behalf of the New England Council. The Council is the nation's oldest regional business organization comprised of the leading manufacturers, service industries, colleges and universities, financial institutions, public utilities and technology companies in the six-state area.

I want to commend you, Madame Chair, for holding hearings on the need to permanently extend the R & D tax credit, and for your leadership - along with Representative Richard Neal of Massachusetts - in introducing HR 803, a bill to permanently extend the credit. I also want to acknowledge the efforts of Governor Weld who has been a tireless advocate and leader among the nation's governors for a permanent federal credit.

800 Boylston Street, Suite 540, Boston, Massachusetts 02199, (617) 437-0304 Fax (617) 437-6279
444 North Capitol Street, N.W., Suite 418 North, Washington, D.C. 20001, (202) 434-8095 Fax (202) 434-8099

My remarks this morning will focus less on the structure of the credit and more on the importance of permanence for the credit.

Let me begin with some specifics of the New England economy and why research and development is so important. To appreciate where we are we must realize where we have been. The recession of the late eighties and early nineties was longer and deeper for New England than any other region of the country. We lost 850,000 jobs during this time period. This amounts to 25% of jobs lost nationwide and 13% of our region's total employment. Only 37.5% of the jobs are back. While our economy has clearly improved we still have a long way to go to get back to pre-recession employment levels.

Despite the results of the recession, I believe New England can have a very bright future. We are home to the some of the best universities, institutions of higher learning, teaching hospitals and laboratories. Education is a major component of our economy and we have the highest intensity of these facilities of any region in the country. New England produces highly educated and innovative individuals.

Gone, for the most part, are the days of agriculture. Today the New England economy is based on knowledge and information. It is no coincidence that clustered around New England's educational institutions are small start-up firms and entities that grow out of the research and work that is performed and nurtured by our institutions.

Many in New England believe that our recovery has been fueled by small and medium sized firms, many in high-tech, biotech and entrepreneurial ventures. Absent an environment conducive to "growing" these kinds of new businesses, we are doomed to a prolonged period of stagnant growth and limited opportunities for this and future generations.

New England is at a crossroads. We have the potential to grow and prosper in some of the most advanced and exciting markets in the world creating high paying and meaningful jobs. The business climate is a critical component of our success. The federal government has a very important role in promoting the development of this potential. Public policies that encourage and reward long term investment are necessary for our economic future.

In 1981, President Reagan established the R & D tax credit for the sole purpose of increasing U. S. productivity by spurring growth in our technology-based economy. Recognizing the importance and effectiveness of the provision, the U. S. Congress has extended the credit six times since then.

Incentives like the R & D tax credit have helped New England's emerging industries to grow and thrive. Our hi tech, biotech, software and chemical sectors all benefit from the credit. For these industries research activities translate directly into high wage jobs. In fact, it is the cost of wages and salaries related to R & D that make up most of the credit-eligible expenses. Indirectly research is the key to tomorrow's products, methods and new sources of economic development.

The importance of the credit to New England can be seen in the following statistics:

* In 1991, New England spent over $11 Billion on R & D activities;

* Massachusetts was number five in the country in total R & D investment, spending over $8 Billion in 1991;

* Top industry credit earners are computers, computer software, pharmaceuticals and biotechnology, all successful growth industries in the region;

* Although the bulk of R & D is still performed by large companies, small businesses are an increasingly important source of R & D spending and an important source of job creation in New England.

Although the R & D tax credit has proven to be an effective means of increasing private sector investment and improving the nation's overall competitiveness. Its incentive value is limited because of its temporary nature and uncertain future.

In order for the private sector to fully realize the benefits of the R & D tax credit it must be made a permanent feature of the tax code. This is the only way to encourage the long term growth that is most needed in New England. Most R & D project span over five to ten years. A temporary credit can actually inhibit a companies ability to judge and plan for a more lengthy project. In most cases it is the longer term projects that are more risky, yet also provide more economic benefit in years ahead.

The New England Council strongly believes that a permanent R & D tax credit will significantly enhance its incentive value and improve the competitive position of the region. In fact, the Council coordinated a letter signed by over one hundred companies and sent yesterday to the New England Congressional delegation and the congressional leadership supporting permanence for the credit. Madame Chair I respectfully request that a copy of the letter, along with the list of companies who have endorsed it, be made a official part of the record of this hearing. If permanent, corporations will be able to rely upon continued availability of the credit when making long term R & D investment and overall business decisions.

Now more than ever New England needs a business climate which fosters the development of new technologies and industries. Research and development leads to advances in scientific and technical knowledge, which in turn leads to productivity improvements and long-term economic growth. A permanent federal R & D tax credit will provide the necessary incentive for continued economic recovery for New England. I urge you to enthusiastically support and enact HR 803. Thank you.

THE
NEW ENGLAND
COUNCIL

May 9, 1995

The Honorable Bill Archer
Chairman, Committee on Ways and Means
1102 Longworth House Office Building
Washington, D. C. 20515

Dear Mr. Chairman:

The undersigned urge you to enact a permanent research and development tax credit as part of the Fiscal Year 1996 Budget legislation. As the present R & D credit will expire on June 30, 1995, the inclusion of a permanent credit in the FY96 Budget legislation will be a major signal to the U. S. research community and industries such as ours that the credit will continue.

We know that the Congressional Leadership considers long-term economic growth a high priority and appreciate your consistent efforts on behalf of a permanent R & D tax credit.

The six state New England region, abundant with high technology companies, universities, colleges, laboratories and teaching hospitals, is on the cutting edge of information and technology. At a time when our economy is still recovering from a prolonged and deep recession, incentives like the R & D tax credit allow companies to utilize these resources in pursuit of new products and services, while also providing high-paying jobs to highly skilled workers.

Investment in R & D has proven vital to the technical innovation and productivity enhancements that are necessary to maintain a competitive position in the world marketplace. As significant as the benefits of the credit are, they have been reduced by its temporary nature. Uncertainty over the future of the credit reduces its incentive value since most R & D projects are long-term efforts, spanning 5-10 years.

Research and development activities hold great promise for New England's high-tech economy. We are poised for significant growth provided the business climate is one which stimulates and facilitates long-term investment. We believe permanent extension of the R & D tax credit will create this kind of environment. We thank you for your past support and urge you to actively support inclusion of a permanent R & D tax credit in the FY96 Budget legislation.

Sincerely,

Chairman JOHNSON. Thank you, Dr. Hooker.
Mr. Anderson.

STATEMENT OF CHRISTOPHER R. ANDERSON, GENERAL COUNSEL, MASSACHUSETTS HIGH TECHNOLOGY COUNCIL, INC., WALTHAM, MASS.

Mr. ANDERSON. Thank you, Madam Chair, members of the subcommittee. My name is Christopher Anderson, general counsel of the Massachusetts High Technology Council, Inc. We urge you and other Members in Congress to support this very timely initiative to make the Federal research and development tax credit permanent.

I would also like to thank, in addition to your efforts, Madam Chair, the efforts of the Massachusetts delegation that have signed on as cosponsors, Congressmen Blute, Frank—we expect Marty Meehan to be an official sponsor soon—Moakley, Neal, and Studds. My plane doesn't leave until 7:30 tonight so I still have time to get a few more for you before I leave.

This is the first time the High Tech Council has testified in Washington. Our primary focus is on Massachusetts public policy issues to make Massachusetts more competitive than other States for high technology companies. Our efforts have been aided significantly by Governor Weld to help improve the climate for high technology in Massachusetts. We compete now with California, Texas, North Carolina, and other States who are becoming very aggressive.

The Federal research and development tax credit would address similar competition from other nations for our research and development activities. Therefore, the goal which you stated today, to evaluate what the policy objective is, I think is probably twofold. One is to encourage additional research and development spending in this country and see, through a policy vehicle, how the Federal Government can reduce the cost of capital and encourage further economic growth.

Providing industries that are committed to expanding their R&D commitments in the United States with a permanent extension of the Federal R&D tax incentive will help achieve both of those objectives.

Very specifically, the Massachusetts High Technology Council believes an effective research and development incentive should have two key features. It must be incremental, and it must be permanent. That view isn't shared by everyone, I understand. However, we believe that this does achieve the objective—the policy objective of creating and rewarding those industries and companies that actually do more.

Now, there are a couple of limitations, and I will divert from my written comments and request that they be submitted in the record here. Let me just comment briefly on a point that has come up and I am sure will come up again.

That point is cost. While not being from inside the beltway, and fully understanding how the game works, the static nature of revenue projections have never told the whole story in the view of the high technology community in Massachusetts. We would prefer to view incentives and evaluate them based on a more dynamic model of revenue impact; and as Congressman Meehan and others have

alluded to, there are dynamic factors, job multipliers, that do demonstrate that this is a job-generating, revenue-enhancing vehicle that proves that you can actually grow the revenue pie without raising taxes.

So we would not concede a cost, and we would rather focus on the dynamic elements of what the research and development tax credit leads to, both in terms of job growth and in terms of tax revenue.

The Massachusetts High Technology Council played a key role in the development of a permanent State-level research and development tax credit in our State, and one key distinction that we made versus similar credits adopted by other States and by the Federal Government was that it was permanent and provides investors with crucial decisionmaking factors of certainty and stability.

As Dr. Hooker mentioned, Governor Weld has played a very active and aggressive role in helping to lead the charge of the Nation's Governors to make this tax credit permanent. He sent a letter to Chairman Archer 2 days ago. I have a copy of that letter here, but I would like to officially request that it be included in the record if possible.

Chairman JOHNSON. Without objection.

[The information follows:]

THE COMMONWEALTH OF MASSACHUSETTS
EXECUTIVE DEPARTMENT
STATE HOUSE • BOSTON 02133
(617) 727-3600

WILLIAM F. WELD
GOVERNOR

ARGEO PAUL CELLUCCI
LIEUTENANT GOVERNOR

May 8, 1995

The Honorable Newt Gingrich
Speaker of the House
H-232 Capitol Building
Washington, DC 20515

Dear Mr. Speaker:

As you know, the federal research and development tax credit is scheduled to expire on June 30, 1995. As Governors of seven of the largest industry-based R&D states in the nation, we are writing to seek your assistance in securing a permanent extension of the federal R&D tax credit. We believe this is the type of market-based, pro-growth tax policy that our party should champion.

In 1981, President Reagan signed into law a four-year R&D tax credit to help stimulate the growth and competitiveness of our technology-based economy. The results have been impressive. Recent studies indicate that the marginal effect of one dollar of the R&D credit stimulates approximately one additional dollar of private research and development spending over the short run, and as much as two dollars of extra R&D in the long-run. Today, in our seven states, the private sector alone spends more than $60 billion per year on R&D. These investments support thousands of highly skilled employees in some of our nation's most promising industries, such as computer hardware and software, biotechnology, telecommunications, pharmaceuticals, and environmental technologies.

As significant as the benefits of the R&D credit are, however, they have been limited by the credit's temporary nature and uncertain future. Since its inception, the R&D credit has been allowed to expire five times, being renewed once retroactively. This uncertainty has hampered the private sector's ability to rely on the credit, forcing many research planners to discount its value when calculating long-term R&D related investments. Given the lengthy nature of R&D projects--frequently spanning five to ten years--permanent extension of the credit would greatly enhance its incentive value and overall effectiveness in stimulating increases in private sector R&D.

Unfortunately, the problems posed by the temporary nature of the credit are also exacerbated by our foreign competitors' generous tax incentives for R&D, including deductibility of current research expenses and special tax credits. Such incentives have caused many U.S. employers to consider the option of transferring their R&D functions overseas to remain competitive in the international marketplace. As a result, our nation runs the risk of becoming an importer, rather than an exporter, of technology and technologically advanced products in the years ahead.

We believe that the Republican Party has a unique opportunity to demonstrate to employers and the nation that we are committed to the principles of long-term economic growth and smaller government, a permanent R&D tax credit delivers both these principles. As a market-based incentive, a permanent R&D tax credit keeps Washington out of the game of picking winners and losers, while fostering an environment conducive to rewarding the patient, technologically based investments of our finest entrepreneurs. By letting the private sector do what it does best, the credit is one of the federal government's most effective means of encouraging real economic growth in the twenty-first century.

Your support is vital to enact a permanent credit in 1995. We look forward to working with you to achieve this important goal in the months ahead.

Sincerely,

Governor Bill Weld

Governor Pete Wilson

Governor George E. Pataki

Governor John Engler

Governor Christine T. Whitman

Governor Jim Edgar

Governor George W. Bush

Mr. ANDERSON. Former Senator Paul Tsongas has long advocated and recognized the value of a permanent R&D tax credit, and as a matter of fact, so too has Massachusetts Congressman Joe Kennedy, so I would expect that the meeting of the minds has been achieved here; and the real question that we ought to be asking shouldn't be, how can we afford this incentive for increased research and development activity. Instead, today, we should ask what action might we take today to provide a long-term boost to our economy.

This is such an action you should take today, and we appreciate your role and the subcommittee's role in helping make sure that this is the last hearing on an extension of the research and development tax credit, and that when the subcommittee concludes its action and Congress does, that we are talking about a permanent incremental tax credit.

[The prepared statement follows:]

MASSACHUSETTS HIGH TECHNOLOGY COUNCIL

Dedicated To Growth ... Committed To Action

Testimony of:
Christopher R. Anderson, General Counsel
Massachusetts High Technology Council, Inc.

Submitted to the United States House of Representatives
Committee on Ways and Means
Subcommittee on Oversight

in *Support* of H.R. 803 making the current
Research and Development tax incentive Permanent

Hearing Date: May 10, 1995

The Massachusetts High Technology Council urges the House Ways & Means Committee's Subcommittee on Oversight to support H.R. 803 sponsored by Congresswoman Nancy L. Johnson (R-CT) and co-sponsored by more than 50 other Representatives to make the current "job-generating" incremental research and development tax incentive permanent. This incentive, first adopted in 1981, is scheduled to expire on June 30, 1995.

Research and development is the basic ingredient in the process of innovation which leads to improved productivity, products and services which in turn result in increased efficiency, reduced costs and improved quality of life for many people throughout the world. While helping to facilitate increased research and development, a permanent, federal incremental research and development tax incentive will also have a significant and positive long-term impact on economic growth in the United States, help to create needed jobs, increase competitiveness, reduce the cost of capital, and generate revenue without raising tax rates.

There is no serious dispute among economists or policy makers about the fact that an environment that stimulates and facilitates the process of innovation is essential to continued growth. However, during the past 50 years, 40 percent of America's research and development was related to Defense Department objectives. Some of those military technologies became important civilian products, but did so as spin-offs from defense related objectives rather than by the pursuit of specific commercial and industrial objectives.

By the early 1990s, the nation's technology industries had already begun a transition away from shrinking federal defense spending. The key problem now is how to facilitate growth in important technologies to enable U.S. industries to be more competitive in a global commercial economy.

Investments in R&D and in capital equipment are the principal mechanisms by which new technology is created and deployed. The high cost of capital in the United States as compared to that of other countries, has the effect of retarding these investments and thus retarding relative

Reservoir Place • 1601 Trapelo Road • Waltham, Massachusetts 02154 • Phone: (617) 890-MHTC • Fax: (617) 890-7478

productivity growth. Providing industries that are committed to expanding their R&D commitments in the United States with a permanent extension of the federal R&D tax incentive will help lower that cost.

Specifically, the Massachusetts High Technology Council believes an effective research and development incentive should have two key features: it must be incremental, and it must be permanent.

In urging President Clinton to support a permanent R&D tax incentive, Massachusetts Governor William F. Weld (R) said "Massachusetts has benefited greatly since we enacted the country's most generous tax incentive for research and development. We've already seen companies either move here or expand in Massachusetts to take advantage of the tax credit."

Former U.S. Senator Paul Tsongas (D-Massachusetts) said providing for a permanent research and development tax incentive "should be self-explanatory." "We can't compete long-term if we are not putting our earnings back into research and development. Such reinvestment into a company should be viewed as the corporate investment of highest priority and taxed accordingly."

U.S. Representative Joseph P. Kennedy II (D-Massachusetts) urged Congress to permanently restore the R&D tax incentive, saying "the R&D tax credit has provided a valuable economic incentive for U.S. high tech companies to increase investment in R&D in order to enhance their competitiveness in the world marketplace. The growth and prosperity of our economy here in New England and across the nation depends on the kind of investment-friendly climate that the credit provides."

The Massachusetts High Technology Council played a key role in passage of a permanent state-level research and development tax incentive in 1991. We believe Massachusetts now has the most attractive state-level R&D tax incentive in the United States. This law creates an important tax incentive for incremental increases in R&D investments in Massachusetts. For many Massachusetts employers and researchers on our public and private university campuses, this incentive is a visible change in Massachusetts tax policy which demonstrates the Commonwealth's commitment to re-establishing an investment-stimulating, job-creating, pro-research climate.

The purpose of the Massachusetts R&D tax incentive is straight-forward: it is designed to influence future decisions on where and even how much R&D is conducted. It was modeled on the federal R&D language in effect at the time, and has a number of distinct advantages over similar R&D incentives in other states. One key distinction is that it is permanent, providing investors with the crucial decision-making factors of certainty and stability.

In addition, we are currently working to amend the Massachusetts R&D incentive in two ways that could also be adopted on the federal level. One amendment would allow for a one-time election of a new 4-year base period ranging between 1983 and 1995 from which to calculate the qualifying incremental increases in R&D expenses. Another amendment would allow reductions in defense-related R&D to be excluded from the calculation of incremental growth in commercial R&D. Both of these new features will provide companies with additional flexibility to increase the "incentive" value of the credit while preserving the important "incremental" requirement and are

particularly helpful to companies making the transition from defense-related to commercial R&D activities. We urge you to consider these two features as well.

We believe a permanent, federal incremental R&D tax incentive will stimulate additional research activity, thereby increasing jobs and revenue, both in the short run and in the long run when successful new products and services are brought to market. In this context, the question shouldn't be: How can we afford this incentive for increased research and development activity? Instead we should ask: What action might we take today to provide a long-term boost to our economy? This is such an action you should take today.

We urge the House Ways & Means Committee's Subcommittee on Oversight to support H.R. 803 making the current research and development tax incentive permanent.

About the Massachusetts High Technology Council:

The goal of the Massachusetts High Technology Council is to help make Massachusetts the world's most attractive place in which to live and work, and in which to create, operate and expand high technology businesses.

The Council is a non-profit, non-partisan corporation made up of 200 entrepreneurial and respected chief executive officers of Massachusetts high technology companies -- employing more than 300,000 people.

Because it holds no political affiliation, the Council is free to focus on any issue which affects the Massachusetts economy, and to take a firm leadership role in instituting change wherever it is needed.

Since the Council's founding in 1977, it has advocated for, and ultimately influenced, state policies which have helped improve the business climate for the Massachusetts high tech industry. Today, its advice and support is sought on a wide variety of issues by members of the state legislature, the Governor's office, the national media, the education community, and other organizations, both public and private, in Massachusetts and around the world.

Chairman JOHNSON. Thank you, Mr. Anderson.

I thank the panel for your testimony.

I want to ask you all, which do you think would encourage greater research, the incremental structure that is in the current law, though possibly adjusted, or a flat tax at a lower rate?

Mr. ANDERSON. I would be willing to take a stab at that.

Chairman JOHNSON. One of the reasons this is important, I think the point that Dr. Olesen made about depth is very important, and when you look at how we can focus this in a way that it will help small business as well as big business, a flat tax on research and development investment may be more important than maintaining the incremental approach. It also may be a lot easier to administer.

But this is a fundamental issue. I want to get your input; I am going to be asking the other panels, too. We need to know whether we need to really write this all over again, or whether we need to look at base year modifications and that kind of thing.

Mr. ANDERSON. If I could just briefly respond, then other members of the panel.

We have endorsed the incremental approach. Corporations are people, they are a collective group of people, so the initial debate really is, should we tax corporations at all since the people who make up these companies end up generating wealth, paying income taxes, and generating other sources of revenue. The fact that there is a corporate income tax at all leads to this discussion of tax credits applied to the general tax.

I think in a pure environment there shouldn't be a tax on corporations and therefore the discussion ends at that point. It is not very realistic to expect a nonincremental credit, because you get around one of the key objectives of the current system, and that is to encourage incremental increases, or reward increases, and not reward those who may actually benefit from a nonincremental credit by making reductions in their research and development expenditures. So in that context, I think we would encourage remaining with the incremental nature of the credit and, as we have in Massachusetts, provide for two amendments. One is to provide an election for corporations to make a selection of what their base year period is.

I mention in my written remarks that we have a proposal in Massachusetts to allow a one-time election that will establish a 4-consecutive-year base period that slides anywhere from 1983 to 1995; that gets over some of the objections where companies are stuck at right now at a high base period.

Another option is to not count reductions in defense R&D spending against increases in commercial R&D spending, and there is a move away from defense-related R&D and toward commercial. To the extent that we should encourage corporations to move toward commercial, we should not count reductions in defense-related R&D against their increases in commercial.

Mr. HOOKER. Madam Chair, I disclaim expertise in the area of tax policy, but I do know that it is difficult to predict the behavioral effects of fundamental philosophical changes in tax policy, and we know that this current system works.

Mr. Ramstad asked for research evidence that indicates the macroeconomic effects of the policy. I have seen lots of research reports.

They certainly exist and are available to your staff, I am sure, so we know that the current program works.

We don't know what the effect would be of a flat tax. I think it would be risky. I would be in favor of extending the current approach.

Chairman JOHNSON. Thank you.

Mr. Olesen.

Mr. OLESEN. Well, as I said in my statement, we favor a nonincremental approach to the tax credit based on the fact that we see the need to build capacity across all of the industrial R&D sectors and to reward those people who have a long-term, steady commitment to R&D in the same fashion that we reward people who incrementally change their R&D. Overall, we believe that a nonincremental system would generate a healthier and more consistent long-term view of R&D, which again focuses on breakthrough kinds of technologies.

Ms. PENSABENE. With respect to the collaborative research credit, I think that the flat tax approach would obviously be better for us, particularly under the EPRI model.

The contributions to EPRI right now are based on gross sales from the utilities, and as I said, it is a 501(c)(3) corporation that does this research. There is only a minimal amount that we can, on a discretionary basis, increase those contributions because of the way the program is structured. A flat tax would be more appropriate with respect to this kind of collaborative research.

Thank you.

Mr. GANDHI. Incremental or flat, I think the key criterion that you want to keep in mind as you redesign a credit is to make sure that you target it properly; that is, we do not want to provide incentive to tax research that would have been done anyway. So if you want to target it and provide incentive for corporations to do more research, then incremental research is a better approach than flat credit.

The second thing you want to keep in mind here is, with all the problems that there are with incremental research, we are not saying that it is not working. All we are saying here is that there are problems that need to be fixed.

Now, as far as the flat credit is concerned, in appearance, it is quite even, uniform, and has an appeal, but it would miss the target, so that is the dilemma that we would have to resolve.

Chairman JOHNSON. Would a flat tax be easier to administer?

Mr. GANDHI. Flat would be easier, no question about that.

Chairman JOHNSON. When the Department issues its regulations, would you get back to us on whether or not they will make it easier to administer?

Mr. GANDHI. Sure.

Chairman JOHNSON. Because if it is easier to administer, it is also more secure for the companies to manage.

Mr. GANDHI. Right. I think the problem in the case of administration is more in terms of what is and what is not innovative research.

Chairman JOHNSON. I understand that, but that is pretty hard for the companies. If you are having a hard time determining that, it is very hard for them, too. I think if we want to encourage more

small and medium-sized business participation, we need to make this thing as clear and simple as we possibly can.

Mr. GANDHI. Yes.

Chairman JOHNSON. In that regard, do any of the panelists have any comments about how we could make this easier or more accessible to small businesses? Because it is true that, for the most part, it is a large business credit.

I am going to yield while you think that over. If you have any comments on that later on, please feel free to offer them. I am going to yield to my colleague, Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chair. I think your question about the flat tax and the incremental approach is a very critical one.

Back in 1981 when we first discussed this issue, and we first talked about the R&D credit, it was so innovative that many were afraid that if we did it on a flat basis it would look like a corporate giveaway; and now perhaps there is some rationale to look at it in terms of—those that have long-term, continuing investments in R&D perhaps should receive it. I don't know if the budgetary problems will allow us to engage in that area, but certainly it is something that I think we should begin to talk about and consider for, if not this reference period, at least in the future.

What I would like is for all five of you, but those of you in the private sector particularly, and perhaps with other panels as well, given the fact that there is a lot of concern about the base period, the 1984–88 base period, perhaps some of you can come up with some alternatives.

I know the industry groups, the coalitions, are working on that now, but perhaps some of your individual companies can also come to us with that kind of information, so that we will have this data as we begin to come up with an alternative.

What I would like to do is to spend my moments asking Dr. Gandhi a couple of questions, because in your GAO report you indicate that the credit itself, in terms of its value, is not really determined. I read the Peat Marwick study—that was November 1994—and they go into a lot of detail and data. They basically say that the earlier studies may not have shown that the credit had real value, No. 1, because there was no study of the interaction between the credit and other provisions of the Internal Revenue Code; and No. 2, companies that began to use the credit in the early and mideighties, it took them time to adjust in terms of some of their long-term investments in research and development. So the positive attributes of the credit in the earlier years and as a result of the earlier studies may not have borne out the positive effect.

The studies in the Peat Marwick document are recent studies. They have studies by Bronwyn Hall, additional studies by Bailey and Lawrence, who were the original people that did these studies, Burger, and a number of others. I take it that your office, you, and your researchers have reviewed some of these studies and the more recent studies that they have done.

From what I understand, they have indicated that there is at least a one-for-one positive advantage in terms of, for each $1 of tax loss there is an additional $1 of R&D spending; and as I indicated in my opening statement, which I got from this document, in

the long term it would produce an additional $1, so you get two for each one; and other studies have shown even more than that.

Do you have any thoughts on that? Do you think it would be appropriate for the GAO—perhaps in the future, you can't do it in the short term necessarily, but perhaps to review some of the more recent data in this area, because it might then help update some of your analysis here, perhaps show that there is a positive value rather than uncertainty as you have in your study?

Mr. GANDHI. Right. Well, let me have two comments on that.

We have looked at some of those studies that you mentioned, sir. It all boils down to what methodology they use, what assumptions they use, and how optimistic their assumptions are. We have been very careful in making sure that we be optimistic about what are the multiplier effects, the spillover effects of the research credit; and even when we use the most optimistic assumptions, we would not be coming out with something like what has been suggested.

The Joint Committee came out yesterday with its own study on that, and we have assumed even more optimistic assumptions than what is contained in the Joint Committee.

But given all that, I do not think that we will be able to come up with that kind of projection in terms of the spillover effects. But nevertheless, we would go back and study a little more and then come back and answer you.

Mr. MATSUI. The only reason I suggest that, perhaps this is a common situation with GAO reports, but there are no references to how you arrive at some of your conclusions in here. As I mentioned, there are a number of—the Eisner study of 19—they don't have a date on here, but the earlier studies indicate there is uncertainty.

But the later studies almost all indicate it does have a positive value, and perhaps some of your research people can look at some of these later ones and then if in fact it requires a change, perhaps you might want to supplement this if it is permanent.

Mr. GANDHI. Yes, we will.

Mr. MATSUI. The only reason I ask this is because these are official documents, and obviously, I believe that they have positive value; a lot of people feel these have positive value. If in fact you can't say that, that is certainly appropriate, but if additional research would be helpful——

Mr. GANDHI. We are not saying, sir, that there is not a positive value here.

Mr. MATSUI. It is uncertain is what you are saying?

Mr. GANDHI. Exactly right. It is difficult to quantify them, difficult to identify all of them and difficult to quantify them, so we will go back and look at those studies one more time.

Mr. MATSUI. If you could look at specifically some of these studies here, I think they would bear it out.

I appreciate that very much. I have no further questions. Thank you.

[The following was subsequently received:]

Recent empirical studies cited in a report produced by KPMG Peat Marwick indicate that, in the long run, each dollar of tax credit generates two additional dollars of R&D spending. Can GAO comment on these new studies and determine if they show that the credit has positive value?

We will be issuing a report later in 1995 on our review of the new studies cited in the KPMG Peat Marwick report. Most of these new studies indicated that the amount of research spending generated by the research tax credit is larger than estimated by earlier studies. However, the authors of some of these studies, themselves, said their results should be used with caution and would benefit from further research. Our forthcoming review addresses the issue of whether these new studies provide evidence that the credit is of positive value and, more specifically, whether each dollar of credit generates an additional two dollars of research spending.

Chairman JOHNSON. Thank you. I have no further questions, either, but thank you for your testimony. I invite your input in the course of the weeks ahead. Thank you.

The next panel will consist of Kevin Conway, the director of Taxes of the United Technologies Corp.; Harry Penner, president and chief executive officer of Neurogen Corp.; Rudolph Penner, managing director of Barents Group, Peat Marwick; Douglas McPherson, director of Tax Affairs of Lockheed Martin Corp., on behalf of the Aerospace Industries Association; Charles Rau, vice president and tax counsel for MCI Communications; and Randall Capps, tax counsel and director of Federal Taxes, EDS, Plano, Tex., on behalf of the Information Technology Association of America.

If we could start right in, I would remind those testifying of the light system and invite your comments.

We will start with Mr. Conway.

STATEMENT OF KEVIN CONWAY, DIRECTOR OF TAXES, UNITED TECHNOLOGIES CORP., HARTFORD, CONN.

Mr. CONWAY. Thank you, Madam Chairman. Madam Chairman and members of the subcommittee, my name is Kevin Conway. I am the director of Taxes for the UTC, United Technologies Corp.

UTC provides a broad range of high technology products and support services for the building systems, automotive and aerospace industries. Our best known products include Pratt & Whitney jet engines, Sikorsky helicopters, Hamilton Standard aerospace systems, Otis elevators, Carrier heating and air conditioning systems, and UT automotive products.

At the end of 1994, UTC ranked 31st among the Fortune 500. We employed 171,000 people, and we were the Nation's 12th largest exporter. We are established in all but six countries of the world, giving us a uniquely global presence.

I appreciate the opportunity to testify today on this important topic. I prepared a statement which I am submitting for the record, and I would like to summarize my comments. I would also like to note that the statements I am submitting have been endorsed and supported by McDonnell Douglas Corp. and Compaq Computer Corp.

I think, Madam Chairman, to focus on some of the key points, during the period 1989–94, UTC spent an average of over $700 million per year on qualified research expenditures, or a total of $4.2 billion in that 6-year period on qualified research expenditures. However, during that period, because of the current structure of the credit, we were unable to claim $1 of research credit. The reason for that, Madam Chairman, is because the credit is not really a credit for increasing research expenditures. It started out that way, but as a result of changes over the years, the structure has been changed, so that in fact during the period 1989–94 we increased our research in certain years, but we were unable to claim the credit.

The reason for that is because, under the current formula, the requirement is that the rate of research spending increases at a greater rate than the historical rate during the period 1984–88. So the notion that the credit as currently structured rewards in-

creased research spending is not accurate. In fact, that is not the case.

The problem that we see with the structure of the current credit is that a company like United Technologies, which spends in excess—an average of $700 million a year—and by the way, I would like to point out that of that average $700 million, $400 million per year, on the average, represented salaries and wages for research jobs in the United States, and that is a key factor that has to be kept in mind.

The problem that we have with the current credit is that it is linked to the historical ratio of research expenditures to sales; and we would submit that rarely, if ever, is there any kind of a logical connection between research expenditures in the current year and sales. In fact, just the opposite is usually true. Sales today are the result of research efforts of the past. Research today is to generate sales in the future.

The problem we have is the linkage under the current structure of sales and research. In fact, if you look at the current structure, one could argue that it is really counterproductive. If your research is successful and your sales go up, your credit will either be reduced or eliminated under the current formula, and the reason for that is that your historical research spending rate is multiplied by the average of your past 4 years' sales. So if your sales increase dramatically, even if you have increased research spending, you will either lose a portion of the credit or all of it; and we don't think that makes any sense.

The other thing to keep in mind is that we should focus not only on the rate of research spending, but the absolute dollars. In today's environment, every dollar is viewed from the standpoint of efficiency and effectiveness, and R&D is no exception. By requiring an increased rate of research spending, the current tax policy is counterproductive to that.

In addition, a company like UTC and broad diversified companies—aerospace, for example, our R&D is going down while our sales remain constant. On the other hand, we have commercial businesses where our sales and our research are going up, and yet we have to average all of this together, and we are not entitled to the credit.

We believe that it is time to restructure the credit. We believe that a nonincremental flat rate credit is more appropriate in today's current economic environment, and we think that a flat rate credit in the range of 3 to 5 percent is absolutely workable.

The Joint Committee report that was released on March 28 in response to the request that you and Congressman Matsui made shows that a 3-percent flat rate credit would be revenue neutral with the current extension. It would also be possible to have a graduated credit up to 5 percent.

In terms of the issue as to—research spending, I would like to point out that a flat rate credit actually does—additional spending because the more dollars you spend in any given year, the more credit you would earn.

What we need to focus on is, we have to get away from this notion of linking sales to historical research, get away from this no-

tion of focusing on incremental dollars. Every $1 of research spending is important.

The point that Congressman Matsui made about other countries' research is critical. We at UTC compete not only with companies from these various jurisdictions, but the United States is competing for research dollars as a tax jurisdiction, so that we have Korea with a flat rate credit, R&D credit; we have Canada, our neighbors to the north; Japan, a major competitor, has a 7-percent nonincremental credit on depreciable expenditures; Spain has a 15- to 30-percent credit on nonincremental expenditures; Australia, Malaysia, and others. So in terms of looking at the need for change, we need not only to look internally, but in a global marketplace where we have to compete for research dollars.

In terms of simplification, I think the arguments there are very compelling. I can tell you that the incremental credit is extremely difficult to administer, even for a large company with a sophisticated tax department. Controversies abound with the IRS not only because of the definition, but because of the application of the base period rules, and also because when the credit is incremental it might cause the IRS to focus on the incremental expenditures. They might not audit all 700 million, just the incremental amount, and that creates some controversy.

So I think the need to go to a flat rate or nonincremental credit is compelling. It is clearly time to look at that; and I think by virtue of the fact that, as we indicated, our credit is comprised substantially of research salaries and wages, we can make a strong argument that that type of a credit will provide an incentive to maintain not only our technological base, but also high technology jobs in the United States.

Thank you for the opportunity to testify. I would be pleased to answer any questions that you may have.

[The prepared statement follows:]

Testimony by Kevin Conway
Subcommittee on Oversight
Committee on Ways & Means
House of Representatives
Proposal for Non-Incremental Research Credit

May 10, 1995

Madam Chairman and members of the Subcommittee on Oversight , my name is Kevin Conway. I am Director of Taxes for United Technologies Corporation ("UTC"). UTC provides a broad range of high-technology products and support services to the building systems, automotive, and aerospace industries. Our best known products include Pratt & Whitney military and commercial aircraft engines, Sikorsky helicopters, Hamilton Standard aerospace systems, Otis elevators and escalators, Carrier heating and air conditioning systems, and United Technologies Automotive components and systems.

At the end of 1994, UTC had 171,200 employees, including 95,200 outside of the United States. UTC is the nation's 12th largest exporter. We are ranked 31st among the Fortune 500 companies and had 1994 sales of $21.2 billion with international revenues accounting for 54 percent of the total. UTC is established in all but six of the world's countries, giving it unique global presence.

Thank you for this opportunity to testify on the subject of the research tax credit. I have a prepared statement I would like to submit for the record and I will summarize my remarks.

Background

This year, Congress will consider extending the research tax credit, which is scheduled to expire June 30, 1995. Since 1981, the Internal Revenue Code has provided a tax credit for increases in expenditures for research conducted in the United States. Congress enacted the credit because of its concern that private spending for research and experimentation had not been adequate, adversely affecting economic growth, productivity gains, and our competitiveness in world markets. It believed that a substantial tax credit for incremental research expenditures would overcome the resistance of many businesses to bear the significant costs of initiating or expanding research programs. It found that while such costs bore characteristics of investment activity, the relationships between the investment in research and the subsequent earnings often were less directly identifiable, so that many businesses were reluctant to allocate scarce investment funds for uncertain rewards. By making the credit incremental, Congress intended to maximize the credit's efficiency by not, to the extent possible, allowing credits for research that would have been undertaken in any event.

Impact of the Current Incremental Research Tax Credit

In its present form, Section 41 of the Internal Revenue Code provides for a credit equal to 20 percent of the excess of a company's qualified research expenses ("QRE") over its "base amount" for that year. The base amount is intended to approximate the amount of research that a company would undertake without the incentive of the credit. The base amount is equal to the company's ratio of QRE to gross receipts for the base period 1984-1988 (its "fixed base percentage"), multiplied by the company's average gross receipts for the four years preceding the year for which the credit is being calculated.

This formula reflects an assumption that a company's average ratio of research expense to sales in the five-year period 1984-1988 is the ratio that will always be appropriate for that company, absent a tax incentive, in every subsequent year. The ratio of research expenses to sales that makes the most sense for a company may vary from year to year, however. For instance, external business conditions may dictate a decrease in the rate of spending on research compared to sales.

Examples of such business conditions follow:

A. An aerospace company might decrease its research spending rate to reflect the expectation of reduced sales in future years resulting from increased international competition and the end of the Cold War.

B. Successful research may result in a rapid, but brief, rise in sales. During the time sales are rising at an unusually high rate, however, the company will not qualify for the credit if its research expenses do not rise at the same rate.

C. Following a period of intensive research spending, a start-up company may enter a "mature" phase when it cannot match the higher rate of spending that was required to get the business going.

D. A company may consolidate and streamline its research operations as part of a larger downsizing that is required for the company to remain competitive, but its cost-saving efforts may cause it to lose the research credit.

The incremental nature of the credit also creates a competitive disadvantage for affiliated groups of companies or a single entity which conducts different businesses. A single credit calculation must be made for such a group, treating all members of the group as a single taxpayer. That means that for a group that includes some companies whose rates of research spending, considered separately, are rising, and also includes other companies whose rates of research spending are falling, the companies with rising rates may not get any research credit because their rising rates must offset the falling rates of other companies in the group. If the companies were not affiliated, the companies with rising rates would be entitled to the credit, while the companies with falling rates would not. If one commonly-held business is an aerospace company that is decreasing its R&D expenditures relative to sales to reflect an expectation of decreased future sales, that policy, appropriate for that business, could prevent an affiliated company, in a different industry, whose rate of research spending is increasing, from receiving any incentive to further increase its spending.

Proposal for a Non-Incremental Credit

Whether or not a company is increasing or decreasing its rate of research spending relative to sales, the incentive of the research credit can be an effective way to induce that company to increase its research expenditures above the amount it would have incurred in the absence of a credit. To make the research credit as effective as possible, Congress should induce the maximum number of businesses to incur research spending, by replacing the current incremental credit with a non-incremental credit with a reduced rate. We believe that a non-incremental credit at a flat rate of 3% or a graduated rate up to 5% would not result in a significant increase in revenue cost. The Joint Committee released a report on March 28, 1995 which indicated that a non-incremental credit with a flat rate of 3% would be revenue neutral with the current incremental credit.

We recognize that giving all taxpayers the option of electing either a reduced-rate non-incremental credit or the current 20% incremental credit would result in a greater revenue loss. Because some companies have reasonably relied on the continuation of the current structure of the credit in planning for future research expenses, however, we propose that companies who have previously elected the incremental credit be given the option of continuing to claim it, with the option of electing a reduced-rate non-incremental credit. Once made, such an election would be binding for all future years.

Benefits of a Non-Incremental Credit

Providing a non-incremental credit would greatly simplify credit calculations for taxpayers, and make the Internal Revenue Service's job of auditing the credit easier. The fact that the amount of the credit depends in part on a taxpayer's gross receipts in a given year undermines the incentive effect of the credit because taxpayers cannot know in advance whether they will qualify for the credit in a given year.

Global Competition

Providing a non-incremental credit would also strengthen the ability of U.S.-based companies to compete with companies based in countries with more generous tax incentives for research. Many other countries offer credits for research expenses, some much more generous than the U.S. incremental tax credit.

Canada, for instance, offers a 20 percent non-incremental credit. The province of Quebec offers an additional 20 percent non-incremental and refundable credit for qualified wages.

Spain has offered a non-incremental credit (in addition to an incremental credit) of 15 percent for non-capital expenses and 30 percent for fixed asset acquisition expenses.

Japan provides a non-incremental credit of 7 percent for the cost of depreciable property used in basic research (subject to a limit of 15 percent of current tax, when combined with the incremental credit).

Korea provides a 5 percent non-incremental credit.

Australia allows a 150 percent deduction for research expenses.

Singapore and Malaysia allow 200 percent deductions for certain non-capital research expenses.

Several countries also offer generous incremental credits, sometimes in addition to a non-incremental credit:

France provides a 50 percent incremental credit (subject to a cap of approximately $8,250,000 per year);

Japan, a 20 percent incremental credit (subject to a cap of 10 percent of current tax) in addition to the 7 percent non-incremental credit;

Korea, a 50 percent incremental credit in addition to the 5 percent non-incremental credit;

Spain offers, in addition to its non-incremental credits, incremental credits of 30 percent for non-capital expenses and 45 percent for fixed asset acquisition expenses.

Conclusion

United Technologies' average QRE have exceeded $700 million per year during the period 1989-1994, but we have not been able to claim any research credit because of its current incremental structure. This structure significantly reduces the overall effectiveness of the research credit as an incentive to incur research expenditures and locate research facilities in this country. A non-incremental credit would encourage more companies, of all sizes and in many different industries, to retain or increase research activities in the U.S. At the same time, it would simplify the structure of the credit substantially, making it easier for more companies to claim the credit. We believe that today it is especially appropriate to consider this change to make the credit more effective because of the increasing international competition faced by many U.S.-based businesses and the increased competition for research investment by different countries. The ultimate benefit would be increased innovation and productivity in the U.S. economy, the strengthening of the U.S. technology base, and the preservation and expansion of job opportunities in this country.

Madam Chairman, I would like to state for the record that the points set forth herein are endorsed and fully supported by McDonnell Douglas Corporation and Compaq Computer Corporation.

United Technologies Corporation, McDonnell Douglas Corporation, and Compaq Computer Corporation appreciate your interest in this important issue, and I would be pleased to answer any questions.

Chairman JOHNSON. Thank you, Mr. Conway, for addressing many of the issues that we have raised to this point. I appreciate that.

Mr. Penner.

STATEMENT OF HARRY H. PENNER, JR., PRESIDENT AND CHIEF EXECUTIVE OFFICER, NEUROGEN CORP., BRANFORD, CONN., ON BEHALF OF THE BIOTECHNOLOGY INDUSTRY ORGANIZATION

Mr. HARRY PENNER. Thank you. Good morning, Madam Chairman, and members of the subcommittee. I am testifying today in support of the R&E credit both on behalf of Neurogen in Branford, Conn., and also the BIO, Biotechnology Industry Organization.

We strongly support H.R. 803, which is legislation introduced by you, Congressman Johnson, and you, Congressman Matsui, to make the R&E credit permanent. We very much appreciate the leadership you both have shown in behalf of America's research-intensive entrepreneurs, and we strongly urge the Congress to enact this legislation before the credit expires on June 30, 1995.

We also support restructuring the credit so it is available as a more effective incentive for most biotechnology companies.

Let me briefly describe Neurogen and its research and development program, then focus on our proposals to restructure the credit. Neurogen is an emerging neuropharmaceuticals company engaged in the design of breakthrough small-molecule drugs to treat a variety of neuropsychiatric disorders.

My company was formed in 1987, went public in 1989, and has grown to more than 80 employees. Some 35 percent of our employees hold doctoral degrees. We have spent more than $35 million since our founding on research. We spent $13 million on research last year. We have no product revenues, and we possibly won't have any until as late as 1999.

The drugs used currently to treat neuropsychiatric disorders are a bit like taking a shotgun to target practice. They hit the neurotransmitter, the receptor in the brain that you want to hit to improve the condition, but they also hit a variety of things around it. These are translatable readily into side effects.

Our technology, which is very novel, enables us to basically take a rifle to the receptor and not only improve the condition but virtually eliminate the possibility of side effects. In the clinic, we have patients taking a nonsedating and nonaddictive anxiolytic drug. We have in human trials a breakthrough treatment for schizophrenia, which is, we believe, going to prove free of side effects so problematic in current medications that as many as 50 percent of schizophrenic patients are not well treated; and we have a drug candidate for eating disorders.

Some 50 to 100 million people in the United States are impacted dramatically by neuropsychiatric disorders. On the one hand, we think ourselves quite special because of what we do, but on the other hand, Neurogen is really quite typical of America's 1,300 biotechnology companies. The biotech industry is the most research-intensive industry in the civilian sector.

The average biotech company spends about $68,000 per employee per year on research. My company spent over $170,000 per em-

ployee on research last year. This is many times the U.S. corporate average of $7,500 per employee. In a 1994 survey by Business Week, 6 of the top 10 firms in the United States in terms of research expenditures per employee were biotech companies.

This industry holds tremendous promise for the improved health and productivity of our citizenry. Already 27 breakthrough products have emerged from biotech R&D. Many more are in clinical trials.

The R&E credit has represented a powerful statement by the Congress in support of our work, in support of high technology in general, and in support of investment in this country's future. It also represents a significant economic incentive to our companies. But almost ironically, biotech companies tend to lose this credit just when they finally manage to bring products to the market and to generate revenue. The problem arises from the unusual economics of our industry—huge research expenditures, long development times, no revenues for many years, followed hopefully by substantial revenues. While the economics of our industry are unusual, I hope you will agree that the biotech industry is exactly the kind of research-intensive industry to which the R&E credit should apply.

We have two proposals to restructure the credit. Let me just mention them briefly. They are explained in more detail in my full statement.

No. 1, we recommend the fixed-base percentage limitations be reduced from 16 to 8 percent. No. 2, we recommend the minimum 50-percent base rule for R&E credits be eliminated. These two proposals will solve the problem with the credit; they will not create any new problems for any other industry. We don't want biotech companies like Neurogen to lose the credit just when they finally manage to bring a product to market and begin to generate revenue.

Let me summarize by stating that failure to provide viable incentives to technological advancement risks U.S. competitiveness, the viability of high technology-based businesses in this country, new jobs which are almost always higher paying—it is a higher paying end of the spectrum—future increases in taxable income, and perhaps even, most importantly, advances in the health and productivity of our citizens.

Thank you very much, and I will be happy to answer any of your questions.

[The prepared statement and attachments follow:]

TESTIMONY OF
HARRY H. PENNER, PRESIDENT AND CEO
NEUROGEN CORPORATION
ON BEHALF OF THE
BIOTECHNOLOGY INDUSTRY ORGANIZATION (BIO)
BEFORE THE OVERSIGHT SUBCOMMITTEE
HOUSE WAYS AND MEANS COMMITTEE
REGARDING THE
RESEARCH AND EXPERIMENTATION
TAX CREDIT
MAY 10, 1995

Madam Chairman and members of the Subcommittee. My name is Harry H. Penner, Jr. and I am President and CEO of Neurogen Corporation of Branford, Connecticut.

I am testifying today regarding the Research and Experimentation Tax Credit (R and E Credit) on behalf of Neurogen and the Biotechnology Industry Organization (BIO).

BIO represents more than 570 biotechnology companies, academic institutions, state biotechnology centers and related organizations in 47 states and more than 20 nations. BIO members are involved in the research and development of health care, agricultural and environmental biotechnology products.

As entrepreneurs must do, let me start with the bottom-line: we support H.R. 803, legislation introduced by Congresswoman Nancy Johnson and Congressman Robert Matsui, to make the R and E Credit permanent. We very much appreciate the leadership they have shown for America's research-intensive entrepreneurs. We urge the Congress to enact this legislation before the Credit expires on June 30, 1995. We also support restructuring the Credit so it is available as an effective incentive for most biotechnology companies.

Furthermore, we recommend that the Congress consider the R and E Credit and the Orphan Drug Tax Credit in tandem. The two Credits are interrelated; both should be made permanent and restructured. We appreciate the support which Congresswoman Johnson and Congressman Matsui have given to making the Orphan Credit permanent and restructuring it and we strongly support H.R. 1560, the bill they have introduced to this end.

Let me first talk about Neurogen and its research and development program, the R and E Credit, the biotechnology industry, and our proposals for restructuring the Credit.

Neurogen and Research and Development

Neurogen is a leading neuropharmaceuticals company engaged in the design and development of breakthrough small molecule psychotherapeutic drugs.

My company was formed in 1989, went public in 1989, and has grown to more than 80 employees, some 35% of whom hold doctoral degrees.

Our company has spent more than $35 million on research since it founding, $13 million last year alone. We have no revenue yet from product sales and do not expect any revenue from product sales until 1999. We have some revenue from other sources. We find that the R and E Credit is a tremendous incentive for investments in research.

Neurogen has integrated its proprietary understanding of neurobiology and molecular biology with cutting edge medicinal chemistry technologies to pioneer the synthesis of new generation of highly receptor specific compounds. This unique series of drug candidates promises improved treatment for a broad range of neuropsychiatric disorders, including anxiety, schizophrenia, epilepsy, dementia, depression, and sleep, eating and stress disorders. More than fifty million persons in the U.S. alone suffer from these disorders and the global market exceeding $12 billion.

Neurogen is pursuing major design and development programs based on the modulation of GABA, dopomine, and neuropeptide receptors. Using computational chemistry, the company is also developing, both for its internal use and for other biotech and pharmaceutical companies, an extensive library of high quality small molecule compounds which are designed to exhibit drug-like characteristics.

One of the molecules we have developed, NGD 91-1, has been shown to be as effective as 10 mg of Valium but with no sedation or alcohol interaction. Additional targets for this compound are dementia and sleep disorders. Another molecule, NGD 94-1, is a highly specific dopomine D4 antagonist for psychosis, or schizophrenia. We have two broad spectrum anti-psychotics, NGD 94-2 and NGD 93-1. Finally, Neurogren's neuropeptide research targets the neuropeptide associated with eating disorders, hypertension, and depression.

We are proud of the research we are doing, its importance for the well being of patients, and positive economic impact we have had on the State of Connecticut.

The R and E Tax Credit

The R and E Credit provides a 20% tax credit for qualifying research and development expenditures. It is an incremental, not a flat rate credit, and the calculation of the credit amount is complex. Not all research is included in calculation of the Credit, in fact, our industry finds that only about half of the research expenses are covered. With a 20% credit for qualified research, and at most 50% of our research covered, the true value of the credit to those companies which can claim it less than 10%.

The Orphan Credit is an alternative to the R&E Credit. Both credits are incremental credits and both are incentives for research. Firms receive only one credit for their research depending on whether it is or is not related to research on cures and therapies for "orphan" diseases or conditions (rare diseases where there is a limited patient population and limited commercial potential). The Orphan Credit is 50% for qualified research. Again, however, at most half of the research expenses are covered, and other sharp limitations apply, so the true value of the credit for the companies which can claim it is less than 25%.

We urge the Subcommittee to consider the two Credits in tandem; they are intimately related and complementary.

Economics of the Biotechnology Industry

The importance of the R and E Credit and our restructuring proposals become immediately apparent when one understands the economics of the biotechnology industry.

The biotechnology industry is one of the most research intensive industries in the civilian manufacturing sector. The average biotechnology company spends $68,000 per employee on research, more than nine times the U.S. corporate average of $7,500. In a 1994 survey by *Business Week*, six of the top ten firms in the U.S. in terms of research expenditures per employee were biotechnology companies, including Biogen ($208,724), Genentech ($117,594), and Genetics Institute ($107,657). Ernst & Young[1] reports that biotechnology companies spent $7 billion on research and development in 1994, up $1.3 billion over 1993.

Bringing a biotech drug product to the market today is both a lengthy and expensive process. From the initial testing of the drug to final approval from the Food and Drug Administration can take 7-12 years, and this process can cost anywhere from $150 to $359 million. Both the length and cost of this process are a tremendous impediment for small biotechnology companies attempting to bring a product to the market.

There are currently 28 biotechnology therapeutics and vaccines on the market. Ernst & Young reports that there are 270 in human clinical development, and over 2,000 in early research stages. As products move into clinical trails, expenses increase. The need for capital for

[1]A fiscal year for Ernst & Young is from July 1 through June 30. Therefore, 1994 indicates July 1, 1993 through June 30, 1994.

biotechnology companies to fund research is increasing right at the time when the industry is coping with a financial crisis.

The biotechnology industry experienced a net loss of $4.1 billion in 1994, and has lost over $11 billion in the last three years. In addition, biotechnology companies raised only $278 million during the first quarter 1995, compared with $762 million in the first quarter of 1994, a 63% decline.

The value of the stock of the publicly traded biotechnology companies has declined precipitously. Since January 1993 the American Stock Exchange (AMEX) biotechnology index has declined by approximately 54% and the index for biotechnology firms traded on the Chicago Board of Options Exchange (CBOE) has declined by 34%.[2] This decline over the past 28 months is due to a variety of factors, including the proposals for controls on prescription drug prices by the Clinton Administration and others during the health care reform debate, disappointments in human clinical trials, and regulatory, tax, patent and litigation issues.

A September 1994 Ernst & Young report finds that biotech companies, on average, have 25 months of capital left at their current burn rates (the rate at which capital is being expended).[3] According to a March 1994 report by Dr. Robert Goldberg of the Gordon Public Policy Center at Brandeis University, 75 percent of biotechnology companies have 2 or fewer years of capital left.[4] Ernst & Young estimates that there are 1,311 companies. If 75% have 2 or fewer years of capital left at their current burn rates, a staggering 983 companies would need to return to the market for more capital.

This capital crunch means that in the struggle to survive, companies must focus on the technology which is closest to the marketplace. They may be interested in other, longer-term projects, but they need revenue to survive. Only when they have revenue can they avoid the need to raise capital from investors.

Impact of the R and E Credit on Biotechnology Research

There can be little doubt that investment in research and development is the answer to keeping the United States economy powerful during this decade and the next century. And, surely, there can be no doubt whatsoever that America's continued economic leadership is indispensable to our national security and freedom. It is the research-driven industries which traditionally have enabled the United States to meet the rapidly intensifying industrial challenge from the rest of the world.

Biotech companies are precisely the type of companies that should be given every incentive to fully explore the technology they have invented. Such companies are beyond the start-up stage, but their revenues and corresponding research budgets are growing rapidly.

These companies are the heroes of the American private sector. If anything, they should be singled out for emulation and given added stimulation. The structure of the current R and E (and Orphan) Credit does the opposite; companies often lose the credit just when they begin to market their first products. Why take away an incentive to keep spending a large portion of revenues on research just when these companies are beginning to be successful? Why force them to reduce their research?

For the biotechnology industry to maintain its leadership in light of increased competition from Japan and Europe, the U.S. industry must compete and win in terms of research breakthroughs, which translates directly into substantial, sustained investment in research and

---

[2] These percentage declines are different because these indexes include the stocks of different biotech companies. The most current figures are provided. In addition, the BioCentury 100 (TM) Indicators for a group of publicly traded biotechnology companies has declined by 40% from January 1994 through the first quarter of 1995.

[3] "Biotech 95: Reform, Restructure, and Renewal," Ninth Annual Report on the Biotechnology Industry, Ernst and Young (September 1994).

[4] "Price Controls and the Future of Biotechnology: The Results of a Survey," Dr. Robert Goldberg, Senior Research Fellow, Gordon Public Policy Center, Brandeis University (March 1994).

development. Biotechnology is barely a decade old and already it faces formidable international competition.

The fundamental purpose of the R and E Credit is to provide an incentive to private companies to conduct accelerated research -- research which will maintain our dominant position in critical industries which first emerged in the United States. After eight years of sporadic temporary measures, legislation is needed to offer a permanent tax credit for R&E activities. By its nature, R&E spending requires long-term commitment and planning. The various temporary measures in place since the previous law expired have not provided the stability needed to fully stimulate maximum research and development.

When a permanent R and E Credit is finally enacted, careful thought should be given to making the bill a complete mandate for maintaining America's leadership in vital industries. It is crucial to give the maximum incentive to emerging companies in relative new industries, such as biotechnology. In the case of biotechnology, these R&E investments will translate into dramatically improved health care for generations to come.

The R and E Credit is important to fast-growing R&E-intensive companies. For these emerging, high-growth companies, an incentive to increase investment in research and development makes the difference as to whether research projects are continued or dropped. The biotechnology industry provides a good illustration of this point.

As I have said, it takes ten to twelve years and hundreds of million dollars of R&E investment to successfully develop one new biotechnology drug. Each drug candidate faces numerous scientific and regulatory hurdles, in addition to normal competitive risks, before a biotech company can market a new prescription drug. In addition, new drugs face unprecedented price and competitive pressures due to the new health care environment. This means that a biotechnology company that is successful in commercializing its first new drug cannot sit back and enjoy its success but must continue to invest ever-increasing funds in new R&E to discover new products and grow the business. This is why the Business Week survey listed biotechnology companies as the most research-intensive companies in the country.

The need to be research intensive poses a dilemma to management. It must fund high-risk research over a long period of time while showing a profit to raise equity to fund the required R&E. This requires management to keep marketing expenses, administrative expenses, and non-research costs at an absolute minimum, as well as make difficult and painful decisions on which research projects to fund and which to drop. Given the very lean marketing and administrative levels at which these companies operate, R&E becomes the swing item in the budget. Thus management is constantly forced to drop some of its promising but higher risk projects on diseases like AIDS and breast cancer in order to meet their minimum profit targets. Once the minimum profit level is met, every additional dollar of revenue can be reinvested back in R&E.

The R and E Credit is critical to these companies. An R and E Credit directly reduces the company's tax expense and thereby increases earnings. These earnings can then be reinvested back in R&E while maintaining the company's profit level. The Credit has supported research on diseases like breast cancer, cystic fibrosis, and AIDS that would otherwise not be done. A permanent credit is particularly important to the biotech industry since its research horizons are so long term. Knowing a credit will be there for the next five years allows the companies to include it is in their long-range plan and support the continuation of high-risk projects.

Some argue that the Credit is not needed since the R&E would be done in any event. That is simply not true for the biotechnology and similar emerging research-intensive industries. It very well might make the difference between finding cures for Alzheimer's, AIDS, breast cancer, blindness and similar diseases, or not.

Restructuring the R&E Credit

BIO supports H.R. 803 and supports making the R and E Credit permanent. We also support restructuring the Credit so that most biotechnology companies qualify for it.

The problems our industry has with the current R and E Credit stem largely from the fact that the Credit is a ratio of research expenditures (the numerator) to the firm's gross receipts (the

denominator). Most biotechnology companies have no revenue, no gross receipts, but they have very large research expenditures. So, the numerator is large and the dominator is zero. As, soon as the firm begins to generate receipts, the denominator becomes a positive figure and it grossly distorts the fraction, the ratio, which determines the firm's R and E Credits.

This is a peculiar problem which does not exist for mature firms, or firms which have revenue at all times in their history. It is a unique problem which stems from the economics of our industry -- huge research expenditures, long development times, no revenues for many years, followed hopefully by revenues commensurate with the considerable risk which our investors have taken in funding the research. We believe that the economics of the biotechnology industry should be rewarded, not penalized by the R and E Credit. To avoid penalizing our industry, the Credit must be restructured.

BIO recommends that the R and E Credit be restructure in two ways:

1. Fixed-Base Percentage Limitation: The fixed base percentage limitation be reduced from 16% to 8%. The 16% maximum base percentage is the limitation on qualifying research (as a percentage of sales) which may be used to calculate the R&E Credit. Many biotech companies' research and development-to-sales ratio often exceeds 16% in their early years before the company's R&E results in a product. For these companies the 16% limitation is far too high.

As biotech companies mature and begin to generate sales, their research-to-sales ratio begins to move closer to the average for pharmaceutical companies, about 15%. This pharmaceutical average ratio is itself three times higher than the all industry average, so you can see how high the ratio is for biotech companies.

The problems with the 16% fixed base limitation is compounded by the fact that roughly 50% of a biotech company's financial statement R and D expenses do not qualify for the R&E Credit. Overhead and other costs of R and D do not qualify for the R&E Credit. A 16% limitation, therefore, requires a biotechnology company to invest over 32% of its sales in R and D (per its financial statement) to get any R&E Credit. This is clearly too high. The practical effect is that the most biotech companies will never receive an R&E Credit once they are mature, even if they invest far more revenue in R and D than any other type of company.

To correct the inequity of the current law, the 16% fixed base limitation should be reduced to 8%. This will still require biotech companies to spend at least 16% of sales on R and D in order to qualify for the R&E Credit.

2. Eliminate Minimum 50% Base Rule: The minimum 50% base rule for R&E Credits should be eliminated. It makes no sense that biotech companies which finally do qualify for the R&E Credit should be hit with a cap on their Credit.

The rule actually deters and penalizes significant growth in R&E expenditures by limiting the increment on which a credit can be given once the increment is equal to 50% of the current-year spending (or once the current year spending equals twice the baseline amount). The effect of the limitation is to bring the marginal incentive effect of the credit down from the statutory 20% to only 10%. If a company has a base of $10 million increases its R&E expenditures to $20 million, the full amount of the increase. But, if it increases its R&E expenditures to $30 million, the credit will be available only on the difference between the $30 million and the artificially assigned minimum base of $15 million, not the full increase of $20 million. This is contrary to the whole purpose of the R&E Credit.

It makes no sense to limit the credit for the firms which increase their R&E expenditures the most, but this is what the minimum 50% base rule does.

Robert Eisner, Steven Albert, and Martin Sullivan have analyzed the current R&E Credit and made some recommendations for its reform. Specifically they have suggested certain reforms which would increase the credit's effectiveness. Their first recommendation is to "eliminate the 50 percent floor to the base." They argue that, "While this limitation does not apparently relate to a large

proportion of R and D, its negative incentive effects can be considerable when it comes into play."[5]

Cost-Effectiveness of the Credit to U.S. Competitiveness

The Joint Committee on Taxation has found that making the Credit permanent will cost approximately eight billion dollars over five years. It has not yet provided estimates of the cost of these two restructuring proposals. The Credit is a sound investment for the country in the long-term competitiveness of a critical American industry.

In 1991, the Office of Technology Assessment (OTA) found that Australia, Brazil, Denmark, France, South Korea and Taiwan (Republic of China) all had targeted biotechnology as an enabling technology. Furthermore, in 1984, the OTA identified Japan as the major potential competitor to the United States in biotechnology commercialization.[6]

The OTA identified the manner in which Japan had targeted biotechnology. Its report stated,

> In 1981, the Ministry of International Trade and Industry (MITI) designated biotechnology to be a strategic area of science research, marking the first official pronouncement encouraging the industrial development of biotechnology in Japan. Over the next few years, several ministries undertook programs to fund and support biotechnology.

The Japanese Ministry of Health and Welfare instituted a policy whereby existing drugs would have their prices lowered, while allowing premium prices for innovative or important new drugs, thus forcing companies to be innovative and to seek larger markets.[7]

It is widely recognized that the biotechnology industry can make a substantial contribution to U.S. economic growth and improved quality of life. For example:

* The National Critical Technologies Panel, established in 1989 within the White House Office of Science and Technology Policy by an Act of Congress,[8] calls biotechnology a "national critical technology" that is "essential for the United States to develop to further the long-term national security and economic prosperity of the United States."[9]

* The private sector Council on Competitiveness also calls biotechnology one of several "critical technologies" that will drive U.S. productivity, economic growth, and competitiveness over the next ten years and perhaps over the next century.[10]

* The United States Congress Office of Technology Assessment calls biotechnology "a strategic industry with great potential for heightening U.S. international economic competitiveness." OTA also observed that "the wide-reaching potential applications of biotechnology lie close to the center of many of the world's major problems -- malnutrition, disease, energy availability and cost, and pollution. Biotechnology can change both the way we live and the

industrial community of the 21st century."[11]

* The National Academy of Engineering characterizes genetic engineering as one of the ten outstanding engineering achievements in the past quarter century.[12]

The importance of the biotechnology industry to America's competitiveness warrants making the R and E Credit permanent and restructuring it.

Detailed explanations of the fixed base limitation and minimum 50% base rule appear in the appendixes to my testimony.

Conclusion

BIO's first priority is to make the Credit permanent, but restructuring the Credit will ensure that it provides an effective incentive for research by biotechnology companies as they begin to market products, a critical time in the life cycle of a company.

BIO's proposals are for amendments to existing tax incentives, not enactment of new tax incentives. It should not be surprising that the tax code does not recognize the special strengths and needs of entrepreneurs. The tax code is old and relatively inflexible and it reflects the values of our economy as it was in the past. The problems entrepreneurs have with the tax code are similar to the problems they have with agency regulations. In both cases the terms of the law may be well intentioned, but they do not work well in the real world. BIO urges this Subcommittee to look at the tax code much as are other committees which are developing a regulatory relief program and ensure that the tax code does not unintentionally discriminate against entrepreneurs.

Thank you very much. I am ready to answer any questions you might have.

[12] National Academy of Engineering, Engineering and the Advancement of Human Welfare: 10 Outstanding Achievements 1964-1989 2 (1989).

Explanation of the Fixed-Base Percentage Limitation

In restructuring the R&E Credit, BIO recommends that the fixed-base percentage limitation be reduced from 16% to 8%. Following is a detailed explanation of the fixed-base limitation:

The Revenue Reconciliation Act of 1989 made some basic changes to the computation of the credit for research activities as defined in Internal Revenue Code Section 41 for taxable years beginning after 1989. For such taxable years, a 20% tax credit is available for qualified research expenditures paid or incurred in a trade or business before July 1, 1995.

The tax credit is based upon the difference between a company's qualified research expenditures for the current year over a company-specific base amount.

The fixed base percentage is a key component factor in the computation of the credit for research activities.

The **credit for research activities** is currently calculated as the sum of:

1. 20% of the increase in qualified research expenses (QRE) for the current year over a base amount, and

2. 20% of the university basic research payments.

The fixed base percentage is one of two factors used in the calculation of the **base amount.**

Base amount = fixed base percentage x average gross receipts for the four tax years preceding the credit year

The **fixed base percentage** of an existing company (except for start-ups) is a ratio. Assuming a calendar year taxpayer, the ratio would be:

Fixed base percentage = $\frac{\text{the taxpayer's aggregate QRE for 1984-1988}}{\text{aggregate gross receipts of taxpayer for same years}}$

The fixed base percentage (for non start-ups) cannot exceed 16%.

Therefore, if the computed ratio is more than 16%, the fixed base percentage "limitation" is imposed and the base amount will be calculated as 16% times the average annual gross receipts for the four tax years preceding the credit year.

Reducing Fixed Base Percentage Limitation from 16% to 8%

BIO's recommends that the 16% maximum fixed base percentage be reduced to 8% because the 16% maximum prevents certain R&E-intensive firms from receiving any R&E Credit. Following is the explanation of this recommendation.

The R&E Credit is based on increases in the amount of sales reinvested in current year "tax qualified"[1] R&E ("R&E") compared to the average amount of sales reinvested in R&E during the 1984-1988 period ("fixed base amount"). For example, if a company reinvested an average of 2%[2] of sales in tax-qualified R&E during 1984-1988, it will receive an R&E credit only if it invests more than 2% of its sales in current year R&E expenditures.

An R&E-intensive company's R&E-to-sales ratio will ' unsustainably high during its formative years as it invests in R&E in anticipation of future sales. As documented in a June 27, 1994 Business Week article, this is particularly evident in certain industries like biotech, where it can take over twenty years before a company has enough products on the market for its R&E-to-sales ratio to begin normalizing. The article lists six biotech companies as having "book" R&E-to-sales ratios of over 35% in 1993, the highest in the country. These ratios compare to the overall industrial

---

1. Industrials invest approximately 2% of their sales in "tax qualified" R&E. (Tax qualified R&E excludes depreciation on R&D buildings and equipment and other expenses. It is approximately 50% of financial statement R&E.)

[2] The industrial average on a "tax qualified" R & E basis.

average of approximately 4%.

As these emerging companies become successful in developing new products, their R&E-to-sales ratios must decline and become closer to industry averages if they are to be profitable over the long term. Unless their fixed base amount is adjusted, however these R&E-intensive companies will not receive any R&E credit in future years since their future R&E-to-sales ratios will be lower than that of the 1984-88 period. This is clearly an unfair result.

To provide partial relief to early stage R&E-intensive companies, current law provides that the "fixed base amount" cannot be greater than 16%. This can be illustrated by the following example:

		1984-1988 (Average)
Sales		$25
R&E Expenses per Financials		$25
Actual % of Book R&E to Sales		100%
"Tax R&E" Eligible for Credit[1]	(A)	$12.50
% of "Tax" R&E to Sales (A/Sales)	(B)	50%
Fixed Base Amount (Lesser of B or 16%)		16%

The 16% limit is based on tax qualified R&E. Since only approximately one-half of book R&E qualifies for the R&E Credit, the 16% limit, therefore, effectively requires companies to invest over 32% of future sales in book R&E to get any credit in the future. This is an impossible base amount to exceed on a long-term basis, since the industry average is only about 4% and as shown in the Business Week survey, no industry averages over 11% on a book basis.

It is recommended that the 16% amount be reduced to 8%. The 8% amount will still require these companies to invest over 16% of sales in book R&E to be eligible for a credit. This level of R&E investment would still be more than most major R&E spenders invest, but at least would be a more reasonable "barrier" to get the credit. This can be illustrated as follows:

	Late Stage Development Company					
	8% Base			16% Base		
Sales		$100			$100	
R&E Expenses per Financials	$26			$26		
Actual % of Book R&E to Sales		26%			26%	
"Tax adjusted R&E"	$ 13	A		$13	A	
% of "Tax" R & E to Sales (A/Sales)	13%	B		13%	B	
Fixed Base Amount[4]		8%	C		16%	C
Qualifying R&E ([B-C] x A)	$5	D		$0	D	
R&E Credit (13%[3] x D)	$0.65	E		$0	E	

Eliminating the 50% Minimum Base Rule

BIO recommends that the 50% minimum base rule be eliminated. Following is a detailed explanation of the 50% minimum base rule:

The "minimum base rule" is a misnomer. The rule actually is an incremental limitation which deters and penalizes significant growth in research expenditures by limiting the increment of which a credit can be given once the increment is equal to fifty percent of current-year spending (or once the current year spending equals twice the baseline amount). the effect of the provision is to bring the marginal incentive effect of the credit down from the statutory twenty percent credit rate to only 10 percent. For example, assume a company with a base of $10 million is contemplating current-year research expenditures of $20-30 million. If the company increases its expenditures to $30 million, the credit will be available only on the difference between the $30 million and the artificially assigned minimum base of $15 million, not on the full increase of $20 million. thus, contrary to the general Congressional intent of stimulation innovation and productivity, the minimum base puts

---

[1] Approximately 50% of book R & E qualifies for the credit.

[4] Assumes actual R & E to-sales ratio exceeding 16% in 1984 through 1988 period.

[3] Adjusted for Section 280C (20% vs. 65%).

constraints on those companies that want to make the greatest research efforts.

There is no policy justification for exacerbating the disincentive effect of the minimum base provisions. Many start-up and emerging growth companies would be even more adversely affected by the increased limitation than they are under the present-law rules. These smaller companies typically reinvest a significant portion of their cash in additional research. Taking away R&E Credits from these companies will make it more difficult for them to remain independent and compete in the global marketplace.

Chairman JOHNSON. Thank you for your testimony. We are pleased to have two Connecticut companies so dedicated to leadership through R&D.

Dr. Penner of Barents Group.

STATEMENT OF RUDOLPH G. PENNER, PH.D., MANAGING DIRECTOR, BARENTS GROUP, KPMG PEAT MARWICK, ON BEHALF OF WORKING GROUP ON RESEARCH AND DEVELOPMENT

Mr. RUDOLPH PENNER. Thank you, Madam Chair. I am pleased to appear before the subcommittee this morning on behalf of the Working Group on Research and Development to discuss the importance of making the R&E tax credit permanent before it expires on June 30 of this year.

It is clear that the credit is now generally regarded as an effective means of stimulating domestic R&D spending. Its effectiveness has been demonstrated by several recent independent economic studies. Nevertheless, its current temporary nature and uncertain future status make the credit less effective than if it were a permanent feature of the Tax Code. Ironically, because the Congress has extended the credit every year—albeit, sometimes retroactively—this short-term approach has yielded no reduction in the credit's actual costs; only its benefits have been reduced.

It is generally recognized that any tax incentive that is designed to encourage long-run investments will be more effective where taxpayers have some certainty regarding its continued availability. Perhaps the single most important reason why the credit has not been made permanent to date has nothing to do with the effectiveness of the credit. Rather, the key issue is revenue. A permanent extension of the credit may cost roughly $8 billion over the next 5 years according to the JCT. However, as just noted, assuming that Congress will otherwise continue to temporarily extend the credit on a short-term basis, no net revenue is actually preserved over the long term. Instead, the credit is simply made less efficient. That is, investors do not fully trust that the credit will always be available. As a result, this uncertainty is likely to lead investors to demand higher rates of return on their R&D investments than would be necessary with a permanent credit. Consequently, the periodic short-term extensions themselves impose a cost in the form of reducing the credit's effectiveness.

I would now like to turn very briefly to the key findings in a report we prepared last fall for the Working Group on Research and Development. In brief, these findings are, No. 1, that R&D is important to the Nation's long-run economic growth. In every theory of economic growth that I know, technological change is the source of a major portion of economic growth, and R&D furthers technological change or else companies would not finance it.

No. 2, there is a tendency for the private sector to underinvest in R&D. The rewards to R&D are difficult to protect using patents and other devices. Innovators are often copied. This copying increases the benefit to society but reduces the reward to the innovator. A tax credit can compensate for this failing of the marketplace.

No. 3, R&D growth has been sluggish in recent years and is lagging behind that of some of our major international competitors.

That is made clear, Madam Chair, in my full testimony in figures 1 and 3.

No. 4, evidence collected over the past several years has shown the credit to be quite effective in stimulating increased R&D spending. As has already been noted in these hearings, earlier studies did not show high effectiveness, but they didn't have much data to work with. More recent academic studies show a very high impact.

No. 5, our analysis indicates that the credit can be made more effective if permanently extended, as I have said several times. I think that point is fairly obvious. A credit that businessmen can rely on will have a much greater impact on their decision process than one that is uncertain. That is especially true when their investment decisions are made for the long run and there is already considerable uncertainty about the payoff to R&D. There is no need to add further to the risk with uncertain tax law.

Thank you very much, Madam Chairman.

[The prepared statement follows:]

STATEMENT OF RUDOLPH G. PENNER, PH.D.
MANAGING DIRECTOR, BARENTS GROUP
KPMG PEAT MARWICK
ON BEHALF OF WORKING GROUP ON RESEARCH AND DEVELOPMENT

Good morning, my name is Rudolph Penner. I am a Managing Director at Barents Group LLC, a wholly owned subsidiary of KPMG Peat Marwick LLP. I direct the Firm's practice in performing economic analysis of tax and budgetary policies. I am pleased to appear before the subcommittee this morning on behalf of the Working Group on Research and Development to discuss the importance of making permanent the research and experimentation tax credit before it expires on June 30 of this year. It is clear that the credit is now generally regarded as an effective means of stimulating domestic R&D spending. Its effectiveness has been demonstrated by several recent independent economic studies. Nevertheless, its current temporary nature and uncertain future status make the credit less effective than if it were a permanent feature of the tax code. Ironically, because the Congress has extended the credit every year (albeit sometimes retroactively), this short-term approach has yielded no reduction in the credit's actual costs — only its benefits have been reduced.

It is generally recognized that any tax incentive that is designed to encourage long-run investments will be more effective where taxpayers have some certainty regarding is continued availability. Perhaps the single most important reason why the credit has not been made permanent to date has nothing to do with the effectiveness of the credit. Rather, the key issue is revenue. A permanent extension of the credit may cost roughly $8 billion over the next five fiscal years, according to the Joint Committee on Taxation. However, as just noted, assuming the Congress will otherwise continue to temporarily extend the credit on a short-term basis, no net revenue is actually preserved over the long term. Instead, the credit is simply made less efficient. That is, investors do not fully trust that the credit will always be available. As a result, this uncertainty is likely to lead investors to demand higher rates of return on their R&D investments than would be necessary with a permanent credit. Consequently, the periodic short-term extensions themselves impose a cost in the form of reducing the credit's effectiveness.

I would now like to very briefly discuss a few of the key findings in a report we prepared last fall for the Working Group on Research and Development.[1] In brief, these are:

- R&D is important to the Nation's long-term economic growth.
- There is a tendency for the private sector to under-invest in R&D.
- R&D growth has been sluggish in recent years and is lagging behind that of some of our major international competitors.
- Evidence collected over the past several years has shown the credit to be quite effective in stimulating increased R&D spending.
- Our analysis indicates that the credit can be made more effective if permanently extended.

R&D is Important to Long-Run Economic Growth: Advances in scientific and technical knowledge are important factors explaining improvements in productivity and long-run economic growth. Innovations resulting from successful research and development (R&D) increase productivity, which contributes to increasing wages and standards of living. And,

[1] "Extending the R&E Tax Credit: The Importance of Permanence," Policy Economics Group, KPMG Peat Marwick LLP, November 1994.

numerous economic studies over the past 20 years have documented a strong link between R&D activity and productivity growth.

There is a Tendency to Under-invest in R&D: R&D activity contains a substantial "public-good" element: The benefits of R&D are not fully reflected in private rates of return, which leads to under-investment in research. Social rates of return to R&D investments are typically about twice as high on average as private rates of return. Examples of the private and social rates of return to R&D for five research-intensive industries are given in Table 1. Documented cases of a particular industry or innovation for which the social rate of return to R&D was less than the private rate of return are quite rare. The difference between the two rates of return represents the benefits to innovation that the innovator is unable to capture — typically referred to as a spillover effect: companies can often piggyback on the R&D successes of others by copying their products and production processes. The resulting competition drives down prices, which pushes the private rates of return below the social rates of return. Similarly, cost-reducing innovations in one company or industry can lead to cost reductions in other companies or industries. The existence of such spillovers implies that there is a tendency to under-invest in industrial R&D. This classic public-good problem is the fundamental justification for government intervention in the R&D market: a tax credit for R&D lowers the cost of private R&D investment, and helps to bring such investment up toward the socially desirable level.

The computer and semiconductor industries abound with examples of spillovers. The development by one manufacturer of a faster and more powerful microprocessor quickly leads to imitation by other manufacturers. Similarly, the development by one wordprocessor software company of a handy new feature — such as graphics capabilities or little buttons that automate complicated tasks — quickly leads to imitation by competitors. A similar process occurs in the pharmaceutical industry. This imitation cuts down the time period over which the original innovators can earn a return to their inventions. There are other broader kinds of spillovers, as well. The availability of increasingly inexpensive, powerful and user-friendly computers has had a broad impact on most industries — both high- and low-tech. There are a host of other more mundane innovations that have had a broad impact on society in excess of the returns to their inventors: hybridized fruits and vegetables that reduce demands on the water supply and reduce the need for pesticides; new kinds of thread that reduce the cost of textile manufacturing; new metal alloys that make cars and bicycles lighter and faster; and so on.

Table 1: Estimated Rates of Return to R&D Investments

Industry	Private Rate of Return	Social Rate of Return
Chemicals	13.3%	29.1%
Non-electrical machinery	24.0%	45.0%
Electrical products	22.4%	30.2%
Transportation equipment	11.9%	16.3%
Scientific instruments	16.1%	128.9%

Source: Jeffrey I. Bernstein and M. Ishaq Nadiri, "Interindustry R&D Spillovers, Rates of Return, and Production in High-Tech Industries," *American Economic Review Papers and Proceedings*, May 1988.

U.S. R&D Growth is Sluggish and is Lagging Our Competitors: The U.S. has not been faring well against its main competitors in terms of R&D effort. By virtue of its sheer size, the U.S. still dominates its major competitors in terms of total dollars spent on R&D. However, recent national and international trends in R&D spending show cause for concern about our continued competitiveness in research and development. First, the growth in real U.S. non-defense R&D spending has stagnated in recent years, as shown in Figure 1. The total and non-defense R&D spending growth rates are summarized in Table 2. This R&D slowdown is not due solely to the drop in federal R&D spending: real *industry-funded* R&D has shown slower growth in recent years. This is illustrated in Figure 2, which shows total U.S. R&D spending as a percentage of GDP, broken down by source of funds. Second, the U.S. is falling increasingly

behind both Japan and Germany in terms of non-defense R&D intensity (R&D as a percentage of GDP). This trend is shown in Figure 3. In 1991, the most recent international data that we have, the U.S. spent 1.9 percent of its GDP on non-defense R&D, compared to 2.7 percent for Germany and 3.0 percent for Japan. The U.S. is gradually falling further behind: U.S. R&D intensity has remained flat since 1986, while that of Japan and Germany has continued to rise. The U.S. remains even with France (1.9 percent) and ahead of the UK (1.7), Italy (1.3), and Canada (1.4).

Table 2: Growth Rates of U.S. R&D and GDP, 1970-1991

	1970-1980	1981-1990	1981-1985	1986-1990
Total R&D Growth Rate	1.6%	3.9%	6.5%	1.4%
Non-Defense R&D Growth Rate	2.5%	3.5%	4.9%	2.1%
GDP Growth Rate	2.5%	2.6%	2.5%	2.6%

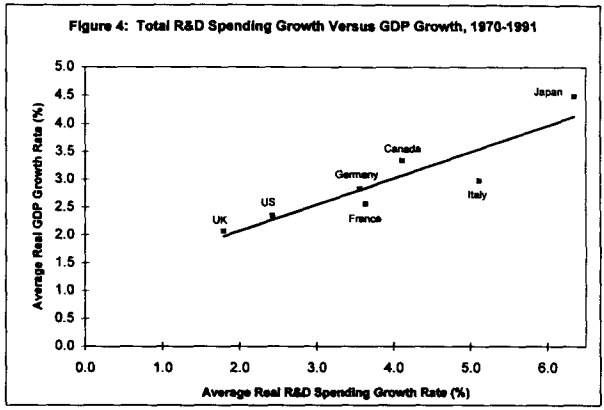
The importance of R&D to economic growth is illustrated in Figure 4: Across countries, faster growth in national R&D spending is generally associated with faster growth in GDP. While this diagram by itself does not demonstrate causation, several economic studies have concluded that measures of technological innovation (such as aggregate R&D spending) are important factors explaining the differences in economic growth among countries. Certainly, there are many other factors that determine an economy's growth rate, but R&D spending growth seems to be an important part of the mix.



Source: National Science Foundation

The R&E Tax Credit Has Been Quite Effective: The R&E tax credit has been shown to be effective in compensating for the tendency to under-invest in research. Several recent studies have documented the credit's effectiveness. On average, it increases R&D investment by approximately $1 for each $1 of credit in the short run, and by as much as $2 over the longer run. This evidence stands in sharp contrast to the information available in 1989, when the R&E credit underwent its last major review. As summarized in the GAO's 1989 report on the credit, early studies from the first few years of the R&E credit indicated that one dollar of foregone tax revenues only stimulated between 15 and 36 cents of additional research spending. These early studies were rather limited in that they only had available a short time-span of data to examine. They were further limited in that they did not take complete account of the interactions of the credit with other provisions of the corporate tax code. The most recent studies cover the first ten years of the credit's history and are more credible on a technical level. They indicate that the additional research spending stimulated by the credit equals or exceeds its revenue cost.

The R&E Credit Should Be Made Permanent: Making the R&E credit permanent is justified. Permanence is necessary to realize the full potential effectiveness of the R&E credit. Its effectiveness will be further enhanced if the continual uncertainty regarding its future is removed. It is important to realize that R&D funding decisions involve consideration of the long-term costs and benefits of multi-year research projects. Research plans have long horizons and long gestation periods. They are also generally risky investments — all the more so because of their long-term nature. The lack of permanence of the credit adds to the riskiness, because businessmen become more uncertain regarding the after-tax cost of R&E expenditures. Furthermore, firms appear to face longer lags in adjusting their R&D plans compared, for example, to adjusting their investments in physical capital. In the pharmaceutical and biotechnology industries, the duration of the research process itself is compounded by the lengthy process of clinical trials and FDA approval. For highly competitive industries such as computer software, electronics and semiconductors, the effects of long gestation on the R&D decision process may be compounded by relatively short pay-back periods: new products can quickly become obsolete, or must be continually improved through an on-going research program. In addition, there is some evidence in studies of the credit's effectiveness indicating lags of several years in the adjustment of companies to R&D tax incentives. This lag appears mainly to be due to the long-term nature of R&D plans.

If investors in long-term research projects cannot count on the availability of the credit over the lifetime of those investments, they will discount the future benefits that might be realized from the R&E credit and their investment levels will undoubtedly be lower than

otherwise. In fact, we have worked with some large, research-intensive companies who base their R&E investment decision on enacted law only. That is, they do not take the R&E credit into account in their investment decisions for years after the date at which the credit is scheduled to expire. Since such budgeting decisions are often made one- to two-years in advance, they have already reduced their planned R&E spending for 1995 and 1996 based on the enacted expiration of the credit as of June 30, 1995. They are engaging in less R&E spending than would be the case if future credits were assured. The more uncertain companies are about the long-term future of the credit, the smaller is its potential to stimulate increased research now and in the future. Permanence will remove that uncertainty and make the R&E credit more effective.

Chairman JOHNSON. Thank you, Dr. Penner.
Mr. McPherson.

STATEMENT OF DOUGLAS McPHERSON, DIRECTOR OF TAXES, LOCKHEED MARTIN CORP., BETHESDA, MD., ON BEHALF OF AEROSPACE INDUSTRIES ASSOCIATION OF AMERICA, INC.

Mr. MCPHERSON. Thank you, Madam Chair. My name is Doug McPherson. I am director of Taxes for Lockheed Martin Corp., which is a Maryland-based multinational, primarily engaged in the space, electronics, aeronautical, and information and technology services business, with sales to the Department of Defense comprising approximately 60 percent of its business. But I am here today representing the Aerospace Industries Association of America, Inc., which in 1994 the industry provided approximately 836,000 U.S. jobs, and certainly R&D is the lifeblood for its continued success. Rather than read the testimony, I would merely like to place it in the record and make a few comments if I could.

Chairman JOHNSON. That is fine. Thank you.

Mr. MCPHERSON. First of all, the current credit does not work for most companies in our industry. Second, making it permanent without other changes will not help most of the companies primarily doing business in the defense arena.

As you may know, the defense budget has been reduced in the last 10 years by 35 percent. More importantly, the procurement section of the defense budget has been reduced by more than 70 percent, and that is where the R&D comes from; and as I understand it, it may be further cut. Consequently, the current incremental credit denies or works against the industry as it downsizes, mergers occur, and we reengineer ourselves to conduct R&D in a more cost-effective manner.

We think the country needs to maintain its technological superiority, as was so clearly shown in the gulf war. If so, and R&D is an important part of that, the system needs to be changed to encourage more R&D, and one way is through the tax system.

As I indicated in my statement, the merger of Lockheed and Martin Marietta, which is now a $23 billion in sales company, was for the purpose of becoming more cost efficient and thus able to spend R&D moneys and other things in a more efficient manner. If you assume a similar amount is spent on R&D by the combined companies as what they spent when they were separate, more R&D will be performed, but the combined company will still not benefit from the credit. So because the incremental credit works against us, or does not help us in any event, we would recommend that taxpayers be permitted to elect a change from the current 20-percent incremental approach to a 5-percent credit on all qualified R&D expenditures; and that election could be made once every 5 years, and once it is made, it is binding for all future years.

In response to some of your previous questions, we certainly think a flat rate credit is the way to go. It benefits us. We also believe it is much simpler to administer. It is easier for the IRS to audit. If it is permanent and a flat rate, it is much easier for our people to predict what benefit it may have in the future so that you can plan, because you don't plan your research and development for only 2 months in advance; it goes out quite a ways.

So we need to have some certainty in that area. If we get that, then it permits companies to perform properly.

So I just want to thank you for the opportunity to appear before you today and welcome your support for this initiative.

[The prepared statement and attachment follow:]

STATEMENT OF DOUGLAS MCPHERSON
ON BEHALF OF AEROSPACE INDUSTRIES ASSOCIATION OF AMERICA, INC.

May 10, 1995

Introduction

My name is Douglas McPherson. I am Director of Taxes for Lockheed Martin Corporation, a Maryland-based multinational primarily engaged in the space, electronics, aeronautical, and information and technology services businesses with sales to the Department of Defense comprising approximately sixty (60%) percent of its business. I am here today representing the Aerospace Industries Association of America, Inc. (AIA).

AIA is the non-profit trade association representing the nation's manufacturers of commercial, military and business aircraft, helicopters, aircraft engines, missiles, spacecraft and related components and equipment. With a membership of more than fifty of the nation's largest manufacturers, AIA represents every significant employer in this industry.

The forces of international competition and the end of the Cold War continue to converge on the U.S. aerospace industry. Its members have been and continue to downsize - in 1994 U.S. aerospace sales fell 9 percent, investment in new plant and equipment fell 8.4 percent, employment fell 7.8 percent and industry's trade surplus fell 5.5 percent. In spite of this decline in business fortunes, the aerospace industry still remains an important segment of the U.S. economy. In 1994 it provided 836,000 U.S. jobs and $38.5 billion of exports from the U.S. Research and development (R&D) is the lifeblood for continued success of the U.S. aerospace industry. R&D is what I would like to talk about today.

The R&D Tax Credit and Its Implementation

A U.S. tax credit is currently provided under Section 41 of the Internal Revenue Code for increasing R&D expenditures on an incremental basis. Taxpayers only obtain the credit to the extent their current year's ratio of R&D expenditure to sales exceeds that same ratio for the base period 1984-1988. When calculating the current year's ratio of R&D expenditures to sales, the sales figure that must be used is the average annual gross receipts for the prior four years.

Most aerospace companies are denied the R&D credit because of the base period limitation. This limitation works against the industry in several ways.

1. As the industry downsizes, R&D as a percentage of sales is static or declining.

2. As the industry mergers occur, multiple R&D programs are being combined and economies of scale are reducing total dollars expended.

3. As the industry "re-engineers" itself to become more efficient and competitive, it is also learning to conduct R&D in a more cost effective manner.

4. As sales decline, the statutory formula for computing the ratio of current year R&D expenditures to sales is punitive.

The first three points clearly describe my own company, Lockheed Martin Corporation. The principal purpose of merging Lockheed and Martin Marietta was to create economics of scale and make the combined businesses more efficient and cost-effective. The whole idea in being more efficient is to be able to undertake more R&D. Unfortunately, the tax credit only helps if the combined company is less cost-efficient.

With respect to the fourth point, attached is a chart showing what happens to a business that grows for four years, and then suffers the nine percent annual decline in sales that the aerospace industry is facing. The business maintains its research at a constant percentage of annual sales. Because of the operation of the base period formula, this business would be entitled to an R&D credit while its overall business is growing, but would not get a credit if it suffers business declines.

Need for Change

Right when business needs to keep its R&D going, our tax policy offers no encouragement to maintains its level of R&D spending constant as a percentage of sales, let alone increase spending.

In addition to not stimulating investment in the aerospace industry, incremental credits (1) impede the orderly transition of employment from defense to commercial activities; (2) do not improve the competitiveness of the industry in world markets; and (3) discourage companies from continuing defense R&D without specific government funding.

Accordingly, the credit should provide an incentive to aerospace and other firms that conduct important research but cannot maintain the level of expenditures necessary to obtain benefits under the current incremental credit. Providing an incentive would help such firms and discourage them from moving their R&D activity offshore in search of the credits that at least sixteen other countries provide.

In calling for a change in the R&D credit, we recognize that there are a few companies for whom the present incremental credits works exactly as intended. These companies (including a few AIA members) have growing sales, and growing levels of R&D expenditures. Therefore, we are suggesting that these companies not be penalized by any changes to the existing credit.

Proposal

To accomplish the goals in this paper, AIA proposes that taxpayers should be permitted to elect to change from the current twenty percent incremental approach to a five percent credit on all qualified R&D expenditures once every five years (1995, 2000, 2005, etc.). The election, once made, would be binding for all future years.

Thank you for the opportunity to appear before you today. We appreciate the Committee's support for our industry and would welcome your support for this initiative.

Impact of Base Period and Average Sales Computation on Research Credit

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	Year 8	Year 9	Year 10
Sales	$1,000,000	$1,100,000	$1,210,000	$1,331,000	$1,211,210	$1,102,201	$1,003,003	$912,733	$830,587	$755,834
R&D @ 3% Of Sales	$30,000	$33,000	$36,300	$39,930	$36,336	$33,066	$30,090	$27,382	$24,918	$22,675
Average Sales Base	N/A	$1,000,000	$1,050,000	$1,103,333	$1,160,250	$1,213,053	$1,213,603	$1,161,854	$1,057,287	$962,131
Base Period @ 3%	N/A	$30,000	$31,500	$33,100	$34,808	$36,392	$36,408	$34,856	$31,719	$28,864
Increase In R&D	N/A	$3,000	$4,800	$6,830	$1,529	($3,326)	($6,318)	($7,474)	($6,601)	($6,189)
Credit @ 20%	N/A	$600	$960	$1,366	$306	$0	$0	$0	$0	$0

NOTES: First Year Credit Is Competed Under Start-Up Rules
Sales Growth at 10% Until Year 4, When They Begin to Decline at 9%

Chairman JOHNSON. Thank you very much, Mr. McPherson.
Mr. Rau.

STATEMENT OF CHARLES W. RAU, VICE PRESIDENT AND TAX COUNSEL, MCI COMMUNICATIONS CORP.

Mr. RAU. Thank you, Madam Chairman. With your permission, I would like to present only portions of my prepared statement and ask that the entire text be included in the record.

My name is Charles Rau. I am vice president and tax counsel for MCI Communications Corp., headquartered here in Washington, D.C. We have annual revenues in excess of $13 billion; we provide a wide array of consumer and business long distance services, local services, data and video communications, on-line information, electronic mail, and communications software. On behalf of both MCI and myself, I thank you, Madam Chairman, and the other members of the subcommittee for permitting me to appear before you today in support of H.R. 803.

Additionally, I express both the company's and my thanks to both you, Madam Chairman, and Mr. Matsui, for your leadership role in this very important issue.

When President Ronald Reagan signed the original R&E tax credit legislation in 1981, an avowed purpose was to stimulate a higher rate of capital formation. Recently, the House of Representatives passed major capital formation legislation, providing for the NCRS depreciation system, reduction in capital gains taxation, and creating the American dream savings accounts.

H.R. 803 addresses another critical area of capital formation, specifically the development of knowledge capital. The importance of knowledge capital was recently viewed by the Bureau of Economic Analysis of the Department of Commerce when it decided there was a need to measure the investment in our national stock of knowledge capital. The Bureau recognized that R&D expenditures are a form of investment which adds to knowledge and the development of new and improved processes and products. These, in turn, lead to increases in productivity and growth, resulting in more and better jobs and a higher standard of living for our citizens.

At MCI, since the enactment of the R&E credit in 1981, our employment has increased from 1,900 persons to 41,000. We created almost 5,000 new jobs in 1994 alone. Our investment in R&D has grown from a negligible amount in 1981 to $333 million last year. Our R&D staff has grown from none in 1981 to some 3,500 full-time people last year. While we paid a dividend representing approximately 4 percent of our earnings in 1994, in the same year 39 percent of our earnings were reinvested in research and development activities.

In the last 6 years, MCI has moved from the 17th largest international communications company in traffic volume to, now, number three. This dramatic gain is in large part attributable to MCI's cutting edge software development.

Eight years ago, for example, the National Science Foundation was able to transmit information at the rate of two pages per second. MCI has now agreed to provide transport to the National Science Foundation at the rate of two small public libraries per sec-

ond. Today, we handle 40 percent of the Internet traffic being generated by some 30 million users. A user group which, by the way, is increasing at the rate of 160,000 per month. We will soon enable the National Center for Atmospheric Research to provide instantaneous weather information to air controllers throughout the United States. These are but a few examples of the benefits from research and development in the Information Age.

Should the R&E credit be permitted to expire, our additional income tax burden would necessarily have a negative impact on our R&D budget. While I wish I were appearing before this subcommittee under circumstances which would permit me to urge you to make the R&D more generous, such as by eliminating the 50-percent minimum base rule alluded to by a prior panelist, I will not make that suggestion, given the very difficult choices which I appreciate you face in light of our current Federal budget situation.

May I conclude by indicating that I believe H.R. 803 passes the test suggested by the Speaker of the House in supporting the transformation of America from an industrial society into an Information Age society. It is consistent with the President's and Vice President's campaign document, Putting People First, where they call for a permanent extension of the R&E credit to stimulate private investment in civilian R&D. It is a concept also endorsed in the President's economic report this year and has been supported by distinguished members of this subcommittee, its chairman, and the chairman of the full House Committee on Ways and Means.

It is also consistent, I believe, with the House Republican Contract With America which states, in part, "We need to make a conscious national decision that we want to have the highest value-added jobs on the planet with the greatest productivity." Things have to be reexamined from the standpoint of what will make us the most competitive society on the planet, the best trained, and the most entrepreneurial workforce. We respectfully submit that continuation of the existing R&E credit serves our mutual goal of building a highly competitive America.

[The prepared statement follows:]

STATEMENT OF CHARLES W. RAU
VICE PRESIDENT AND TAX COUNSEL
MCI COMMUNICATIONS CORP.

My name is Charles W. Rau. I am Vice President and Tax Counsel of MCI Communications Corporation, headquartered in Washington, D.C. With annual revenue in excess of $13 billion, MCI provides a wide array of consumer and business long-distance services, local services, data and video communications, on-line information, electronic mail, network management services, and communications software.

On behalf of both myself and MCI Communications Corporation, I thank you Madame Chairman and the other members of the Subcommittee for permitting me to appear before you today in support of H.R. 803. Additionally, may I express our thanks to both you, Madam Chairman, and you, Mr. Matsui, for your leadership on this very important issue.

CAPITAL FORMATION

When President Ronald Reagan signed the original R&E tax credit legislation in 1981, an avowed purpose was to "stimulate a higher rate of capital formation." Recently, the House of Representatives passed major capital formation legislation providing for an NCRS depreciation system, a reduction in the tax on capital gains, and the creation of American Dream Savings Accounts. H.R. 803 addresses another critical area of capital formation -- specifically the development of "knowledge capital."

The importance of "knowledge capital" recently resulted in the Bureau of Economic Analysis of the U.S. Department of Commerce deciding there was a need to measure this investment in our national stock of "knowledge capital." The Bureau recognized R&D expenditures as a form of investment which adds to knowledge and to the development of new and improved processes and products. These, in turn, lead to increases in productivity and growth -- resulting in more and better jobs and a higher standard of living for our citizens.

SPILL-OVER BENEFITS

An interesting phenomenon attributable to R&D expenditures is that alluded to in both a study prepared by the Policy Economics Group of KPMG Peat Marwick and this year's Economic Report of the President. They speak of the substantial "spill-over benefits" of technological innovation. These are the benefits captured by others, without compensation to the firm making the investment. The Peat Marwick study found that these "social returns" of R&D investments are, on average, twice as high as the return obtained by the investor. The President's

Economic Report refers to estimated social returns of around 60 percent -- as compared to an average estimated return to the investor of 20 to 30 percent. The President's Report concludes that because the social return exceeds the investor's return, a private market left to its own devices would invest too little. Therefore, the Report suggests government has an important complementary role to play by sponsoring research itself, in subsidizing private sector research, or in doing both. I believe that continuing the existing R&E tax credit, has the advantage of not requiring the government to pick specific winners or losers in providing an R&D incentive. Rather, the tax credit serves as an impartial incentive to reward those who incrementally increase their expenditures on R&D projects.

In a National Bureau of Economic Research paper, Frank Lichtenberg of the Columbia Business School concluded that the rate of return on government funded R&D is less than the return on private investment -- and in some cases may even be negative.

The Peat Marwick study indicates that one dollar of R&E credit stimulates approximately one dollar of additional private R&D spending over the short run and as much as two dollars of additional R&D spending over a longer period. The President's Economic Report found that industry funded R&D investment has been noticeably greater relative to GDP during the 1980's and early 1990's than during the prior two decades. Since 1980, the Report concludes, the private sector has sponsored more R&D than has the federal government. Interestingly, this is the period during which the R&E tax credit was available.

INTERNATIONAL COMPARISONS

The Peat Marwick study concludes that, unfortunately, since 1986 the growth in non-defense R&D spending has slowed both in real dollar terms and as a percentage of GDP ("R&D intensity"). In terms of non-defense R&D intensity, this means that both Japan and Germany have increased their lead over the United States. The Economic Report of the President concluded that as a percentage of GDP, U.S. spending for civilian R&D for 1992, the most recent year for which comparative date was available, stood at 2.1 percent -- compared to 2.4 percent in Germany and 2.8 percent in Japan.

Japan provides a 20 percent tax credit for qualified R&D expenditures in excess of a base amount. Additionally, there is a 7 percent flat credit for qualifying depreciable property used in the research and development of basic technology. (It is interesting to note that a recent

newspaper article indicated that the government of Japan has projected a $585 billion multimedia market in Japan by the year 2000 -- up sharply from the $158 billion market of 1994. The article indicates this will result in the creation of 2 million new jobs.)

Germany provides investment grants and special depreciation allowances for equipment acquired for R&D purposes, in addition to the current deductibility of R&D expenses. Since 1984, Canada has provided a flat rate credit equal to 20 percent of qualified expenditures, with higher rates for smaller companies and for research in certain disadvantaged geographic areas.

MCI

Since the enactment of the R&E credit in 1981, MCI has grown its employment from 1,900 people to 41,000 people -- creating almost 5,000 new jobs in 1994, alone. Our investment in R&D has grown from a negligible amount in 1981 to $333 million in 1994. Our R&D staff has grown from none in 1981 to approximately 3,500 full time R&D professionals presently. And while we paid a dividend representing approximately 4 percent of our earnings in 1994 -- in that same year approximately 39 percent of our earnings was reinvested in research and development activities.

In the last six years, MCI has moved from the 17th largest international communications company in traffic volume to the 3rd. This dramatic gain is in large part attributable to MCI's cutting-edge software development. Eight years ago the National Science Foundation was able to transmit information at the rate of two pages per second. MCI has now agreed to provide transport to the National Science Foundation at the rate of two small public libraries per second. Today, MCI handles 40 percent of the Internet traffic being generated by its 30 million users and will soon enable the National Center for Atmospheric Research to provide instantaneous weather information to air controllers throughout the United States. These are but a few examples of the benefits derived from research and development expenditures in the Information Age.

Should the R&E tax credit be permitted to expire, MCI's additional income tax burden will necessarily have a negative impact on our R&D budget.

AN ENHANCED R&E CREDIT

While I wish I were appearing before the Subcommittee under circumstances which would permit me to urge you to make the R&E credit more advantageous -- such as by eliminating the 50 percent minimum base rule -- I will not make the suggestion given the very difficult choices which I appreciate you face in the light of our current federal budget situation.

CONCLUSION

May I conclude by indicating that I believe H.R. 803 passes the test, suggested by the Speaker, of supporting the transformation of America from an industrial society into an Information Age society. It is also consistent with the President and Vice President's 1992 campaign document, *Putting People First*, wherein they call for the enactment of a permanent extension of the R&E tax credit to stimulate private investment in civilian R&D. This concept is endorsed in this year's *Economic Report of the President* and has been supported by distinguished members of this Subcommittee, its Chairman, and the Chairman of the House Committee on Ways and Means. It is also consistent with the House Republicans' *Contract with America* which states, in part:

> "...we need to make a conscious national decision that we want to have the highest value added jobs on the planet with the greatest productivity...things have to be reexamined from the standpoint of what will make us the most competitive society on the planet...the best trained and most entrepreneurial work force...."

I respectfully submit that continuation of the existing R&E tax credit serves our mutual goal of building a highly competitive America.

Chairman JOHNSON. Thank you very much, Mr. Rau.
Mr. Capps.

STATEMENT OF R. RANDALL CAPPS, FEDERAL TAX DIRECTOR AND ASSISTANT TREASURER, ELECTRONIC DATA SYSTEMS CORP., PLANO, TEX., ON BEHALF OF INFORMATION TECHNOLOGY ASSOCIATION OF AMERICA

Mr. CAPPS. Good morning, Madam Chairwoman and members of the subcommittee. My name is Randy Capps. I am Federal tax director and assistant treasurer for the EDS, Electronic Data Systems Corp. I am here on behalf of my company and the Information Technology Association of America. I appreciate this opportunity to testify on the importance of a permanent research and experimentation tax credit.

EDS is one of the Nation's largest information technology services companies. EDS has operations in more than 40 countries and employs more than 80,000 people. With more than 6,000 direct and affiliated member companies, ITAA is the principal trade association of this Nation's computer software and services industry. It has been estimated that by the year 2000 the information technology industry will account for 14 percent of the world's GDP.

Congress created the credit to encourage the business community to conduct more research and enhance the competitive position of the United States. Despite its temporary nature, the credit has exceeded expectations. Last year, for example, every information technology services contract worldwide with a value of over $100 million was won by a U.S. firm. The R&E credit encourages business to invest in high-risk research by reducing the cost to the point where business can afford to invest scarce human and financial resources.

Ours is a research-intense economy. Total 1991 research spending in the United States was $102 billion, $78 billion of which was spent by the private sector. Among the most research intensive are information technology companies. Generally speaking, these companies spend between 4 and 5 percent of their gross receipts on qualifying R&E. Smaller entrepreneurial firms spend an even higher percentage.

These information technology companies have created thousands of high-paying, high-skilled jobs in this country and have helped U.S. companies and other industries modernize and compete more efficiently. These companies have created a host of new products and services, ranging from home banking to movies on demand to major new health care systems.

Allow me to describe the value of the credit to EDS. Since the credit was enacted in 1981, the number of EDS employees has grown from 11,000 to more than 80,000. The R&E tax credit has facilitated that growth. Our U.S. investment in research and development has grown from $15 million in 1981 to approximately $250 million in 1993. Most of our investment goes toward employee salaries.

Today, EDS is reinvesting roughly 42 percent of its domestic earnings in research and development, and the company's domestic R&D spending increased 45 percent from 1991 to 1993. With the

help of a permanent credit, R&D spending at EDS will continue to increase at a rapid pace.

The Information Age is a global phenomenon. Many of EDS's competitors are headquartered in countries with attractive tax incentives for research. Canada provides a flat rate credit equal to 20 percent of qualified research expenditures, with even higher rates for smaller companies. In France, a 50-percent incremental credit is available. Japan, Germany, and the United Kingdom likewise provide tax incentives for research. These provide our international competitors an advantage over U.S. companies, who must contend with the temporary nature of the U.S. credit.

The R&E credit has been extended six times and allowed to expire twice. Nonetheless, the credit has been successful in stimulating research. Permanent extension would make it more so.

In information technology, development cycles often far exceed the useful commercial life of a product; predictability is essential. At EDS, we educate our business units on the importance of investing in research and using the credit to reduce costs. One of the bases used to evaluate our managers is the economic value they have generated measured on an after-tax basis.

The credit is not as highly valued, however, as it would be if it were made permanent. When the investment tax credit was available, it was always considered in our formal modeling process in the decision as to whether to buy a piece of equipment. Because of its uncertain future, the R&E credit doesn't carry similar weight in determining whether to undertake risky, high-cost research projects which may take up to 200 people and 10 years to complete.

The credit provides a significant incentive for research and experimentation and is important to my industry and the economic growth of the United States. It will provide an even greater incentive if made permanent.

I appreciate the opportunity to appear before you, and I look forward to your questions.

[The prepared statement follows:]

STATEMENT OF R. RANDALL CAPPS
ELECTRONIC DATA SYSTEMS CORP., PLANO, TEX.
ON BEHALF OF INFORMATION TECHNOLOGY ASSOCIATION OF AMERICA

Good morning, Madam Chairwoman and members of the Subcommittee. My name is Randy Capps. I am Federal Tax Director and Assistant Treasurer for Electronic Data Systems Corporation (EDS). I am here today on behalf of my company and on behalf of our industry association, the Information Technology Association of America (ITAA).

I appreciate this opportunity to testify before you on the importance of the research and experimentation tax credit and the need to make it permanent.

EDS is one of the nation's largest information technology services companies, and a leader in applying information technology to meet the needs of businesses and governments worldwide. EDS has operations in more than 40 countries and employs more than 80,000 people.

ITAA is the principal trade association of this nation's computer software and services industry. Its more than 6,000 direct and affiliated member companies provide the computer software, programming, information processing, and systems integration services that make computer hardware and communications systems productive. It has been estimated that by the year 2000 the information technology industry, including consulting and telecommunications services, will account for 14 percent of the world's GDP.

I will focus my comments on the importance of the R&E Credit to my company, to the information technology industry, and the ability of U.S. companies to compete effectively in a global economy. I will also emphasize the critical need to make the Credit permanent.

I. The R&E Credit Is Important to the U.S. Economy Generally and to the U.S. Information Technology Industry In Particular

A. The R&E Credit Effectively Promotes the National Interest

Congress created the Credit for Increasing Research Activity to encourage the business community to conduct more research and enhance the competitive position of the United States in the world marketplace. Despite its temporary nature, including two lapses, the R&E Credit has exceeded expectations in meeting that objective, particularly in the information technology industry. Last year, for example, every information technology services contract -- worldwide -- with a value of over $100 million was won by a U.S. firm. Not only that, but only U.S. companies were finalists for those contracts.

Technological change and scientific advances are important factors contributing to long-term improvements in our productivity and economic growth. These, in turn, result in increased wages and improved living standards for all Americans.

As reported by Dr. Rudolph G. Penner for KPMG Peat Marwick,[1] technological innovation is a "public good," yielding "spill-over" benefits to society, not all of which

[1] Penner, Rudolph G., Smith, Linden C., and Skanderson, David M., Extending the R&E Tax Credit: The Importance of Permanence, Policy Economics Group, KPMG Peat Marwick, (November, 1994).

can be recouped by individual innovators. Indeed, according to Dr. Penner, the societal return from innovation is twice that which accrues to the individual innovator.

Although companies, particularly information technology companies, will always engage in research and experimentation, there are always more worthwhile projects than funds. Thus, promising but risky ventures must often be dropped. The R&E Credit helps overcome the understandable reluctance of business to invest in high-risk research and experimentation by reducing the cost to the point where businesses can afford to invest scarce human and financial resources.

Without the Credit, businesses have inadequate incentives to invest in the kinds of research and experimentation that yield the most social benefit. Quantifying the benefits of the Credit, Dr. Penner reports that "at the margin one dollar of R&E credit stimulates approximately one dollar of additional private R&D spending over the short run, and as much as two dollars of extra R&D over the longer-run."

B. U.S. Information Technology Leadership Is Due in Large Part to the Advances Made Possible by the R&E Credit

Ours is a research-intense economy. Total 1991 research spending in the U.S. was $102.3 billion, $78.2 billion of which was spent by the private sector.[2] Among the most research-intensive are information technology companies, particularly computer and semiconductor manufacturers and companies providing software, systems design, and computer programming services. Generally speaking, these companies spend between 5.2 percent (computers and semiconductors) and 4.3 percent (software, systems design, and computer programming) of their gross receipts on qualifying research and experimentation. Individual companies, particularly smaller, entrepreneurial firms, spend an even higher percentage.

These same information technology companies have created thousands of high-paying, high-skill jobs in this country and have helped U.S. companies in other industries modernize, increase productivity, and compete more efficiently both here and overseas. These information technology companies have also created a host of new products and services, ranging from home banking, to movies-on-demand, to major new health care systems delivering life-saving diagnostics and treatment.

None of this would have been possible without tremendous investments of time and money in research and experimentation. What is true for the information technology industry is true for other industries, such as the chemical, pharmaceutical, and automotive industries.

Without the R&E Tax Credit, U.S. information technology companies will find it much more difficult to invest large amounts of capital in long-range, high-risk programs to create innovative information technology products. Computer programs, for instance,

[2] Id. at p. 15.

typically have very short commercial life cycles before they are overtaken by technological development.

II. The R&E Credit Is Critical to EDS and Other Information Technology Companies

Allow me briefly to put into perspective the importance of the R&E Credit by describing its value to my company, EDS.

The amount of data with which businesses, governments, and individuals must deal is doubling every five years; soon, it will be every four years. EDS' strategy for dealing with this data deluge begins with consulting, whereby we help customers identify their strategic objectives and chart a course to achieve them. The next step is business process re-engineering which aligns people and processes with those objectives. EDS then designs, develops, integrates, and manages information systems to meet customer goals.

Since the Credit was enacted in 1981, the number of EDS employees has grown from 11,000 to more than 80,000. The R&E Tax Credit has facilitated that growth.

Our U.S. domestic investment in research and development[3] has grown from $15 million in 1981 to approximately $250 million in 1993, with most of that investment going toward employee salaries.

Today, EDS is re-investing roughly 42 percent of its domestic earnings in research and development, and the company's domestic R&D spending increased 45 percent from 1991 to 1993. We anticipate that, with the help of a permanent Credit, R&D spending at EDS will continue to increase at a rapid rate for the foreseeable future.

The effect of the Credit on other information technology companies is much the same. Testifying before the Senate Finance Subcommittee on Taxation and Internal Revenue Service Oversight, Cliff Simpson, Vice President, Tax, Export and Audit, for Novell indicated that his company -- a leading developer of operating systems, application software, and network services -- has grown from 14 employees in 1983 to more than 7,900. Approximately 35 percent of Novell's employees are directly involved in R&D.

III. Other Nations Have Recognized the Importance of Research and Experimentation Incentives

Information technology knows no geographic boundaries. The Information Age is a global phenomenon, and many of EDS' direct competitors are headquartered in countries that extend attractive tax incentives for research and experimentation.

With a definition of "research and experimentation" that is generally the same as ours, Canada provides a flat-rate credit equal to 20 percent of qualified research

[3] Note that for federal tax purposes, the term "research and development" is broader than "research and experimentation."

expenditures, with even higher rates for smaller companies. In addition, tax credits may offset up to 75 percent of total corporate tax liability, and certain capital expenses for scientific research are deductible.

In France, another country in which EDS faces stiff competition, a 50 percent incremental credit is available. Similarly, Japan provides a 20 percent tax credit for qualified expenditures exceeding the base amount, up to 10 percent of current tax liability. Germany and the United Kingdom likewise provide tax incentives for research and experimentation.

Designed to invigorate their indigenous technology industries and to attract foreign research initiatives, these tax incentives lower the cost of research and experimentation in these countries. They also provide our international competitors an advantage over U.S. technology companies who must contend with the uncertain, temporary nature of the U.S. R&E Credit.

IV. To Achieve Maximum Effectiveness, the R&E Credit Must Be Made Permanent

Since the R&E Credit was enacted in 1981, it has been extended six times and been allowed to expire twice, with retroactive re-enactment. Despite its uncertain and temporary character, the R&E Tax Credit has been extraordinarily successful in stimulating research and experimentation. Permanent extension, however, would make it more so, generating even higher returns to the nation.

In virtually all areas of technology, but especially in information technology, development cycles often far exceed the useful commercial life of a product. Hence, predictability is essential. Otherwise, expensive, high-risk projects of possibly major societal importance may not be undertaken. Because of the uncertainty of its long-term availability, corporate decision-makers are hesitant to consider the Credit's benefits when evaluating these risky research projects.

At EDS, we educate our business units on the importance of investing in research and the opportunities of using the Credit to reduce costs. One of the bases used to evaluate the contributions of our managers is to examine the economic value they have generated for the company, measured on an after-tax basis. The R&E Credit is thus allocated to the group that generated it, and the managers are recognized within the company for the improved performance represented by the Credit.

The R&E Credit is not as highly valued, however, as it would be were it made permanent. When the Investment Tax Credit was available, it was always considered in our formal modeling process to determine whether to buy a particular piece of equipment. Because of its uncertain future, the R&E Credit does not carry similar weight within the company in determining whether to undertake risky, high-cost research projects which can take up to 200 people and 10 years to complete.

Conclusion

The R&E Credit is important to my company, my industry, and the economic growth of the United States. Despite its uncertain availability, the Credit provides a significant incentive for research and experimentation today, and it will provide an even greater incentive if made permanent.

I appreciate this opportunity to appear before you, and I look forward to your questions. Thank you for your consideration.

Chairman JOHNSON. I thank the panel for your excellent testimony.

Dr. Rudolph Penner, in your testimony, you provide some charts—and a number of you mentioned this—that compare U.S. R&D spending growth versus R&D spending growth in other countries; and as I read your chart and your testimony, Mr. Penner, only the United Kingdom invests less in R&D. France, Italy, Canada, Germany, Japan all invest considerably more. Am I reading that correctly?

Mr. RUDOLPH PENNER. That is correct, yes.

Chairman JOHNSON. Could you elaborate a little bit on how the other countries favor R&D spending and how that compares with our tax credit, and could the panelists look at this question from the point of view of both big companies and small companies?

Mr. RUDOLPH PENNER. I think almost all of the countries on the chart have some sort of tax advantage for R&D investment. As has already been mentioned, the Japanese have a fairly generous credit. I think they have an incremental credit of, I think, 20 percent on certain kinds of expenditures. Their qualified research expenditures are defined more broadly than ours, in that a lot of the capital investment associated with R&E also gets some tax advantage.

The Canadians have a fairly generous approach to the problem. The British do, as well. I think every country recognizes that the free market, left to its own devices, would not produce enough spending on R&E investment and therefore subsidize it one way or another.

Chairman JOHNSON. Thank you. Does anyone else want to comment on foreign versus American subsidies?

Mr. CONWAY. Yes, Madam Chairman, I would just like to reemphasize that I think part of the issue—there are really two questions. In looking at the flat credit, as I testified, I think it does provide an incentive to do more research because the more dollars you spend, the greater credit you will get. There is no fixed determination year by year that a company will increase its absolute amount; but very importantly, when looking at global competition, there is a second question we now have to answer, and that is where the research will be done. From the standpoint of a tax director, doing a tax analysis in terms of looking at the tax efficiency of R&D dollars, if we look at a jurisdiction like Canada or Japan, with a flat rate credit, it is clear that in our case, for example, the research dollars spent there would be more efficient from a tax standpoint.

So we think it is time for the United States to look at these other systems—not that we have to follow them, but just to be competitive, and it makes sense now to look at this from the standpoint of restructuring our own credit to take that into account.

Chairman JOHNSON. That is exactly the point of my question, Mr. Conway. What is it about their tax law that would make your research dollar more efficient in other countries?

Mr. CONWAY. Well, I think the simple answer is that if we spend a dollar here—and as I indicated, from 1989 to 1994, we spent over $4 billion in qualified research expenditures——

Chairman JOHNSON. OK. Is the issue incremental versus flat, because if we change ours to flat does that make us competitive with them?

Mr. CONWAY. If we change ours to flat and we assume we have a choice that we can do the research in either place, we can be more tax efficient, we can reduce our Canadian taxes or our taxes in Japan by getting a flat rate credit; and that will increase our profits and make the return on research—allow us to invest more in research. So because we have a tax liability in these countries and we do business there, having a flat rate credit makes it more attractive.

I think also these other countries have simpler tax systems that can be understood. I think that is something that is unique to the U.S. system; it is very complicated and complex. I think that is also probably a factor in why they have nonincremental credits.

They also have, in some cases, dual systems. They have both.

Chairman JOHNSON. So what you are saying is that in your opinion, if we went to a flat tax, even if it were low, we would be more competitive than we are now with other countries?

Mr. CONWAY. Yes, I don't think there is any question about that.

Chairman JOHNSON. OK, other comments?

Mr. Rau.

Mr. RAU. I just wanted to say that at MCI, all of our research and development has been done, to date, in the United States under the current incremental credit.

Chairman JOHNSON. Mr. Capps.

Mr. CAPPS. Yes, at EDS, we are very aware of the different incentives for research around the world. One concern we would have is that if we didn't have extension of the research credit here, we would be at a competitive disadvantage vis-a-vis our competition.

There are foreign companies that we are in dog fights with globally, that are headquartered in these countries, that have attractive tax benefits for research. If they are getting benefits and we are not, it is going to give them a better cost structure from the bottom line than we will have.

I would like to briefly address the issue you raised earlier of the current incremental credit versus a flat credit. The current provision, as Dr. Penner indicated, seems to be working well from a macroeconomic standpoint. We find that it is working very well for the information technology industry. We do recognize that there are some pockets of legitimate concern, though, and you have already heard some of those this morning.

We would recommend, as Mr. McPherson suggested, that to the extent we try to address those concerns, we come up with elective alternatives that would take care of some of those problems, and we don't tinker with the core incremental nature of the credit, which we have already seen is working and working well.

We would be concerned if we went to a flat credit across the board and didn't have it elective. Our concern would be that you would probably have to make it so low that it wouldn't have the incentive feature that we are seeing now with the current incremental rate. I don't know just what that percentage would be.

Chairman JOHNSON. Mr. Capps, have you calculated that out in regard to your company? What would be the benefits of, say, a 5-percent flat credit? What would be your savings in terms of administration? Over time, what would be the benefits for you? I would appreciate it if you would do that.

One of the things that has concerned this subcommittee, at least rhetorically, for a number of years has been the complexity of the code; and while we have made many contributions to increase that complexity—including in the last bill that we passed—nonetheless, we are concerned about it. I appreciate Mr. Conway's point that other countries have simpler systems and that makes them more understandable, more predictable, and more manageable, and that, in and of itself, has a certain economic effect.

I would like to see if there are going to be real losers by going to a flat tax. We need to know that. If it is just anxiety about change, we need to decide whether it is worth it, but it is very hard for me to see how we restructure base years, how we restructure the rather complex nature of our current incremental system in a way that would either make it available to small companies or make it functional for many of our big companies. For example, just cutting national defense spending destroys their eligibility under this because it knocks out all defense research.

We are holding these hearings at exactly the right time because the old law is really not strong enough or thoughtful enough to meet the future. We have to think either how to change the current formula or how to just simply go to a flat, incremental tax credit. I think those of you who worry about that need to calculate it out. Those of you who have expressed anxiety about it on preceding panels, or will in later panels, need to decide whether this is just an anxiety attack about Congress and change, which would be perfectly logical—I would have anxiety attacks if I were you, if I knew that we might actually make a change that would affect you.

But I do think we have to look at the long term; and certainly our R&D investment doesn't compare favorably and our law doesn't compare favorably, and so I really urge you to look at those things from a very self-centered point of view in your industry and let us know.

[The following was subsequently received:]

EDS

May 25, 1995

The Honorable Nancy L. Johnson
U. S. House of Representatives
Room 343
Cannon House Office Building
Washington, D.C. 20515

Madam Chairwoman:

I would like to respond, for the record, to two questions you asked during my testimony before the Subcommittee on Oversight, of the Committee on Ways and Means, on May 10, 1995. You inquired as to (i) what effect a flat Research and Experimentation (R&E) Tax Credit would have on EDS and (ii) what our administrative savings would be if a change were made from an incremental to a flat credit.

EDS' R&E Credit has been averaging around 10 percent, if converted to a flat rate. This would mean a change in law from the current incremental credit to a flat credit of 5 percent would reduce our incentive by one half. In fact, anything less than a 10 percent flat credit would result in a lower incentive than we experience under current law.

The administrative savings for EDS of a change from an incremental to a flat credit would be minimal. We spend more than 2,000 hours each year identifying and documenting projects that qualify for the R&E Credit and making the required calculations. The information necessary for the incremental calculation is generally readily available, and the calculation takes a negligible amount of time. There is a requirement, however, that taxpayers who have acquired or disposed of businesses adjust their base period for those acquisitions and dispositions to keep it consistent with the current period. Since EDS has acquired a significant number of businesses, it spends about 40 hours per year making these base period adjustments. Thus, I would estimate that our administrative burden would drop by less than 2 percent (40/2,000+) if we migrated to a flat based credit. For most companies, who are not making acquisitions and dispositions, I would expect the administrative savings to be even less.

I hope the above information helps you and the rest of the Subcommittee in your analysis. I would again like to commend you for your leadership on this issue, which is so important to EDS, the information technology industry, and the country. If you have additional questions or I can be of further assistance, please feel free to phone me at (214) 605-1238. I am enclosing a copy of this letter with the corrected transcript of my testimony that I am returning to the Subcommittee.

Sincerely yours,

R. Randall Capps

R. Randall Capps

RRC:ch

Chairman JOHNSON. Mr. Matsui.

Mr. MATSUI. Thank you, Madam Chair. I am starting to think that a critical issue in this debate—and I think this issue has been kind of pending over the years, but we have never been able to really deal with it because of the revenue issue—is the issue of whether you just give a flat credit or you give an incremental credit. I noticed Ken Kaley, who has been working on this for 14 years now, sitting here and probably wondering how he is going to keep the coalition together.

I do see this, though, as a dollar-and-cents issue. You have mature companies who rightfully say that they have not had the advantage of an incremental credit—and rightfully so. Their dollars spent annually are still the same as any other company, and it has the same positive impact on a long-term/short-term GDP, the future of our country.

At the same time, I think, originally we decided to go with an incremental approach not only because of revenue issues and the fear that this would be seen as a giveaway at that time in 1981, but also because we wanted to encourage additional R&D investments by, basically, emerging companies. We have that now.

We have biotech companies, obviously communication companies; I want to ask Mr. Rau what his position is because MCI is obviously expanding rapidly. So we have this problem.

The problem, of course, with Mr. McPherson's approach—and I am not criticizing you or your approach—is you give a choice that you have a revenue problem because everybody will want to keep what they have, and then obviously you have to then provide the 3 percent, or whatever credit you give, for those that—for example, United Technologies; and somehow we have to deal with that.

You don't want to do it in a way that you reduce the amount so it is valueless to everybody because it is so minimal. We have to come to grips with it. Perhaps we want to expand the credit, spend a little bit more money on it, but I don't know if our budget will allow us to really do that.

But, Mr. Rau, could you give me your thoughts on this? MCI obviously, for 15 years now, has been a growth company, you are high technology. What would be most beneficial to you in terms of your situation at this time?

Mr. RAU. In our current situation under the incremental credit, we are very pleased with the incremental credit, the way it works, because of our rapid growth in R&D spending. To the extent additional funds are available and the Congress would want to use them to expand the credit in some elective manner, certainly we would have no objection to it. There are, of course, a variety of theories on how you might do that.

You might change the base versus a flat rate credit, and so forth, but because of our situation, I think probably somewhat similar to EDS and other information-type companies, the growth is so rapid and we put so much money into R&D and we are not a downsizing industry, we are satisfied where we are.

Mr. MATSUI. Dr. Penner, you represent generally the coalition. What are your thoughts on this between the two?

Mr. RUDOLPH PENNER. As you implied, Mr. Matsui, the coalition has not taken a position on the issue.

My personal view is that there is a difficult tradeoff here. If you do a flat tax, my understanding is that, to be revenue neutral, you would have to have a rate as low as about 3 percent, and very obviously that does not provide a very big incentive.

On the other hand, the way the current incremental credit works, it is very erratic. It is worth 13 cents on the dollar for some firms, 6.5 cents for others, nothing for many others.

I have a feeling—my own judgment is that the current approach stimulates more dollars of R&E expenditure per dollar of revenue loss. However, they are not necessarily the most efficient dollars because of the erratic nature of the credit. I think that you would probably get less R&E with a flat rate, but it would be somewhat more efficient; and judging the tradeoff between those, I think, is very difficult.

Mr. MATSUI. I appreciate that. I think that is probably a good analysis of it, because there are a lot of emerging companies that are probably going to fail, and so they are investing. Is that kind of your sense of it, they are investing R&E that may not have any value in the long term, or how do you distinguish between good R&E and not so good R&E?

Mr. RUDOLPH PENNER. Well, ultimately, you would like to measure the rate of return to it from the point of view of society as a whole, which is its impact on economic growth; and I am just making a judgment here that when you have a very erratic subsidy that provides very different kinds of subsidies to individual companies, depending on their circumstances, it is not a level playingfield, and therefore you don't get the most efficient package of R&E that you could otherwise.

Mr. MATSUI. Could I ask Mr. McPherson—you are Lockheed; is that right?

Mr. MCPHERSON. Yes.

Mr. MATSUI. Lockheed Martin.

What is your sense of this? You are a mature company. You obviously also have extensive R&E, given your international needs and the need to keep modernization going. What are your thoughts?

Mr. MCPHERSON. Well, as I indicated before, obviously, we haven't received any benefit out of the credit—most of us in the industry—probably since 1989; so, to say what is going to happen if we do get a flat rate credit, it can't do anything but help.

I don't have any macro, studies or anything on what the effect would be, but from a tax standpoint, we haven't played any role in R&D for so long that it is hard to envision. All I can say is, if we do have a flat rate credit where we get some benefit out of it, obviously we will play a role; and that will certainly, I would think, play an important part in how much more R&D is expended.

Mr. MATSUI. In other words, you think it would create an incentive effect?

Mr. MCPHERSON. I think it would help, yes.

Mr. MATSUI. Dr. Penner, I don't want to quote you because you are part of this coalition, but I know GAO would probably feel it is maybe not as great. This is something that I think all of us will have to really grapple with. I really appreciate the fact that you are all very open and candid about this, because obviously we want to work together. We want to make sure we keep the R&E; we

don't want to let this thing just deteriorate into a huge fight between industries because the long-term impact is too important to us.

I look forward to working with you, and certainly the Chair here, on this issue.

Thank you.

Chairman JOHNSON. In fact, my colleague, Mr. Matsui, has gone right to the heart of the matter that we think is very important. Erratic tax policy that affects one company one way and another company another way, in the same industry or in different industries, is not healthy, and fundamentally this does not grow a strong economy.

On the other hand, I appreciate that a 3-percent flat credit for some of you who are way out there and are in sectors where, if you are not way out there, you are not going to be there at all, does matter; and Dr. Penner, since you are really closer to a variety of these companies and are aware of these tensions, I would urge you to begin helping us look at what are the various options in a flat credit? Is there some way of recognizing certain industries in which a much higher investment of R&D is, in a sense, equivalent to a much lower investment in other segments, that the need is so much greater?

I don't know if there is any way of varying the flat credit so you have really a progressive flat credit or a variable flat credit, but it would be a lot easier, it would be a lot simpler, it would be far more equitable. I think we can't not recognize the difference in an R&D demand from one segment to another.

On the other hand, I am more concerned than I was in the beginning of this hearing, because frankly I didn't realize quite how erratic the impact of this was. I did know that some of our big companies didn't benefit at all, and the little companies were having trouble. But I think we owe it to ourselves to look at both simplicity and equity, because in the long run if we make this permanent, we are talking about tax policy for the next decade, two decades, and we ought to think about economic growth across the spectrum. So I do urge you to really give that some thought and get back to us with your best shots.

Mr. RUDOLPH PENNER. We would be very pleased to, Madam Chair.

I do think it has to be said that whatever the faults of the current approach, it is much better than the moving base that we used to have, which had some really perverse incentives in it. So there has been some improvement.

I think any incremental approach has some complexity and inefficiency involved.

Chairman JOHNSON. We are finding the same thing with retroactivity, too, and refundability.

Let me recognize Mr. Portman from Ohio.

Mr. PORTMAN. I thank the Chairwoman.

I wasn't able to be here for all your testimony. I was here earlier at the hearing and have just a continuation of the same line of questioning.

We are in this bind—Dr. Penner knows it well—on the budget; we need to figure out a way to make the Federal dollar stretch fur-

ther. It seems to me that in many of these incentives we have in our system, we need to be sure that the activity wouldn't take place otherwise.

In particular with regard to R&E, it is very important for us to figure out a way to be sure that the research and development wouldn't otherwise occur. That is why I like the incremental idea, because it seems conceptually consistent with that, that it would encourage companies to undertake additional R&E because of the Federal incentive; but I am hearing now both from reading some of your testimony and hearing from Mr. Rau and others that—and from Mr. McPherson, of course—that a flat approach might be preferable.

I guess my question for all of you, and maybe Dr. Penner, since you have already addressed this more generally, is if we do stay with an incremental-type approach, is there something that you would recommend in addition to what has already been suggested for the base period to make it more sensible?

I would agree with the Chairwoman that any time you get into the incremental approach there will be some complexity, but do you have any specific suggestions as to how the base period could be restructured? Perhaps you could start, Dr. Penner, but others chime in.

Mr. RUDOLPH PENNER. I don't, sir. I think that any change that you contemplate is going to hurt some companies and help others in the base period. That is just in the nature of how it works.

Mr. PORTMAN. But from your earlier responses, it seems to me that you do acknowledge that having a flat credit might not be consistent—and I don't mean to put words in your mouth—might not be consistent with the approach of encouraging R&E where it is not otherwise going to take place? What do you see as a middle ground between the existing system, that seems to be unfair to certain industries or businesses, and a flat rate?

Mr. RUDOLPH PENNER. As a budget person, I always think of these in a revenue-neutral kind of way, which makes it very difficult, but——

Mr. PORTMAN. Which we appreciate these days. In fact if you can think of it in terms of not just budget neutral, but a budget savings, why that would be more appreciated.

Mr. RUDOLPH PENNER. The budget neutrality requirement limits you, but I do think you gain more flexibility obviously with some sort of elective approaches and giving the companies somewhat more choice. That is a middle ground.

Mr. PORTMAN. More flexibility. Mr. Rau.

Mr. RAU. Just to clarify my earlier statement, it is that we do support an incremental credit. It has worked well for our company, and therefore all of our R&D today is done in the United States.

Mr. PORTMAN. I appreciate that. Mr. McPherson, any thoughts?

Mr. MCPHERSON. Well, I really haven't given any thought to alternatives because even if you had a sliding base scale, as our industry goes down, we still wouldn't be able to benefit from it, so it almost makes——

Mr. PORTMAN. Your industry would be unlikely to be able to take advantage of the credit with anything other than a flat rate?

Mr. MCPHERSON. Essentially.

Mr. PORTMAN. Any other thoughts?

Mr. Capps.

Mr. CAPPS. Again, the information technology industry is growing rapidly, and the current incremental credit has worked well for us. We think that from an economic standpoint, it is working, it is a good incentive, and from a macro standpoint. So we would suggest that we don't tinker with the core incremental features that we have now, but maybe provide for some elective alternatives to address some of the legitimate concerns that we have heard this morning.

Mr. PORTMAN. Thank you very much.

Mr. Conway.

Mr. CONWAY. Mr. Portman, I would just like to add, in terms of the base period, we have looked at that as an alternative, and from our standpoint, we think that for a lot of companies that is not an appropriate remedy here. The reason for that is, as long as we have a base period, you still have uncertainty. If sales increase dramatically because your R&D is successful, and you apply that base period percentage to those sales, you can lose the credit; and in terms of—we recognize also the importance of providing an incentive to do additional R&D. We recognize that that is an important policy.

I just point out that a flat rate credit can be—it could be progressive, and it certainly will provide incentive to do more in 1 year. I think those are two points that ought to be taken into account. Even a flat rate credit has incremental features or can have incremental features.

Mr. PORTMAN. To provide incentive for additional research and therefore additional credit. Thank you very much.

Thank you, gentlemen.

Chairman JOHNSON. Mr. Hancock.

Mr. HANCOCK. One of the things you need to try and do to handle all the problems, is try to figure out what Internal Revenue is going to do from year to year. I think everybody is curious about that.

I would like to see a 5-year moratorium on a lot of these rules and regulations, but I think on the question of renewal and extending the present R&D tax credit, I think the basic question is, is that going to happen? The other question is, should it be incremental or should it be a flat rate?

It would appear to me—it may have been said in early testimony, but it would appear to me, from an industry standpoint, that the most important thing would be to get a permanent extension.

Mr. RUDOLPH PENNER. I think there is no doubt about that. That is the first priority.

Mr. HANCOCK. It can work whether it is incremental or whether it is flat, but the permanent extension is the first priority. Let me ask this question then.

Would the industry consider or would they prefer even a lesser rate to get a permanent extension than the current formulas that are set up? In other words, would it be worth a little bit of a tradeoff to get a permanent extension so you could make long-term plans, even though the credit actually amounted to less money? I am not talking—20 percent less, you know.

Mr. MCPHERSON. Speaking on behalf of myself, and possibly on behalf of AIA, we recognize the problems that you people have and we would like to be flexible and work with you in that regard. Permanency is essential. Whether the rate is exactly as we ask for is another thing. I think that we should be flexible and work with you on that.

Mr. HANCOCK. I think you understand, and I support the idea of a permanent extension because I am a businessman. It drives me up the wall trying to figure out what is going to happen up here. I think the more we can get out of having to come back to Congress every year to decide whether something that you are planning on for the next 5 years is covered by the credit, and you don't know whether you can plan on it or not—it would appear to me that that would be a real detriment to even study certain programs. So I would like to hear from you all, at least some suggestions possibly for the subcommittee.

We might be able to make a more accurate recommendation that we go for a permanent extension on the basis that industry is willing to look at it, maybe the figures we are working with now would be less, in return for a permanent extension. I would appreciate any information you might be able to furnish us on that.

Mr. HARRY PENNER. I would comment that I think that there is an overall policy aspect to this credit and that is to incent high technology spending. Certainly that is the constituency I represent.

It is sort of a tradeoff we are talking about. Permanency in return for reduced credit may not necessarily get you where you want to be in terms of creating the proper incentives to maintain U.S. competitiveness in high technology, high investment industries. I think you have to consider that.

Mr. HANCOCK. I understand, but let me look at it this way. Is there a possibility, though, that there would be more overall investment in research and development from the competitive standpoint? Are there companies or businesses that are saying, well, because we don't know whether we are going to get it next year and the next year, then we are not going to do it at all? To me, that would be the key.

If I was a chief executive officer of a company, I would say, wait 1 minute, we are talking about spending $10 million in research and development partially because we are going to get a tax credit, but we can't afford to continue the program unless the Congress renews it. That is a awkward position to put any board of directors in.

Mr. HARRY PENNER. I can't deny that, but on the other hand I wonder if a one-size-fits-all policy is the correct one.

Mr. RUDOLPH PENNER. I would comment that it is right.

First of all, the uncertainty reduces the amount of R&E that you get from this credit. Logically, of course, there is some lower credit with permanency that would get you the same amount. However, I do think that the recent evidence is extremely persuasive that this is one of the most effective tax expenditures in the system in terms of bang for the buck.

So while I can't comment on specific other—I haven't done the kind of study of other kinds of tax expenditures that we have done of the R&E credit, I would suggest that when it comes to the mat-

ter of financing permanence, it would be a good idea to look down the whole list to see if there is something less effective that could be limited in order to finance permanence for this.

Mr. HANCOCK. Thank you.

Thank you, Madam Chairman.

Chairman JOHNSON. Mr. Johnson.

Mr. JOHNSON. Thank you, Madam Chairman. I think we have pretty well discussed this, and I don't want to prolong it. I would like to note that MCI and EDS are here at my suggestion, and those two companies, and I am sure the others would too, are ready to support us in any effort to devise a better tax system. Mr. Capps, in particular, is in our district in Plano, and in addition to being with EDS, was with Texas Instruments and also spent 5 years with the IRS, so I think he knows what he is talking about.

Thank you for being here.

Chairman JOHNSON. Mr. Matsui.

Mr. MATSUI. Thank you.

Mr. Penner, I didn't ask you your opinion on this difference between the incremental approach versus the flat credit approach because you represent the biotech industries. Could you tell me what your thoughts are on this and——

Mr. HARRY PENNER. It is an analysis that we personally haven't conducted at our company, but there is much more appeal to the incremental approach for our industry. We believe there are some improvements that can be made in the incremental credit, and we have suggested those and put them in the record regarding the fixed base percentage and the 50-percent base rate, and so forth. Overall, the incremental approach is one we like.

[The following was subsequently received:]

WHY AN INCREMENTAL CREDIT FOR R&E EXPENDITURES?

1) INCENTIVE THEORY

- The Research & Experimentation Tax Credit (IRC §41) was carefully crafted in the early 1980s to create an incentive for American businesses to increase the level of their expenditures directed to research and experimentation (R&E).

- In order to capture the level of year-to-year increases in R&E and base the tax credit on those increases, an incremental approach was designed.

- An incremental credit encourages new R&E, and it results in R&E that would not otherwise be conducted. Therefore, the current credit rewards those companies that increase the amount of sales revenue reinvested in R&E. In contrast, routine, recurring R&E that would be conducted anyway, is not rewarded.

- By excluding routine, recurring R&E investments, an incremental credit can be set at a high enough rate to change corporate behavior, thus generating new R&E, while still being fiscally responsible.

2) FLAT CREDIT AND "CORPORATE WELFARE"

- A shift from an incentive-based, incremental credit to a universally-available, flat credit would make the R&E credit susceptible to the charge that it is, in effect, a corporate welfare program, jeopardizing its survivability in the future.

- The main argument for a flat credit is that if high-risk, research-intensive industries, such as biotech, electronics and other cutting-edge technologies, are eligible for a tax credit, then everyone should be eligible. The proponents' preferred solution, a flat tax credit based on total R&E, clearly rewards some R&E that would be performed in any event. Service industries that routinely invest small amounts in R&E would receive the credit even though it would not incrementally increase the amount of research they perform.

3) FLAT CREDIT IS SIMILAR TO NOW-REPEALED ITC

- In 1986, Congress fundamentally reformed the tax code; included in that reform was the elimination of the Investment Tax Credit (ITC), which was a flat credit based simply on investment expenditures.

- Throughout its history, the ITC was much-maligned as nothing more than a handout to business — a tax credit for decisions businesses were going to make anyway.

- Under the intense scrutiny of the 1986 reforms, the ITC did not survive.

- Importantly, though, the incentive-based R&E credit did survive because it was structured to reward incremental research investments.

4) PERMANENCY IS MOST IMPORTANT TO BUSINESS COMMUNITY

- Business agrees that the R&E credit should be made permanent, so that investment decisions each year will be based on stability in the tax code.

- If the R&E credit is made permanent, the current incremental credit would make the difference between undertaking high-risk, long-term research projects to find cures for diseases like breast cancer or not. High-growth, R&E-intensive emerging industries, such as biotech and electronics, depend on the R&E credit to encourage these types of investments instead of safer projects.

- A wholesale change of the R&E credit may divert Congress' attention from finally making this important credit permanent.

5) BUDGET CONSTRAINTS

- Fundamentally changing the credit to a flat credit in excess of 5 percent would cost from between $5.5 to $12 billion over five years more than the current credit. These dollars would be better spent on extending the credit permanently and possibly fine-tuning the credit where needed.

- Since a flat credit would need to be set at a relatively low rate (5% or less) because of budget constraints, the effective incentive would be less than 2% on a book basis. This is hardly enough to make a difference.

- Defects in the calculation of the current credit may arguably create "winners and losers" but can be corrected (e.g., an adjustment to the base period or an election option into a progressive R&E credit at a set percentage above the national corporate R&E average) without changing the incentive nature of the R&E credit.

6) JOINT TAX COMMITTEE RATIONALE 1/

"Incremental credits are designed to target tax incentives where they have the most effect on taxpayer behavior. Incremental credits attempt to not reward projects which would have been undertaken in any event and to target incentives to marginal projects.

"Incremental credits have the potential to be far more effective per dollar of revenue cost than flat credits in inducing taxpayers to increase qualified expenditures.

"The incentive effects of incremental credits per dollar of revenue loss can be many times larger than those with a flat tax credit."

1/ Excerpts from "Description and Analysis of Certain Tax Provisions Expiring in 1994 and 1995," Joint Committee on Taxation, JSC-8-95, May 8, 1995, at pp. 38 and 39.

Mr. MATSUI. Thank you. Thank you all.

Chairman JOHNSON. I thank the panel very much. I am very pleased to have MCI and EDS here and appreciate your expertise; and Mr. Penner from the biotech industry, too. It is important that we move with good solid knowledge behind us.

I would like for you to look at your companies and see, given the administrative savings that you will make from a simpler approach, what would it take for the flat tax to be as beneficial for you as an incremental tax.

There are several ways to look at the issue of incentive. One could exclude the first 25 percent of research spending so that from then on, if you spent 10 percent additional dollars, two would go into that 25-percent base, or 250, and the rest would go into the portion that would be exposed to the flat credit.

So there are permutations that aren't quite as simple as the flat tax but have some equity and some administrative advantages. I would ask you to look at that.

I do think with the amount of activity in the small and medium-sized business sector and the role that they are increasingly playing in developing new products and doing some of the basic research that is going to drive future developments, it is important to try to think through, how can we make this more accessible to them?

To my knowledge, this isn't accessible to them. They don't have the resources to manage an incremental benefit.

Thank you very much for your testimony, and we invite your input in the weeks ahead.

Re: Incremental vs. Flat Rate R and E Credit

Dear Congresswoman Johnson and Congressman Matsui:

BIO very much appreciates your leadership on the R and E and Orphan Drug Tax Credits. Our entrepreneurs could not have more effective champions in the Congress.

I am writing to follow-up on issues which were raised during the testimony of Harry Penner, CEO of Neurogen, at the R and E Credit hearing. Harry was asked for his views on the comparative effectiveness of an incremental vs. a flat rate R and E Credit. Harry stated his preference for an incremental credit, but asked for the opportunity for BIO to submit additional information on the issue.

Enclosed are talking points about incremental and flat rate credits. As Harry indicated, we do prefer an incremental credit. There are some problems with the current structure of the incremental credit, which were outlined in his testimony, but these do not lead us to prefer a flat rate credit.

One of our concerns is that a flat rate credit would be subject to the same criticisms as the Investment Tax Credit, which was repealed to finance the 1986 Tax Reform law. An R and E Credit which provides a credit for the first dollar of research would be subject to the same criticism as the I.T.C. and it might lead

FAX 202-857-0237

to the same result. An incremental credit makes sense as it rewards increased research, not just maintenance of research effort. This design provides a true incentive for research, not a credit for research which would have been undertaken without the credit. This means that the incremental credit is designed for entrepreneurs who can increase the competitiveness of U.S. firms in international trade, a critical issue for the long-term growth of our standard of living. We are not opposed to elections which might be made available to expand the number of companies which can claim the R and E credit.

The biotechnology industry is the most research intensive industry in the civilian manufacturing sector. The industry on average spends $68,000 per employee on research, more than nine times the U.S. corporate average of $7,500. In a 1994 survey by Business Week, six of the top ten firms in the U.S. in terms of research expenditures per employee were biotechnology companies, including Biogen ($208,724), Genentech ($117,594), and Genetics Institute ($107,657). Ernst & Young reports that biotechnology companies spent $7 billion on research in 1994, up $1.3 billion over 1993. The R&E and Orphan Credits are critically important as an incentive for this research.

Thank you very much for your leadership. We will do all that we can to support making the R and E Credit and Orphan Drug Credit permanent and to restructure them so that they are even more effective for entrepreneurs.

RATIONALE FOR AN INCREMENTAL CREDIT FOR R&E EXPENDITURES

1) INCENTIVE THEORY

-- The Research & Expenditure Tax Credit (IRC S.41) was carefully crafted in the early 1980s to create an incentive for American businesses to increase the level of their expenditures directed to research and experimentation (R&E).

-- In order to capture the level of year-to-year increases in R&E and base the tax credit on those increases, an incremental approach was designed.

-- An incremental credit encourages new R&E, and it results in R&E that would not otherwise be conducted. Therefore, the current credit rewards those companies that increase the amount of sales revenue reinvested in R&E. In contrast, routine, recurring R&E that would be conducted anyway, is not rewarded.

-- By excluding routine, recurring R&E investments, an incremental credit can be set at a high enough rate to change corporate behavior, thus generating new R&E, while still being fiscally responsible.

2) FLAT CREDIT AND "CORPORATE WELFARE"

-- A shift from an incentive-based, incremental credit to a universally-available, flat credit would make the R&E credit susceptible to the charge that it is, in effect, a corporate welfare program, jeopardizing its survivability in the future.

-- The main argument for a flat credit is that if high-risk, research-intensive industries, such as biotech, electronics and other cutting-edge technologies, are eligible for a tax credit, then everyone should be eligible. The proponents' preferred solution, a flat tax credit based on total R&E, clearly rewards some R&E that would be performed in any event. Service industries that routinely invest small amounts in R&E would receive the credit even though it would not incrementally increase the amount of research they perform.

3) FLAT CREDIT IS SIMILAR TO NOW-REPEALED ITC

-- In 1986, Congress fundamentally reformed the tax code; included in that reform was the elimination of the Investment Tax Credit (ITC), which was a flat credit based simply on investment expenditures.

-- Throughout its history, the ITC was much-maligned as nothing more that a handout to business -- a tax credit for decisions businesses were going to make anyway.

-- Under the intense scrutiny of the 1986 reforms, the ITC did not survive.

-- Importantly, though, the incentive-based R&E credit did survive because it was structured to reward incremental research investments.

4) PERMANENCY IS MOST IMPORTANT TO BUSINESS COMMUNITY

-- Business agrees that the R&E credit should be made permanent, so that investment decisions each year will be based on stability in the tax code.

-- If the R&E credit is made permanent, the current incremental credit would make the difference between undertaking high-risk, long-term research projects to find cures for diseases like breast cancer or not. High-growth, R&E-intensive emerging industries, such as biotech and electronics, depend on the R&E credit to encourage these types of investments instead of safer projects.

-- A wholesale change of the R&E credit may divert Congress' attention from finally making this important credit permanent.

5) BUDGET CONSTRAINTS

-- Fundamentally changing the credit to a flat credit in excess of 5 percent would cost from between $5.5 to $12 billion over five years *more* than the current credit. These dollars would be better spent on extending the credit permanently and possibly fine-tuning the credit where needed.

-- Since a flat credit would need to be set at a relatively low rate (5% or less) because of budget constraints, the effective incentive would be less than 2% on a book basis. This is hardly enough to make a difference.

-- Defects in the calculation of the current credit may arguably create "winners and losers" but can be corrected (e.g., an adjustment to the base period or an election option into a progressive R&E credit at a set percentage above the national corporate R&E average) without changing the incentive nature of the R&E credit.

6) JOINT TAX COMMITTEE STATEMENTS[1]

-- "Incremental credits are designed to target tax incentives where they have the most effect on taxpayer behavior. Incremental credits attempt to not reward projects which would have been undertaken in any event and to target incentives to marginal projects."

-- "Incremental credits have the potential to be far more effective per dollar of revenue cost than flat credits in inducing taxpayers to increase qualified expenditures."

-- "The incentive effects of incremental credits per dollar of revenue loss can be many times larger than those with a flat tax credit."

May 19, 1995

The Honorable Nancy L. Johnson, Chairman
Subcommittee on Oversight
House Committee on Ways and Means
1136 Longworth House Office Building
Washington, DC 20515

Dear Madame Chairman,

This is to follow up on the questions you presented to members of our panel who testified before your Subcommittee on May 10 with respect to the R&E tax credit. I understood you to pose two questions. First, what would be the impact on our company from a change from the current 20% incremental tax credit to a flat 5% tax credit? Second, what administrative savings might be generated by a change to a flat rate tax credit?

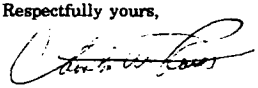
With respect to the first question, because MCI has consistently increased its commitment to research, we receive an effective tax credit of 10% of our qualified expenditures under the current incremental system. Therefore the substitution of a flat rate credit of 5% would mean a 50% reduction in the credit available to MCI. (After "the haircut" of IRC Section 280C(c)(3) the 10% becomes 6.5% -- while the 5% would become 3.25%.)

As to any administrative savings, there are fundamentally two activities connected with our obtaining the existing R&E credit. The first is the gathering of information to support the credit and the second is justifying the credit to IRS auditors during the course of their examination. In both instances, our principal administrative cost is in identifying and documenting what constitutes a qualified R&E expenditure. Any cost attendant to applying the incremental credit formula is *de minimus*. Therefore, a change to a flat rate tax credit system would generate virtually no administrative cost savings.

To the extent funds are available and you desire to make the R&E credit more universally available, we request that any enhancement be made as an elective alternative and not in lieu of the current incremental R&E tax credit.

If MCI may be of further service to you or your Subcommittee, please contact me. With our corporate headquarters in DC, we are readily available to you and your staff if further dialogue or information is desired.

Respectfully yours,



May 25, 1995

The Honorable Nancy L. Johnson
U. S. House of Representatives
Room 343
Cannon House Office Building
Washington, D.C. 20515

Madam Chairwoman:

I would like to respond, for the record, to two questions you asked during my testimony before the Subcommittee on Oversight, of the Committee on Ways and Means, on May 10, 1995. You inquired as to (i) what effect a flat Research and Experimentation (R&E) Tax Credit would have on EDS and (ii) what our administrative savings would be if a change were made from an incremental to a flat credit.

EDS' R&E Credit has been averaging around 10 percent, if converted to a flat rate. This would mean a change in law from the current incremental credit to a flat credit of 5 percent would reduce our incentive by one half. In fact, anything less than a 10 percent flat credit would result in a lower incentive than we experience under current law.

The administrative savings for EDS of a change from an incremental to a flat credit would be minimal. We spend more than 2,000 hours each year identifying and documenting projects that qualify for the R&E Credit and making the required calculations. The information necessary for the incremental calculation is generally readily available, and the calculation takes a negligible amount of time. There is a requirement, however, that taxpayers who have acquired or disposed of businesses adjust their base period for those acquisitions and dispositions to keep it consistent with the current period. Since EDS has acquired a significant number of businesses, it spends about 40 hours per year making these base period adjustments. Thus, I would estimate that our administrative burden would drop by less than 2 percent (40/2,000+) if we migrated to a flat based credit. For most companies, who are not making acquisitions and dispositions, I would expect the administrative savings to be even less.

I hope the above information helps you and the rest of the Subcommittee in your analysis. I would again like to commend you for your leadership on this issue, which is so important to EDS, the information technology industry, and the country. If you have additional questions or I can be of further assistance, please feel free to phone me at (214) 605-1238. I am enclosing a copy of this letter with the corrected transcript of my testimony that I am returning to the Subcommittee.

Sincerely yours,

R. Randall Capps

RRC:ch

Chairman JOHNSON. The next panel consists of Dan Kostenbauder, Hewlett-Packard; Cliff Jernigan, Advanced Micro Devices; Roger Siboni, Peat-Marwick; Harry Gutman, Generic Pharmaceutical Industry Association, on behalf of the National Association of Pharmaceutical Manufacturers and National Pharmaceutical Alliance; and Gordon Steel, Xilinx.

Mr. Kostenbauder will start.

STATEMENT OF DANIEL KOSTENBAUDER, GENERAL TAX COUNSEL, HEWLETT-PACKARD CO., PALO ALTO, CALIF.

Mr. KOSTENBAUDER. Madam Chair, I am Dan Kostenbauder, general tax counsel with Hewlett-Packard Co. Last year, Hewlett-Packard had worldwide revenues of $25 billion, about 54 percent of which was outside the United States, and we spent over $2 billion worldwide in R&D.

I want to start by thanking you for conducting these hearings today on the R&E credit and express our appreciation for your leadership on this issue, along with Mr. Matsui, as leaders on H.R. 803; and to thank the other members of the subcommittee for their support of the R&E credit.

Hewlett-Packard has long supported the R&E credit, and I hope with my testimony today to add a little more insight and understanding of the workings and the mechanics of the current credit as to how it affects some companies that have been traditionally very much involved in the high technology world. The current structure of the credit does have some efficiencies that should be addressed.

The way I like to describe the current structure of the credit is to talk about R&D intensity. What happens in terms of the current credit is, you measure the qualified research and development expenses and divide that by gross receipts, the company's revenue, and that provides a fraction that was based in the 1984–88 timeframe. So your R&D divided by your revenues in that 5-year period establishes a baseline R&D intensity. Essentially, to get a credit into the future, you have to exceed that R&D intensity. If you fall below that R&D intensity, you will not get a credit.

My written statement goes into some greater detail on a variety of factors that could impact your R&D intensity over time, having more to do with many factors besides just increasing R&D.

I will focus on two particular elements that are surprising and in some ways counterproductive. For example, one is exports. If a company under this current methodology starts exporting a significant amount more than it did during the base period, this really implies that the worldwide demand is being supplied more from the United States than from outside the United States. That is not going to change the overall business R&D intensity, but reduce the R&D intensity in the United States, where we are measuring the R&E credit. So this would be one anomalous effect.

If a company started exporting significantly, it would reduce or perhaps eliminate the R&E credit because your R&D intensity would fall below the base period. That, in my view, would be a somewhat anomalous result.

Another very large factor—a number of these factors affect Hewlett-Packard and some don't that I have identified in my testimony.

The single biggest factor affecting Hewlett-Packard is the change in our business. I think it is important to note that in the high technology world, businesses are—not just computers, but even very significant parts of the computer business; for example, the economics of personal computers and the R&D intensity associated with personal computers will be different than that associated with larger computers in very substantial ways.

Let me, since I submitted my written testimony—Monday morning the Wall Street Journal had an interesting article titled "Compaq Seeks To Join U.S. Computer Industry's Elite." The point of this article is that a company which has been a leader in the personal computer area is now seeing itself as being a participant across a broader part of the computer business.

After discussing some of the issues involved in that, the reporter says, analysts also suggest Compaq will need to spend more on research and development to compete in the upper strata of computing. They define a couple of statistics about recent R&D, but then conclude, "but Compaq's outlays still amounted to only 2 percent of 1994's $10 billion-plus in sales." That compares with 6.8 of revenue at IBM, 8.1 of revenue at Hewlett-Packard, and a whopping 18 percent at Digital, all companies with much greater sales than Compaq.

I am not here to give an extensive economic analysis of all this, but what is key there is that some parts of our industry—the high technology world or the computer world, broadly defined—have a historical business with a very low R&D intensity associated with it and others have much higher R&D intensity.

Some of those companies do nothing more than change their business mix and therefore have a higher R&D intensity and will get a very large R&E credit. Other companies who are changing their business mix and having more sales of products with lower R&D intensity are virtually precluded in the future from getting an R&E credit, and this is an anomaly that we think should have been addressed in any extension of the R&E credit.

One other thing. If you have my written testimony, there is a chart on the last page that is helpful in understanding what is happening, by referring to that chart. Three lines, the top line being revenue, if you have a successful company where revenue is increasing because of this phenomenon of R&D intensity being the same, the bottom line is the base, and that will increase along with revenue.

So for any number of these reasons I have talked about, if R&D is actually growing at a slower rate than revenue is growing, over time that company will be out of the R&E credit despite the many different factors that could cause that result.

In conclusion, I would like to strongly urge the subcommittee to improve the base period. Particularly if some low-cost solution to improving the credit can be identified, it should definitely be adopted in conjunction with a permanent extension of the credit.

Thank you, Madam Chair.

[The prepared statement and attachment follow:]

STATEMENT OF DANIEL KOSTENBAUDER
GENERAL TAX COUNSEL, HEWLETT-PACKARD CO.
PALO ALTO, CALIF.

Good morning. My name is Dan Kostenbauder. I am General Tax Counsel at Hewlett-Packard Company of Palo Alto, California. I appreciate the opportunity to testify today on behalf of Hewlett-Packard Company about the need for restructuring of the base period rules for the research and experimentation (R&E) credit.

Madam Chairman, I want to congratulate you and Mr. Matsui, the Ranking Member of the Oversight Subcommittee, for your leadership in introducing H.R. 803. Although my testimony will discuss the need for modifications to the structure of the R&E credit, your bill is an excellent starting point. We appreciate that you are holding hearings on the need for a permanent R&E credit and to examine possible structural modifications to ensure that the R&E credit delivers the maximum incentive effect to the largest number of taxpayers possible. We would also like to express our appreciation, as well, for the support of the many co-sponsors of H.R. 803 -- both in the Ways and Means Committee and the full House of Representatives.

Hewlett-Packard designs, manufactures and services electronic products and systems for measurement, computation and communications. Our basic business purpose is to create information products that accelerate the advancement of knowledge and improve the effectiveness of people and organizations. The company's products and services are used in industry, business, engineering, science, medicine and education in more than 120 countries.

During HP's last fiscal year, which ended October 31, 1994, HP had worldwide revenues of about $25 billion. Over 54% of this revenue was from sales to customers outside of the United States. HP spent over $2 billion on research and development worldwide, most of which was performed within the United States. HP's strong research and manufacturing base in the United States enables it to be one of our country's largest exporters. Last year HP exported over $4.6 billion from the United States.

Research and development have long been key to the success of HP and other high-technology companies. The process of developing new high-technology products is complex and uncertain and requires innovative designs that anticipate customer needs and technological trends. After the products are developed, the company must quickly manufacture products in sufficient volumes at acceptable costs to meet demand.

During the 14 years that the R & E credit has been in effect, HP has increased qualified R & E every year except one. Since the R&E credit was first adopted in 1981, there has been an ongoing debate -- in Congress and in the business community -- about whether it is appropriate to have an R&E credit, and if so, how it should be structured. When the R&E credit was first enacted, it was made temporary so that Congress could judge its effectiveness. Since then it has been extended six times. Congress has consistently reaffirmed its commitment to provide a market incentive to encourage private-sector R&D.

HP has supported tax incentives for R&D since 1981. We believe that R&D is a high value-added activity that generates good, high-wage jobs and a better standard of living. Increasing R & D in the United States will lead to a stronger U. S. economy as the technology and intellectual property generated by R&D is sold in the global marketplace. Tax incentives to stimulate U. S. R & D are appropriate because they will increase U. S. economic growth and counteract the incentives many other countries offer for conducting R & D in their countries.

The R&E credit's focus has been sharpened by limiting both qualifying activities and eligible expenditures, and altering its computational mechanics. The credit has been the focus of significant legislative activity and has undergone refinement many times since its inception. Accordingly, such an important incentive must be continually reviewed to ensure that it is structured so that it is available over time to companies that effectively commercialize R & D.

Most companies that conduct a significant amount of R&D in the United States sell a significant amount outside of the United States. In HP's case about 54% of total worldwide revenue is from customers outside of the United States. For a company to be successful, it is critical to sell into the global marketplace in order to be able to achieve the highest possible revenue from a given expenditure for R&D. In global business, being able to keep global R&D intensity as low as possible by maximizing revenue is a critical competitive element. If a company's R&D expenses

are much higher than those of direct competitors, company profits available to finance future R&D and general growth will not be as readily available.

"RESEARCH INTENSITY" CREDIT

The 1989 revision of the methodology for computing the R&E credit measures R&E intensity (Qualified R&E divided by gross receipts) during an arbitrary 5-year base period (1984-1988). To the extent R&D intensity increases, a credit is available. If R&D intensity falls, then no credit is available. For purposes of this computation, gross receipts are measured using a four-year moving average. This is an appropriate element of the formula, since companies generally would find it difficult, and probably imprudent, to increase R&D expenses to correspond with revenue growth above expected levels. Furthermore, if gross receipts were measured on only a current year basis, the amount of R&E credit could be very volatile and therefore would be less of an incentive. In addition, companies that are especially successful in commercializing R&D would almost never be able to increase R&D above the base period intensity level if gross receipts were measured using too short a time period.

The "R & D intensity" methodology has an underlying premise that higher gross receipts enable a company to spend a proportionately higher amount on R & D. This premise might have some validity if a company maintained the same relative mix of products and the same relative market position and if the economics and technologies of those products remained stable over time. In rapidly changing high-technology businesses, these circumstances are unlikely to prevail for very long for very many companies.

CONCERNS ABOUT THE "RESEARCH INTENSITY" CREDIT

At the end of this testimony is a chart that schematically addresses HP's main concern with the "research intensity" R & E credit methodology.

Any company whose rate of revenue growth exceeds its rate of R & E growth will eventually receive no incentive from the U. S. R & E credit -- *even though the company's R&E is increasing.* This is a result that should not be built into the structure of the credit without some feature to permit companies whose base exceeds qualified R & E, while qualified R & E is increasing, to qualify for the credit.

R & D expense budgets are much more within the control of a company's management than gross receipts. Gross receipts will depend on how quickly, cheaply and effectively a company can manufacture and sell products it has invented and designed. Ultimately gross receipts will depend upon how customers react to the fruits of the R & D effort -- will they pay high prices for large quantities of a product, or will they only be willing to buy small quantities at low prices? Companies and their management's can decide to spend a certain amount on R & D, but they cannot control how customers respond. Companies that consistently, over a number of years, are able to convert R & D spending into successful products will have their gross receipts grow faster than R & D in most cases.

Having a changing mix of products is another major factor that can result in a company having gross receipts grow faster than R & E expenses. To illustrate this point, imagine a company that was in a business characterized by high R & E intensity (say 14%) during the 1984-1988 base period. Suppose that the company decides to compete in a second high-technology business characterized by somewhat lower R & E intensity (say 8%). If the company is successful in the second business, its future R & E intensity for the two businesses together will be lower than the company's "fixed base percentage." This would be true even if the company increased the R & E intensity of its new business (to 10%). Again, given the dynamic nature of most companies, fixing the appropriate threshold for determining R & E credits on a base period 7 to 11 years prior to today, without any adjustment mechanism, seems quite inappropriate.

FACTORS THAT AFFECT R&E INTENSITY

For analytical purposes, it is useful to consider a company's R & E intensity on a global basis, since most high-technology companies compete in a worldwide marketplace. Global R&D intensity may be considered to be composed of U.S. R&D intensity and foreign R&D intensity.

The mechanics of the U.S. R&E credit will then be affected by three major factors:
(1) U.S. R&E intensity during the 1984-1988 base period, which established the "fixed base percentage;"
(2) factors impacting general R&E intensity; and
(3) factors impacting only U.S. R&E intensity.

FIXED BASE PERCENTAGE

The 1984-1988 period used to establish the "fixed base percentage," which can be thought of as "R&E intensity," is obviously an arbitrary period. This period was selected because it was the period immediately before the law was enacted. For most companies, it was probably a representative period. For others, however, it might have been unrepresentative -- either too high or too low.

In HP's case, the fixed base percentage was clearly higher than average because of two major factors. First, HP's revenue growth was low due to a general downturn for computer companies in 1985, and delays in bringing new products to market. Second, major investments were made in a new computer architecture and technology called RISC ("reduced instruction set computing").

GENERAL R&D INTENSITY

Factors that affect general R&E intensity include:

Product Mix -- If gross receipts from products with low R&E intensity grow more rapidly than gross receipts from products with high R&E intensity, then average R&E intensity will fall. This could occur even if the actual R&E intensity of all products was rising.

Successful Products -- If products are significant commercial successes, gross receipts will tend to grow more rapidly than R&E. This would occur, for example, if a company gained market share from global competitors. Although the argument could be made that a successful company can afford to do more R&D, it seems counterproductive to deny further tax incentives to companies that have been especially successful in commercializing R&E while reserving most of the benefits for companies that are less successful at commercializing R&E.

Increased R&E Efficiency -- By relying exclusively on a historical base without any adjustment mechanism, a company that significantly improves the efficiency of its R&E activities may lose all incentive benefits of the credit. Again, this scenario seems counter intuitive. Although it would not be worthwhile for a company to become less efficient in order to claim a greater R&E credit, companies should not be denied any R&E credit simply because they significantly increase their efficiency at conducting R&E.

U.S. R&E INTENSITY

There are a number of factors that can impact U.S. R&E intensity relative to foreign R&E intensity. Although for a given company worldwide R&E intensity may remain relatively stable over the short run, U.S. R&E intensity could rise, thereby generating more R&E credit, or it could fall, thereby generating less R&E credit.

Shifting R&E to the United States -- By shifting the location where R&E is conducted from a foreign location to the United States, U.S. policy objectives would be supported and a company's R&E intensity, and therefore R&D credit, would increase.

Shifting Manufacturing to the United States -- Shifting manufacturing to the United States would cause R&E credits to fall. This is because U.S. gross receipts would increase thereby reducing U.S. R&E intensity.

Exports -- Increasing the relative portion of a company's worldwide manufacturing done in the United States would cause U.S. exports to rise in order to supply worldwide demand. This increase in exports would increase gross receipts and therefore lower R&E intensity, which in turn would cause a reduction in R&E credits. As in other situations noted above, it seems counterproductive to rely on an R&E credit that penalizes a company for increasing exports from the U.S. faster than its global sales are increasing.

PROPOSED SOLUTIONS

HP has engaged in many discussions over the years about the need for a permanent commitment by the Federal government to encourage U.S. R&D through the R&E credit and about how to structure an ideal R&E credit. We are not sure such an ideal exists. Nevertheless, we do not believe "the perfect should be the enemy of the good," and so we have supported the existing R&E credit.

At this time, we are not convinced that the existing credit should be revised totally. The many factors described above that impact the existing credit make it difficult to focus on one or two that should be dealt with to the exclusion of others.

We strongly urge that the R & E credit be adjusted so that companies that have experienced changed circumstances since 1989, when the R&E intensity concept replaced the three-year rolling average concept, may qualify again for the credit.

We hope a permanent credit is enacted with an adjustment mechanism in place so that companies dramatically increasing U.S. exports, improving R&E efficiency, or shifting the businesses in which they compete are not precluded from receiving any incentive effects of the R & E credit in the future. Because the credit has been in place since 1981, it could be considered to have achieved "quasi-permanence." During this first major review of the structure of the R&E credit since its current format was introduced in 1989, it would be appropriate to correct obvious shortcomings at this time.

HP would offer the following specific proposal that would operate within the general structure of the existing credit (noting that we are open to other approaches as well):

If a company has not received any credit for one year because the base for that year exceeded qualified R&E, then for the next year the fixed base percentage would be recalculated based on the qualified R&E and gross receipts for the year in which no credit is available and for the four prior years. A company should also be able to elect to have this recalculation of the fixed base percentage be conducted for several years, perhaps five, before a final fixed base percentage is set. This will enable companies that are in the middle of fundamental shifts in their business to continue to receive an incentive benefit from the credit while this shift occurs. This opportunity would be available if R & E expenses increase from the prior year.

With regard to how the Congress deals with the credit at this time there appear to be two broad approaches within a limited level of funding for the credit. Congress could make permanent the existing R & E credit, leaving it to those companies or industries not receiving any incentive from the R & E credit to lobby in some future year for some restructuring of the credit. Alternatively, Congress could restructure the credit now so that it would be available to a broader group of companies and then have all companies benefiting or likely to benefit from the credit work together in the future to further enhance the credit. Both approaches could eventually lead us to the same general destination. The second approach just mentioned seems a more appropriate route toward adopting an effective credit of benefit to the broadest range of taxpayers.

Thank you for the opportunity to appear today to share our thoughts with you.

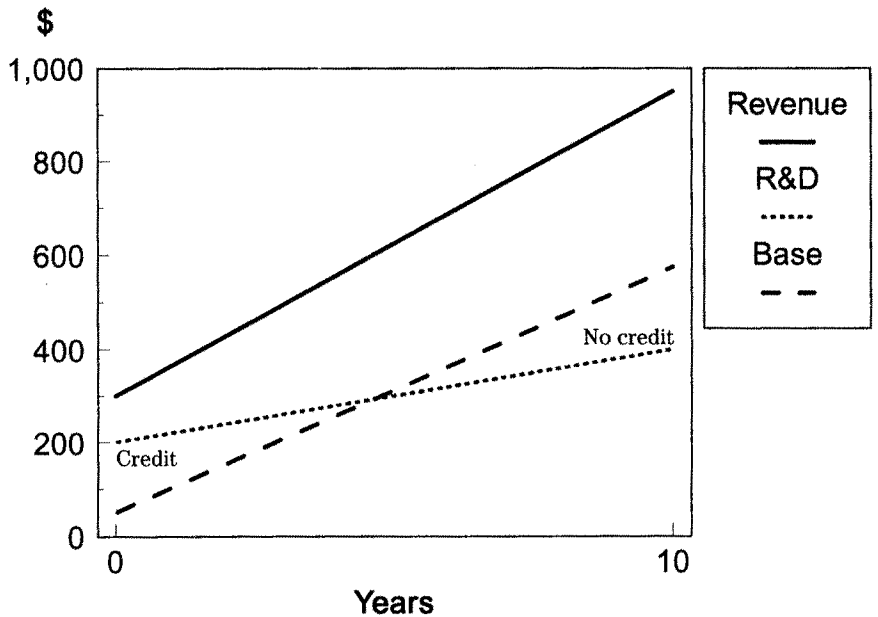
Why Base Restructuring Is Necessary



HEWLETT PACKARD

CORPORATE TAX DEPARTMENT
R&D 1/95

Chairman JOHNSON. Thank you.
Mr. Jernigan.

STATEMENT OF CLIFF JERNIGAN, DIRECTOR, GOVERNMENT AFFAIRS, ADVANCED MICRO DEVICES, INC., SUNNYVALE, CALIF.

Mr. JERNIGAN. Thank you. I am Cliff Jernigan. I am director of Government Affairs at the AMD, Advanced Micro Devices, Inc., one of the largest semiconductor companies. Our major plants are in Sunnyvale, Calif., and Austin, Tex. We have 6,000 people in the United States and 12,000 worldwide. In 1994 our worldwide sales were $2.1 billion. I am here to talk about the research and experimentation tax credit.

The credit is a very worthwhile incentive, but in a nutshell, we do not believe it is relevant to much of American business. It is too complex and it operates in an inequitable manner to many businesses.

The semiconductor industry is one of the leading research investors in the country. We are viewed by government and the private sector as one of the critical industries. In short, we represent some of the most important crown jewels of the kingdom.

Semiconductors drive all of our advances in the electronics industry and in the Information Age. We are exactly the type of company and industry meant to benefit from a research credit. Unfortunately, AMD has not received the credit since the credit structure changed in 1989. We have increased our research spending in absolute dollars every year since 1989. In our research spending, percentage to sales is among the highest in the country at an average of 18 percent for the last 11 years, the time period beginning with the 1984–88 time when you look at R&D to sales for the base point.

The present research credit formula is ill-conceived, favors some industries and taxpayers at the expense of others, and does not fully accomplish its intended effect of increasing U.S. research efforts. Major restructuring of the credit is absolutely essential.

If the present system is to be kept intact, at a minimum, the 5-year base period from 1984–88, which is used to determine the research spending and sales percentage, needs to be moved to a more current time period such as 1990–94. For AMD, we prefer to return to the prior law, the 3-year base period rule, or even go to a new method such as a flat rate credit on current research spending.

We really prefer a flat credit. A flat rate credit has the benefit of being relevant to today's taxpayer—it is simple to administer, and it treats all taxpayers in an equitable manner. It takes the nuances out of the current formula which hurts taxpayers with abnormally high research spending percentages during the 1984–88 base period, or who are experiencing abnormally high sales growth over the past 4 years precisely because of the research investments made earlier, which are coming to fruition in the form of strong sales demand for their products.

In summary, we need to revise the credit to make it relevant, simple, and equitable. AMD favors the flat rate credit.

Thank you very much.

[The prepared statement and attachment follow:]

TESTIMONY OF CLIFF JERNIGAN
OF ADVANCED MICRO DEVICES, INC.
ON THE R&E TAX CREDIT
BEFORE THE WAYS AND MEANS COMMITTEE
ON WEDNESDAY, MAY 10, 1995

INTRODUCTION

My name is Cliff Jernigan. I am Director of Government Affairs at Advanced Micro Devices, Inc. (AMD), one of the largest semiconductor companies in the United States. AMD has major plants in Sunnyvale, California and Austin Texas and employs 12,000 people worldwide.

AMD supports making the Research and Experimentation (R&E) Tax Credit permanent, but only if the Committee fundamentally reforms the structure of the credit. If the credit is to provide the greatest return within current budget or cost limits, the manner in which it is computed must be relevant, equitable and simple, while providing an incentive for taxpayers to invest in research in the United States. We believe the current calculation of the base amount needs significant improvement if the flexibility necessary to meet changing economic and market conditions is to be worked into the credit for the future.

RELEVANT

Current law uses a complicated fixed base percentage formula that was enacted as part of the Omnibus Budget Reconciliation Act of 1989. This formula uses the time period from 1984 to 1988 inclusive to determine the ratio of qualified research expenditures to gross receipts. The 1984 to 1988 time period has lost its significance as a yardstick to determine today's research intensity. In addition, companies that do not have three years of operating history during this 1984 to 1988 time period are classified as "start-up" companies, and their base period is computed under completely separate, more favorable rules. As time passes, a growing percentage of all R&E credit taxpayers will be considered "Start-up" companies. Some of these enterprises are now large publicly held corporations and are still benefiting from the more favorable rules. By not updating this time period to cover a more contemporary interval, the formula will continue to deny credit benefits to taxpayers with increasing research expenditures while unjustly rewarding other taxpayers whose facts and circumstances may not warrant the amount of benefit--resulting in an imbalance that undermines the intent of the program altogether.

EQUITABLE

A tax incentive should treat taxpayers the same when they engage in similar behavior. AMD has continuously increased its U.S. financial statement research and development spending from $203.7 million dollars in 1990 to $280 million dollars in 1994--a 37% increase. From 1984 to 1994, AMD's R&D as a percentage of sales was 18%--one of the highest percentages in the U.S. (see chart attached). Yet AMD has not qualified for the research credit since the (OBRA '89) change to the base year period.

One of the research credit's goals is to provide an incentive to taxpayers to increase their research spending. Clearly, AMD has accomplished this, yet we receive no benefit. Furthermore, AMD would have received a research credit during this period under the old base period rules, or, if AMD qualified as a "start-up" company under the existing rules. This result is inequitable and the effect on AMD and other similarly situated research intensive companies points out the fact that the current base year formula needs to be revised.

SIMPLE

Simpler tax laws are more easily understood by taxpayers. Ease of understanding yields many benefits, including greater compliance with the tax laws at a much lower cost both to the government and the taxpayer.

A more simple and straight forward research credit would also significantly reduce the incidence of unintended adverse consequences, such as AMD is currently experiencing, where research spending is increasing significantly yet no credit is available.

The current base period amount requires a computation of a research intensity ratio over a five-year period beginning in the mid-eighties. Then this ratio must be modified by changes in the definition of qualified research between these years and the qualified expenditures for the current year (i.e., rental expenses). This ratio is then multiplied by the average annual gross receipts of the 4 preceding taxable years. The current rule is anything but simple and may be unreasonable.

An example of the credit computation is as follows:

1. Determine U.S. R&E spending for the years 1984, 1985, 1986, 1987 and 1988
2. Determine U.S. sales for the years 1984, 1985, 1986, 1987 and 1988
3. Divide U.S. R&E spending for the years 1984-88 by U.S. sales for the years 1984-88 to determine the R&E percentage
4. Multiply the R&E percentage times the average sales for the prior four years to arrive at the R&E base
5. Subtract the R&E base from current year U.S. R&E
6. Multiply the difference by 20% to determine the R&E credit

Putting numbers into the above formula, if the R&E percentage in step 3 above is 10% and if the average sales in step 4 above for the prior four years is $1,000,000, then the base will be $100,000 (10% x 1,000,000). If the current year R&E in step 5 above is $150,000, then the difference of $50,000 would be multiplied by 20%, as in step 6 above, to arrive at a credit of $10,000

In our view, a more simple approach would be to include fewer years and more current year information into the determination of the base amount if the incremental structure is preserved. In terms of simplicity, a flat credit based on the current years' qualified costs represents a better and more simple option and would be an appropriate starting point in a modified structure.

AMD'S SITUATION

AMD and the semiconductor industry in general were adversely impacted by Japanese dumping of semiconductor memory products into the U.S. and world markets in the mid-1980's. The dumping coincided with a recessionary period in the U.S. industry. Together, these factors resulted in significant declines in revenue for many semiconductor companies. AMD's financial statement revenue fell from $1.12 billion in 1984 to $795 million in 1985--a 29% decline. AMD's strategy out of this situation was to significantly increase research spending in order to offer superior integrated circuits. Book R&E spending increased from $137 million in 1984 to $173 million 1985--an increase of 26% at the same time that revenues declined by 29%!! This had a disastrous impact on AMD's fixed base period R&E percentage by "artificially" inflating it, making it abnormally high and fiscally impossible to overcome. Clearly the contraction in revenues was out of AMD's control. Fortunately, in this innovate or die situation, AMD did recover and revenues again exceeded $1 billion by 1988 with $1.13 billion in sales.

INCENTIVE FOR U.S. RESEARCH / ALTERNATIVES TO EXISTING CREDIT

The R&E credit operates as an incremental concept--the incentive credits expenditures over a certain threshold--in order to provide the highest possible benefit at the lowest possible cost to the federal Treasury. Currently, the research credit rate is 20%. The consensus of most recent research credit studies is that the credit has been effective in stimulating U.S. research spending. Most of these studies also point out, however, that the temporary nature of the credit does not improve the credit's ability to stimulate additional spending. Furthermore, many foreign countries have recognized the merits of encouraging research activities and have enacted research tax credit mechanisms as well. AMD has complete and reliable knowledge only of its own facts. However, there must be other enterprises with significant research expenditures which find that they too do not qualify for the credit even with R&E expenditures increasing year to year. This fact flies in the face of congressional intent, and unless the basic structure of the credit is corrected, some industries, perhaps numerous in number, would just as soon let the credit lapse.

We believe that no single fixed base period formula can produce a fair credit as a result of the changes that occur within all industries over time. Should Congress choose to retain some form of a fixed base period formula, an alternative should be provided to assure a credit for those taxpayers who are currently increasing research spending. One option would allow taxpayers who have increased research spending in three of the last five years to make an irrevocable election to take a 5% credit on current year qualified research expenditures for the next five years. We support an option to allow a flat rate credit since it is the simplest and most equitable method of computing the research credit. We are not in favor of a "fresh start" that does not recognize that some taxpayers have been prevented from claiming the credit since the change to the fixed base period concept.

Should Congress maintain an incremental credit formula, and if it is willing to reform the fixed base concept, we believe some form of moving base period yields the most equitable result. The moving base period will self correct over time for those industries and taxpayers whose businesses are affected by factors outside that have events beyond their control during the base period that prevent them from qualifying for the credit, even as their research spending increases.

As stated before, a flat rate credit for all qualifying research expenditures is a simple and equitable approach and still provides an incentive to increase meaningful research. Should this option be considered too expensive or as not providing sufficient marginal incentives, tests could be drafted to allow a credit only to those taxpayers whose research efforts--and expenditures--surpass certain limits.

CONCLUSION

We look forward to a restructured and more equitable permanent research credit. We believe that the research credit does stimulate additional U.S. research which results in more high-skill, high-paying jobs, export growth and a higher standard of living for residents. Furthermore, we believe a credit that arbitrarily denies the benefit to taxpayers who increase their U.S. research, is a strong disincentive to continue the conduct of their research activities in the U.S. We hope this paper and the options presented herein help the Committee as it considers the extension and revision of a revitalized R&E tax credit..

Chairman JOHNSON. Thank you very much.
Mr. Jones.

STATEMENT OF ROGER S. SIBONI, NATIONAL MANAGING PARTNER, KPMG PEAT MARWICK, AS PRESENTED BY KENDALL C. JONES, PARTNER, NATIONAL TAX PRACTICE, KPMG PEAT MARWICK

Mr. JONES. Thank you. My name is Ken Jones. I am a partner in the Washington national tax practice of KPMG Peat Marwick. I am here to testify on behalf of Roger Siboni, our managing partner in the Information, Communications and Entertainment line of business, who, I learned about 15 minutes ago, is unavoidably detained and could not be here on time.

We would like to take this opportunity to urge your support of H.R. 803, which would make the R&E credit a permanent provision in the Internal Revenue Code. Moreover, we encourage the adoption of a flexible credit, which would more effectively simulate investment in R&E.

Perhaps the most important point to be made regarding the credit is that it must become a permanent part of the code. While there are two bills pending now that would make the credit permanent, permanence is not yet a reality. We are concerned that in the heat of the legislative negotiations, the R&E credit may be extended once again on a temporary basis.

I would point out that since 1986 the R&E credit has been renewed on a temporary basis six times and structurally modified four times. The uncertainty as to the duration of the R&E credit, coupled with the frequent modifications to the statutory provisions affecting the credit, has resulted in the inability of businesses to effectively plan their research activities. Specifically, a business that plans to conduct research projects is in the position of having to speculate as to whether a temporary credit provision set to expire will be extended.

The typical company is much less likely to commit resources to long-term research activities under those kinds of conditions, because research activities inherently involve risk. Businesses that conduct research need certainty as the tax consequences of their activities. Enacting a permanent credit would provide the certainty that is necessary to budget research activities.

Enacting a permanent provision would also reduce the number of legislative changes to the R&E credit provision because every time the R&E credit must be extended, the opportunity exists for Congress to change the structure of that credit.

The numerous modifications over the years have made it very difficult for the IRS and the Treasury Department to publish meaningful guidance on the mechanical application of the credit. To illustrate that point, the final regulations defining the R&E expenditures were issued in 1994, 13 years after the statute was originally enacted. In the interim, businesses, tax practitioners, and the IRS have relied on regulations that were issued in 1957, 24 years before the credit was even conceived of and enacted.

My specialty at KPMG Peat Marwick is representing clients before the IRS in tax controversies. On behalf of any number of clients, I have been involved in contentious audits involving the R&E

credit issue. These audit issues arise because of the lack of regulatory or procedural guidance from the IRS that has forced taxpayers on their own to address a number of complex, unresolved issues with respect to the computation of the credit. Inevitably, these controversies will continue until we can get that guidance.

The other important issue that must be addressed is structure. Our clients have faced a number of different problems arising from the structure of the credit, arising mostly from base period computations. In fact, many who conduct qualified research can't even claim the credit, due to structural problems with the manner in which the base period is computed.

Therefore, our recommendation to the subcommittee would be to provide as much flexibility as possible with respect to base period computations. Flexibility would improve the usefulness and effectiveness of the credit.

We also want to emphasize that the base period concept is indeed a good concept because it encourages increases in spending. At the same time, we would encourage the subcommittee to adopt some flexibility, such as the flat credit proposal just mentioned, that would allow companies to take full advantage and encourage research in the most meaningful manner possible.

In conclusion, the two points that need to be addressed, in our view, are permanence and flexibility.

Thank you.

[The prepared statement follows:]

KPMG Peat Marwick LLP

STATEMENT OF ROGER S. SIBONI
National Managing Partner
Information, Communications & Entertainment Practice of
KPMG PEAT MARWICK LLP

AS PRESENTED BY KENDALL C. JONES
PARTNER, KPMG PEAT MARWICK, NATIONAL TAX SERVICE

May 10,1995

As the National Managing Partner of the Information, Communications & Entertainment line of business of the international accounting and consulting firm of KPMG Peat Marwick LLP, I would like to take this opportunity to urge your support of H.R. 803 which would make the Research & Experimentation Credit a permanent provision in the Internal Revenue Code. Moreover, I encourage the adoption of a flexible credit provision which would more effectively stimulate investment in R&E.

Need for a Permanent Credit

The call for permanent enactment of the Research & Experimentation Credit is coming from all corners. The House of Representatives has twice passed a permanent extension (in 1989 and 1993) and again seeks to do so with H.R. 803, sponsored by Chairman Johnson, originally co-sponsored by Congressmen Matsui, Herger and Neal, and since co-sponsored by fifty additional Representatives. The Senate has acted through Senators Domenici and Danforth, who both proposed permanent extensions in 1994, and Senator Hatch, who called for permanent extension this year with S. 351. Recently, President Clinton has called for a permanent extension "to stimulate private investment." Nonetheless, permanence is not yet a reality, and I am concerned that in the heat of the legislative negotiations process, the R&E Credit may be extended temporarily rather than permanently.

Since 1986, the R&E Credit has been temporarily renewed six times and structurally modified four times. The uncertainty as to the duration of the R&E Credit coupled with the frequent modifications to the statutory provisions affecting the credit has resulted in the inability of businesses to plan their research activities. Specifically, a business that plans to conduct a long-term research project must speculate as to whether a temporary credit provision set to expire during its research project will, in fact, be extended. Even though the temporary R&E Credit has always been extended by Congress, sometimes retroactively, business forecasting and tax planning cannot be performed retroactively. The typical company is less likely to commit resources to long-term research activities if it is unable to reasonably estimate the after-tax costs of such projects. Thus, the repeated enactment of a temporary R&E Credit reduces the incentive to plan extensive R&E activities. Because research activities inherently involve risks, businesses that conduct research need certainty as to the tax consequences of their activities. Enacting a permanent R&E Credit would provide the certainty that is necessary to reasonably budget research activities.

Enacting a permanent provision also would reduce the frequency of legislative changes to the R&E Credit provision because every time a temporary R&E Credit must be extended, an opportunity exists for modifying the structure of the credit. The numerous modifications have made it difficult for the Internal Revenue Service to publish guidance on the mechanical application of the R&E Credit. To illustrate, the final regulations defining "research and experimental expenditures" were issued in 1994, thirteen years after the statute was originally enacted. In the interim, businesses,

tax practitioners and the Internal Revenue Service have relied on regulations originally issued in 1957, twenty-four years before the R&E Credit was first enacted.

By way of another example, a 1986 amendment to the R&E Credit excluded the development of software for internal use except as provided by the regulations. The Conference Agreement indicated that the development of internal use software should qualify if it is innovative, commercially unavailable, and involves significant economic risk in its development. Nine years later, there is still no regulatory guidance from the IRS, demonstrating how the repeated expiration dates and statutory changes have resulted in the inability of the government to keep up with the statute.

The lack of regulatory guidance has forced taxpayers to address a number of complex, unresolved issues when computing the R&E Credit. Inevitably, many of the positions taken by taxpayers in the absence of regulatory guidance will be challenged by the IRS, thus increasing the economic costs of taking the R&E Credit.

The statute has been extended six times, never more than three years and sometimes retroactively:

- The Economic Recovery and Tax Act of 1981 enacted the "Credit for Increasing Researching Activities" with a five year duration.
- The R&E Credit expired December 31, 1985.
- The Tax Reform Act of 1986 retroactively renewed the R&E Credit and extended it three years.
- The Technical & Miscellaneous Revenue Act of 1988 extended the R&E Credit one year.
- The Omnibus Budget Reconciliation Act of 1989 extended the R&E Credit one year.
- The Omnibus Budget Reconciliation Act of 1990 extended the R&E Credit one year.
- The Tax Extension Act of 1991 extended the R&E Credit through June 30, 1992.
- The R&E Credit expired June 30, 1992.
- The Omnibus Budget Reconciliation Act of 1993 retroactively renewed the R&E Credit, extending it to June 30, 1995.

In addition to the uncertainty regarding the duration of the provision, there remains continual doubt as to the structure of the R&E Credit, because along with these prospective and retroactive extensions have come four direct modifications to the R&E Credit supplemented by amendments to related provisions. For example:

- In 1986, "qualified expenditures" were more narrowly defined and the R&E Credit was reduced from 25% to 20% and made subject to the General Business Credit cap.
- The 1988 extension carried with it a reduction of R&E deductions by 50% of the R&E Credit for that year.
- OBRA 1989 changed the method of calculation of the R&E Credit and further reduced the allowable §174 deduction.
- OBRA 1990 repealed the special proration provision of OBRA 1989, but due to an as yet uncorrected technical error, taxpayers with a fiscal year ending in the fourth quarter of 1989 lost up to three months worth of credit.
- OBRA 1993, which extended the R&E Credit through June, 1995 modified the fixed base percentage for start up companies.

The R&E Credit was initially enacted in 1981 with a five year duration so that Congress could evaluate the operation of the credit. After thirteen years of observation and alteration, the concept of the R&E Credit remains as intended, a valuable incentive to encourage investment in the technological future of our country.

Who is Affected?

When discussing the subject of research and experimentation, thought may first turn to Silicon Valley, the home of many small high-technology start-up companies that have been responsible for numerous technological innovations in recent years. Yet it may surprise some that one of the largest high-technology commercial areas lies within Utah. While discussing research and experimentation, one may think of large Texas, California or Michigan defense contractors whose efforts have contributed to a strong, high-technology military. But technology-based industry is present throughout the entire country, affecting businesses and people in every state. The R&E Credit affects not only the large high-technology firms that often come to mind, but also offers great relief to small firms in the biochemical, pharmaceutical, agricultural, manufacturing, and service industries, as well as start-up businesses desperately in need of cash flow.

Do We Need a Research & Experimentation Credit?

The United States is not a global leader when non-defense research and experimentation is measured as a percentage of Gross Domestic Product; for instance, Japan and Germany both have a higher rate of non-defense research activities as a percentage of Gross Domestic Product. While other nations provide greater tax incentives to research, and in some instances government sponsorship of such research, the Internal Revenue Code, in certain cases, fails to promote R&E activities to the same degree as other countries. For example, small, high-technology start-up firms are often in need of capital at certain key points during R&E projects. In today's economic environment, such capital is often acquired by selling the business to a larger, cash-rich entity. However, with the fifteen year amortization period for intangibles provided by I.R.C. §197, domestic capital is often squeezed out of the market by foreign investors, many of whom are afforded by their governments shorter periods in which to write-off intangibles. The R&E Credit has helped to ease the cash flow issues faced by these capital-starved entrepreneurs.

Most economists agree that government support in the form of the R&E Credit is justified and desirable. From a macro-economic perspective, technology breeds productivity which in turn results in higher wages and a better standard of living. In fact, a recent study done by the Policy and Economics Group of KPMG Peat Marwick LLP, entitled "Extending the R&E Tax Credit: The Importance of Permanence," indicates that for every one dollar of R&E Credit, research expenditures increase by one dollar in the short run and by two dollars in the long run. This suggests that the credit has a beneficial impact on the gross domestic product. However, while investment in technology produces a long-term societal benefit, it does not necessarily produce an immediate return on investment to a company conducting the research due to the inherent risk in most innovative research activities.

The R&E Credit's societal benefit is derived from the fact that research conducted by any given company often has a spill-over effect on competitors and businesses in other industries. For example, the development of a new piece of machinery will result in the development of similar machinery designed to compete with the original. This competition benefits the consumer and society as a whole, but at the same time, it limits the profitability to the original inventor. Consequently, since businesses see limited returns on investments in developing new technology, there is a reduced incentive for funding research. The R&E Credit mitigates this natural economic disincentive to incur R&E expenditures.

The Impact on an Uncertain Economy

The impact of the R&E Credit on a thriving economy is obvious. During the boom of the early eighties when the R&E Credit was first enacted, research activity grew at a rate in excess of double the growth rate of the Gross Domestic Product. However, R&E is one of the first expenses to be cut during uncertain economic times, since the benefits of such expenditures are, by their very nature, long term. When a need to reduce short term expenses arises, expenditures which cannot demonstrate an immediate return are cut. The R&E Credit combats this phenomenon.

To illustrate, according to published reports, a large, high-technology firm recently released its first quarter earnings. Although investment in research for this firm had essentially remained constant, sales had dropped 20 percent. The result was an increased rate of investment in research and experimentation over the previous base which in turn will result in a larger credit. The R&E Credit will have the effect of easing an economically difficult period which may have otherwise resulted in a management decision to reduce the level of research.

Structure of the R&E Credit

The Subcommittee has also indicated a desire to examine the structure of the R&E Credit. Presently, the R&E Credit is based upon the increase in the rate of R&E expenditures over a base period. While this provides an incentive to increase R&E expenditures beyond the base, there is a debatable assumption that the base accurately reflects an appropriate minimum standard of expenditures on research. At both a macro-economic and a micro-economic level, change in the business community is continuous. Due to overall economic changes, R&E expenditures have dropped since the mid-1980's. Since the fixed base period can be static, it is not necessarily a relevant barometer for determining the value of an R&E Credit in a changing economy. As a result of the current structure, many entities that conduct valuable research cannot avail themselves of the R&E Credit due to the unique factors which may affect any single business.

Because the business environment is constantly changing in both macro-economic and micro-economic terms, I urge Congress to make the R&E Credit as flexible as possible. The existing increase-over-base concept should be retained. However, many companies have been unable to utilize the R&E Credit under the current structure due to the circumstances previously described. A remedy for the static base issue would be to allow businesses to elect from a menu of base period options. The base period election could provide alternatives to the taxpayer which would include a three or five year rolling average base period, akin to the base period as reflected in the statute as originally enacted in 1981. Another option would be to allow a business to reset the fixed base period to the most recent five years. Perhaps Congress could limit these elections to entities that have failed to qualify for the R&E Credit for two consecutive years. These types of options would allow enough flexibility with the R&E Credit to avoid the economic issues described above.

One additional alternative Congress should consider is an elective Minimum Flat Credit. Such a credit would be calculated using a flat-rate percentage applied to qualified R&E expenditures. A Minimum Flat Credit would always provide an incentive for R&E investment, regardless of the change in the company's circumstances. In other words, a Minimum Flat Credit would eliminate any anomalies created by the base period method.

CONCLUSION

The Research and Experimentation Credit should be granted permanent status within the Internal Revenue Code. The repeated short term implementation and frequent modifications breed uncertainty, which undermines the effectiveness of the R&E Credit. Furthermore, the R&E Credit should be modified to provide for a more flexible base period and a Minimum Flat Credit, so as to provide a continued incentive for investment in research and experimentation regardless of the change of circumstances which may effect a business.

Chairman JOHNSON. Thank you.
Mr. Gutman, welcome back.

STATEMENT OF HARRY L. GUTMAN, COUNSEL, KING & SPALDING, ON BEHALF OF GENERIC PHARMACEUTICAL INDUSTRY ASSOCIATION, NATIONAL ASSOCIATION OF PHARMACEUTICAL MANUFACTURERS, AND NATIONAL PHARMACEUTICAL ALLIANCE

Mr. GUTMAN. Thank you very much Madam Chair, members of the subcommittee. I am Hank Gutman, a partner in the law firm of King & Spalding, and I am appearing today on behalf of the Generic Pharmaceutical Industry Association, the National Association of Pharmaceutical Manufacturers, and the National Pharmaceutical Alliance.

The organizations that I represent support the permanent extension of the credit and urge that in connection therewith, the Congress take this opportunity to reiterate what has been its previously expressed intent that expenses incurred in the process of developing generic drugs have been and will continue to be eligible for the credit.

In a sense, it is fortuitous that this hearing is being held before the Oversight Subcommittee, because the issue that I am addressing is in part an oversight matter.

As claimed on their tax returns by manufacturers of generic drugs, the R&E credit plays an important role in maintaining an economically viable generic drug industry, and the maintenance of an economically viable generic drug industry is an important component in the quest to contain health care costs. Unfortunately, the IRS has taken the position that the developers of generic drugs are, per se, ineligible to claim the credit for their premarketing development costs and costs to secure FDA approval of their products as new drugs. Moreover, the Treasury Department, despite having testified in October 1994 before the Select Revenue Measures Subcommittee of this committee that generic manufacturers should be subject to a facts-and-circumstances determination to determine eligibility for the credit, has refused to exercise its policy prerogative in intervening with the IRS regarding the IRS' interpretation of the scope of the credit. As a result, a stalemate has been created by the Treasury's failure to follow through on its testimony, and the organizations now have to come to the Congress to ask for clarification of congressional intent that the credit is available for these expenses. This is the only alternative that these entities have other than costly litigation.

My statement describes in detail the process of developing and securing regulatory approval for a generic drug, and it also demonstrates how that process results in expenses that are eligible for the credit. In the balance of my time, I would like to flesh out why it is that we are here.

The IRS has taken the position that the developers of generic drugs are, per se, ineligible to claim the credit. The IRS position is based on a code provision that excludes from the credit expenses that are related to the reproduction of an existing business component from a physical examination of the business component or from plans, blueprints, details, specifications, or publicly available

information. The Service says that this exception applies to the expenses that are incurred in producing a generic drug.

That position of the IRS is unwarranted under the statute; it is factually inaccurate, and it is contrary to congressional intent. No. 1, a generic drug is not developed from a physical examination of a target drug or from publicly available information. Therefore, the process of development of a generic drug is not described by the statute.

No. 2, generic drugs may improve on the target listed drug in terms of shelf life and stability, to say nothing of lowering costs.

No. 3, the legislative history of the duplication exception makes it clear that the reproduction that is meant there is reverse engineering of an existing product, not the development of an alternative by original research and experimentation. The process of developing a generic drug does not in any sense constitute reverse engineering.

Finally, the FDA views generic drugs as new drug products.

Over the past number of years, members of the industry have attempted to persuade the IRS to reverse its position. In Treasury testimony, the Treasury basically adopted the industry position, but has not indicated any willingness to try to get the IRS to change its position. Consequently, members of the industry are in the frustrating position of being betwixt and between the Treasury and IRS and, consequently, have come before the subcommittee to ask that as this legislation goes forward that their concern be resolved.

I thank you.

[The prepared statement follows:]

STATEMENT OF

HARRY L. GUTMAN

On behalf of the Generic Pharmaceutical Industry Association, the National Association of Pharmaceutical Manufacturers, and the National Pharmaceutical Alliance

HEARING BEFORE THE

Subcommittee on Oversight
Committee on Ways and Means
U.S. House of Representatives
on the
Research and Experimentation Tax Credit

May 10, 1995

Madam Chairman and Members of the Subcommittee:

My name is Hank Gutman. I am a partner in the law firm of King & Spalding. I am pleased to appear before the Subcommittee today on behalf of the Generic Pharmaceutical Industry Association, the National Association of Pharmaceutical Manufacturers, and the National Pharmaceutical Alliance (the "Organizations"). The Organizations support the permanent extension of the research and experimentation tax credit (the "R&E credit") and urge that in connection therewith the Congress reiterate its previously expressed intent that the expenses incurred in the process of developing generic drugs have been, and will continue to be, eligible for the R&E credit.

This reiteration of Congressional intent is necessary because, as described in more detail below, the Internal Revenue Service ("IRS") has taken the position in a number of audits of generic drug companies, and in a technical advice memorandum, that developers of generic drugs are per se ineligible to claim the R&E credit for their premarketing development costs and costs to secure Food and Drug Administration ("FDA") marketing approval of their products as new drugs. Moreover, the Treasury Department, despite having testified on October 6, 1994 before the House Ways and Means Subcommittee on Select Revenue Measures that generic drug manufacturers should be subject to a "facts and circumstances" determination process to determine eligibility for the R&E credit, has refused to exercise its policy prerogative and intervene with the IRS regarding its interpretation of the scope of the credit. As a result of the stalemate that has been created by the Treasury's deliberate failure to follow through on its Congressional testimony, the Organizations are compelled to seek Congressional clarification as an alternative to costly litigation.

The balance of this statement first describes the issue in more detail. It then describes the process of developing and securing regulatory approval for a generic drug. Third, the statement discusses current law governing the allowance of the R&E credit, as well as the Congressional intent in enacting that legislation, and demonstrates that the process of creating a generic drug falls squarely within the ambit of expenses that

Congress intended to qualify for the R&E credit. Finally, the statement describes the alternatives now available to the Congress.

THE ISSUE

The IRS has taken the position that developers of generic drugs are per se ineligible to claim the R&E credit for their premarketing development costs and costs to secure Food and Drug Administration marketing approval of their products as new drugs. Internal Revenue Code Section 41(d)(4)(C)[1], which excludes from the credit expenses related to the reproduction of an existing business component from a physical examination of the business component itself or from plans, blueprints, details, specifications, or publicly available information, applies to these expenses. In rationalizing this conclusion, the TAM states,

> We believe the statutes and legislative histories ... are evidence that a generic drug is a duplication of another taxpayer's business component and the development of the generic drug is excluded from the definition of the term "qualified research" under Section 41(d)(4)(C) of the Code. TAM, p.9.

The TAM also states,

> It is our view that Congress considers generic drugs for approval under the ANDA procedure to be duplications of existing listed drugs. Drugs approved under the ANDA cannot improve on the target listed drug. TAM, p.10.

The conclusion stated in the TAM is unwarranted under the statute, factually incorrect and contrary to Congressional intent. First, as discussed more fully below, a generic drug is not developed from a physical examination of a target drug or from publicly available information. Thus, the process of development of a generic drug is not described by the literal language of the exclusion. Second, generic drugs may improve on the target listed drug in terms of shelf life and stability, to say nothing of cost. Third, the legislative history of Section 41(d)(4)(C) makes clear that "reproduction" means reverse engineering of an existing product, not development of an alternative by original research and experimentation. Again, as described in more detail below, the process of developing a generic drug product does not in any sense constitute "reverse engineering." Furthermore, FDA views generic drugs as new drug products.

In a number of meetings, the taxpayer to whom the TAM was directed attempted to persuade the IRS that the IRS position was incorrect. When it appeared the IRS would not change its position, that taxpayer, together with the Organizations, brought the issue to the attention of several members of Congress. Their effort culminated in a legislative proposal during the last Congress to clarify the application of the R&E credit to expenses incurred in developing generic drugs. Under the proposal, a generic drug would not be treated per se as a duplication of an existing business component. That is, Section 41(d)(4)(C) would specifically state that mere "duplication" of performance by an

---

[1] Section references are to the Internal Revenue Code unless otherwise noted.

alternative product would not preclude the credit, so long as all the other conditions of Section 41 were satisfied. Therefore, taxpayers would be permitted to show, on a facts and circumstances basis, that the expenses incurred in conducting "research and experimentation" to produce a generic drug would qualify under Section 41.

The proposal was the subject of a hearing on October 6, 1994 before the Select Revenue Measures Subcommittee of this Committee. At that hearing, Glen Kohl, the Tax Legislative Counsel, took the position on behalf of the Treasury that

> the costs of developing a product that is new for a particular taxpayer can qualify for the credit even though other taxpayers already offer similar products. The only express limitation that applies to competing products is the exclusion for products developed by duplication . . . . The question of whether the development of generic drugs is qualified research or nonqualified duplication should be resolved on a case-by-case basis, using the same standards that apply to other products in taking into account all of the relevant facts and circumstances of each case. Hearing Record, p.9.

Congressman Payne asked Mr. Kohl "[I]s it the position of the Treasury that a generic drug is simply a duplication of a brand name drug?" Mr. Kohl responded, "[w]e think that for a generic drug you have to look at the facts and circumstances . . . . The Treasury Department is . . . saying . . . that the rules the Congress has enacted in the past should apply to the facts involved in developing a generic drug." Hearing Record, p.13. Later, Mr. Kohl noted that if the duplication issue were resolved favorably the credit would be available for the expenses of developing the generic drug. Id.

Treasury's description of the scope of the R&E credit is precisely what the industry has previously argued to the IRS. That position is completely consistent with the legislative history of the R&E credit.

Subsequent to the hearing, representatives of the taxpayer and the Organizations met with Mr. Kohl and Paul Kugler, Assistant Chief Counsel of the IRS in charge of Passthrough and Special Industries, in an attempt to resolve the inconsistency between the Treasury's statements and the holding of the TAM. In that meeting the scope of the duplication exclusion was discussed further. The question posed was whether, assuming all other conditions of the R&E credit were satisfied, the mere fact that a taxpayer's product achieved similar or the same performance or results as another's would by itself preclude the R&E credit under the duplication exception. (For example, would a synthetic diamond developed by qualifying research and experimentation be disqualified from the R&E credit?) Mr. Kohl stated that in his view it would not. In contrast, Mr. Kugler appeared to be of the view, with respect to generic drugs having an active ingredient which is composed of the same molecule as the brand product, that "bioequivalence" of drug performance as required by FDA law is fatal to the R&E credit under the duplication exception. Treasury and the IRS were asked to reconcile their apparent conflict, perhaps in the context of a revenue ruling project. Mr. Kohl indicated that the appropriate course of action was to pursue the matter further with the IRS.

On March 7, 1995, following Mr. Kohl's suggestion, representatives of the taxpayer and the Organizations met with Marlene Gross, Acting Deputy Chief Counsel of the IRS, Mr. Kugler and members of their staffs to discuss the matter further. At that meeting it was made clear that in the IRS view any generic drug product that (i) uses the same molecule of active ingredient as the corresponding brand product, and (ii) achieves the same therapeutic result as a brand name product is excluded from credit benefits by Section 41(d)(4)(C). It was also clear that Ms. Gross, who is in a position to overturn that IRS position, has no intention of so doing.

Virtually all of the generic industry products meet these two conditions. Moreover, despite contrary Treasury views, the IRS has made it clear that it will not change its position. It is thus highly likely that this position will be taken by IRS auditing agents against all companies manufacturing generic products to preclude the tax credit for such products. Therefore, the only avenues to resolution of this issue are litigation on the individual companies' tax deficiencies or legislation. Litigation is expensive and an unnecessary and unfair use of both taxpayer and Government resources in light of the statute, Congressional intent and Treasury's expressed views. Congressional reiteration of its original intent would eliminate the problem.

DEVELOPING AND SECURING REGULATORY APPROVAL FOR A GENERIC DRUG

A generic drug product is a new drug that can achieve the same therapeutic results as a brand name drug product and that can be substituted in prescriptions for the brand name product. What is new are the formula of inactive ingredients and the manufacturing and delivery process, and the research and experimentation of a generic drug manufacturer focuses on that.

A generic drug is developed by original research that delivers a known active ingredient using a newly developed and unique combination and ratio of inactive ingredients with the active ingredient. While a generic product usually uses the active ingredient having the same molecular structure as the brand product, the other physical characteristics of the generic's active ingredient, such as the polymorphic form, impurities, and particle size, often affect the bioavailability of the final drug. Such effects must be compensated for by variations (i.e., differences) in the inactive formula and/or manufacturing process of the generic product (from those of the brand), so that the generic product is "bioequivalent" to the brand within a tolerance allowed by the FDA. Such compensation (and other factors) usually result in the generic product having a different formula of inactive ingredients and a different manufacturing process from the brand.

The identity, type, nature, characteristics and sources of each inactive ingredient must be intensively researched and evaluated because each ingredient must serve a specific purpose in the final formulation. Variations in combinations and identity of inactive ingredients with the active ingredient affect performance, as measured by bioavailability. The quantity and ratio of the inactive ingredients must be developed in combination with the active ingredient in the generic manufacturer's own formulation to achieve a successful generic drug product. Every aspect of the formulation of any drug

product requires a delicate balance to achieve the desired result. Moreover, in addition to its own formulation, the generic drug manufacturer creates a new manufacturing process. That process described in detail the record of the October 6, 1994 hearing at pages 27 to 30.

A generic drug is, by definition, a new drug under the Food, Drug and Cosmetic Act (the "FDC Act"). 21 U.S.C. § 321(p)(1) (1988). It is a violation of the FDC Act to market a new drug in interstate commerce unless the FDA has approved a new drug application for the drug. 21 U.S.C. §§ 355(a), 331(d).

A generic drug may be approved through one of two types of new drug applications. The only difference between FDA approval standards for the two types of new drug applications, (1) full new drug applications ("NDA") and (2) abbreviated new drug applications ("ANDA"), is that ANDAs require bioequivalence data rather than clinical studies. Compare 21 U.S.C. § 355(b)(1)(A)-(F) with 21 U.S.C. § 355(j)(2)(A)(i)-(vi). Although an ANDA need not contain information on safety and effectiveness investigations, it is required to contain data demonstrating bioequivalence to a "listed" drug, i.e., a drug previously approved in a full NDA. If a generic drug company's initial tests do not demonstrate bioequivalence, the company must alter its formulation and/or manufacturing process and retest. The cycle of testing and revising the formulation is followed until (1) the tests indicate that the two products are bioequivalent within a range of plus or minus 10% to 20% with respect to the rate and extent of absorption or (2) the company fails to achieve its objective abandons its effort.

An ANDA must contain the same types of information concerning components, composition, manufacturing methods, samples, and labeling, as a NDA. 21 U.S.C. § 355(j)(2)(A)(i)-(vi) (1988). Because the FDA considers each new drug as a unique product, an ANDA is not required to compare its qualitative and quantitative formulation and manufacturing process with that of the listed drug's manufacturer. See 21 U.S.C. § 355(j)(3) (1988). Each new drug's performance depends on product-specific variables, including chemistry, manufacturing, and control factors that are specific to the manufacturer and its product.

For each new product it attempts to develop, a generic drug manufacturer goes through a process of experimentation to discover chemical properties of its source of the active ingredient, the dosage form technologies, combinations of inactive ingredients with the active ingredient, enclosures, and the equipment and manufacturing techniques that will produce a product that satisfies the ANDA performance test.

CURRENT LAW AND CONGRESSIONAL INTENT

Section 41(a), originally enacted as Section 44F in 1981, allows a tax credit for incremental "qualified research" expenses. Section 41(d)(4)(C), enacted in 1986, excludes from the definition of qualified research "any research related to the reproduction of an existing business component (in whole or in part) from a physical examination of the business component itself or from plans, blueprints, detailed specifications, or publicly available information with respect to such business component." The Treasury has yet to issue Regulations interpreting Section 41(d)(4)(C).

In many cases the IRS has conceded that, but for Section 41(d)(4)(C), the expenses of developing a generic drug would constitute qualified research expenses. However, it takes the position that Congress intended generic drugs submitted for approval under the ANDA procedure to be "duplicative" of existing drugs and therefore ineligible for the credit under Section 41(4)(C).

A generic drug is not a "duplicate" of an existing drug. The FDA has supplied a statement included is the record of the October 6, 1994 hearing at pages 30 and 31, explaining the FDA's requirements for approving a generic drug and the agency's interpretation of the status of generic drugs under the FDC Act. In the view of the FDA, "Because a generic drug's performance depends on product specific variables, the FDA considers each generic drug as a distinct product. ... A generic drug is, therefore, not the same drug as the one approved in the NDA."

Second, the activities listed in Section 41(d)(1)(4) are Congress' express illustrations of situations in which the credit will not be allowed because the research is not research in the experimental sense. A generic drug company's research activities are clearly experimental.

Thus, the scope of the exclusion of research related to reproduction of an existing business component from an examination is the critical question. Although the heading of Section 41(d)(4)(C) is "Duplication of Existing Business Component," as noted above the exclusion is for "research related to the reproduction of an existing business component (in whole or in part) from a physical examination of the business component itself or from plans, blueprints, detailed specifications, or publicly available information with respect to such business component." Because a generic drug company conducts its own original research to produce its own new business components, and does not copy existing products by cloning or reverse engineering, its research activities are eligible for the Section 41 credit under current law.

The legislative history on this issue specifically states, "The exclusion for duplication does not apply merely because the taxpayer examines a competitor's product in developing a different component through a process of otherwise qualified experimentation requiring the testing of viable alternatives and based on the knowledge gained from such tests." H. Rep. No. 841, 99th Cong., 2nd Sess. (1986), at II-75 (report of the Conference Committee on the Tax Reform Act of 1986, Pub. L. No. 99-514) [hereinafter "1986 Conference Report"]. The plain implication is that a taxpayer who examines a competitor's product that achieves a particular result and then, through experimentation, develops its own original product that duplicates the result achieved by the competitor's product, is entitled to the Section 41 credit. The original formulation and manufacturing process developed in connection with a generic drug are clearly new and different business components under the statute.

As explained in the 1986 Conference Report, duplication means producing something that exactly corresponds in composition and structure to an original. The House Ways and Means Committee Report explanation of the Section 41 changes in P.L. 99-514 (H.R. Rep. No. 426, 99th Cong., 1st Sess. (1985)) defines duplication as "The reproduction of an existing business item of another person from a physical examination of the item itself or from

plans, blueprints, detailed specifications, or publicly available information with respect to such item." Such duplication is referred to as "reverse engineering" in the 1986 Conference Report at II-75, restating the language from the Ways and Means Committee report cited above. A generic drug invention is not a duplicate or a reproduction, but is a new and different product; the new product duplicates results, but the product itself is not a duplicate or a reproduction.

The conclusion that generic drug research should be entitled to the credit is reinforced by the numerous references to drug products in the legislative histories of Section 41 and Section 174. In particular, the legislative history of Section 41 is crystal clear: "[C]osts of experiments undertaken by chemists or physicians in developing and testing a new drug are eligible for the credit because the researchers are engaged in scientific experimentation."

Moreover, it is also clear from various amendments to the FDC Act and from legislative history that Congress intended to encourage the development of generic drug products. For example, in 1984, Congress estimated that the availability of generic equivalents to brand name drug products approved after 1962 would save American consumers $920 million over 12 years. H.R. Rep. No. 857, 98th Cong., 2d Sess., pt. 1, at 17 (1984). Older Americans, in particular, would benefit, since they use almost 25% of all prescription drugs. Id. In addition, the federal government would save millions of dollars from the increased availability of generic drug products, since it purchases drugs through the Medicaid program and in veterans' and military hospitals. Id. at 17, 19. State governments would also save on drugs purchased through Medicaid. Id.

The availability of high quality, low cost alternatives to brand name drug products is desirable from both an economic and a public health standpoint. A generic drug product is usually sold for a significantly lower price than a brand name product. As mentioned above, the lower level of costs of research for generic drug developers compared to the development of a brand name drug results in lower credit compared to the major pharmaceutical houses, but it does not mean that the credit is not a major incentive for research.

The research required to develop a generic drug product consists of experiments related to the physical content, form and production process of the new drug, and, once a model has been developed, studies that compare the model's bioavailability with the bioavailability of the target brand name product. These studies are necessary in order to obtain FDA approval to market the generic drug product. 21 U.S.C. § 355(j)(2)(A)(iv) (1988). This process is less expensive, however, than the process would be if it also included the clinical studies necessary to show that a drug product is both safe and effective for the purpose for which it will be marketed. H.R. Rep. No. 857, 98th Cong., 2d Sess., pt. 1, at 19.

The potential for lower cost prescription drug products was one of the major factors that Congress discussed in connection with 1962 amendments to the Food, Drug, and Cosmetic Act. Drug Amendment of 1962, Pub. L. No. 87-781. The FDA established a procedure for submitting abbreviated new drug applications (ANDAs) for new generic versions of brand name products initially approved before enactment of the 1962 Amendment. See 21 C.F.R.

314.56 (removed by 57 Fed. Reg. 17950, 17963 (April 28, 1992)). In a further effort to expand the use of lower cost generic drug products and increase competition within the pharmaceutical industry, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984. Pub. L. No. 98-417. This Act amended the Food, Drug, and Cosmetic Act by adding an ANDA procedure for generic equivalents to any FDA-approved drug product for which a valid patent was not in force. 21 U.S.C. § 355(j).

Congress clearly intended to encourage the development of generic drug products by enacting special FDA procedures. Excluding the costs of such development from eligibility for research-related tax benefits would flatly contradict that intent. Allowing research credits for brand name drug product development while denying such credits for generic drug product development would decrease the competitiveness of generic drug products, discourage the development of generic products, and increase the costs of generic products. Congress certainly did not intend the application of the R&E credit to produce such results.

CONCLUSION

It is frustrating to have to submit a statement to the Subcommittee and suggest that clarifying legislation is necessary because the Treasury will not exercise its tax policy authority and direct the IRS to interpret the statute in accordance both with its views as expressed before a Congressional Committee and with Congressional intent. The generic drug industry believes the result it seeks would ultimately be achieved through costly, time consuming litigation. Clearly these costs can be totally avoided if the IRS were to change its position. If it does not, clarifying legislation will be needed to resolve the issue.

Chairman JOHNSON. Thank you very much.
Mr. Steel.

STATEMENT OF GORDON M. STEEL, VICE PRESIDENT OF FINANCE AND CHIEF FINANCIAL OFFICER, XILINX, INC., SAN JOSE, CALIF.

Mr. STEEL. Thank you. Madam Chair and members of the subcommittee, good afternoon. I am Gordon Steel. I am the vice president of Finance and chief financial officer for Xilinx, Inc. I wish to thank the subcommittee for providing me the opportunity to testify on what I consider to be a technical flaw in the R&D credit definition as it applies to startup companies. This has often been referred to as the R&D equivalent of the "notch baby" issue.

By way of background, Xilinx is based in San Jose, Calif., and is the world's largest supplier of programmable logic semiconductors and related development systems software. Founded in early 1984, Xilinx, in late 1985, introduced a new programmable component, the field programmable gate array, or FPGA. This market is currently in the vicinity of $400 million in size, and is projected by some analysts to grow to some $1.5 billion by the end of this decade.

In the fiscal year that ended March 1995, Xilinx reported revenues slightly in excess of $350 million. We currently have approximately 1,000 employees of whom 750 are located in San Jose, Calif.; roughly 250 are employed in R&D. I note in passing that two companies represented on this panel are customers of ours.

Perhaps the most critical ingredient in fueling Xilinx's growth has been our substantial commitment to research and development in a variety of areas including software development, integrated circuit design, and manufacturing process engineering. The success of our R&D efforts has provided our customers with the industry's broadest range of products and with consistent predictable enhancements in performance and reductions in cost. It has also led to substantial increases in employment not only at Xilinx, where employment has grown more than 25 percent annually, but also for many of the firms with whom we work.

The pace at which new technology is introduced is accelerating rapidly. Accordingly, I am convinced that the commitment to research and development in the future will be even more critical tomorrow than it is today.

The implementation of the R&D tax credit has significantly expanded business commitment to R&D, not only for startup companies like Xilinx, but also for many major corporations as well. I am concerned, however, that a technical glitch concerning the definition of a startup company will severely limit or even eliminate the intended benefits of the R&D credit for those fast-growth corporations who commenced operations in 1984, 1985, or 1986. This includes companies such as Sierra Semiconductor of California, Sequent Computer Systems of Oregon, and Xilinx.

The explanation of this technical glitch is rather complex. Under the current approach, only qualified research expenses over a fixed base amount are eligible for the credit. In 1989 the computation of the fixed base amount was changed. Recognizing that companies in a startup mode will experience distorted relationships between re-

search expenses and gross receipts, Congress provided a special base for startup companies. Specifically, those companies that did not have gross receipts and qualified research expenses during at least 3 years of the base period beginning 1984 through 1988 were eligible to use a lower ratio of qualified research expenses to gross receipts.

This definition inadvertently introduces a problem, since those companies that were unfortunate enough to have started operations in 1984, 1985, or 1986 were ineligible to use the lower ratio. Xilinx's experience can highlight this point. As a result of our startup operations, which began in 1984, our year fixed base percentage of research to gross receipts is so high, at approximately 26 percent, that for the foreseeable future we will receive no R&D credit even though our R&D expenditures are approximately 13 percent of our aggregate revenues. Our inability to utilize the credit places us at a significant competitive disadvantage relative to many of our competitors. We understand, from speaking with some of those involved in putting the initial provision together in 1989, that this result was not intended.

The remedy to this technical glitch is straightforward—change the definition of a startup company to include any company with its first year of both research and development and revenues in 1984 or thereafter and to discontinue the 3-out-of-5-years' requirement.

This proposal has been endorsed by the AEA, American Electronics Association, which represents some 3,000 U.S. technology companies ranging from small startups to Fortune 100 firms. Based upon a revenue estimate given on this proposal when it was introduced in H.R. 11 in 1992, a bill that was vetoed by President Bush for reasons unrelated to this issue, the cost of this correction over 5 years was estimated to be under $50 million. I assume that the cost would be similar today.

On behalf of Xilinx and other similarly situated companies, I request that you seriously consider rectifying this problem through either a technical correction or through another form of R&D credit legislation.

Thank you again for providing me with this opportunity to share my views.

[The prepared statement follows:]

XILINX

STATEMENT OF GORDON M. STEEL

VICE-PRESIDENT OF FINANCE,
CHIEF FINANCIAL OFFICER
FOR
XILINX, INC.
SAN JOSE, CALIFORNIA

RESEARCH AND DEVELOPMENT CREDIT

BEFORE THE HOUSE WAYS & MEANS COMMITTEE
SUBCOMMITTEE ON OVERSIGHT

UNITED STATES HOUSE OF REPRESENTATIVES

MAY 10, 1995

Madame Chair and Members of the Subcommittee. My name is Gordon Steel. I am the Vice-President of Finance and Chief Financial Officer of Xilinx, Inc. Xilinx is based in San Jose, California and is the world's leading supplier of complementary metal oxide semiconductor (CMOS) programmable logic and related development system software. In March 1995, the end of our most recent fiscal year, Xilinx had approximately 850 employees worldwide, the majority of whom are located in the United States. Approximately 35% of our total revenue comes from sales made to customers outside the U.S. Founded eleven years ago, Xilinx's last fiscal year generated revenues in excess of $350 million. R&D expenses over the past ten years exceeded $150 million. Approximately 28% of our employees are engaged in R&D in San Jose, California.

I wish to thank this Subcommittee for providing me this opportunity to testify on what I consider to be a technical flaw in the R&D credit definition of start-up companies. This glitch severely impacts Xilinx as well as a few other similarly situated companies -- such as Sierra Semiconductor from California and Sequent Computer Systems of Oregon -- and has resulted in our receiving reduced credits since the credit structure was changed in 1989. In its current form, the R&D credit provision would preclude us from realizing such credit, even though our research expenditures have increased substantially each year since the inception of the company.

Xilinx was founded in 1984 by three former Zilog employees with a product concept and future vision that the R&D credit was designed to encourage. As a result of our successful R&D efforts, Xilinx had revenues in excess of $350 million for our most recent fiscal year and offers the industry's broadest selection of programmable logic devices. The success of our R&D efforts has also facilitated our annual growth in revenue, which has averaged 48% per year since becoming a public company in 1990. The first field programmable gate array (FPGA), introduced in 1985, cost $55. Today, the same part sells for $5, due in part to the research and development undertaken by Xilinx.

Before the structure of the credit was changed in 1989 and the start-up definition was written in such a way as to exclude certain start-up companies, the R&D credit was critically important to Xilinx, even though we couldn't currently use the credit dollars because of the net operating losses associated with an R&D intensive start-up operation. The credit was very important to us, nonetheless, because it reduced our effective tax rate for book accounting purposes, which in turn reduced our cost of capital. As a result, I believe that it worked as an incentive to encourage Xilinx to spend more on R&D. I further believe that the technical glitch referred to as the "notch baby issue" which prevents us from obtaining any credit is incompatible with the objectives of the R&D credit and accordingly should be corrected.

THE TECHNICAL GLITCH AFFECTING START-UP COMPANIES LIKE XILINX

Under the current credit, only qualified research expenses over a fixed base amount are eligible for the credit. In 1989, the base calculation was changed so that the base is now computed by multiplying the ratio of a company's qualified research expenses to gross receipts for 1984-1988 by the company's average gross receipts in the prior four years.

Recognizing that companies in a start-up phase will experience a distorted relationship between research expenses and gross receipts in their initial years of operation, Congress provided a special fixed base for start-up companies. Specifically, under those rules, a start-up company is defined as any company with fewer than 3 years of both gross receipts and qualified research expenses during the base period (1984-1988).

The problem with this three out of five year test is that it affords incompatible treatment for R&D credit for those companies that began during the early years of the base period, as contrasted with those starting in the later years of that period or thereafter. Indeed, any successful company that starts selling or starts R&D in the early years of that period would not have stopped R&D spending or sales during the later years of that period. As such, any company with its first year of both gross receipts and R&D falling in 1984, 1985 or 1986 will not be considered a start-up company even though its R&D to sales ratio could have been well beyond 100% during many of the base years. We understand from those involved in putting the provision together in 1989 that this result was never intended.

Xilinx is a perfect example of the inequity exacted by this rule. Like many companies in the early to mid 80's, Xilinx was funded by venture capital. This initial capital provided the founders of the company with the resources and time necessary to develop a marketable product without the immediate need to generate revenue to cover operating costs. As a result, in the early years of operations, the company's R&D as a percentage of sales was extremely high.

Xilinx incurred its first year of research costs in 1984 and its first year of gross receipts in 1985. As a result, our four year fixed base percentage is so high (approximately 26%) that for all of the foreseeable future, we will not receive any R&D credit, even though our R&D expenditures are approximately 13% of our total revenue. Our history and our R&D to sales ratio show that we were clearly in a start-up phase and thus, were the type of company Congress intended to include in future eligibility.

Without This Change The Credit's Incentive Value is Zero For Companies Like Xilinx: We agree that the best policy goal of the credit should be to cause companies to spend more on R&D than they otherwise would without the credit. This increased R&D effort is beneficial to society because companies will be better able to bring new and more efficient technologies to society. In Xilinx's case, however, the credit doesn't work because of the technical glitch.

The Credit Actually Puts Xilinx at a Competitive Disadvantage vis-à-vis its Competitors: More importantly, the current start-up company definition puts Xilinx at a significant disadvantage when we compete with an already established company or a new company. Either of these companies will get a 20% incentive for the extra R&D they spend in developing future generations of product. We, in contrast, will not receive such assistance.

The high technology industry has evolved and changed over the years since Xilinx began business. The overriding mainstay to survival in the marketplace is having a competitive edge. Without an R&D credit, Xilinx will be at a distinct disadvantage against our competitors due to our misfortune of having our first year of sales and R&D fall in 1985 rather than in 1987 or beyond.

PROPOSAL

The proposal that would solve this problem is very simple. It would be to change the definition of a start-up company to include any company with its first year of both R&D

and sales in 1984 or thereafter. Indeed, this revised definition was included in H.R. 11 in 1992, which was vetoed by President George Bush for reasons unrelated to this issue. At the time, the cost of this fix over 5 years was estimated to be under $50 million, a cost that I would expect to be similar today.

The American Electronics Association (AEA), which represents some 3,000 U.S. technology companies ranging from small start-ups to Fortune 100 firms, has also endorsed this technical correction. I hope that you will seriously consider fixing this problem through a technical correction or through another form of R&D credit legislation to ensure that start-up companies like Xilinx who began business during the early years of the fixed base period (1984-1986) are not penalized merely for the year they were formed.

CONCLUSION

Xilinx is a perfect example of an innovative, leading edge technology company doing business in a rapidly evolving marketplace in an industry where commitment to substantial expenditures of R&D is essential. We ask that you acknowledge the oversight that resulted from the 1989 tax legislation with respect to the start-up definition. We also ask for your support in making this technical correction.

I would be happy to answer any questions you may have.

Chairman JOHNSON. Thank you very much, Mr. Steel.

How do the rest of you react to Mr. Steel's proposal?

Mr. JERNIGAN. It doesn't impact AMD, but I think it is a worthwhile proposal.

Mr. KOSTENBAUDER. At Hewlett-Packard, it doesn't impact us. We weren't involved in starting up during that 1984–88 period.

Chairman JOHNSON. Because we have heard this from a number of folks, I appreciate your being specific.

In terms of the discussion that you have heard from Members and the preceding panels, would any of you care to comment on the issue of moving to a simpler, flat tax versus retaining the incremental tax with its complexities?

Mr. JERNIGAN. I would like to comment on that.

AMD would very much support a flat tax, because with our high R&D to sales ratio of 18 percent for the last 11 years and increasing every year, the present formula is just not working; and some companies are benefiting, others are not, and I think the flat tax is the only way to be equitable to all of the companies in the country that do R&D.

It is also simple, and I think that is very worthwhile.

Mr. KOSTENBAUDER. I make the observation that for at least the limited amount of revenue that is available to fund it, the more incremental, the higher the rate; and the higher the rate, obviously the more incentive impact there can be.

On the other hand, as my testimony described, the structure of the credit as it exists has the impact of providing, at least in a number of cases, significantly greater R&E credit in cases that really do not have a lot to do with a company significantly responding to the incentive, but rather a company perhaps switching the mix of businesses in which it is already operating, or conducting its business in some other way that impacts this relationship between revenue and sales.

The point was made on another panel that today's sales have a lot to do with yesterday's R&D. I think to the extent that there is a disconnect on that point, which isn't addressed structurally, certainly moving toward a flat credit would help to ameliorate that phenomenon. Although if we can figure out a way to do it, something that keeps more of an incremental nature has the benefit of a higher rate. We don't have the final answers, but we are pleased to try to work with everyone to resolve this conundrum.

Chairman JOHNSON. Mr. Jones, in your experience in dealing with the IRS, in some of these cases wouldn't a simpler tax structure make it far easier for companies to benefit from this tax? From what I have heard today, I don't see any way we can fix the definition of what is an eligible expense. Aside from the base period issue, what is an eligible expense is very unclear to me, and I should think it would be increasingly difficult for companies to allocate expenses to innovative work versus work.

Mr. JONES. It is hard to say. In dealing with IRS controversies, I don't think the controversies arise so much over the mechanical computations and looking at the base period, but from the definitional problem. I agree that is not something that we are going to solve today or that perhaps even Congress can solve.

Some would say I am being too generous to IRS, but I really feel that to a great extent their problem has been, as the law has changed, they too have had to deal with this uncertainty. I have heard it from some within the IRS that if it isn't going to be enacted on a permanent basis, why should we continue to focus resources on it? I think permanent enactment, in whatever form, would allow the IRS to give guidance to start taxpayers to work with the IRS and make sure that everyone understands the rules.

I don't necessarily think that a flat credit is going to be any simpler in terms of tax administration. Obviously, the IRS would have to give you their opinion on that. But I suspect most of the controversy, as you have suggested, will revolve around whether or not the activity is qualified or not.

Chairman JOHNSON. Why wouldn't it be much simpler?

Mr. JONES. It would be simpler in terms of the computations. That is not the issue with the IRS. The issues and the controversies I am involved in with the IRS are whether or not a certain type of activity even qualifies.

As we have indicated in our prepared statement, it took the IRS a couple of decades to get guidance out at the very base threshold level. But again, the controversies that we see are not necessarily over the computation. It is more or less over the definitional aspects of the credit.

I know that the gentleman to my left testified about the problems with generic drugs. That is a poignant example of what has occurred to date. It is a definitional problem.

Mr. GUTMAN. I agree. It is simple to do one mathematical process, multiplying a flat number times a base. It is not much more difficult to do some averaging and then multiply numbers against a base. What is really hard is to try to figure out what is eligible for the credit. That is where we have been having the difficulty.

That is what my statement was about and my particular situation, I suspect, is not one in isolation.

Chairman JOHNSON. I certainly would hope that you would give us your thoughts on how we could simplify the terminology, what is eligible. Because the staff has helped me understand why I thought this would be a lot simpler than it is clearly going to be. But I think that a much cleaner line, if we are going to make this permanent, we have to do a better job of clarifying what is in and what is out.

Your thoughts on that would be very useful.

[The information was not available at time of printing.]

Chairman JOHNSON. Mr. Steel.

Mr. STEEL. I would agree with the previous two speakers that the administration issue would not necessarily greatly simplify the efforts involved. The problems are more like in definition and implementation.

At the risk of displaying ingratitude to the earlier two speakers, who were kind enough to support my position for tax relief for companies in the 1984–88 timeframe, I would argue slightly differently with respect to the flat rate versus the incremental. My argument would go much along the lines of Randy Capps, a previous speaker.

I suspect most employees who are serving with a rapid-growth firm would favor an incremental approach, as it probably provides

the greatest incentive to them for their overall R&D commitment. As I am sure you are aware, the incremental approach has a cap for very rapid-growth companies, 10 percent of R&D. So, clearly, in those cases where a flat tax rate would be 10 percent, that would be break-even to us if we are experiencing very, very rapid growth, but I doubt that that would be the percentage that will be seen as wise by Congress.

I also point out that employment over the last 5 years or so has been driven not so much by the Fortune 100 companies but rather by the rapid growth of small and medium-sized companies who have leveraged high technology very successfully. I believe that the most direct incentive to that future growth is to reward those rapid-growth companies by providing some additional incentive in the R&D arena.

Mr. JERNIGAN. Madam Chair, I would like to give a different perspective on the simplicity issue. I think it is more than just a mechanical simplicity.

Having a flat rate credit would also have simplicity value as far as determining what R&D is for any kind of base period—whether 1984–88, what is the R&D per year? If you move the base to a current year, you still have to determine, what is the R&D for each of those years? You are going to have to determine the sales for each of those years; you are going to have to determine the current year's sales. This has complexity, and just going to a flat credit on the current year's R&D would be much simpler, in my view.

Mr. JONES. I might add, our experience again with the IRS has been that most of the fights are over the definitional issues; and those fights, I can assure you, consume an awful lot of time and professional fees that could be more appropriately devoted to research activities. So certainly to the extent that the subcommittee and Congress can help in giving the IRS some guidance to put a little more meat on the definitional bone, that would be most helpful, and we would be glad to help in any way possible.

Chairman JOHNSON. I will appreciate your comments on the new regulations that the IRS is about to publish in this area. They promise that they will be out very soon.

Mr. JONES. The allocation issues, yes.

Attention: CC:DOM:CORP:T:R (INTL-0023-95)
Room 5228

Dear Sir or Madam:

We respectfully submit the following comments on the proposed regulations released May 19, 1995 (INTL-0023-95), governing the allocation and apportionment of research and experimental expenditures for purposes of determining taxable income from United States and from foreign sources.

The Treasury Department and IRS have long recognized the importance to the United States economy of research and experimental ("R&E") activities conducted in the United States, and the significant impact the existing provisions of the tax law governing the allocation and apportionment of R&E expenses (in determining a taxpayer's net income from United States and foreign sources) have on a taxpayer's R&E activities. The continued attention and concern of the Treasury Department and IRS is most recently reflected in the Treasury Department's report released May 19, 1995, "The Relationship Between U.S. Research and Development and Foreign Income" (the "Treasury Report"), and proposed regulations issued on that same date

(INTL-0023-95, hereinafter the "Proposed Regulations") prescribing rules governing the allocation and apportionment of R&E expenditures.

We note with approval that the Proposed Regulations would favorably modify existing regulations in several significant respects -- e.g., permitting a taxpayer to use three-digit SIC code categories in allocating its R&E expenses among its different activities, and increasing from 30 percent to 50 percent the percentage of R&E expenses that may be exclusively apportioned to income arising from the geographic location where the R&E activities are performed. Though the changes to existing regulations that are proposed are welcome, we believe certain additional modifications and clarifications are necessary to improve their efficacy. The amendments we propose are consistent with and follow upon the basic conclusions of the Treasury Report on the relationship between a taxpayer's United States R&E activities and its net foreign source income. In particular, we recommend the following changes to the proposed regulations:

1) to apply the "exclusive allocation" rule to a greater percentage of R&E expenditures,

2) to allow taxpayers to apply the optional gross income method of allocation without making a binding election,

3) to allow taxpayers the option of applying more focused SIC code categories,

4) to clarify the rules governing the treatment of a possessions corporation that has elected the profit split method under section 936(h)(5)(C)(ii) of the Code, and

5) to modify the proposed effective date in cases where a taxpayer otherwise would be unable to apply either these regulations or section 865(f).

1. The "exclusive allocation" percentage should be increased

We believe the "exclusive allocation" rule should apply to a greater percentage of R&E expenses attributable to activities performed in the United States. As the Treasury Report states, there is *considerable uncertainty* in determining the factual relationship between R&E expenses attributable to activities in the United States and foreign source income. Indeed, the Treasury Report states that there is a wide range of uncertainty, and its own estimate under the 50 percent exclusive allocation rule of the Proposed Regulations would result in an allocation of an amount that is within the range of estimates determined in the report but that is considerably above the lower end of that range.

For several reasons, we believe it is appropriate to adopt an exclusive allocation percentage that is at the lowest end of the "range of uncertainty" described in the Treasury Report. First, the Treasury Report rightly concludes that there is a high level of uncertainty in its determinations. Second, the Treasury Report's own estimation of the impact of the allocation under the Proposed Regulations would be significantly above the lower end of its range of uncertainty. Perhaps most importantly, the Treasury Report and the Congressional consideration of this issue all acknowledge the fundamental importance of United States-based R&E activities to the U.S. economy generally and the sensitivity of these activities to the effects of the tax law.

Specifically, for the reasons discussed below, we believe an exclusive allocation percentage of 64 percent is appropriate. First, a 64 percent exclusive allocation percentage has been statutorily endorsed by a prior Congress, which recognized that a reduction in U.S.-based R&E activities might adversely affect the competitive position of the United States. Congress also recognized that tax rules allocating an inappropriately large amount of R&E expense to foreign source income might unduly increase the tax cost of these activities to U.S. taxpayers -- notably, in the common circumstance where a foreign jurisdiction fails to allow the U.S. taxpayer a deduction for amounts allocated under U.S. rules to foreign source income, the foreign tax credit limitation available to the taxpayer would be inappropriately reduced. See section 11114(a) of Pub. L. 101-239; H.R. Rept. No. 247, 101st Cong., 1st Sess. 1205-1208 (1989); see also H.R. Rept. No. 795, 100th Cong., 2d Sess. 458 (1988) (A 64 percent threshold would be "consistent with tax and competitiveness policy while reducing somewhat the cost of [an earlier 67 percent threshold.]").

Second, the Baily-Lawrence study discussed in the Treasury Report and the Mansfield and Romeo data upon which it is based (also cited in the Treasury Report) conclude that a 64 percent exclusive allocation is an appropriate figure. We find the conclusions of the Baily-Lawrence study difficult to challenge, and are concerned with the arguments presented in the Treasury Report that attempt to rebut certain of the study's conclusions. For example, the Treasury Report states that the growing integration of the world economy has resulted in a decrease from that relied upon in the Baily-Lawrence study in the time lag between the introduction of technology in the United States and its introduction abroad. The Treasury Report then states that a shorter time lag would justify a smaller exclusive allocation percentage.

We are surprised by this conclusion of the Treasury Report, and find it internally inconsistent. Our own experience in high technology industries suggests that for many of the new technologies developed in the United States, the time lag between introduction in the United States and introduction abroad has actually *increased* (one of a number of examples is the fiber-optics industry). Thus, we do not believe that the Treasury Report's sweeping conclusion applies to industries in the higher end of the technological spectrum, though this determination

could be true with respect to certain industries that are not technology-intensive. The results described in the Treasury Report in this regard therefore are misleading. Moreover, the Treasury Report also states that there may be a *longer* lag in the application of R&E to foreign income than to domestic income. Though this statement appears directed at the lag in the realization of a return on technology outside the United States rather than the introduction of technology outside the United States, as a blanket statement it cannot be reconciled with the Treasury Report's determination that a globalized economy would lead to a shorter lag in the introduction of technology abroad.

The foregoing discussion illustrates a fundamental flaw in the Treasury Report and the evidence upon which it relies -- namely, the Treasury Report fails to distinguish between the application of R&E activities of high technology versus low technology industries. In the latter case, we believe that R&E expenditures are likely to be low. Including these industries in the figures relied upon in the Treasury Report's "Estimating the Domestic Return to U.S. R&D" results in grave distortions. To a certain extent the Treasury Report acknowledges these distortions, noting in its discussion of its principal and alternative methodologies that computing a return on domestic R&E is subject to "substantial error." The substantial error is illustrated by the very numbers the Treasury Report presents: it states that for 1990 the domestic R&E expenditures amounted to $63.5 billion, yet projects a range of return on this investment the low end of which is $104.8 billion, which we believe is an unusually modest projection. This projection may indeed factor too heavily the impact of low R&E industries that distort the true economic impact of R&E activities generally.

These uncertainties, inconsistencies, and possible substantial errors preclude any sort of substantial reliance on the range of results projected by the Treasury Report in its Table I. Instead, these figures must be adjusted to accommodate more fully the imperfections of the methods to avoid any undue economic impact on this critical U.S. activity. Accordingly, we believe the range of results should appropriately be expanded to include an allocation that utilizes an exclusive apportionment of at least 64 percent.

2. The optional gross income method election should not be binding

The Proposed Regulations dictate that the optional use of the gross income method of allocation is available only if the taxpayer makes an election *binding* on the taxpayer for all subsequent years unless revoked with the consent of the Commissioner. Prop. Reg. section 1.861-8(e)(3)(iii)(C). The requirement that the gross income method is available only by making a binding election represents a significant limitation on the ability of taxpayers to manage effectively the tax cost associated with their R&E expenditures. As noted above, the Treasury Report itself emphasizes the considerable uncertainty associated with the determination of the factual relationship between R&E activities conducted in the United States and foreign source

income. The dictate that taxpayers make a binding election for apportioning expenses under the gross income method forces taxpayers to commit to a position involving an allocation of expenditures for which the tax effects are profound, but whose policy base is uncertain. Moreover, this position is inconsistent with the Treasury Report's acknowledgment of this uncertainty. Accordingly, we recommend deletion of the binding election requirement, and propose instead to allow taxpayers annually to choose to apply the gross income method of allocation, which would be entirely consistent with the existing regulations.

3. Taxpayers should be permitted the option of applying more focused SIC codes

In dividing a taxpayer's R&E expenses among its different product categories, the Proposed Regulations provide that the taxpayer may determine its relevant product categories by reference to the three digit SIC code. This refines the provisions of existing regulations limiting the allocation to product categories determined by reference to the two digit SIC codes, and prohibiting any subdivision of categories. It is unclear from the language of the Proposed Regulations, however, whether application of the three digit code is mandatory where it is available, or if the two digit SIC code may otherwise be used. See seventh and eighth sentences of Prop. Reg. section 1.861-8(e)(3)(i)(B). It is appropriate to allow taxpayers flexibility in determining the specificity with which it may define its product categories. Therefore, we urge that the proposed regulations be clarified to permit taxpayers to choose whether to utilize the two digit SIC code.

Consistent with this view, it also would be appropriate to allow taxpayers that have information sufficient to allow them to define a product category by reference to a more specific SIC code (i.e., of four, five or greater digits) to choose those product categories, so long as the taxpayer's method is consistent from year to year and cannot be changed without the Commissioner's approval (as provided in the Proposed Regulations).

4. Taxpayers electing section 936 profit split method should be allowed corresponding adjustments

Stated broadly, Prop. Reg. section 1.861-8(e)(3)(i)(C)(2) provides that sales and gross income from products produced in whole or in part by a possessions corporation will not be taken into account in allocating and apportioning R&E expenditures. Prop. Reg. section 1.861-8(e)(3)(i)(C)(3) provides that the R&E expenses taken into account for purposes of these provisions must be reduced by the amounts included in computing the cost-sharing amount of the possessions corporation under section 936(h)(5)(C(i)(I). A reduction is necessary to avoid double counting the same expenses -- once in reducing the allowable income of a possessions corporation and a second time in reducing the parent company's foreign source income. Where the possessions corporation subsidiary has elected the profit split method prescribed in section

936(h)(5)(C)(ii), however, the proposed regulations appear to require this improper double counting. This arises because the combined taxable income computed under the profit split method must be reduced by 120 percent of the applicable product area research expenses incurred by the parent corporation. To the extent the allowable income of the possessions corporation subsidiary has been reduced pursuant to this rule, it would be appropriate for the Proposed Regulations to prescribe a rule reducing by a corresponding amount the R&E expenditures taken into account under Prop. Reg. section 1.861-8(e)(3).

5. Effective date should be amended to cover taxpayers otherwise excluded from both these regulations and section 865(f)

Section 864(f), which prescribes a 50 percent exclusive allocation rule under both the sales and the gross income methods, is generally applicable for a taxpayer's first taxable year beginning on or before August 1, 1994. The effective date of the Proposed Regulations is proposed to be for taxable years of a taxpayer beginning after December 31, 1995. See Prop. Reg. section 1.861-8(e)(3)(vi). The Proposed Regulations would allow a taxpayer to choose to apply the regulations instead to its taxable year beginning after December 31, 1994. In spite of this option, however, there remains a gap in timing under which a taxpayer whose taxable year begins after August 1, 1994 but before January 1, 1995 can apply NEITHER the provisions of section 864(f) NOR those of the Proposed Regulations. We therefore urge that the optional effective date of the Proposed Regulations be amended to extend to taxpayers whose taxable years began after August 1, 1994.

We appreciate the opportunity to offer comments on the Proposed Regulations. If you have any questions on these comments or would like to discuss them further, please contact Nilesh Shah (714-850-4317) or Larry DeLap (415-354-4016).

Respectfully,

Mr. GUTMAN. If I could make one comment, what I think you are hearing now and what you have heard this morning is an illustration of an important tension that exists in terms of trying to determine where the subsidy should go, how you determine whether it is going into the right place, and what is good and bad R&D.

To the extent that the statute is less rather than more precise, the IRS is the entity that has to make that decision, and the kinds of difficulties that we encounter in practice come because the IRS is forced to make these kinds of decisions. Sometimes they make them in a way that is correct, sometimes probably against congressional intent; but the difficulty, I think, is endemic and has to be faced. When you are going to legislate this kind of incentive you have to decide the scope of the incentive and then who will decide who is entitled to it. That is a difficult tension.

Chairman JOHNSON. I agree. I have seen this subcommittee go through those kinds of rethinking processes and struggle with those very issues. I would say that I want the subcommittee to go through that again on this.

On the other hand, because of the overriding importance of permanence, if there is one message that has been consistent, it is that we have to make it permanent; and it may be that because of our process, that will be all we can handle.

Mr. GUTMAN. I understand that. I think that is very important.

Chairman JOHNSON. I would like to bring to the committee a greater depth of discussion, or at least to the subcommittee.

I have a vote. I will run over and vote. If the last panel will assemble, I will be right back. Thanks.

[Recess.]

Chairman JOHNSON. Thank you very much. The hearing will reconvene.

Mr. Warren of TRW.

STATEMENT OF WILLIAM A. WARREN, VICE PRESIDENT, TAX, TRW, INC., CLEVELAND, OHIO, ON BEHALF OF ELECTRONIC INDUSTRIES ASSOCIATION

Mr. WARREN. Madam Chair, I am William Warren, vice president of Tax for TRW, Inc. TRW is a U.S. company, based in Cleveland, Ohio, which provides advanced technology and worldwide products for the automotive, space, and defense markets. I am here today representing the EIA, Electronic Industries Association. EIA represents over 1,000 members involved in the manufacture of electronic components for communications, industrial, government, and consumer end uses.

Today, U.S. companies compete on a global basis. A sound R&D tax policy is essential if U.S. companies are to compete effectively in the global marketplace. A permanent and effective R&E tax credit is essential to this policy, along with a permanent and fair resolution of the continuing controversy on the section 861 R&D allocation rules.

Since its inception, the R&E tax credit has provided a valuable economic incentive for U.S. companies to increase their investment in R&D in order to maintain their competitive edge in the global marketplace and to keep that R&D in the United States. On the margin, $1 of credit stimulates as much as $2 of additional R&D

spending in the long run, but this incentive effect is reduced because of lack of permanence.

At TRW, for example, we hold a leadership position on automotive safety systems such as air bags. The technology evolves rapidly and we compete with many non-U.S. companies. Our technology has led to major investments in the United States and thousands of U.S. jobs. However, despite our success to date, we must continue to invest in new R&D, and that new R&D must always have uncertain returns. Further, these high-risk R&D dollars must compete internally with other global capital budget opportunities. A permanent and effective R&E tax credit is needed in this environment.

For many EIA companies, the current credit is very effective. However, for some, such as TRW, structural reform would be very helpful. Space technology products, for example, used to be over 50 percent of our business; due to a downsizing of that segment, it is now about 40 percent. However, our historically high levels of space technology research continue to be reflected in the 1984–88 base period component of the credit calculation, which then restricts the deliverability of the credit on current automotive research.

Permanence is a first priority. However, we urge the Congress to address these structural reform needs.

The last issue is the allocation of U.S.-based research expense for Federal tax purposes. Under the section 861 regulations, first issued in 1977, U.S.-owned research-intensive companies with foreign operations are required to treat a significant portion of their U.S. R&D as if the research was, instead, conducted offshore for purposes of determining foreign tax credits. These arbitrary allocations create a bias against U.S.-based research and against U.S.-owned companies competing in this global environment.

In my experience, I have found no foreign country that allows a tax deduction for this research, which has, in fact, been conducted right here in the United States. Consequently, these U.S. companies effectively lose the benefit of a deduction for a significant segment of their U.S. R&D. Thus, American companies with U.S. R&D successfully competing in global markets are penalized. It also creates a competitive disadvantage for those U.S.-owned companies. U.S. tax rules should not put any U.S.-owned companies at such a disadvantage.

Absent relief, the only way to ensure full deductibility would be to perform the research in a foreign country. Of course, movement of such research abroad would be contrary to American economic interests, so the Congress has periodically and rightly imposed moratoriums on these 1977 rules.

Treasury has recently indicated that the 1977 rules in question are under review, which may lead to a permanent regulatory solution. However, if not, we ask this subcommittee to support a permanent legislative moratorium on the 1977 regulations using the so-called "64-percent solution" which has been previously enacted.

We appreciate the support of past congressional leadership in urging Treasury to resolve the section 861 R&D allocation issue. We urge the Congress to continue this support. We also need a permanent R&E tax credit to keep us competitive and, again, permanence is our No. 1 priority.

Thank you very much.

[The prepared statement follows:]

STATEMENT OF WILLIAM A. WARREN
VICE PRESIDENT, TAX, TRW, INC.
ON BEHALF OF ELECTRONIC INDUSTRIES ASSOCIATION

My name is William A. Warren. I am Vice President of Tax for TRW Inc. TRW is a U.S. company based in Cleveland, Ohio, which provides advanced technology products and services for the automotive, space and defense, and information markets on a worldwide basis.

I am here today representing the **Electronic Industries Association (EIA).** EIA is the industry's oldest, full service national trade association for the electronics industry, comprised of more than 1250 companies involved in the design, manufacture, distribution and sale of electronic components, equipment and systems for consumer, commercial, military, industrial and space use. Overall, the industry was responsible for more than $340 billion in factory sales in 1994, of which approximately 30% were export-oriented.

THE NEED FOR PERMANENT RESEARCH & DEVELOPMENT INCENTIVES

EIA believes that broad-based research and development incentives are good policy because they allow the marketplace to continue to drive the decisions as to what types of research and development are needed to help the nation stay competitive. R&D spending by U.S. firms has improved from the low levels of the late 1970s -- in part, we believe, because of the R&D tax credit's impact.

However, most of the major industrialized European and Asian countries as well as Canada offer various R&D related tax and financial incentives to assist native companies and to encourage foreign companies to locate R&D projects within their borders. These incentives lower the cost of R&D in these foreign countries and provide foreign companies competitive advantages over U.S. industries absent similar U.S. research and development incentives.

Indeed, EIA believes the high rates of R&D in other nations underscore the success these nations have had in fashioning successful national strategies --- including tax policies -- which advance their own technology-based industries' global competitiveness.

A sound research and development tax policy is essential if U.S. companies are to compete effectively in the global marketplace. A permanent and effective R&E tax credit is critical to this policy along with a permanent and fair resolution of the continuing controversy on the section 861 R&D allocation rules.

R & D TAX CREDIT

Since its inception the R&D credit has provided a valuable economic incentive for U.S. companies to increase their investment in research and development in order to maintain their competitive edge worldwide. A permanent R&D credit is critical to research-intensive companies such as those in electronics and to encourage U.S. industry to continue research and development activities in the U.S. rather than moving them offshore. On the margin, one dollar of the R&D credit stimulates as much as two dollars of additional R&D spending in the long-run. However, the incentive effect is reduced because of its lack of permanence; corporate decisionmakers are hesitant to factor in the credit's benefits due to the uncertainty over the long-term availability of the credit.

For example, at TRW, we hold a leadership position on automotive safety systems such as air bags. The technology for these products evolves rapidly, and we compete with many non-U.S. companies. Our technology has led to major investments in the U.S. and thousands of U.S. jobs. However, despite our success to date, we must continue to invest in new R&D and that new R&D will always have uncertain returns. Further, these new high-risk R&D dollars must compete with many other global capital budget opportunities within the company. A permanent and effective R&E tax credit is needed in this environment. This is true for all research-intensive, U.S. companies -- the credit can make the key difference.

For many EIA companies, the current credit is very effective; however, for some such as TRW, structural reform of the credit would be helpful. Space technology products used to be 50% of TRW's business. Due to downsizing of that segment, it is now about 40% and declining. However, our historically high levels of space technology research continue to be reflected in the 1984-88 base period component of the credit calculation which then restricts the deliverability of the credit on current automotive research. Permanence is a first priority. However, we urge the Congress to study and address these structural reform needs.

SECTION 861 ALLOCATION RULE

The last issue is the allocation of U.S.-based research expense for federal tax purposes. This issue spans an 18-year period of continuing controversy. Under the section 861 regulations, issued in 1977, U.S.-owned, research-intensive companies with foreign operations are required to treat a significant portion of their U.S. research expense "as if" the research was instead conducted offshore for purposes of determining foreign tax credits. These arbitrary allocations create a bias against U.S.-based research and U.S.-owned companies competing in a global environment. In my experience, no foreign country allows a tax deduction for this research which has, in fact, been conducted in the U.S. Consequently, these U.S. companies effectively and economically lose a deduction for the expenditures and are exposed to international double taxation to the extent they have excess foreign tax credits. In effect, a penalty is directed at those American companies performing substantial U.S. R&D and successfully competing in global markets; and yet both of these characteristics are highly beneficial to the U.S. economy and crucial to the growth of the high-tech companies that comprised EIA.

The only way to ensure that such expenses receive full deductibility would be to perform the research in the foreign country rather than in the U.S. Of course, movement of such research abroad is counterproductive to American economic interests. Recognizing this, the Congress has periodically imposed a complete or partial moratorium of the 1977 regulatory rules.

In addition to being an incentive for the movement out of the U.S. of U.S.-based R&D, the section 861 rule imposes a competitive disadvantage on those U.S. owned companies subject to the rules. Consider for a moment two multi-national companies, one U.S.-owned and one foreign-owned, and both investing in new R&D. To focus on the effects of 861, assume that the two companies have identical U.S. operations -- same investment, cost structure, products, technology, management, workforce, and the same level of U.S.-based R&D. The U.S.-owned operation would carry a higher tax burden than the foreign-owned U.S. operation due to section 861 and would be at a serious competitive disadvantage relative to the foreign-owned competitor -- a disadvantage which would grow each year solely as a result of the section 861 R&D allocation provisions. Further, to the extent the foreign-owned competitor conducts its research outside the U.S., it would again enjoy full deductibility in its home country. Again, by comparing this to the U.S.-owned company, we can see that a competitive disadvantage is created by U.S. tax rules against many U.S.-owned companies.

Surely U.S. tax rules should not put any U.S.-owned companies at such a disadvantage for R&D located in the U.S. Growing U.S. research is critical to U.S. economic growth. This requires a permanent and fair solution to the issue of the allocation of U.S.-based research expenses.

Thus, just to reiterate this key point, American companies with U.S. R&D, successfully competing in global markets, are penalized. It also creates a competitive disadvantage for those U.S.-owned companies relative to U.S. and foreign competitors not subject to these reallocations. U.S. tax rules should not put any U.S.-owned companies at such a disadvantage.

Absent legislative or regulatory relief, the only way to ensure that such expenses receive full deductibility would be to perform the research in a foreign country rather than in the U.S. Recognizing that movement of such research abroad is counterproductive to American economic interests, the Congress has periodically and rightly imposed a complete or partial moratorium on the 1977 rules.

Recently, Treasury has indicated that the 1977 rules in question are under review. We hope this will lead to a permanent, satisfactory regulatory solution which will eliminate the continuing controversy. Treasury certainly has the authority to resolve these issues, and we hope this committee and the congressional leadership will urge Treasury to exercise that authority. However, if a regulatory solution is not forthcoming, we ask this committee to support a permanent legislative moratorium on the 1977 regulations and impose the so-called "64% percent solution" which has been previously enacted in response to this issue.

CONCLUSION

In closing, on behalf of the Electronic Industries Association I thank you for the opportunity to testify before the committee today. EIA urges you and your fellow committee members to make permanent the R&E tax credit to keep us competitive in this global economy, to drive the creation of new technology and to make us a more productive America in the years ahead.

We also appreciate the support of the past congressional leadership in urging Treasury to resolve the section 861 R&D allocation issue administratively. We urge this Committee and the Congress to continue this support in order to find a joint and permanent solution to this continuing controversy.

Chairman JOHNSON. Thank you. Now my earlier mistaken comment is not relevant. We will be interested in your reaction to those regulations that are due out any time and see if they solve some of the problems. We have been led to believe they will.

Mr. WARREN. Would you like comments now or later?

Chairman JOHNSON. Later. They are due out any day. So when they come out, we will look at that before we decide how to move in this area. So if you will get back to us when you see that, that goes for anyone whose interests are in this area.

[The following was subsequently received:]

Electronic Industries Association

September 6, 1995

Commissioner Margaret Richardson
Internal Revenue Service
1111 Constitution Avenue, N.W.
Washington, D. C. 20114

Attn:CC:DOM:CORP:T:R (INTL-0023-95)

Re: Proposed Regulation Section 1.861-8(e)(3)

Dear Commissioner Richardson:

I am writing on behalf of the Electronic Industries Association (EIA) in response to the Notice of Proposed Rulemaking published in the Federal Register on May 24, 1995 (60 Fed. Reg. 27453) relating to proposed regulations concerning the allocation and apportionment of research and experimental ("R&D") expenditures for purposes of determining taxable income from sources within and without the United States (hereinafter referred to as the "Proposed Regulations").

EIA is the industry's oldest, full service national trade association for the electronics industry, comprised of more than 1250 companies involved in the design, manufacture, distribution and sale of electronic components, equipment and systems for consumer, commercial military, industrial and space use. Overall, the industry was responsible for more than $340 billion in factory sales in 1994, of which approximately 30% were export-oriented.

EIA commends Treasury's efforts in reexamining the proper allocation and apportionment of deductions for U.S. based R&D expenditures to foreign income, Treas. Reg. *Sec.* 1.861-8(e) (the "1977 Regulations"). There has been a great deal of uncertainty regarding the proper allocation and apportionment of deductions for U.S. based R&D expenditures to foreign income for more than 17 years. EIA supports a permanent resolution to this issue and believes that the Proposed Regulations represent a significant step in the right direction.

2500 Wilson Boulevard • Arlington, Virginia 22201-3834 • (703) 907-7500 • FAX (703) 907-7501

EIA is pleased with a number of technical decisions underlying the Proposed Regulations including:

1) The decision to conform the treatment of the Section 936 and R&D allocation rules with the former section 864(f) rules, which provided that the R&D expenditures taken into account under the allocation rules should be reduced by amounts taken into account under either the cost sharing or profit split method computed under section 936(h)(5)(C). EIA believes that to fully achieve that result, the language of the Proposed Regulations should be explicitly modified to clarify that the reduction in R&E expenditures provided by Prop. Reg. S 1.861-8(e)(3)(I)C)(3) applies when the taxpayer has elected either the cost sharing or the profit split method under section 936(H)(5)(C).

2) EIA was pleased with Treasury's decision not to adopt the so-called "goose-to-gander" provision included in section 864(f) of the Internal Revenue Code of 1986, as amended (the "Code"), because that provision failed to recognized the greater impact of parent country affiliation on commercialization of R&D. EIA feels the rule in the Proposed Regulation achieves a more accurate matching of income and expense.

EIA believes that the Proposed Regulations are a substantial improvement over the 1977 regulations; however, EIA believes that the Proposed Regulations must be further improved, particularly to afford some tax relief to companies that utilize the gross income method. Absent such relief these companies effectively remain under the 1977 regulations.

EIA recommends that the Proposed Regulations be amended to address the following points. First, the exclusive apportionment provision applicable to the gross sales method of apportionment should be expanded to include the optional gross income method of apportionment. Second, taxpayers should not be required to make a binding election in order to use the gross income method. Third, although the proposed regulations adopt the three digit (rather than two digit) SIC code grouping rule allowing certain taxpayers to avoid allocating U.S. research to foreign income that is truly unrelated to that U.S. research, we suggest that further relief is warranted for taxpayers that have worldwide product lines in the same three digit SIC code but the products by geographical region are sufficiently different that non-U.S. R&D is both necessary and appropriate. For these taxpayers with significant non-U.S. R&D, further allocations of U.S. R&D is inappropriate. Lastly, that the effective date of the Proposed Regulations should be modified to cover fiscal year taxpayers whose taxable years begin after August 1, 1994 but before January 1, 1995.

1) In order for all taxpayers to avoid the potential of double taxation, allocations of R&D expenditures should be based solely on each taxpayer's facts and circumstances. The 1977 Regulations acknowledged that due to differences in facts and circumstances, some taxpayers

could reduce their exposure to double taxation by use of the gross sales method and others through use of the gross income method. Treasury should maintain consistency in this matter (i.e., such as Rev. Proc. 92-56, 1992-2 C.B. 409) by permitting those taxpayers on the gross income method to exclusively apportion their R&D expenditures on the same basis as taxpayers who use the gross sales method of apportionment.

2) The requirement in the Proposed Regulations that taxpayers who elect to apportion R&D expenditures on the optional gross income method are bound to use such method in future taxable years ignores both the aforementioned differences in taxpayers' facts and circumstances and the basic tenet espoused by both Treasury and the Congress of reducing taxpayers' exposure to double taxation by allowing the taxpayer the choice of either the gross sales method or gross income method. It is not even clear from the related Treasury study why the binding election rule was adopted in the proposed regulations. The gross income method is an acceptable method, and as such, should not be burdened by extra requirements not placed on the other acceptable method. Taxpayers should be entitled to choose each year the method of apportionment that best reduces the potential for double taxation. There is no tax advantage to taxpayers who elect to apportion R&D expenditures on the basis of gross income in one year and then on the basis of gross sales the next; such taxpayers are merely reducing the real cost of double taxation.

3) There is a lack of clarity of what is normally referred to as the facts and circumstances test for special allocations. EIA would suggest that you consider some method of relief in these areas both from a tax policy point of view as well as a competitiveness issue in a global marketplace. Specifically we propose that you address this area by defining a bright line test by three digit SIC code. Under this method, if the ratio of foreign R&D in a three digit SIC code of all foreign affiliates of a U.S. consolidated group over foreign affiliate sales in that SIC code exceeds 50% of the ratio of U.S. consolidated R&D in that SIC code to consolidated group sales in the same SIC code, then the U.S. consolidated group R&D would be exclusively (100%) allocated to U.S. source income. For any three digit SIC code group which does not meet this test, the normal 50% allocation followed by a sales method apportionment would then apply with comparable adjustments for taxpayers on the gross income method. Incorporation of this test in the regulations would permit taxpayers with extensive foreign R&D to properly avoid inappropriate allocations and apportionments of U.S. R&D to foreign source income.

4) The effective date of the Proposed Regulations is for taxable years beginning after December 31, 1995, although the regulation gives taxpayers the option of electing to apply the regulation for taxable years beginning after December 31, 1994. This effective date permits calendar year companies to apply the new regulation to their first taxable year beginning after the regulation's latest moratorium. Fiscal year companies whose taxable years begin after August 1, 1994, but before January 1, 1995, however, will suffer a one year "gap" during which

the 1977 Regulations will apply because the last extension of the moratorium on the 1977 Regulations applied to the first taxable year beginning on or before August 1, 1994. Section 864(f)(6) of the Code, as amended by the OBRA OF 1993.

Although the gap in the effective date provisions of section 864(f)(6) of the Code and the Proposed Regulations may only be an oversight, it needs to be corrected in order to prevent unfair results to fiscal year taxpayers whose taxable years began after August 1, 1994, but before January 1, 1995.

Thank you in advance for considering these comments.

Sincerely,

Donna Siss Gleason

Donna Siss Gleason
Director
Government Relations

Chairman JOHNSON. Mr. Sinaikin.

STATEMENT OF RONALD A. SINAIKIN, VICE PRESIDENT, TAXES, ALLIEDSIGNAL, INC., MORRISTOWN, N.J., ON BEHALF OF THE CHEMICAL MANUFACTURERS ASSOCIATION

Mr. SINAIKIN. Thank you, Madam Chair. I am Ronald Sinaikin, vice president of Taxes, AlliedSignal, Inc. I am appearing on behalf of the CMA, Chemical Manufacturers Association. I am going to summarize our written statement which I ask be included in full in the hearing record.

CMA welcomes this opportunity to present the views of the U.S. chemical industry on the research credit and on the allocation of research and development expenses. Our member companies represent more than 90 percent of America's productive capacity for basic industrial chemicals. Since 1991 the chemical industry has been the Nation's leading exporter with an estimated $50 billion in exports and a net trade surplus of $18 billion in 1994.

The chemical industry also ranks first among all U.S. manufacturers, with an estimated $18.1 billion in research and development spending in 1994. Our industry is an excellent example of how a strong research effort can develop new products and increased productivity to help overcome high labor and capital cost disadvantages.

Over time, the U.S. chemical industry has shifted from the production of basic commodity chemicals to the production of new specialty chemicals. Our industry has changed fundamentally, but it continues to provide high technology, high-wage jobs for more than 1.1 million U.S. workers and continues to be a strong, positive contributor to the U.S. trade performance.

On several occasions, CMA has supported extending and improving tax incentives for U.S. research and development. Without them, the competitiveness of both the United States and the U.S. chemical industry will decline. Other industrial nations offer strong incentives for research. The nations that develop new science and technology are normally those in which the new technology will first be employed and new plants and jobs will be created.

In addition, tax incentives for research offer an appropriate means to offset our competitive disadvantages of high labor and capital costs. Because research programs require long lead times, short-term extensions of the research credit will not achieve the full economic incentive of a permanent extension. At a minimum, Congress should adopt the permanent research credit now.

It should also be recognized that many companies that have strong research programs do not benefit from the present research credit. That is because the credit applies on an incremental basis. Our statement outlines several common fact patterns under which a company may not receive the research credit even though it maintains or increases its actual expenditures for research. We urge that you either amend the existing research credit or develop an alternative that will be available in those circumstances.

CMA also supports a permanent solution to the 18-year controversy over the Treasury's R&D expense allocation rules. The Treasury allocation rules work at cross-purposes with the research credit. A company can be eligible for the credit for its research ac-

tivities, but through the operation of the allocation rules, the company could effectively be denied a deduction for its research expenses.

The real economic effect of the allocation rules is to disallow any deduction for expenses of research conducted in the United States after the company is in an excess foreign tax credit position. For these companies, that could significantly increase the cost of conducting research in the United States. It makes no sense for the U.S. tax system to increase the cost of conducting research in America under any conditions.

CMA has testified since 1983 that the allocation regulations would undermine the effectiveness of the research credit. On at least seven occasions, Congress has enacted statutory moratorium to prevent allocation under the 1977 regulations. That is persuasive evidence that those regulations were ill advised. It is time to end the 18 years of controversy.

The most rational solution is for the U.S. Treasury Department to adopt a permanent allocation rule which, at a minimum, is similar to the most recent moratorium. In the alternative, Congress should enact legislation to achieve that result. Hopefully, we will see in a couple of days if Treasury did do that.

As a nation, America needs a strong private sector research establishment located in the United States. As we have testified, it is a source of the new technologies needed for continued economic growth and productivity that will provide new American jobs and higher living standards.

That concludes my oral statement. I will be happy to answer any questions.

[The prepared statement follows:]

STATEMENT OF
RONALD A. SINAIKIN
VICE PRESIDENT, TAXES
ALLIEDSIGNAL INC.
ON BEHALF OF THE
CHEMICAL MANUFACTURERS ASSOCIATION
ON THE
RESEARCH AND EXPERIMENTATION TAX CREDIT AND THE
ALLOCATION OF RESEARCH EXPENSES UNDER I.R.C. § 861
SUBMITTED TO THE
SUBCOMMITTEE ON OVERSIGHT
OF THE
COMMITTEE ON WAYS AND MEANS
MAY 10, 1995

SUMMARY OF PRINCIPAL POINTS

1) Research and development activities form the basis for new products, new markets, and increased economic productivity and living standards. Without these activities the United States becomes noncompetitive. The U.S. chemical industry – a high tech industry – would be particularly disadvantaged.

2) Other nations offer strong incentives for research, recognizing that these activities develop new science and technology. Research sites importantly influence the location of the plants in which the new technology will be employed.

3) CMA, accordingly, supports a permanent research tax credit. Because research programs require long lead times, short-term extensions of the research credit will not have the full economic incentive of a permanent extension.

4) Many industries that maintain important research and development programs do not benefit from the present incremental research credit. Congress should consider providing an alternative research credit for firms that conduct important research activities but that have not expanded those activities rapidly enough to qualify for the incremental research credit.

5) It also should be recognized that Treas. Reg. 1.861-8(e)(3) allocation rules work in direct opposition to the research credit. The practical impact of these regulations is to deny any deduction for research and development expenses after a company is in an excess foreign tax credit position.

6) National Science Foundation data continue to provide strong evidence that U.S. corporations are increasingly conducting research activities abroad.

7) It is time to end the 18 years of controversy over the allocation of research expenses between U.S. and foreign source income. Enacting a permanent allocation rule similar to the most recent moratorium would encourage the conduct of research activities in this country. This allocation should also be used to compute the allowable export incentive under the Foreign Sales Corporation ("FSC") provisions.

The Chemical Manufacturers Association (CMA) is a nonprofit trade association whose member companies represent more than 90 percent of the productive capacity of basic industrial chemicals within this country. We welcome this opportunity to submit the views of the U.S. chemical industry on (1) the importance of extending the research and experimentation tax credit ("research credit") before it expires on June 30, 1995, and the need to make the research credit permanent; and, (2) the need for a legislative solution for the current law rules requiring the allocation of expenses for research and development conducted in the United States between U.S. and foreign source income.

The U.S. chemical industry has a vital interest in the continuing search for ideas that will contribute to future expansion of productive capacity and new job opportunities in the United States. In 1994, our industry spent an estimated $18.1 billion for research, more than twice the amount expended in 1984. Moreover, the chemical industry ranks first among all U.S. manufacturing in research and development spending.

Over the past several years the U.S. chemical industry has been shifting from production of basic commodity chemicals toward production of new specialty chemicals that have evolved from continuing research and development. Research and development is also important to the U.S. chemical industry not only because it leads to the discovery of new, patent protected products, but because it leads to increased productivity which can overcome labor and capital cost disadvantages.

Although the fundamental nature of the U.S. chemical industry is changing, it continues to provide high-tech, high-wage jobs for more than 1 million U.S. workers. Moreover, the chemical industry continues to be a strong positive contributor to U.S. trade performance. As you know, our nation's merchandise trade balance in 1994 showed a $151.3 billion deficit, but exports of chemicals totaled $51.5 billion and exceeded imports by $18.3 billion. The strong export position of the U.S. chemical industry is, however, very much dependent on maintaining the productivity gains and stream of new products that derive from a large, effective private sector research effort.

On several occasions over the past 15 years, CMA has appeared before this committee to support the extension and improvement of tax incentives for U.S. research and development. The reason for these incentives is fundamental: research and development activities form the basis for new products, new markets, and increased economic productivity. Without these activities, the competitiveness of both the United States and the U.S. chemical industry will decline. For valid reasons, industrialized nations typically offer strong incentives for research and experimentation expenditures. Nations that develop new science and technology are normally those in which the new technology will be first employed and new plants and new jobs will be created. Since U.S.-based production has relatively high labor and capital costs, incentives for research and development offer the most appropriate means to offset these competitive disadvantages.

The research credit was enacted in 1981 to provide these incentives. But let us consider its history to date.

In 1981 the research credit equaled 25 percent of the excess of qualified research expenses in the current year over a moving average of such costs in the three prior taxable years. That research credit expired in December, 1985, but the Tax Reform Act of 1986 retroactively extended it on a modified basis through 1988. The 1986 legislation reduced the research credit rate from 25 percent to 20 percent, tightened the definition of qualifying expenses and modified the university basic research credit. The Technical Amendments and Miscellaneous Revenues Act of 1988 extended the research credit at 20 percent through December 31, 1989. The Act also reduced the deduction under Section 174 for qualified research expenses by an amount equal to 50 percent of the research credit for that taxable year. The Omnibus Budget Reconciliation Act of 1989 extended the research credit through December 31, 1990, replaced the moving average base period with a fixed-base percentage, and increased the Section 174 deduction disallowance to 100 percent of the research credit claimed for that year.

In the Omnibus Budget Reconciliation Act of 1990, Congress extended the research credit through December 31, 1991. The credit was subsequently extended to June 30, 1992, in the Tax Extension Act of 1991. Most recently, the Omnibus Budget Reconciliation Act of 1993 extended the research credit from July 1, 1992 until June 30, 1995.

CMA believes that the research credit should be improved and made permanent and has consistently expressed this position since 1981. The credit has contributed significantly to the continuation and expansion of research programs in general (cf. the 1994 study "Extending the R & E Tax Credit: The Importance of Permanence," by R.G. Penner, L.C. Smith, and D.M. Skanderson of the Policy Economics Group, KMPG Peat Marwick), and to the health and prosperity of the United States chemical industry in particular. The chemical industry has a vital interest in the continuing search for ideas which will contribute to future expansion in new technology, processes, production, and the development of new job opportunities in this country. The industry is in the forefront of U.S. research-oriented activities.

As a nation, we need a strong private sector research establishment. New technology is a primary source of continued economic growth and the basis for future increases in productivity and living standards. It is imperative that U.S. policy encourage domestic research activity. Research programs typically require long lead times, and the uncertainty about the future that results from short-term extensions of the research tax credit are detrimental to new research programs.

CMA believes that a permanent extension of the research credit would be a significant start on the job that needs to be done. At a minimum, Congress should adopt a permanent research credit now. Until that is done the real economic incentive the research credit can provide is substantially reduced.

It should be recognized that many companies that have made substantial contributions to the U.S. economy by maintaining strong research and development programs do not benefit from the present research credit. That is because the research credit currently applies on an incremental basis. The research credit is available only to the extent the taxpayer's current year ratio of research and development expenses to sales exceeds the same ratio for the base period 1984-1988.

Moreover, a company may not be eligible for the research credit even though it maintains or increases its actual expenditures for research. Regrettably, this can occur in several common fact patterns:

o A rapid increase in sales could adversely affect the company's ratio of research expenses to sales.

o A company develops new product lines that are not research intensive, thus lowering its overall ratio of research expenses to sales.

o To meet international competition, many companies have been forced to reduce their work force, thus lowering the overall ratio of research expenses to sales.

In each of these illustrations a company could be denied the research credit for reasons that are totally unrelated to its research efforts. Thus, Congress should consider providing an alternative research credit that would be available to these firms that conduct important research activities, but that have not expanded those research activities rapidly enough to qualify for the incremental research credit.

CMA also strongly believes that a permanent solution to the almost 18-year controversy over Treas. Reg. 1.861-8 (e)(3), the research and development ("R & D") expense allocation rules, is also critically needed. Treas. Reg.1. 861-8 (e)(3) works at cross purposes with the research credit because it provides a disincentive to conduct research in the United States.

Since 1981, Congress has adopted a statutory moratorium on seven occasions to prevent the allocation of R & D expenses between U.S. and foreign source income that

otherwise would be required under Treas. Reg. 1.861-8(e)(3). These include amendments to ERTA (1981), DEFRA (1984), COBRA (1985), Tax Reform Act (1986), TAMRA (1988), OBRA (1990), and OBRA (1993). In addition, in 1992 the chairmen of the House Committee on Ways and Means and Senate Committee on Finance urged the Treasury to deal with the unsatisfactory problems associated with the regulations administratively. Treasury responded, but only on a temporary basis. The OBRA 1993 moratorium expired December 31, 1994, for calendar year taxpayers. Therefore, the 1977 regulations must now be applied for future years unless a regulatory or legislative solution is adopted.

As indicated above, Treas. Reg. 1.861-8(e)(3) works at cross purposes with the research credit. Although Treas. Reg. 1.861-8(e)(3) deals with the ability of companies to use the foreign tax credit to offset a portion of their U.S. income tax, the real economic effect of the regulations is to disallow any deduction for research and development expenses after a company is in an excess foreign tax credit position.

In 1983, CMA testified at length on this issue before the House Ways and Means Subcommittee on Oversight. (Hearings, Subcommittee on Oversight, House Committee on Ways and Means, 98th Congress, First Session, October 26; November 3, 1983). At that time we stated that the operation of the regulations would undermine the effectiveness of the research credit and would significantly increase the cost of that research in the United States. Moreover, we indicated that this increased cost of conducting research in the United States would be an important factor that would be considered in choosing whether to locate new research facilities here or abroad. We continue to believe that the regulations are ill-advised.

On at least seven occasions, Congress has wisely enacted and renewed the moratorium on apportionment of research and development expenses under the regulations. Unquestionably, a principal reason for doing so was the concern that the operation of the regulations was to encourage multinational businesses to shift research activities abroad. (See "Description of Proposals Relating to Research and Development Incentive Act of 1987 (S.58) and Allocation of R & D Expenses to U.S. and Foreign Income (S.716)", Joint Committee on Taxation, JCS-6-87, April 2, 1987.)

In 1989, National Science Foundation data suggested that U.S.-based corporations were increasingly conducting research outside the United States. R & D spending abroad by U.S.-based companies increased significantly more than comparable spending in the United States. Although the falling dollar accounted for some of this increase, R & D spending rose much faster abroad even after adjusting for depreciation of the dollar. The latest available National Science Foundation data demonstrate this trend is continuing. Based on 1992 data, a 1994 National Science Foundation study found that total company financed R & D performed outside the U.S. was $10.0 billion, equivalent to 10.3 percent of total company R & D spending. This represents an increase from the equivalent 8.5 percent share in 1987 and 7.7 percent in 1982. ("Selected Data on Research and Development In Industry: 1992," National Science Foundation, 1994.)

One reason for this trend is that the effects of the excess foreign tax credit limitation on research are far more widespread than previously assumed. It is estimated that, as a result of the corporate tax rate reductions in the 1986 Act, almost 70 percent of all corporations have an excess foreign tax credit limitations problem. As recognized by the staff of the Joint Committee on Taxation in 1987:

> "On the other hand, the rate reduction potentially modifies the conclusions reached in the Treasury study. The percentage of worldwide income of U.S. corporations earned by firms in an excess foreign tax credit position is expected to rise as a by-product of the rate reduction, with the result that any change in the R & D allocation rules can now be expected to have a more uniform effect, from firm to firm, than was true in 1983. Consequently, the rate reduction tends to make any future revision of the R & D allocation rules a relatively more efficient mechanism for influencing taxpayers' R & D decisions. This is because the mechanism works only on taxpayers

> with excess credits, and it works better to the extent that it causes a greater proportion of taxpayers to face similar incentives for undertaking R & D in the United States."
>
> JCS-6-87, pg. 42.

CMA believes that it is time to end the 18 years of controversy. The most rational solution is for Congress to enact a permanent allocation rule similar to the most recent moratorium.

We should also point out that the allocation required under Treas. Reg. 1.861-8 (e)(3) is also required to be used to compute the allowable export incentive under the Foreign Sales Corporation ("FSC"). The FSC provisions were enacted to enable U.S. exporters to be more competitive in world markets. When the regulations are applied in this context, allocating research and development expenses to export income has the effect of reducing FSC export incentive. CMA urges that any solution on the allocation of research and development expenses should also apply to the Foreign Sales Corporation provisions.

As CMA has emphasized, continued and expanded research and development in the United States is vital to our nation's economic future. Domestic tax policies that increase the cost of research in the United States while other nations continue to offer strong incentives to conduct research in their countries will provide continued motivation to reduce U.S. research activities, or to locate the research activities of U.S. firms outside the United States.

As a nation, America needs a strong private sector research establishment located in the United States. Through research we gain new technologies which are the source of continued economic growth and productivity, and provide the basis for new jobs and rising living standards.

Chairman JOHNSON. Thank you.
Mr. Sample.

STATEMENT OF BILL SAMPLE, DIRECTOR OF FINANCIAL SERVICES AND PRINCIPAL ACCOUNTING OFFICER, LOTUS DEVELOPMENT CORP., CAMBRIDGE, MASS., ON BEHALF OF R&D CREDIT/SECTION 861 COALITION

Mr. SAMPLE. Madam Chairman and distinguished members of the subcommittee, my name is Bill Sample. I am director of Financial Services for Lotus Development Corp. I am appearing today on behalf of the R&D Credit/Section 861 Coalition and Lotus. On behalf of the Coalition and Lotus, I would like to thank you for convening this hearing and providing Lotus and the Coalition the opportunity to testify.

The Coalition is comprised of several prominent trade associations and their many members, including several thousand companies with several million employees. The industries represented by the Coalition are among the most dynamic and fastest growing industries in the United States.

Lotus was incorporated in 1982 and is headquartered in Cambridge, Mass. Lotus employs over 6,000 people worldwide, including over 1,600 product development professionals and support staff.

Lotus' initial product, 1–2–3, was the most popular PC application software product in the world. In 1989 Lotus introduced Notes and defined a new category of PC software, workgroup computing.

Lotus competes in an industry where products have a technological life cycle of 18 to 24 months, and accordingly, Lotus invests heavily in product development activities. Since 1982 Lotus has reinvested approximately 14 percent of its revenues in R&D, with cumulative R&D spending exceeding $900 million.

The R&D credit was enacted in 1981, the year before Lotus was born. The funding provided by the credit has helped nurture Lotus through its infancy, childhood, and now into its teen years. Lotus is a $970 million success story built on innovative technology, and the R&D credit has played an important part in our success.

Lotus is also an international software company deriving approximately 50 percent of its revenue from overseas. The 861 R&D allocation rules have caused excess foreign tax credits and double taxation for Lotus, and we feel permanent improved allocation rules are an important component of encouraging exports and domestic R&D.

Madam Chairman, like the other members of our Coalition, intensive research and development efforts are vital to Lotus' ability to compete in the worldwide market. We strongly and wholeheartedly urge Congress to make the R&D credit permanent. Opponents of the credit have argued that the credit is not needed since R&D activities will be done with or without a credit. Madam Chairman, this is simply not true. High technology companies will always conduct R&D, but more projects exist than can be funded and promising ideas must often be cut from the list. The R&D credit provides an effective financial incentive for companies to engage in R&D projects on the margin, which might otherwise be canceled. These projects have and will continue to produce important technological advances and may save companies and jobs.

At Lotus we are constantly reminded of the benefits of investing in R&D projects outside of our core competency. In 1984 sales of Lotus 1–2–3 were growing beyond all expectations, and the company was one of the darlings of Wall Street. A young Lotus software engineer had an idea for a new software product, completely unrelated to Lotus' current business. Lotus senior management were hesitant to fund a project outside of their area of expertise, but eventually agreed to fund some development work. In the late eighties, spreadsheet revenue growth slowed and cost pressures caused the company to cut back on some R&D projects. The availability of the R&D credit to fund incremental R&D helped save this project.

This research project culminated in the development of Lotus Notes. Today, Notes is the unquestioned key to Lotus' success and survival, supporting over 6,000 jobs.

Madam Chairman, there have been ongoing discussions on the various ways the credit's current structure might be improved in order to enhance its effectiveness. While the subcommittee has clearly heard from companies proposing modifications to the credit's current structure, it is critical for the subcommittee to understand that many companies prefer the existing structure and would probably suffer a reduced credit if the current structure is changed. The current credit works well for Lotus and many other members of the Coalition. We do not believe that Congress should delay permanence while studying whether the credit ought to be revised. Accordingly, we believe making the credit permanent should be the first priority.

Current section 861 R&D rules, which can cause double taxation to foreign earnings, create a disincentive to perform R&D activities in the United States and increase the costs incurred by U.S. companies to compete in international markets. This disincentive works against the R&D credit's objective to increase U.S. R&D.

The existing Treasury regulations promulgated in 1977 reduce the extent to which foreign taxes can be credited against U.S. taxes, thereby increasing the overall effective tax rate. Recently, the Treasury Department has indicated that the 1977 rules are under review and revised regulations are imminent. We hope this will lead to a satisfactory, permanent regulatory solution which will eliminate the continuing controversy. However, if a satisfactory regulatory solution is not forthcoming, we ask the Ways and Means Committee to support a permanent legislative moratorium on the 1977 regulations and make permanent the so-called 64-percent solution, which has been previously enacted in response to this issue.

Madam Chairman, in closing, on behalf of the Coalition, I again thank you for inviting us to appear before you today, and I would like to introduce into the record an association letter to Secretary Rubin on the section 861 R&D allocation rules. Thank you.

[The prepared statement and letter follow:]

STATEMENT OF BILL SAMPLE
DIRECTOR OF FINANCIAL SERVICES AND PRINCIPAL ACCOUNTING OFFICER
LOTUS DEVELOPMENT CORP., CAMBRIDGE, MASS.
ON BEHALF OF R&D CREDIT/SECTION 861 COALITION

May 10, 1995

I. Introduction

Madame Chairman and distinguished members of the Subcommittee:

My name is Bill Sample. I am Director of Financial Services and Principal Accounting Officer of Lotus Development Corporation ("Lotus"). I am appearing today on behalf of the R&D Credit/Section 861 Coalition ("Coalition") and Lotus.

On behalf of the Coalition and Lotus, I would like to thank you for convening this hearing and for providing Lotus and the Coalition the opportunity to testify and participate in your Subcommittee's consideration of whether the research and experimentation tax credit, commonly known as the R&D Credit, should be made permanent and on formulating a permanent and fair solution to the Section 861 R&D allocation rules.

A. R&D Credit/Section 861 Coalition

I am also very proud to serve as Chairman of the R&D Credit Working Group of the R&D Credit/Section 861 Coalition and to be able to represent today the Coalition members. The Coalition is comprised of several prominent trade associations and their many members, including the American Electronics Association, the Biotechnology Industry Organization, the Business Software Alliance, the Electronic Industries Association, the Information Technology Association of America, the Pharmaceutical Research & Manufacturers of America, and the Software Publishers Association. These trade associations represent several thousand companies who employ several million U.S. workers. The industries represented by the Coalition are among the most dynamic and fastest growing industries in the United States. The members of these associations are closely following this issue and are very strong and active supporters both of a permanent R&D Credit and a satisfactory solution to the Section 861 R&D allocation rules.

B. Lotus Development Corporation

Lotus Development Corporation was incorporated in 1982 and is headquartered in Cambridge, Massachusetts. Lotus is engaged in the development, manufacture, sale and support of software products and services that meet the evolving technology and business applications requirements of individuals, workgroups, and entire organizations. Lotus employs over 6,000 people worldwide, including over 1,600 product development professionals and support staff.

Lotus' initial product, 1-2-3, was the most popular PC applications software product in the world, and is credited with helping to redefine business financial analysis techniques. In 1990, Lotus introduced Notes and defined a new category of PC software, workgroup computing. Notes is widely acclaimed for its ability to enable workgroups to access, track, share, route and organize information across diverse computing platforms and geographical boundaries. Notes is the preeminent client-server product for developing and deploying groupware applications, including those found in customer service, sales, account management, and product development. Notes workgroup capabilities improve the responsiveness and flexibility of product development organizations by enabling companies to decentralize their product development organizations to be closer to their markets.

Lotus competes in an industry where products have a technological life cycle of 18-24 months and accordingly Lotus invests heavily in product development activities. As our products become simpler to use, they are much more difficult to develop. For example, the

original version of 1-2-3 contained a little over 100,000 lines of code; later Windows versions contained over 500,000 code lines. Since 1982, Lotus has reinvested approximately 14% of its revenues in R&D, with cumulative R&D spending exceeding $900 million. Lotus' R&D investment is increasing, with over 16% of 1994 revenues invested in R&D and an even higher percentage planned for 1995.

The R&D credit was enacted in 1981, the year before Lotus was born. Lotus has taken full advantage of the R&D credit in each of the first 13 years of Lotus' existence, and the funding provided by the Credit has helped nurture Lotus through its infancy, childhood, and now into its teen years. Lotus is a $970 million success story built on innovative technology, and the R&D credit has played an important part in our success. Lotus is an international software company deriving approximately 50% of its revenue from overseas. The Section 861 R&D allocation rules have caused excess foreign tax credits and double taxation for Lotus and we feel permanent, improved allocation rules are an important component of encouraging exports and domestic R&D.

II. Importance of a Permanent R&D Credit

Madame Chairman, like the other members of our Coalition, intensive research and development efforts are vital to Lotus' ability to compete in the worldwide market. We strongly and whole-heartedly urge Congress to make the R&D Credit permanent.

Since its inception, the R&D Credit has provided a valuable economic incentive for U.S. companies to increase their investment in research and development in order to maintain their competitive edge in the global marketplace. The software industry has invested heavily in R&D and the U.S. software industry currently maintains a majority market share in each of the world's major economies. A permanent R&D Credit is critical to fast-growing R&D intensive companies such as those in the software industry and the many other industries represented by the Coalition.

A permanent R&D Credit is also important to encourage U.S. industry to continue R&D activities in the U.S. rather than moving such activities offshore. Most of the major industrialized European and Asian countries (including the United Kingdom, France, Germany, Japanese and others), as well as Canada, offer various R&D-related tax and financial incentives to assist native companies and to encourage foreign companies to locate R&D projects within their borders. These incentives lower the cost of R&D in these foreign jurisdictions and provide foreign companies competitive advantages over U.S. industries absent similar U.S. R&D incentives. Foreign incentives have encouraged Lotus and other U.S. companies to locate some product development offshore, especially R&D targeted towards developing products for foreign markets. Communications products like Lotus Notes are making it easier to decentralize R&D activities. The U.S. must continue to offer R&D incentives to compete for such R&D projects.

III. Effectiveness of R&D Credit

The R&D Credit has been effective in achieving the goals for which it was originally enacted. A key finding of the 1994 study by Rudy Penner on behalf of the KPMG Peat Marwick Policy Economic Group entitled "Extending the R&E Tax Credit; The Importance of Permanence" is that the marginal effect of one dollar of the R&D Credit has been to stimulate one dollar of additional private R&D spending in the short-run and as much as two dollars of additional R&D spending in the long-run.[1/]

Opponents of the Credit have argued that the Credit is not needed since R&D activities will be done with or without a credit. Madame Chairman, this is simply not true for the software industry and the research-intensive industries represented by the Coalition. Although

---

[1/] A copy of this 1994 study is submitted herewith for the record.

high technology companies will always conduct R&D, more projects exist than can be funded and promising ideas must often be cut from the list. The R&D Credit provides an effective financial incentive for companies to engage in R&D projects on the margin which, because of fiscal and other restraints, might otherwise be canceled. These projects have, and will continue to produce important technological advances and may save companies and jobs.

At Lotus, we are constantly reminded of the benefits of investing in marginal R&D projects outside of our core competency. In 1984, sales of Lotus 1-2-3 were growing beyond all expectations and the Company was one of the darlings of Wall Street. A young Lotus software engineer had an idea for a new software product completely unrelated to Lotus' current business. Lotus senior management, satisfied with their spreadsheet success, were hesitant to fund a project outside of their area of expertise, but eventually agreed to fund some development work if the engineer agreed to perform the R&D in a separate company so as not to interfere with Lotus' existing business. In the late 1980's, spreadsheet revenue growth slowed and cost pressures caused the Company to cut back on some R&D projects. Lotus' Vice President of Finance, who believed in the young engineer's product vision, used the availability of the R&D credit to fund incremental R&D to help save this project. This research project culminated in the development of Lotus Notes which first went on the market in 1989. Today, Notes is the unquestioned key to Lotus' continued success and survival, supporting over 6,000 jobs.

IV. Lack of Permanence Reduces Effectiveness of R&D Credit

Unfortunately, the incentive benefit of the current R&D Credit has been reduced because of its temporary and uncertain nature. In industry today, many product development initiatives and research projects have long lead times - often up to twelve years - and corporate decision makers are hesitant to factor in the Credit's benefits due to the uncertainty over the long-term availability of the Credit.

History has shown their hesitancy is well-founded. While the Credit has been renewed six (6) times since 1981, in one instance the Credit was renewed for only six months and on two occasions, the R&D Credit was actually allowed to expire only to be renewed retroactively. Further, adding to the frustration of American industry has been the fact that each time the Credit has been extended, its supporters have had to find revenue offsets to "pay for" the Credit which have become a permanent part of the Tax Code while the Credit remains only temporary. Supporters of the Credit feel they have had to "pay for" the Credit time and time again. This pattern of short-term extensions and lapses in the Credit followed by periods of uncertainty, reduces our ability to factor the R&D Credit into planning for long-term projects and reduces the incentive value and effectiveness of the R&D Credit.

V. R&D Credit Should Be Made Permanent

As our companies and markets mature, and competition increases, management faces the same dilemma over and over again. It must fund research, which like all research efforts is high-risk, over a long period of time while showing a profit to satisfy equity investors. Lotus, although it is only 13 years old and still undergoing major product transitions, is expected to produce significant profits. This requires management to reduce non-research costs, as well as make difficult and painful decisions on which research projects to fund and which to abandon. Given the lean budgets companies must maintain in order to remain competitive, R&D projects frequently are the swing items in the budget. Thus, management is constantly faced with the dilemma of whether it must drop some of its promising but higher risk R&D projects in order to meet financial targets. The R&D Credit is critical to companies and their long-term R&D projects and can make the difference in whether a particular project is retained or abandoned. In fact, this is precisely the result Congress intended when it first enacted the R&D credit - namely that the Credit would provide the additional incentive to encourage real increases in R&D.

Madame Chairman, that is why we need permanence. The R&D Credit can most effectively incentivize R&D projects if decisionmakers know the Credit will be there for the long run.

VI. Background on R&D Credit - A Good Investment

The R&D Credit was originally enacted in 1981 to provide an incentive for companies to increase existing levels of R&D in the United States. The Credit was designed to encourage industry to increase U.S.-based R&D and applies only to increases in domestic R&D above a specified base amount.

Under the current credit, taxpayers are eligible to receive a credit equal to 20% of Qualified Research Expenditures or "QREs", in excess of a specified base amount. The current year base amount is calculated by applying a historical R&D spending-to-revenue ratio (using 1984-1988 amounts) to the taxpayer's average revenues for the preceding four years. However, the base amount can never be less than 50% of current year QRE's, which will reduce the Credit's marginal rate to 10%. This effective rate is further reduced to 6.5% because corporations must reduce their tax deduction for R&D expenses by an amount equal to the credit. These rules effectively leverage the Credit such that a U.S. taxpayer must spend $100 on QREs to receive $6.50 of R&D tax credit. Conversely, the U.S. government is assured that every $1 of R&D credit given has generated over $16 of private sector QRE spending.

QREs are limited to domestic spending and consist primarily of salaries and wages paid for direct research, supervision and support of R&D, 65% of payments to outside contractors for R&D, certain R&D supplies, computer time sharing directly related to R&D activities, and basic research payments to universities. The Credit does not apply to indirect expenditures, R&D expenditures supporting R&D activities such as R&D facilities, overhead (or depreciation), computers, equipment, infrastructure, executive compensation or most employee fringe benefits. In fact, roughly one-half of a company's financial statement R&D does not qualify for the Credit thereby further limiting its effective rate and increasing its spending leverage. Hence, the Credit's narrow base limits abuse and applies only to direct, legitimate R&D efforts. Moreover, since the conduct of R&D is a labor intensive activity, the single biggest component of the credit base historically has been wages and salaries. These wages and salaries tend to be for engineers, scientists, researchers and their direct assistants, which generally comprise "middle-class" jobs, a critical sector of job growth in our economy. Further, certain developmental efforts such as those by pharmaceutical companies are often conducted at university hospitals, thereby assisting the university systems.

In short, the Credit allows the private sector (rather than the government) to determine where R&D dollars are most efficiently allocated, rewards incremental R&D domestic spending, is highly leveraged, encourages middle-class job growth, and enhances the ability of U.S. companies to compete in the global marketplace.

VII. Consideration of Structural Changes to R&D Credit

Madame Chairman, as you know, there have been ongoing discussions on the various ways the Credit's current structure might be improved in order to enhance its effectiveness, such as having a rolling base period, making the Credit a flat rate with no reference to a base period, reducing the maximum fixed base percentage limitation below 16%, and eliminating the 50% minimum base rule. Alternatively, some have suggested that the current structure be retained but that taxpayers be given a right to elect at specific times to change to alternate rules. While the Committee has clearly heard from companies proposing modifications to the Credit's current structure, it is critical for the Committee to understand that many companies prefer the existing structure and would probably suffer a reduced credit if the current structure is changed. One of the reasons for adopting the 1989 changes creating a fixed base percentage, and calculating the base period amount by reference to revenue, was to correct a

flaw in the original Credit's base period computation which caused companies to spend their way out of the Credit. Under the original three-year rolling average spending base amount computation, increased R&D spending also increased the base amount, making the Credit more difficult to obtain in future years. Since the purpose of the R&D Credit is to encourage increases in R&D spending, the base period mechanics should not penalize companies for increasing R&D spending. The 1989 changes generally corrected this problem. The current Credit works well for Lotus and many other members of the Coalition. This important feature of the current Credit should be retained.

Many options exist as to the various changes that could be made to the credit; however, there is no consensus at this time as to which, if any, would be beneficial to the business community. The Committee would find general support for reversing the various limitations imposed on the original Credit during the 1980's, such as the reduction in the credit rate from 25% to 20% and the loss of the deduction for Section 174 expenses. Changing the Credit mechanics within a fixed revenue limitation, however, will be a difficult process creating winners and losers which deserves careful consideration and study.

We do not believe that Congress should delay permanence while studying whether the Credit ought to be revised. Accordingly, we believe making the Credit permanent should be the first priority.

VIII. Section 861 R&D Allocation Rule

The current Section 861 R&D allocation rules, which can cause double taxation of foreign earnings, create a disincentive to perform R&D activities in the U.S. and increase the costs incurred by U.S. companies to compete in international markets. We strongly believe the current regulatory rules adversely affects U.S. R&D and the R&D Credit; the rules discourage the same U.S. R&D the R&D Credit is intended to encourage.

The Section 861 R&D allocation issue relates primarily to the allocation of U.S.-based research expense for purposes of computing a U.S. company's foreign tax credit. The issue spans an 18-year period of continuing controversy, focused on Treasury Regulation section 1.861-8(e)(3). Under this regulation, issued in 1977, U.S.-owned, research-intensive companies with foreign operations are required to treat a significant portion of their U.S. research expenditures "as if" such research was conducted offshore for purposes of determining foreign tax credits. This reduces the extent to which foreign taxes can be credited against U.S. taxes thereby increasing the overall effective rate of tax (U.S. and foreign) to which such companies are subject and possibly causing double taxation of foreign source income. These allocation rules are arbitrary and create a bias against U.S.-based research and U.S.-owned companies competing in a global environment. In my experience, no foreign country allows a tax deduction for this research which has, in fact, been conducted in the U.S. Consequently, these U.S. companies effectively and economically lose a deduction for the expenditures and are exposed to international double taxation to the extent they have excess foreign tax credits. In effect, a penalty is directed at those American companies performing substantial U.S. R&D and successfully competing in global markets; both of these characteristics are highly beneficial to the U.S. economy and crucial to the growth of the high-tech companies in the Coalition. As a multinational company competing in a variety of foreign markets, Lotus, as are many other Coalition members, is adversely affected by the existing R&D expense allocation rules.

Based on the existing regulation, the only way to ensure that such expenses receive full deductibility would be to perform the research in a foreign country rather than in the U.S. Recognizing that this is counterproductive to American economic interests, and works against the primary objective of the R&D tax credit - to increase U.S. R&D, Congress has periodically imposed a complete or partial moratorium on the 1977 regulatory rules. The most recent moratorium expired December 31, 1994 for calendar year taxpayers, so it is important that this problem be corrected as soon as possible.

In addition to being an incentive for the expatriation of U.S.-based R&D, the Section 861 rules impose a competitive disadvantage on those U.S.-owned companies subject to the rules. Consider for a moment two multi-national companies, one U.S.-owned and one foreign-owned, and both investing in new R&D. To focus on the effects of 861, assume that the two companies have identical U.S. operations -- same investment, cost structure, products, technology, management, workforce, and the same level of U.S.-based R&D. The U.S.-owned company would be subject to a higher tax burden than the foreign-owned U.S. operation due to Section 861 and hence would be at a serious competitive disadvantage relative to the foreign-owned competitor -- a disadvantage which would grow each year solely as a result of the Section 861 R&D allocation provisions. Further, to the extent the foreign-owned competitor conducts its research outside the U.S., it would again enjoy full deductibility in its home country. In short, these U.S. tax rules impose a competitive disadvantage against many U.S.-owned companies.

I believe we would all agree that U.S. tax rules should not put U.S.-owned companies at a competitive disadvantage for locating R&D in the U.S. This requires a permanent and better solution to the issue of the allocation of U.S.-based research expenses.

Recently, the Treasury Department has indicated that the 1977 rules in question are under review. We hope this will lead to a satisfactory permanent regulatory solution which will eliminate the continuing controversy. Treasury certainly has the authority to resolve these issues, and we hope the Ways and Means Committee and the Congress will urge Treasury to exercise its authority. However, if a regulatory solution is not forthcoming, we ask the Ways and Means Committee to support a permanent legislative moratorium on the 1977 regulations and make permanent the so-called "64% percent solution" which has been previously enacted in response to this issue.

IX. Conclusion

Madame Chairman, in closing, I again thank you for inviting me to appear before you today. I and the many other members of the R&D Credit/Section 861 Coalition look forward to working with you and the other members of the Subcommittee in achieving permanence for the R&D Credit and in finding a satisfactory permanent solution for the R&D expense allocation rules.

R&D CREDIT/SECTION 861 COALITION

September 6, 1995

Commissioner Margaret Richardson
Internal Revenue Service
1111 Constitution Avenue, N.W.
Washington, D.C. 20224

Attn: CC:DOM:CORP:T:R (INTL-0023-95)

Re: *Proposed Regulation § 1.861-8(e)(3)*

Dear Commissioner Richardson:

We, the R&D Credit/Section 861 Coalition, are writing in response to the Notice of Proposed Rulemaking published in the Federal Register on May 24, 1995 (60 Fed. Reg. 27453) regarding the proposed regulations concerning the allocation and apportionment of research and experimental ("R&D") expenditures for purposes of determining taxable income from sources within and without the United States (hereinafter referred to as the "Proposed Regulations").

The Coalition is comprised of several prominent trade associations including the American Electronics Association, Chemical Manufacturers Association, Electronic Industries Association, Information Technology Industry Council, National Association of Manufacturers, Pharmaceutical Research & Manufacturers of America, Software Publishers Association and the U.S. Chamber of Commerce.

The Coalition applauds Treasury's efforts in reexamining the proper allocation and apportionment of deductions for U.S.-based R&D expenditures to foreign income and, specifically, Treas. Reg. § 1.861-8(e) (the "1977 Regulations"). For over 17 years, there has been uncertainty regarding the proper allocation and apportionment of deductions for U.S.-based R&D expenditures to foreign income. It is time for a permanent resolution, and the Coalition believes that the Proposed Regulations represent a significant step in the right direction.

In addition to being pleased with the attempt to permanently resolve this issue, the Coalition is also pleased with a number of technical decisions underlying the

Proposed Regulations. First, the Coalition agrees with the decision to adopt the three digit (rather than two digit) SIC code grouping rule. The three digit grouping rule allows taxpayers to avoid allocating U.S. research to foreign income that is truly unrelated to that U.S. research.

Second, the Coalition applauds the decision not to adopt the so-called "goose-to-gander" provision included in Section 864(f) of the Internal Revenue Code (the "Code") because that provision had failed to recognize the greater impact of parent country affiliation on commercialization of R&D. The rule in the Proposed Regulation, therefore, achieves a more proper matching of income and expense.

Finally, the Coalition is pleased with Treasury's decision to conform the treatment of the Section 936 and R&D allocation rules to the former Section 864(f) rules. Those rules provided that the R&D expenditures taken into account under the allocation rules should be reduced by amounts taken into account under either the cost sharing or profit split method as computed under Section 936(h) (5) (C). Nonetheless, the Coalition believes that to fully affect this result, the language of the Proposed Regulations should be modified to explicitly clarify that the reduction in R&E expenditures provided by Prop. Reg. § 1.861-8(e) (3) (i) (C) (3) applies when the taxpayer has elected either the cost sharing or the profit split method under Section 936 (h) (5) (C).

Although the Coalition generally subscribes to the approach taken in the Proposed Regulations and believes they are a substantial improvement over the 1977 Regulations, the Coalition believes that the Proposed Regulations can be improved in the following ways.

First, in light of the historical response to the 1977 Regulations, the exclusive apportionment provision applicable to the gross sales method of apportionment should be expanded to include the optional gross income method of apportionment. Second, the election of the optional gross income method of apportionment should not be binding on a taxpayer for subsequent years but, rather, should be available on a year-by-year basis. Finally, the effective date of the Proposed Regulations should be modified to cover fiscal year taxpayers whose taxable years begin after August 1, 1994 but before January 1, 1995. Each of these recommendations are discussed below.

Extension of Exclusive Apportionment to Optional Gross Income Method

The 1977 Regulations provide that in lieu of apportioning the deduction for R&D expenditures on the basis of gross sales, taxpayers may annually elect to apportion the entire deduction on the basis of gross income. The 1977 Regulations, however, do not permit taxpayers to apportion R&D expenditures exclusively to the place of performance if they elect to use the optional gross income method. The Proposed Regulations continue this approach, notwithstanding that Treasury concluded in its own related Study that, in order to increase the fairness of the 1977 Regulations, the Proposed Regulations should reduce the allocation of domestic R&D to foreign income by 25 percent in comparison to the 1977 Regulations. For taxpayers that consistently use the gross income method, the Proposed Regulations do not provide any material relief from the 1977 Regulations. The Proposed Regulations, therefore, fail to fulfill Treasury's own goal.

In order for taxpayers to avoid the potential of double taxation, allocations of R&D expenditures would have to be based solely on each taxpayer's facts and circumstances. The 1977 Regulations acknowledged that due to differences in facts and circumstances, some taxpayers could reduce their exposure to double taxation by use of the gross sales method and others through use of the gross income method. For the Treasury to allow those taxpayers who utilize the gross sales method to reduce the risk of double taxation by 25 percent as compared to the 1977 Regulations but not allow those who utilize the gross income method to reduce their risk by a comparable amount, is patently unfair. The Proposed Regulations have broken the equilibrium of the past 14 years between those taxpayers who use the gross sales method and those who use the gross income method. This equilibrium should be retained by permitting those taxpayers who use the gross income method to exclusively apportion their R&D expenditures on the same basis as taxpayers who use the gross sales method of apportionment.

The Internal Revenue Service should treat the two methods consistently, especially since it treated the methods consistently in Rev. Proc. 92-56 and the Administration expressed support for a revenue-neutral extension of Section 864(f) of the Code which provides for Tax Proposals Before the House Committee on Ways and Means, 104th Cong., 1st Sess.42 (statement of Leslie B. Samuels, Asst. Secretary (Tax

Policy, Dept. of the Treasury). Thus, the Coalition notes that the Treasury has publicly supported consistent treatment of the gross sales and gross income methods.

The Optional Gross Income Method Should Not Be Binding

As noted above, the 1977 Regulations acknowledged that due to differences in facts and circumstances, some taxpayers could reduce their exposure to double taxation by use of the gross sales method and others through use of the gross income method. The requirement in the Proposed Regulations that taxpayers who elect to apportion R&D expenditures on the optional gross income method are bound to use such method in future taxable years nonetheless, ignores such factual differences. Neither the Proposed Regulations nor the Treasury Study gives any indication why the binding election rule was adopted. Regardless of the level of exclusive apportionment ultimately provided by the regulations for the gross income method, it is nevertheless an acceptable method, and as such, should not be burdened by extra requirements not placed on the other acceptable method. Taxpayers should be entitled to choose each year the method of apportionment that best reduces their potential for double taxation. There is no tax advantage to taxpayers who elect to apportion R&D expenditures on the basis of gross income in one year and then on the basis of gross sales the next; such taxpayers are merely reducing the real cost of double taxation.

Modification of Effective Date Provision

The effective date of the Proposed Regulations is for taxable years beginning after December 31, 1995, although the regulation gives taxpayers the option of electing to apply the Regulations for taxable years beginning after December 31, 1994. This effective date permits calendar year companies to apply the new regulation to their first taxable year beginning after the regulation's latest moratorium. Fiscal year companies whose taxable years begin after August 1, 1994, but before January 1, 1995, however, will suffer a one year "gap" during which the 1977 Regulations will apply because the last extension of the moratorium on the 1977 Regulations applied to the first taxable year beginning on or before August 1, 1994. Section 864(f)(6) of the Code, as amended by the OBRA OF 1993.

Although the gap in the effective date provisions of Section 864(f)(6) of the Code and the Proposed Regulations may only be an oversight, it needs to be corrected in order to prevent unfair results to fiscal year taxpayers whose taxable years began after August 1, 1994, but before January 1, 1995.

Thank you for considering these comments.

Sincerely,

American Electronics Association
Chemical Manufacturers Association
Electronic Industries Association
Information Technology Industry Council
National Association of Manufacturers
Pharmaceutical Research & Manufacturers of America
Software Publishers Association
U.S. Chamber of Commerce

Chairman JOHNSON. Thank you very much, Mr. Sample.
Ms. Kaye.

STATEMENT OF TRACY ANNE KAYE, ASSOCIATE PROFESSOR OF LAW, SETON HALL UNIVERSITY SCHOOL OF LAW, SETON HALL UNIVERSITY, NEWARK, N.J.

Ms. KAYE. Thank you, Madam Chairman, and members of the Subcommittee on Oversight, for the opportunity to testify before you today. I am Tracy Kaye, an associate professor of law at Seton Hall University School of Law. I appear before you today to comment on the 861 R&D allocation rules.

I am here to urge Congress to take into consideration international economic policy and the effects of any proposals on the competitiveness of U.S. corporations. U.S. international tax policy needs to minimize tax deterrents to productive international economic activities and needs to avoid creating a hostile tax environment.

The reality of the global marketplace is that our tax system must interact with other countries' tax systems. Therefore, Congress should consider other nations' tax systems when designing our own. The United States uses a foreign tax credit system to eliminate international double taxation. This credit is limited, however, to the U.S. tax liability on foreign-source taxable income. To compute this limitation, sourcing of income and allocation of expense rules are necessary to determine foreign-source taxable income.

These rules generally aim to ensure that income subjected to foreign tax is treated as foreign source. Any allocation of expense to foreign-source gross income reduces foreign-source taxable income and, correspondingly, the foreign tax credit limitation. Thus, too great an allocation to foreign-source income leads to double taxation.

The R&D expense category has proven to be one of the most difficult to allocate, primarily because R&D expenses are capital in nature. Although these costs are incurred to earn future income, code section 174 permits a current deduction.

Most expenses are allocated to domestic or foreign-source income on the basis of their factual relationship to the production of particular gross income. Because R&D expenses do not generally relate to gross income earned in the current period, the matching principle is not helpful.

The regulations contain detailed rules for the allocation and apportionment of R&D expenses. Since 1981, the regulation has been modified eight times by legislation, which lets you know there is a problem. What is this problem? Well, conflicts between the sourcing of income and allocation of expense rules of the United States and foreign countries lead to economic double taxation. No foreign country grants a deduction for R&D performed in the United States just because a U.S. regulation allocates that expense to foreign-source income.

What do other countries do? Many countries use a tracing approach, allocating expenses incurred within the residence country to domestic-source income, and expenses incurred outside the country to foreign-source income.

Other countries follow generally accepted accounting principles for attributing items of expense to categories of gross income. To my knowledge, no country has R&D allocation rules similar to the U.S. rules. Generally, the allocation of expense rules of foreign countries are much less developed and often relying on a facts-and-circumstances determination. This absence of sophisticated 861 allocations in foreign countries means that foreign-owned multinationals enjoy a tax advantage over the foreign activities of U.S. multinationals.

The sourcing of income and expense allocation rules should be designed to achieve three goals—the elimination of double taxation, the elimination of undertaxation, and the distribution of tax jurisdiction among sovereign governments in some mutually agreeable fashion. The only solution that will simultaneously satisfy all three goals is international consensus on a set of rules for the sourcing of income and the allocation of expenses. Therefore, I urge Congress to encourage the Treasury Department to take the lead in the negotiation of such a harmonized set of rules.

Until such an international agreement is reached, however, I propose that the allocation of R&D expense to foreign-source income should only occur where deductible in the foreign jurisdiction.

The tax planning of multinationals focuses on the reduction of worldwide tax liability, not just U.S. tax liability. Therefore, given that U.S. corporate tax rates are often lower than most other jurisdictions, there is already a built-in incentive to claim all allowable deductions against foreign-source income aggressively so as to reduce the foreign tax burden. To the extent U.S. multinationals are operating in jurisdictions with lower tax rates than the United States, it will be necessary to develop a mechanism to allocate the R&D expense allowable as a deduction in the foreign jurisdiction.

I believe this departure from U.S. tax policy is justified because of the unique income measurement problems that exist with respect to R&D expenses. The U.S. unilateral resolution to this issue has led to double taxation for many U.S. multinationals. This is admittedly a second-best and should not be a permanent solution.

Once again, the only way to satisfy the international goals of designing a system that avoids overtaxation and undertaxation is to harmonize the rules for the sourcing of income and the allocation of expenses.

Thank you.

[The prepared statement follows:]

Testimony of

TRACY ANNE KAYE
Associate Professor of Law
Seton Hall University School of Law

Before the

COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT
UNITED STATES HOUSE OF REPRESENTATIVES

May 10, 1995

Introduction

Thank you, Chairman Johnson, Congressman Matsui, and Members of the Subcommittee on Oversight, for the opportunity to testify before you today. I am Tracy Kaye, an Associate Professor of Law at Seton Hall University School of Law. I appear before you today to comment on Treasury Regulation Section 1.861-8(e)(3), the research and experimentation expense allocation rules, often referred to as the "861 R&D allocation rules."

I am here to urge Congress to take into consideration international economic policy and the effects of any proposals on the competitiveness of U.S. corporations. U.S. international tax policy needs to minimize tax deterrents to productive international economic activities and avoid creating a hostile tax environment.

Applying the United States income tax system to international transactions is inherently complex because cross-border transactions do not have a single geographic source. Thus, in order to avoid either double taxation or undertaxation of these transactions, a coherent set of rules for determining the geographical source of taxable income must be developed. To achieve a coherent system of international taxation, the United States should take note of how other countries tax international income.[1] The reality of the global marketplace is that our tax system must interact with other countries' tax systems. Therefore, Congress should consider other nations' tax systems in designing our own.

Historical Background

The United States taxes the worldwide income of its corporations and uses a foreign tax credit system to eliminate international double taxation. The foreign tax credit is limited to the United States tax liability on foreign source taxable income to ensure that the foreign tax credit does not reduce the U.S. corporation's taxes on its domestic income. To compute this limitation, sourcing of income and allocation of expense rules are necessary to determine foreign source taxable income. The rules generally aim to ensure that income subjected to foreign tax is treated as foreign source. Any allocation of expense to foreign source gross income reduces foreign source taxable income and correspondingly the foreign tax credit limitation. Thus, too great an allocation to foreign source income leads to double taxation; too little leads to undertaxation of the cross-border income.[2]

[2]Department of the Treasury; International Tax Reform, An Interim Report (January 1993).

The research and development (R&D) expense category has proven to be one of the most difficult to allocate, primarily because R&D expenses are capital in nature. Although these costs are incurred to earn future income, code section 174 permits a current deduction as an incentive for the performance of R&D. Most expenses are allocated to domestic or foreign source income on the basis of their factual relationship to the production of particular gross income. Because R&D deductions do not generally relate to gross income earned in the current period, the matching principle of Treasury regulation 1.861-8 is not helpful.

The Section 1.861-8 regulations, published in 1977, contain detailed rules for the allocation and apportionment of R&D expenses. These rules require government mandated R&D expenses to be allocated to the gross income arising in the country where the benefit is expected to be derived. The remaining R&D expenses must be allocated to the product categories to which they relate or to all categories if the expenses cannot be related to a particular product category.[3] Allocation is followed by an apportionment procedure whereby a fixed percentage of R&D (at present 30 percent) is apportioned to the geographic source where over half of the taxpayer's deductible research expenses are incurred.[4] The remaining expense is apportioned on the basis of gross sales.[5]

Alternatively, a taxpayer may use an optional gross income method to apportion the non-government mandated expenses on the basis of relative amounts of gross income from domestic and foreign sources.[6] Unfortunately, it is actually even more complicated than the above description. Since 1981, this regulation has been modified eight times by temporary legislation to permit an exclusive apportionment (ranging from 50 percent to 100 percent) to the actual place of performance of the R&D.

Problem

Conflicts between the sourcing of income and allocation of expense rules of the United States and foreign countries lead to economic double taxation. No foreign country grants a deduction for R&D performed in the U.S. on the basis of U.S. regulatory allocation of that expense to foreign source income. Many countries use a tracing approach, allocating expenses incurred within the residence country to domestic source income and expenses incurred outside the country to foreign source income. Other countries follow generally accepted accounting principles for attributing items of expense to categories of gross income.[7]

To my knowledge, no country has R&D allocation rules similar to those required by the United States. Generally, the allocation of expense rules of foreign countries are much less developed, often relying on a facts and circumstances determination.[8] This absence of sophisticated 861 allocations in foreign countries means that foreign-owned multinationals enjoy a tax advantage over the foreign activities of U.S. multinationals.[9]

Recommendation

The sourcing of income and expense allocation rules should be designed to achieve three goals: 1) the elimination of double taxation; 2) the elimination of undertaxation; and 3) the distribution of tax jurisdiction over taxable income among sovereign governments in some mutually agreeable fashion.[10] The only solution that will simultaneously satisfy all three goals is international consensus on a set of rules for the sourcing of income and the allocation of expenses. Therefore, I urge Congress to encourage the Treasury Department to take the lead in the negotiation of such a harmonized set of rules.

Until such an international agreement is reached, I propose that the allocation of R&D expense to foreign source income should only occur where deductible in the foreign jurisdiction. The tax planning of multinationals focuses on the reduction of worldwide tax liability, not just U.S. tax liability. Therefore, given that U.S. corporate tax rates are often lower than most other jurisdictions,[11] there is already a built-in incentive to claim all allowable deductions against foreign source income aggressively so as to reduce the foreign tax burden. To the extent U.S. multinationals are operating in jurisdictions with a lower tax rate than that of the U.S., it will be necessary to develop a mechanism to allocate the greatest amount of R&D expense allowable as a deduction in the foreign jurisdiction.

This is a departure from traditional U.S. tax policy which requires that foreign source taxable income be computed according to U.S. concepts. It is probable that research expenses incurred in the U.S. produce not only domestic income but also foreign income,[12] therefore to the extent the amount of research expense deductible in the foreign jurisdiction is less than the amount properly allocable to the foreign source income, the United States would suffer a loss of revenue in favor of the foreign jurisdiction.

I believe this departure from U.S. tax policy is justified because of the unique income measurement problems that exist with respect to R&D expenses. The United States' unilateral resolution to this issue has led to double taxation for many U.S. multinationals.[13] In theory, these double taxation problems should be resolved through the negotiation of bilateral treaties and the competent authority mechanism.[14] However, given the limited treaty network of the United States, the lengthy treaty negotiation process, and the problems with the competent authority process, this is not realistic.

This is admittedly a second best, and should not be a permanent, solution. Once again, the only way to satisfy the international goals of designing a system that avoids overtaxation and undertaxation as well as providing for an equitable distribution of tax revenue among sovereign governments is to harmonize the rules for the sourcing of income and the allocation of expenses. It will be necessary to study the approaches taken by the various governments' tax systems and develop a system that is mutually agreeable. Note that these rules are of paramount importance whether administrating a territorial tax system or a foreign tax credit system.

---

[11]See Ernst & Young, *Worldwide Corporate Tax Guide* (1994).

[12]The counterargument made by some is that these expenses are recovered initially in the domestic market, and, as royalties or other payments represent the profits, no allocation should be made to foreign income.

[13]Double taxation only occurs for those taxpayers in an excess foreign tax credit position, i.e. those taxpayers whose foreign income taxes paid exceed their foreign tax credit limitation. It is generally assumed that the majority of multinational corporations are in an excess credit position.

[14]McIntyre, *supra* note 10.

As cross-border activity between Canada and Mexico increases because of the North American Free Trade Agreement, it will be necessary to attempt some harmonization of these respective tax systems, including the allocation of R&D expenses. The European Union, now comprised of fifteen countries, is already engaged in a similar exercise.[15] These efforts should pave the way for the negotiation of a coherent system for the sourcing of income and allocation of expenses of international transactions.

Chairman JOHNSON. Thank you very much, Ms. Kaye.
Mr. Wiacek.

STATEMENT OF RAYMOND J. WIACEK, TAX COUNSEL, JONES, DAY, REAVIS & POGUE, ON BEHALF OF EMERGENCY COMMITTEE FOR AMERICAN TRADE

Mr. WIACEK. Thank you, Madam Chair. My name is Ray Wiacek. I am here to testify on behalf of the ECAT, Emergency Committee for American Trade.

ECAT is an organization of about 60 very large U.S. multinationals. They employ over 5 million people and generate annual sales in excess of $1 trillion. The membership includes some of the most R&D-intensive companies in the world.

I am here to talk about the so-called 861 R&D regulations, and I have submitted a written statement for the record, so I would like to come off the written page and just talk to you directly and briefly for a moment.

The 861 R&D regulations treat a portion of U.S.-performed R&D as if it were done abroad. Technically, these rules work through the foreign tax credit rules. But there are economic consequences, principally the denial of a deduction for that portion of U.S. R&D deemed to be foreign.

Now, as Professor Kaye has said, no foreign country grants a deduction for such R&D. From time to time, the Joint Committee has pointed out that this might be wrong as a purely theoretical matter. I think in the Joint Committee's pamphlet for the last hearings on this apportionment issue they cited the Philippines and Turkey as possibilities where you might get a deduction. In the Joint Committee's pamphlet for this hearing, it is noted that in Finland or New Zealand a U.S. company also might be able to obtain a deduction. The Joint Committee specifically notes, however, that in such major trading partners as Japan and Canada, that no deduction would be obtained.

Of course, in the real world the denial of such a deduction makes sense. You would know yourself, Madam Chair, that there is not a chance that we would get a deduction in Japan for engineering salaries paid or lab supplies purchased in Connecticut. It just isn't going to happen.

Now, the consequence of the section 861 R&D apportionment regulations is that the cost of U.S. R&D has been increased, or put another way, that the amount of R&D that you could do for a given level of investment is decreased.

These section 861 R&D regulations are about as controversial as any I can remember. They were first issued in 1977. They phased in and became fully operational in 1980, and almost immediately Congress began to enact a series of full and partial moratoriums—moratorium against their application. Looking back at this activity, it is like reviewing a "who's who" list of the tax legislation of the last dozen years.

Congress first enacted a moratorium in 1981 in ERTA, then again in DEFRA, then again in COBRA, then again in the 1986 Tax Reform Act, then in all the various OBRAs of the late eighties and the Tax Extension Act and so on. I think Mr. Sinaikin said he thought there were seven. By my count, there have been nine legis-

lative moratoriums. The Treasury also acted in 1992 administratively, granting relief from its own regulations.

Now, a lot of good has come from the above activity. For one thing, the record is long. All of this activity has been accompanied by testimony, studies, committee reports, that time and again question the tax policy, noting the disincentive to U.S. R&D, asking for further studies and so on. But there has been one major downside to all this activity. It has all been temporary, and this is tragic, because R&D is a long-term, risk-laden proposition, and it requires commitment, stability, and consistency in terms of government policymaking.

Now, looking at the above record, you have really got to admit that imposition of the 861 penalty, removal of it on a full basis for 1 year, then removal of it on a 50-percent basis for half a year, then imposition of the penalty again, then removal of it on a 2-year basis for 64 percent, and so on, is not a model of stability.

As to consistency, I think it is ironic that we have heard much testimony today about the incentive provided by the R&D credit and the need for it. At the same time, we leave regulations outstanding that impose a penalty on the same R&D, so we are talking both about an R&D incentive and a penalty coexisting.

Now, as you mentioned, Madam Chair, there has been a development, and it somewhat changes the conclusion of anyone's testimony. The development is news from the Treasury Department that it intends to resolve the section 861 issue by administrative action, which is within its power. Without this development my conclusion would have been to urge the subcommittee to initiate legislation that would once and for all resolve the section 861 R&D issue and bring a permanent solution to this area. But we have been working with the Treasury, and we applaud their sincerity and good faith in dealing with this regulation. We did hear Deputy Assistant Secretary Beerbower testify yesterday that some relief is imminent. So I think I would conclude instead, by asking that this subcommittee stay involved and stay interested because, despite applauding Treasury's sincerity and good faith, after, lo, these dozen years, we are going to believe it when we see it.

If and when those regulations come out, we would ask that the subcommittee stay interested with us in order to make sure that the solution is permanent and that it embodies fair and sound tax and R&D policy.

Thank you very much.

[The prepared statement and study with attachments prepared by Martin N. Baily and Robert Z. Lawrence follow:]

STATEMENT OF RAYMOND J. WIACEK, TAX COUNSEL JONES, DAY, REAVIS & POGUE, WASHINGTON, D.C. ON BEHALF OF EMERGENCY COMMITTEE FOR AMERICAN TRADE

WEDNESDAY, MAY 10, 1995

My name is Raymond J. Wiacek and I am a partner here in Washington with Jones, Day, Reavis & Pogue. I am testifying on behalf of the Emergency Committee for American Trade, or ECAT. ECAT is an organization that represents over 60 large U.S. corporations with vital interests in international tax and trade. Its member companies employ over 5 million people and generate over $1 trillion in annual sales. Its membership includes many R&D-intensive companies who perennially rank among those with the largest commitments to R&D.

I am hear to testify with respect to Treasury Regulations § 1.861-8 as they apply to R&D -- that is, the so-called "861-R&D" regulations. These regulations treat a portion of R&D done in the U.S. as if it were done abroad. The regulations operate, technically, through the foreign tax credit rules, but their effect is the same as denying a deduction for that portion of U.S. R&D "deemed" to be foreign. Of course, no major foreign country grants a deduction for R&D costs incurred in the U.S. just because the U.S. Treasury deems a portion of that R&D to be "foreign." This makes sense. Does anyone really believe that Japan will allow a deduction against Japanese income for engineering salaries paid in Connecticut or chips and semiconductors consumed in California? Would the U.S. let a plant in Ohio assembling Japanese autos reduce its U.S. income taxes for research done on emission controls in Toyota City?

Because they effectively deny an R&D deduction for many U.S. companies, the 861-R&D regulations increase the net cost of R&D performed in the United States, and decrease the overall amount of R&D that can be undertaken for a given level of investment. In 1983, in fact, the Department of the Treasury reported that the 861-R&D rules would reduce overall levels of U.S. R&D. Many R&D-intensive companies also have asked why they shouldn't move some of their R&D abroad, since the Treasury treats some of their R&D as if done there anyway.

The 861-R&D rules have been controversial since their issuance in 1977. They became fully operational in 1980 after a "phase in", and Congress promptly thereafter began enacting short-term "moratoriums" against their application. These now total *nine*.[*] Sometimes these have been full moratoriums, and sometimes 50% or 64% of U.S. R&D was freed from possible allocation to foreign sources. The Treasury, too, has adopted a temporary solution to the 861-R&D problem, holding as a regulatory matter in 1992 that 64% of U.S. R&D need not be subject to foreign allocation.

Each of these actions by Congress and Treasury was accompanied by testimony, economic studies, and legislative reports noting the disincentive to U.S.-R&D, questioning the tax policies inherent in the regulations, calling for further study, and so on. For example, a 1991 study by Baily and Lawrence found that over 300 U.S. corporations, performing approximately 80% of this country's industrial R&D, were penalized by the 861-R&D rules.[**] The bottom line here is that the record on this issue is already long.

---

[*] The 861-R&D problem was addressed in the 1981 Act (ERTA), the 1984 Act (DEFRA), the 1985 Act (COBRA), the 1986 Act (TRA), the 1988 Act (TAMRA), the 1989 Act (OBRA), the 1990 Act (OBRA), the 1991 Act (TEA), and the 1993 Act (OBRA).

[**] A copy of this study is attached. It is worth noting that Martin Baily, one of the authors, is now a member of the Council of Economic Advisors.

Unfortunately, no one has permanently resolved this long-acknowledged problem. This is significant, because R&D is a long-term, risk-laden proposition that requires stable and consistent governmental policies. The stability necessary is not demonstrated, however, by policies that remove the 861 penalty on U.S. R&D episodically and for differing short-term periods. The consistency necessary also is lacking where an R&D credit meant to foster R&D is adopted at the same time regulations which penalize R&D are left outstanding.

As a matter of sound tax and R&D policy -- and as a matter of good government -- it is time to resolve once and for all the long-festering 861-R&D problem. ECAT strongly supports adoption of a solution like that embodied in the many moratoriums heretofore passed -- but on a permanent basis. ECAT urges the Subcommittee to demonstrate its commitment to U.S. R&D and sound tax policy by initiating such a solution.

Senior Fellow, The Brookings Institution

At a time of intense foreign competition and slow productivity growth it is essential that the U.S. economy sustain or even strengthen its commitment to commercial R&D. And, recognizing this, there is now broad agreement among policymakers on the need for a permanent R&D tax credit. At the same time, it is vital that other provisions of the U.S. tax code do not offset or reduce the impact of the R&D tax credit. One such provision that would be harmful in its effect on domestic R&D is tax regulation 861-8.

Tax regulation 861-8 requires international companies to attribute part of their U.S. R&D to their foreign-source income. This regulation has been largely suspended since its inception, but the most recent suspension will expire at the end of this year and this would provide an incentive for U.S. companies to move some of their R&D overseas. Given the global operations of many companies and the fact that qualified scientists and engineers are now available in a number of foreign countries, this incentive could lead to a significant reduction of U.S.-based R&D.

It has been argued that the 861-8 provision is narrow in its scope and that only a few companies would be affected by the proposed repeal. In this testimony I report on a study of this question conducted by myself and Robert Z. Lawrence.* We evaluated a sample of 524 companies performing most of U.S. R&D. We find that 304 companies, accounting for 82 percent of sample R&D spending, are likely to be adversely affected if regulation 861-8 were fully implemented.

The Importance of R&D

In earlier studies we have argued that there is a persuasive case for using public policy to encourage commercial R&D.[1] When a U.S. company develops a new technology, it cannot prevent other companies from borrowing or imitating the new developments. Even when there is patent protection, other companies can "invent around" the patent and introduce their own version of the new product.

The fact that a given development in technology has "spillover" benefits for all companies is not bad for the economy. It means that new ideas spread throughout the economy and consumers benefit from the competition among multiple suppliers. In some cases, high-technology companies will even foster the cooperative element of technology development by using cross-licensing agreements or joint-venture R&D projects, as have occurred in the semiconductor industry.

The problem with the spillover of technology is that it reduces the private incentive to perform R&D. Any given company will weigh only the effect on its own profitability of its R&D when deciding how much R&D to perform. It will not include in its calculation the benefits to other companies and to consumers, and the result is

* This study was sponsored by the Council on Research and Technology.

[1]The views expressed here are our own. They do not represent those of the Brookings Institution.

that the private rate of return to R&D is well below the social rate of return. (The private rate is the rate of return to the company that performs the R&D. The social rate includes the private rate plus the rate of return to the economy at large). Since there is this disparity between the private and social rates of return, too little R&D is performed. The economy as a whole, therefore, has a stake in encouraging additional R&D. This argument provides the main rationale for providing a tax credit for R&D and also explains why it is essential to make sure that adverse incentives in one part of the tax code do not undo the favorable effects that have been obtained elsewhere.

Many types of investment are helpful in terms of improving U.S. productivity and competitiveness and for creating jobs, but investment in R&D is special. For most investments, the private and social rates of return are close together, so that we can leave it to the market to ensure that there is an adequate amount done. This is not to deny the importance of policies that keep long term interest rates low and tax burdens reasonable in order to encourage all investment. Rather, it says that there is no need for special treatment for most kinds of investment, indeed it is to be avoided. R&D is different because of the huge gap between private and social rates.

A study by Edwin Mansfield and associates at the University of Pennsylvania in 1977 found that the social rate of return to R&D was over 50 percent compared with about half that for the private rate.[2] There have been numerous follow-up studies of the returns to R&D done since then using Mansfield's approach and using alternative methods. It has been found consistently that the social return to R&D is much higher than the private rate and that there has been no reduction over time in the returns to R&D.[3] Despite the relatively slow growth of the U.S. economy in the last twenty years, it remains the case that commercial R&D is a very good investment for everyone in the economy. Slow economic growth does not seem to have diminished the payoff to R&D.

Based upon arguments such as these, we have strongly supported the R&D tax credit as one way of encouraging additional R&D. And in our own empirical analysis of the impact of the credit that was in effect from 1981-85 we found that it had increased commercial R&D by about $2.5 billion per year. Some other empirical estimates found smaller effects, but there was a clear consensus from a variety of studies that tax incentives for R&D can increase the amount of commercial R&D, and indeed they have done so.[4] The tax treatment of R&D is an important determinant of the amount of R&D performed. Moreover, the efforts to reform the incentive structure of the credit have paid off, so that the proposed permanent R&D credit will provide a surprisingly strong incentive for R&D given its rather small revenue effect.[5] There is now broad agreement in Congress and the White House that an R&D tax credit is desireable.

At this time, however, the Congress is considering how to treat R&D for companies that have significant foreign operations. Tax regulation 861-8 says that part of the U.S. R&D expenses of a U.S. multinational company must be attributed to its foreign activities. This regulation has been largely held in suspension until now, but if it were enforced as written it would provide a substantial incentive for U.S. companies to move R&D overseas, thereby depriving the U.S. economy of much of the benefit of this investment.

The Adverse R&D Tax Incentive Caused by 861-8

The U.S. tax code treats U.S. owned companies on the basis of their world-wide income. Companies must compute both their domestic and their foreign source income and pay U. S. corporate income tax on both parts, with a credit given for the taxes paid to foreign governments in order to avoid double taxation. The U.S. tax code has long specified that companies can take no more in foreign tax credits than the amount that they would have paid in U.S. tax on their foreign income. If the foreign government nevertheless sets a tax rate that is higher than the U.S. rate, the company bears the burden. This prevents a high tax country from passing its taxes to the U.S. Treasury via the foreign tax credit.

For many years the corporate income tax rate in the U.S. was roughly in line with tax rates in the main countries where U.S. multinationals were located. Companies were therefore able to take almost all of their foreign tax payments as credits against their U.S. taxes. There was no particular incentive within the tax code to locate production or other facilities in one country or another. Following the changes that took place in the tax code in the United States in the 1980s, particularly the 1986 changes, this is no longer the case. The tax rate on corporate income in the U.S. is below the rates in most other major countries. This means that more U.S. multinational companies find themselves in the position of having excess foreign tax credits.

Regulation 861-8 states that a company computing its foreign source income must attribute a fraction of its U.S. R&D expenses to its foreign activities, even though all of the R&D is actually being performed in the U.S. For example, a company that had $100 million of R&D or U.S. R&D expenses might have to attribute $20 million to its foreign operations. This raises its domestic source income and its domestic tax liability. But since no foreign government allows companies to deduct R&D expenses incurred in the U.S. from their taxable income within the foreign country, the 861-8 attribution does not correspondingly reduce the amount of foreign taxes paid by the company.

Since many or most U.S. companies with substantial foreign operations are now in an excess foreign tax credit position, the 861-8 regulation, if fully implemented, would increase their overall tax liability and, more importantly, the regulation would also change the calculations of the costs and benefits of locating R&D in different countries. Such companies would then have a very substantial tax incentive to move some of its R&D operations to countries where it has production facilities or where it is earning taxable income. Consider the example that was given earlier and suppose that this company decided to cut its actual U.S. R&D by 20 percent, to $80 million, and to establish a lab overseas with annual spending of $20 million. Its total R&D costs are the same as before, but its tax situation is now very different. The $20 million of foreign spending is now a deductible business expense in the foreign country. If the corporate tax rate overseas were, say, 45 percent, then the company would reduce its foreign tax liability by $9 million (0.45 x 20). The company's U.S. tax liability on its foreign income is unchanged because it has excess foreign tax credits, but its tax liability on its U.S. income would rise by $6.8 million (0.34 x 20). In this example, therefore, the tax benefit to the company represents 11 percent of the amount of R&D shifted (100 x (0.45- 0.34)). For companies with excess foreign tax credits, the 861-8 provision will

generate an important incentive for shifting R&D overseas, the percentage incentive being equal to the difference between the U.S. and foreign corporate income tax rates.

R&D in The U.S. Economy and Overseas

After a number of years in which every new economic statistic seemed to bring more bad news about the performance of the U. S. economy compared to its major competitors, we are now discovering that U.S. industry has more strength than we thought. The trend of productivity growth in U. S. manufacturing has been excellent since the early 1980s. The trade deficit is declining, indeed the most recent figures indicate that the U.S. is running only a very small deficit in manufactured goods. And as we move out of the current recession, even employment in manufacturing should improve. These gains have come, however, despite a continuation of the very fierce foreign competition that now characterizes the world economy. There remain many U.S. industries that are having trouble competing and many more that are succeeding only by making continual efforts to improve their technology, productivity and product quality. Clearly, the ability and willingness of U.S. companies to fund R&D is crucial in determining the outcome of this competitive effort.

The danger of the 861-8 regulation is that it would generate an incentive for many companies to transfer their R&D overseas. This would have a detrimental effect on U.S. economic performance at a critical time for U.S. industry. R&D is particularly important because of its high social rate of return; it gives spillover benefits even to those who are not performing it. To some extent these spillover benefits are international. They can be gained regardless of where the R&D is performed. A new technology developed in Switzerland can be applied in a factory in Ohio. But most of the spillover benefits are local. A scientist or engineer learns by working for one company and then carries this knowledge with him or her to another company. A scientist or engineer based in a U.S. university consults for U.S. companies and then uses this knowledge and experience to help in teaching students. When Toyota developed its innovative methods for auto assembly, this new technology spread fairly quickly to other Japanese auto companies and to other assembly lines. It has taken much longer for U.S. companies to copy the innovation and adapt it to U.S. needs. Many of the spillover benefits of R&D occur within national borders.

The responsiveness of U.S. R&D to the adverse incentives embodied in the 861-8 regulation may be very substantial. The U.S. has been the leader in scientific and engineering research for a long time and it remains the leader today. Twenty years ago, few U.S. companies would have been willing to move much of their R&D overseas because the trained personnel were not available and there was not the same critical mass of research going on. Today, Germany and Japan have a larger fraction of their GNP devoted to civilian R&D than does the U.S. Electronics research can be moved to Japan, pharmaceutical research can be moved to Europe and software development can be moved almost anywhere in the world. Multinational companies are now citizens of the world and will locate their activities where they earn the most return. Indeed the pressure of competition forces them to do this.

We are not suggesting that R&D will suddenly flee the U. S. if the 861-8 exemption is repealed. There are many good reasons for companies to do research here. The real question is: What is going to happen at the margin? If there is a substantial incentive to move R&D overseas or to construct new labs overseas rather than here at home, this is going to happen and U.S. R&D will be adversely affected. We do not know of any clear evidence that shows exactly how large the response is likely to be, but if each dollar of R&D that moves overseas reduces a company's total tax liability by 10 cents or more (as seems to be the case) and if many, many companies are affected by the regulation (as we will show below), then the effect of it is bound to be substantial.

How Many Companies Will Be Affected?

The potential adverse effects of the 861-8 provision on U.S. R&D have been recognized for some time, but their importance has been questioned. One argument is that only a very few companies would be subject to the regulation. Most of the companies performing R&D in the U.S. would not be affected, it is said, and so the bulk of R&D would be unaffected. Moreover, whenever provisions of the tax code affect only a very few companies, there is concern that the case for tax relief reflects merely special pleading by these few companies, rather than being based upon true public policy concerns.

The issues, then, are whether regulation 861-8 affects a small or a large number of firms and whether it applies to a small or large fraction of total corporate R&D. We have addressed these questions by looking at 743 manufacturing companies from a COMPUSTAT data base. This data base is a standard source for the analysis of U.S. business; it is prepared by Standard and Poor's from company reports and SEC filings.[4]

Of the 743 companies in the sample, 524 reported that they performed R&D and the total of their reported spending was $51.581 billion in 1987 and $56.842 in 1988. These figures are close to 90 percent of the National Science Foundation's figures for total industry-funded R&D for those years. The company data in the COMPUSTAT file are not exactly comparable to the NSF figures, because the NSF excludes R&D performed by U. S. companies overseas and because some government-funded R&D may be included in the COMPUSTAT figures. But nonetheless, these totals indicate that the firms in our sample cover the great majority of U.S. R&D.

It is worth noting immediately that the percentage of the companies that performed R&D was very high indeed -- over 70 percent. R&D is not an activity restricted to a small group of companies in the U.S. economy. Over two-thirds of our large manufacturing companies are R&D performers.

We then set up a series of criteria to determine which of the 524 R&D performers would be affected by the 861-8 regulation. We assumed that a company will be affected by 861-8 if it conducts R&D in the United States, is profitable, has foreign income and pays "high" foreign taxes. These criteria indicated that 312 companies would have been affected by the provision either in 1987 or 1988 if it had been in effect. This figure is conservative in that it excludes several companies that failed to report all of the

relevant information to COMPUSTAT, even though some of these companies may in fact be affected by the regulation. The 312 companies obtained by the above criteria did include, however, 8 major defense contractors that are probably not affected by 861-8 because they do not have enough high-taxed foreign source income. Thus the final tally was that 304 of the companies are estimated to be affected by 861-8. This means that of the companies in the sample that perform R&D, 58 percent are affected. In 1988, these affected companies performed $46.450 billion of R&D, equal to 82 percent of the sample R&D in 1988. It is clear that the 861 regulation is one that affects a large number of companies and a large fraction of total R&D.[7] The results of the analysis are summarized in Table 1.

The Extent to Which U.S. R&D is Concentrated

We have shown that a large number of companies would be affected by a repeal of the 861-8 exemption, so that this is not an issue that is of concern only to a few companies. However, there are a few companies that account for a large fraction of the tax effect of the regulation. Even though the regulation would affect many firms, its quantitative impact is rather concentrated and the reason for this is that R&D itself is very concentrated.

R&D is very risky, the payoffs often accrue over the very long term and there are advantages to operating at large scale. It is in the nature of the R&D activity itself that it will be concentrated in large firms. We often hear of the small firms and the pioneering innovators that have made major advances in technology without having large labs or large- scale resources. And these stories are indeed correct. However, these small firms and small labs generally have to team up with large firms in order to develop their products and processes. Most of the cost of R&D comes in the development stage, not when the invention is first made. If we are to provide support and incentives for R&D in the U.S. economy, inevitably this means the greater part of those benefits will flow to large firms.

One way that we know that concentration in R&D is to be expected is that we see the same pattern of concentration in other countries. Figure 1 gives the distribution of R&D spending in the 70 largest U.S. R&D spenders and the 70 largest Japanese spenders. We see a very similar pattern of concentration in the two countries, actually with somewhat higher concentration in Japan than in the U.S. The largest 15 performers in Japan account for about 65 percent of the total R&D performed by the full 70 firms. The corresponding figure for the U.S. companies is about 55 percent.

Conclusions

- It is important to support R&D spending by U.S. companies and it is important that this spending occur here at home.

- Failure to renew the suspension of the 861-8 exemption would result in an incentive for U.S. companies with international operations to shift some of their R&D spending overseas.

- Our study of the largest manufacturing companies in the U.S. indicated that 58 percent of them, over 300 out of 524 R&D performers, are likely to be affected by full implementation of the 861-8 regulation. These affected companies performed $46.45 billion of R&D in 1988 -- an amount equal to 82 percent of the R&D in our sample (and 78.5 percent of all industry-funded R&D in the U.S.).

- The impact of the 861-8 regulation is concentrated on large firms because R&D itself is concentrated. The concentration of R&D in the U.S. economy is less than R&D concentration in Japan.

5. Martin Neil Baily and Robert Z. Lawrence, The Incentive Effects of the New R&E Tax Credit. Study sponsored by the Council on Research and Technology, Washington, D.C., July, 1990.

6. We understand that R&D for financial and SEC purposes differs somewhat from R&D for tax purposes, but we believe that the COMPUSTAT data provide a reasonable approximation for purposes of this analysis.

7. In order to check our criteria, we provided the list of the largest 50 R&D performers in our sample to Mr. Raymond Wiacek of Jones, Day, Reavis and Pogue, an expert on 861-8. We asked him to indicate which companies on the list would be affected by the regulation based on his knowledge of the companies and the regulation. His response allowed us to determine how well the criteria were working in marking the affected companies. The agreement was excellent. There were only four differences in classification, one of which came from a "cost-sharing" company and three of which were defense companies. As we say in the text, we thereafter eliminated all of the major defense contractors from our list of affected companies.

STATEMENT OF ROBERT H. GREEN, VICE PRESIDENT, TAX POLICY, NATIONAL FOREIGN TRADE COUNCIL, INC.

Mr. GREEN. Thank you, Madam Chair, and members of the subcommittee. My name is Bob Green, and I am vice president for Tax Policy of the NFTC, National Foreign Trade Council, Inc. I appreciate the opportunity to testify before the subcommittee on the 861 allocation rules and the 1977 regulations. I have submitted a very detailed written statement, which I ask to be incorporated in the record. In light of the fact that a number of the witnesses on the panel have covered the points that I intended to address during my testimony, I will briefly summarize those points for you.

Our basic position on the 861 allocation issue is that we would urge the Treasury to finalize regulations that provide a permanent solution that will provide a reasonable allocation between domestic and foreign source of the R&E expenses to operate in tandem with the R&D tax credit in a manner that does not undermine its vitality. I am very encouraged, as Ray Wiacek said, about the effort that the Treasury has undertaken to pursue a regulatory solution to this problem.

Ray is more familiar with the history of this issue, perhaps, than anyone; and because of the sporadic nature of the solution to this issue over the years, I think it behooves all of us to monitor the Treasury solution to this problem very closely and to share with the subcommittee our input and assessment of the substance of the regulations when it is released. But I commend the Treasury for the initiative.

Just by way of background, the NFTC is an organization of roughly 500 companies, 90 percent of which are U.S.-owned. The organization's members are engaged in activities that span the spectrum of commercial activities from industrial, commercial, financial, and service activities throughout the world. In this respect, the need to establish a permanent solution of the R&E allocation rules is a crucial element in the ability of these companies to compete in the growth markets around the world.

Companies sitting around the table here, who have spoken, and many others in my organization are very active in the R&E area and in the growth areas of the world; China, Indonesia, many of the Pacific rim countries are areas where R&E activities are particularly important to compete in those marketplaces.

I think Ray Wiacek has amply demonstrated the nature of the history of the 861 R&E allocation rule, which is one of uncertainty, instability, and lack of finality. One of the things that you can clearly count upon with companies is when they have tried to plan their business investments in a particular country, they attempt to analyze and assess the return on that investment. That is especially difficult to do when you are uncertain about both the U.S. consequences of your R&E investment and the foreign treatment of that particular investment. For that reason, the permanency issue is paramount, and we urge the subcommittee to work with the Treasury to try to come up with a solution that makes sense.

The rest of my remarks are contained in my written statement. I am delighted to testify here today, and I am willing to answer any questions that the subcommittee has.

[The prepared statement follows:]

National Foreign Trade Council, Inc.

Prepared Statement Submitted to the Subcommittee on Oversight of the Committee on Ways and Means U.S. House of Representatives

May 10, 1995

Madame Chairman and Members of the Subcommittee:

The National Foreign Trade Council, Inc. (NFTC) appreciates the opportunity to submit its written comments on the issue of the research and experimentation expense allocation rules contained in Treasury regulations Section 1.861-8(e)(3). While a more detailed discussion of our position is described below, the NFTC would respectfully urge the Treasury to resolve this issue permanently by regulation to provide for a 64 percent allocation to U.S. source income for R&D expenses conducted in the U.S., or, alternatively to provide at least for the 50 percent apportionment contained in the OBRA Legislation of 1993. If a regulatory solution cannot be achieved, then the NFTC would urge Congress to enact a permanent, legislative resolution of this issue by providing for allocation of at least 50 percent of R&D expenses incurred in the U.S. to U.S. source income.

The NFTC, organized in 1914, is an association of over 500 U.S. business enterprises engaged in all aspects of international trade and investment. The NFTC membership is actively engaged in a broad spectrum of industrial, commercial, financial, and service activities around the world. The NFTC's sole agenda is to foster an environment through tax and trade policy that permits U.S. companies to be dynamic and effective competitors in the international business arena. In this respect, the need to establish a permanent solution to the R&E allocation rules is a crucial element to further the ability of U.S. companies to be competitive in the growth markets of the international economy.

Background

The history of the 861 R&E allocation issue is one of uncertainty, instability, and lack of finality. Since the issuance of the 1977 regulations that proposed a maximum allocation of 30 percent to U.S. source for R&D expenses conducted in the U.S., there have been numerous efforts of a temporary nature, both legislative and regulatory, to address the R&E allocation question.

To briefly summarize the history of the R&E allocation issue after issuance of the 1977 regulations, Congress imposed a moratorium on implementation of the 1977 regulations beginning in 1981 and extending through 1986. During that period, U.S. companies were permitted to allocate the entirety of their R&D expenses to U.S. source income. The rule permitting all expenses to be allocated to U.S. source was modified in 1987 to allow a 50 percent allocation to U.S. source income. For most of the next five years (1988 - 1992), Congress passed legislation that provided for a 64 percent allocation of R&E expense to U.S. source income.

In 1992, the Chairmen of the Tax-Writing Committees sent a letter to then Treasury Secretary Brady urging that the 64 percent allocation rule be extended by administrative fiat. The Treasury Department favorably responded to this request, but only for a temporary period of 18 months. The 1993 OBRA legislation modified the administrative fiat provided by the Treasury Department to allow a maximum of 50 percent of R&D expenses to be allocated to U.S. source income, but the 1993 legislation expired December 31, 1994. Unless an administrative or legislative solution is obtained, the 1977 regulations will apply for 1995 and all subsequent taxable years.

Proposed Solution

The NFTC believes that the preferred solution to the R&E allocation issue is for the Treasury Department to revise the 1977 regulations to provide for a 64 percent allocation of R&E expense to U.S. source income, or, alternatively at least to adopt the 50 percent allocation rule contained in the 1993 OBRA legislation. If the R&E allocation issue cannot be satisfactorily resolved at the regulatory level, then the NFTC would urge that the Congress enact legislation to extend on a permanent basis the 50 percent allocation rule adopted in the 1993 legislation. The NFTC wishes to emphasize the need to provide a permanent solution, either regulatory or legislative, that is fair in its treatment of R&E expense allocation relative to foreign companies against which U.S. businesses must compete.

Reasons Underlying the Need for a Solution

There are numerous, compelling reasons for either the Treasury Department or the Congress to act expeditiously to establish rules that would allocate R&E expenses to U.S. source income in a reasonable manner. These include:

1. R&E expenses allocated to foreign source Income under U.S. rules are disallowed as a deduction in foreign countries. Any portion of the R&E expense incurred in the U.S. that is allocated to foreign source income is disallowed as a deduction in the foreign country. When this scenario occurs, the result is to impose double taxation on U.S. companies. Foreign companies against which U.S. businesses compete for market share are generally permitted to deduct all of the R&E expenses performed in their own country.

   To avoid the double taxation that ensues when R&E expenses are allocated to foreign source income, U.S companies may consider the possibility of conducting their R&E expense in foreign jurisdictions. While a decision to relocate is only undertaken after weighing all business-related factors, U.S. policy should encourage U.S. companies to perform R&E expense in the U.S. Instead, present U.S. policy causes U.S. companies to at least to consider the alternatives of performing R&E elsewhere.

2. Allocation of R&E Expenses to Foreign Source Income Undermine the Purposes Underlying the Research and Development Tax Credit. The research and development tax credit (R&D) was enacted by Congress to promote the performance of research and development in the United States. It is widely recognized that research and development in the United States has declined relative to the R&D activities in most industrialized countries, in which the foreign competitors of U.S. companies are primarily based. The tax policy in the U.S. that encourages the performance of R&D expenses in this country works in concert with or is complimentary to the R&D tax credit mechanism. Conversely, the concept underlying the R&D tax credit is undermined to the extent that a significant portion of R&E allocation expense is allocated to foreign source income.

3. Reasonable R&E Rules and Effective R&D Tax Credit Enhance U.S. Competitiveness in a Global Economy. Adoption of allocation rules that provide an allocation of up to 64 percent of R&E expenses to U.S. source income promote a competitiveness of U.S. companies that are growth oriented and effectively compete in the global economy. The companies affected by both the R&E rules and the R&D tax credit compete in against their foreign counterparts in the emerging market places of the world/i.e./China, Indonesia, etc. It can unequivocally be stated that strengthen these two components of U.S. tax policy (the R&D tax credit and R&E allocation rules) will enhance the competitiveness of U.S. companies and lead to greater job creation.

4. The Solution to the R&E Allocation Problem should be Permanent in Nature. As the of the R&E allocation debate amply demonstrates, there is a compelling need to devise a permanent solution to the R&E allocation issue that permits U.S. companies to effectively compete in foreign jurisdictions. While the NFTC preference would be for the Treasury to revise the 1977 regulations in a manner consistent with our recommendations, the important point to stress is the need for a permanent and not a temporary solution to what has been an intractable problem. It is extremely difficult for U.S. companies to plan their business investments in foreign jurisdiction when a vital component of the tax planning surrounding investments of this nature, namely, the treatment of R&E expenses, is uncertain and unreliable. We urge the Treasury and the Congress to collaborate to produce a permanent solution to this issue.

The forgoing reflect our comments on the 861 R&E allocation issue. Please let us know if you need further information or if there is any other manner in which we may be of assistance.

Chairman JOHNSON. Thank you.

This is a subject we are going to have to come back to as soon as Treasury releases their regulations, so I invite all of you to share your comments on those when they are released. But I would like to hear your comments on Ms. Kaye's proposal. It may be worth looking at that, even if the regulations are far better than anything we have had to date.

One of the things that is becoming increasingly clear to the subcommittee as a whole is that if we don't simplify our tax structure, then we leave ourselves at a terrible disadvantage. Also, frankly, it is not only so complex that you can't understand it without a lot of tax experts, it is harder and harder for Members to understand the implications of actions that are proposed; and this is a perfect example of the area.

Imagine solving a problem for 10 years by imposing a moratorium. This is not exactly digging in and fixing. So I think we do have an obligation and an opportunity right now to evaluate the Treasury's effort because the Treasury has made a very positive effort.

There is no question that they are trying to reach out and make this thing work in a way that is fair and equitable. I am not sure from what I just heard and in preparation that the law is written in such a way that they can avoid the double taxation that is destructive.

In one of the preceding panels, while the speaker didn't quote that part of their testimony, apparently there is now pretty good evidence of an increasing flow of American R&D abroad, and I would assume that that has something to do with this portion of the law. At any rate, I would be interested in your comments on Miss Kaye's proposal which was, if I may remind you, that the allocation of R&D expense to foreign-source income should only occur where deductible in a foreign jurisdiction.

Comments?

Mr. WARREN. I guess I can offer a few comments to begin with. Speaking for TRW, in particular, and I believe for the Electronic Industries Association——

Chairman JOHNSON. Mr. Warren, if I could defer the answer to my question, Mr. Portman, who has been with us off and on now many, many hours has a speech in 5 minutes. I am going to yield to him for his question first.

Mr. PORTMAN. You are very kind. I appreciate it, and with apologies to my colleague, Mr. Cardin.

My question was practically the same as Mrs. Johnson's; it usually is. I tend to be sympathetic with what was stated here today. I think I understand the issue fairly well, but one thing that didn't come across clearly to me was the fact that I think the consequence of all this, which is a significant policy consequence, is that companies have very little incentive to keep R&D here if they fall into this trap, and therefore would have at least no disincentive to go overseas with their R&D, assuming most of it is getting allocated, or a significant part to their foreign income.

I guess that is part of what Mr. Warren might be responding to, in responding to that specific proposal of only having the allocation apply when it is deductible to foreign-source income. I would ask

Mr. Warren to proceed with his answer, but perhaps the other panelists can think about that question and whether that is a realistic consequence of the current law.

Mr. WARREN. The problem with the 861 allocation is just what was stated. It encourages movement of research offshore. It is a very real disincentive. It works, as you have heard other witnesses say, in direct opposition to an R&E tax credit, which is designed to encourage research.

I listened to the proposal that was just outlined with much interest. I think, from a company standpoint, from an industry standpoint, our interest has focused on trying to resolve this from a very real economic standpoint, and in the process we have gone through a series of moratoriums ranging from 100 percent to, I think most recently, 50 percent.

The proposal, as outlined, would offer a number of theoretically unique characteristics that I think and would hope would be considered by the Treasury Department. It is certainly a much more theoretically pure approach than a compromise resolution that layers additional complexity on top of regulations that are overly complex to begin with.

The 1977 regulations are very difficult to apply to begin with. Any legislative solution or regulatory solution that uses that as a starting point will have to end up with a very complex solution. What we need is simplification, though most importantly, we need an economic resolution that encourages U.S.-based research.

Chairman JOHNSON. Other comments?

Yes, Mr. Wiacek.

Mr. WIACEK. There were, I think, several questions embodied in the two that were asked. As to foreign R&D, it has often been said by the affected companies that if Treasury is going to treat their R&D as if it were done abroad and they get no deduction for it, why shouldn't they do it over there instead and get the deduction and remove the disincentive?

Now, academic studies have found it difficult to quantify the direct effect of the regulation on the export of R&D, although the studies do show that there is an effect. Because many affected companies are so large and R&D decisions involve so many other considerations, I don't know if anyone, given the burden of proof, could come through with really demonstrable proof. But the companies all have the capability to put the R&D abroad because they have foreign R&D facilities. R&D decisions are made at the margins, and they are made on an after-tax basis so that R&D tax costs are certainly part of the equation.

I would caution that we shouldn't think of all R&D done abroad as something bad or wrong, because the United States has no monopoly on brain power. We want our capital and our companies to employ those scientists or those people who achieve technological breakthroughs wherever they may be in the world.

As to Professor Kaye's proposal, an off-the-cuff reaction would be that we would favor it. I can't tell you whether we would support it as a proposal per se or merely as proof of what we have been saying. The bottom line is that no member of ECAT has ever received a deduction for any 861 allocation. At one time we did a

study and the companies represented in it account for about 80 percent of U.S. industrial R&D.

So the upshot of Professor Kaye's proposal would be a 100-percent moratorium or elimination of this regulation, which would be better than what we have come to expect, in light of the many years of hurly-burly that has produced compromises and questionable temporary solutions.

To illustrate, do any of you know where the 64-percent solution came from? It was a solution that was to be two-thirds/one-third or rounded at 67/33. But at 3 o'clock in the morning that left us a little short on revenue so that 3 percentage points got knocked off; thus, the famous 64-percent solution. That is the type of thing that has been involved.

Professor Kaye's solution would be a 100-percent one. The interesting thing also about it would be that it would put the pressure where it should be, on Treasury. If Treasury really thinks that foreign countries should recognize the theoretical underpinnings of the section 861 tax policy that R&D done here benefits the worldwide enterprise, rather than telling U.S. companies to go over to Germany or Japan and get a deduction for research done in the United States, let Treasury, by treaty or otherwise, pressure these countries, because right now the pressure is on us and all it results in is double taxation.

So I think the bottom line is that her proposal would achieve a correct and fantastic result. Whether it is adopted as the solution or whether it is proof of what we have been saying, it is a good proposal in either case.

Chairman JOHNSON. Thank you.

Mr. Cardin.

Mr. CARDIN. Thank you, Madam Chairman. Let me thank all of our panelists for their testimony. This is clearly an issue that cries out for a permanent solution and not one that changes at the whim of whether we need to change it by 3 percentage points in order to work out the budget for that particular year. It is one that we really should look for permanent allocation rules as relates to these expenses.

I share the views of the other members of the subcommittee who have said we need to take a look at this when we develop permanent allocation rules as to what rewards U.S. companies for the research being done in the United States. I understand that there are advantages to U.S. operations for research done outside of the United States, but I think as far as tax policy here is concerned, we need to take a look at making sure that we encourage research here in the United States; and I have found your testimonies to be very helpful to us in that regard.

As we look at specific recommendations that come in from Treasury, we would welcome your continued working with our subcommittee so that we can try to come out with allocation rules which will reward your companies in performing research here in the United States and being as competitive as you can be in the worldwide economy atmosphere.

Thank you.

Chairman JOHNSON. I thank the panel very much, and I look forward to your response to the regulations.

Ms. Kaye, if you want to submit to us any further detail on your proposal, legal language, I would be happy to look at it. Thank you.

Thank you for your help today. The hearing stands adjourned.

[Whereupon, at 2:03 p.m., the hearing was adjourned.]

[Submissions for the record follow:]

HEARING BEFORE THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

on

THE RESEARCH AND EXPERIMENTATION TAX CREDIT

May 10, 1995

Written Statement
of
The American Automobile Manufacturers Association
Submitted by Price Waterhouse LLP

Price Waterhouse LLP, on behalf of the American Automobile Manufacturers Association (AAMA), appreciates the opportunity to submit this written statement concerning the research and experimentation tax credit. AAMA's member companies -- Chrysler Corporation, Ford Motor Company, and General Motors Corporation -- annually expend large amounts of capital on research and experimental activities to maintain their competitive position in the world market.

The competitive strength of the U.S. automobile manufacturing industry depends on continuing technological development. AAMA thus strongly supports a permanent research credit as critical to promoting investments in research and experimental activities that lead to technological advances. The reasons for the research credit, as expressed by Congress in enacting the credit in 1981 and in subsequent legislation extending the credit, remain equally valid today. These include encouraging companies to allocate scarce investment funds to costly research and experimental activities.

The effectiveness of the research credit hinges in part on sound administration of the rules governing the credit's operation. It is particularly important that taxpayers and the IRS agree on the scope of the credit. Unfortunately, the IRS has not proposed regulations under section 41 since the Tax Reform Act of 1986 changes to the credit. Over the past nine years, IRS agents operating without guidance appear to have adopted differing views as to what constitutes credit-eligible activities and expenses. This results in restrictive audit practices and lack of uniformity creating uncertainty for companies as they plan their research programs.

Credit-eligible expenses

The General Accounting Office (GAO) in recent reports on the research tax credit has concluded that confusion over the definition of "qualified research" has made the credit more difficult for the IRS to administer. In the absence of clarifying regulations, AAMA agrees with this assessment.

AAMA is concerned, however, about a presupposition in the GAO reports that research must result in "innovative" products or processes in order to qualify for the section 41 credit. A 1994 GAO report states, "The requirement that research be truly innovative to

qualify for the credit will mean that administering the credit will continue to be labor-intensive and to involve judgments about highly technical matters."[1] A 1995 report states, "IRS officials reported that they were required to make difficult technical judgments in their audits concerning whether research was directed to produce truly innovative products or processes."[2] The 1995 report summarizes, "Innovative research qualifies for the credit; routine research does not."[3]

Contrary to the presupposition in the GAO reports, there is no general standard that the results of research activities must be "truly innovative" in order to qualify for the credit. Indeed, the only reference to any type of innovation standard in the section 41 statute or the 1986 Act conference agreement relates to the credit-eligibility of costs of developing internal-use software. The 1986 Act conference agreement states that Congress intends that Treasury issue regulations providing that internal-use software, in order to qualify for the credit, must be "innovative (as where the software results in a reduction in cost, or improvement in speed, that is substantial and economically significant)."[4] The fact that Congress specified an innovation test in order for internal-use software to qualify for the credit makes clear that there is no general innovation standard applicable to other development costs.

A generally applicable innovation standard indeed would be difficult to administer. IRS agents and taxpayers would be embroiled in continuous disputes assessing the relative technological advances made by one product or component in relation to another. Congress did not intend such a restriction when it enacted the 1986 Act's targeting changes to the credit.

Instead, the 1986 Act definition of "qualified research" eligible for the credit starts with a requirement of section 174 qualification (relating to the treatment of costs as deductible R&E expenditures) and provides further clarifications. In order for expenditures to be eligible for the research credit, the 1986 Act provided that (1) the research activities must be aimed at discovering information that is technological in nature, (2) substantially all the research activities must relate to functional aspects of the product, process, etc., and (3) substantially all the research activities must constitute elements of a "process of experimentation."

These rules focus on the activities undertaken by the taxpayer -- e.g., whether the activities were part of a process of experimentation -- not on the product resulting from the research activities. There is no requirement that products or processes be innovative; the tests envision that the credit also is available with respect to research activities that support evolutionary improvements to products and processes.

[4]H.R. Rep. No. 99-841, 99th Cong., 2d Sess. (Sept. 18, 1986) at II-73.

Section 41 regulations

IRS regulations clarifying the definition of credit-eligible activities and expenses would help taxpayers plan their research programs and would minimize many disputes currently arising with respect to the credit. It is important that any regulations maintain the scope of credit-eligibility that was outlined by Congress in 1986. As a general rule, the section 41 regulations should embrace a principle envisioned by the 1986 Act conference agreement and set forth in final regulations under section 174. These regulations provide that the determination whether product development costs qualify as research or experimental is based on "the nature of the activities," rather than on the nature of the product or improvement being developed or the level of technological advancement the product or improvement represents.

The final section 174 regulations, issued in September 1994, were the product of a dialogue between the IRS and affected taxpayers, including AAMA's member companies. A similarly reasoned approach needs to be taken -- and commenced soon -- in formulating guidance on the section 41 research credit. In the absence of regulations, uncertainty over the definition of credit-eligible expenses will leave the IRS and taxpayers enmeshed in resource-consuming audit disputes and will create uncertainties that diminish the incentive effect of the research credit.

STATEMENT OF

THE AMERICAN GAS ASSOCIATION

I. Introduction

Madame Chairwoman and Members of the Subcommittee, thank you for the opportunity to submit this statement on ways in which our tax code can promote needed private sector research and development (R&D).

The American Gas Association (A.G.A.) is a national trade association comprising some 275 natural gas distribution and transmission companies throughout the United States, Canada and Mexico. These firms deliver gas energy from the wellhead, and various unconventional sources, to the burner tip, serving over 58 million customers. Collectively, 90 percent of the gas consumers in this country are served by A.G.A.'s members.

A.G.A. supports the extension of the existing research and experimentation (R&E) tax credit in Internal Revenue Code (IRC) Section 41, which expires on June 30, 1995. Additionally, we strongly support modifying existing law in IRC Section 41 by providing an optional 20 percent flat credit for expenditures made to support research that is done collaboratively for the public benefit by not-for profit organizations. According to this modification, a flat 20 percent collaborative R&E credit would be provided for energy conservation, safety, environmental, manufacturing process or other research of public importance conducted by teams of companies or utilities through a non-profit scientific research organization. This modification would complement, but not supplant, the existing incremental tax credit.

The R&E tax credit is more important now than at any time in its history. International competition is growing. Industry is forced to cut expenses wherever possible. The federal government is cutting its investment in energy-related R&D. Federal policies supporting a strong private sector commitment to R&D need to be enhanced. In order for the R&E credit to effectively promote new and relevant research, it must be designed in a way to encourage collaboration. Collaboration is often the most efficient means of conducting research and achieving the best results with scarce R&D resources.

Many of A.G.A.'s members are members of the Gas Research Institute (GRI), which was founded in 1976 by a committee of members of the boards of directors of A.G.A. and the Interstate Natural Gas Association of America. GRI is the leading research, development and demonstration management organization of the natural gas industry. Its mission is to discover, develop and deploy technologies and information that measurably benefit gas customers and enhance the value of gas energy service. GRI accomplishes its mission by planning and managing a consumer sensitive, cooperative research program emphasizing technology transfer. GRI conducts its R&D program in cooperation with its member companies and other participants who provide funding as well as input for the programs content and direction.

GRI is funded by a surcharge collected by its interstate pipeline member companies through tariffs approved by the Federal Energy Regulatory Commission (FERC) for natural gas transportation services. GRI is a medium through which a number of our members can sponsor industry-related research in both pure and applied sciences.

II. Benefits of a Collaborative R&E Tax Credit

A flat 20 percent tax credit would provide companies contributing to consortia a significantly greater incentive than the current credit. This modification will complement and enhance, rather than interfere with R&D conducted pursuant to the current law. A collaborative credit would encourage a greater private sector response to possible

reductions in government-sponsored research. The collaborative credit would be a stimulus for new research, as is the goal of present law. Such a credit would clearly benefit natural gas and electric power research that is essential to all other manufacturing and consumer applications.

The importance of R&D can best be described in terms of who benefits. Natural gas industry sponsored R&D results in lower costs and higher-quality gas energy services for gas consumers. Ultimately, producers, pipelines, distribution companies, manufacturers and customers benefit from new technologies that increase the availability of cost-competitive gas supplies; provide safer, more cost-effective gas industry operations; develop uses for natural gas that provide cost or performance advantages over other energy sources and enhance environmental quality.

Consortia research is far more efficient on a dollar spent-dollar deployed R&D basis. When firms join R&D consortia, they reduce redundancies, spread risks and costs, share in the results achieved and promote technology. In consortia research, overhead is reduced to that of managing the collaborative pathways and decisions on research subjects.

In addition to reducing the duplication of research and stimulating new R&D, a consortia could prove to be a fertile and robust environment for the deployment of new technology. The consortia environment combines both suppliers and users of the R&D such that the widest market for the implementation of technology is assured. By encouraging collaboration, the credit would help speed the discovery of innovations because it would serve to pool the experiences of a variety of firms.

Technology deployment is the means by which advanced manufacturing technologies, either equipment, software, processes or management techniques, find their way from development to practical application. Sustained, expeditious and effective technology deployment is essential for R&D to have a practical positive impact.

III. Current R&E Tax Credit Discourages Collaborative Research

While the current R&E tax credit was enacted to encourage the kinds of research that are conducted by research organizations such as GRI, it has failed to encourage collaborative R&E conducted by a consortium. The tax law does not adequately address several issues that affect collaborative research and the full use of the R&E tax credit is being restricted in ways not contemplated by Congress.

Typically, consortium members pool their funds and contract with third party research organizations to carry out the research. Current law limits the tax credit to 65 percent of the amounts paid by the taxpayer for contract research conducted on the taxpayer's behalf. The outside contract research provision was placed in the Tax Code to ensure that the credit would not reward overhead beyond the scope of the R&D definition. Therefore, there is less incentive for consortia-based R&E than R&E conducted by individual companies at their own research facilities.

The benefits of the credit for collaborative research are restricted further because of considerations relating to the "carrying on a trade or business requirement" of Section 41.[1] For example, GRI conducts research on the energy efficient use of natural gas in home furnaces, industrial processes and commercial cooling. Since this research does not have a direct link to an interstate pipeline's business of delivering natural gas, the Internal Revenue Service has determined that current law does not allow this research to qualify for the tax credit.[2] These issues present a major disincentive for collaborative research contributions.

Current law encourages R&D only above a base amount because it seeks to reward R&D that would not otherwise occur in the absence of the credit. However, the base beyond which the credit applies is determined on an historic ratio of R&D to sales. This concept may be appropriate when applied to an individual companies focusing on product innovation. When this concept is applied to utilities and their energy partners, the economic assumptions underlying the incremental credit are incorrect.

First, the connection between R&D and gross receipts in the utility industry is not always present. While product R&D is conducted with the goal of increased sales, utility research will often not lead to increased territory or product sales. If research is related to energy efficiency, it may even lead to the opposite result -- less energy consumption and lower gross receipts -- as natural gas appliances, gas fired electric generation, and transmission are made more efficient.

Second, basing the tax incentive on incremental increases in R&D is not appropriate in the context of consortia research. On a national level, collaborative R&D is only a small fraction of all R&D being spent. When firms collaborate, R&D is done in the most efficient manner since costs and benefits are pooled, and duplication is reduced. When firms collaborate, some duplicative research they would have done on an individual basis (and for which they may receive the incremental credit), is done more efficiently. Applying the incremental approach to consortia research places an unnecessary and socially counterproductive barrier on collaboration.

Unique Nature of Research by Utilities

Some natural gas R&D projects have significant costs, high risks and, at best, a long-term return on investment. Additionally, much of the research done by GRI involves the development of new processes or uses for natural gas. While this type of R&D has greater overall benefits to the industry, it is unlikely to be conducted by one gas company who cannot typically recapture the R&D dollars by selling the new process or use. The competitive environment inaugurated by the deregulation of the natural gas industry has made it more difficult to sponsor R&D that does not involve an immediate return on investment.

---

[1] Section 41 of the Internal Revenue Code requires that "qualified research expenses" include certain amounts paid or incurred by the taxpayer during the taxable year in carrying on any trade or business of the taxpayer.

[2] In Regulation Section 1.41-2, the Internal Revenue Service has stated that a "contract research expense of the taxpayer is not a qualified research expense if the product or result of the research is intended to be transferred to another in return for license or royalty payments and the taxpayer does not use the product of the research in the taxpayer's trade or business."

Unlike product-specific R&D, energy conservation R&D may actually result in decreased use of the product that gas companies sell -- energy. Individual utility companies have less of an incentive under the current credit to invest in R&D to develop technologies that reduce consumers' costs or preserve the environment through greater energy efficiency because these technologies will lead to reduced sales for utility company.

It is in the public interest to encourage greater levels of environmental and energy efficiency research. Research that serves a public purpose usually requires a collaborative effort, rather than the commitment of a single company. These obstacles make it nearly impossible for an individual gas company to undertake public interest research.

It is possible that government-sponsored R&D may be curtailed as a result of efforts to cut government spending. Therefore, we must look towards more private sector, industry-based solutions to meet public needs. While the tax code is the only true private-sector incentive for R&D, its current requirements do not promote needed consortia research nor ensure adequate levels of energy R&D.

The purpose of the R&E credit is not just to promote R&E, but to promote technological innovations that will have a practical positive effect on our standard of living. In contemplating changes to the credit, the Subcommittee should, in addition to rewarding incremental individual research, seek to encourage companies to utilize their limited R&D dollars through collaboration. The discussion of this issue should be advanced beyond the perennial call to extend the credit; we should consider the best way to structure the credit to achieve its ultimate objectives.

The National Academy of Engineering has endorsed the concept of a collaborative R&E tax credit. Specifically, a recent Academy Study Commission looking at various measures to increase the level of stability of R&D through tax policy recommended:

> [that we] replace the current incremental Research and Experimentation tax credit with a permanent tax credit on the total annual R&D expenditure of a company to encourage an increase in the level and the stability of R&D activity across business cycles. In addition, extend the R&E tax credit to cover industry-sponsored R&D in universities, and other institutions, and the industrial contribution to R&D performed as a part of a consortium that includes government laboratories.

IV. Conclusion

We urge Congress to promote a domestic tax policy which fosters R&E conducted cooperatively. The collaborative R&E credit leverages research dollars while encouraging more efficient use of limited resources. The credit will encourage new research as it spreads risks and costs among consortia members. The credit will eliminate duplicative research that would otherwise be conducted at higher costs to individual companies.

The federal government must be as creative as industry in providing a fertile environment for the growth of R&E. It must recognize that other nations have not been complacent in expanding research opportunities, but have developed and nurtured a technology development and deployment infrastructure that is based on collaboration. We must begin immediately to take the steps needed to promote this environment in the United States. Encouraging research that would not otherwise be conducted is the primary justification for the R&E tax credit. Making a change that would enhance and encourage collaboration would greatly advance the underlying policy goals of current law. We urge Congress to extend the present credit and to include a modification to allow for a 20 percent credit for collaborative research.

HEARING
OF THE SUBCOMMITTEE ON OVERSIGHT
OF THE COMMITTEE ON WAYS AND MEANS,
U.S. HOUSE OF REPRESENTATIVES,
ON

EXPIRING TAX PROVISIONS,
INCLUDING THE RULES ON
THE ALLOCATION OF RESEARCH EXPENSES
UNDER THE INTERNAL REVENUE CODE OF 1986

The American Petroleum Institute (API) is a trade association of approximately 300 companies involved worldwide in all phases of the oil and gas industry, including exploration and production, transportation, refining and marketing, as well as petrochemical processing.

Because of the competitive significance and rising costs of research in an era of continuing growth of the foreign operations of its members as multi-national enterprises (MNEs), API welcomes the opportunity to submit its views on the importance of reasonable and reliable rules on allocation of the expenses of research and experimentation (R&E).

1. History of Rules Evidences an Awareness That Section 174 Must Not Be Diluted by Double Taxation, but Lack of Permanent Rule Instills a Chilling Uncertainty

The history of the rules on the allocation of the cost of R&E within the last 15 to 20 years reflects the awareness of the need of an allocation regime that respects the U.S. nexus of R&E and the need to avoid a frustration of the tax policy behind the R&E expense (R&EE) deduction under Code section 174. Unfortunately, the R&EE allocation rules have one of the most unstable histories of any Code provision; a brief summary will demonstrate this unfortunate aspect.

The first R&EE allocation rules under the 1954 Code were published in 1957 (T.D. 6258, 1957-2 C.B. 368). With the increasing focus on the sourcing rules as a consequence of the rising importance of the foreign tax credit, the U.S. Treasury Department (Treasury) proposed amendments in 1973 (38 F.R. 15,840[1973]), which after modifications in response to taxpayer comments led to Treas. Reg. section 1.861-8(e)(3)[the Basic Regulations]. The rules are complex and biased towards allocation of R&EE to foreign source income.

However, since 1981 these Basic Regulations have been

suspended and replaced by temporary favorable regimes no less than TEN times:

1) In ERTA 1981 Congress suspended the Basic Regulations for two years and directed 100% U.S. allocation (the Moratorium); the primary concern was that R&EE should not be allocated to income earned in a country that does not allow a deduction for the cost of research conducted in the U.S. Obviously, the disallowance of a deduction against both U.S. income and against the income in the host country will result in double taxation.

2) In response to a recommendation by Treasury, Congress extended the Moratorium (100% domestic allocation) by another 2 years in DEFRA 1984. Again, the rationale was that it was inappropriate to require allocation of U.S. R&EE to foreign source income, and that any loss of foreign tax credit would conflict with the tax policy underlying the section 174 deduction.

3) COBRA 1985 brought a one year extension of the Moratorium. At this point, three fragmented statutory "fixes" allowed taxpayers to allocate all R&EE incurred between August 1981 and August 1986 to U.S. source.

4) For taxable years beginning before August 1, 1987, the Tax Reform Act of 1986 continued with a more limited suspension of the Basic Regulations; the unqualified domestic allocation under the Basic Regulation was reduced to 50%.

5) After several failed Administration proposals of a pre-emptive (before application of the Basic Regulations) 67% U.S. allocation of U.S. R&EE, TAMRA 1988 finally approved a 64% domestic allocation, for the first four months of taxable years beginning after August 1, 1987.

6) OBRA 1989 revived the rule in Code section 864(f) for the first nine months of the first taxable year beginning after August 1, 1989.

7) OBRA 1990 again extended section 864(f).

8) A further "fix" is found in the Tax Extension Act of 1991 for the first six months of the first taxable year beginning after August 1, 1990.

9) The Internal Revenue Service (Service) published Rev. Proc. 92-56, 1992-2 C.B. 409, which allowed taxpayers to allocate according to section 864(f) for another 18 months. The Service acknowledged that the Basic Regulations may not reflect economic reality or good tax policy and promised a review of the allocation issue (which study finally was released on the 19th of this month, see below).

10) Most recently OBRA 93 revived section 864(f) for the first taxable year beginning on or before August 1, 1994, but reduced the automatic allocation to 50%.

With the expiration of the 1993 extension the rules of the Basic Regulation come to bear again. Since their promulgation 18 years ago, the Basic Regulations were suspended most of the time. This is a clear indication that the Basic Regulations are not perceived as a good rule. At the same time, the "on and off"

effect of the repeated extensions of the moratoria adversely affected the tax planning for research activities. The continuing threat of having domestic R&EE allocated to income earned in a country which does not allow a corresponding deduction and the ongoing exposure of a reduction of the foreign tax credit limitation have diluted or eliminated for MNEs the purported attractiveness of current deductibility of R&EE, representing a conflict in tax policy and sound tax administration.

On May 19, 1995 the Service promulgated a proposal to liberalize the Basic Regulations (Notice of Proposed Rulemaking, INTL 23-95). According to Prop. Treas. Reg. section 1.861-8(e)(3)(ii) the percentage of R&EE that may be exclusively apportioned to U.S. source income under the sales method would be increased from 30 percent to 50 percent. Concurrently Treasury issued its study "The Relationship Between U.S. Research and Development and Foreign Income" (the Treasury Study).

While the Treasury Study claims that the Basic Regulations "may be correct on average," it concedes that the 1977 rules "may be unfair to a significant number of taxpayers." Using 1990 data, the Treasury Study compared the allocation of R&EE incurred in the U.S. against foreign source under the Basic Regulations with past or proposed alternatives. The relative allocations under the expired OBRA 93 regime and the Proposed Regulations are 50% vs. 75% of the amount under the Basic Regulations.

2. **The Desirability of Keeping Research in the U.S. and the Effect on Competitiveness of U.S. Companies in the Global Market (Double Taxation) Recommend a Permanent Realistic and Equitable Allocation Rule**

Research is a vital factor in the economic growth of the United States. Particularly in a era of a lamented loss of manufacturing jobs to lower cost overseas production bases, a strong investment in technological development is an opportunity for the United States to maintain leadership in world trade and to assure the welfare of her people by securing challenging employment opportunities at home. Opportunities for research jobs will prevent the emigration of high skilled workers or, figuratively speaking, the waste of their talent in having to find employment in the proverbial fast food centers. The future of the quality of the U.S. labor force will depend to a great extent on the continuing investment in the creation of intellectual property and know-how in this country.

Thus, from the perspective of the nation's well being and economic strength, the promotion of domestic research is essential. We must remove any actual or perceived obstacles to making U.S. the primary choice of a MNE's research location. This includes the assurance of a deduction of R&EE incurred in the U.S. against other U.S. source income.

Under the Basic Regulations, MNEs with foreign source income obviously are denied to a great extent a deduction for U.S. tax purposes, although the research is physically carried on in the U.S., employing the talent of the U.S. job market and, more likely than not, the equipment and facilities from U.S. manufacturing output. Against this background of what one could view a U.S. tax penalty, MNEs may look to foreign countries which provide substantial incentives for locally conducted research.

Being under a pressure to maximize the marginal utility of each research dollar, the MNE may find itself having to move the research to the economically more hospitable (because of direct subsidies or tax breaks) foreign environments, reducing the opportunity of challenging U.S. research jobs and curtailing or eliminating the market for U.S. equipment and facilities.

Moreover, the allocation of U.S. R&EE deductions to foreign source income is flawed not only because it may lead to a migration of research activities to a more "hospitable" foreign country (which allows a favorable deduction or a direct subsidy, removing the double taxation exposure under the Basic Regulations), but also because the rationale of the R&EE deduction under Code § 174 obviously conflicts with the effective canceling out of that benefit as a result of the loss of foreign tax credits.

The current deductibility of R&EE under section 174 is an award for the risk taker, which serves as an encouragement as well as a means of providing a source for reinvestment in form of the cash flow from the deferral of tax on other income due to the current expensing of R&EE; the normal concern for matching income and expenses has no place in this context. This rationale must trump any effort to match a domestic deduction with arguable generated foreign source income. The general income/expense matching mandate does not apply here.

The repeated temporary legislative "fixes" of the ill conceived Basic Regulations must be turned into a permanent relief; domestic R&EE should always be allocated (at least predominantly) against U.S. source income. While the Proposed Regulations of May 19 are a step in the right direction, Treasury's own numbers indicate that still too much of domestic R&EE would be allocated to foreign source income, in disregard of the rationale behind the deduction under Code section 174.

STATEMENT FOR THE RECORD
CONCERNING THE TARGETED JOBS TAX CREDIT

BY:
Tzipporah Benavraham
Brooklyn, NY

Congressmen, policy makers, and members of the Oversight Subcommittee, I am pleased to address you this day regarding the issue of the Targeted Jobs Tax Credit Reauthorization, and the issues of how it has helped persons with physical disabilities find work. I am grateful you are affording me the opportunity to be heard and hope that you will weigh my comments well and keep this very important law in effect for the physically disabled who desire the opportunity to work.

I am well aware of the talk concerning the issues of welfare reform and the unfunded mandates. I know that there are any problems this country has faced with an economy that looms hard on the next generation and on issues of budget. However, government and public policy has always looked for ways to protect those who cannot help themselves as there is a recognition that we are our brother's keeper and have a heartfelt and moral pledge to show compassion to those less fortunate. There have been grave errors in public policy over the years. However, many times there are answers formulated by policy makers to help the populations they intend to serve.

I myself suffer from a painful and degenerating disease called multiple sclerosis. I am legally blind, use a wheelchair, and a ventilator. However, by the good graces of a society that is aware of the needs of the poor and sick, we have established ways that I received rehabilitation, obtained medical equipment, and most noteworthy, I received an advanced education. With my graduate degrees, I sought to become an educator of disabled technology. I run a small laboratory at three colleges in New York City teaching disability technology since 1986. By the good graces of the National Science Foundation Handicapped Assistance Facilitation Award in 1991, I lectured and published concerning the access disABLED persons have to the emerging technologies. And proudly I mention that of the 870 students I have taught since 1986, I have over 200 who are disabled and graduates of my education processes. I also have the grace of being on the Board of Directors of the People to People Committee on Disability since 1992, which was established by President Dwight D. Eisenhower in 1956 as an international outreach on disability information to other nations.

However, recently my part time profession of being an adult and college educator has been curtailed dramatically in New York. It occurred to me since I am well published but credentialed, I should seek out ways that I can ply my craft and share my knowledge with others. Since I am blind, I went to the New York State Commission for the Blind and obtained in February the Targeted Jobs Tax Credit forms from the senior counselor and went with these to the Labor Department handicapped counselor to seek out another college in the city where I might find work. You see, I would need to have ramps, an accessible bathroom, adaptive technology and a few costly accommodations on any job site. Where I am now, as a part-timer, I have no medical insurance because I am both part time and also have a pretty severe pre-existing condition for insurance purposes. The extra amount of money it takes to hire a person like me is a serious issue to any potential employer if they do not already have these accommodations in place, or if they have no cash upfront to pay for the accommodations I need. The Americans with Disabilities Act is wheat your Congress considers an "unfunded mandate". yet this provision of the Targeted Jobs Tax Credit

can often cover the cash needed that an employer may NOT have to retrofit and hire someone of my qualifications. They may weigh heave whether or not there is money for these accommodations if there were no way to "sweeten the deal" so to speak by having a tax credit and incentive up front to justify the process of proceeding with the interview. Here with the TJTC, as well as section 190 of the IRS code which allows for retrofits for the handicapped access accommodations, as well as section 44 of the IRS code, allow for the most broad funding of the provisions that my life easier in a job hunt.

By the good graces of this country, which has the best educational system in the world, I have achieved the status of being "qualified" for a job DESPITE my physical limits. However, the "leg up" needed is clearly in the incentives a person would have to hiring someone with my qualifications. I studied the emerging technologies in hopes that I wold find a way to incorporate the disabled into them as they progressed. And with the hope in hand, I worked with the National Science Foundation's handicapped coordinator, Dr. Larry Scadden, and the luminaries of our time in this realm, such as Dr. Greg Vanderheiden, Dr. Norman Coombs, and Dr. Gary Woodill. I gleaned and interacted in hopes of finding employment in this realm, and obtained many credentials to help me fulfill this goal.

But I wold like to impart to you how the LACK of this law being currently in effect has HURT my job hunt. There is a college in New York City which was looking for a handicapped student coordinator. It is well known for its technology training and education. The labor department referred me to this college. However, there is NO handicapped bathroom ON CAMPUS, no adaptive technology, and the concern also was that with my disability of multiple sclerosis, that their insurance premiums would rise to cover my needs. It was a referral to a full time position. There was an extreme reluctance when they noted this provision of TJTC had NOT been in effect at the time of the interview. In that I was told I would be "considered" for the job BUT there was economic factors which would have FIRST have to be dealt with.

In yet another job interview with a Fortune 500 company, I was clearly the most qualified person. It was a major company wanting to make their publications available for the disabled online as a new commercial enterprise. They needed a person proficient in disability access issues to online materials as well as someone who knew the machinery of the online productions. I invite all here in this hearing to look at my internet project and site of the St. John's University Electronic Rehabilitation Resource Center at gopher. sjuvm.stjohns.edu. I and my students placed over 485 megabytes of materials on disabilities online on the internet since 1989 when it began for free. The employer who I interviewed with was clearly impressed and said he never saw anything else like it. However, the issue of insurance and my own personal needs for adaptive equipment was an issue since he asked about costs and clearly had some degree of consternation about the figures he came up with. However, with section 44 of the IRS code AND Targeted Jobs Tax Credit (if it had been in effect at the time of the interview) as well as this large business being able to also use the section 190 of the IRS code (which it could not at this time since it made over one million dollars a year in gross receipts), I MIGHT have been able to obtain this $75,000 a year job. The lack of any incentive or fund to pay for those accommodations made ME a LESS desirable candidate for the position DESPITE what the interviewer said were superior credentials. It seemed they lacked a budget for an employee who may need accommodations to do the job. In that, the lack of that credit or provision made me lose the position to another person. And my frustration was great.

Congressman, I WANT to work. I WANT to be able to find a barrier-free environment both to live and work in. I HAVE worked, albeit part time. However, I HATE having to by no choice of my own sit on Supplemental Security Income (SSI) and NOT work, when I have the ability to work IF barriers are eliminated.

I would hope that technology can be part and parcel of the new avenues to dignity for disabled persons. However, the power of the incentives in labor laws and tax laws can help us fund our own ways to independence. Without a national health care system, the physically disable are relegated to poverty and a trap-like situation. We have scarce options to get out of the cycle of dependence. I encourage your committee to consider the reestablishment of the provisions of this law: the Targeted Jobs Tax Credit.

I would also seek that Congress establish a way that in tax law and in labor law allow for the accoutrements for technology access for persons with disabilities as well as for other incentives. It would be a fine idea to extend and help businesses use the section 190 and section 44 sections of the IRS code to hire more people with disabilities. With a reauthorization of the TJTC, Congress might consider a special category of incentive for hiring people who are handicapped for the employers.

It would bode well to help the disabled become equals in the new developments for the new information technologies. I think giving industry an incentive to have certain disability access in their hardwares and softwares off the shelf may also be a good idea. The initiatives of Dr. Larry Scadden of the National Science Foundation in the topic of Universal Design may well be a keystone and marker for Congress to give an incentive to industry to develop. Built in large print and voice synthesis, as well as alternate keyboard configurations may be worth supporting in the information technology industry of the future. Home-based computer businesses are rising. It would be a good idea to help include the disabled in the plans for the new information industries as we progress in our newer industry developments.

Thank you for letting me address you today at this hearing. I am hoping these ideas will bear weight in your deliberations and that I gave you serious points to ponder. I am hoping I have mirrored a real concern to preserve these special tax credits and help the disabled better help themselves. Thank you.

Hearing before the
Subcommittee on Oversight
Committee on Ways and Means
U. S. House of Representatives

on

Allocation of Research Expenses

May 10, 1995

Written Statement
of
William F. Ausfahl, Chief Financial Officer
The Clorox Company

The Clorox Company appreciates the opportunity to submit this written statement concerning the need for a permanent set of rules governing the allocation of research and experimentation (R&E) expenses. Clorox is the leading U. S. manufacturer of home cleaning products and liquid bleach. These products include Pine-Sol, Soft Scrub, Formula 409, and Clorox liquid bleach. These and many other household products are sold in more than 90 countries worldwide.

Clorox strongly believes that a permanent solution to the rules governing the allocation of R&E expenses is needed and that these rules should not be a disincentive to conducting research in the United States. It is essential that the Congress and the President provide certainty in this area of the tax code, which is of vital importance to the competitive position of U. S. multinationals and to maintaining the U. S. job base.

R&E allocation regulations under Treasury Reg. Sec. 1.861-8(e)(3), issued in 1977, generally provide that taxpayers may automatically allocate 30 percent of research performed in the United States against U. S.-source income. The interplay of these rules with the foreign tax credit can increase the cost of performing research in the United States. Congress on nine occasions has overridden the application of the 1977 regulations because of concerns that the 1977 regulations would encourage U. S. multinational businesses to shift research activities abroad.

Clorox applauds the action taken by Congress most recently--as part of the Omnibus Budget Reconciliation Act of 1993--to suspend application of the 1977 regulations. The rules under the 1993 Act, which provided for a more favorable 50 percent automatic allocation, expired at the end of 1994 for calendar-year taxpayers. Clorox believes permanent rules, statutory or regulatory, should quickly be implemented which provide for at least a 50 percent automatic allocation of U. S.-based research to U. S.-source income.

Research and development is a cornerstone of a growing economy. This is attested to by the significant incentives to attract research activities that have been enacted in recent years by numerous other countries. In the United States, the importance of research is reflected in part by the section 41 tax credit for increasing R&E expenditures, which enjoys strong support from lawmakers of both sides of the aisle and the Clinton Administration. U. S. rules for allocating R&E expenses should work hand in hand with the research credit to help the United States compete in an increasingly global economy.

Action on the R&E allocation rules needs to be taken this year--either through legislation or regulations--that recognizes the importance of U. S.-based research activities. Otherwise, taxpayers will be left with the 1977 regulations and their detrimental impact on the U. S. economy. It also is important that policymakers settle on a permanent solution, which would end 18 years of complexity, confusion, and controversy in this area.

Statement for the Record of
David O. Webb, Senior Vice President
Policy and Regulatory Affairs
Gas Research Institute

for R&E Tax Credit Hearing

May 10, 1995

Gas Research Institute (GRI) appreciates the opportunity to provide testimony for the Record relating to the Research and Experimentation (R&E) tax credit. We believe research and development (R&D) is the lifeblood of improvement in products, processes, efficiency, and productivity. The current R&E tax credit should continue and should be extended permanently. Annual extensions or extensions for only a few years at a time do not provide a stable base for planning and conducting research, especially long-term research that may require five to ten years to complete.

The current tax credit has not inspired the level of R&D which we as a nation must promote to keep pace with an ever increasing competitive world market and the need for collaborative R&D. Therefore, we urge consideration be given to the proposed modification of the existing law to provide for an optional 20% flat credit for contributions to research that is done collaboratively. Collaborative research is normally performed for the public's benefit by not-for-profit scientific and educational organizations. This would serve as an important incentive for the private sector to increase its commitment to collaborative research.

GRI is a not-for-profit 501(c)(3) organization established by the gas industry to conduct broad collaborative research and development programs for the industries, their customers and society.

GRI was founded in 1976 by a Committee of members of the boards of directors of the American Gas Association (A.G.A) and the Interstate Natural Gas Association of America (INGAA). Consequently, GRI is the research, development and demonstration (RD&D) management organization of the natural gas industry. Its mission is to discover, develop and deploy technologies and information that measurably benefit gas customers and enhance the value of gas energy service. GRI accomplishes its mission by planning and managing a consumer sensitive, cooperative research program emphasizing technology transfer. GRI conducts its R&D program in cooperation with its member companies and other participants, who provide funding as well as input for the programs content and direction.

GRI is funded by a surcharge collected by its 37 interstate pipeline member companies through tariffs approved by the Federal Energy Regulatory Commission (FERC) for natural gas transportation services. Regulatory bodies in the 50 states and the District of Columbia are automatic intervenors in the FERC review of GRI's programs. GRI's 326 members include natural gas interstate pipeline companies, natural gas producers, investor-owned distribution companies and municipal gas utilities. Membership in GRI is totally voluntary.

When the current R&E tax credit measure was written it was intended to address the kinds of research that is conducted by organizations such as GRI, i.e., the technologies themselves. However, as written, it does not adequately address research conducted by collaborative organizations. Because of this discrepancy, the R&E tax credit is being restricted in ways never contemplated by Congress, and indeed, is inconsistent with Congress' express intent. In addition, restrictions are often placed on the remainder of the contribution because of questions relating to the "carrying on any trade or business requirement" and the transfer of the research results to another entity in return for license or royalty fees under the current law. As an example, GRI conducts research on the more efficient use of natural gas in home furnaces, industrial processes and commercial cooling. However, since this research does not have an absolute direct link to the pipeline's business, the IRS has determined that the current law does not allow this research to

qualify for the tax credit. These unresolved issues present a major disincentive for collaborative research contributions.

Although the current law has been somewhat useful in stimulating R&E conducted by firms at their own research facilities, the law fails to encourage collaborative R&E conducted by consortia. Typically, consortium members pool their funds and contract with a third-party research organization that carries out the actual research. The current law reduces the tax credit by one-third by limiting the credit to 65 percent of the full value of this type of research (i.e., research that is contracted out) compared with the tax credit for research conducted in-house. Thus the current law does not provide as much of an incentive for consortia-based R&E as it does for R&E conducted by individual firms at their own research facilities.

Collaborative research has many advantages over individual research. Primarily it pools limited R&D dollars. Additionally, collaborative research can bring together all entities needed to research, develop, and market the results often more quickly and efficiently than a single entity. And, finally, collaborative research diminishes the chance for duplicative research which wastes valuable research dollars. Attached are types of successful collaborative research which has been carried out by members of GRI.

It is in our national interest to correct the inequity between the tax credit for in-house research versus consortia-based research. Consortia-based R&E can be very effective in reducing overhead costs and in assuring that research results are quickly made available to a broad industry segment. Equally important, much of the research conducted collaboratively by consortia, such as collaborative research conducted by the energy industry, involves technology to use a product more efficiently. Collaborative, consortia-based research often is research that would not otherwise be conducted because it is too costly, too risky, or too long term to undertake individually. While this type of research is of great value to the consumer and to our nation, it does not necessarily result in increased sales or profits to individual organizations, and therefore, will not be a priority.

One proposal for improving the credit is to modify the credit to reward contributions to research that is conducted collaboratively -- research conducted by teams of companies or utilities through a 501(c)(3) scientific research organization like GRI or Electric Power Research Institute (EPRI).

A flat 20 percent tax credit will provide contributing firms a significantly greater incentive on a comparative basis than the current credit. Such a modification will complement rather than interfere with existing law, would not have major revenue implications, and will improve the credit in several ways. In the words of former Treasury Secretary Bentsen, such a modification "can significantly improve the efficiency and effectiveness of the R&E tax credit." By encouraging collaboration the credit would:

- Encourage research that would not otherwise be conducted to be done in the most efficient manner by eliminating duplicative R&D on matters of wide public policy importance and interest to the firms (such as energy efficiency, environmental, or manufacturing process R&D). The credit will therefore assist in rewarding firms least able to recapture -- and who may never recapture -- their expenditures.

- By reducing redundant R&D, a collaborative modification will save increasingly limited private funds that can be devoted to R&D, and it will also save public funds by improving the efficiency of the tax credit itself by encouraging firms to take the collaborative R&E tax credit when they pool their research efforts.

- Most importantly, a collaborative credit modification will advance the main underlying policy goal of the existing credit most effectively by encouraging new R&D. That is because "incentivizing" collaboration will either encourage more efficient R&D or will encourage new research by spreading costs and risks.

- By encouraging collaboration, the credit would help speed discovery of innovations by pooling experiences of firms, and it will encourage speedy deployment of R&D results

to a broad base of parties. Part of the reason for the accelerated deployment is that consortia typically involve both users and consumers of technology.

The proposed modification is as timely as it is relevant. As Congress looks for ways to reduce the federal budget, federal R&D is a function often targeted for major spending reductions. In view of the proposed federal budget cuts for R&E, the tax credit modification is a means of promoting R&E for the public benefit funded by the private sector. With the proposed elimination of federal programs and significant cutbacks in funding for energy R&E, federal research programs inevitably will be reduced in size. Unfortunately, many of the critical gaps in these research programs, such as research on energy and the environment and improvement in efficiency, will not be filled by the for-profit private sector. Such research activities are often the last conducted by the private sector because these research dollars are the most difficult to recapture in sales over the short term. In the case of the regulated natural gas industry and the electric utility industry, these expenditures often cannot be completely recaptured through the rate base.

As Congress reduces federal spending for research, encouraging collaborative research through the proposed modification to the R&E tax credit will provide the means to speed the transition to more private sector research in a cost-effective manner. Moreover, the proposal will fill the research gap by privatizing decisions about the scope and nature of such research.

I respectfully ask for your serious consideration and support to extend the current R&E tax credit and to modify it to provide a flat 20 percent credit for collaborative R&E conducted through not-for-profit 501(c)(3) scientific research consortia. As Congress takes steps to reduce the size of the federal government and corresponding federal funding for research, your support for an R&E tax credit that encourages collaborative, consortia-based research in even more crucial.

DOT Approves Using Clock Spring

The natural gas industry has received permission from the U.S. Department of Transportation to use Clock Spring®, an advanced pipeline-repair technology developed through the sponsorship of the Gas Research Institute.

A waiver filed with the Federal Register by the DOT's Research and Special Programs Administration is expected to significantly expand the use of the technology and provide pipeline companies with a new opportunity for reducing maintenance costs.

The waiver to DOT Rule 49 CFR 192.713(a) was granted in response to a petition from 28 gas pipeline operators, including Texas Gas, on behalf of the pipelines by the Interstate Natural Gas Association of America in November 1993. The waiver, which is subject to conditions and future performance evaluations, allows pipeline companies to use Clock Spring technology as an alternative to more costly pipeline repair methods. Previously, the regulations set by DOT, the governing agent for pipeline repairs, called for two methods for the repair of gouged, dented or corroded pipe — covering the damaged pipe with a welded metal split sleeve, or temporarily removing the pipe from service and replacing the damaged section.

Clock Spring offers significant advantages over previously mandated repair methods. Labor and material savings using Clock Spring have been estimated at up to 40 percent over the metal sleeve repair method and 65 percent over section replacement. Based on pipeline industry input on the expected use of Clock Spring, GRI estimates an annual industry savings of $8.5 million to $11.5 million.

Developed by NCF Industries Inc., and Clock Spring Company LP, with support from GRI and Panhandle Eastern Corporation, the Clock Spring repair system consists of a fiberglass composite-reinforced coil that is wrapped around a pipe defect with a specially designed adhesive. Initially marketed as a crack arrestor in 1987, product development, proven in laboratory and field validations, has since advanced the technology to its current status as an option for the repair of pipe gouges, corrosion and other anomalies. Repairs made with Clock Spring have shown the capability to restore the strength of the line pipe sufficient to permit it to operate at its original allowable operating pressure. As part of a demonstration program by the Gas Research Institute, the Clock Spring has been installed on a number of pipelines nationwide including on two segments of Texas Gas' No. 1 26-inch diameter line near Grand Rivers, Ky., and Clarksdale, Miss.

"The value of this technology has been proven in extensive field evaluations," explains Theodore L. Wilke, GRI vice president, gas operations technology development. "With the Clock Spring system, permanent repairs can be made while the pipeline is operating. This enables pipelines to avoid customer-service interruptions, as well as revenue and vented gas losses. As shown by the number of companies joining the petition filed with DOT, the industry has long recognized the benefits of using Clock Spring. However, until now, regulations have not permitted its use on gas pipelines."

Clock Spring is manufactured and marketed by Clock Spring Company (Houston). The composite material used in the Clock Spring system consists of glass fibers impregnated by a resin matrix. Fiberglass is highly resistant to corrosion, and fiber-reinforced composites are known for their high strength, light weight and relatively low cost.

Application of the composite repair material is a fairly simple process. Once the pipe defect has been inspected, prepared, and filled, a coiled band of Clock Spring material is wrapped around the pipe and bonded into a single unit with a proprietary adhesive. This repair method not only restores the pipe's original pressure capabilities, but can also improve its resistance to further structural deterioration.

INFIELD RESERVE GROWTH

Geology Combines with Geophysics, Engineering, and Petrophysics to Reveal New Reserves in Old Fields

The lower 48 states contain approximately 800 trillion cubic feet (Tcf) of technically recoverable natural gas in reservoirs of conventional "tightness" (porosity and permeability). Of this, approximately 400 Tcf is in undiscovered fields, and about 160 Tcf is proved reserves. The remaining 240 Tcf, however, is incremental gas left behind in existing gas fields (in uncontacted or incompletely drained compartments). Today, technological improvements and changes in the economics of development make these "left-behind" resources both attainable and highly attractive.

"By taking a multidisciplinary team approach that brings together the expertise of geologists, geophysicists, petrophysicists, and reservoir engineers, you can achieve a more complete characterization of complex, heterogeneous reservoirs, and, with greater precision, target the placement of new wells and recompletions in existing wells."

L. Frank Pitts
President
Pitts Energy Group

Over the last six years, GRI—with the U.S. Department of Energy (DOE), the Bureau of Economic Geology (BEG), and the state of Texas—has developed advanced techniques for identifying missed gas in mature fields.

This program, entitled "Infield Natural Gas Reserve Growth Joint Venture," is reevaluating older fields in the Gulf Coast and Midcontinent regions. The result is significant new reserves at costs far less than full-cycle exploration and production operations. Since June 1993, the program has been concentrating on the Boonsville field, near Fort Worth, TX.

conventional approach. A well was drilled based on these combined data, however, and the initial results were good.

"By taking a multidisciplinary team approach that brings together the expertise of geologists, geophysicists, petrophysicists, and reservoir engineers, you can achieve a more complete characterization of complex, heterogeneous reservoirs, and, with greater precision, target the placement of new wells and recompletions in existing wells," explains L. Frank Pitts, President of Pitts Energy Group.

The major benefit of the Joint Venture program is that even small operators can use its techniques to redevelop fields and exploit reserve growth opportunities, at costs and risk factors much lower than traditional exploration and production procedures. A field test in Victoria County, TX, demonstrates the economic advantages of secondary gas recovery. Costs for redeveloping several targeted reservoirs were $0.31 per thousand cubic feet (Mcf), while the market price for the gas was about $2.00/Mcf.

In the Gulf Coast region, reserve additions per gas development well were up 48 percent in 1993 compared to the 1991-92 average, and were the second highest in 14 years. In addition, costs were reduced substantially.

Although field experiments are still underway to identify absolute links between structure, sequence stratigraphy, and the distribution of reservoir compartments, much has been accomplished. "You must understand the geological environment of your property and do your homework in all disciplines to be sure that you are able to make a rational analysis," conclude Gary Hoge and Tom Coffman, Coffman Exploration, Austin, TX.

House of Representatives
Committee on Ways & Means

Subcommittee on Oversight

Hearings
on the
Research and Experimentation Tax Credit

May 10, 1995

Statement for the Record
by
Joe Cobb
John M. Olin Senior Fellow in Political Economy
The Heritage Foundation
Washington, DC 20002

We appreciate very much the opportunity to include a statement in the hearing record on the way in which our government treats both the taxation of private research and experimentation, and the Clinton Administration's apparent preference for a "Big Government" approach.

We can all agree that the United States, as the leading economic power in the world, is challenged continually on the frontiers of new technologies to stay in the lead. But there are two very distinct philosophies about how to make the needed progress.

Some people advocate government leadership, government planning, and government investment. We say that is wrong. Progress and innovation do not come from direct government aid, but from the efforts of inventors and scientists and engineers in the private sector. Even government funded laboratories and universities make the discoveries they do at the computer terminals and laboratory facilities where the scientific personnel themselves have wide freedom of action, independently of the program planners in their administrative offices.

To remain the world's leader in science and technology, the United States must put more emphasis on letting the private sector take the lead and ***reduce emphasis on government programs*** as the main strategy. The Clinton administration has clearly taken a stand in favor of government action.

Statement of Joe Cobb
The Heritage Foundation

The Disappearing R&E Tax Credit

The research and experimentation (R&E) tax credit expires on June 30, 1995. Last year the Clinton Administration did not support its extension. This year, their "support" is tucked away in a little note in the tax section of their budget, and it is not even mentioned in the Research and Development discussion.

It is clear that the R&E tax credit is quite peripheral to the Administration's science and technology policy goals. In our opinion, by contrast, that is where the main emphasis ought to be placed.

Instead of exploring new and sound ways to promote private industry research and development (R&D) or even private-public partnerships, the Clinton Administration has chosen to increase federal funding of government chosen research. As the following table shows, the Administration's record shows federal civilian R&D spending will have grown 15.1 percent by 1996, although defense-related R&D spending has fallen 9.9 percent.

CLINTON ADMINISTRATION'S R&D SPENDING

Dollars in millions	1993	1995 (est.)	1996 (prop.)	1993-96	1995-96
NASA	$8,885	$9,561	$9,179	3.3%	-4.0%
Commerce Dept.	607	904	1,096	80.6%	21.2%
EPA	519	552	616	18.7%	11.6%
ATP	68	431	491	622.1%	13.9%
TRP	472	443	500	5.9%	12.9%
Mfg. Extension Prog..	18	91	147	716.7%	61.5%
HHS	9,666	11,272	11,793	22.0%	4.6%
Total Civilian	30,329	33,815	34,902	15.1%	3.2%
Total Defense	42,164	38,898	37,981	-9.9%	-2.4%
Total All	72,493	72,713	72,883	0.5%	0.2%

Source: *FY1996 Budget of the U.S. Government*, pp. 94-95; and *Analytical Perspectives*, p. 119.

More noticeably, a series of programs of widely questioned effectiveness have grown dramatically. From Fiscal Year 1993 through Fiscal Year 1996:

- ✓ the Advanced Technology Program (ATP) would grow to $491 million, or 622 percent
- ✓ the Technology Reinvestment Program (TRP) would grow to $500 million, or 5.9 percent
- ✓ Commerce Department R&D would grow to $1.1 billion, or 80.6 percent

- ✓ the Manufacturing Extension Partnership would grow to $147 million, or 717 percent
- ✓ HHS Department R&D would grow to $11.8 billion or 22 percent.

The Unwelcome New System of Government Tech Centers

The Manufacturing Extension Partnership (MEP) program is a prime example of the Clinton Administration's bold new government-dominated initiatives. But at the same time, it is a good example of why this approach needs to be questioned.

Started in 1988 as part of the Omnibus Trade and Competitiveness Act, the MEP was supposed to bridge the gap between sources of manufacturing technology and the small and mid-sized companies that were viewed as facing barriers that make them relatively slow in adopting important new technologies. The National Institutes of Standards and Technology (NIST) is in charge of the initiative.

The NIST program has been criticized as unworkable and unresponsive to industry needs. In a 1991 report, the General Accounting Office indicated that "overall, the ... programs have been only somewhat effective in addressing the technology needs of small manufacturers ... while legislation establishing the ... program emphasized the transfer of advanced technologies being developed at federal laboratories, the centers have found their clients primarily needed proven technologies."

Mandate for Change, the political issues handbook published by the Progressive Policy Institute (PPI) in January, 1993, which in those days was called "President Clinton's think tank," criticized the MEP tech centers as:

> their performance has been disappointing. Like other government retail service efforts, the extension services have reached too few firms and most manufacturers regard them as unlikely sources of practical expertise. [p. 75]

The book advocated instead a new kind of privately run "teaching factory," which [emphasis supplied]:

> would overcome many of these extension services shortcomings by operating as an *industry-owned and -operated* learning center. It would offer groups of firms within a particular industry a place to put new processes into

> operation and experiment with new technical applications. Its relevance to real factory floor problems would be reinforced by a *requirement that firms provide at least half the operating costs of the facility. [ibid.]*

Private industry-led alternatives to the government extension centers exist — from networks of consultants to full-scale integrated teaching factories. These alternatives address the concern raised by the Progressive Policy Institute's study, yet the Clinton Administration has increased MEP funding to $147 million, which is 717 percent.

Vanished? A Collaborative Private Sector R&E Credit

More important, however, is that the Clinton Administration's budget completely ignores two initiatives to foster what are truly industry-led partnerships — a modification to the existing R&E tax credit introduced in the previous Congress by Senators Danforth and Baucus (S. 666) and Senator Lieberman (S. 394) to reward collaborative R&D. Incentives for collaborative R&D have wide support, including the Democratic Leadership Council, the NorthEast-MidWest Coalition, the National Academy of Engineering and others.

These proposals would modify the R&E tax credit in a fiscally responsible way. By providing a greater reward in the form of a flat credit for R&D conducted in teams from different organizations, the modification would maximize limited private and public sector R&D and encourage firms to allocate scarce R&D resources to projects that benefit both their individual goals and joint, industry-wide goals.

The proposed extension of the R&D tax credit would also stimulate new research — research unlikely to be undertaken individually whenever it might be too risky or too long-term, or so generally applicable that no single developer could fully capture all the benefits competitively. By making more efficient use of both private and publicly funded R&D resources, the proposed collaborative credit could significantly advance the overall efficiency and effectiveness of the R&E tax credit.

Today one of the most touted reasons for government initiative R&D financing is that a central agency has some advantage in selecting among different proposals submitted by individual organizations and companies. Therefore, and perhaps most importantly, a collaborative R&E tax credit would allow private industry to initiate joint research and experimentation projects. *Private*-public partnerships would be

encouraged to flourish without the obtrusive hand of the federal government directing the area of study.

The cost of stimulating industry-led partnerships would be significantly lower through a collaborative R&E tax credit than through direct federal subsidies. The Danforth-Baucus and Lieberman modification in the R&E tax credit was estimated to cost about one-quarter the amount of the existing R&E tax credit. This would be roughly one-half of the cost of the ATP program — a program that has been criticized as one "unblemished with success."

The Congress needs to adopt policies that promote private industry-led R&D rather than government-led R&D. Congress should protect incentives for the more efficient, collaborative form of R&D employed to a greater degree by our trading partners. And Congress should ensure that industry puts its money where its self-interest is, that the private sector co-funds the research. This would most effectively assure and that the research is relevant to the practical needs of America's manufacturing industries. A collaborative R&E tax credit provision, like the proposals introduced in the previous Congress by Senators Danforth and Baucus (S. 666) and Senator Lieberman (S. 394) should be given serious consideration by this Committee.

STATEMENT ON THE RESEARCH AND EXPERIMENTATION EXPENSE ALLOCATION RULES AND THE RESEARCH AND EXPERIMENTATION TAX CREDIT

BY THE
NATIONAL ASSOCIATION OF MANUFACTURERS

FOR SUBMISSION TO THE
SUBCOMMITTEE ON OVERSIGHT
COMMITTEE ON WAYS AND MEANS
U.S. HOUSE OF REPRESENTATIVES

MAY 24, 1995

Introduction

The National Association of Manufacturers (NAM) is a voluntary business association of more than 13,000 firms located in every state. Our members range in size from the very large to the more than 8,000 small members that have fewer than 500 employees. The NAM's member companies produce more than 80 percent of the nation's manufactured goods.

The NAM submits this statement for the printed record of the May 10, 1995, hearing regarding the research and experimentation expense allocation rules, commonly known as the "861 R&D allocation regulations," and the research and experimentation tax credit, commonly known as the "R&E tax credit."

RESEARCH AND EXPERIMENTATION EXPENSE ALLOCATION RULES

These regulations are a prime example of how the current federal tax regime places U.S. multinational firms at a clear competitive disadvantage in the international marketplace. The NAM strongly recommends that the Congress work with the Administration to ensure that a permanent regulatory solution to the R&E expense allocation issue is adopted this year, and to enact corrective legislation if such relief is not promptly forthcoming. A final resolution of this problem is crucial to the international competitiveness of U.S. manufacturing.

In 1977, the Treasury adopted onerous regulations under Internal Revenue Code Section 861 continuing specific rules requiring allocation of the expenses of R&E conducted in the U.S. between a taxpayer's U.S. source and foreign source income. Although the Section 861 R&E allocation rules operate through the mechanism of the foreign tax credit limitation, their practical effect is the same as denying an income tax deduction against U.S. income for part of the R&E actually conducted in the U.S.

Needless to say, the foreign countries to which U.S.-conducted R&E expense is allocated do not allow U.S. firms a deduction for such allocated expense in computing foreign taxes owed. U.S. multinational firms are thus penalized for conducting all or a substantial portion of their R&E in the U.S., giving rise to a strong incentive to move part of such R&E overseas. In our view, this is not only unfair but constitutes singularly poor public policy. It is significant to note that we are the only major industrialized nation that does not allow domestic taxpayers to fully deduct domestic R&E expenses against domestic income.

Since adoption of the 861 R&E regulations in 1977, Congress and the Administration have advocated and adopted a number of temporary moratoria to prevent the full implementation of the rules. Under the latest moratorium, included in the Omnibus Budget Reconciliation Act of 1993 ("OBRA '93), 50 percent of domestic R&E expense was allocated

and apportioned to U.S. source income, with the remaining 50 percent allocable between U.S. and foreign source income on the basis of sales or gross income. The OBRA '93 moratorium expired December 31, 1994, for calendar year taxpayers. Therefore, the 1977 regulations must be applied for future years unless a regulatory or legislative solution is adopted.

The NAM believes that a permanent resolution to the 861 allocation regulations issue is long overdue, and requests that you work with the Administration to ensure that such a solution is promptly adopted through regulations. Otherwise, Congress should pass corrective legislation this year.

Domestic R&E is Crucial to Competitiveness of U.S. Manufacturers

The NAM believes that providing stable tax treatment for R&E that does not discourage U.S.-based R&E is crucial to the international competitiveness of U.S. manufacturing. Numerous econometric studies have demonstrated a positive link between R&E spending and increased productivity, which in turn leads to increased U.S. competitiveness and GDP growth. The vast majority of private (i.e., nongovernmental) R&E outlays are made by manufacturing firms. To the extent this R&E leads to increased productivity in the manufacture of goods, such goods become more competitive in both domestic and overseas markets. The international aspect of this improved competitiveness is especially important, since in recent years, the growth in manufactured exports has been the main source of strength in the U.S. economy.

Accordingly, the NAM believes the case for regulatory or legislative resolution of the R&E allocation issue is extremely strong. Equally strong, in our view, is the need to make such resolution permanent. R&E by its nature is often a long-term proposition. Indeed, it is not unusual for half of a firm's R&E to be directed at projects with a time horizon of five to ten years. Manufacturing concerns need the stability that is necessary for sound, long-term business planning.

Recommendation

The NAM strongly supports a definitive resolution to the R&E expense allocation regulations issue this year. We appreciate the opportunity to submit this statement and would welcome the opportunity to work with Congress and the Administration to resolve this longstanding problem.

RESEARCH AND EXPERIMENTATION TAX CREDIT

Cost of Capital Considerations

The most critical economic determinant on the manufacturing sector of the United States economy is the cost of capital. In recent years the cost of capital for United States manufacturers, both in absolute terms and relative to manufacturers in other countries, has experienced an unfavorable trend. Increased cost of capital adversely affects our ability to maintain a skilled workforce, price goods competitively in the global market and develop technological innovation.

Research and Experimentation Tax Credit

In legislation the U.S. House of Representatives passed this year, it has begun to address cost of capital issues on a broad scale. It has taken measures to enhance the recovery of investment in plant and facilities, it has passed moderation in the taxation of capital gains, and has provided a savings vehicle which will serve to encourage U.S. savings. And there are signs that out-of-control regulation will also abate. All of these have a favorable impact on cost of capital and enable our members to make even greater

contributions to the well-being of our citizens.

Yet there remains attention to the single most important capital element in maintaining world technological leadership. The capital flow created by the research and experimentation tax credit must be maintained.

Productivity of the Manufacturing Sector

Manufacturing productivity growth averaged almost 3% during the 1980s and early 1990s, nearly three times as high as in the non-farm business sector. When measured in terms of output per unit of labor and capital, it is six times greater. This broader measure, total factor productivity, mainly reflects technological advance.

The United States has continued to maintain a higher average level of manufacturing productivity than any of the large industrial countries. According to a recent study at the Brookings Institution, productivity in German manufacturing stood at 86% of that in the United States compared with Japan at 78 percent. Individual worker productivity statistics demonstrate similar United States leadership.

United States companies are far ahead in the deployment of information technologies. The number of personal computers in use in the workforce in this country is more than twice the number in use in Germany and nearly four times the personal computers in the workforce in Japan. Besides the huge lead in use of personal computers, some 56% of U.S. personal computers can communicate with other computers within a company through local area network connections, compared with just 13% in Japan. Eight of the top ten personal computer companies worldwide in 1993 were American. The U.S. lead in information technologies has contributed to export growth, thereby strengthening U.S. manufacturers' global competitive standing.

From the start of the export boom in 1986, the number of export jobs related to export goods increased by more than 2.3 million. Every year since 1986, the number of jobs supported by goods exports have been more than double the number supported by service exports. Each $1 billion of new exports creates an average of 17,000 new jobs.

Over the period 1970-1993, 68% of total United States R&D was performed in industry. Ninety percent of all industrial R&D is conducted by manufacturers. The relationship is obvious -- R&D activity by manufacturing businesses in the United States has contributed significantly to the country's continuing leadership among the worlds leading countries. The Research and Experimentation Tax Credit works. It is effective; it is productive; it creates jobs. It needs to be extended and made permanent.

Fundamental Utility of the Incentive

The "Manufacturers' Pro-Growth Agenda" sponsored by the NAM includes the following item:

> Support Technological Innovation. Reduce the number of federal labs and more precisely define their mission to avoid public-/private-sector competition. Make remaining federal R&D activities more cost-effective and more private-sector-oriented. Encourage appropriate, industry-led technology partnerships with government. Reduce existing regulatory obstacles to innovation and to the rapid diffusion of new technologies, and avoid enacting new regulatory obstacles.

The NAM believes the credit should be evaluated considering the suggested reduction in federal labs with a view toward using that cost saving to further encourage private R&D through an enhanced credit.

While the credit has been effective in encouraging private R&D, many companies that have made substantial investments in research and development do not benefit from the current credit. This is due to the structure of the current credit that is available only to the extent that a company's current ratio of R&D expense to sales exceeds the same ratio for the 1984-1988 base period.

A company may actually increase R&D spending and still be ineligible for the credit. This can occur for a number of reasons relating to business developments such as the acquisition of a less R&D intensive subsidiary or a rapid increase in sales for cyclical industries. In these cases, a company could be denied the credit for reasons unrelated to its overall research efforts.

The NAM believes Congress should consider providing an alternative, elective credit that would be available to these firms that conduct critical research activities, but that for a variety of reasons have not been able to qualify for the incremental credit using the existing base period.

The existing credit remains an effective framework from which improvement can be made. A large number of companies are investing existing amounts in R&D because of the credit. Because the present credit is scheduled to expire at the end of June, the NAM believes the entire framework will be in jeopardy if it is not renewed. It is of utmost importance that there be an uninterrupted continuation of the credit. The NAM encourages Congress to extend the credit in such a way so that it will work effectively for the broadest possible spectrum of industries.

Recommendation

The NAM urges that the R&E tax credit be extended and made permanent. That should be done this year retroactive to its expiration date. If sufficient funding is available, an enhancement should be made so as to support any productive R&D activities without the credit structure itself constituting an impediment to productive activities. One means to achieve this objective would be through an alternative, elective credit which would not disadvantage businesses currently earning the credit.

Summary

The health of the United States' economy and its favorable position in the world market is dependent on the manufacturing sector. The cost of capital is the most critical economic determinant in supporting a successful manufacturing community. The majority of private commercial R&D is conducted by manufacturing enterprises. R&D spending by United States manufacturers sustains growth and advancement in manufacturing technology enabling a healthy economy, creation of new jobs and maintaining the United States leadership in the global market.

TESTIMONY OF MIKE CUMMINS

VICE PRESIDENT

OF THE NATIONAL CENTER FOR MANUFACTURING SCIENCES

Madam Chairwoman and Members of the Subcommittee on Oversight:

The National Center for Manufacturing Sciences welcomes the opportunity to testify on the need to improve the research and experimentation (R&E) tax credit. More specifically, we would like to lend our support for, and offer our perspective on, an enhanced reward for research conducted collaboratively.

In sum, an enhanced reward for research conducted collaboratively will serve several important functions not currently served by the R&E tax credit. A modification for collaborative R&D will:

- reward currently underspent manufacturing process R&D of generic application to industry, which will ensure we not only innovate in new products, but have the ability to produce those products on competitive terms;
- permit small manufacturers to leverage resources and know-how with larger manufacturers to conduct joint R&D of importance to the supplier chain;
- encourage companies to do research in the most efficient manner possible, *i.e.* collaboratively, when the research would otherwise be duplicated and encourage new research that would not otherwise be done if R&D had to be conducted and paid for on an individual firm basis;
- cost effectively reward the deployment and commercialization of R&D, not just the ability of firms to spend more on R&D; and,
- widen the benefits of the R&D tax credit to firms currently not eligible for the credit and simplify administration of the credit.

The NCMS -- a 501(c)(3) not-for-profit manufacturing research and development organization -- is one of the Nation's leading R&D consortia, and the largest in the manufacturing realm. Comprised of predominately smaller manufacturers, the NCMS focuses on generic manufacturing process R&D -- R&D that is the building block for the conversion of raw materials to finished products.

The unique model of the NCMS, as a consortium of large assemblers and small suppliers, serves to maximize the benefit of every R&D dollar expended. First and foremost, the selection process for process R&D engages the expertise of a diverse group of participants, who not only see the process technology from its potential application to their unique product lines, but through their chain of suppliers. Such a selection process assures that the process technology has wide commercial application across industry, as well as defense application. The NCMS model avoids the problem encountered when individual firms undertake process R&D. Too often processes of considerable merit to a vast number of businesses are not made relevant and cost-effective because their application to industry is not fully utilized or even appreciated.

Second, since NCMS is governed by the highest quality principles synthesized across industries, the value of the process technology to NCMS members is always benchmarked against the regiments of quality. The consortia environment ensures that the procedures of the widest practicable application emerge, but also that these processes yield products of the highest quality.

Finally, as a consortium of variegated firms, NCMS' unique membership can accelerate the commercialization of process technologies. That is because the technology is instantly available to a base of manufacturers that represent a significant portion of the industry users.

In our testimony here today, we would like to discuss with this Subcommittee the need to understand the distinction between process and product R&D, the reason why process R&D is underspent, and why we believe a collaborative tax credit will address many of these problems.

I. Policymakers Must Understand the Essential Need for Collaborative and Process-Oriented R&D

The Congress and the Administration, regardless of whether either is in Republican or Democratic hands, perennially touts the need for R&D funding. At the state level, governors provide direct assistance to stimulate R&D and the fruits of increased productivity, higher paying jobs and the manufacturing productivity it embodies. And across our shores, virtually every developed country finds ways in which to reward R&D. The need for R&D, and for government incentives for R&D is permanently etched into the American psyche.

But expressions of support for the idea of promoting R&D, as this committee has heard from many witnesses here today and over the last ten years, is the easy task. What is more difficult is determining how to translate that support into concrete proposals to encourage R&D. Equally important is determining what form of R&D should be rewarded.

Recognizing that we underspend in R&D, therefore, is only part of the story. We must appreciate the critical distinction between product and process R&D, we must attempt to quantify and understand the causes of underspending, and we must -- most importantly -- take steps to direct additional resources to process R&D commensurate with its importance.

Process R&D is Critical to Manufacturing Competitiveness

In its most basic form, manufacturing can be defined as the conversion of raw materials into finished products with defined shape, structure and properties that fulfill given requirements, specifications and quality levels.[1] This conversion into finished products is accomplished using a variety of processes that apply energy -- be it electrical, mechanical, thermal or chemical in nature -- to produce the desired changes in the configuration of materials. The means by which this conversion is effected is collectively known as 'manufacturing process', and the study of how to most efficiently effect this conversion is the study of manufacturing process technology.

Manufacturing process R&D matters, because it is the key to competitiveness of manufacturing sector. Every nation's success as a global manufacturer requires the development and use of processes capable of producing high-quality products rapidly, cost-effectively, and in an environmentally acceptable manner. U.S. companies must be able to manufacture products of superior quality at competitive prices, and the key to the quality of any product is an understanding of the manufacturing process by which it is produced and an understanding of the most efficient means to implement that manufacturing process knowledge.

Evidence of the criticality of process R&D, can certainly be found in the concerns advanced by policymakers. Numerous studies which have been undertaken to define the most important areas of future industrial research have emphasized the need to place manufacturing process development on an equal basis with new product technologies. According to these studies, the U.S. must establish a permanent foundation in engineering and science which is capable of innovating and improving not only products, but the processes by which they are produced. For instance, the report of the National Research Council, Materials Science and Engineering in the 1990s: Maintaining Competitiveness in the Age of Materials, highlights materials synthesis and process as an important area of expanded emphasis over the next decade (NRC 1989). Other studies point out that the reason for the loss of manufacturing competitiveness and productivity has been a reduction in investment in manufacturing process R&D; indeed, that the U.S. focus on products rather than processes has been fueling the relative decline of American manufacturing with respect to other manufacturing nations.[2] [3]

[3] Mettler, R.F. 1993, Forging the Future: Policy for American Manufacturing, 1993. Washington, D.C.: Report of the Manufacturing Subcouncil, Competitive Policy Council.

These studies are bolstered by everyday observations. Although global integration of product markets and advances in reverse engineering techniques have improved the ability of competitors to determine the compounds of new products, the ability to clone products still depends on competitors' ability to make those compounds. Excellence in developing and implementing manufacturing processes that produce unique production capabilities with cost and quality advantages are determinants of market success, since processes and investment in capital and training costs cannot be easily duplicated.

Process R&D Assists Production in Many Ways

Manufacturing process occupies a central role in our economy because of its ability to increase affordability and quality of the products, decrease time to market and time for commercialization, broaden applications of products, and incorporate environmental or other externalities. Each factor deserves elucidation.

First, manufacturing process R&D adds greater affordability to production; indeed, affordability is one of the seven industrial thrusts identified by the Department of Defense in determining the priority of Manufacturing, Science and Technology funding. One of the basic values of process technology is its ability to provide the required quality level of transformation at minimum input cost per unit of output. This involves minimization of such factors as energy use, scrap generation, capital and labor costs.

Second, manufacturing process technology can find new uses for advanced materials. Often advanced materials with outstanding properties are simply left unused or languish in a single laboratory or corporation since little consideration had been given to the methods required to produce them. Understanding process helps us understand the possible uses to which such material can be put.

Third, manufacturing process technology can shorten the time to transform a product technology from research to commercialization by rapid response to customer needs. One of the critical understandings in research today, is the need, developed by industry and adopted by the Department of Defense, to have concurrent process and product technology, otherwise known as Integrated Product and Process Technology. Though concurrent process R&D we can achieve production more successfully, with more quality and with greater speed. Of course, process R&D can shorten the time of production, which is particularly important if the process is the limiting factor in bringing the product to market.

II. Why do We Underspend on Process R&D?

The failure of market forces to provide for an adequate level of manufacturing process R&D results from the economics of R&D spending, particularly the unique economics relative to manufacturing process R&D. As a general proposition, firms tend to underspend on R&D since they are unable to translate into profits all of the value their R&D adds to the economy; but this "innovation gap" is widest for manufacturing process R&D where the return to the individual firm is perceived to of less advantage to the firm than to the manufacturing community as a whole.

Individual firms tend to underspend in manufacturing process R&D. Both product and process R&D may entail large costs, high risks and long term payoffs. The potential gain for any one firm from process technology is limited by the use to which the firm can apply the technology in their own operations. The R&D may result in technology that will reduce their costs, allow a lower pricing structure and improve market share to some extent. It will not expand their revenues to the same dramatic degree that a new and innovative product will. And since they are not in the manufacturing technology business, they will not typically know how to enter an entirely new and different market based on the improvement. The process improvement, however, probably has wide application throughout their industry and in others. Thus the gap between the return to the firm (defined by the reduction in costs in its plants) and the potential return to society (lower costs and higher productivity in innumerable firms and often across industries).

Manufacturing R&D has the widest possible application of almost all R&D besides basic research but perhaps the lowest potential return to a particular firm. While few firms may be able to utilize a product innovation, many firms can find application to improvements in the processes by which that product is made. This dichotomy—the value to the industry or industries that would benefit from the technology vs. the inability of firms to typically receive a modest cost savings from their manufacturing R&D investment—causes individual firms to collectively underspend on process R&D at a level which exceeds the level firms underspend on R&D in general.

There is another reason that process R&D is relatively underfunded compared to product R&D. Protecting a firm's intellectual property in a product innovation is relatively direct. If a firm loses sales to a competitor using patented or otherwise protected product technology, it will quickly find out since exploiting the purloined technology necessarily involves third parties (i.e. customers). It may then enforce its legal rights (at least domestically and in most advanced countries). Process R&D may, in contrast, be used to good effect by a firm internally in its plant. It is therefore vastly more difficult to discover violation of a firm's intellectual property rights. This difference increases the risk and reduces the return on process R&D. This difficulty in protecting property rights makes it more likely that the firm will elect to perform product R&D even though the economic benefit to society would be higher were more R&D dollars allocated to process R&D.

Although it is not a particularly simple task to determine whether process R&D is being underspent in the private sector, the ability or failure of firms to compete successfully against domestic and foreign competitors gives a fairly direct measure of the productivity of their manufacturing operations and the efficacy of their manufacturing processes. In the case of defense suppliers, who are typically manufacturing a unique product with one buyer, it is more difficult to gauge the proper level of defense process R&D spending.

III. Why are Added Incentives for Collaborative R&D are Needed?

There are many reasons why a collaborative R&D tax credit is needed.

The Collaborative Credit Overcomes An Inherently Institutional Bias Against Collaboration and a Built-in Reluctance to Collaborate

Most importantly, the credit is needed to overcome a bias against collaborative research that has been institutionalized in the American business culture. Historically, antitrust laws and our traditional image of stubborn independence have combined to characterize collaborative research not only as a sign of weakness, but as an approach that could restrict competition or trade. As a result, most American companies have been reluctant to share manufacturing information and technology, even when their problems are industry-wide and solutions are long-term, costly and risky.

The credit would be the next logical step in a series of steps undertaken by Congress to remove institutional obstacles to collaborative research. In 1984, Congress passed the National Collaborative Research Act, which was intended to assuage fears that collaborative research (through the prototype stage) violated U.S. anti-trust statutes. In addition, the Stevenson-Wydler Technology Act of 1980, the Federal Technology Transfer Act of 1986 and the Omnibus Trade and Competitiveness Act of 1988 have all increased the abilities of American companies to engage in collaborative research.

In addition to overcoming cultural biases, the credit is needed to overcome internal perceptions that collaboration will hinder rather than help. R&D goes to the very heart of a firm's existence. Innovation, technology, knowledge and discoveries are the lifeblood of a firm; they are the means by which a firm gains marketshare. But these commodities only have value if they are either unknown to other firms or protected under intellectual property laws.

By asking firms to collaborate on R&D, we are asking them to share with others -- mostly competitors -- some of this knowledge. Collaborative R&D is new, difficult to organize and carries substantial perceived risks to firms. For an aggressive growth company, fear of "contributing knowledge" to competitors instead of "sharing" in the new knowledge is very real. And the collaborative group activity is subject to less individual corporate control, which elevates this concern.

The Collaborative Credit Furthers Sound Policy Goals of the Incremental Section 41 Credit

The collaborative R&E tax credit strongly advances the policy justifications of the section 41 incremental credit, and at the same time, rewards the most efficient use of limited R&D funds. The collaborative credit has much to recommend it: to the extent the credit leverages research dollars it encourages more efficient use of limited R&D resources; to the extent it spreads risks and costs; it encourages new research that would not be conducted in its absence; and, to the extent it eliminates redundant research, it increases the stimulating effect of the existing tax expenditures.

First, the collaborative R&D tax credit will stimulate new R&D (as the incremental Section 41 credit is intended to do). This is because the credit enables firms to spread risks and costs by pooling cash, in-kind contributions, scientists and technical know-how on R&D that would otherwise be too costly, too risky or too long-term to perform individually.

Second, the collaborative credit will advance the underlying goals of Section 41 by ensuring the research is conducted in the U.S. and by better enabling firms to meet foreign competition. The collaborative R&D tax credit is intended not only to help firms compete against one another, but to band together to meet global competition.

The Credit Will Benefit Firms Not Encouraged by the Current Incremental Credit

Direct benefits of the proposed enhancement to the R&E tax credit will undoubtedly inure to the bottom line of companies that conduct collaborative research. The collaborative credit will assist companies that are otherwise increasing their R&E expenditures above the "base," regardless of how that base is defined in the section 41 incremental credit. Equally important, however, it will also benefit companies that cannot take immediate advantage of the incremental credit either because they do not have taxable income against which the credit can be offset, are subject to the limitations of the Alternative Minimum Tax or whose R&D falls below the base. It also includes smaller firms who may be disinclined to invest the needed amounts in process or other technologies not perceived to immediately inure to the bottom line, but in the long run are key to their sustained competitiveness.

The ability to share in the research results of collaborative research that is "incentivized" or encouraged by the enhanced credit is a direct benefit that will inure to all participants in a collaborative venture. In other words, because the research is collaboratively conducted (and financing is interrelated), lowering the costs of capital outlays lowers the cost of capital for the research venture in its entirety. In essence, the leveraged research is disseminated to small and large firms alike, for-profit and currently not-for-profit firms alike, and the indirect benefit of the credit is spread to the entire membership of the project. For firms that are below the "base", collaboration will allow them to "catch up to the fold" with immediately rewardable R&E expenditures.

The Credit Will Efficiently Stimulate R&D to the Benefit of the Public and the Public Fiscal Interest

A common test of the utility of the credit has always been how much research it stimulates, but this is far from a perfect criterion as pointed out in the testimony of the GAO. A more correct measure of the utility of an R&E tax credit is how efficiently the credit promotes research, how quickly it facilitates dissemination of research results, and how effectively it assists in the commercialization of innovations within short time frames. The credit should not be judged

simply by how much R&D dollars it stimulates, but by the knowledge conveyed and deployed by the R&D performing firm.

The collaborative R&D tax credit induces new research at lower costs to limited public resources (in the form of tax expenditures) and lower costs to increasingly limited private resources. It helps companies make more efficient use of limited resources by overcoming transactional and cultural barriers to collaboration, providing a counterbalance to perceived or real disadvantages from disclosure of information. Moreover, it will reduce redundant research on which the incremental credit is now taken, ensure innovations are considered for the widest possible application, enable U.S. companies to bring technology to market faster on a wide variety of applications by involving more partners and employ teamwork to meet new challenges in the global trade environment.

The savings of finite public and private sector R&D resources and the new generation of R&D activity will inure to the benefit of the consumers in safer, more economical and more efficient products of greater variety.

The Credit Will Close the Wider Gap Between Societal and Economic Returns

It is generally recognized that firms will under invest in R&D. The prospect of recapturing income from a new idea is the primary incentive for commercializing new products or developing new processes. But individuals or firms that undertake R&D of new technologies must always balance the prospect of return with the cost of that R&D, the risk of failure and the consideration that, even if they are successful, they will not be able to reap the profits attributable to the new technology.[4] A firm that is efficient in finding new technologies is not always poised to best manufacture and distribute the product, or otherwise fully capitalize on that technology. In short, firms have difficulty capturing the benefits of research to the same extent those benefits inure to society.

The R&D tax credit is partly meant as a means to balance this market distortion by bridging the gap between the social rate of return and the economic rate of return to the individual firm. To the extent the gap between social and economic rates is closed, actual market forces can work more effectively to properly allocate sufficient funding to R&D. The credit also counters similar incentives provided for by our competitor-nations.

In collaborative research, however, even greater gaps between economic income and the social rate of return are present, and even greater competitive pressures come to bear. The greater gap between societal and individual rates of return stem from two factors: first, that the social rate of return is higher per dollar of R&D expended; second, that the firm has greater difficulty recapturing investment. As noted, because companies are sharing research results with competitors -- even if the consortia involves vertical components -- the starting line for competition is advanced for all participants. No individual firm, therefore, gains relative advantage over another in collaborative research. This inability to recapture relative income gain widens the gap between the firm's perceived individual return, and the benefit to the public. The collaborative R&D tax credit modification is meant to stimulate two principal policy goals of the Section 41 credit: (1) it is intended to stimulate new research, and (2) it enables firms to recapture the economic profits of R&E outlays, when these are the most difficult to be recaptured.

The Credit Redresses Certain Inequities

The tax credit for consortia research is also needed because the Code can treat collaborative research disadvantageously. As previously discussed, outside contract expenses are currently creditable, if at all, to the extent of 65 percent. Therefore, contributions to research consortia are not fully creditable as in-house expenses. This 65 percent contract limitation is not without an ostensible policy goal: it is meant to reflect the cost of in-house research overhead, and therefore,

---

[4] While research may result in large dividends to firms that conduct such research, such firms are reluctant to conduct research because of the long-term nature of the rewards and because of the fear that the innovation or new processes developed from this research will be lost to competitors.

equalize the treatment between in-house and contracted research. However, the reasoning behind the policy is flawed: it is precisely the lower overhead costs of research consortia and the higher return per dollar of contribution which recommends collaborative research.

Conclusion

It is time for a domestic tax policy that rewards R&D conducted collaboratively as part of our current tax incentive system for R&D. The credit leverages research dollars and encourages more efficient use of limited R&D resources. The credit also spreads risks and costs and encourages new research that would not be conducted in its absence. Finally the credit eliminates duplicative research, thereby reducing the tax expenditure. For these reasons the NCMS recommends that national tax policy incentivize collaborative R&D.

National Society of Professional Engineers

Statement
of the
National Society of Professional Engineers
on the
Research and Experimentation Tax Credit

May 24, 1995

The National Society of Professional Engineers supports legislation (S. 351/H.R. 803) to make permanent the tax credit for research and experimentation. The R&E tax credit is one of the most effective ways the government can encourage private sector research and development.

The National Society of Professional Engineers (NSPE) was founded in 1934 and represents over 65,000 engineers in over 500 local chapters and 52 state and territorial societies. NSPE is a broad-based disciplinary society representing all technical disciplines and all areas of engineering practice, including government, industry, education, private practice, and construction.

The R&E tax credit, provided in Section 41 of the Internal Revenue Code, allows taxpayers to claim an incremental credit for R&E expenditures. Because the credit applies only to R&D expenditures that exceed a base R&D investment amount, it encourages the beneficiaries to increase their level of R&D investment beyond what they would normally have conducted without the credit. The tax credit also counters one of the primary disincentives to private sector R&D - the financial disadvantage incurred by a firm that conducts research, only to have their competitor gain access to the new technology, without having incurred the research expense themselves. In a sense, the tax credit "reimburses" those industries whose research benefits the economy as a whole.

Also, because the R&E credit applies to contract research conducted on the taxpayer's behalf, as well as to in-house R&D, the credit may in some cases stimulate greater cooperation between industry and academia. Both industry and academia benefit when certain academic research is directed to specific industry needs.

Unfortunately, the R&E tax credit has been subjected to short-term extensions. As a result, beneficiaries have not been able to make long-range business plans with confidence. In fact, some eligible participants may have chosen not to avail themselves of the tax benefit as a result of the uncertainties involved. In effect, the short-term nature of the provision has diminished its potential to effectively meet our important research needs. We are confident that the impact of the R&E credit will be magnified when it is made a permanent component of the tax code.

The R&E tax credit is a sensible use of tax policy to enhance our nation's long-term economic competitiveness. It has our full support.

Our Business is Your Success

STATEMENT OF ROBERT S. GREGG

SENIOR VICE-PRESIDENT OF FINANCE, LEGAL,
TREASURER AND CFO
FOR SEQUENT COMPUTER SYSTEMS, INC.
BEAVERTON, OREGON

RESEARCH AND DEVELOPMENT CREDIT

BEFORE THE HOUSE WAYS & MEANS COMMITTEE
SUBCOMMITTEE ON OVERSIGHT

UNITED STATES HOUSE OF REPRESENTATIVES

MAY 10, 1995

Madame Chair and Members of the Subcommittee. My name is Bob Gregg. I am the Senior Vice-President of Finance and Legal, Treasurer and Chief Financial Officer of Sequent Computer Systems (Sequent). I respectfully submit this written testimony on behalf of my company. As a member of the American Electronics Association (AEA), we are asking for your help in seeking legislative relief from a technical glitch in the R&D tax credit definition of start-up companies.

Sequent is based in Beaverton, Oregon, and is a leading architect of enterprise information technology solutions. In 1994, Sequent had approximately 1800 employees worldwide, with approximately half of our total revenue coming from sales outside the U.S. from research and development and production of products within the U.S.

The unintended glitch in the tax law severely impacts Sequent and has resulted in our receiving no R&D credit since the structure was changed in 1989, even though our research expenditures have increased over 700 percent since the inception of the company to over $60 million annually and have contributed to the employment of over 300 highly skilled engineers in Oregon and over 600 technically skilled support personnel.

Sequent was founded in 1983 by 18 former Intel employees with a vision of the future and with the innovative spirit that the R&D credit was designed to encourage. As a result of our successful R&D efforts in the middle 1980's, Sequent has grown from being a start-up company just over 10 years ago to the mid-sized company that it is today. Our success is largely due to the research and development undertaken by Sequent to design and manufacture a new generation of large commercial computer systems (which have come to be known as symmetric multiprocesssing computers).

Sequent believes that the R&D credit is a very important tool to US tax policy. We are committed to the R&D credit because prior to the change in the calculation with the technical glitch, the credit had a real impact on the decisions of Sequent and other young companies like us. This research has in turn allowed us to stay ahead of our foreign competition in the computer systems business. As a result, we know the R&D credit has a direct and clear impact on our future investment in research and it is critical that a technical glitch in the definition of a start-up company not put us at a competitive disadvantage.

SEQUENT COMPUTER SYSTEMS, INC. • 15450 SW KOLL PARKWAY • BEAVERTON, OR 97006-6063
• PHONE: (503) 626-5700 • FAX: (503) 578-9890

TAX LAW REVISIONS FAIL TO ENCOURAGE ALL START-UP'S

As previously mentioned, Sequent was incorporated in 1983. We began R&D in 1983 and introduced our first product in December 1984. While we continued to invest significantly in R&D during the fixed base period of 1984 to 1988, our sales volume reached only $76 million by 1988, the last year of the fixed base period. In contrast, our revenue for 1994 was over $450 million. During the critical period of 1984 to 1988, our average percentage of qualified research expenses to sales was over 15%, significantly higher than our current qualified R&D to sales ratio. Because only incremental R&D spending above the base qualifies for the credit, when applying the fixed base percentage for the period 1984-1988 to the average of our gross receipts for the most recent 4 years, the result is a base so high that even as our R&D spending increases, we will not be entitled to an R&D credit for any future year.

Acknowledging that companies in a start-up phase will experience a distorted relationship between R&D expenses and gross receipts in their initial years of operation, Congress provided a special fixed base for start-up companies. We failed to qualify as a "start-up company" for purposes of the special base period relief because we had more than de minimis sales in 3 out of the 5 years of the fixed base period (1984-1988) even though we were clearly a start-up company during that period of time and in fact Sequent's R&D as a percentage of sales was well over 100% in some years during the base period. The credit's incentive value is zero for a few companies like Sequent.

More importantly, the current start-up company definition puts Sequent at a significant disadvantage when we try to compete with an already established company, or a new company who currently qualifies as a start-up company. These companies will get a 20% incentive for their incremental R&D spending. This comes at a time for us when technologies must be developed so that exciting new products can replace the mature products that drove much of our past growth.

We understand from those involved in putting the provision together back in 1989 -- and from the AEA representatives that were consulted at that time -- that this result was never intended. Rather, companies like us within AEA were simply too small to be aware of various congressional proposals back then, and so we never found out about it until it was too late.

THE PROPOSAL

The proposal that solves this problem is simple. ***It would change the definition of a start-up company to include any company with its first year of both R&D and sales in 1984 and thereafter.*** Indeed, this fix was included in H.R. 11 in 1992, which was vetoed by President George Bush for reasons unrelated to this issue. At the time, the cost over 5 years was estimated to be under $50 million. I hope that you will seriously consider fixing this problem to ensure that start-up companies like Sequent who began business during the early years of the fixed base period (1984, 1985 or 1986) are not penalized merely for the year they were formed.

CONCLUSION

Legislative relief is necessary to ensure that "notch" companies such as Sequent are not at a competitive disadvantage vis-a-vis, our competitors. We urge Congress to review this issue and to take action now on behalf of companies whose situations apparently were overlooked during the struggle over bigger issues in the 1989 research credit revisions.

STATEMENT
on the
RESEARCH AND EXPERIMENTATION TAX CREDIT
and the
ALLOCATION OF RESEARCH AND DEVELOPMENT EXPENSES
UNDER IRC SECTION 861
for submission to the
HOUSE COMMITTEE ON WAYS AND MEANS
SUBCOMMITTEE ON OVERSIGHT
for the
U.S. Chamber of Commerce
by
William T. Sinclaire
Senior Tax Counsel and Director of Tax Policy
May 10, 1995

The U.S. Chamber of Commerce appreciates this opportunity to express its views on the research and experimentation (R&E) tax credit and the research and development (R&D) expense allocation rules. The Chamber is the world's largest business federation, representing 215,000 business members, 3,000 state and local chambers of commerce, 1,200 trade and professional associations, and 72 American Chambers of Commerce abroad.

Research and Experimentation Tax Credit

The R&E tax credit contained in Section 41 of the Internal Revenue Code was designed to reward businesses for increasing expenditures in R&D. However, the R&E tax credit is due to expire on June 30, 1995, and the Chamber believes it should be made permanent because it benefits the overall economy in both the short and long term.

The best way our country can maintain its competitive edge in the global economy is through increased innovation and technological development. R&D cycles can last for many years, and high levels of R&E must be performed continuously to achieve desired results. Because the R&E tax credit stimulates innovation and product development, it should not only be extended, but should be made permanent so companies can rely on it during their budgetary processes.

The R&E tax credit was initially enacted as part of the *Economic Recovery Act of 1981*. Originally, the credit was equal to 25 percent of the excess of qualified research expenses incurred in the tax year over the average of qualified research expenses incurred in the three prior tax years. The credit was to expire at the end of 1985; however, it was extended through the end of 1988 by the *Tax Reform Act of 1986*. This act also modified the credit by (a) reducing the credit to 20 percent, (b) tightening the definition of the expenses eligible for the credit, and (c) enacting a separate, university basic research credit. Thereafter, the *Technical and Miscellaneous Revenue Act of 1988* extended the credit through the end of 1989 and reduced the deduction allowed for qualified research expenses by an amount equal to 50 percent of the credit determined for the year.

The *Omnibus Budget Reconciliation Act of 1989* extended the R&E tax credit through the end of 1990 and further reduced the deduction allowed for qualified research expenses by an amount equal to 100 percent of the credit determined for the year. The *Omnibus Budget Reconciliation Act of 1990* extended the credit through the end of 1991.

The research tax credit was extended for an additional six months through June 30, 1992, by the *Tax Extension Act of 1991*. The *Omnibus Budget Reconciliation Act of*

1993 extended it further through June 30, 1995, and amended the rules determining the fixed-based percentage of start-up companies.

With the R&E tax credit having been renewed six times and modified four times since 1981, uncertainty abounds in the business community and long-term planning for R&D can be precarious. This uncertainty reduces the incentive value and effectiveness of the credit. In order for businesses to make the necessary time and cost commitments for initial and continuing R&D projects, a permanent credit is required.

A permanent R&E tax credit will remove uncertainty and allow businesses to plan and undertake long-term research projects. This will enhance American technology, increase our productivity and competitiveness in the global marketplace, create high-paying jobs, and improve our overall quality of life.

Research and Development Expense Allocation

American businesses that conduct most of their R&D in the United States are at an international competitive disadvantage if they have foreign operations with foreign source income. The R&D allocation regulations (861 allocation regulations), contained in Section 1.861-8(e)(3) of the Treasury Regulations, were first issued in 1977 and have been debated significantly ever since. This debate has developed because U.S. multinational companies with foreign source income are required, for purposes of determining their foreign tax credits, to treat a portion of their domestic R&D expenses as if the R&D was conducted abroad. This has effectively led to double taxation for American companies, since no foreign country allows a deduction for R&D conducted in the United States.

The requirement that a portion of R&D performed in the United States be treated for tax purposes as if it were conducted in a foreign country creates a disincentive for American businesses to undertake R&D in the United States and encourages the movement of R&D abroad. Moving R&D out of the United States runs counter to the goal of fostering investment in R&D in this country and is clearly not in our national best interest.

The double taxation problem arose when the Treasury Department first drafted the 861 allocation regulations in 1977. Since then, a number of measures designed to prevent the full implementation of the regulations have been advocated and adopted by subsequent Administrations and Congresses. Starting in 1981, and continuing through 1986, the 861 allocation regulations were suspended and taxpayers were allowed to allocate 100 percent of their U.S. R&D expenses to U.S. source income, irrespective of their worldwide sources of income. In 1987, this suspension was modified to allow a 50 percent exclusive apportionment to U.S. source income. From 1988 to 1992, with the exception of a short period during 1988 and 1989, a series of provisions were enacted to generally permit a 64 percent exclusive apportionment of U.S. R&D expenses to U.S. source income.

In 1992, the Treasury Department effectively allowed taxpayers to elect out of the 861 allocation regulations for two years in exchange for other rules when it announced that it was undertaking a review of the regulations to determine if they provided for a proper allocation or apportionment. Thereafter, further legislation suspended the 861 allocation regulations through December 31, 1994.

Unless there is a regulatory or legislative solution, the 861 allocation regulations drafted in 1977 will apply to all tax years beginning after 1994. American multinational

businesses involved in U.S. R&D will effectively be subject to double taxation to the extent U.S. R&D expenses are allocated to non-U.S. source income.

The Chamber believes that a permanent resolution to the 861 allocation regulations issue is necessary to ensure that the goal of encouraging American companies to invest in R&D within the United States is achieved. American technology has been a major source of our export strength and world leadership. U.S.-based R&D is essential to sustaining America's competitiveness and is critical to our nation's continued economic growth. Advances in technology are vital to creating high-wage jobs and enhancing the position of American businesses in the world economy.

Conclusion

The Chamber urges enactment of a permanent R&E taxcredit and finality to the 861 allocation regulations issue. Making the R&E tax credit permanent will best serve the country's long-term economic interests because it will eliminate the uncertainty about the future of the credit and permit businesses to make important R&D business decisions with certainty. Innovation greatly contributes to overall economic growth, increases productivity, creates new, better and higher-paying jobs, and allows for a higher standard of living. Providing for a favorable and definitive resolution to the 861 allocation regulations issue is essential to having an environment that is conducive to R&D investment in the United States. It is necessary that R&D remain in this country so that high-paying jobs do not move abroad. American technology has been a major source of U.S. export strength and is vital to American businesses remaining in leadership positions in our global economy.

STATEMENT ON BEHALF OF THE

UNITED STATES TELEPHONE ASSOCIATION

The United States Telephone Association ("USTA") is pleased to have this opportunity to submit testimony to the Committee on Ways and Means concerning the extension of the research and experimentation tax credit ("credit"). USTA is the primary trade association of local telephone companies serving more than 98 percent of the access lines in the United States and represents over 1100 members from the smallest of independents to the large regional Bell companies.

USTA supports permanent extension and urges Congress to refrain from efforts to once again modify the credit.

As the information age continues to advance in both technology and reach, the credit becomes increasingly important for precisely the reasons which prompted Congress to adopt it originally: it provides a real incentive for U.S. companies in our rapidly changing industry to increase and expand their level of commitment to tomorrow's world of communication. As such, it encourages investments in innovation, productivity gain and international competitiveness notwithstanding their risk. The presence of a stable, unchanging credit mechanism is the best insurance that we will continue our position as a world leader in communications by producing new products and technologies despite the risks associated with their development. The credit also encourages new jobs as technology-driven services and products made possible by research and experimentation are brought to the marketplace.

The velocity of change in telecommunications is astonishing and accelerating. The life-cycle of new modes of communicating is increasingly short, with advancement and transformation occurring world-wide. Our membership competes for business in this fast-paced marketplace. Foreign entities and governments benefit from incentives sometimes two-thirds greater than any available in the United States. The credit helps offset that potential investment imbalance.

The Committee, in its proper focus on the credit, is looking at its effectiveness and what steps might be taken to improve its utility. Probably the most important action that could be taken would be to permanently extend the credit. In so doing, our industry, and every other one dependent on research for its future, would be able to plan for the long-term, no longer concerned, as we are today, about uncertainty regarding the availability of the credit. Over the last several years, Congress has always extended the credit but many times with narrowing modifications and at times retroactively. This has had the impact of reducing its attractiveness as an incentive upon which strategic planning could be based. We would ask the Committee to refrain from efforts to again transform the credit as it is made permanent. It would be disruptive of the goal of permanent extension to do so in that businesses would have to take the next several years to learn about and cope with additional modifications. Such changes are not without their impacts. For example, commitments to research are not merely made in dollars but also include the hiring of talented and dedicated academics and scientists. Over the last several years, fewer commitments in human terms could be made given the "year to year" existence of the credit. Permanent extension would reverse that situation.

We are not unmindful of the difficult budgetary issues confronting the Committee as it considers extension of the credit. USTA supports the desire to reduce government commitments. The extension of the research and experimentation credit, however, is one of the intelligent choices Congress can make in order to ensure that the U.S. remains a world leader in communications.

Statement submitted by Chuck Shewbridge, Chairman of the USTA Tax Committee. For further information, contact Geoff Feiss, Director of Government Relations, United States Telephone Association, 1401 H Street, N.W., Suite 600, Washington, D.C. 20005. Telephone number: 202/326-7257.
